EMBRA'CERY, *ſ.* in law, an attempt to influence a jury corruptly to one ſide, by promiſes, perſuaſions, entreaties, money, entertainments, and the like. The puniſhment for the perſon embracing, (the embraceor,) is by fine and impriſonment; and for the juror ſo embraced, if it be by taking money, the puniſhment is (by various ſtats. of Edw. III. viz. 5 Edw. III. c. 10. 34 Edw. III. c. 8. 38 Edw. III. c. 12.) perpetual infamy, impriſonment for a year, and forfeiture of ten-fold value. 1 *Hawk. P. C.* c. 85.

EMBRA'SURE, *ſ.* [Fr.] In architecture, an enlargement of the aperture or opening of a door, or window, within ſide the wall, ſloping back inwards, to give the greater play for the opening of the door, caſement, &c. or to take in more light. In fortification, the apertures or holes through which the cannon are pointed, whether in caſemates, batteries, or in the parapets of walls. In the navy, they are called port-holes. The embraſures are placed twelve or fifteen feet apart from each other; being made ſloping or opening outwards, from ſix to nine feet wide on the outſide of the wall, and from two to three within, to allow the gun to traverſe from ſide to ſide. Their baſe is about two and a half or three feet above the platform on the inſide of the wall, but ſloping down outwards, ſo as to be only about one and a half above it on the outſide; in order that the muzzle on occaſion may be depreſſed, that the gun may ſhoot low, or downwards.—This fort, which is faced with ſtone, has eighteen or twenty *embraſures. Carteret's Voyage in Hawkeſworth.*—[In *Shakeſpeare.*] Embrace:

Beguiles our lips
Of all rejoindure, forcibly prevents
Our lock'd *embraſures.* *Troilus and Creſſida.*

To EMBRA'VE, *v. a.* [from *brave.*] To decorate; to embelliſh; to deck; to grace; to adorn. *Not in uſe:*

So, both agree their bodies to engrave;
The great earth's womb they open to the ſky,
And, with ſad cypreſs, ſeemly it *embrave.* *Spenſer.*

EMBREW'ED, *adj.* in heraldry, dipt in blood.

EMBRHU'HREN, a town of Germany, in the circle of Weſtphalia, and biſhopric of Munſter: ten miles north-north-weſt of Rheine.

To EM'BROCATE, *v. a.* [ἐμβρέχω, Gr.] To rub any part diſeaſed with medicinal liquors.—I returned her a glaſs with oil of roſes and vinegar, to *embrocate* her arm. *Wiſeman.*

EMBROCA'TION, *ſ.* The act of rubbing any part diſeaſed with medicinal liquors or ſpirits. The lotion with which any diſeaſed part is waſhed or embrocated.—We endeavoured to eaſe by diſcutient and emollient cataplaſms, and *embrocations* of various ſorts. *Wiſeman.*

To EMBROI'DER, *v. a.* [*broder*, Fr.] To border with ornaments; to decorate with figured work; to diverſify with needlework; to adorn a ground with raiſed figures of needlework.—Such an accumulation of favours is like a kind of *embroidering*, or lifting of one favour upon another:

Embroider'd purple clothes the golden beds;
This ſlave the floor, and that the table ſpreads. *Pope.*

EMBROI'DERER, *ſ.* One that adorns clothes with needlework.—Blue ſilk and purple, the work of the *embroiderer. Eccleſ.*

EMBROI'DERY, *ſ.* Figures raiſed upon a ground; variegated needlework.—Laces and *embroideries* are more coſtly than either warm or comely. *Bacon.*

Next theſe a youthful train their vows expreſs'd,
With feathers crown'd, with gay *embroidery* dreſs'd. *Pope.*

Variegation; diverſity of colours.—If the natural *embroidery* of the meadows were helpt and improved by art, a man might make a pretty landſcape of his own poſſeſſions. *Spectator.*

By 22 Geo. II. c. 36. no foreign embroidery, or gold and ſilver brocade, ſhall be imported, upon pain of being forfeited and burnt, and penalty of 100l. for each piece. No perſon ſhall ſell, or expoſe to ſale, any foreign embroidery, gold or ſilver thread, lace, fringe, brocade, or make up the ſame into any garment, on pain of having it forfeited and burnt, and penalty of 100l. All ſuch embroidery, &c. may be ſeized and burnt; and the mercer, &c. in whoſe cuſtody it was found, ſhall forfeit 100l.

To EMBROIL', *v. a.* [*brouiller*, Fr.] To diſturb; to confuſe; to diſtract; to throw into commotion; to involve in troubles by diſſention and diſcord:

Rumour next, and chance,
And tumult and confuſion, all *embroil'd*,
And diſcord with a thouſand various mouths. *Milton.*

To perplex; to entangle.—The Chriſtian antiquities at Rome, though of a freſher date, are ſo *embroiled* with fable and legend, that one receives but little ſatisfaction. *Addiſon.*—In the following paſſage the word ſeems improperly uſed for *broil* or *burn.*—That knowledge, for which we boldly attempt to rifle God's cabinet, ſhould, like the coal from the altar, ſerve only to *embroil* and conſume the ſacrilegious invaders. *Decay of Piety.*

To EMBRO'THEL, *v. a.* [*brothel, brodel.*] To incloſe in a brothel:

Men, which chooſe
Law practice for mere gain, boldly repute,
Worſe than *embrothel'd* ſtrumpets proſtitute. *Donne.*

EM'BRUN, a city of France, and principal place of a diſtrict, in the department of the Higher Alps, on the Durance; before the revolution, the ſee of an archbiſhop, containing five pariſhes, and about 12,000 inhabitants. It was taken in 1692, by Victor Amadeus II. king of Sardinia, but abandoned ſoon after; and, a little time after, Louis IV. built Mount Dauphin, to prevent the like circumſtance another time: ſix leagues eaſt of Gap. Lat. 44. 24. N. lon. 24. 9. E. Ferro.

EM'BRYO, or EMBRYON, *ſ.* [from ἐμβρύω, Gr. to pullulate or bud forth.] The offſpring yet unfiniſhed in the womb. See the article CONCEPTION, vol. v. p. 4. —The bringing forth of living creatures may be accelerated, if the *embryo* ripeneth and perfecteth ſooner. *Bacon.*—An excluſion before conformation, before the birth can bear the name of the parent, or be ſo much as properly called an *embryon. Brown.*

When the crude *embryo* careful nature breeds,
See how ſhe works, and how her work proceeds. *Blackm.*

The ſtate of any thing yet not fit for production; yet unfiniſhed.—The company little ſuſpected what a noble work I had then in *embryo. Swift.*

EM'BRYONATE, *adj.* Belonging to an embryo. *Scott.*

EMBRYOTHLAS'TES, *ſ.* [from ἐμβρυον, Gr. the fœtus, and θλαω, to break.] In ſurgery, an inſtrument for breaking the bones of a dead fœtus to promote its delivery.

EMBRYO'TOMY, *ſ.* [*embryotomia*, Lat. from εμβρυων, Gr. a fœtus, and τεμνω, to cut.] The operation of cutting a child from the womb of its mother, in obſtructed parturition.

EMBRYUL'CUS, *ſ.* [from εμβρυων, Gr. a fœtus, and ελκω, to draw.] An inſtrument for drawing a child from the womb.

EMBS, or EMS, a town of Germany, in the circle of Swabia, and county of Embs, or Hohenembs, near which are ſome baths impregnated with ſulphur: ten miles ſouth of Bregentz.

EMBS, or HOHENEMBS, a ſmall county of Germany, in the circle of Swabia, ſouth of the county of Bregentz, and the lake of Conſtance, about ten miles long, and five broad, erected into a county by Charles V. and now belonging to the houſe of Auſtria. Its Roman month is twenty florins, and tax ſixty rixdollars.

EM'DEN, a ſea-port of Germany, in the circle of Weſtphalia, and capital of the county of Eaſt Friſeland, on the eaſt ſide of the Embs, near the mouth; large, ſtrong, and commercial, divided into Old and New Town, with two fauxbourgs. It contains three churches for Calviniſts, beſides places of worſhip for Roman catholics, Lutherans, Mennonites, and Jews. It was taken by the French in 1757, who evacuated it the next year. It was afterwards again taken by the French; but the prince of Soubiſe exacting too ſevere contributions, the peaſants roſe, and drove the enemy out of the town and country. It is a free port. The right of protection has been purchaſed by the king of Pruſſia of the Dutch. Its territory includes ſeveral towns and villages. Lat. 53. 22. N. lon. 24. 34. E. Ferro.

EME, *ſ.* [eame, Sax.] Uncle. *Now obſolete:*

Whilſt they were young, Caſſibelan their *eme*,
Was by the people choſen in their ſtead;
Who on him took the royal diadem,
And goodly well it long time governed. *Spenſer.*

EMEGIA'GEN, a town and fortreſs of Africa, in the empire of Morocco.

EMEND'ABLE, *adj.* [*emendo*, Lat.] Capable of emendation; corrigible.

EMEN'DALS, *ſ.* [*emenda*, Lat.] An old word ſtill made uſe of in the accounts of the ſociety of the Inner Temple; where ſo much in emendals at the foot of an account, on the balance thereof, ſignifies ſo much money in the bank or ſtock of the houſes, for reparation of loſſes or other emergent occaſions: *quod in reſtaurationem damni tribuitur. Spelm.*

EMENDA'RE, *ſ.* [*emendam ſolvere*, Lat.] In law, that principle which directs to make amends for any crime or treſpaſs committed. *Leg. Edw. Confeſſ.* c. 35. Hence a capital crime, not to be attoned by fine, was ſaid to be *inemendabile. Leg. Canut.* p. 2.

EMENDA'TION, *ſ.* [*emendo*, Lat.] Correction; alteration of any thing from worſe to better.—The eſſence and relation of any thing in being, is fitted, beyond any *emendation*, for its action and uſe; and ſhews it to proceed from a mind of the higheſt underſtanding. *Grew.*—An alteration made in the text by verbal criticiſm.—Who, in his *emendations* upon Suidas, has ſhewn a critical acumen. *Harris.*

EMENDA'TOR, *ſ.* [*emendo*, Lat.] A corrector; an improver; an alterer for the better.

E'MER-YAPAR, a town of Aſia, in Thibet: ſeventeen miles from Cha-tcheou.

EM'ERALD, *ſ.* [*emeraude*, Fr. *ſmaragdas*, Lat.] A tranſparent precious ſtone, of a green colour. See the article GEM and MINERALOGY.

Nor deeper verdure dies the robe of ſpring,
When firſt ſhe gives it to the ſouthern gale,
Than the green *emerald* ſhows. *Thomſon.*

EM'ERALD MOUNTAIN, a mountain of Egypt, anciently famous for the production of emeralds, and ſuppoſed to be ſituated in the range bordering on the Red Sea, towards Coſſir. It is imagined that theſe emeralds conſiſted of cryſtallized cockle; which, where found of a green colour, and free from flaws, is called *emerald* by the jewellers. Hence the cockle ſpar brought from Egypt is called *mother of emeralds*. It is probable that this cockle was, in ancient times, faſhionable in Egypt under the name of emerald; but it is of a deeper green than the true emeralds, and alſo wants their luſtre. See the article EGYPT, p. 388, of this volume.

To EMER'GE, *v. n.* [*emergo*, Lat.] To riſe out of any thing in which it is covered.—They *emerged*, to the upper part of the ſpirit of wine, as much of them as lay immerſed in the ſpirit. *Boyle.*

Thetis, not unmindful of her ſon,
Emerging from the deep, to beg her boon. *Dryden.*

To iſſue; to proceed.—If the priſm was turned about its axis that way, which made the rays *emerge* more obliquely out of the ſecond refracting ſurface of the priſm, the image ſoon became an inch or two longer. *Newton.*—To riſe; to mount from a ſtate of depreſſion or obſcurity; to riſe into view:

Darkneſs, we ſee, *emerges* into light;
And ſhining ſuns deſcend to ſable night. *Dryden.*

When, from dewy ſhade *emerging* bright,
Aurora ſtreaks the ſky with orient light. *Pope.*

EMER'GENCE, or EMERGENCY, *ſ.* The act of riſing out of any fluid by which it is covered.—We have read of a tyrant, who tried to prevent the *emergence* of murdered bodies. *Brown.*—The act of riſing or ſtarting into view.—The white colour of all refracted light, at its very firſt *emergence*, where it appears as white as before its incidence, is compounded of various colours. *Newton.*—Any ſudden occaſion; unexpected caſualty.—Moſt of our rarities have been found out by caſual *emergency*, and have been the works of time and chance rather than of philoſophy. *Glanville.*—Preſſing neceſſity; exigence. *A ſenſe not proper.*—In any caſe of *emergency*, he would employ the whole wealth of his empire, which he had thus amaſſed together in his ſubterraneous exchequer. *Addiſ.*

EMER'GENT, *adj.* Riſing out of that which overwhelms or obſcures it:

Immediately the mountains huge appear
Emergent, and their broad bare backs upheave
Into the clouds. *Milton.*

Riſing into view, or notice, or honour.—The man that is once hated, both his good and his evil deeds oppreſs him; he is not eaſily *emergent*. *Ben Jonſon.*—Proceeding or iſſuing from any thing.—The Stoics held a fatality, and a fixed unalterable courſe of events; but then they held alſo, that they fell out by a neceſſity *emergent* from, and inherent in, the things themſelves. *South.*—Sudden; unexpectedly caſual.—All the lords declared, that, upon any *emergent* occaſion, they would mount their ſervants upon their horſes. *Clarendon.*

EMER'GENT YEAR, *ſ.* in chronology, the epoch, or date, from whence any people begin to compute their time or dates. So, our emergent year is ſometimes the year of the creation, but more uſually the year of the birth of Chriſt. The Jews uſed that of the Deluge, or the Exodus, &c. The emergent year of the Greeks, was the beginning of the Olympic games; while that of the Romans was the date of the building of their city.

EM'ERODS, or EMEROIDS, *ſ.* [corrupted by ignorant pronunciation from *hemorrhoids*, αιμορροιδες, Gr.] Painful ſwellings of the hemorrhoidal veins; piles.—He deſtroyed them, and ſmote them with *emerods*. 1 *Sam.*

EMER'SION, *ſ.* [from *emerge*.] In aſtronomy, the reappearance of the ſun, moon, or other planet, after having been eclipſed, or hid by the interpoſition of the moon, earth, or other body. The emerſions and immerſions of Jupiter's firſt ſatellite, are particularly uſeful for finding the longitudes of places; the immerſions being obſerved from Jupiter's conjunction with the ſun, till his oppoſition;

tion; and the emerſions from the oppoſition till the conjunction. But within fifteen days of the conjunction, both before and after it, they cannot be obſerved, becauſe the planet and his ſatellites are then loſt in the ſun's light.—*Emerſion* is alſo uſed when a ſtar, after being hid by the ſun, begins to re-appear, and to get out of his rays.

EMER'SION, *ſ.* in phyſics, the riſing of any ſolid above the ſurface of a fluid that is ſpecifically heavier than the ſolid, into which it had been violently immerged, or puſhed. It is one of the known laws of hydroſtatics, that a lighter ſolid, being forced down into a heavier fluid, immediately endeavours to emerge; and that with a force equal to the exceſs of the weight of a quantity of the fluid above that of an equal bulk of the ſolid. Thus, if the body be immerged in a fluid of double its ſpecific gravity, it will emerge again till half its bulk be above the ſurface of the fluid.

EM'ERSON (William), an eminent Engliſh mathematician, born at Hurworth, near Darlington, in the county of Durham, in 1701. His father, who taught a ſchool, was a proficient in the mathematics; and by his inſtructions, and the books of which he was poſſeſſed, was his ſon's genius for mathematical ſtudies firſt unfolded. He devoted himſelf to a long life of ſtudious retirement, in which he wrote his numerous treatiſes. On the 20th of May, 1782, he fell a victim to the ſtone, in his native village, when he was near eighty-one years of age. Mr. Emerſon, from the ſtrength of his mind, and the cloſeneſs of his application, had acquired a deep knowledge of all the branches of mathematics and phyſics. He was alſo well ſkilled in the ſcience of muſic, the theory of ſounds, and the various ſcales ancient and modern, but appeared to poor advantage as a performer. The following is a liſt of his publications: 1. The Doctrine of Fluxions, 8vo. 1748. 2. The Projection of the Sphere, orthographic, ſtereographic, and gnomonical, 8vo. 1749. 3. The Elements of Trigonometry, 8vo. 1749. 4. The Principles of Mechanics, 4to. 1754. 5. A Treatiſe of Navigation, 12mo. 1755. 6. A Treatiſe of Algebra, in two books, 8vo. 1765. 7. The Method of Increments, 8vo. 8. The Arithmetic of Infinites, the Differential Method, and the Elements of the Conic Sections, in three books, 8vo. 1767. 9. Mechanics, or the Doctrine of Motion, &c. with the Laws of Centripetal and Centrifugal Forces 8vo. 1769. 10. The Elements of Optics, in four books, 8vo. 1768. 11. A Syſtem of Aſtronomy, 8vo. 1769. 12. Mathematical Principles of Geography, Navigation, and Dialling, 8vo. 1770. 13. Clycomatheſis, or an eaſy Introduction to the ſeveral Branches of the Mathematics, 8vo. 1770. 14. A Commentary on Sir Iſaac Newton's Principia, with a Defence of Sir Iſaac againſt the Objections made to ſeveral Parts of his Works, 8vo. 1770. 15. A volume of Tracts, in 8vo. 1770. And, 16. Another of Miſcellanies, containing ſeveral Mathematical Subjects, 8vo. 1776.

E'MERSTORFF, a town of Germany, in the archduchy of Auſtria, on the Danube: ſixteen miles above Crems.

EM'ERUS. See ÆSCHYNOMENE and CORONILLA.

E'MERY, *ſ.* [*ſmyris*, Lat. *eſmeril*, Fr.] A mineral, which yields to no ſubſtance in hardneſs, except the diamond.—The lapidaries cut the ordinary gems on their wheels, by ſprinkling the wetted powder of emery over them; but it will not touch the diamond. It is conſtantly uſed in cleaning and poliſhing ſteel. See the article MINERALOGY.

EME'SA, a town of Aſiatic Turkey, in the pachalic of Damaſcus: twenty-five miles ſouth of Hama.

EME'TIC, or EMETICAL, *adj.* [*emetica*, Lat. from εμεω, Gr. to vomit.] Having the quality of provoking vomits.—Various are the temperaments and operations of herbs; ſome purgative, ſome *emetic*, and ſome ſudorific. *Hale.*

EME'TIC, *ſ.* A medicine which provokes vomiting.

EME'TICALLY, *adv.* In ſuch a manner as to provoke to vomit.—It has been complained of, that preparations of ſilver have produced violent vomits; whereas we have not obſerved duly-refined ſilver to work *emetically*, even in women and girls. *Boyle.*

E'METZ, a town of Ruſſian Siberia, in the government of Tobolſk: twenty-eight miles weſt of Iſchim.

EMICA'TION, *ſ.* [*emicatio*, Lat.] Sparkling; flying off in ſmall particles, as ſprightly liquors.—Iron, in aquafortis, will fall into ebullition with noiſe and *emication*, as alſo a craſs and fumid exhalation. *Brown.*

EMIC'TION, *ſ.* [from *emictum*, Lat.] Urine; what is voided by the urinary paſſages.—Gravel and ſtone grind away the fleſh, and effuſe the blood apparent in a ſanguine *emiction*. *Harvey.*

EM'IGRANTS, *ſ.* [of *emigrans*, Lat.] Thoſe who go out of their own country to reſide in another, conſtrained either by poverty or perſecution, as the Palatines, Straſburghers, French prieſts, &c.—All theſe *emigrants* were to receive pay and ſubſiſtence for ſome years at the public expence. *Robertſon.*

To EM'IGRATE, *v. a.* [*emigro*, Lat.] To remove from one place to another.

EMIGRA'TION, *ſ.* Change of habitation; removal from one place to another.—We find the originals of many kingdoms either by victories, or by *emigrations*, or inteſtine commotions. *Hale.*

EMILI' (Paul), (*Æmilius*, Lat.) an hiſtorian of reputation, native of Verona. He had obtained a great character in Italy, when the cardinal de Bourbon brought him to France in 1487. After the death of his patron, Paul was obliged for his ſubſiſtence to teach the languages in a college of the univerſity. Through the recommendation of Stephen Ponchet, biſhop of Paris, he was engaged by Louis XII. to write in Latin the hiſtory of France, and for this purpoſe he was gratified with a canonry in the cathedral of Notre Dame. He retired to the college of Navarre, where he applied for near thirty years aſſiduouſly to his labour, which he brought down, in ten books, from Pharamond to the fifth year of Charles VIII. Of this work the firſt four books were publiſhed about 1516; two more were added in a ſecond edition; and he left four more, the laſt of which being imperfect, was completed by Daniel Zavariſi. The whole was publiſhed together at Paris in 1539, and has been ſeveral times reprinted, and tranſlated into foreign languages. He is praiſed as the firſt writer who gave to French hiſtory a juſt form and method. Emili died at Paris in 1529.

EMIL'IA, a woman's name.

E'MIMS, [Heb. a formidable people.] Ancient inhabitants of the land of Canaan beyond Jordan, who were defeated by Chedorlaomer and his allies. *Gen.* xiv. 5. They were beaten in Shaveh-Kirjathaim, which was in the country of Sihon, conquered from the Moabites. *Joſh.* xiii. 19–21. The Emims were a warlike people, of a gigantic ſtature, great and many, and tall as the Anakims.

EMILLE'GUE, one of the Pelew iſlands.

EM'INENCE, or EMINENCY, *ſ.* [*eminentia*, Lat.] Loftineſs; height. Summit; higheſt part.—Mountains abound with different vegetables, every vertex or *eminency* affording new kinds. *Ray.*—A part riſing above the reſt.—They muſt be ſmooth, almoſt imperceptible to the touch, and without either *eminence* or cavities. *Dryden.*—A place where one is expoſed to general notice.—A ſatyr or libel on one of the common ſtamp, never meets with that reception as what is aimed at a perſon whoſe merit places him upon an *eminence*, and gives him a more conſpicuous figure. *Addiſon.*—Exaltation; conſpicuouſneſs; ſtate of being expoſed to view; reputation; celebrity; fame; preferment; greatneſs.—When men cannot arrive to any *eminency* of eſtate, yet religion makes a compenſation, by teaching content. *Tillotſon.*—Supreme degree. A title given to cardinals:

Whatever pure thou in the body enjoy'ſt,
And pure thou wert created, we enjoy
In *eminence*. *Milton.*

Notice; diſtinction:

Let your remembrance ſtill apply to Banquo;
Preſent him *eminence* both with eye and tongue. *Shakeſp.*

EM'INENT, *adj.* [*eminens*, Lat.] High; lofty.—Thou haſt built unto thee an *eminent* place. *Ezek.*

Satan, in geſture proudly *eminent*,
Stood like a tow'r. *Milton.*

Dignified; exalted:

Rome for your ſake ſhall puſh her conqueſts on,
And bring new titles home from nations won,
To dignify ſo *eminent* a ſon. *Dryden.*

Conſpicuous; remarkable.—She is *eminent* for a ſincere piety in the practice of religion. *Addiſon.*

Eminent he mov'd
In Grecian arms, the wonder of his foes. *Glover.*

EMINEN'TIAL EQUA'TION, *ſ.* A term uſed by ſome algebraiſts, in the inveſtigation of the areas of curvilineal figures, for a kind of aſſumed equation that contains another equation eminently, the latter being a particular caſe of the former.

EM'INENTLY, *adv.* Conſpicuouſly; in a manner that attracts obſervation:

Such as thou haſt ſolemnly elected,
With gifts and graces *eminently* adorned. *Milton.*

In a high degree.—All men are equal in their judgment of what is *eminently* beſt. *Dryden.*

E'MIR, *ſ.* a title of dignity among the Turks, ſignifying a prince. This title was firſt given to the caliphs; but when they aſſumed the title of ſultans, that of emir remained to their children; as that of Cæſar among the Romans. At length the title came to be attributed to all who were judged to deſcend from Mahomet by his daughter Fatimah, and who wear the green turban. The Turks alſo call the vizirs, baſhaws, or governors of provinces, by this name.

E'MIR, a town of Curdiſtan, ſituated on the weſt ſide of a well-cultivated and pleaſant valley, with a fine river running towards the north.

E'MIR-BACHA, a town of Aſiatic Turkey, in the province of Natolia: eighty miles weſt of Tocat.

EM'ISSARY, *ſ.* [*emiſſarius*, Lat.] One ſent out on private meſſages; a ſpy; a ſecret agent.—Clifford, an *emiſſary* and ſpy of the king's, fled over into Flanders with his privity. *Bacon.*

You ſhall neither eat nor ſleep,
No, nor forth your window peep,
With your *emiſſary* eye,
To fetch in the forms go by. *Ben Jonſon.*

One that emits or ſends out. *A technical ſenſe.*—Wherever there are *emiſſaries*, there are abſorbent veſſels in the ſkin; and, by the abſorbent veſſels, mercury will paſs into the blood. *Arbuthnot.*

EMIS'SILE, *adj.* Capable of being caſt out, capable of being ſent out. *Scott. Not much uſed.*

EMIS'SION, *ſ.* [*emiſſio*, Lat.] The act of ſending out;—Tickling cauſeth laughter: the cauſe may be the *emiſſion* of the ſpirits, and ſo of the breath by a flight from titillation. *Bacon.*—Affection, in the ſtate of innocence, was happily pitched upon its right object; it flamed up in direct fervours of devotion to God, and in collateral *emiſſions* of charity to its neighbour. *South.*

To EMIT', *v. a.* [*emitto*, Lat.] To ſend forth; to let go; to give vent to.—The ſoil, being fruitful and rich, *emits* ſteams, conſiſting of volatile and active parts. *Arbuthnot.*—To let fly; to dart:

Pay ſacred rev'rence to Apollo's ſong,
Leſt, wrathful, the far-ſhooting god *emit*
His fatal arrows. *Prior.*

To iſſue out juridically.—That a citation be valid, it ought to be decreed and *emitted* by the judge's authority, and at the inſtance of the party. *Ayliffe.*

EM'LY, a village of Ireland, in the county of Tipperary; the ſee of a biſhop, ſaid to have been founded ſo early as the fifth century; and afterwards erected into an archbiſhopric. In 1568, it was united to Caſhel, in which ſtate it ſtill continues: fifteen miles weſt of Caſhel.

EM'LYN (Thomas), an eminent Engliſh proteſtant-diſſenting divine, born at Stamford in Lincolnſhire, in 1663. His parents were frequenters of the eſtabliſhed church, but, being inclinable to the principles of the nonconformiſts, choſe to bring up their ſon to the miniſtry in that connection. Mr. Emlyn made his firſt appearance, in the character of a preacher, in December, 1682. In 1683, he became chaplain to the counteſs of Donegal, who then lived in London, and in the year following went over with her and her family to Belfaſt in Ireland, where ſhe was married to ſir William Franklin; who, having a good eſtate in the weſt of England, offered him a conſiderable living in that country; but this offer he declined, on account of his diſſatisfaction with the terms of miniſterial conformity, though at that time he entertained no ſcruples on the ſubject of the Trinity. He was the author of a conſiderable number of tracts on religious controverſy. In the year 1731, he alſo wrote Obſervations on Dr. Waterland's Notions in Relation to Polytheiſm, Ditheiſm, &c. and in the ſame year drew up ſome Memoirs of the Life and Sentiments of the Rev. Dr. Samuel Clarke. Thoſe pieces were not publiſhed till a complete collection was made of the author's works in 1746, in two volumes 8vo. to which are added Memoirs of his Life. He died on the 30th of July, 1743, in the ſeventy-ninth year of his age. His ſon, Mr. SOLLOM EMLYN, who was bred to the law, and became an eminent counſellor, was employed to publiſh lord-chief-juſtice Hale's Hiſtory of the Pleas of the Crown, which he did in 1736, in two volumes folio, together with a preface and large notes.

EM'MA, a woman's name.

EMMA'NUEL, or IMMANUEL, a Hebrew word which occurs Iſaiah viii. 14, in that celebrated prophecy, wherein he declares to Ahaz the birth of the Meſſiah, who was to be born of a virgin, and be Emmanuel, that is, *God with us.* The ſame prophet (viii. 8.) repeats the ſame thing, while he is ſpeaking of the enemy's army, which, like a torrent, was to overflow Judea. "The ſtretching out of his wings ſhall fill the breadth of thy land, O Emmanuel." The evangeliſt Matthew, i. 23. informs us, that this prophecy was accompliſhed in the birth of Chriſt, in whom the two natures divine and human were united, and who in this ſenſe was really Emmanuel, or God with us.

EM'MAUS, a village of Paleſtine, ſituated in Judea, ſixty furlongs from Jeruſalem; near which, Judas Maccabeus vanquiſhed the army under the command of Gorgias; and where Chriſt, after his reſurrection, made himſelf known to two of his diſciples. 1 *Macc.* iv. *Luke*, xxiv. 13.

EM'ME, a river of Swiſſerland, which riſes near Entlibuch, in the canton of Lucern, and runs into the Aar at Biberiſch, in the canton of Soleure, through a fertile valley, called Emmenthal.

EMMELOO'RT, a town in the north part of the iſland of Schockland, in the Zuyder ſea: ten miles eaſt of Vollenhove.

EMMEN'AGOGUES, *ſ.* [*emmenagoga*, Lat. from εμμηνια, Gr. the menſes, and αγω, to move.] Medicines that promote the courſes, either by giving a greater force to the blood in its circulation, or by making it thinner. *Quincy.*—*Emmenagogues* are ſuch as produce a plethora, or fulneſs of the veſſels, conſequently ſuch as ſtrengthen the organs of digeſtion, ſo as to make good blood. *Arbuthnot.*

EMMENALO'GIA, *ſ.* [from εμμηνια, Gr. the menſes, and λογος, a diſcourſe.] A treatiſe on the emmenia.

EMMENDIN'GEN, a town of Germany, in the circle of Swabia, and marggraviate of Baden, on the Enz: ſeven

ſeven miles north of Fryburg, and nineteen ſouth-ſouth-eaſt of Straſburg.

EMME'NIA, *ſ.* [from ἐν, in, and μὴν, Gr. a month.] A term with phyſicians for the monthly purgation of women.

EM'MERICH, or EMBRICH, or EMMERICK, a town of Germany, in the circle of Weſtphalia, and duchy of Cleves, ſurrounded with walls and ditches in 1247. It contains four churches, for Lutherans, Calviniſts, Roman catholics, and Mennonites, one each; the Roman catholics have four convents. It has a voice and ſeat at the provincial aſſemblies. It was taken by the French in 1672, and reſtored to the elector of Brandenburg in 1673: ſix miles eaſt of Cleves. Lat. 51. 51. N. lon. 23. 40. E. Ferro.

EM'MET, *ſ.* [æmette, Sax.] An ant; a piſmire. See the article FORMICA.

To EMMEW', *v. a.* To mew or coop up:

This outward-ſainted deputy,
Whoſe ſettl'd viſage and delib'rate word,
Nips youth i' th' head, and follies doth *emmew*,
As faulcon doth the fowl, is yet a devil. *Shakeſpeare.*

EM'MIUS (Ubbo), a learned philologiſt and hiſtorian, born in 1547 at Gretha, a village in Eaſt Frieſland, of which his father was paſtor. He ſtudied at the univerſity of Roſtock, where he attended the lectures of David Chytræus and Henry Bruce. On the death of his father he returned to his native place, where he lived and engaged as maſter of the ſchool of Norden in Eaſt Frieſland, in 1579. Under his direction this ſeminary flouriſhed greatly; but as he declined to ſubſcribe the confeſſion of Augſburg, ſome bigotted Lutherans cauſed him to be deprived of his ſalary, and prohibited from teaching. He therefore accepted an invitation to undertake the ſame office at Leer, to the ſchool of which he gave a reputation which durably injured that of Norden. Several Calviniſts expelled by the Lutherans from Groningen came to reſide at Leer, and contracted an intimacy with Emmius. Through their influence, when Groningen aſſociated itſelf with the United Provinces, and planned the re-eſtabliſhment of its college, Emmius was invited to become its director, with the power of forming ſuch ſtatutes for its government as he ſhould think proper. He removed thither in 1594, and exerciſed his office near twenty years to the great advantage of the inſtitution. At the end of that time, the city of Groningen having erected its college into an univerſity, Emmius was appointed profeſſor of hiſtory and Greek. This ſituation he retained to old age, and no offers from other univerſities could tempt him to remove. He died at Groningen in 1625, in the ſeventy-ninth year of his age. The principal works of Emmius are, 1. *Decades Rerum Friſicarum*, folio, 1616; a valuable performance, and the more ſo, as his ſuperiority to the national partiality ſo common in hiſtorians of their own country, has led him to reject and refute the fables concerning the Friſian antiquities related by other authors; yet he has incurred reproach for this attachment to truth. 2. *Vetus Græcia illuſtrata*, 3 vols. 8vo. 1626; a valuable ſummary of the geography, hiſtory, polity, &c. of ancient Greece. 3. *Opus Chronologicum Novum*, folio, 1619. 4. *Chronologica Rerum Romanarum, cum ſerie Conſulum*, folio, 1619. 5. *Appendix Chronologica*, folio, 1620. All theſe diſplay a profound knowledge of hiſtory, and have been much applauded by learned men.

EM'MOR, [from the Heb. ſignifying an aſs.] The name of a man.

To EMMO'VE, *v. a.* [*emmouvoir*, Fr.] To excite; to rouſe; to put into emotion. *Not uſed.*

One day, when him high courage did *emmove*,
He pricked forth. *Spenſer.*

EMOL'LIENT, *adj.* [*emolliens*, Lat.] Softening, ſuppling.—Barley is *emollient*, moiſtening, and expectorating.—Diuretics are decoctions, emulſions, and oils of *emollient* vegetables, ſo far as they relax the urinary paſſages; ſuch as relax ought to be tried before ſuch as ſtimulate. *Arbuthnot.*

EMOL'LIENTS, *ſ.* Such things as ſheath and ſoften the aſperities of the humours, and relax and ſupple the ſolids at the ſame time. *Quincy.*—*Emollients* ought to be taken in open air, to hinder them from perſpiring, and on empty ſtomachs. *Arbuthnot.*

EMOLLI'TION, *ſ.* [*emollitio*, Lat.] The act of ſoftening.—Laſſitude is remedied by bathing, or anointing with oil and warm water; the cauſe is, for that all laſſitude is a kind of contuſion and compreſſion of the parts, and bathing and anointing give a relaxation or *emollition*. *Bacon.*

EMO'LUMENT, *ſ.* [*emolumentum*, Lat.] Profit; advantage.—Let them conſult how politic they were, for a temporal *emolument* to throw away eternity. *South.*—Nothing gives greater ſatisfaction than the ſenſe of having diſpatched a great deal of buſineſs to public *emolument*. *Tatler.*

EMOLUMEN'TAL, *adj.* Uſeful.—Who receive and promote his dictates in all that is laudable, and truly *emolumental* of this nature. *Evelyn's Preface.*

EMON'GST, *prep.* [ſo written by *Spenſer.*] Among:

The merry birds of every ſort,
Chaunted aloud their chearful harmony;
And made *emongſt* themſelves a ſweet conſort,
That quick'ned the dull ſp'rit with muſical comfort.
Fairy Queen.

EMO'TION, *ſ.* [Fr.] Diſturbance of mind; vehemence of paſſion, or pleaſing or painful.—I will appeal to any man who has read this poet, whether he finds not the natural *emotion* of the ſame paſſion in himſelf, which the poet deſcribes in his feigned perſons? *Dryden.*

Thoſe rocks and oaks that ſuch *emotion* felt,
Were rural maids whom Orpheus taught to melt. *Granville.*

EMOUI', or HIA-MEN, an iſland near the ſouth-eaſt coaſt of China, in the province of Fo-kien, about fifteen miles in circumference, with a port capable of containing any number of veſſels, with ſufficient depth of water; where the emperor keeps a garriſon of ſeveral thouſand men. In the beginning of the eighteenth century it was frequented by European veſſels for trade, but is now neglected for Canton. Lat. 24. 30. N. lon. 1. 52. E. Peking.

To EMPA'LE, *v. a.* [*empaler*, Fr.] To fence with a pale:

How happy's he, which hath due place aſſign'd
T' his beaſts, and diſaforeſted his mind?
Empal'd himſelf to keep them out, not in;
Can ſow, and dares truſt corn, where they have been.
Donne.

To fortify.—The Engliſh *empaled* themſelves with their pikes, and therewith bare off their enemies. *Hayward.*—To incloſe; to ſhut in:

They have *empal'd* within a zodiac
The free-born ſun, and keep twelve ſigns awake
To watch his ſteps: the Goat and Crab controul
And fright him back. *Donne.*

To put to death by ſpitting on a ſtake fixed upright:

Let them each be broken on the rack;
Then, with what life remains, *empal'd*, and left
To writhe at leiſure round the bloody ſtake. *Addiſon.*

EMPA'LEMENT, *ſ.* The kind of puniſhment in which a ſharp pole was thruſt up the fundament. In botany, the calyx, that part which ſurrounds and ſupports the petals or flower leaves of a plant.

EMPA'LING, *part. act.* Fencing, fortifying, incloſing, putting to death by ſpitting the body on a pole.

EMPAN'NEL, *ſ.* [from *panne*, Fr.] The writing or entering the names of a jury into a parchment ſchedule, or roll of paper, by the ſheriff, which he has ſummoned to appear for the performance of ſuch public ſervice as juries are employed in. *Cowel.*

To EMPAN'NEL, *v. a.* To ſummon to ſerve on a jury.—I ſhall not need to *empannel* a jury of moraliſts or divines, every man's own breaſt ſufficiently inſtructing him. *Government of the Tongue.*

EMPAR'LANCE, *ſ.* in law, ſee IMPARLANCE.—A parley in the midſt of a conflict:

Full often times did Britomart aſſay
To ſpeak to them, and ſome *emparlance* move. *Spenſer.*

EM'PASM, *ſ.* [*empaſma*, Lat. from εν, and πασσω, Gr. to ſprinkle.] A medicine compoſed of ſweet powders, to take away ſweat, correct the bad ſcent of the body, and allay inflammations, by being ſprinkled or rubbed upon the parts affected.

To EMPAS'SION, *v. a.* To move with paſſion; to affect ſtrongly; to throw off from equanimity:

So ſtanding, moving, or to height upgrown,
The tempter, all *empaſſion'd*, thus began. *Milton.*

EMPAS'SIONATE, *adj.* Strongly affected:

With the neare touch whereof in tender hart
The Briton prince was ſore *empaſſionate*,
And woxe inclined much unto her part. *Spenſer.*

EMPE'DOCLES, an eminent Sicilian philoſopher and poet, a native of Agrigentum, who flouriſhed about the 84th olympiad, or 444 years before Chriſt. Upon the death of his father Meto, who was a wealthy citizen of Agrigentum, he became a man of conſequence and weight among his fellow-citizens, and ſecured their confidence and eſteem by eſpouſing, in all ſtruggles of a political nature, the intereſts of the great body of the people, and by the liberal and generous purpoſes to which he applied a conſiderable ſhare of his large paternal eſtate. Among other inſtances, he beſtowed a part of it in the form of dowries, on indigent young women, who by thoſe means were enabled to marry into reſpectable connections. There was ſomething of oſtentation, however, in the diſtinction of dreſs which he aſſumed, wearing a purple robe, a golden girdle, and a Delphic crown; in the numerous train of ſervants by which he choſe to be attended; and in the grave and commanding aſpect which he always maintained. Such ſtately appearances would have been conſidered as indications, in moſt men, of a wiſh to obtain the poſſeſſion of ſovereign power. But Empedocles had no ſuch deſire. On the contrary, he was, as Ariſtotle affirms, utterly averſe to taking any government upon him, and, according to Xanthus, refuſed a crown which was once offered him, whether by the Agrigentines, or by what other people, we are not informed; ſhewed himſelf a determined enemy to tyranny, under whatever form it was attempted to be eſtabliſhed; and conſtantly employed his wealth and influence in preſerving and defending the rights and liberties of his countrymen. Empedocles alſo poſſeſſed poetical talents. Some of his pieces were ſung at the olympic games; and his ſtile is ſaid by Ariſtotle to have been homerical, forcible in expreſſion, and adorned with numerous metaphors and other poetical figures. Henry Stephens has collected fragments of his verſes which are diſperſed through various ancient writers; and their exiſtence affords ſome ground for the opinion of Fabricius, that Empedocles was the real author of that ancient fragment which bears the name of The Golden Verſes of Pythagoras. He is alſo ſaid to have written ſome tragedies, and treatiſes on politics. That he was an eminent maſter of the art of eloquence, may be concluded not only from the effects produced on his fellow-citizens by his harangues to them, but from the circumſtance that Georgius Leontinus, a celebrator orator, was his pupil. There is much uncertainty in the accounts relative to the time and manner of his death. According to certain writers, he periſhed in the burning crater of mount Etna. One of their accounts ſtates, that he incautiouſly ſlipped into it while attempting to examine the phenomenon; and that the accident was diſcovered by means of one of his brazen ſandals, which was thrown out from the mountain in a ſubſequent eruption. Strabo, however, and other writers, reject this ſtory as fictitious. Timæus's relation, moſt probably, is the true one, which affirms that towards the cloſe of his life, Empedocles went into Greece, and that he never returned to Sicily; by which means the time and manner of his death remain unknown. According to Ariſtotle, he died when he completed his 60th year; but ſome make him 67, and others 109, years old. A ſtatue was erected to his memory at Agrigentum, which was afterwards carried to Rome. The following is the ſubſtance of his philoſophy, as collected from his Fragments: That it is impoſſible to judge of truth by the ſenſes, without the aid of reaſon, which is led, through their medium, to contemplate the real nature and immutable eſſences of things; that the firſt principles of nature are of two kinds, active and paſſive, the former of which is unity, or God, the latter, matter; that the active principle is a ſubtle ethereal fire, intelligent and divine, which gives being to all things, animates all things, and into which all things will finally be reſolved; that there are in the regions of the air numerous demons, emanations from the divine nature, who preſide over human affairs; that brute animals are allied to the Divinity, as conſtituting a part of thoſe animated beings which the ſame ſpirit unites to itſelf, and to one another, on which account it is unlawful to kill or eat animals; that the world is one whole, circumſcribed by the revolution of the ſun, and ſurrounded by a maſs of inactive matter; that the firſt material principles of the four elements are ſimilar atoms, indefinitely ſmall, and of a round form, poſſeſſing the primary qualities of friendſhip and diſcord; that theſe atoms being excited to motion by the energy of the intellectual fire, or the divine mind, homogeneous parts became united, and heterogeneous ſeparated, and the four elements compoſed of which all bodies are generated; that all motion, as well as all life and being, muſt therefore be aſcribed to God; that the firſt principles of the elements are eternal; that nothing can begin to exiſt, or be annihilated, and that all the varieties of nature are produced by combination or ſeparation; that in the formation of the world ether was firſt ſecreted from chaos, then fire, then earth, by the agitation of which were produced water and air; that the heavens are a ſolid body of air cryſtalliſed by fire; that the ſtars are bodies compoſed of that fiery ſubſtance which proceeded from ether at its firſt ſecretion, and fixed in the cryſtal of heaven, while the planets wander freely beneath it; that the ſun is of a fiery maſs, larger than the moon; that the moon is in the form of a hollow diſh, and twice as far from the ſun as from the earth; that the ſoul of man conſiſts of two parts, the ſenſitive, produced from the ſame firſt principles with the elements, and the rational, a demon ſprung from the divine ſoul of the world, and placed in the body by way of puniſhment for its crimes in a former ſtate, which it is to ſuſtain till it is ſufficiently purified to return to God; that in the courſe of the tranſmigration to which all human ſouls are liable, they may inhabit not only different human bodies, but the bodies of any animal or plant; and that all nature is ſubject to the immutable and eternal law of neceſſity.

To EMPE'OPLE, *v. a.* To form into a people or community:

He wonder'd much, and 'gan enquire
What ſtately building durſt ſo high extend
Her lofty towers unto the ſtarry ſphere,
And what unknown nation there *empeopled* were? *Spenſer.*

EMPEREU'R (Conſtantine l'), a learned Dutch divine and oriental ſcholar, native of Oppyck, in Holland. He applied himſelf to the ſtudy of juriſprudence and theology, and took the degree of doctor in the latter faculty. But he principally diſtinguiſhed himſelf by his proficiency in oriental literature, and Jewiſh antiquities. After having made himſelf acquainted with the Syriac, Arabic, and Hebrew, languages, he took much pains to encourage

encourage the ſtudy of them among Chriſtian ſcholars; and he alſo employed himſelf in refuting the objections of the Jews againſt the Chriſtian religion. Druſius and Erpenius were his maſters in the oriental tongues. He was profeſſor of theology and of Hebrew at Harderwyck during eight years, after which he was appointed profeſſor of Hebrew at Leyden in 1627. On that occaſion he pronounced an oration *De dignitate & utilitate Linguæ Hebraicæ*. He died in 1648, at an advanced time of life, and not long after he had entered on the duties of theological profeſſor in the univerſity of Leyden. His tranſlations of Jewiſh books and Talmudical writings, though not free from faults, deſerve to be reckoned among the beſt works of that deſcription, and are accompanied with uſeful notes and remarks. His works were, 1. Diſputationes theologicæ Hardevicenæ. 2. Paraphraſis Joannis Jachiadæ in Danielem. 3. Itinerarium Rabbi Benj. Tudel. 4. *Halicot Olam*, ſeu Clavis Talmudicæ. 5. *Middot*, ſeu de Templo Hieroſolymitano, & de menſuris Templi. 6. *Brava Cava*, ſeu de Damnis. 7. Abarbanel & Alcheiſch in Eſai liii. with a refutation of the Grammar of Moſes Kimchi; and an edition, with uſeful remarks, of Bertram's valuable treatiſe *De Republica Hebræorum*.

EMPE'RISHT, *part. adj.* Periſhed:

That his ſad mother ſeeing his ſore plight
Was greatly woe-begon, and gan to feare
Leaſt his fraile ſenſes were *emperiſht* quight. *Spenſer.*

EM'PEROR, *ſ.* [*empereur*, Fr. *imperator*, Lat.] The higheſt ruler of large kingdoms and territories; a title anciently given to renowned and victorious generals of armies, who acquired great power and dominion. And this title is not only given to the emperor of Germany, as emperor of the Romans; but was formerly belonging to the kings of England, as appears by a charter of king Edgar. It was alſo a title taken by ſome of the early kings of France. See the articles FRANCE and GERMANY.

EM'PERY, *ſ.* [*empire*, Fr. *imperium*, Lat.] Empire; ſovereignty; dominion. *A word out of uſe:*

A lady
So fair, and faſten'd to an *empery*,
Would make the great'ſt king double. *Shakeſpeare.*

EM'PETRUM, *ſ.* [from εν and πετρος, a rock; ſo named from the place of its growth.] In botany, a genus of the claſs dioecia, order triandria, natural order of ericæ. The generic characters are—I. Male. Calyx: perianthium three-parted; diviſions ovate, permanent. Corolla: petals three, ovate-oblong, narrower at the baſe, larger than the calyx, withering. Stamina: filaments three, capillary, very long, hanging forwards; antheræ upright, ſhort, two-parted. II. Female. Calyx: perianthium as in the male. Piſtillum: germ ſuperior, depreſſed; ſtyle ſcarce any; ſtigmas nine, reflex-expanding; (ſtyles three to nine. *Gærtner.*) Pericarpium: berry orbiculate, depreſſed, one-celled, larger than the calyx. Seeds: nine, jointedly placed in a circle, on one ſide bulging, on the other cornered; (ſeeds three to nine, *G.*) —*Eſſential Character.* Male. Calyx, three-parted; corolla three-petalled; ſtamina, long. Female. Calyx, three-parted, corolla, three-petalled; ſtyles, three to nine; berry, three to nine.

Species. 1. Empetrum album, or white-berried heath: erect. This differs from the following ſpecies in having the ſmaller branches pubeſcent; the leaves longer, ſomewhat ſcabrous on their upper ſurface, and channelled underneath. Berry guarded at the baſe by the calyx, fleſhy, white, ſhining. Seeds two or three, ſeldom more, bony, on one ſide convex and obſcurely furrowed, on the other angular or flattiſh. Native of Portugal.

2. Empetrum nigrum, or black-berried heath, crow or crake-berry. A ſmall decumbent ſhrub. The outer bark deciduous, and of a brown colour, the inner yellow. Branches rough with the remains of the petioles. The terminating bud conſiſts of five membranaceous leaflets, hairy at the edge; this puts forth five little branches, of which four are in a whorl. The leaves are in fours; they are ſomewhat three-cornered, with a white linear keel, and petioled. Flowers axillary, ſeſſile, ſolitary, ſurrounded by a bracte reſembling an outer three-parted calyx; calyx whitiſh, petals purple; filaments very long, and purple, with browniſh black anthers. The female is like the male, but the ſtem is redder; the leaves deep green, in fives; piſtil black. Berries browniſh black, when ripe; the colour and ſize of juniper berries, marked at the top with a ſmall round hole, protected at the bottom with a whitiſh three-leaved calyx, and a red corolla of three petals: the fleſh is rather firm, and pale green, except that towards the circumference it is purpliſh; receptacle central, columnar, ſlender. From ſix to nine bony pale-coloured ſeeds are placed round this in a ring, and fixed to it a little above the baſe. Linnæus informs us that he once, and once only, met with a plant which had hermaphrodite flowers. Profeſſor Jacquin obſerved ſeveral with three, two, and even one, ſtamen only; a few females, but no males; the ſtamens are very upright, ſtiff, and ſtraight. Native of the northern parts of Europe, generally in elevated ſituations, both on dry, barren, and mooriſh or boggy ſoils; in moors from the Baltic to the Eaſtern Ocean, in Kamtſchatka, and the iſles towards America; in the mountains of Lapland, and at the mines of Fahlun it abides, when other plants have periſhed with the cold; in Warwickſhire, Staffordſhire, Derbyſhire, and the northern counties of England, it is frequent; alſo in Scotland. The Highlanders and children in Scotland eat the berries, but they are no very deſirable fruit; and taken in large quantities are ſaid to bring on a ſlight head-ach. The Ruſſian peaſants, however, eat them; and the Kamtſchadales gather great quantities of them to boil with their fiſh, or to make a ſort of pudding with the bulbs of their lilies. They are eſteemed antiſcorbutic and diuretic. Grouſe and heath-cocks feed upon them, and they give the excrement a tinge of purple. Boiled in alum-water they afford a dark purple dye; and boiled with fat they are ſaid to be uſed in dying otter and ſable ſkins black. Cattle do not ſeem to browſe on this ſhrub. Linnæus ſays that it flowers in April with the elm; with us it flowers in April and May.

Propagation and Culture. Theſe little ſhrubs are ſeldom propagated in gardens unleſs for variety ſake; but they may be cultivated in ſhady places, and will thrive very well in gardens, where the ſoil is ſtiff. The plants ſhould be procured from the places where they grow naturally, for the ſeeds remain a year in the ground before they vegetate, and afterwards are very ſlow in their growth. If they are planted on a moiſt boggy ſoil in autumn, they will get roots in the winter, and will require no farther care than to clear them from weeds; for theſe low ſhrubs commonly grow upon the tops of wild mountains, where the ſoil is peaty, and full of bogs. See BEGONIA.

EM'PHASIS, *ſ.* [*emphaſe*, Fr. *emphaſis*, Lat. εμφασις, Gr.] In rhetoric, a remarkable ſtreſs laid upon a word or ſentence; particular force impreſſed by ſtile or pronunciation.—*Emphaſis* not ſo much regards the time as a certain grandeur, whereby ſome letter, ſyllable, word, or ſentence, is rendered more remarkable than the reſt, by a more vigorous pronunciation, and a longer ſtay upon it. *Holder.*

EMPHA'TIC, or EMPHATICAL, *adj.* [*emphatique*, Fr. *enfatico*, It. *emphaticus*, Lat. of εμφατικος, of εν and φαινω, Gr.] Forcible; ſtrong; ſtriking.—Where he endeavours to diſſuade from carnivorous appetites, how *emphatical* is his reaſoning! *Garth.*—Striking the ſight.—It is commonly granted, that *emphatical* colours are light itſelf, modified by refraction. *Boyle.*

EMPHA'TICALLY, *adv.* Strongly; forcibly; in a ſtriking manner.—How *emphatically* and divinely does every word proclaim the truth of the goſpel. *South.*—According to appearance.—What is delivered of the incurvity of dolphins, muſt be taken *emphatically*, not really, but in appearance, when they leap above water, and ſuddenly ſhoot down

down again. *Brown.*—With emphaſis.—This introduced pretty generally the right of diſpoſing one's property by teſtament, according to the pleaſure of the deceaſed; which we therefore *emphatically* ſtile his will. *Blackſtone.*

EMPHEREPY'RA, *ſ.* in mineralogy, a genus of iron ſtone.

EMPHERO'MENUS, *ſ.* [from εμφερω, Gr. to bear.] A term with phyſicians for urine which has ſediment.

EMPHRAC'TICS, *ſ.* [*emphractica*, Lat. from εμφρασσω, Gr. to obſtruct.] Medicines which applied to the ſkin ſhut up the pores.

EMPHRA'GMA, or EMPHRAXIS, *ſ.* An obſtruction or impediment.

EMPHYSE'MA, *ſ.* [from εμφυσαω, Gr. to inflate.] A tumour ariſing from air admitted into the cellular membrane.

EMPHYSE'MATOUS, *adj.* [from εμφυσημα, Gr.] Bloated; puffed up; ſwollen.—The ſigns of a gangrene are theſe: the inflammation loſes its redneſs, and becomes duſkiſh and livid; the tenſeneſs of the ſkin goes off, and feels to the touch flabby or *emphyſematous*; and veſications, filled with ichor of different colours, ſpread all over it. *Sharp.*

EMPHYSO'DES, *ſ.* With phyſicians, an extreme heat in fevers which occaſions puſtules and inflammations in the mouth.

EMPHYTEU'SIS, *ſ.* [from εν, in, and φυτευω, Gr. to plant.] The act of planting; the act of clearing lands for plantation; the tenure of lands on condition of planting; the alienation of lands on condition of planting, and paying a ſmall annual rent to the original proprietor.

EMPHYTEU'TA, or EMPHYTEUTES, *ſ.* The tenant that rents land on condition of planting it.

EMPHYTEU'TIC, *adj.* Belonging to emphyteuſis; let out to farm; let on condition of planting. *Scott.*

To EMPIER'CE, *v. a.* To pierce into; to enter into by violent appulſe:

The weapon bright,
Taking advantage of his open jaw,
Ran through his mouth with ſo importune might,
That deep *empierc'd* his darkſome hollow maw. *Spenſer.*

EMPI'GHT, *preterite* and *part.* from *to pight*, or *pitch.* See PITCH. Set; fixed; faſtened:

But he was wary, and ere it *empight*
In the meant mark, advanc'd his ſhield atween. *Spenſer.*

EM'PIRE, *ſ.* [*empire*, Fr. *imperium*, Lat.] Imperial power; ſupreme dominion; ſovereign command:

Aſſert, ye fair ones, who in judgment ſit,
Your ancient *empire* over love and wit. *Rowe.*

The region over which dominion is extended. Command over any thing.—A nation extended over vaſt tracts of land, and numbers of people, arrives in time at the ancient name of kingdom, or modern of *empire*. *Temple.*

Sextus Pompeius
Hath given the dare to Cæſar, and commands
The *empire* of the ſea. *Shakeſpeare.*

EM'PIRES, *Duration of.*—No preciſe duration can be fixed to the Eaſtern empires, owing to the inaccuracy of hiſtorical accounts; the following ſtatement of the principal of them ſeems the beſt authenticated and neareſt the truth. The Aſſyrian empire, over a great part of Aſia, from Ninus to Sardanapalus, laſted, according to Juſtin, 1300 years; Euſebius ſays 1240; Georgius Monachus, 1340. The empire of Aſia was transferred from the Aſſyrians to the Medes in the 317th year before Chriſt: their reign, according to Euſebius, was about 260 years, although Diodorus and Georgius Monachus differ from him, and alſo one another, in the names of the kings, and dates of their reigns. From the foundation of the Perſian empire by Cyrus, to its deſtruction by Alexander, about 232 years elapſed. The Macedonian empire, from its foundation by Philip, to the 11th year of king Perſeus, when it was reduced to a Roman province by Paulus Æmilius, laſted, according to Juſtin, 192 years. The Roman empire, from the foundation of the city of Rome, 753 years before Chriſt, to the final deſtruction of the weſtern empire by Odoacer, in the 476th year of the Chriſtian era, laſted 1229 years.

All theſe empires owed their origin and increaſe to conqueſt, and an union of diſſonant parts; they therefore fell to pieces ſo ſoon as luxury and effeminacy had undermined them, and the bravery of the ancient founders had become extinct in their poſterity. Enterpriſing people were ſoon found ready to take advantage of their degeneracy. The Aſſyrian and Roman empires were the ſloweſt in growth, and the longeſt in decay. The Chineſe is the moſt remarkable empire, as well for its durability, as for the invariable continuation of the ſame laws and manners for a long ſucceſſion of ages. Its hiſtory, however, is very little known by Europeans, and what the Chineſe themſelves pretend to give of it, is too ſophiſticated by fable to be believed. It is nevertheleſs certain, that after being conquered by the Tartars, they ſtill preſerved the ſame laws, religion, and language; and as the conquerors became loſt in the immenſe numbers of the conquered, and by degrees aſſumed their manners, the dominions of the Tartars might be ſaid to be added to the Chineſe empire.

The Britiſh empire reſembles the Aſſyrian and Roman in the ſlowneſs of its growth, and the Chineſe in the fate of its invaders. The Saxons, Danes, Romans, and Normans, after their ſucceſſive irruptions, remained moſtly in England, and formed, in proceſs of time, one nation, governed by one law, and acknowledging ſubjection to one prince. England, by its ſubjection and union with Ireland, Wales, and Scotland, laid the foundation of the Britiſh empire; and by its conqueſts and colonies in every part of the globe, and more particularly by its commerce and manufactures, raiſed it to that pitch of grandeur as to be ſecond to none. Beſides having given birth to the United States of North America, a nation nearly as populous as itſelf, it is now forming ſettlements in New South Wales, with the ſame unremitting watchfulneſs, toil, and labour, as attended the foundation of the United States.

The foundation of the American republic affords a ſplendid ſpectacle to the eye of the univerſe. Its increaſing ſtrength may place it in the foremoſt rank of nations; and, if the Americans continue united, and know where to place a proper bound to their love of dominion, there is a great probability that it will be as durable as any empire the world has witneſſed; but, if they diſunite, or diminiſh their internal ſtrength by too great an extenſion of their poſſeſſions, they will become petty ſtates, perpetually ſtruggling with each other, and a prey to factious deſigning men. All the advantages attending the monarchies or republics of the old world, center in the new, as well as others which they never poſſeſſed. The Aſſyrian, Perſian, Macedonian, and Roman, empires, the dominions of Charlemagne, and the Saracens, aroſe from conqueſt, and the uniting of kingdoms different in arts, manners, languages, and religions. The American empire is formed by commerce, and the arts of peace; by people ariſing from the ſame ſtock; emigrating from the ſame country; poſſeſſing the ſame language, religion, laws, manners, and purſuits; for the ſmall variation in ſome diſtricts, owing to the intermixture of Germans, forms only a very ſlight exception, which will be entirely done away in the courſe of a very few generations. By this intimate connection of men and morals, the cauſe, which accelerated and finally proved the overthrow of the Eaſtern empires, is totally done away in the Weſtern. The extent of the United States is commenſurate with any probable increaſe of population for ages to come; and it poſſeſſes all the ſolid advantages of the Chineſe empire, without the fatal neighbourhood of the Tartars. By the ceſſion of Louiſiana, the Americans have gained a

vaſt

vaſt increaſe of territory; and the free navigation of the Miſſiſſippi, which is thereby ſecured to them, will increaſe the population of the weſtern parts, and form a complete barrier on that ſide. The two Floridas can never be an object of terror to them; and, in caſe of a rupture between Spain and the United States, will ſoon be taken poſſeſſion of by the latter. The Britiſh poſſeſſions on the north and weſt are alone to be dreaded, and in the latter quarter they are ſtrongly guarded by the forts eſtabliſhed by the Britiſh, and lately delivered up to the Americans, according to the treaty of Paris. Thus ſituated, the United States appear formed by nature for a great, permanent, and independent, government. Such an extenſive tract of country, covered with a people ſprung from an active and induſtrious nation, whoſe example they ſeem anxious to emulate, ought to form a commonwealth as indiſſoluble as humanity will allow.

EMPI'RIC, *ſ.* [*empiricus*, Lat. from εν, Gr. in, and πειρα, experience.] This word ſeems to have been pronounced *empiric* by Milton, and *émpiric* by Dryden. Milton's pronunciation is to be preferred. *Johnſon.* A trier; an experimenter; ſuch perſons as have no true education in, or knowledge of, phyſical practice, but venture upon hearſay and obſervation only. *Quincy.*—Such an averſion and contempt for all manner of innovation, as phyſicians are apt to have for *empirics*, or lawyers for pettifoggers. *Swift.*

Th' illit'rate writer, *emp'ric*-like applies
To each diſeaſe unſafe chance remedies;
The learn'd in ſchool, whence ſcience firſt began,
Studies with care th' anatomy of man. *Dryden.*

EMPI'RIC, or EMPIRICAL, *adj.* Verſed in experiments:

By fire
Of ſooty coal, the *empiric* alchemiſt
Can turn, or holds it poſſible to turn,
Metals of droſſieſt ore to perfect gold. *Milton.*

Known only by experience; practiſed only by rote, without rational grounds.—The moſt ſovereign preſcription in Galen is but *empiric* to this preſervative. *Shakeſpeare.*

In extremes, bold counſels are the beſt;
Like *empiric* remedies, they laſt are try'd,
And by th' event condemn'd or juſtify'd. *Dryden.*

EMPI'RICALLY, *adv.* Experimentally; according to experience.—We ſhall *empirically* and ſenſibly deduct the cauſes of blackneſs from originals, by which we generally obſerve things denigrated. *Brown.*—Without rational ground; charlatanically; in the manner of quacks.

EMPI'RICISM, *ſ.* Dependence on experience without knowledge or art; quackery.

EM'PIS, *ſ.* in entomology, a genus of inſects belonging to the order diptera. The characters are theſe: mouth with an inflected ſucker and proboſcis: ſucker with a ſingle-valved ſheath, and three briſtles: feelers ſhort and filiform: antennæ ſetaceous. There are twenty-nine ſpecies of this inſect now known, moſt of them very minute, which live by ſucking out the blood and juices of the larger animals. Five of the ſpecies are found in England; the largeſt of which is the *empis livida*, ſeen frequently in our gardens upon plants and flowers; the head is ſmall, of a roundiſh form; the thorax gibbous, of a pale green colour, with three longitudinal lines or bands. The eyes are of a reddiſh brown; the upper part of the abdomen of a duſky dun colour; the feet are long, hairy, and of a paler brown; the wings are incumbent, rather long, with dun-coloured veins. This is correctly figured in the engraving.

EMPLA'GIA, *ſ.* [Gr.] With phyſicians, a palſy. *Scott.*

EMPLAS'TER, *ſ.* [*emplatre*, Fr. *impiaſtro*, Ital, εμπλαστρον, Gr. This word is now always pronounced, and generally written *plaſter.*] An application to a ſore of an oleaginous or viſcous ſubſtance, ſpread upon cloth. See PLASTER.—All *emplaſters*, applied to the breaſts, ought to have a hole for the nipples. *Wiſeman.*

To EMPLAS'TER, *v. a.* To cover with a plaſter.—They muſt be cut out to the quick, and the ſores *emplaſtered* with tar. *Mortimer.*

EMPLAS'TIC, *adj.* [εμπλαστικος, Gr.] Viſcous; glutinous; fit to be applied as a plaſter.—Reſin, by its *emplaſtic* quality, mixed with oil of roſes, perfects the concoction. *Wiſeman.*—*Emplaſtic* applications are not ſufficient to defend a wound from the air. *Arbuthnot.*

To EMPLE'AD, *v. a.* To indict; to prefer a charge againſt; to accuſe.—Antiquity thought thunder the immediate voice of Jupiter, and *empleaded* them of impiety that referred it to natural caſualties. *Glanville.*

Since none the living villains dare *emplead*,
Arraign them in the perſons of the dead. *Dryden.*

EMPLEU'RUM, *ſ.* [εμπλευρος, Gr. *latera plena habens.*] In botany, a genus of the claſs monoecia, order tetrandria, natural order aggregatæ, (rutaceæ, *Juſſ.*) The generic characters are—I. Male flowers. Calyx: perianthium one-leafed, bell-ſhaped, four-toothed, permanent. Corolla: none. Stamina: filaments four, awl-ſhaped, longer than the calyx, patulous; antheræ oblong, ſubquadrangular, retuſe. II. Female flowers on the ſame plant. Calyx: as in the male. Corolla: none. Piſtillum: germ ſuperior, oblong, compreſſed, terminated by a leafy, erect, proceſs; ſtyle, none; ſtigma placed on the lateral toothlet of the germ, cylindric, deciduous. Pericarpium: capſule oblong, compreſſed, crowned by a leafy proceſs, one-celled, opening along the ſtraighter margin. Seed: ſolitary, oblong, covered with a ſubcoriaceous bivalve aril.—*Eſſential Character.* Male. Calyx, four-cleft; corolla, none. Female. Calyx, four-cleft, inferior; corolla, none; ſtigma cylindric, placed on the lateral toothlet of the germ; capſule opening on the ſide; ſeed, one, arilled.

Empleurum ſerrulatum, or cape empleurum, a ſingle ſpecies. This is a ſhrub with wand-like even branches; leaves like thoſe of a willow, alternate, ſubpetioled, linear lanceolate, even above, beneath longitudinally wrinkled, ſmooth, quite entire on the edge, but appearing to be ſerrate by pellucid dots; flowers ſmall, moſt of them male. In the habit and aril of the ſeed it reſembles dioſma, but it has no corolla, and only a ſingle capſule. Firſt obſerved by Sparrmann, at the Cape of Good Hope; introduced here by Mr. Francis Maſſon in 1774.

To EMPLO'Y, *v. a.* [*employer*, Fr.] To buſy; to keep at work; to exercife. It is uſed both as agent; as *The king* employed *the miniſter*; or cauſe, as *The public credit* employed *the miniſter:*

For thrice, at leaſt, in compaſs of the year,
Thy vineyard muſt *employ* the ſturdy ſteer. *Dryden.*

In the following quotations it is uſed with *in*, *about*, *to*, and *upon*, before the object. *To* ſeems leſs proper.—Their principal learning was aplied to the courſe of the ſtars, and the reſt was *employed in* diſplaying the brave exploits of their princes. *Temple.*—Our reaſon is often puzzled, becauſe of the imperfection of the ideas it is *employed about*. *Locke.*—The proper buſineſs of the underſtanding is not that which men always *employ* it *to*. *Locke.*—This is a day in which the thoughts of our countrymen ought to be *employed upon* ſerious ſubjects. *Addiſon.*

On the happy change, the boy
Employ'd his wonder and his joy. *Prior.*

To uſe as an inſtrument:

The cleanly cheeſe-preſs ſhe could never turn;
Her awkward fiſt did ne'er *employ* the churn. *Gay.*

To uſe as means.—The money was *employed to* the making of galleys. 2 *Mac.*

Peace is not freed from labour, but from noiſe;
And war more force, but not more pains, employs. *Dryd.*

To uſe as materials.—The labour of thoſe who felled and framed the timber *employed about* the plough, muſt be charged on labour. *Locke.*—To commiſſion; to entruſt with the management of any affairs.—Jonathan and Jahaziah were *employed about* this matter. *Ezra*, x. 15.—To fill up with buſineſs:

To ſtudy nature will thy time employ;
Knowledge and innocence are perfect joy. *Dryden.*

To paſs or ſpend in buſineſs:

Why, whilſt we ſtruggle in this vale beneath,
With want and ſorrow, with diſeaſe and death,
Do they more bleſs'd perpetual life *employ*
In ſongs of pleaſure, and in ſcenes of joy? *Prior.*

EMPLO'Y, *ſ.* Buſineſs; object of induſtry:

Preſent to graſp, and future ſtill to find,
The whole *employ* of body and of mind. *Pope.*

Public office.—The honours and the burdens of great poſts and *employs* were joined together. *Atterbury.*

EMPLOYA'BLE, *adj.* Capable to be uſed; proper for uſe.—The objections made againſt the doctrine of the chemiſts, ſeem *employable* againſt this hypotheſis. *Boyle.*

EMPLOY'ER, *ſ.* One that uſes, or cauſes to be uſed.—That man drives a great trade, and is owner or *employer* of much ſhipping, and continues and increaſes in trade and ſhipping. *Child on Trade.*

EMPLOY'MENT, *ſ.* Buſineſs; object of induſtry; object of labour. Buſineſs; the ſtate of being employed. Office; poſt of buſineſs.—Leaders, on each ſide, inſtead of intending the public weal, have their hearts wholly ſet to get or to keep *employments*. *Swift.*—Buſineſs intruſted:

Call not your ſtocks for me; I ſerve the king,
On whoſe *employment* I was ſent to you. *Shakeſpeare.*

Implement:

My ſtay hath been prolongued
With hunting obſcure nooks for theſe *employments.**
[* An iron crow and a halter.] *Chapm. Widow's Tears.*

EMPNEUMATO'SIS, *ſ.* [from εν, in, and πνεω, to blow.] With phyſicians, an inflation of the ſtomach, or womb, or any other part.

To EMPOI'SON, *v. a.* [*empoiſonner*, Fr.] To deſtroy by poiſon; to deſtroy by venomous food or drugs; to poiſon.—Muſhrooms cauſe the incubus, or mare in the ſtomach, therefore the ſurfeit of them may ſuffocate and *empoiſon*. *Bacon.*—To taint with poiſon; to envenom. *This is the more uſual ſenſe.* It frequently occurs with a metaphorical meaning in poetry.—Or want's *empoiſon'd* arrow, ridicule. *Shenſtone.*

One doth not know,
How much an ill word may *empoiſon* liking. *Shakeſpeare.*

EMPOI'SONER, *ſ.* [*empoiſonneur*, Fr.] One who deſtroys another by poiſon.—He is vehemently ſuſpected to have been the *empoiſoner* of his wife, thereby to make vacant his bed. *Bacon.*

EMPOI'SONMENT, *ſ.* [*empoiſonnement*, Fr.] The practice of deſtroying by poiſon.—It were dangerous for ſecret *empoiſonments*. *Bacon.*

EM'POLIS, a town of Italy, in the duchy of Tuſcany, ſituated on the Arno: fifteen miles weſt of Florence. It is deſcribed by Dr. John Targioni Tozetti, in his Travels through Tuſcany, publiſhed in 1792, as follows: "Empolis is ſituated as happily as can be deſired for a great metropolis; in the middle of an immenſe plain, ſalubrious and fruitful, well aired, ſurrounded by delicious and abundant hills, neither too far from, nor too near to, the mountains, and riſes above a majeſtical navigable river, ſufficiently near to the ſea. I never caſt my eyes on this ſuperb town without feeling an indignation againſt the famous Farinati Degli Oberti, who, in 1260, dared ſingly to oppoſe the project of deſtroying Florence, and removing the inhabitants to Empolis. This tranſmigration was certainly not to the taſte of our anceſtors, but would have been extremely advantageous for us; for Empolis would have become, in time, a town infinitely more beautiful, and more ſalubrious, than Florence: remains of the admired ages of antiquity have been found in it, and it has been conſiderable alſo in more modern times. The preſent houſes are very low, and into moſt of them the entrance is by a deſcent; which ſhews the ſurface of the earth to be new ſoil, ſomewhat raiſed."

EMPORE'TIC, *adj.* [*emporeticus*, Lat. of εμπορητικος, Gr.] That which is diſpoſed of at markets, or in merchandize.

EMPO'RIÆ, anciently a double city of the Hither Spain, near the Pyrenees; ſeparated by a wall; one part was occupied by the Greeks of Phocæa, whence originally are the Maſſilienſes; the other, by native Spaniards, to whom was added by Auguſtus a Roman colony. Now *Ampurias*, in Catalonia.

EMPO'RIUM, *ſ.* [from εμπορεω, Gr. to negotiate.] A place of merchandize; a mart; a town of trade; a commercial city:

And while this fam'd *emporium* we prepare,
The Britiſh ocean ſhall ſuch triumphs boaſt,
That thoſe who now diſdain the trade to ſhare,
Shall rob like pirates on our wealthy coaſt. *Dryden.*

The brain is ſo called, as being the place where all rational and ſenſitive tranſactions are collected.

EMPO'RIUM, two ancient cities near Placentia; one fortified and guarded by a ſtrong garriſon, at which Hannibal met a repulſe: the other, Hannibal took and plundered; now thought to be *Ponte Nura*, in the duchy of Placentia.

To EMPO'VERISH, *v. a.* [*pauvre*, Fr.] To make poor; to depauperate; to reduce to indigence.—To leſſen fertility; as, tillage *empoveriſhes* land.—For ſenſe of honours, if it *empoveriſheth* a man, it is, in his eſteem, neither honour nor ſenſe. *South.*

Freſh roſes bring,
To ſtrow my bed, 'till the *empoveriſh'd* Spring
Confeſs her want. *Prior.*

EMPO'VERISHER, *ſ.* One that makes others poor. That which impairs fertility.—They deſtroy the weeds, and fit the land for after-crops, being an improver, and not an *impoveriſher*, of land. *Mortimer.*

EMPO'VERISHMENT, *ſ.* Depauperation; cauſe of poverty; drain of wealth.—Being paid, as it is, now ſome, and then ſome, it is no great burden unto her, nor any great *empoveriſhment* to her coffers. *Spenſer's State of Ireland.*

To EMPOW'ER, *v. a.* To authoriſe; to commiſſion; to give power or authority to any purpoſe.—You are *empowered*, when you pleaſe, to give the final deciſion of wit. *Dryden.*—To give natural force; to enable.—Does not the ſame power that enables them to heal, *empower* them to deſtroy? *Baker.*

EM'PRESS, *ſ.* [contracted from *emperes*, which is retained by *Jonſon* in the following lines.] The queen of an emperor:

Let your nimble feet
Tread ſubtile circles, that may always meet
In point to him; and figures to expreſs
The grace of him, and his great *emperes*. *Ben Jonſon.*

A female inveſted with imperial dignity; a female ſovereign.—*Empreſs* of this fair world, reſplendent Eve! *Milton.*

Wiſdom, thou ſay'ſt, from heav'n receiv'd her birth;
Her beams tranſmitted to the ſubject earth;
Yet this great *empreſs* of the human ſoul,
Does only with imagin'd power controul. *Prior.*

EMPRI'MED, *adj.* with hunters, ſeparated from the herd.

EMPRI'SE, *ſ.* [Fr.] Attempt of danger; undertaking of hazard; enterpriſe:

Fierce faces threan'ning wars;
Giants of mighty bone, and bold *empriſe*. *Milton.*

Thus,

Thus, 'till the ſun had travell'd half the ſkies,
Ambuſh'd we lie, and wait the bold *empriſe*. *Pope.*

EMPROSTHO'TONUS, *ſ.* [from εμπροσθεν, Gr. before or forwards, and τεινω, to extend.] A ſpaſmodic contraction, where ſome part of the body is bent forwards.

EMP'TIER, *ſ.* One that empties; one that makes any place void by taking away what it contained.—The *emptiers* have emptied them out, and marred their vine-branches. *Nahum*, ii. 2.

EMP'TINESS, *ſ.* Abſence of plenitude; inanity:

Deſolation reigns
And *emptineſs*; diſmay'd, unfed, unhous'd,
The widow and the orphan ſtroll. *Philips.*

The ſtate of being empty:

His coffers ſound
With hollow poverty and *emptineſs*. *Shakeſpeare.*

A void ſpace; vacuity; *vacuum.*—The ordinary air in which we live and reſpire, is of ſo thin a compoſition, that ſixteen thouſand one hundred and forty-nine parts of its dimenſions are mere *emptineſs* and nothing; and the remaining one, only material and real ſubſtance. *Bentley.*—Want of ſubſtance or ſolidity.—'Tis this which cauſes the graces and the loves to take up their habitations in the hardeſt marble, and to ſubſiſt in the *emptineſs* of light and ſhadow. *Dryden.*—Unſatisfactorineſs; inability to fill up the deſires.—Form the judgment about the worth or *emptineſs* of things here, according as they are or are not of uſe, in relation of what is to come after. *Atterbury.*—Vacuity of head; want of knowledge:

Eternal ſmiles his *emptineſs* betray,
As ſhallow ſtreams run dimpling all the way. *Pope.*

EMP'TION, *ſ.* [*emptio*, Lat.] The act of purchaſing; a purchaſe.—There is a diſpute among the lawyers, whether Glaucus's exchanging the golden armour with the brazen one of Tydides, was *emption* or commutation. *Arbuthnot.*

EMP'TIONAL, *adj.* Belonging to buying.

EMPTI'TIOUS, *adj.* Capable of being bought, ſaleable. *Scott.*

EMP'TIVE, *adj.* [from the Lat. *emo*, to buy; but not much uſed.] Bought; hired. *Scott.*

EMP'TORY, *ſ.* *Not ſo common a word.* An empory; a mart. *Cole.*

EMPTURI'TION, *ſ.* [from the Lat. *emptus*, bought.] The inordinate deſire of buying. *Cole.* *Not uſed.*

EMP'TY, *adj.* [æmtiȝ, Sax.] Void; having nothing in it; not full.—I did never know ſo full a voice iſſue from ſo *empty* a heart; but the ſaying is true, the *empty* veſſel makes the greateſt ſound. *Shakeſpeare.*—Evacuated; no longer full:

Himſelf he frees by ſecret means unſeen,
His ſhackles *empty* left, himſelf eſcaped clean. *Spenſer.*

Devoid; unfurniſhed:

Art thou thus boldened, man, by thy diſtreſs,
That in civility thou ſeem'ſt ſo *empty*? *Shakeſpeare.*

Unſatisfactory; unable to fill the mind or deſires.—Pleas'd in the ſilent ſhade with *empty* praiſe. *Pope.*—Without any thing to carry; unburthened; unfreighted.—They beat him, and ſent him away *empty*. *Matthew.*—When ye go, ye ſhall not go *empty*. *Exodus.*

Yet all the little that I got, I ſpent;
And ſtill return'd as *empty* as I went. *Dryden.*

Hungry:

My falcon now is ſharp and paſſing *empty*,
And, till ſhe ſtoop, ſhe muſt not be full-gorg'd,
For then ſhe never looks upon her lure. *Shakeſpeare.*

Vacant of head; ignorant; unſkilful; unfurniſhed with materials for thought.—How comes it that ſo many worthy and wiſe men depend upon ſo many unworthy and *empty*-headed fools? *Raleigh.*—Unfruitful; barren.—Seven *empty* ears blaſted with the eaſt wind. *Geneſis.*—Iſrael is an *empty* vine. *Hoſea.*—Wanting ſubſtance; wanting ſolidity; vain:

The god of ſleep there hides his heavy head,
And *empty* dreams on every leaf are ſpread. *Dryden.*

To EMP'TY, *v. a.* To evacuate; to exhauſt; to deprive of that which was contained in it.—The Euxine ſea is conveniently ſituated for trade, by the communication it has both with Aſia and Europe, and the great navigable rivers that *empty* themſelves into it. *Arbuthnot.*

Boundleſs intemperance
In nature is a tyranny: it hath been
Th' untimely *emptying* of the happy throne,
And fall of many kings. *Shakeſpeare.*

To EMP'TY, *v. n.* To become empty:

The chapel *empties*; and thou may'ſt be gone
Now, Sun. *Ben Jonſon.*

"EMPTY veſſels make the loudeſt ſound."—Agreeable to the words of divine wiſdom, a fool's voice is known by a multitude of words. Thoſe who have leaſt worth, are generally fulleſt; whereas, on the contrary, thoſe who poſſeſs excellent qualities, are moſt ſilent on their own praiſe. The French ſay, as we: *Les tonneaux voides, font le plus de bruit.* The Italians: *La piu cattiva ruota del carro ſempre cigola*: The worſt wheel of the cart cracks firſt. The Arabians have a proverb to the ſame effect, taken from a thunder-cloud, which makes a *great report*, but yields no rain.

EMP'TYSIS, *ſ.* [from εμπτυω, to ſpit.] A diſcharge of blood by ſpitting.

To EMPUR'PLE, *v. a.* To make of a purple colour; to diſcolour with purple:

The deep,
Empurpled ran, with guſhing gore diſtain'd. *Philips.*

EM'PUS, a town of France, in the department of the Var, and chief place of a canton, in the diſtrict of Draguignan: five miles north weſt of Draguignan.

EMPU'SA, *ſ.* [from the Greek.] A hobgoblin; a ſpirit which was ſuppoſed to go on one leg. *Philips.*

To EMPUZ'ZLE, *v. a.* To perplex; to put to a ſtand.—It hath *empuzzled* the enquiries of others to apprehend, and enforced them unto ſtrange conceptions to make out. *Brown.*

EMPYE'MA, *ſ.* [from εν, within, and πυον, Gr. pus.] A collection of purulent matter in any part whatſoever; generally uſed to ſignify that in the cavity of the breaſt only, and which ſometimes happens upon the opening of abſceſſes or ulcerations of the lungs, or membranes incloſing the breaſt. *Quincy.*—An *empyema*, or a collection of purulent matter in the breaſt, if not ſuddenly cured, doth undoubtedly impel the patient into a phthiſical conſumption. *Harvey.*—There is likewiſe a conſumption from an *empyema*, after an inflammation of the lungs; which may be known from a weight on the diaphragm, oppreſſion of the lungs, a difficulty of breathing, and inability to lie on one ſide, which is that which is ſound. *Arbuthnot.*

EMPYEMA'TICS, *ſ.* [*empyemata*, Lat. from εν, and πυον, pus.] Medicines which ſuppurate or produce pus.

EMPY'REAL, *adj.* [εμπυρος, Gr.] Formed of fire; refined beyond aerial; pertaining to the higheſt and pureſt region of heaven. [*Tickell* accents it on the penult.]

Now went forth the morn,
Such as in higheſt heav'n, array'd in gold
Empyreal. *Milton.*

Go, ſoar with Plato to th' *empyreal* ſphere,
To the firſt good, firſt perfect, and firſt fair. *Pope.*

But *empyréal* forms, howe'er in fight
Gaſh'd and diſmembered, eaſily unite. *Tickell.*

EMPYRE'AN, *ſ.* [εμπυρος, Gr.] The higheſt heaven; The

The Almighty Father from above,
From the pure *empyrean* where he fits
High thron'd above all height, bent down his eye. *Milt.*

EMPY'REUM, or EMPYREU'MA, *ſ.* [from εμπυρευω, Gr. to kindle.] The imperfect combuſtion of any matter in boiling or diſtillation, which thence gives a particular offenſive ſmell. *Quincy.*—It is ſo far from admitting an *empyreum*, that it burns clear away without leaving any cinders, or a duſt about it. *Harvey.*—The hopes of an elixir inſenſibly evaporate, and vaniſh to air, or leave in the recipient a foul *empyreuma*. *Decay of Piety.*

Macquer obſerves, that empyreuma is the peculiar ſmell of burned oils, and that no other but oily ſubſtances can produce it. He even propoſes this indication as a teſt of the preſence of oil, in bodies which contain too ſmall a quantity of that fluid to admit of any other way of exhibiting it.

EMPYREUMA'TICAL, *adj.* Having the ſmell or taſte of burnt ſubſtances.—*Empyreumatical* oils, diſtilled by ſtrong fires in retorts, may be brought to emulate eſſential oils drawn in limbecks. *Boyle.*

EMPYRO'SIS, *ſ.* [εμπυροω, Gr.] Conflagration; general fire.—The former opinion that held theſe catacliſms and *empyroſes* univerſal, was ſuch as held that it put a total conſummation unto things in this lower world, eſpecially that of conflagration. *Hale.*

EMS, a town of Germany, in the circle of the Upper Rhine, and principality of Heſſe Darmſtadt: ſeven miles eaſt-ſouth-eaſt of Coblentz.

EMS, or EMER, a river of Germany, in the circle of Weſtphalia, which riſes in the biſhopric of Paderborn, paſſes through the biſhopric of Munſter and Eaſt Frieſland, and runs into the German Ocean, a little below Emden.

EMS'BACH, a river of Germany, in the circle of the Lower Rhine which runs into the Lahne, three miles eaſt from Limburg, in the electorate of Trevcs.

EMS'WORTH, a ſmall port on the coaſt of Hampſhire, two miles from Havant, ſeven from Chicheſter and eleven from Portſmouth. It is famous for the peculiar flavour of its oyſters.

EMU'CID, *adj.* [from the Lat. *muceo*, to be muſty.] Mouldy. *Scott. Not much uſed.*

To EM'ULATE, *v. a.* [*æmulor*, Lat.] To rival; to propoſe as one to be equalled or excelled. To imitate with hope of equality, or ſuperior excellence:

Thoſe fair ideas to my aid I'll call,
And *emulate* my great original. *Dryden.*

What though no weeping loves thy aſhes grace,
Nor poliſh'd marble *emulate* thy face. *Pope.*

To be equal to; to riſe to equality with.—I ſee how thy eye would *emulate* the diamond. *Shakeſpeare.*

We ſee no new-built palaces aſpire,
No kitchens *emulate* the veſtal fire. *Pope.*

To imitate; to copy; to reſemble.—It is likewiſe attended with a delirium, fury, and an involuntary laughter, the convulſion *emulating* this motion. *Arbuthnot.*

EMULA'TION, *ſ.* [*æmulatio*, Lat.] Rivalry; deſire of ſuperiority.—There was neither envy nor *emulation* amongſt them. 1 *Mac.*

A noble *emulation* heats your breaſt,
And your own fame now robs you of your reſt:
Good actions ſtill muſt be maintained with good,
As bodies nourith'd with reſembling food. *Dryden.*

Envy; deſire of depreſſing another; conteſt; contention; diſcord:

What madneſs rules in brainſick men,
When for ſo ſlight and frivolous a cauſe,
Such factious *emulations* ſhall ariſe! *Shakeſpeare.*

EM'ULATIVE, *adj.* Inclined to emulation; rivalling; diſpoſed to competition.

EMULA'TOR, *ſ.* A rival; a competitor.—In ſuperiors it quencheth jealouſy, and layeth their competitors and *emulators* aſleep. *Bacon.*

To EMU'LE, *v. a.* [*emulor*, Lat.] To emulate. *Not in uſe.*

He ſitting me beſide, in that ſame ſhade,
Provoked me to play ſome pleaſant fit;
Yet *emuling* my pipe, he took in hand
My pipe, before that *emuled* of many,
And plaid thereon; for well that ſkill he could. *Spenſ.*

To EMUL'GE, *v. a.* [*emulgeo*, Lat.] To milk out; to ſtroke gently.

EMUL'GENT, *adj.* [*emulgens*, Lat.] Milking or draining out. The *emulgent* veſſels are the two large arteries and veins which ariſe; the former from the deſcending trunk of the aorta, or great artery; the latter from the vena cava.—Through the *emulgent* branches the blood is brought to the kidneys, and is there freed of its ſerum. *Cheyne.*

EM'ULOUS, *adj.* [*æmulus*, Lat.] Rivalling; engaged in competition.—She is in perpetual diffidence or actual enmity with her, but always *emulous* and ſuſpectful of her. *Howell.*—Deſirous of ſuperiority; deſirous to riſe above another; deſirous of any excellence poſſeſſed by another; with *of* before the object of emulation:

By ſtrength
They meaſure all, *of* other excellence
Not *emulous* nor care who them excels. *Milton.*

By fair rewards our noble youth we raiſe
To *emulous* merit, and to thirſt of praiſe. *Prior.*

Factious; contentious:

Whoſe glorious deeds, but in the fields of late,
Made *emulous* miſſions 'mongſt the gods themſelves,
And drave great Mars to faction. *Shakeſpeare.*

EM'ULOUSLY, *adv.* With deſire of excelling or outgoing another:

So tempt they him, and *emulouſly* vie
To bribe a voice that empires would not buy. *Granville.*

EMUL'SION, *ſ.* [*emulſio*, Lat.] A form of medicine, by bruiſing oily ſeeds and kernels, and drawing out their ſubſtances with ſome liquor, that thereby becomes milky. *Quincy.*—The aliment is diſſolved by an operation reſembling that of making an *emulſion*; in which operation the oily parts of nuts and ſeeds, being gently ground in a marble mortar, and gradually mixed with ſome watery liquor, are diſſolved into a ſweet, thick, turbid, milky liquor, reſembling the chyle in an animal body. *Arbuthnot.*

EMUNC'TORIES, *ſ.* [*emunctorium*, Lat.] Thoſe parts of the body where any thing excrementitious is ſeparated and collected, to be in readineſs for ejectment. *Quincy.*—Superfluous matter deflows from the body under their proper *emunctories*. *Brown.*—Diſcourſing of the lungs, I ſhew that they are the grand *emunctory* of the body; that the main end of reſpiration is continually to diſcharge and expel an excrementitious fluid out of the maſs of blood. *Woodward.*

EMUNDA'TION, *ſ.* [from the Lat. *e*, from, and *mundo*, to cleanſe.] The act of cleanſing. *Scott. Not much uſed.*

EMUNG'S, one of the Pelew iſlands.

EMUSCA'TION, *ſ.* [from the Lat. *e*, from, and *muſcus*, moſs.] The act of clearing a tree from moſs. *Scott.*

-EN, an inſeparable particle borrowed by us from the French, and by the French formed from the Latin *in*. Many words are uncertainly written with *en* or *in*. In many words *en* is changed into *em* for more eaſy pronunciation.

EN-DOR, a city of Paleſtine, in the half tribe of Manaſſeh, weſt of Jordan, ſituated near the Mediterranean; whither king Saul went to conſult the witch that reſided there. *Joſh.* xvii. 11. The woman at En-dor, who had a familiar ſpirit, is called אוב, Oub, or Ob: and it is interpreted *Pythoniſſa*. The place where ſhe reſided, ſeems to

to have been named from the worſhip there inſtituted: for *En-dor* is compounded of *En-Ador*, and ſignifies *Fons Pythonis*, the fountain of light, the oracle of the god Ador. This oracle was probably founded by the Canaanites; and had never been totally ſuppreſſed.

EN-EGLAIM, a city of Paleſtine, ſituated near the Dead Sea. *Ezek.* xlvii. 10.

EN-GANNIM, a city of Paleſtine, ſituated in the tribe of Iſſachar; and one of the cities of the Levites, of the family of Gerſhon. *Joſh.* xxi. 29. Alſo the name of another city of Paleſtine, in the tribe of Judah, ſituated in the low parts of that province. *Joſh.* xv. 34.

EN-GEDI, [Heb. a fountain of happineſs.] A city of Paleſtine, in the tribe of Judah, ſituated in the wilderneſs of Judah; in the ſtrong holds of which, David concealed himſelf from the rage of Saul. *Joſh.* xv. 62. 1 *Sam.* xxiv. 1.

EN-HADDAH, a city of Paleſtine, ſituated in the tribe of Iſſachar. *Joſh.* xix. 21.

EN-HAKKORE, [Heb. the well of him that called.] The name given by Sampſon, to the well at which he refreſhed himſelf, after his ſlaughter of the Philiſtines with the jaw-bone of an aſs. *Judges* xv. 19.

EN-HAZOR, a city of Paleſtine, ſituated in the tribe of Naphtali. *Joſh.* xix. 37.

EN-MISHPAT, or KADESH. *Gen.* xiv. 7. See KADESH.

EN-RIMMON, a city of Paleſtine, ſituated in the tribe of Judah. *Nehem.* xi. 29.

EN-ROGEL, [or the well Rogel,] ſituated in Paleſtine, in the tribe of Judah, upon the boundaries of that province and Benjamin. *Joſh.* xv. 7. xviii. 16.

EN-SHEMESH, [i.e. waters of the ſun,] *waters of*, ſituated in Paleſtine, near the boundaries of Judah and Benjamin. *Joſh.* xv. 7. xviii. 17.

EN-TAPPUAH, or TAPPUAH, a city of Paleſtine, ſituated juſt within the border of Manaſſeh, weſt of Jordan, but belonging to the tribe of Ephraim. *Joſh.* xvii. 7, 8.

To ENA'BLE, *v. a.* To make able; to empower; to ſupply with ſtrength or ability.—He points out to him the way of life, ſtrengthens his weakneſs, reſtores his lapſes, and *enables* him to walk and perſevere in it. *Rogers.*

EN'ABY, a town of Sweden, in the province of Eaſt Gothland: twenty-five miles ſouth of Linkioping.

EN'ACH, *ſ.* In the cuſtoms of Scotland, the ſatisfaction for a crime; the recompence for a fault.

To ENA'CT *v. a.* To act; to perform; to effect. *Not in uſe.*—In true balancing of juſtice, it is flat wrong to puniſh the thought or purpoſe of any before it be *enacted*. *Legiſlator.*—To eſtabliſh by law; to decree:

It is *enacted* in the laws of Venice,
If it be proved againſt an alien,
He ſeek the life of any citizen,
The party, 'gainſt the which he doth contrive,
Shall ſeize on half his goods. *Shakeſpeare.*

To repreſent by action.—I did *enact* Hector. *Shakeſpeare.*

ENA'CT, *ſ.* Purpoſe; determination.

ENACT'OR, *ſ.* One that forms decrees, or eſtabliſhes laws.—The great author of our nature, and *enactor* of this law of good and evil, is highly diſhonoured. *Atterbury.*—One who practiſes or performs any thing. *Not uſed.*

The violence of either grief or joy,
Their own *enactors* with themſelves deſtroy. *Shakeſpeare.*

ENA'CTURE, *ſ.* Effect. *Maſon*, who quotes the preceding example, which in ſome editions has *enactures* for *enactors*.

EN'ÆMA, *ſ.* [from εν, and αιμα, blood.] Any medicine appropriated to bleeding wounds.

ENAL'LAGE, *ſ.* [of εναλλαττειν, Gr. to change.] A figure in grammar, whereby ſome change is made of the common modes of ſpeech, as when one mood or tenſe of a verb is put for another.

ENAM, a city of Paleſtine, in the tribe of Judah; ſituated in the low parts of that province. *Joſh.* xv. 34.

To ENAM'BUSH, *v. a.* To hide in ambuſh; to hide with hoſtile intention:

They went within a vale, cloſe to a flood, whoſe ſtream
Us'd to give all their cattle drink, they there *enambuſh'd* them. *Chapman.*

To ENA'MEL, *v. a.* [from *émel.* See AMEL.] To inlay; to variegate with colours, properly with colours fixed by fire:

Muſt I, alas!
Frame and *enamel* plate, and drink in glaſs? *Donne.*

See Pan with flocks, with fruits Pomona crown'd;
Here bluſhing Flora paints th' *enamell'd* ground. *Pope.*

To lay upon another body ſo as to vary it:

Higher than that wall, a circling row
Of goodlieſt trees, laden with faireſt fruit,
Bloſſoms, and fruits at once of golden hue,
Appear'd with gay *enamell'd* colours mix'd. *Milton.*

To ENA'MEL, *v. n.* To practiſe the uſe of enamel.—Though it were fooliſh to colour or *enamel* upon the glaſſes of teleſcopes; yet, to gild the tubes of them may render them more acceptable to the uſers, without leſſening the clearneſs of the object. *Boyle.*

ENA'MEL, *ſ.* Any thing enamelled, or variegated with colours fixed by fire.—There are various ſorts of coloured glaſſes, paſtes, *enamels*, and factitious gems. *Woodward.*

Down from her eyes welled the pearles round,
Upon the bright *enamel* of her face;
Such honey drops on ſpringing flowers are found,
When Phœbus holds the crimſon morn in chaſe. *Fairf.*

The ſubſtance inlaid in other things.

ENA'MELLER, *ſ.* One that practiſes the art of enamelling.

ENA'MELLING, *ſ.* The art of preparing and laying enamel upon metals, porcelaine, &c. and of colouring, painting, and burning in, the ſame, by means of the muffle, or enameller's lamp. This art has been greatly depreſſed and retarded in England, by the conſiderable advantage the enameller derives from a diſcovery of any colour uncommonly brilliant, clear, or hard. On this account the artiſt naturally endeavours to keep his proceſs a ſecret, as the ſource of private gain. The principal ingredients of enamel colours have been, however, long known. There are two kinds of enamel, the opake and the tranſparent. Tranſparent enamels are uſually rendered opake by adding putty, or the white calx of tin, to them. The baſis of all enamels is therefore a perfectly tranſparent and fuſible glaſs. The calx of tin renders this of a beautiful white, the perfection of which is greater when a ſmall quantity of manganeſe is likewiſe added. If the calx of tin be not ſufficient to deſtroy the tranſparency of the mixture, it produces a ſemi-opake glaſs, reſembling the opal. Clouet, in his Reſearches reſpecting the Compoſition of Enamel, publiſhed in 1800, gives the following improved methods of producing the moſt beautiful and permanent colours:

WHITE enamel, either for china-ware, or the purpoſe of being applied on metals, is compoſed in the following manner: Firſt calcine a mixture of lead and tin, which may be varied in the following proportions, viz. for one hundred parts of lead, fifteen, twenty, thirty, and even forty of tin. A mixture of lead and tin calcines very eaſily in contact with the air. As ſoon as this mixture is brought to a red heat, it burns like charcoal, and is calcined very ſpeedily. The compoſition which calcines beſt, is that which in one hundred pounds of lead contains from twenty to twenty-five of tin. The tin here meant is pure tin. In proportion as the calcination is effected, take out the calcined part, and continue to oxydate the reſt until the whole has become pulverulent, and of an uniform colour. When the proportion of tin exceeds twenty-five or thirty, a ſtronger fire is neceſſary to produce the calcination. A hundred parts of the calx above mentioned, which in the French potteries is called *calcine*, is generally taken with one hundred parts of ſand. From twenty-five to thirty

pounds of ſea-ſalt, or muriat of ſoda, are added: the whole is well mixed together, and it is fuſed in the bottom of a furnace in which potter's ware is baked. This matter is generally placed on ſand, on lime quenched in the open air, or on aſhes. The bottom of the maſs is in general badly fuſed. This, however, does not prevent the matter, after it has been pounded, and applied on the articles, from becoming exceedingly white and hard in the furnace. This proceſs is that generally uſed in potteries. In the compoſitions deſtined for china-ware, the proportion of twenty-five parts of tin to one hundred of lead is never exceeded: for common earthen-ware, the manufacturers are even ſatisfied with fifteen of tin to one hundred of lead. If it be wiſhed to obtain an enamel whiter and more fuſible, the quantity of ſand muſt be diminiſhed; but there is no neceſſity for augmenting that of the ſea-ſalt, or muriat of ſoda, as the whiteneſs and opacity depend on the quantity of tin. But it is neceſſary to employ ſome further manipulations, when white enamel is required proper for being applied on metals, and to give all the perfection of which it is ſuſceptible. In that caſe the ſand muſt be calcined in a ſtrong heat, with a quarter of its weight of marine ſalt, either in a ſmall quantity in a crucible, or on a large ſcale in a potter's furnace. If it be wiſhed to have a very fuſible enamel, add minium, or lead calcined by the former operation, and nearly as much ſea-ſalt; this produces a white maſs half fuſed and porous, which is to be pulveriſed and employed in the compoſition of enamel inſtead of ſand, and in the ſame proportions as ſand.

When it be wiſhed to have fluxes for the colours, the ſame compoſitions may be employed, except that little or no tin is to be put into the lead. Nitre and borax are now generally uſed for making this glaſs. The following are recommended as the beſt, upon trial by C. Clouet; three parts of ſiliceous ſand, one of chalk, and three of calcined borax, give a matter proper to be uſed as a flux for purples, blues, and other delicate colours.

Three parts of white or flint glaſs, one of calcined borax, a quarter of a part of nitre, one of the white oxyd of antimony made with nitre well waſhed, give an exceedingly white enamel, which may ſerve alſo as a flux for purple, and particularly for blue.

Sixty parts of enamel ſand or leſs, thirty of alum, thirty-five of ſea-ſalt, and a hundred of minium, or any other oxyd of lead, give a white enamel when the fluxes do not predominate too much, and a gelatinous glaſs when a great deal of fluxes has been added. This glaſs is good for red, and the enamel may be applied to all kinds of clay capable of ſuſtaining a ſtrong heat. It is of great importance to remark, and to know, that the ſand employed for enamel muſt not be ſand which contains only ſilex: ſand of that kind alone is of no uſe. The ſand proper for this purpoſe is that which contains talc with ſilex. To make a ſand proper for enamel and the fluxes of colours, there muſt be nearly one part of talc and three of ſiliceous ſand. The principal quality of good enamel, and that which renders it fit for being applied on porcelaine, or on metals, is the facility with which it acquires luſtre by a moderate heat, without entering into complete fuſion. Enamels applied to theſe purpoſes muſt poſſeſs this quality. They do not enter into complete fuſion; they aſſume only the ſtate of paſte, but of a paſte exceedingly firm; and yet when baked one might ſay that they had been completely fuſed.

There are two methods of ornamenting or painting on enamel: on raw, or on baked, enamel. Both theſe methods are employed, or may be employed, for the ſame object. Solid colours, capable of ſuſtaining the fire neceſſary for baking the enamel ground, may be applied in the form of fuſed enamel on that which is raw, and the artiſt may afterwards finiſh with the tender colours. The colours applied on the raw material do not require any flux; there is one, even, to which ſilex muſt be added, that is, the calx of copper, which gives a very beautiful green. All the colours may be produced by the metallic oxyds. Theſe colours are more or leſs fuſed in the fire, according as they adhere with more or leſs ſtrength to their oxygen. All metals which readily loſe their oxygen cannot endure a great degree of heat, and are unfit for being employed on the raw material.

Purple.—This colour is the oxyd of gold, which may be prepared different ways; as by precipitating, by means of a muriatic ſolution of tin, a nitro-muriatic ſolution of gold much diluted in water. The leaſt quantity poſſible of the ſolution of tin will be ſufficient to form this precipitate. The ſolution of tin muſt be added gradually until the purple colour begins to appear: it is then put into an earthen veſſel to dry ſlowly. But the colour is always more beautiful, if the precipitate is ground with the flux before it has become dry. The different ſolutions of gold, in whatever manner precipitated, provided the gold is precipitated in the ſtate of an oxyd, give always a purple colour, which will be more beautiful in proportion to the purity of the oxyd; but neither the copper nor ſilver, with which gold is generally found alloyed, injure this colour in a ſenſible manner: it is changed, however, by iron. The gold precipitate which gives the moſt beautiful purple is certainly fulminating gold, which loſes that property when mixed with fluxes. Purple is an abundant colour; it is capable of bearing a great deal of flux, and in a ſmall quantity communicates its colour to a great deal of matter. It appears that ſaline fluxes are better ſuited to it than thoſe in which there are metallic calces. Thoſe, therefore, which have been made with ſilex, chalk, and borax, or white glaſs, borax, and a little white oxyd of antimony, with a little nitre, ought to be employed with it. Purple will bear from four to twenty parts of flux, and even more, according to the ſhade required. Painters in enamel employ generally for purple a flux which they call brilliant white. This flux appears to be a ſemi-opake enamel, which has been drawn into tubes, and afterwards blown into a ball at an enameller's lamp. Theſe bulbs are afterwards broken in ſuch a manner that the flux is found in ſmall ſcales, which appear like the fragments of ſmall hollow ſpheres. Enamel painters mix this flux with a little nitre and borax. It is to be remarked, that purple will not bear a ſtrong heat.

Red.—We have no metallic oxyd capable of giving directly a fuſed red; that is to ſay, we have no metallic calces which, entering into fuſion, and combining under the form of tranſparent glaſs with fluxes or glaſs, give directly a red colour. To obtain this, it muſt be compounded different ways, as follows: Take two parts, or two parts and a half, of ſulphat of iron and of ſulphat of alumine; fuſe them together in their water of cryſtalliſation, and mix them well together. Continue to heat them to complete dryneſs; then increaſe the fire ſo as to bring the mixture to a red heat. The laſt operation muſt be performed in a reverberating furnace. Keep the mixture to a red heat until it has every where aſſumed a beautiful red colour, which may be aſcertained by taking out a little of it from time to time, and ſuffering it to cool in the air. The red oxyds of iron give a red colour; but this is exceedingly fugitive: for, as ſoon as the oxyd of iron enters into fuſion, the portion of oxygen which gives it its red colour leaves it, and it becomes black, yellow, or greeniſh. To preſerve, therefore, the red colour of this oxyd in the fire, it muſt be prevented from vitrifying, and abandoning its oxygen. Clouet tried a variety of different ſubſtances to give it this fixity, but none of them ſucceeded except alum. The doſes of alum and ſulphat of iron may be varied. The more alum, the paler will be the colour. Three parts of alum to one of ſulphat of iron give a fleſh colour. It is alum alſo which gives this colour the property of becoming fixed at a very ſtrong heat. This colour may be employed on raw enamel: it has much more fixity than the purple, but not ſo much as the blue of cobalt. It may be waſhed to carry off the

ſuperfluous

ſuperfluous ſaline matter, but it may be employed alſo without edulcoration; in that ſtate it is even more fixed and more beautiful. It does not require much flux; the flux beſt ſuited to it is compoſed of alum, minium, marine ſalt, and enamel ſand. This flux muſt be compounded in ſuch a manner as to render it ſufficiently fuſible for its object: from two to three parts of it are mixed with the colour. In general, three parts of flux are uſed for one of colour: but this doſe may, and ought to be, varied, according to the nature of the colour, and the ſhade required. Red calx of iron alone, when it enters into fuſion with glaſs, gives a colour which ſeems to be black; but if it be diluted with a ſufficient quantity of glaſs, it at laſt becomes of a tranſparent yellow. Thus, the colour really produced by calx of iron combined with glaſs is a yellow colour, but which being accumulated becomes ſo dark that it appears black. In the proceſs above given for making the red colour, the oxyd of iron does not fuſe: and this is the eſſential point; for, if this colour is carried in the fire to vitrification, it becomes black, or yellowiſh, inſtead of red, and diſappears if the coat be thin, and the oxyd of iron preſent be only in a ſmall quantity.

YELLOW.—Though yellow may be obtained in a direct manner, yet compound yellows are preferred; becauſe they are more certain in their effect, and more eaſily applied, than the yellow which may be directly produced from ſilver. The compound yellows are obtained in conſequence of the ſame principles as the red colour of iron. For this purpoſe metallic oxyds are employed, the vitrification of which muſt be prevented by mixing with them other ſubſtances, ſuch as refractory earths, or metallic oxyds difficult to be fuſed. The metallic calces which form the baſes of the yellow colours are generally thoſe of lead; as minium, the white calx of lead, or litharge, the white calx of antimony, called diaphoretic antimony: that called crocus metallorum is alſo employed. This regulus, pulveriſed and mixed with white oxyd, gives likewiſe a yellow. The following are the different compoſitions uſed: one part of the white oxyd of antimony, one of the white oxyd of lead (or two or three); theſe doſes are exceedingly variable; one part of alum, and one of ſal-ammoniac. When theſe matters have been all pulveriſed, and mixed well together, they are put in a veſſel over a fire ſufficient to ſublimate and decompoſe the ſal-ammoniac; and when the matter has aſſumed a yellow colour, the operation is finiſhed. This in the ſhops is called Naples yellow. The calces of lead mixed in a ſmall quantity either with ſilex or alumine, alſo with the pure calx of tin, exceedingly white, give likewiſe yellows. One part of the oxyd of lead is added to two, three, or four, of the other ſubſtances above-mentioned. In theſe different compoſitions, for yellow, we may uſe alſo oxyd of iron, either pure, or that kind which has been prepared with alum and vitriol of iron: thus different ſhades of yellow may be obtained. Yellows require ſo little flux, that one or two parts, in general, to one of the colour, are ſufficient; ſaline fluxes are improper for them, and eſpecially thoſe which contain nitre. They muſt be uſed with fluxes compoſed of enamel ſand, oxyd of lead, and borax, without marine ſalt. A yellow may be obtained directly from ſilver; for which may be uſed ſulphat of ſilver, or any oxyd of that metal mixed with alumine or ſilex, or with both, in equal quantities. The whole muſt be gently heated until the yellow colour appear; and the matter is to be employed with the fluxes pointed out for yellows. Yellow of ſilver, like purple, cannot endure a ſtrong heat: a nitric ſolution of ſilver, precipitated by the ammoniacal phoſphat of ſoda, will obtain a yellow precipitate, which may be uſed to paint in that colour with fluxes, which ought then to be a little harder.

GREEN.—This colour is obtained directly from the oxyd of copper. All the oxyds of copper are good: they require little flux, which muſt not be too fuſible; one part or two of flux will be ſufficient for one oxyd. This colour agrees with all the fluxes, the ſaline as well as the metallic; which tends to vary a little the ſhades. A mixture of yellow and blue is alſo uſed to produce green. Thoſe who paint figures or portraits employ glaſs compoſed in this manner; but thoſe who paint glazed veſſels, either earthen-ware or porcelain, employ in general copper green. Independently of the beautiful green colour produced by oxydated copper, it produces alſo a very beautiful red; but it is exceedingly fugitive. The oxyd of copper gives red only when it contains very little oxygen, and approaches near to the ſtate of a regulus. Notwithſtanding the difficulty of employing this oxyd, a method has been found to ſtain tranſparent glaſs with different ſhades of a very beautiful red colour by means of it. It is exceedingly difficult to make this colour well; but when it ſucceeds, it has a great deal of ſplendour. By employing the calx of copper alone for the proceſſes above-mentioned, we obtain a red ſimilar to the moſt beautiful carmine. The calx of iron changes the red into vermilion, according to the quantity added. If we had certain proceſſes for making this colour, we ſhould obtain all the ſhades of red from pure red to orange, by uſing, in different proportions, the oxyd of copper with that of iron. The calx of copper fuſes argil more eaſily than ſilex; the caſe is the ſame with calx of iron. If we fuſe two or three parts of argil with one of the oxyd of copper, and if the heat be ſufficient, we obtain a very opake enamel, and of a vermilion red colour: the oxyd of copper paſſes from red to green through yellow; ſo that the enamel of copper, which becomes red at a ſtrong heat, may be yellow with a weaker heat. The ſame effect may be produced by deoxydating copper in different degrees: this will be effected according as the heat is more or leſs intenſe. The above compoſition might alſo be employed to give a vermilion red colour to porcelaine; but the heat of the porcelaine furnace muſt be of ſufficient ſtrength to produce the proper effect.

BLUE.—This colour is obtained from the oxyd of cobalt. It is the moſt fixed of all colours, and becomes equally beautiful with a weak as with a ſtrong heat. The blue produced by cobalt is more beautiful the purer it is, and the more it is oxydated. Arſenic does not hurt it. The ſaline fluxes which contain nitre are thoſe beſt ſuited to it. But the flux which gives to cobalt blue the greateſt ſplendour and beauty, is that compoſed of white glaſs (which contains no metallic calx), of borax, nitre, and diaphoretic antimony well waſhed. When this glaſs is made for the purpoſe of being employed as a flux for blue, we add leſs of the white oxyd of antimony; a ſixth of the whole is ſufficient.

VIOLET.—Black calx of manganeſe, employed with ſaline fluxes, gives a very beautiful violet. By varying the fluxes, the ſhade of the colour may alſo be varied; it is very fixed as long as it retains its oxygen. The oxyd of manganeſe may produce different colours; but for that purpoſe it will be neceſſary to fix its oxygen in it in different proportions. Theſe are all the colours obtained from metals. From hence it is evident that ſomething ſtill remains to be diſcovered. We do not know what might be produced by the oxyds of platina, tungſten, molybdena, and nickel: all theſe oxyds are ſtill to be tried; each of them muſt produce a colour, and perhaps red, which is obtained neither directly nor with facility from any of the metallic ſubſtances formerly known and hitherto employed.

Thoſe who paint on enamel, on earthen-ware, porcelaine, &c. muſt regulate the fuſibility of the colours by the moſt tender of thoſe employed; as, for example, the purple. When the degree which is beſt ſuited to purple has been found, the other leſs fuſible colours may be ſo regulated (by additions of flux,) when it is neceſſary to fuſe all the colours at the ſame time, and at the ſame degree of heat. We may paint alſo in enamel without flux; but all the colours do not equally ſtand the heat

neceſſary

neceſſary to be employed. If the enamel, however, be very fuſible, the colours may all penetrate it. This manner of painting gives no thickneſs of colour; on the contrary, the colours ſink into the enamel at the places where the tints are ſtrongeſt. To make them penetrate, and give them luſtre, a ſtrong fire will be neceſſary to ſoften the enamel, and bring it to a ſtate of fuſion. This method cannot be practiſed but on enamel compoſed with ſand. It will be readily conceived, that the colours and enamel capable of enduring the greateſt heat, are the moſt ſolid, the moſt durable, and the leaſt liable to be changed by the air. A mixture of theſe different enamels produces a great variety of intermediate colours, according to their nature and proportion. In this branch of the art, the coloured enamels are ſometimes mixed with each other, and ſometimes the calces are mixed before they are added to the vitreous baſes.

The enameller, however, though provided with a ſet of good colours, is very far from being in a ſituation for practiſing the art, unleſs he be ſkilled in the methods of applying them, and the nature of the grounds upon which they are to be laid. Many of the metals are too fuſible to be enamelled, and almoſt all of them are corroded by the action of the fuſed glaſs. For this reaſon, none of the metals are uſed but gold, ſilver, and copper. Platina has indeed been uſed; but of its effects and habitudes with enamels, very little can yet be ſaid, for want of a ſufficient number of experiments. The pureſt gold of twenty-four carats is calculated to produce the beſt effect with enamel; becauſe it entirely preſerves the metallic brilliancy, without undergoing any calcination in the fire. Being alſo leſs fuſible, it admits of a more refractory, and conſequently a harder and more beautiful, enamel. It is not uſual, however, to enamel upon finer gold than twenty-two carats; and the operation would be very defective, if a coarſer kind than that of eighteen carats were uſed. For in this caſe more alkali muſt be added to the enamel, to render it more fuſible; and this addition would at the ſame time render it ſofter and leſs brilliant.

The artiſt begins his operation, by breaking the enamel into ſmall pieces in a ſteel mortar, and afterwards pulveriſing it in a mortar of agate. He is careful to add water in this part of his proceſs, which prevents the ſplinters of glaſs from flying about. There are no means of explaining the point at which the trituration ought to be given up, as this can be learned only by experience. Some enamels require to be very finely triturated; but others may be uſed in the form of a coarſe powder. As ſoon as he apprehends that his enamel is ſufficiently pounded, he waſhes it by agitation in very clear water, and pouring off the fluid as it becomes turbid. This operation, which is made for the purpoſe of carrying off duſt and every other impurity from the enamel, is continued until the water comes off as clear as it was poured on. The workman puts his enamel, thus prepared, in a white china or earthen ſaucer, with water poured on it to the depth of about one tenth of an inch. He afterwards takes up this enamel with an iron ſpatula, as equally as poſſible. As the enamel here ſpoken of is tranſparent, it is uſual to ornament the ſurface of the gold with roſe-work, or other kinds of work, calculated to produce a good effect through the enamel. The thickneſs of this firſt layer depends entirely upon its colour: delicate colours, in general, require that it ſhould have no great thickneſs. The moiſt enamel, being thus placed, is dried by applying a very clean half-worn linen cloth to it, which muſt be very carefully done, to avoid removing the enamel by any action of wiping. In this ſtate the piece is ready for the fire. If it be enamelled on both ſides, it is placed upon a tile, hollowed out in ſuch a manner, that the uncovered edges of the piece alone are in contact with the iron. But if it be enamelled on one ſide only, it is ſimply laid upon the plate, or on a tile. Two things, however, require to be attended to. 1. If the work be very ſmall, or not capable of being enamelled on its oppoſite ſide, the iron plate muſt be perfectly flat, in order that the work may not bend when ſoftened by heat. 2. If the work be of conſiderable ſize, it is always counter-enamelled if poſſible; that is to ſay, an enamel is applied on the back ſurface, in order to counteract the effect which the other coating of glaſs might produce on the ſoft metal, when it came to contract by cooling.

The enamellers furnace is ſquare, and built of bricks, bedded in an earth proper for the purpoſe. It may be conſidered as conſiſting of two parts, the lower part, which receives a muffel, reſting on the floor of the furnace, and open on both ſides. The upper part of the furnace conſiſts of a fire-place, rather larger and longer than the dimenſions of the muffel. This fire-place contains the charcoal, which muſt ſurround the muffel on all ſides, excepting at the bottom. The charcoal is put in at a door above the muffel, and which is cloſed when the fire is lighted. A chimney proceeds from the ſummit of the furnace with a moderate aperture, which may be cloſed at the pleaſure of the artiſt, by applying a caſt iron plate to it. This furnace differs from that of the aſſayer in the circumſtance that it is ſupplied with air through the muffel itſelf: for if the draught were beneath the muffel, the heat would be too ſtrong, and could not be ſtopped when requiſite. As ſoon as the fire is lighted, and the muffel has obtained the requiſite degree of ignition, the charcoal is diſpoſed towards the lower part of the muffel in ſuch a manner as that it ſhall not fall upon the work, which is then conveyed into the muffel with the greateſt care upon the plate of iron or earthen ware, which is taken up by long ſpring pinchers. The work is placed as near as poſſible at the further extremity of the muffel; and as ſoon as the artiſt perceives a commencement of fuſion, he turns it round with great delicacy, in order that the fuſion may be very uniform. And as ſoon as he perceives that the fuſion has completely taken place, he inſtantly removes it out of the furnace: for the fuſion of gold happens ſo very near that of the enamel, that a neglect of a few ſeconds might be attended with conſiderable loſs. When the work is cooled, a ſecond coat of enamel is applied in the ſame manner as the firſt, if neceſſary. This, and the ſame cautious management of the fire, are to be repeated for every additional coat of enamel the nature of the work may demand.

As ſoon as the number of coatings are ſufficient, it becomes neceſſary to give an even ſurface to the enamel, which, though poliſhed by the fire, is nevertheleſs irregular. This is done with an Engliſh fine-grained file and water. As the file wears ſmooth, ſand is uſed. Much precaution and addreſs are required in this part of the work, not only becauſe it is eaſy to make the enamel ſeparate in ſplinters from the metal, but likewiſe becauſe the colour would not be uniform if it were to be ground thinner at one part than at another. The deep ſcratches of the file are in the next place taken out, by rubbing the ſurface with a piece of deal wood and fine ſand and water. A poliſh is then given by a ſecond ignition. This poliſh, however, is frequently inſufficient, and not ſo perfectly uniform as the delicacy of the work may require.

The ſubſtance uſed by the enamellers, as a poliſhing material, is known by the name of rotten-ſtone; which is prepared by pounding, waſhing, decanting off the turbid water, ſuffering the fine ſuſpended particles to ſubſide from this water, and laſtly levigating it upon a glaſs plate. The work is then cemented to a ſquare piece of wood with a mixture of roſin and brick-duſt, and by this means fixed in a vice. The firſt operation of poliſhing is made by rubbing the work with rotten-ſtone upon a ſmall ſtrait bar of pewter. Some delicacy is here required, to avoid ſcratching or producing flaws in the enamel, by preſſing it too hard. In this way the piece is rendered perfectly even: but the laſt brilliant poliſh is given by a piece of deal wood and the ſame rotten-ſtone.

This is the general method of applying enamels; but ſome colours require more precaution in the management of

of the fire. Opake colours require leſs management than the tranſparent. A variety of circumſtances muſt be attended to in the management of tranſparent colours; every colour requires gold of a particular fineneſs. When different colours are intended to be placed beſide one another, they are kept ſeparate by a ſmall edge or prominency, which is left in the gold for that purpoſe, and is poliſhed along with the enamel. The enamelling upon ſilver is effected nearly in the ſame manner as that of gold; but the changes ſuſtained by the colours upon the ſilver, by the action of fire, are much more conſiderable than when gold is uſed. Copper is not much uſed by enamellers, on account of the difficulty which attends the attempt to fix beautiful colours upon it. When this metal is uſed, the common practice is to apply a coating of opake white enamel, and upon this other colours which are more fuſible than the white. A good effect is produced in toys, by leaving part of the gold bare. For this purpoſe its ſurface is cut into ſuitable compartments by the engraver. This, however, is an expenſive method, and is for that reaſon occaſionally imitated by applying ſmall and very thin pieces of gold upon the ſurface of the enamel, where they are fixed by the fire, and afterwards covered by a tranſparent vitreous coating. For painting and enamelling glaſs, china-ware, &c. See the articles GLASS, PORCELAIN, and POTTERY.

Mr. Brougniart deſcribes a method of taking off the enamel from any toy, without injuring its metallic part. For this purpoſe, a mixture of common ſalt, nitre, and alum, in powder, is applied upon the enamel, and the piece put into the furnace. As ſoon as the fuſion has taken place, the piece is ſuddenly thrown into water, which cauſes the enamel to fly off either totally or in part. The part which may remain is to be removed by repeating the ſame operation a ſecond time.

The proceſs adopted by the Ruſſian ſilverſmiths, for filling up engravings in plate with a black, glaſſy, durable enamel, and which they muſt have derived from the Perſians or Indians, is as follows: They take half an ounce of ſilver, two ounces and a half of copper, three ounces and a half of lead, twelve ounces of ſulphur, and two ounces and a half of ſal ammoniac. The metals are melted together and poured into a crucible, which has been before filled with pulveriſed ſulphur made into a paſte by means of water; the crucible is then immediately covered, that the ſulphur may not take fire; and this regulus is calcined over a ſmelting fire until the ſuperfluous ſulphur be burnt away. This regulus is then coarſely pounded, and, with a ſolution of ſal ammoniac, formed into a paſte, which is rubbed cloſely into the engraving on ſilver plate. The ſilver is then wiped clean, and ſuffered to become ſo hot under the muffle, that the ſubſtance rubbed into the ſtrokes of the engraving melts and adheres to the metal. The ſilver is afterwards wetted with the ſolution of ſal ammoniac, and again placed under the muffle till it becomes red hot. The engraved ſurface may then be ſmoothed and poliſhed without any danger of the black ſubſtance, which is an artificial kind of ſilver ore *(fablerz)*, either dropping out or decaying. In this manner is all the ſilver plate brought from Ruſſia ornamented with black engraved figures, &c.

It is incredible to what a degree of fineneſs and delicacy the threads of enamel may be drawn by the enameller's lamp. Thoſe which are uſed in imitating tufts of feathers are ſo fine, that they may be wound on the reel like ſilk or thread. The fictitious jets of all colours, uſed in embroideries, are alſo made of enamel; and that with ſo much art, that every ſmall piece hath its hole to paſs the thread through wherewith it is ſewed. Theſe holes are made by blowing them into long pieces; which they afterwards cut with a proper tool.

A method of enamelling culinary utenſils, as a ſubſtitute for *tinning*, has been lately invented by M. Rinman, of the Royal Academy of Stockholm; for which ſee the article TINNING.

To ENA'MOUR, *v. a.* [*amour*, Fr.] To inflame with love; to make fond: with *of* before the thing or perſon loved.—'Tis hard to diſcern whether is in the greateſt error, he who is *enamour'd of* all he does, or he whom nothing of his own can pleaſe. *Dryden.*

He, on his ſide,
Leaning half-rais'd, with looks of cordial love,
Hung over her *enamour'd*. *Milton.*

ENANGIOMONOSPER'MOUS, *adj.* [from εν, in, αγγιον, a veſſel, μονος, alone, and σπερμα, a ſeed.] In botany; belonging to that claſs of plants which have but one ſeed in the ſeed veſſel.

ENANTI'OSIS, *ſ.* [εναντιωσις, Gr. contrariety.] A rhetorical figure, when that is ſpoken by a contrary, which is intended ſhould be underſtood, as it were, by affirmation; as, There was rage againſt reſolution; pride againſt nobility.

ENA'RA, a lake of Lapland, the furtheſt north; about ſeventy miles in length, and thirty in breadth, at the wideſt part.

ENARE'A, a province of Abyſſinia, conquered by the troops of the Negus at the beginning of the ſeventeenth century, ſituated at the ſouth-weſt extremity of the empire.

ENARGE'A, *ſ.* [εναργεια, evidentia, illuſtratio.] In botany, a genus of the claſs hexandria, order monogynia. The generic characters are—Calyx: none. Corolla: petals ſix, oblong-ovate, concave, acute; three outer, and three inner; all marked below the middle with two green ſpots. Stamina: filaments ſix, half the length of the corolla. Piſtillum: germ roundiſh; ſtyle three-cornered, thick. Pericarpium: berry ſubglobular, three-celled. Seeds: four or five, globular.—*Eſſential Character.* Calyx, none; petals ſix, oblong-ovate, concave, acute, three outer, three inner, green-ſpotted; berry, three-celled, with four or five globular ſeeds.

Enargea marginata, a ſolitary ſpecies. The fruit is an elliptic-ſpheroidal berry, fleſhy, the ſame conſiſtence with thoſe of Vitis idæa, red purple on one ſide, whitiſh on the other: in each of the three cells there are four or five globular, ruſeſcent ſeeds. Native of Terra del Fuego.

ENAR'GIA, *ſ.* [ενεργεια, Gr.] Evidence, or clearneſs of expreſſion.

ENARRA'TION, *ſ.* [*enarro*, Lat.] Explanation; expoſition.

ENARTHRO'SIS, *ſ.* [from εν, in, and αρθρον, Gr. a joint.] In anatomy, that ſort of articulation where the round head of one bone moves in the ſocket of another.

ENATA'TION, *ſ.* [*enato*, Lat.] The act of ſwimming out; eſcape by ſwimming.

ENAUN'TER, *adv.* An obſolete word explained by Spenſer himſelf to mean *leſt that*:

Anger would not let him ſpeak to the tree,
Enaunter his rage might cooled be,
But to the root bent his ſturdy ſtroke. *Spenſer.*

ENAVIGA'TION, *ſ.* [from the Lat. *e*, from, and *navigo*, to ſail.] The act of ſailing out; the act of ſailing by. *Little uſed.*

EN'BA, a river of Ruſſia, which runs into the Caſpian Sea. Lat. 46. 55. N. lon. 71. 40. E. Ferro.

EN'BAR, a town of Aſiatic Turkey, in the Arabian Irak, on the Euphrates: forty miles weſt of Bagdad.

ENCÆ'NIA, the name of ſeveral feaſts celebrated by the Jews in memory of the dedication of the temple, by Judas Maccabæus, Solomon, and Zorobabel. This term is likewiſe uſed in church-hiſtory for the dedication of Chriſtian churches.

To ENCA'GE, *v. a.* To ſhut up in a cage; to coop up; to confine:

Like Bajazet *encag'd* the ſhepherd's feoff,
Or like ſlack-ſinew'd Samſon, his hair off. *Donne.*

To ENCA'MP, *v. n.* To pitch tents; to ſit down for a time in a march; to ſettle a temporary habitation.—He

encamped at the mount of god, *Exod.* xiii. 5.—The French knew how to make war with the Engliſh, by not putting things to the hazard of a battle, but wearing them by long ſieges of towns, and ſtrong fortified *encampings*. *Bacon*.

To ENCA'MP, *v. a.* To form an army into a regular camp; to order to encamp.—The people were *encamped* againſt Gibbethon. *Kings*.

ENCAMP'MENT, *ſ.* The act of encamping, or pitching tents. A camp; tents pitched in order.—The enemies ſerved to improve them in their *encampments*, weapons, or ſomething elſe. *Grew*.

When a gen'ral bids the martial train
Spread their *encampment* o'er the ſpacious plain,
Thick riſing tents a canvas city build. *Gay*.

ENCAN'THIS, *ſ.* [from εν, and κανθος, Gr. the angle of the eye.] An inciſted tumour in the inner angle of the eye.

ENCAR'DIUM, *ſ.* [from εν, and καρδια, the heart.] In botany, the heart or pith of vegetables; a precious ſtone in the form of a heart.

ENCAR'PIA, *ſ.* [Gr.] In architecture, flower-work or fruit-work on the corners of pillars.

ENCATHIS'MA, *ſ.* [Gr.] A bath for the belly.

ENCAU'MA, *ſ.* [Gr.] A burning in any part of the body; alſo an ulcer in the eye, with a filthy ſcab.

ENCAU'STIC, *adj.* [*encauſtum*, Lat. from εν, and καιω, to burn.] Having the property of varniſh; ſo called becauſe it is wrought with fire.

ENCAU'STIC PAINTING. See the article PAINTING.

To ENCA'VE, *v. a.* To hide as in a cave:

Do but *encave* yourſelf,
And mark the fleers, the gibes, and notable ſcorns,
That dwell in every region of his face. *Shakeſpeare*.

ENCEA'DA DA BELA, a town of Africa, in the kingdom of Adel, on the coaſt of the Indian Sea: thirty miles ſouth of Cape Guardafu.

ENCE'INTE, *ſ.* [Fr.] In fortification, the whole incloſure, circumference, or compaſs, of a fortified place, whether built with ſtone or brick, or only made of earth, and whether with or without baſtions, &c.

ENCEL'ADUS, in fabulous hiſtory, a ſon of Titan and Terra, the moſt powerful of all the giants who conſpired againſt Jupiter. He was ſtruck with Jupiter's thunders, and overwhelmed under mount Ætna. Some ſuppoſe that he is the ſame as Typhon. According to the poets, the flames of Ætna proceeded from the breath of Enceladus; and as often as he turned his weary ſide, the whole iſland of Sicily felt the motion, and ſhook from its very foundations. *Virgil*.

ENCEPHA'LOCELE, *ſ.* [from εγκεφαλον, the brain, and κηλη, Gr. a tumour.] A rupture of the brain.

ENCE'PHALUM, *ſ.* [from εν, within, and κεφαλη, Gr. the head.] The brain, containing whatever is within the ſcull; the medullary ſubſtance of vegetables.

To ENCHA'FE, *v. a.* [*eſchauffer*, Fr.] To enrage; to irritate; to provoke:

The wind-ſhak'd ſurge, with high and monſtrous main,
Seems to caſt water on the burning bear;
I never did like moleſtation view
On the *enchafed* flood. *Shakeſpeare*.

To ENCHA'IN, *v. a.* [*enchainer*, Fr.] To faſten with a chain; to hold in chains; to bind; to hold in bondage:

What ſhould I do? while here I was *enchain'd*,
No glimpſe of godlike liberty remain'd. *Dryden*.

To link together; to concatenate.—The one contracts and *enchains* his words, ſpeaking preſſingly and ſhort; the other delights in long-breathed accents. *Holder*.

To ENCHA'NT, *v. a.* [*enchanter*, Fr.] To give efficacy to any thing by ſongs of ſorcery:

Theſe powerful drops thrice on the threſhold pour,
And bathe with this *enchanted* juice her door;
That door where no admittance now is found,
But where my ſoul is ever hov'ring round. *Granville*.

To ſubdue by charms or ſpells.—Arcadia was the charmed circle, where all his ſpirits for ever ſhould be *enchanted*. *Sidney*.—To delight in a high degree:

Too dear I priz'd a fair *enchanting* face;
Beauty unchaſte is beauty in diſgrace. *Pope*.

ENCHANT'ER, *ſ.* [*enchanteur*, Fr.] A magician; a ſorcerer; one who pretends to the art of charms and ſpells.—Such phaſms, ſuch apparitions, are excellencies which men applaud in themſelves, conjured up by the magic of a ſtrong imagination, and only ſeen within that circle in which the *enchanter* ſtands. *Decay of Piety*.

Ardan, that black *enchanter*, whoſe dire arts
Enſlav'd our knights, and broke our virgin's hearts. *Granville*.

ENCHANT'ER's NIGHTSHADE, *ſ.* in botany. See CIRCÆA.

ENCHANT'INGLY, *adv.* With the force of enchantment. It is improperly uſed in a paſſive ſenſe in the following paſſage.—He's gentle; never ſchool'd, and yet learn'd; full of noble device; of all ſorts *enchantingly* belov'd. *Shakeſpeare*.

ENCHANT'MENT, *ſ.* [*enchantement*, Fr.] Magical charms; ſpells; incantation; ſorcery.—The Turks thought that tempeſt was brought upon them by the charms and *enchantments* of the Perſian magicians. *Knolles*.—Irreſiſtible influence; overpowering delight.—Warmth of fancy will carry the loudeſt and moſt univerſal applauſe, which holds the heart of a reader under the ſtrongeſt *enchantments*. *Pope*.

ENCHAN'TRESS, *ſ.* [*enchantereſſe*, Fr.] A ſorcereſs; a woman verſed in magical arts.—Fell banning hag! *enchantreſs*, hold thy tongue. *Shakeſpeare*.—A woman whoſe beauty or excellencies give irreſiſtible influence:

From this *enchantreſs* all theſe ills are come;
You are not ſafe till you pronounce her doom. *Dryden*.

Oft with the *enchantreſs* of his ſoul he talks,
Sometimes in crowds diſtreſs'd. *Thomſon*.

ENCHARAX'IS, *ſ.* [from εν, and καραασσω, Gr. to ſcarify.] A ſcarification; an engraving.

To ENCHA'SE, *v. a.* [*enchaſſer*, Fr.] To infix; to incloſe in any other body ſo as to be held faſt, but not concealed.—Words, in their natural ſituation, ſhine like jewels *enchaſed* in gold. *Felton*.

Like poliſh'd iv'ry, beauteous to behold;
Or Parian marble, when *enchas'd* in gold. *Dryden*.

To adorn by being fixed upon it:

What ſee'ſt thou there? king Henry's diadem,
Enchas'd with all the honours of the world! *Shakeſpeare*.

To adorn by raiſed or emboſſed work:

When was old Sherwood's head more quaintly curl'd,
Or look'd the earth more green upon the world,
Or nature's cradle more *enchas'd* and purl'd? *Ben Jonſon*.

The art of *enchaſing* is practiſed only on thin metals, as watch-caſes, cane-heads, and various toys. It is performed by driving out the metal, to form figures, from withinſide, ſo as to ſtand out prominent from the plane of the metal.—To mark by inciſion:

They took their ſwords again, and each *enchas'd*
Deep wounds in the ſoft fleſh of his ſtrong foe. *Fairfax*.

ENCHEA'SON, *ſ.* [*encheaſon*, old law French.] Cauſe; occaſion. *Skinner. Cowel. Bailey*.

Certes, ſaid he, well mote I ſhould to tell
The fond *encheaſon* that me hither led. *Spenſer*.

ENCHELE'Æ, anciently a town of Illyricum, where Cadmus was changed into a ſerpent.

EN'CHELIS, *ſ.* in zoology, a genus of worms belonging to the order infuſoria. It is an animalcula, inviſible to

to the naked eye, very ſimple, and moſtly cylindrical. The ſpecies are deſcribed under the article ANIMALCULE, vol. i. p. 718, 719. Three of them, viz. the punctifera, caudata, and retrograda, are repreſented, greatly magnified, in the Engraving.

EN'CHENREUTH, a town of Germany, in the circle of Franconia, and biſhopric of Bamberg: thirty-ſix miles eaſt-north-eaſt of Bamberg.

ENCHIRI'DION, *ſ.* [from εν, and χειρ, Gr. a hand.] A manual, or ſmall volume, that may be carried about in one's hand; a pocket-book.

ENCHYMO'SIS, *ſ.* [from εν, and χυω, Gr. to pour in.] Bluſhing, or the ſudden effuſion of blood into the cutaneous veſſels. Alſo an extravaſation of blood which makes the part look livid.

To ENCIR'CLE, *v. a.* To ſurround; to environ; to encloſe in a ring or circle; to enring:

That ſtranger gueſt the Paphian realm obeys,
A realm defended with *encircling* ſeas. *Pope.*

ENCIR'CLET, *ſ.* A circle; a ring:

In whoſe *encirclets* if ye gaze,
Your eyes may tread a lover's maze. *Sidney.*

ENCK'HUSEN, a ſea-port town of Holland, on the coaſt of the Zuyder Sea, which encompaſſes two-thirds of it, and forms it into a peninſula; it takes its name from two words which ſignify *ſome houſes*, conſiſting originally of only a few fiſhermen's huts. William, comte of Holland, gave it the privileges of a town, and ſurrounded it with walls, in 1355; before that time it had been burnt down by John d'Arkel and Nicholas de Putten, in 1292. In 1514, an inundation deſtroyed part of the ramparts and ſome houſes. In 1517, the Gueldrians, who were at war with the Hollanders, attempted to take it by ſurpriſe, but the ſudden ebbing of the tide fruſtrated their deſign. It had formerly a good harbour, large, commodious, and much frequented. In 1394, Albert, comte of Holland, deſirous to paſs over to Frieſland with his army, aſſembled here 3000 veſſels; Charles V. and his ſon Philip, embarked from hence to Spain, and all their ſhips were kept in this port; but the harbour is now too much obſtructed by ſand to permit very large veſſels to enter with convenience: it is however a port of good trade, particularly in ſalt fiſh. The ſtreets are clean, with a great number of canals, the houſes handſome, and the public buildings good, eſpecially the town-houſe, which is embelliſhed with a very lofty tower, and is equal to any in Holland, except that of Amſterdam. The three towns, Enckhuſen, Hoorn, and Medemblic, have the privilege of coining money each ſeven years alternately: twenty-eight miles north-north-eaſt of Amſterdam. Lat. 52. 42. N lon. 22. 38. E. Ferro.

ENCK'ENDORP, a town of Germany, in the duchy of Holſtein: ſix miles ſouth-eaſt of Renſburg.

ENCLI'TICS, *ſ.* [εγκλιτικα, Gr.] Particles which throw back the accent upon the foregoing ſyllable.

To ENCLO'SE, *v. a.* [*enclos*, Fr.] To part from things or grounds common by a fence.—The protector cauſed a proclamation to be ſet forth againſt encloſures, commanding that they who had *encloſed* lands, accuſtomed to lie open, ſhould lie them open again. *Hayward.*—To environ; to encircle; to ſurround; to encompaſs; to ſhut in between other things; to include. To hold by an excluſive claim.—The fourth row a beryl, and an onyx, and a jaſper: they ſhall be ſet in gold in their *encloſings*. *Exod.* xxviii. 20.

The peer now ſpreads the glitt'ring forfex wide,
T' *encloſe* the lock; now joins it, to divide. *Pope.*

ENCLO'SER, *ſ.* One that encloſes or ſeparates common fields in ſeveral diſtinct properties. Any thing in which another is encloſed:

If God had laid all common, certainly
Man would have been th' *encloſer*; but ſince now
God hath impal'd us, on the contrary,
Man breaks the fence. *Herbert.*

ENCLO'SURE, *ſ.* The act of encloſing or environing any thing.—The membranes are for the comprehenſion or *encloſure* of all. *Wilkins.*—The ſeparation of common grounds into diſtinct poſſeſſions.—Touching *encloſures*, a company of lands incloſed are thereby improved in worth two or three parts at the leaſt. *Hayward.*—The appropriation of things common.—Let no man appropriate what God hath made common; that is againſt juſtice and charity, and by miraculous accidents God hath declared his diſpleaſure againſt ſuch *encloſure*. *Taylor.*—State of being ſhut up in any place; encompaſſed, or environed.—This expreſſes particularly the *encloſure* of the waters within the earth. *Burnet.*—The ſpace encloſed; the ſpace comprehended within certain limits:

And all, that elſe this world's *encloſure* baſe
Hath great or glorious in mortal eye,
Adorns the perſon of her majeſty. *Spenſer.*

Several; ground encloſed; ground ſeparated from the common.—'Tis not the common, but the *encloſure* muſt make him rich. *South.*

ENCLOU'DED, *adj.* Covered with clouds.—The heavens on ev'ry ſide *enclouded* be. *Spenſer's Gnat.*

ENCOF'FINED, *adj.* Encloſed in a coffin.—His body reſted here in quietneſſe until the diſſolution, when for the gain of the lead in which it was *encoffined*, it was taken up and thrown into the next water. *Weever.*

ENCOLAP'TICE, *ſ.* [Gr.] The art of making braſs plates, and cutting in the figures and letters for inſcriptions and laws.

ENCOM'BERMENT, *ſ.* [Fr.] Moleſtation:

The beſt advizement was of bad, to let her
Sleepe out her fill without *encomberment*. *Spenſer.*

ENCO'MIAST, *ſ.* [εγκωμιαστης, Gr.] A panegyriſt; a proclaimer of praiſe; a praiſer.—The Jeſuits are the great *encomiaſts* of the Chineſe. *Locke.*

ENCOMIAS'TIC, or ENCOMIASTICAL, *adj.* [from εγκωμιαστικος, Gr.] Panegyrical; laudatory; containing praiſe; beſtowing praiſe.

ENCOMIAS'TIC, *ſ.* [from the *adj.*] An encomium; a copy of verſes in praiſe of any perſon.

ENCO'MIUM, *ſ.* [εγκωμιον, Gr.] Panegyric; praiſe; eulogy.—How eagerly do ſome men propagate every little *encomium* their paraſites make of them. *Government of the Tongue.*

A vile *encomium* doubly ridicules;
There's nothing blackens like the ink of fools. *Pope.*

To ENCOM'PASS, *v. a.* To encloſe; to encircle:

Look how my ring *encompaſſeth* my finger;
Ev'n ſo thy breaſt encloſeth my poor heart. *Shakeſpeare.*

Poetic fields *encompaſs* me around,
And ſtill I ſeem to tread on claſſic ground. *Addiſon.*

To ſhut in; to ſurround; to environ:

He, having ſcarce ſix thouſand in his troop,
By three and twenty thouſand of the French
Was round *encompaſſed* and ſet upon. *Shakeſpeare.*

To go round any place; as, *Anſon* encompaſſed *the world.*

ENCOM'PASSMENT, *ſ.* Circumlocution; oblique tendency of talk:

Finding
By this *encompaſſment* and drift of queſtion,
That they do know my ſon, come you more near.
Shakeſpeare.

EN'COPE, *ſ.* [Gr.] An inciſion; a cut; a gaſh.

ENCO'RE, *adv.* [Fr.] Again; once more. A vociferation uſed at public theatres, when a performer is deſired by the audience to do the ſame thing again:

To the ſame notes thy ſons ſhall hum or ſnore,
And all thy yawning daughters cry *encore*. *Dunciad.*

ENCOUN'TER, *ſ.* [*encontre*, Fr.] Duel; ſingle fight; conflict:

Pallas

Pallas th' *encounter* ſeeks; but ere he throws
To Tuſcan Tiber thus addreſs'd his vows:
O, ſacred ſtream, direct my flying dart,
And give to paſs the proud Haleſus' heart. *Dryden.*

Battle; fight in which enemies ruſh againſt each other:

As two black clouds
With heav'n's artillery fraught, come rattling on
Over the Caſpian; then ſtand front to front,
Hov'ring a ſpace, 'till winds the ſignal blow
To join their dark *encounter* in mid air. *Milton.*

Eager and warm converſation, either of love or anger.
Accidental congreſs; ſudden meeting:

Propitious Pallas, to ſecure her care,
Around him ſpread a veil of thicken'd air,
To ſhun th' *encounter* of the vulgar crowd. *Pope.*

Accoſting; tranſient or unexpected addreſs:

But in what habit will you go along?
—Not like a woman; for I would prevent
The looſe *encounters* of laſcivious men. *Shakeſpeare.*

Caſual incident; occaſion. This ſenſe is ſcarcely Engliſh. *Johnſon.*—An equality is not ſufficient for the unity of character: 'tis further neceſſary, that the ſame ſpirit appear in all ſort of *encounters*. *Pope.*

To ENCOUN'TER, *v. a.* To meet face to face; to front.—The faſhion of the world is to avoid coſt, and you *encounter* it. *Shakeſpeare.*—To meet in a hoſtile manner; to ruſh againſt in conflict.—Putting themſelves in order of battle, they *encountered* their enemies. *Knolles.*—To meet with reciprocal kindneſs.—See, they *encounter* thee with their hearts thanks. *Shakeſpeare.*—To attack; to meet in the front.—Which way ſoever we turn, we are *encountered* with clear evidences and ſenſible demonſtrations of a Deity. *Tillotſon.*—To oppoſe; to oppugn.—Jurors are not bound to believe two witneſſes, if the probability of the fact does reaſonably *encounter* them. *Hale.*—To meet by accident:

I am moſt fortunate thus to *encounter* you:
You have ended my buſineſs, and I will merrily
Accompany you home. *Shakeſpeare.*

To ENCOUN'TER, *v. n.* To ruſh together in a hoſtile manner; to conflict:

Encounter ſo,
As doth the fury of two deſperate men,
Which, in the very meeting, fall and die. *Shakeſpeare.*

To engage; to fight: it has *with* before the thing.—Thoſe who have the moſt dread of death, muſt be content to *encounter with* it, whether they will or no. *Wake.*

Our wars
Will turn into a peaceful comic ſport,
When ladies crave to be *encountered with*. *Shakeſpeare.*

To meet face to face. To come together by chance.

ENCOUN'TERER, *ſ.* Opponent; antagoniſt; enemy.—The lion will not kick with his feet, but he will ſtrike ſuch a ſtroke with his tail, that he will break the back of his *encounterer* with it. *More.*—One that loves to accoſt others. *An old term:*

Oh, theſe *encounterers!* ſo gilt of tongue,
They give a coaſting welcome ere it comes:
And wide unclaſp the tables of their thoughts
To every tickliſh leader. *Shakeſpeare.*

To ENCOU'RAGE, *v. a.* [*encourager*, Fr.] To animate; to incite to any thing.—They *encourage* themſelves in an evil matter. *Pſa.* lxiv. 5.—To give courage to; to ſupport the ſpirits; to inſpirit; to embolden.—Kinds of muſic *encourage* men, and make them warlike, or make them ſoft and effeminate. *Bacon.*—I would neither *encourage* the rebels, nor diſcourage the proteſtants loyalty. *King Charles.*—To raiſe confidence; to make confident.—I doubt not but there are ways to be found, to aſſiſt our reaſon in this moſt uſeful part; and this the judicious Hooker *encourages* me to ſay. *Locke.*

ENCOU'RAGEMENT, *ſ.* Incitement to any action or practice; incentive. Increaſe of confidence. Favour; countenance; ſupport.—The reproach of immorality will lie heavieſt againſt an eſtabliſhed religion, becauſe thoſe who have no religion will profeſs themſelves of that which has the *encouragement* of the law. *Rogers.*

For when he dies, farewel all honour, bounty,
All generous *encouragement* of arts. *Otway.*

ENCOU'RAGER, *ſ.* One that ſupplies incitements to any thing; a favourer:

Live then, thou great *encourager* of arts,
Live ever in our thankful hearts. *Dryden.*

ENCRA'DLED, *adj.* Put into a cradle:

Begin we firſt, where he *encradled* was
In ſimple cratch. *Spenſer's Hymns.*

EN'CRATITES, *ſ.* in church hiſtory, heretics who appeared towards the end of the ſecond century: they were called *Encratites*, or *Continentes*, becauſe they gloried in abſtaining from marriage and the uſe of wine and animal food.

ENCRE'ASE. See INCREASE.

To ENCRO'ACH, *v. a.* [*accrocher*, from *croc*, a hook, Fr.] To make invaſions upon the right of another; to put a hook into another man's poſſeſſions to draw them away. To advance gradually and by ſtealth upon that to which one has no right; with *on* before the ſubject:

This hour is mine; if for the next I care, I grow too wide,
And do *encroach upon* death's ſide. *Herbert.*

To ENCRO'ACH, *v. n.* To creep on gradually without right:

Th' *encroaching* ill you early ſhould oppoſe;
Flatter'd, 'tis worſe, and by indulgence, grows. *Dryden.*

To paſs bounds:

Next, fenc'd with hedges and deep ditches round,
Exclude th' *encroaching* cattle from thy ground. *Dryden.*

ENCRO'ACHER, *ſ.* One who ſeizes the poſſeſſion of another by gradual and ſilent means:

The bold *encroachers* on the deep,
Gain by degrees hinge tracts of land,
'Till Neptune, with one general ſweep,
Turns all again to barren ſtrand. *Swift.*

One who makes ſlow and gradual advances beyond his rights.—Full dreſs creates dignity, augments conſciouſneſs, and keeps at diſtance an *encroacher*. *Clariſſa.*

ENCRO'ACHMENT, *ſ.* An unlawful gathering in upon another man. For example: if two men's grounds lie together, the one preſſes too far upon the other; or if a tenant owe two ſhillings rent-ſervice to the lord, and the lord takes three: ſo the Spencers encroached to themſelves royal power and authority. *Cowel.*

But this uſurper his *encroachment* proud
Stays not on man: to God his tow'r intends
Siege, and defiance. *Milton.*

If it be a man's known principle to depart from his right, ill men will make unjuſt *encroachments* upon him. *Atterbury.*—To advance into the territories or rights of another.—As a man had a right to all he could employ his labour upon, ſo he had no temptation to labour for more than he could make uſe of: this left no room for controverſy about the title, nor for *encroachment* on the right of others. *Locke.*—The ancient Romans made many *encroachments* on the ſea, and laid the foundations of their palaces within the very borders of it. *Addiſon on Italy.*—The people, ſince the death of Solon, had already made great *encroachments*. *Swift.*

To ENCUM'BER, *v. a.* [*encombrer*, Fr.] To clog; to load; to impede.—*Encumber'd* with his veſt, without defence. *Dryden.*—To entangle; to embarraſs; to obſtruct:

The

The god awak'd,
And thrice in vain he ſhook his wing,
Encumber'd in the ſilken ſtring. *Prior.*

To load with debts; as, *His eſtate is* encumbered *with mortgages.*

ENCUM'BRANCE, *ſ.* Clog; load; impediment.—Philoſophers agreed in deſpiſing riches, at beſt conſidering them as unneceſſary *encumbrances* of life. *Temple.*—Excreſcence; uſeleſs addition:

Strip from the branching Alps their piny load,
The huge *encumbrance* of horrific woods. *Thomſon.*

Burden upon an eſtate.—In reſpect of the *encumbrances* of a living, conſider whether it be ſufficient for his family, and to maintain hoſpitality. *Ayliffe.*

ENCY'CLICAL, *adj.* [εγκυκλιος, of κυκλος, Gr. a circle.] Circular; ſent round through a large region.—This council was not received in particular ſees, which is evident from Photius's *encyclical* epiſtle to the patriarch of Alexandria. *Stillingfleet.*

ENCYCLOPÆ'DIA, or ENCYCLOPEDY, *ſ.* [of εν, in, κυκλος, a circle, and παιδεια, Gr. learning.] The circle of ſciences; the round of learning.—In this *encyclopædia* or round of knowledge, like the great wheels of heaven, we muſt obſerve two circles, that while we are daily carried about, and whirled on by the ſwing and rapt of the one, we may maintain a natural and proper courſe in the ſober wheel of the other. *Brown.*—Every ſcience borrows from all the reſt, and we cannot attain any ſingle one without the *encyclopædy. Glanville.*—This art may juſtly claim a place in the *encyclopædia*, eſpecially ſuch as ſerves for a model of education. *Arbuthnot.*

The firſt work of literary eminence preſented to the world under this title, was the *Dictionnaire Encyclopédique* of Meſſieurs D'Alembert and Diderot, which coſt above twenty years of unwearied application. Of the hiſtory and origin of that great and laborious undertaking, the following particulars are given by Anthony Fantin-Deſodoards, in his *Louis XV. & Louis XVI.* publiſhed in 1798.

"While the Janſenites and Moliniſts were buſying the multitude with their controverſies, D'Alembert and Diderot were compiling, under the name of *Encyclopædia*, a vaſt repertory of human knowledge. In 1752 appeared the firſt and ſecond volumes; in which the editors had included reflections on religion and politics, equally alarming to the fanatics and to the enemies of public liberty. The prieſts, the jeſuits eſpecially, repeated inceſſantly that this lump of argumentations, ſome ſolid and ſome captious, far from teaching men to think, would only lead them to doubt thoſe principles on which the inſtitutions of ſociety depend. The compoſition of this vaſt work neceſſarily required a multitude of fellow-labourers. This was a center of union, and a rallying point for the philoſophers; who began to form a body, without owning it. There was in France an encyclopedic ſect, as there was in Greek an ionic ſect, an academic ſect. Voltaire, although remote from the metropolis, was the cheftain of the encyclopediſts. The aſſiſtance which he gave, the greatneſs of his celebrity, the univerſality of his talents, and his acceſs among ſovereign princes, conſpired to obtain for him this rank.

"The two editors, vain as they were, conſidered themſelves merely as the lieutenants of Voltaire. To diſſipate prejudice, to annihilate error, to enlighten mankind, to prepare the reign of concord and beneficence on earth, formed the bold deſign of the encyclopediſts. They undertook, each in his own department of ſociety, to propagate, without relaxation, and in every poſſible form, a doctrine which was abominable in the eyes of the jeſuits, but which their partiſans conſidered as humane and ſalutary. The great number of aſſiſtants, who had not equal talents, was the principal obſtacle to the accompliſhment of the magnificent promiſes made by D'Alembert in his proſpectus of the work. The Encyclopedia is an edifice of *gold* and of *droſs*. It muſt be re-made over and over again, before it can attain perfection; and even then the diſcrepancy of ſtyle, and the inequality of erudition and intellect, will prevent a man of taſte from regarding it as an harmonious work, until the *whole* has been completely re-written.

"The jeſuits were the firſt to attack the Encyclopedia: they entered into this warfare more from intereſt and pique, than from any zeal for the public good. The Encyclopedia was intended to ſupplant *their* dictionary of *Trevoux*; which was a mortification to the ſociety. They caballed, therefore, againſt the new work; and having found out twenty articles which were ſuſceptible of an offenſive interpretation by the civil or eccleſiaſtical authority, they obtained a decree of council, which condemned it. The police-officers went to the houſe of Diderot, and ſeized his manuſcripts: but the Encyclopediſts ſoon recovered this temporary inconvenience. Their main point was accompliſhed; they had a center of unity, an eſtabliſhed hierarchy, a ſyſtem to inculcate, and ſigns of recognition. They knew that perſecution is equally the aliment of zeal, as of fanaticiſm: they ſowed with labour, but they in vain expected a grand harveſt."

ENCYCLO'PEDIST, *ſ.* [from *encyclopedy*.] The compiler or editor of an encyclopædia.

ENCYST'ED, *adj.* [κυστις, Gr.] Encloſed in a veſicle or bag.—*Encyſted* tumours borrow their names from a cyſt or bag, in which they are contained. *Sharp's Surgery.*

END, *ſ.* [end, Sax.] The extremity of the length of any thing materially extended. Of bodies that have equal dimenſions we do not uſe *end*: the extremity of breadth is *ſide.*—Jonathan put forth the *end* of the rod that was in his hand, and dipt it in a honeycomb. 1 *Sam.*—Extremity, or laſt part in general.—The extremity and bounds of all bodies we have no difficulty to arrive at; but, when the mind is there, it finds nothing to hinder its progreſs into this endleſs expanſion: of that it can neither find nor conceive any *end. Locke.*—The laſt particle of any aſſignable duration.—Behold the day groweth to an *end. Judges.*

If the world's age and death be argued well
By the ſun's fall, which now tow'rds earth doth bend,
Then we might fear, that virtue, ſince ſhe fell
So low as woman, ſhould be near her *end.* *Donne.*

The concluſion or ceſſation of any action.—Jacob had made an *end* of commanding his ſons. *Geneſis.*

Yet vainly moſt their age in ſtudy ſpend;
No *end* of writing books, and to no end. *Denham.*

When *end* is not uſed materially, it is oppoſed to *beginning.*—Better is the *end* than the *beginning* thereof. *Eccleſ.*—The concluſion or laſt part of any thing: as, the *end* of a chapter; the *end* of a diſcourſe.—Ultimate ſtate; final doom.—Mark the perfect man, and behold the upright; for the *end* of that man is peace. *Pſalms.*—The point beyond which no profeſſion can be made.—They reel to and fro, and ſtagger like a drunken man, and are at their wits' *end. Pſalm* cvii. 27.—Final determination; concluſion of debate, or deliberation.—My guilt be on my head, and there's an *end! Shakeſpeare.*—Death; fate; deceaſe.—'Tis the great buſineſs of life to fit ourſelves for our *end*, and no man can live well that hath not death in his eye. *L'Eſtrange.*

Remember Milo's *end*,
Wedg'd in that timber which he ſtrove to rend. *Roſcom.*

Ceſſation; period.—What is the ſign of the *end* of the world? *Matth.*—Great houſes ſhall have an *end. Amos.*—Limit; termination.—There is no *end* of the ſtore. *Nahum.*—Abolition; total loſs.—There would be an *end* of all civil government, if the aſſignment of civil power were by ſuch inſtitution. *Locke.*—Cauſe of death; deſtroyer:

Take heed you dally not before your king,
Leſt he that is the ſupreme King of kings,
Confound your hidden falſehood, and award
Either of you to be the other's *end.* *Shakeſpeare.*

Conſequence;

Conſequence; concluſive event; concluſion.—The *end* of theſe things is death. *Rom.* vi. 21.

O, that a man might know
The *end* of this day's buſineſs ere it come!
But it ſufficeth that the day will end. *Shakeſpeare.*

Fragment; broken piece:

Thus I clothe my naked villainy,
With old odd *ends*, ſtol'n forth of Holy Writ,
And ſeem a ſaint. *Shakeſpeare.*

Purpoſe; intention.—There was a purpoſe to reduce the monarchy to a republic, which was far from the *end* and purpoſe of the nation. *Clarendon.*

Heav'n, as its inſtrument, my courage ſends;
Heav'n ne'er ſent thoſe who fight for private *ends*. *Dryd.*

Thing intended; final deſign; the termination of intellectual proſpect.—The *end* of our faſt is to pleaſe God, and make him propitious. *Smalridge.*—Wiſdom may have framed one and the ſame thing to ſerve commodiouſly for divers *ends*. *Hooker.*—The *end* of the commandment is charity. 1 *Tim.*

Life, with my Indamora, I would chuſe;
But, loſing her, the *end* of living loſe. *Dryden.*

For when ſucceſs a lover's toil attends,
Few aſk if fraud or force attain'd his *ends*. *Pope.*

An END, [Corrupted from *on end.*] Upright; erect: as, his hair ſtands *an end.*—*An* END has a ſignification in low language not eaſily explained; as, *moſt an end, commonly*; perhaps it is properly *an end*, at the concluſion; or corrupted from ſome old word not eaſily recoverable:

Stay'ſt thou to vex me here?
Slave, that, ſtill *an end*, turns me to ſhame! *Shakeſpeare.*

To END, *v. a.* To terminate; to conclude; to finiſh.—They have *ended* all my harveſt. *Ruth.*—That expenſive war under which we have ſo long groaned, is not yet *ended*. *Smalridge.*—To deſtroy; to put to death:

The lord of Stafford dear to-day hath bought
Thy likeneſs; for, inſtead of thee, king Harry,
This ſword hath *ended* him. *Shakeſpeare.*

To END, *v. n.* To come to an end; to be finiſhed:

Then eaſe your weary Trojans will attend,
And the long labours of your voyage *end*. *Dryden.*

To die: [τελευταω.]

Yet happy were my death, mine *ending* bleſt,
If this I could obtain, that, breaſt to breaſt,
Thy boſom might receive my yielded ſpright. *Fairfax.*

To terminate; to conclude.—Our laughing, if it be loud and high, commonly *ends* in a deep ſigh; and all the inſtances of pleaſure have a ſting in the tail. *Taylor.*—To ceaſe; to fail.—His ſovereignty, built upon either of theſe titles, could not have deſcended to his heir, but muſt have *ended* with him. *Locke.*—To conclude action or diſcourſe:

The angel *ended*, and in Adam's ear
So charming left his voice. *Milton.*

END-ALL, *ſ.* Abſolute concluſion:

That but this blow
Might be the be-all, and the *end-all*, here. *Shakeſpeare.*

END *for* END, (a ſea term,) when a rope runs all out of the pully, or off the block, or what it is wound upon.

To ENDA'MAGE, *v. a.* To miſchief; to prejudice; to harm.—When an erroneous opinion is publiſhed, the public is *endamaged*, and therefore it becomes puniſhable by the magiſtrate. *South.*

Nor ought he car'd whom he *endamaged*
By tortous wrong, or whom bereav'd of right. *Spenſer.*

ENDA'MAGEMENT, *ſ.* Damage;

Theſe flags of France that are advanced here,
Have hither march'd to the *endamagement*. *Shakeſpeare.*

To ENDAN'GER, *v. a.* To put into hazard; to bring into peril.—Every one deſires his own preſervation, and therefore hath a natural dread of every thing that can deſtroy his being, or *endanger* his happineſs. *Tillotſon.*

To force the foes from the Lavinian ſhore,
And Italy's *endanger'd* peace reſtore. *Dryden.*

To incur the danger of; to hazard.—He that turneth the humours back, and maketh the wound bleed inwards, *endangereth* malign ulcers. *Bacon.*

ENDAN'GERMENT, *ſ.* Peril:

And bad his ſervant Talus to invent
Which way he enter might without *endangerment*. *Spenſ.*

EN'DE, one of the ſmaller Molucca iſlands. Lat. 8. 30. S. lon. 120. E. Greenwich.

To ENDE'AR, *v. a.* To make dear; to make beloved.—All thoſe inſtances of charity which uſually *endear* each other, ſweetneſs of converſation, frequent admonition, all ſignifications of love, muſt be expreſſed towards children. *Taylor.*

And in the mixture of all theſe appears
Variety, which all the reſt *endears*. *Denham.*

ENDEAR'MENT, *ſ.* The cauſe of love; means by which any thing is *endeared.*—Her firſt *endearments*, twining round the ſoul. *Thomſon.*—The ſtate of being endeared; the ſtate of being loved.—Is not the ſeparate property of a thing the great cauſe of its *endearment* amongſt all mankind? *South.*

ENDEA'VOUR, *ſ.* [*devoir*, Fr. *endevoir.*] Labour directed to ſome certain end; effort to obtain or avoid.—This is the hinge on which turns the liberty of intellectual beings, in their conſtant *endeavours* after, and ſteady proſecution of, true felicity. *Locke.*

Heav'n doth divide
The ſtate of man in divers functions,
Setting *endeavour* in continual motion. *Shakeſpeare.*

To ENDEA'VOUR, *v. n.* To labour to a certain purpoſe; to work for a certain end. It has commonly *after* before the thing.—I could wiſh that more of our country clergy would *endeavour after* a handſome elocution. *Addiſ.*

Of old, thoſe met rewards who could excel;
And thoſe were prais'd, who but *endeavour'd* well. *Pope.*

To ENDEA'VOUR, *v. a.* To attempt; to eſſay:

To pray'r, repentance, and obedience due,
Though but *endeavour'd* with ſincere intent,
My hand ſhall not be ſlow, mine ear not ſhut. *Milton.*

To try at getting.—I'll *endeavour* his acquaintance. *Congr.*

ENDEA'VOUR STRAITS, a narrow ſea, between New Guinea and New Holland.

ENDEA'VOUR RIVER, a river on the north-eaſt coaſt of New Holland, with a bar at its mouth, and not depth of water for veſſels to ſail more than a mile above the bar. Lat. 15. 26. S. lon. 145. 12. E. Greenwich.

ENDEA'VOURER, *ſ.* One who labours to a certain end.—He appears an humble *endeavourer*, and ſpeaks honeſtly to no purpoſe. *Rymer.*

ENDEA'VOURMENT, *ſ.* Labour:

The huſband-man was meanly well content,
Tryal to make of his *endeavourment*. *Spenſer.*

ENDE'CAGON, *ſ.* [ενδεκαγονον, of ενδεκα, and γονια, Gr. a corner.] A plane geometrical figure of eleven ſides and angles, otherwiſe called *undecagon*. If each ſide of this figure be 1, its area will be $9{\cdot}3656399 = 11/4$ of the tang. of $73\frac{7}{11}$ degrees, to the radius 1.

ENDEDINE'MENUS, [from ενδινεω, Gr. to turn round.] A medical term for the eyes, when they turn round preternaturally in their orbits.

ENDE'IS,

ENDE'IS, a nymph, daughter of Chiron. She married Æacus, king of Ægina, by whom ſhe had Peleus and Telamon. *Apollodorus.*

ENDEL'AVE, a ſmall iſland of Denmark: eight miles north of Funen.

ENDE'MIA, *ſ.* [from ἐν, in, and δημος, Gr. the multitude.] A diſeaſe peculiar to a particular country or people.

ENDE'MIAL, ENDEMIC, or ENDEMICAL, *adj.* [*endemicus*, Lat. from ἐν, and δημος, Gr. the people.] Peculiar to a country; uſed of any diſeaſe proceeding from ſome cauſe peculiar to the country where it reigns: ſuch as the ſcurvy to the northern climes. *Quincy.*—We may bring a conſumption under the notion of a pandemick, or *endemick*, or rather a vernacular diſeaſe, to England. *Harvey.*—Solenander, from the frequency of the plants ſpringing up in any region, could gather what *endemial* diſeaſes the inhabitants were ſubject to. *Ray.*—What demonſtrates the plague to be *endemial* to Egypt, is its invaſion and going off at certain ſeaſons. *Arbuthnot.*

ENDE'NA, a town of Italy, in the Bergamaſco: ſeven miles north of Bergamo.

To ENDEN'IZE, or ENDENIZEN, *v. a.* To make free; to enfranchiſe; to naturalize.—The Engliſh tongue hath been beautified and enriched out of other tongues, by enfranchiſing and *endenizing* ſtrange words. *Camden.*—It is virtue that gives glory; that will *endenizen* a man every where. It is only that can naturalize him. *Ben Jonſon's Diſcoveries.*

EN'DER, a town of Italy, in the Bergamaſco: twelve miles north-eaſt of Bergamo.

EN'DER, a river of Scotland, formed by the union of ſeveral ſmall brooks, which runs into the Garry, ſeven miles weſt of Blair Athol, in Perthſhire.

EN'DERSDORF, a town of Sileſia, in the principality of Neyſze: three miles and a half ſouth of Ziegenhals.

EN'DERSDORF, a town of Sileſia, in the principality of Neyſze: three miles and a half ſouth-weſt of Grotkau.

To ENDEW', *v. a.* [uſed by *Spenſer* for] Endow:

Returne from whence ye came, and reſt a while,
Till morrow next that I the elfe ſubdew,
And with Sansfoy's dead dowry you *endew*. *Fairy Queen.*

[In falconry,] is when a hawk digeſts her meat ſo, that ſhe does not only diſcharge her gorge of it, but alſo cleanſe her pannel.

EN'DIAN, a town of Perſia, in the province of Chuſiſtan: 150 miles ſouth-ſouth-eaſt of Suſa.

EN'DING, *ſ.* [from *end*, *v. n.*] Termination:

The fight was deep imprinted in their hearts,
Who ſaw this bloody fray to *ending* brought. *Fairfax.*

ENDIN'GEN, a town of Germany, in Auſtrian Swabia: ſeven miles north-weſt of Friburg.

To ENDITE, *v. a.* [*enditer*, Fr. *dictum*, Lat.] To charge any man by a written accuſation before a court of juſtice: as, *He was* endited *for felony.* It is oftener written *indict*; which ſee.—To draw up; to compoſe; to write:

Hear how learn'd Greece her uſeful rules *endites*,
When to repreſs, and when indulge, our flights! *Pope.*

To ENDI'TE, *v. n.* To compoſe:

Your battles they hereafter ſhall *endite*,
And draw the image of our Mars in fight. *Waller.*

EN'DIVE, *ſ.* In botany. See CICHORIUM.

END'LESS, *adj.* Having no end; being without concluſion or termination.—Nothing was more *endleſs* than the common method of comparing eminent writers by an oppoſition of particular paſſages in them. *Pope.*—Infinite in longitudinal extent.—As it is pleaſant to the eye to have an *endleſs* proſpect, ſo it is ſome pleaſure to a finite underſtanding to view unlimited excellencies. *Tillotſon.*—Infinite in duration; perpetual:

All our glory extinct, and happy ſtate
Here ſwallow'd up in *endleſs* miſery! *Milton.*

Inceſſant; continual:

Each pleaſing Blount ſhall *endleſs* ſmiles beſtow,
And ſoft Belinda's bluſh for ever glow. *Pope.*

END'LESSLY, *adv.* Inceſſantly; perpetually. Without termination of length.—Though God's promiſe has made a ſure entail of grace to all thoſe who humbly ſeek, yet it no where engages that it ſhall importunately and *endleſsly* renew its aſſaults on thoſe who have often repulſed it. *Decay of Piety.*

END'LESSNESS, *ſ.* Extenſion without limit. Perpetuity; endleſs duration. The quality of being round without an end:

The tropic circles have,
Yea, and thoſe ſmall ones, which the poles engrave,
All the ſame roundneſs, evenneſs, and all
The *endleſſneſs* of the equinoctial. *Donne.*

END'LONG, *adv.* In a ſtraight line:

Then ſpurring at full ſpeed, ran *endlong* on,
Where Theſeus ſat on his imperial throne. *Dryden.*

END'MOST, *adj.* Remoteſt; furtheſt; at the farther end.

To ENDOR'SE, *v. a.* [*endorſer*, Fr. *dorſum*, Lat.] To regiſter on the back of a writing; to ſuperſcribe. In commerce, to write ones name on the back of a draft. See the article BILL OF EXCHANGE, vol. iii. p. 29.—Upon credential letters was *endorſed* this ſuperſcription, "To the king who hath the ſun for his helmet." *Howell.*—To cover on the back. *This is not uſed.*

Chariots, or elephants *endors'd* with tow'rs
Of archers. *Milton.*

ENDOR'SEMENT, *ſ.* Superſcription; writing on the back. Ratification:

Th' *endorſement* of ſupreme delight,
Writ by a friend, and with his blood. *Herbert.*

To ENDO'SS, *v. a.* [*endoſſer*, Fr.] To mark on the back; to put on the back; to mark by inciſion:

Her name in every tree I will *endoſs*,
That, as the trees do grow, her name may grow. *Spenſ.*

To ENDOW', *v. a.* [*indotare*, Lat. *endouairer*, Fr.] To enrich with a portion.—He ſhall ſurely *endow* her to be his wife. *Exodus.*—To ſupply with any external goods. An alms-houſe I intend to *endow* very handſomely for a dozen ſuperannuated huſbandmen. *Addiſon.*—To enrich with any excellence.—Among thoſe who are the moſt richly *endowed* by nature, and accompliſhed by their own induſtry, how few are there whoſe virtues are not obſcured? *Addiſon.*—God did never command us to believe, nor his miniſters to preach, any doctrine contrary to the reaſon he hath pleaſed to *endow* us with. *Swift.*—To be the fortune of any one:

I do not think
So fair an outward, and ſuch ſtuff within,
Endows a man but him. *Shakeſpeare.*

ENDOW'MENT, *ſ.* Wealth beſtowed to any perſon or uſe. The beſtowing or aſſuring a dower; the ſetting forth a ſufficient portion for a vicar towards his perpetual maintenance, when the benefice is appropriated. *Cowel.*—Appropriation of revenue.—A chapel will I build, with large *endowment*. *Dryden.*—Gifts of nature. In this ſenſe it is commonly plural.—By a deſire of fame, great *endowments* are not ſuffered to lie idle and uſeleſs to the public. *Addiſon.*

ENDRO'MIS, *ſ.* In antiquity; a coarſe ſhaggy mantle, uſually thrown over the athletæ, after their exerciſes in the Grecian games. A ſhaggy kind of cloak to wear in cold weather.

ENDSCHUTZ', a town of Germany, in the circle of Upper

Upper Saxony, and circle of Neuſtadt: four miles eaſt-north-eaſt of Weyda.

To ENDU'E, *v. a.* [*induo*, Lat.] To ſupply with mental excellencies; to inveſt with intellectual powers.—*Endue* them with thy Holy Spirit. *Common Prayer.*

Theſe baniſh'd men that I have kept withal,
Are men *endu'd* with worthy qualities. *Shakeſpeare.*

In the following paſſage it ſeems incorrectly printed for *endow*. — Leah ſaid, God hath *endued* me with a good dowry. *Gen.*

ENDU'RANCE, *ſ.* Continuance; laſtingneſs.—Some of them are of very great antiquity and continuance, others more late and of leſs *endurance*. *Spenſer's Ireland.*

Patience; ſufferance:

Great things of ſmall
One can create; and in what place ſoe'er
Thrive under evil, and work eaſe out of pain,
Through labour and *endurance*. *Milton.*

State of ſuffering.—I would fain know whether that man takes a rational courſe to preſerve himſelf, who refuſes the *endurance* of theſe higher troubles, to ſecure himſelf from a condition infinitely more miſerable. *South.*—Delay; procraſtination. *Obſolete:*

I ſhould have ta'en ſome pains to bring together
Yourſelf and your accuſer, and have heard you
Without *endurance* further. *Shakeſpeare.*

To ENDU'RE, *v. a.* [*endurer*, Fr. *durare*, Lat.] To bear; to ſuſtain; to ſupport unbroken.—The hardneſs of bodies is cauſed chiefly by the jejuneneſs of the ſpirits, and their imparity with the tangible parts, which make them not only hard, but fragile, and leſs *enduring* of preſſure. *Bacon.*

Both were of ſhining ſteel, and wrought ſo pure,
As might the ſtrokes of two ſuch arms *endure*. *Dryden.*

To bear with patience.—The gout haunts uſually the eaſy and the rich, the nice and the lazy, who grow to *endure* much, becauſe they can *endure* little. *Temple.*

So dear I love him, that with him all deaths
I could *endure*; without him, live no life. *Milton.*

To undergo; to ſuſtain.—I wiſh to die, yet dare not death *endure*. *Dryden.*—To continue in. *Not uſed.*—The deer *endureth* the womb but eight months, and is complete at ſix years. *Brown.*—[A Latiniſm, from *induro*.] To harden:

And manly limbs, *endur'd* with little care
Againſt all hard miſhaps, and fortuneleſs miſfare. *Spenſer.*

To ENDU'RE, *v. n.* To laſt; to remain; to continue.—Labour not for the meat which periſheth, but for that meat which *endureth* unto everlaſting life. *John.*

A charm that ſhall to age *endure*
The mind benevolent and pure. *Anon.*

To brook; to bear; to admit.—For how can I *endure* to ſee the evil that ſhall come unto my people? Or how can I *endure* to ſee the deſtruction of my kindred? *Eſth.* viii. 6.

ENDU'RER, *ſ.* One that can bear or endure; ſuſtainer; ſufferer.—They are very valiant and hardy; for the moſt part great *endurers* of cold, labour, hunger, and all hardineſs. *Spenſer.*—Continuer; laſter.

END'WISE, *adv.* Erectly; uprightly; on end.—A rude and unpoliſhed America, peopled with ſlothful and naked Indians, living in pitiful huts and cabbins, made of poles ſet *endwiſe*. *Ray.*

ENDY'MION, in fabulous hiſtory, a ſhepherd, ſon of Æthlius and Calyce. It is ſaid that he required of Jupiter to grant to him to be always young, and to ſleep as much as he would; whence came the proverb of *Endymionis ſomnum dormire*, to expreſs a long ſleep. Diana ſaw him naked as he ſlept on mount Latmos; and was ſo ſtruck with his beauty, that ſhe came down from heaven every night to enjoy his company. Endymion married Chromia daughter of Itonus; by whom he had three ſons, Pæon, Epeus, and Æolus, and a daughter called Eurydice. The fable of Endymion's amours with Diana, or the moon, aroſe from his knowledge of aſtronomy; and as he paſſed the night on ſome high mountain to obſerve the heavenly bodies, it came to be ſaid that he was courted by the moon. Some ſuppoſe that there were two of that name; the ſon of a king of Elis, and the ſhepherd or aſtronomer of Caria. The people of Heraclea maintained that Endymion died on mount Latmos, and the Eleans pretended to ſhow his tomb at Olympia, in Peloponneſus.

ENE'AS, a Trojan prince; a man's name.

To EN'ECATE, *v. a.* [*eneco*, Lat.] To kill; to deſtroy.—Some plagues partake of ſuch a pernicious degree of malignity, that in the manner of a moſt preſentaneous poiſon, they *enecate* in two or three hours, ſuddenly corrupting or extinguiſhing the vital ſpirits. *Harvey.*

ENE'DA, a town of Swiſſerland, in the canton of Glaris: two miles eaſt of Glaris.

ENE'ID, *ſ.* [from *Eneas*.] The heroic poem of Virgil in honour of Eneas.

EN'EMA. See ENÆMA.

ENEMAS'SAR, a man's name. *Tob.* i. 13.

EN'EMY, *ſ.* [*ennemi*, Fr. *inimicus*, Lat.] A public foe.—The *enemy* thinks of raiſing threeſcore thouſand men for the next ſummer. *Addiſon.*—A private opponent; an antagoniſt.—I ſay unto you, love your *enemies*. *Matt.*—Any one who regards another with malevolence; not a friend:

Kent in diſguiſe,
Follow'd his *enemy* king, and did him ſervice
Improper for a ſlave. *Shakeſpeare.*

One that diſlikes.—He that deſignedly uſes ambiguities, ought to be looked on as an *enemy* to truth and knowledge. *Locke.*

Bold is the critic, who dares prove
Theſe heroes were no friends to love;
And bolder he who dares aver,
That they were *enemies* to war. *Prior.*

[In theology.] The fiend; the devil.—Defend us from the danger of the *enemy*. *Common Prayer.*

ENEN'THIUS, in heathen mythology, an idol of the Phœnicians.

ENERGE'TIC, *adj.* [ενεργητικος, Gr.] Forcible; active; vigorous; powerful in effect; efficacious.—Theſe miaſms entering the body, are not ſo *energetic* as to venenate the entire maſs of blood in an inſtant. *Harvey.*—Operative; active; working; not at reſt.—If then we will conceive of God truly, and, as far as we can, adequately, we muſt look upon him not only as an eternal Being, but alſo as a Being eternally *energetic*. *Grew.*

To EN'ERGIZE, *v. n.* To act with energy.—Theſe heroic virtues could never have had exiſtence, had not thoſe things called evils firſt eſtabliſhed them into habits, and afterwards given occaſion for them to *energize*. *J. Harris.*

ENER'GUMENS, *ſ.* In church hiſtory, perſons ſuppoſed to be poſſeſſed by the devil, concerning whom there were many regulations among the primitive Chriſtians. They were denied baptiſm and the euchariſt; and though they were under the care of exorciſts, yet it was thought a becoming act of charity, to offer up for them the public prayers of the church, at which they were permitted to be preſent.

EN'ERGY, *ſ.* [*energia*, Lat. from εν, and εργον, Gr. work.] Power not exerted in action.—They are not effective of any thing, but are *energies* merely; for their working upon mirrors, and places of echo, doth not alter any thing in thoſe bodies. *Bacon.*—Force; vigour; efficacy; influence.—Beg the bleſſed Jeſus to give an *energy* to your imperfect prayers, by his moſt powerful interceſſion. *Smalridge.*

What but God, who, boundleſs ſpirit all,
And unremitting *energy*, pervades,
Adjuſts, ſuſtains, and animates, the whole. *Thomſon.*

Faculty;

Faculty; operation.—Matter, though divided into the ſublimeſt parts, moved ſwiftly, is ſenſeleſs and ſtupid, and makes no approach to vital *energy*. *Ray*.—Strength of expreſſion; force of ſignification; ſpirit; life.—Swift and ready, and familiar communication is made by ſpeech; and, when animated by elocution, it acquires a greater life and *energy*, raviſhing and captivating the hearers. *Holder*.

Who did ever, in French authors, ſee
The comprehenſive Engliſh *energy*. *Roſcommon*.

To ENER'VATE, *v. a.* [*enervo*, Lat.] To weaken; to deprive of force; to emaſculate.—Sheepiſh ſoftneſs often *enervates* thoſe who are bred like fondlings at home. *Locke*.

On each *enervate* ſtring they taught the note
To pant, or tremble through an eunuch's throat. *Pope*.

ENERVA'TION, *ſ.* The act of weakening; emaſculation.—The ſtate of being weakened; effeminacy.—This colour of meliority and preheminence is a ſign of *enervation* and weakneſs. *Bacon*.

To ENER'VE, *v. a.* [*enervo*, Lat.] To weaken; to break the force of; to cruſh.—We ſhall be able to ſolve and *enerve* their force. *Digby*.

Such object hath the pow'r to ſoft'n and tame
Severeſt temper, ſmooth the rugged'ſt brow,
Enerve, and with voluptuous hope diſſolve. *Milton*.

To ENFA'MISH, *v. a.* To ſtarve; to famiſh; to kill with hunger.

ENFA'MOUSED, *adj.* Made famous:

To Padus' ſilver ſtream then glides ſhe on,
Enfamouſed by reckleſs Phaeton. *W. Browne*.

ENFA'NS PERDUS, *ſ.* [Fr.] The forlorn hope; a military term.

To ENFEE'BLE, *v. a.* To weaken; to enervate; to deprive of ſtrength.—My people are with ſickneſs much *enfeebled*. *Shakeſpeare*.

Sure, nature form'd me of her ſofteſt mold,
Enfeebled all my ſoul with tender paſſions,
And ſunk me ev'n below my own weak ſex. *Addiſon*.

ENFE'LONED, *adj.* Full of felonious rage:

With that, like one *enfelon'd* or diſtraught,
She forth did roam. *Spenſer*.

To ENFE'OFF, *v. a.* [*feoffamentum*, low Lat.] To inveſt with any dignities or poſſeſſions.—If the eldeſt ſon *enfeoff* the ſecond, reſerving homage, and that homage paid, and then the ſecond ſon dies without iſſue, it will deſcend to the eldeſt as heir, and the ſeignory is extinct. *Hale*.

ENFE'OFFMENT, *ſ.* The act of enfeoffing. The inſtrument or deed by which one is inveſted with poſſeſſions.

To ENFET'TER, *v. a.* To bind in fetters; to enchain. *Not in uſe*:

His ſoul is ſo *enfetter'd* to her love,
That ſhe may make, unmake, do what ſhe liſt. *Shakeſpeare*.

EN'FIELD (William, LLD.) an elegant and eſtimable writer, born at Sudbury, in 1741. He was educated for the miniſtry among the proteſtant diſſenters at the academy at Daventry, where he diſtinguiſhed himſelf by his early compoſitions. In 1763 he was choſen to the paſtoral office by the congregation of Benn's-garden in Liverpool, and ſoon obtained notice as a pleaſing preacher, and an amiable man in ſociety. During his reſidence in that town, he publiſhed two volumes of Sermons, in 12mo. which were very favourably received, and alſo a collection of Hymns, and Family Prayers, the latter of his own compoſition. In 1770 he accepted an invitation to undertake the poſt of reſident tutor and lecturer in the belles-lettres in the academy at Warrington. With great diligence and general reputation he fulfilled theſe offices for ſome years, adding to them that of mathematical tutor. He likewiſe publiſhed various works, moſt of them of the claſs of compilations, but excellently calculated for the improvement of young perſons. One of the moſt popular of theſe was entitled The Speaker, a ſelection of miſcellaneous pieces from the beſt Engliſh writers for the purpoſes of recital, to which he prefixed a valuable eſſay on elocution. A ſequel to this work was afterwards printed under the title of Exerciſes in Elocution. Of his other publications during this period, were, The Preacher's Directory, an arrangement of topics and texts; The Engliſh Preacher, a collection of ſermons from various authors, nine vols. 12mo; Biographical Sermons on the principal Characters in the Old and New Teſtament; and ſeveral ſingle ſermons on particular occaſions. He alſo drew up Inſtitutes of Natural Philoſophy, theoretical and experimental, in one vol. 4to. a moſt valuable work, which has already paſſed two editions, the laſt of which was publiſhed in 1799. The title of doctor of laws was conferred upon him during his academical employment by the univerſity of Edinburgh. After the diſſolution of the academy in 1783 he remained two years at Warrington, occupied with the education of private pupils, and with his duty as miniſter of the diſſenting congregation there. In 1785 he accepted an invitation from the ſociety at the octagon diſſenting meeting-houſe at Norwich. In that city he continued for ſome time to purſue his plan of private tuition; but at length he devoted himſelf entirely to literary occupations and the paſtoral office. He was engaged for a conſiderable time in the laborious taſk of abridging Brucker's Hiſtory of Philoſophy, a work of great value, but little attractive in its original form, on account of its prolixity, and its harſh and involved Latin ſtyle. Dr. Enfield publiſhed his Abridgement in two vols. 4to. 1791, and probably the tenets of the different ſects of philoſophers were never before diſplayed with ſo much elegance and perſpicuity. It was, indeed, his peculiar talent to expreſs the ideas of other men to the greateſt advantage. His language, chaſte, clear, correct, and free from all affectation, is one of the beſt ſpecimens of that middle ſtyle which is fitted for all topics, and he communicates to his reader all that clearneſs of idea which reigned in his own mind. He died on the third of November, 1797, in his fifty-ſeventh year. Few men have lived more generally beloved, or have died more lamented. After his death a publication was made of his Sermons, in three vols. 8vo.

EN'FIELD, a neat and pleaſant town in Middleſex, ten miles from London; it is called in ſome old records Enfen, or Infen, from the fenny ſoil of its pariſh; but ſo drained ſince, that, except the part called Enfield-waſh, that it is now become good land. It was formerly noted for tanning of hides; had a royal palace in the reign of Henry VII. and the chace near it is a parcel of the duchy of Lancaſter. In the centre of the chace are the ruins of an old manſion, ſaid to have belonged to the earls of Eſſex. Here is a moſt ſumptuous lodge for the ranger; and the ſkirts of the chace are ſtored with country-ſeats belonging to the citizens of London. This chace was full of deer, and all ſorts of game, when James I. reſided at Theobalds; but in the civil wars it was ſtripped both of the game and timber, and let out in farms. Yet after the reſtoration it was laid open again, woods and groves were re-planted, and the whole chace ſtored with deer. But, by an act of parliament in 1779, it was diſforeſted. Part of it was allotted to different pariſhes, and enclofed, when it was found to contain 8349 acres; and another part, reſerved to the crown, was afterwards ſold, in eight lots, at the office of the duchy of Lancaſter. The church is large and very ancient, and has been lately repaired and beautified. Oppoſite the church is an ancient ſtructure, built in the reign of Henry VII. by Sir Thomas Lovel. Henry VIII. is ſuppoſed to have purchaſed it as a nurſery for the royal children. Edward VI. went hence to the Tower on his acceſſion to the throne. In April, 1557, the Princeſs Elizabeth was eſcorted from Hatfield to Enfield

Chace, by a retinue of twelve ladies in white ſatin, on ambling palfries, and twenty yeomen in green, all on horſeback, that her grace might hunt the hart. On entering the chace, ſhe was met by fifty archers, in ſcarlet boots and yellow caps, armed with gilded bows, each of whom preſented her with a ſilver-headed arrow winged with peacock's feathers. By way of cloſing the ſport, the princeſs was gratified with the privilege of cutting the throat of the buck. In the garden is ſtill a fine cedar of Libanus, planted about the middle of the ſeventeenth century. It was planted by Dr. Uvedale, who kept a flouriſhing ſchool in the houſe at the time of the plague in 1665, and was a great botaniſt. Tradition ſays that the plant was brought immediately from Mount Libanus in a portmanteau. Enfield Park, part of this royal demeſne, affords a moſt beautiful diſplay of rural ſcenery. The market is on Saturdays; fairs September 23, and November 3. The river Lea runs through part of the pariſh, as does alſo the New River, which winds in various directions, and adds greatly to the beauty of the country. Here is a free-ſchool for boys belonging to the pariſh, and ſeveral other charities.

EN'FIELD, a townſhip of the American States, in Hartford county, Connecticut, on the eaſt bank of Connecticut river, bounded on the north by the Maſſachuſett's line, and ſettled in 1681. The parts contiguous to the river are extremely pleaſant and productive: eighteen miles north of Hartford.

EN'FIELD, a townſhip of the American States, in Grafton county, New Hampſhire, incorporated in 1761. It contains by the cenſus 724 inhabitants, chiefly farmers: eleven miles ſouth-eaſt of Dartmouth College.

ENFILA'DE, *ſ.* [French.] A ſtraight paſſage; any thing through which a right line may be drawn. In fortification, it is applied to thoſe trenches, and other lines, that are ranged in a right line, and ſo may be ſcoured or ſwept by the cannon lengthways, or in the direction of the line.—*A battery d'enfilade*, is that where the cannon ſweep a right line.—*A poſt* or *command d'enfilade*, is a height from whence a whole line may be ſwept at once.

To ENFILA'DE, *v. a.* To pierce in a right line; to ſweep lengthways by the firing of cannon, &c.—The avenues, being cut through the wood in right lines, were *enfiladed* by the Spaniſh cannon. *Expedition to Carthagena.*

ENFINE', a modern name for Antinoë; an ancient city of Egypt, built by Adrian in honour of his favourite Antinous. See the article EGYPT, p. 359, of this volume.

To ENFI'RE, *v. a.* To fire; to ſet on fire; to kindle. *Obſolete:*

So hard thoſe heavenly beauties be *enfir'd*,
As things divine, leaſt paſſions do impreſs. *Spenſer.*

To ENFOR'CE, *v. a.* [*enforcir*, Fr.] To give ſtrength to; to ſtrengthen; to invigorate. To make or gain by force:

Sometimes with lunatic bans, ſometimes with pray'rs
Enforce their charity. *Shakeſpeare.*

To put in act by violence. To inſtigate; to provoke; to urge on; to animate:

Fear gave her wings, and rage *enforc'd* my flight
Through woods and plains. *Spenſer.*

To urge with energy.—To avoid all appearance of diſaffection, I have taken care to *enforce* loyalty by an invincible argument. *Swift.*—To compel; to conſtrain:

For competence of life I will allow you,
That lack of means *enforce* you not to evil. *Shakeſpeare.*

To preſs with a charge. *Little uſed:*

If he evade us there,
Enforce him with his envy to the people,
And that the ſpoil got on the Antiates
Was ne'er diſtributed. *Shakeſpeare.*

To ENFO'RCE, *v. n.* To prove; to evince; to ſhew beyond contradiction.—Which laws in ſuch caſe we muſt obey, unleſs there be reaſon ſhewed, which may neceſſarily *enforce* that the law of reaſon, or of God, doth enjoin the contrary. *Hooker.*

ENFOR'CE, *ſ.* Power; ſtrength. *Not uſed:*

He now defies thee thrice to ſingle fight,
As a petty enterpriſe of ſmall *enforce*. *Milton.*

ENFOR'CEDLY, *adv.* By violence; not voluntarily; not ſpontaneouſly; not by choice:

If thou did'ſt put this four cold habit on,
To caſtigate thy pride, 'twere well, but thou
Doſt it *enforcedly*: thoud'ſt courtier be,
Wert thou not beggar. *Shakeſpeare.*

ENFOR'CEMENT, *ſ.* An act of violence; compulſion; force offered:

Confeſs 'twas her's, and by what rough *enforcement*
You got it from her. *Shakeſpeare.*

Sanction; that which gives force to a law.—The rewards and puniſhments of another life, which the Almighty has eſtabliſhed as the *enforcements* of his law, are of weight enough to determine the choice. *Locke.*—Motive of conviction; urgent evidence.—The perſonal deſcent of God himſelf, and his aſſumption of our fleſh to his divinity, was an *enforcement* beyond all the methods of wiſdom that were ever made uſe of in the world. *Hammond.*—Preſſing exigence:

More than I have ſaid,
The leiſure and *enforcement* of the time
Forbids to dwell on. *Shakeſpeare.*

ENFOR'CER, *ſ.* Compeller; one who effects by violence.—When a man tumbles a cylinder or roller down an hill, 'tis certain that the man is the violent *enforcer* of the firſt motion of it. *Hammond.*

ENFOUL'DRED, *adj.* [from *foudre*, Fr.] Mixed with lightning. *Obſolete:*

Heart cannot think what courage and what cries,
With fould *enfouldred* ſmoak and flaſhing fire,
The hell-bred beaſt threw forth unto the ſkies. *Spenſer.*

To ENFRAN'CHISE, *v. a.* To admit to the privilege of a freeman.—The Engliſh colonies, and ſome ſepts of the Iriſhry, *enfranchiſed* by ſpecial charters, were admitted to the benefit of the laws. *Davies.*—Romulus was the natural parent of all thoſe people that were the firſt inhabitants of Rome, or of thoſe that were after incorporated and *enfranchiſed* into that name, city, or government. *Hale.*—To ſet free from ſlavery.—If they won a battle, priſoners became ſlaves, and continued ſo in their generations, unleſs *enfranchiſed* by their maſters. *Temple.*—To free or releaſe from cuſtody:

His miſtreſs
Did hold his eyes lockt in her cryſtal looks.
—Belike, that now ſhe hath *enfranchis'd* them,
Upon ſome other pawn for fealty. *Shakeſpeare.*

To denizen; to endenizen.—Theſe words have been *enfranchiſed* amongſt us. *Watts.*

ENFRAN'CHISEMENT, *ſ.* Inveſtiture of the privileges of a denizen.—The incorporating a man into any ſociety, or body politic. For example, he that is by charter made denizen of England, is ſaid to be *enfranchiſed*; and ſo is he that is made a citizen of London, or other city, or burgeſs of any town corporate, becauſe he is made partaker of thoſe liberties that appertain to the corporation. *Cowel.*—Releaſe from priſon or from ſlavery:

Never did captive with a freer heart
Caſt off his chains of bondage, and embrace
His golden uncontroul'd *enfranchiſement*. *Shakeſpeare.*

To ENFREE'DOM, *v. a.* To make free.—I mean ſetting thee at liberty, *enfreedoming* thy perſon. *Shakeſpeare's Love's Labour loſt.*—This unuſual word (being put into the mouth of Armado) is probably meant for the coinage of affectation. *Maſon's Supplement to Johnſon's Dictionary.*

ENFRO'ZEN, *part:* Congealed with cold. *Not uſed:*

Yet to augment the anguiſh of my ſmart,
Thou haſt *enfrozen* her diſdainful breaſt,
That no one drop of pity there doth reſt. *Spenſer.*

ENGADI'NA, a diſtrict in the country of the Griſons, in a valley on the banks of the river Inn, bordering on the Tyroleſe, divided into Upper and Lower. Upper Engadina is divided into two communities; the number of inhabitants is eſtimated at four thouſand, four or five hundred of whom emigrate to foreign countries in different capacities. The country, on account of its elevation, produces paſture, but not ſufficient corn for the wants of the people: Zutz is eſteemed the principal place. Lower Engadina is divided into three communities; the ſoil is more fertile than in Upper Engadina, and produces abundance of fruit, and all things neceſſary for the inhabitants. Cernetz is the principal place.

To ENGA'GE, *v. a.* [*engager*, Fr.] To make liable for a debt to a creditor:

I have *engag'd* myſelf to a dear friend,
Engag'd my friend to his mere enemy,
To find my means. *Shakeſpeare.*

To impawn; to ſtake:

They moſt perfidiouſly condemn
Thoſe that *engag'd* their lives for them. *Hudibras.*

To enliſt; to bring into a party.—All wicked men are of a party againſt religion: ſome luſt or intereſt *engageth* them againſt it. *Tillotſon.*—To embark in an affair.—Before I *engage* myſelf in giving any anſwer to this objection of inconſumptible rights, I would ſee the effect certainly averred. *Digby:*—To unite; to attach; to make adherent.—Good-nature *engages* every body to him. *Addiſon.*—To induce; to win by pleaſing means; to gain:

To ev'ry duty he could minds *engage*,
Provoke their courage, and command their rage. *Waller.*

So ſhall I court thy deareſt truth,
When beauty ceaſes to *engage!*
So thinking on thy charming youth,
I'll love it o'er again in age. *Prior.*

To bind by any appointment or contract.—We have been firm to our allies, without declining any expence to which we had *engaged* ourſelves, and we have even exceeded our engagement. *Atterbury.*—To ſeize by the attention: as, He was deeply *engaged* in converſation. To employ; to hold in buſineſs:

For I ſhall ſing of battles, blood, and rage,
Which princes and their people did *engage*. *Dryden.*

To encounter; to fight:

The rebel knave, who dares his prince *engage*,
Proves the juſt victim of his royal rage. *Pope.*

To ENGA'GE, *v. n.* To conflict; to fight.—Upon advertiſement of the Scots army, the earl of Holland was ſent with a body to meet and *engage* with it. *Clarendon.*—To embark in any buſineſs; to enliſt in any party:

'Tis not indeed my talent to *engage*
In lofty trifles, or to ſwell my rage
With wind and noiſe. *Dryden.*

ENGA'GEMENT, *ſ.* [from *engage*; *engagement*, Fr.] The act of engaging, imparting, or making liable to a debt. Obligation by contract.—We have, in expence, exceeded our *engagements*. *Atterbury.*—Adherence to a party or cauſe; partiality.—This practice may be obvious to any who impartially, and without *engagement*, is at the pains to examine. *Swift.*—Employment of the attention.—Play, either by our too conſtant or too long *engagement* in it, becomes like an employment or profeſſion. *Rogers.*—Fight; conflict; battle:

Our army, led by valiant Torriſmond,
Is now in hot *engagement* with the Moors. *Dryden.*

Obligation; motive.—This is the greateſt *engagement* not to forfeit an opportunity. *Hammond.*

ENGAN'HO, or ENGANNO, one of the Malayan iſles, in the eaſtern Sea; a little diſtant from the ſouth-weſt coaſt of the iſland of Sumatra, and about ninety miles ſouth of fort Marlborough. It was ſcarcely known to have been inhabited, by reaſon of the inacceſſible rocks, and dreadful breakers, until Commodore Beaulieu viſited it, who calls it *L'Iſle Trompeuſe*, and adds, that the natives *murder all that come on ſhore*. Mr. Charles Miller, however, found this account greatly exaggerated. He went on ſhore from our ſhips of diſcovery, and ſays "the men were from five feet eight to five feet ten inches high, of a reddiſh colour, with black ſtrait hair cut ſhort; that of the women long, and rolled into a neat curl on the top of the head. The men went quite naked; the women had no more than a plantain leaf to hide their nakedneſs; the arms of the men were lances headed with the bone of fiſh, their canoes made of two boards ſewed together, and the ſeam filled with pitch. Their houſes were circular, ſupported on ſtakes of iron-wood; they had no ſort of fowl, cattle, or rice; they lived on cocoa nuts, ſugar canes, and ſweet potatoes, or fiſh dried in the ſmoke. The fiſh they caught with their lances, or in nets very neatly manufactured by themſelves. Their behaviour was hoſpitable, nor did they give any ſort of umbrage, till ſome imprudent conduct on our ſide excited an alarm. Conch ſhells, the murex tritonis, reſounded in all parts of the iſland, and our people thought fit to make a ſudden retreat."

To ENGA'OL, *v. a.* To impriſon; to confine:

Within my mouth you have *engaol'd* my tongue,
Doubly portcullis'd with my teeth and lips. *Shakeſpeare.*

To ENGAR'RISON, *v. a.* To protect by a garriſon.—Neptune with a guard doth *engarriſon* her ſtrongly. *Howel.*

ENGASTRIMU'THI, *ſ.* [from ἐν, in, γαστὴρ, the belly, and μυθέομαι, Gr. to diſcourſe.] In pagan theology, the Pythians, or prieſteſſes of Apollo, who delivered oracles from within, like ventriloquiſts, without any action of the mouth or lips. Ancient philoſophers are divided upon the ſubject of the engaſtrimuthi. Hippocrates mentions it as a diſeaſe: others as a kind of divination: others attribute it to the operation or poſſeſſion of an evil ſpirit: and others to art and mechaniſm. Scottus maintains that the engaſtrimuthi of the ancients were poets, who, when the prieſts could not ſpeak, ſupplied the defect by explaining in verſe what Apollo dictated in the cavity of the baſon of the ſacred tripod.

EN'GELACH, a town of Germany, in the circle of Lower Saxony, and biſhopric of Hildeſheim: fifteen miles ſouth-weſt of Alfeld.

EN'GELBERG, an abbey of Swifferland, in the canton of Underwald, in a valley ſurrounded with lofty mountains. The cantons of Uri, Schwitz, and Unterwald are its protectors: five miles eaſt-ſouth-eaſt of Saxlen.

EN'GELBERT, [Sax.] A man's name.

EN'GELBRECHTS, a town of Germany, in the archduchy of Auſtria: five miles north-north-weſt of Bavarian Waldhoven.

ENGELHART'ZEL, a town of Germany, in the archduchy of Auſtria: nine miles eaſt of Paſſau.

EN'GELHAUS, a town of Bohemia, in the circle of Saatz: two miles eaſt-ſouth-eaſt of Carlſbad.

EN'GELHOLM, a ſea-port town of Sweden, on the eaſt ſide of the Categat, in a conſiderable bay, with good anchorage: thirty-ſix miles north of Lund, and forty-five weſt of Chriſtianſtadt. In 1678 it was taken by the Danes, after an obſtinate defence, in which the city was reduced almoſt to a heap of ruins. Lat. 56. 13. N. lon. 12. 49. E. Greenwich.

EN'GELSBERG, a town of Sileſia, in the principality of Appau: five miles north-north-weſt of Freudenthal.

EN'GELSBURG, a town of Pruſſia, in the territory of Culm: twelve miles north-eaſt of Culm.

EN'GELSDORF, a town of Bohemia, in the circle of Boleſlaw: ten miles north-north-eaſt of Krottau.

EN'GELSTEIN,

EN'GELSTEIN, a town of Pruſſia, in the province of Natangen: forty-eight miles ſouth-eaſt of Konigſberg.

ENGELSTET'TEN, a town of Germany, in the archduchy of Auſtria: twenty-three miles eaſt of Vienna.

EN'GEN, a town of Germany, in the circle of Swabia, and principality of Stuhlingen: twelve miles north-north-eaſt of Schaffhauſen, and twenty-one north-north-weſt of Conſtance.

To ENGEN'DER, *v. a.* [*engendrer*, Fr.] To beget between different ſexes.—This baſtard love is *engendered* between luſt and idleneſs. *Sidney.*—To produce; to form:

Oh, nature! thou, who of the ſelf-ſame mettle,
Whereof thy proud child, arrogant man, is puffſt,
Engender'ſt the black toad and adder blue. *Shakeſpeare.*

To excite; to cauſe; to produce.—It unloads the mind, *engenders* thoughts, and animates virtue. *Addiſon.*

Say, can you faſt? your ſtomachs are too young,
And abſtinence *engenders* maladies. *Shakeſpeare.*

To bring forth.—Vice *engenders* ſhame, and folly broods o'er grief. *Prior.*

To ENGE'NDER, *v. n.* To be cauſed; to be produced.—Thick clouds are ſpread, and ſtorms *engender* there. *Dryden.*

EN'GENTHAL, a town of Germany, in the circle of Franconia: thirteen miles eaſt of Nuremberg.

EN'GER, a town of Germany, in the circle of Weſtphalia, and county of Ravenſberg: three miles weſt of Hervorden.

EN'GER SEE, a lake of Carinthina, ten miles north-north-weſt of Feltkirchen.

EN'GERSTORFF, a town of Germany, in the archduchy of Auſtria: ten miles ſouth-weſt of Ziſterſdorf.

ENGHI'EN, or ENGHUIEN, a town of the Netherlands, in the county of Hainaut, near which was fought the famous battle of Steenkirk: eight miles eaſt-north-eaſt of Ath, and thirty north-north-eaſt of Valenciennes.

EN'GIA, an iſland near the coaſt of the Morea, in a gulf to which it gives name; anciently called *Egina*, *Oenone*, and *Myrmidonia*, which laſt name it obtained from the activity and induſtry of the inhabitants, compared to ants: about ten leagues in circumference; but rendered by rocks nearly inacceſſible, except on the north-weſt. It has no harbours. It has one town which contains about eight hundred houſes; and in it are ſeen the remains of a temple dedicated to Venus, and of another dedicated to Jupiter: twenty-five miles ſouth-ſouth-weſt of Athens. Lat. 37. 42. N. lon. 41. 20. E. Ferro.

EN'GIA, a gulf on the ſouth-eaſt coaſt of European Turkey, ſo called from the iſland ſituated in it, about ſixty miles in length from north-weſt to ſouth-eaſt, and twenty-five wide at the mouth.

To ENGIL'D, *v. a.* To illuminate:

Fair Helena, who more *engilds* the night,
Than all yon fiery o's and eyes of light. *Shakeſpeare.*

E'NGINE, *ſ.* [*engin*, Fr. *ingegno*, Ital.]—Any mechanical complication, in which various movements and parts concur to one effect.—In all *engines* it muſt be conſidered, what weight every beam is to carry. *Adams.*—A military machine:

This is our *engine*, towers that overthrows;
Our ſpear that hurts, our ſword that wounds, our foes.
Fairfax.

Any inſtrument.—The ſword, the arrow, the gun, with many terrible *engines* of death, will be employed. *Raleigh.*

He takes the ſciſſars, and extends
The little *engine* on his fingers' ends. *Pope.*

Any inſtrument to throw water upon burning houſes.

Some cut the pipes, and ſome the *engines* play;
And ſome, more bold, mount ladders to the fire. *Dryd.*

Any means uſed to bring to paſs, or to effect; *commonly in an ill ſenſe.*—Prayer muſt be divine and heavenly, which the devil with all his *engines* ſo violently oppoſeth. *Duppa.* An agent for another; *in contempt:*

They had th' eſpecial *engines* been, to rear
His fortunes up into the ſtate they were. *Daniel.*

In Mechanics, this term is applied to wheels, ſcrews, levers, and all the mechanical powers, combined to lift, caſt, or ſuſtain a weight, or produce any other conſiderable effect; ſome of which are for war, as the baliſta, catapulta, ſcorpio, battering ram, &c. others for the arts of peace, as mills, cranes, preſſes, clocks, watches, &c. which ſee under their reſpective heads; alſo the articles MECHANICS, HYDROSTATICS, ARTILLERY, &c.

ENGINE'ER, *ſ.* [*engignier*, Fr.] One who manages engines; one who directs the artillery of an army. He is denominated either a *civil* or *military* engineer, according as the objects of his profeſſion reſpect civil or military purpoſes.—An author, who points his ſatire only at a great man, is like the *engineer* who ſignalized himſelf by this ungenerous practice. *Addiſon.*

Him thus enrag'd,
Deſcrying from afar, ſome *engineer*,
Dext'rous to guide th' unerring charge, deſign'd,
By one nice ſhot, to terminate the war. *Philips.*

A *military engineer* ſhould be an expert mathematician and draughtſman, and particularly verſed in fortification and gunnery, being the perſon officially employed to direct the operations both for attacking and defending works. It is their buſineſs alſo to draw the lines of circumvallation and contravallation; alſo to mark out the trenches, places of arms, batteries, and lodgments, and in general to direct the workmen in all ſuch operations.

EN'GINERY, *ſ.* [from *engine*,] The act of managing artillery.—They may deſcend in mathematics to fortification, architecture, *enginery*, or navigation. *Milton.*—Engines of war; artillery:

We ſaw the foe
Approaching, groſs and huge, in hollow cube
Training his dev'liſh *enginery*. *Milton.*

Machination in general:

Imbibe the novel daylight, and expoſe
Obvious the fraudful *engin'ry* of Rome. *Shenſtone.*

To ENG'IRD, *v. a.* [from *gird.*] To encircle; to ſurround; to environ; to encompaſs.

My heart is drown'd with grief,
My body round *engirt* with miſery;
For what's more miſerable than diſcontent? *Shakeſp.*

To ENGI'RT, *v. a.* To engird.—That gold muſt round *engirt* theſe brows of mine. *Shakeſpeare.*—*Johnſon* has produced this paſſage for an example of *engird*. *Maſon.*

ENGISO'MA, *ſ.* [from εγγιζω, Gr. to approach.] A ſurgical inſtrument for making the parts of the broken clavicle meet. Alſo a fracture of the cranium where the bone and the membrane of the brain meet.

ENG'LAND, or South-Britain, one of the ſmalleſt, though confeſſedly the moſt celebrious, of all the countries of Europe. It is bounded on the north by Scotland, on the eaſt by the German Ocean, on the ſouth by the Engliſh Channel, and on the weſt by St. George's Channel, the Atlantic Ocean, Wales, and the Iriſh Sea. The extent of England, including Wales, reckoned in ſquare miles, is computed at 49,450; and the population being eſtimated at eight millions four hundred thouſand of ſouls, the number of inhabitants to every ſquare mile will be one hundred and ſixty-nine. The whole iſland extends from fifty to fifty-eight and a half degrees of north latitude, whence it is about five hundred geographical miles in length, divided into two parts, viz. North Britain, commonly called Scotland; and South-Britain, or England; which, from the Land's End in Cornwall, to the North Foreland in Kent, is three hundred and twenty geographical miles. In Britiſh miles, the whole length of

of the iſland may be computed at five hundred and eighty, and the breadth, from the points above mentioned, at three hundred and ſeventy.

England is interſected by four very important rivers, the Severn, the Thames, the Humber, and the Merſey. The Severn riſes from the mountain Plenlimmon in North Wales, and after an eaſterly courſe to Shrewſbury, bends its progreſs almoſt ſouth to Glouceſter, whence it flows ſouth-weſt into the Briſtol Channel, a progreſs of about one hundred and fifty miles, navigable as far as Welch pool. Its chief tributary ſtreams are the northern and ſouthern Avons, the Teme, and the Wye.

The majeſtic Thames originates in Cotſwold-hills, Glouceſterſhire; and maintains a ſouth-eaſterly direction, to its egreſs into the German Ocean, after receiving the Cherwel, the Teme, the Kennett, another Wye, the Mole, and Lee. The Medway flows into the eſtuary of the Thames, as the Wye into that of the Severn. The courſe is computed at 140 miles, navigable to Cricklade. This pre-eminent river may truly boaſt of wafting to and from the metropolis, the principal riches of the world.

The Humber is a name almoſt confined to a large eſtuary, which receives many conſiderable rivers that fertilize the central parts of England. Of theſe the Trent is the moſt important, which riſes at New-pool, in Staffordſhire, and proceeding North-eaſt, enters the Humber, after a direct courſe of about one hundred miles, being navigable to Burton in Staffordſhire. The other principal rivers that iſſue into the Humber, are the Dun, a navigable ſtream which runs by Doncaſter; the Aire navigable to Leeds, and the Calder navigable to Halifax, both ſingularly uſeful in tranſporting the woollen manufactures; the Warf, navigable to Tadcaſter; and the noble river Ure, or Ouſe, which runs by York, and forms another grand branch of the Humber, navigable to Rippon: nor muſt the Derwent be omitted, which is navigable to New Malton; nor, though laſt and leaſt, the Hull. The Humber may be regarded as the ſtem of a venerable oak, which ſpreads its chief branches in a horizontal direction, and accumulates moiſture from every quarter, for the benefit of the parent-ſtock.

The Merſey preſents a grand eſtuary; yet its courſe is not of great extent. It riſes in the weſt riding of Yorkſhire, and runs to the ſouth-weſt; but the eſtuary bends towards the north. The direct courſe is not above fifty miles; and is navigable to Stockport: as the Irwell to near Mancheſter, and the Weever to near Northwich, and its mines of rock-ſalt. Not only theſe rivers, but many more in different parts of the kingdom are likewiſe navigable: the Avon is navigable to Bath, the Perrot to Ilcheſter, the Tone to Taunton, the Taw to Barnſtaple, and another branch to Biddeford; the Camil of Cornwall, to Wedbridge, while the Plym, Dart, and Ex, can alſo be pervaded to a conſiderable height. Another Avon is navigable to near Saliſbury, the Itchin to Wincheſter, the Arun to Arundel, the Ouſe to Lewes: the Rother, which forms the haven of Rye, is yet navigable, though fallen in fame. The Stour admits boats even to Canterbury; but the Medway preſents a navigable ſtream as far as Tunbridge. On the north of the Thames, the Lee is navigable to Biſhop's Stortford and Hertford: the Crouch conveys boats from the ſea to Hull-bridge in Eſſex; the Black-water to Chelmsford, and another branch to Colcheſter. The Stour is navigable to Sudbury; the Orwell to Stow, the Deben to Woodbridge: the Yare and Waveney to Foulſham and Bungay. Next is the eſtuary called the Waſh, which receives the Ouſe, the Nen, the Welland, the Witham, all ſtreams of conſiderable navigation. On the north of the Humber, the Tees admits veſſels to Stockton; the Tyne to Newcaſtle. On the weſt, the Eden is navigable to Carliſle; the Lon to Lancaſter and Hornby; the Dee to Cheſter; the Conway to within two miles of Llanrwſt; the Tivey to Llanpiter. Milford Haven preſents branches navigable to Haverford-weſt, and to near Wiſton: and laſtly, the Wye may be purſued as far as Hay, in Brecknockſhire.

In general it may be obſerved of the Britiſh rivers, that the length of their courſe is inconſiderable, when compared with that of the continental ſtreams. The length of the Thames compared with that of the Danube, is only as one to ſeven, and with that of the Nile, as one to twelve. The Kian Keu of China, and the river of Amazons in ſouth America, extend through a progreſs of more than fifteen times the length of that of the Thames. The rivers of the ſouthern and middle parts of England, preſent a ſtriking contraſt to thoſe of the north; the former purſuing a ſlow and inert courſe over mud, between level banks, amid rich and extenſive meadows; while the latter roll their clear torrents over beds of gravel, between elevated banks, and rocky precipices; and even when verdant levels occur, the ſtream ſtill retains its banks and beds of gravel. England has little to boaſt of extenſive lakes; yet thoſe of Coniſton, Windermere, and Derwent, in Cumberland, have been juſtly celebrated by deſcriptive and poetical writers, as poſſeſſing beauties of a rural and romantic nature, rarely to be ſurpaſſed.

The mountains in this country, though not lofty, form a grand feature of geographical limit and boundary. They ſeldom appear ſingle, but are either diſpoſed in ridges, called chains, or in cluſters. When they can be arranged under the firſt form or denomination, as the Alps for example, or the Pyrenees, they afford great clearneſs to geographical deſcriptions. While Bennevis, the higheſt mountain in Scotland, is not much above one quarter of height of Mont Blanc, the ſovereign of the Alps, the Engliſh and Welſh ſummits aſpire to heights ſtill leſs conſiderable; Snowden being only 3568 Engliſh feet above the ſea, while Bennevis is 4387, or, by other accounts, 4350. But Wharn, in Yorkſhire, was eſtimated at 4050. The mountains of Cheviot may be ſaid to form a regular ridge, running from the ſouth-weſt, where they join thoſe of Galloway to the north-eaſt. But there is a central ridge which pervades England from north to ſouth, beginning at Geltſdale foreſt, fourteen miles ſouth-eaſt of Carliſle, and paſſing on the weſt of Durham and Yorkſhire, where it contains mines of coal and lead, is ſplit into the appellations of fells and laws. Kelton-fell, Stanmore, Widehill-fell, Wildboar-fell, Bow-fell, Homefell, Bunhill, &c. ariſe on the weſtern limits of Yorkſhire. Cumberland and Weſtmoreland preſent many detached mountains, Skiddaw, &c. which can hardly be reduced to any diſtinct arrangement; but thoſe of Craven, in the Weſt Riding of Yorkſhire, as Wharn, or, as commonly called by the country people, Wharnſide, Ingleborough, and Pennigant; and Pendle on the eaſt of Lancaſter; belong to the Central Chain, which proceeds ſouth, through Derbyſhire to the Peak, abounding with minerals and natural curioſities; but here it ſeems to terminate, ſpreading a little into Cheſhire. Still, however, a central chain of ſmaller elevation, may be traced, in a zig-zag line, to near Saliſbury, with two diverging and irregular branches on the eaſt, one towards Norfolk, another into Kent, while a third runs ſouth-weſt into Cornwall. To the firſt belong the hills of Gogmagog, in Cambridgeſhire, &c. to the ſecond, the northern hills of Hampſhire, Surrey, and Kent. Malvern hills, in Worceſterſhire, deviate from the central ridge, while thoſe of Cotſwold, in Glouceſterſhire, may be regarded as a continuation of it. The hills of Mendip, Polden, Sedgemoor, Blackdown, in Somerſetſhire; the Tores and Wilds of Dartmore, in Devon; and the hills and upland downs of Cornwall extend this chain to the Land's End: and, after paſſing this laſt rocky province, it expires in the iſlands of Scilly. The ſouthern range, commonly called the South Downs, forms a long and remarkable line of continuity from weſt to eaſt; commencing with great abruptneſs at Old Wincheſter, oppoſite Portſdown, in Hampſhire, and thence continuing over the lofty brow of Butſur to Uppark, the telegraph heights of Marden, Rook's hill above Goodwood-park, bending towards Lavington, and thence running with incomparable beauty of land

and ſea proſpect, and richneſs of paſturage, which has given ſo much celebrity to the South-down breed of ſheep, quite to the eaſtern extremity of the county of Suſſex, after paſſing the towns of Steyning, Brighthelmſtone, Lewes, &c. and ſerving as a barrier to the ſea on the ſouthern coaſt.

Wales is moſt abundant in alpine mountains, eſpecially the northern provinces; but their orology remains indeterminate, and it would require the actual ſurvey of an experienced engineer, to reduce them to chains or groupes. To begin with the North, Snowden commands the firſt attention, a mountain of eminent height and fame. The top is called Y Widdfa, or the conſpicuous, forming almoſt a point, and preſenting a view of the county of Cheſter, the mountains of Yorkſhire, parts of Scotland and Ireland, and the iſles of Man and Angleſey. Mr. Pennant obſerves, that large coarſe cryſtals are often found in the fiſſures, and very frequently cubic pyritæ, the uſual attendants on alpine tracts. From Snowden, a line of mountains extends by the ſea to Plenlimmon, whence iſſue the noble rivers, Severn and Wye. Of theſe hills, Urrou Seth, Caer Idris, and Moyle Vadiau, are the moſt memorable. The hills on the eaſt of North Wales, are far from attaining ſuch conſiderable elevation, and gradually decline to the hills of Shropſhire, of which the Wrekin is one of the moſt noted. A chain alſo proceeds due ſouth to near Cardiff, in South Wales; it is of far inferior height, and a ſmall branch diverges to the weſt, conſiſting of Cwn Cothy, Mynydd, Carreg, Briſley, and Cwm Kerrun-hills. On the eaſt of South Wales, are the hills of Herefordſhire, the Black Mountain, Cuſop-hill, Hargeſt, Stockley-hill, &c.

In the northern and weſtern mountains and hills, chalk is unknown, while it forms a chief material of thoſe of the ſouth and eaſt. Mr. Pennant obſerves, that a line drawn from Dorcheſter, in the county of Dorſet, to the county of Norfolk, would form a boundary of the great chalky ſtratum which interſects the kingdom, none being found in any quantity to the north or weſt of that line. The northern mountains are moſtly compoſed of limeſtone, free-ſtone, ſlate, or ſchiſtus, with mines of lead or coal; thoſe of Derbyſhire preſent vaſt maſſes of limeſtone, interſected with thick veins of toad-ſtone, by ſome aſſerted to be the produce of fire, while others aſſign an aqueous origin. See the article EARTH, p. 177, of this volume.

The ſummit of Skiddaw preſents white ſhivery ſlate, or argillaceous ſchiſtus; but ſome of the Weſtmoreland mountains contain ſiliceous ſchiſtus; and it is probable that granite may exiſt in thoſe of Cheviot. The vaſt baſe of Ingleborough, near thirty miles in circuit, conſiſts of lime-ſtone; on the eaſt ſide full of ſhells to near the ſummit, which is of grit and ſand-ſtone flag; the foſſils, black and brown marble, thin ſlate near Ingleton, rotten-ſtone or tripoli, and ſome lead-ore. And ſuch is this chain to its termination; while further to the ſouth, the eaſterly elevations are of chalk; and thoſe on the weſt, as Mendip-hills, in Somerſetſhire, are wholly calcareous. The granite begins at Dartmoor, in Devonſhire, and continues through Cornwall, where it occurs of various colours, the grey granite, or moorſtone; the red, or oriental; the white, the yellow, and the bluiſh, or pigeon-coloured. Near the Lizard and Mullion, are rocks of ſerpentine and ſteatites, the latter being alſo found in a ſingular variolite, at Thorverton, between Exeter and Upton Pyne. The china-ſtone, or petunſi, uſed in making fine porcelain, is here a decompoſed granite, the felſpar having become ſoft like lithomarga.

The Welſh mountains abound in various granites, with large maſſes of quartz and ſerpentine: a French mineralogiſt, Coquebert, obſerves a ſimilarity between the ſubſtances of the Welſh mountains, and thoſe of Wicklow in Ireland, whence he infers a primitive junction. While on the eaſt of England the lime-ſtone ſucceeds the chalk, (of which change the noble promontory of Flamborough-head affords a ſtriking inſtance,) on the coaſt towards Wales, are found granite, and other primitive rocks. The Wrekin, about ten miles eaſt of Shrewſbury, is chiefly compoſed of reddiſh chert, or petroſilex, with ſileceous ſand-ſtone, baſalt, and a kind of granite. The great coal diſtrict of Colebrook-dale, reſts on indurated clay, while that near Briſtol is accompanied by black freeſtone, and even the calcareous freeſtone near Bath is interſperſed with numerous veins of coal. The Malvern-hills, on the ſouth-weſt of Worceſterſhire, run north and ſouth about ten miles, and afford many granitic rocks, with chert and hornblende ſlate. Theſe notices muſt ſuffice on the compoſition of the Engliſh mountains; a ſubject (ſays Mr. Pinkerton) which only begins to attract that attention which its curioſity merits.

England, in its primeval ſtate, muſt have been half covered with woods and foreſts. Many of the foreſts in the Anglo-Saxon times, were eſteemed royal demeſnes; and the Norman monarchs were ſo much addicted to the chace, that upwards of ſixty foreſts at one time appertained to the crown; of which the chief now remaining are the foreſts of Dean in Glouceſterſhire; Sherwood, in Nottinghamſhire; Windſor, in Berkſhire; the New Foreſt, and the Foreſt of Bere, in Hampſhire. Beſides theſe, other diſtricts ſtill retain the name, as Dartmoor-foreſt, in Devonſhire; Enfield-chaſe, in Middleſex; Witham and Epping-foreſt, and that of Henault, in Eſſex; Sacy and Wittleborough-foreſt, and Rockingham-foreſt, in Northamptonſhire; Peak-foreſt, in Derbyſhire; Malvern-chaſe and Wyre-foreſt, in Worceſterſhire; Cannock-chaſe and Neidwood-foreſt, in Staffordſhire, Mogg-foreſt and Clun-foreſt, and that of Hays and Mocktree, in Shropſhire; Macclesfield-foreſt, in Cheſhire; Netherdale-foreſt and Langſter-chaſe, in the Weſt Riding of Yorkſhire; the foreſt of Galtres, and Arkengarth and Stainmore, and Leyne, in the North Riding; Teeſdale and Weredale-foreſts, in the county of Durham; Roſendale-foreſt, in Lancaſhire; Sleddell and Martindale-foreſts, &c. in Weſtmoreland; Geltſdale and Inglewood-foreſts, in Cumberland. The relics of a ſub-marine foreſt on the coaſt of Lincolnſhire, manifeſt a ſtriking proof of the mutations and changes on the face of the globe, occaſioned by volcanic, electric, or other, diſturbance in the bowels of the earth, whereby ſome tracts of country are abſorbed by the ſea, whilſt others are thrown up from the bottom of the ocean, and converted into dry land. See the article EARTHQUAKE, p. 207 of this volume.

Of luxuriant fruits, and rich vegetable productions, England is by nature very ſcantily ſupplied. The frequent rains, the blaſting winds, the nipping froſts, and the uncertain and irregular heat of the ſun, deny to this country thoſe vegetable treaſures, which, in the tropical regions, offer themſelves in abundance as food for man. The humidity of the climate, however, clothes the vales and meadows, and even the hills and mountains, with a rich verdure almoſt unknown to any other country, and ſhews how admirably England is adapted to the growth and ſupport of graminivorous quadrupeds. This partiality of nature in ſcanting to the aboriginal inhabitants the ſupply of vegetable food, while it is profuſely offered to the grazing herds of every kind, obliged them to depend for their ſupport principally on the fleſh of animals; and thus inducing a robuſt and vigorous habit, gave them ſtronger motives to perſonal exertion, than a more favoured ſtate in a warmer climate could have afforded. While the native of the tropical climates was receiving from the bountiful hand of nature an exuberant ſupply of bread-fruit, bananas, and cocoa-nuts, the aboriginal Briton was obliged to earn his daily food by the hard labour of each returning day, to chaſe the flying deer through the woods, or to diſpute his prey with the boar or the wolf. Thus, the ſeverity of climate, and paucity of vegetable food, was the firſt germ of induſtry

duſtry and invention in England, which, at length, by the aid of huſbandry and horticulture, has laid all the vegetable riches of the globe at our feet.

It is the peculiar felicity of England to be infeſted with very few animals, but what are, or may be made, ſubſervient to the uſes of man. Of the domeſtic kinds, this country boaſts peculiar pre-eminence, particularly in horſes, beeves, veniſon, and mutton, in conſequence of the natural luxuriance of its paſtures. That noble and uſeful animal, the horſe, is found in England of many mingled breeds, while moſt other kingdoms produce only one kind. The high-bred horſes deſcend from Arabian ſtallions, originally barbs. The great ſtrength and ſize of the Engliſh draught-horſes, are derived from thoſe of Germany, Flanders, and Holſtein; and other breeds have been ſo intermingled, that native horſes may be found adapted to every purpoſe of pomp, pleaſure, and utility. Thoſe of Yorkſhire are celebrated for their great ſpirit and beauty; thoſe of Lincolnſhire and Leiceſterſhire for their ſuperior draught and ſtrength. The ſpeed of Childers was computed at a mile in a minute; and ſuch is the ſtrength of a Yorkſhire pack-horſe, that he will uſually carry 420 pounds; and a mill-horſe of Leiceſterſhire will ſupport a weight of 910 pounds. Mr. Pennant obſerves, that though the Britiſh cavalry was remarkable, even in the time of Julius Cæſar, yet we know nothing of the primitive breed.

The indigenous breed of horned cattle is now only known to exiſt in Neidwood-foreſt, in Staffordſhire, and at Chillingham caſtle in Northumberland. They are long-legged and wild like deer, of a pure white colour, with black muzzles, ears, and tails, and a ſtripe of the ſame hue along the back. The Engliſh breeds of black cattle are almoſt as various as thoſe of our horſes; thoſe of Wales and Cornwall are uſually ſmall; while the Lincolnſhire kind derive their great ſize from thoſe of Holſtein, ſince bred and foſtered in their immenſe fens.

The number and value of ſheep in England, may be appreciated from the ancient ſtaple commodity of wool. Of this moſt uſeful animal ſeveral breeds appear, generally denominated from their particular counties or diſtricts; thoſe of Herefordſhire, Suſſex, Devonſhire, and Cotſwold-downs, are noted for fine fleeces, while the Lincolnſhire and Warwickſhire kind, are remarkable for the quantity. The Teeſdale breed of the county of Durham, though lately neglected, ought not to loſe their fame. The wool is beautiful, but the length of their legs leſſens their value in the eyes of the breeder. The mutton of Wales, on the contrary, is eſteemed, while the wool is coarſe, yet employed in many uſeful and ſalutary manufactures. The Suſſex breed is remarkable for black faces and ſhort legs; but they are chiefly preferred on account of their hardy nature, the eaſe with which they paſs the winter on a ſpare diet, the fineneſs and value of their fleece, and the facility with which they fatten on turnip: hence the South-down breed of ſheep has of late years been in great requeſt throughout England. Thoſe of Leiceſterſhire are very large, with abundance of wool, but coarſe; and without horns, like the Suſſex breed, with which they have of late been pretty much croſſed.

The goat, an original inhabitant of our rocks, has, even in Wales, begun to yield to the more uſeful breed of ſheep; that country being, like Scotland, more adapted to the woollen manufacture. The breeds of ſwine are alſo various and uſeful: originally the boar was wild, and hunted in our foreſts and woods. England alſo abounds in valuable breeds of dogs, ſome of which were celebrated even in the Roman times. In the reign of Elizabeth, Dr. Caius enumerates ſixteen denominations of Engliſh dogs. Some ſeem to be now extinct; and the blood-hound only occurs in Staffordſhire. The cat is one of the moſt univerſal, and moſt identic of animals, thoſe of Angola excepted, with their white fleeces, and thoſe of Ruſſia with a bluiſh fleece, and eyes of topaz.

Of our ſavage animals, the moſt fierce and deſtructive is the wild cat, which is three or four times as large as the domeſtic, with a flat broad face, colour yelloviſh white, mixed with deep grey, in ſtreaks running from a black liſt on the back; hips always black, tail alternate bars of black and white; only found in the moſt mountainous and woody parts. The wolf has been long extinct, but the fox abounds. It is ſufficient to name the badger, the fitchet, the martin, the ſtoat or ermin, the otter, ſquirrel, dormouſe, rat, and various kinds of mice. The mole, urchin, and bat, ſeem to become more rare; the ſeal is chiefly found on the coaſt of Wales.

In the parks of the great, the roe is now extinct, but fallow deer abound, of great beauty, and the red deer; the latter are known by the terms, ſtag, hind, young, or calf; while the former are ſtyled buck, doe, and fawn; the red kind are more vicious than the other, and becoming more uncommmon. Veniſon, in its wild ſtate, has been long extinct in England.

The chief of our birds of prey, are the golden eagle, ſometimes found on Snowden; the black eagle has appeared in Derbyſhire; the oſprey, or ſea eagle, ſeems extinct in England. The peregrine falcon breeds in Wales; and many kinds of hawks in England. The nightingale, one of the moſt celebrated birds of ſong, is not found in North Wales, nor any where to the north, except about Doncaſter, where it abounds; nor does it travel ſo far weſt as Devonſhire and Cornwall. This limitation is remarkable, as theſe birds are found in the ſevere climate of Sweden. Engliſh poultry ſeem to originate from Aſia; the peacocks are from India; the pheaſants from Cholchis; the guinea-fowl from Africa. Our ſmalleſt bird is the golden-creſted wren, which ſports on the higheſt pine-trees; and our largeſt the buſtard, ſome of which weigh twenty-five pounds, and are now ſcantily found in the open countries of the ſouth and eaſt. But the tame buſtard, which is the turkey, richly ſupplies the defect; the largeſt are reared in Norfolk and Suffolk. Game abounds ſo much in England, that the right of killing and eating it conſtitutes the moſt vexatious of our laws.

The reptiles in England are very few, and rarely injurious; they are the coriaceous tortoiſe, frogs, toads, ſeveral kinds of lizards: of ſerpents, the viper or adder alone is venomous; other kinds are the ringed ſnake, ſometimes found four feet in length; and the blind worm, ſeldom exceeding eleven inches.

Of fiſh, the whale ſeldom appears near the Engliſh coaſts, nor the dolphin; the porpoiſe and others of the ſame genus are not uncommon. The baſking ſhark ſometimes appears off the ſhores of Wales. Numerous are our edible ſea-fiſh. Some of the moſt celebrated are the turbot, doree, ſoal, cod, plaice, mullet, &c. The conſumption of herrings and mackarel extends to moſt parts of the kingdom; but pilchards are confined to the Corniſh coaſts. Our chief river fiſh are the ſalmon and the trout, which are brought from the northern parts in prodigious numbers, generally packed in ice; but ſometimes the trout are brought alive, in veſſels provided with a well or baſon for that purpoſe. It is ſaid that not leſs 30,000 ſalmon are brought from one river, the Tweed, to London, in the courſe of a ſeaſon. The lamprey, though a ſea-fiſh, is chiefly found in the Severn; it reſembles the eel, but has a line of ſeven apertures near the head. The charr is chiefly found in the lakes of Weſtmoreland, the ſides ſprinkled with red ſpots. The umber, or grayling, ſomewhat reſembles the trout. The ſamlet is the ſmalleſt of the trout kind, and has erroneouſly been ſuppoſed the young of the ſalmon; in Scotland it is called the par. Our carps are from Poland, and the inferior ſort from Pruſſia: the tench and perch are eſteemed by ſome as dainties of the table. The lobſter is found on moſt of the rocky coaſts, particularly off Scarborough, and the Iſle of Wight, Portland, Purbeck, &c. Of ſhell-fiſh, the pearl mya, a large kind of muſſel, was found in the Conway, in Wales, and the Irt, in Cumberland; but it ſeems

now

now confined to Ireland and Scotland. The Engliſh oyſters maintain their Roman reputation; but they ſeem to yield in flavour to thoſe of more northern countries. The green from Colcheſter in Eſſex, and the white from Milton in Kent, have the chief reputation in the London market.

In valuable mineral productions, England is far from being deficient. The tin-mines of Cornwall are not only venerable from their antiquity, but are, it is ſuppoſed, the richeſt of the kind in the world. Tin is alſo found in Bohemia, Saxony, and Hungary, and in the oriental regions of Malacca, Banca, and Siam, but not in ſuch laſting exuberance as in the Corniſh mines. That kind of ſilver, termed by mineralogiſts horn-ore, is alſo found in that diſtrict; but the profound ſecrecy obſerved in working it, forbids any inveſtigation of the amount. The Hucl rock boaſts of what is called bell-metal ore; and of wolfram. Cornwall alſo produces copper at Redruth, Helſtone, and the Land's End. The ſame metal is found in Yorkſhire and Staffordſhire; but no where in ſuch abundance as in the Parrys mountain, in the north-weſt of Anglefea. This valuable mine was diſcovered about thirty years ago.

Lead is found in the Mendip-hills of Somerſetſhire; which alſo produce calamine and manganeſe. The lead-mines in Derbyſhire are well known, not only for that metal, but for the beautiful veins of fluor which accompany it, and which is manufactured into ſeveral ornamental articles. In general, the northern central ridge of mountains abounds with lead ore. The lead-mines of Aldſton, on the eaſtern verge of Cumberland, employ upwards of eleven hundred men. No metal is ſo widely diffuſed through the globe as iron; and England not only contains excellent mines, but excels all nations in the variety of fabrication. The moſt remarkable mines of iron, are thoſe of Colebrook-dale, Shropſhire; Dean-foreſt, in Glouceſterſhire; with ſome in the north of England, particularly near Ulverſton, in Lancaſhire. Zinc, in the form of lapis calaminaris, and blend, is found in Derbyſhire, Cornwall, and other regions. Nickel and arſenic ſometimes appear in Cornwall; and recently, what is called menachanite. But one of the moſt important of this kind is plumbago, which is found in the ridge of Borrowdale, near Keſwick, in Cumberland.

Gold has been diſcovered in various quarters of England, particularly near Silſoe, in Bedfordſhire; but the metal has never recompenſed the labour and expence. The real gold mines of England are thoſe of coal, found in the central, northern, and weſtern parts, but particularly in the northern, round Newcaſtle. The whole opulence of England has been aſcribed to her coal, as being the very ſoul of her manufactures, and conſequent commerce. The coals of Whitehaven and Wigan are more pure; and the cannel and peacock coals of Lancaſhire are ſo beautiful, that they are ſuſpected by ſome to have conſtituted the *gagates*, or jet, which the ancients aſcribed to Britain. See the article COAL, vol. iv. p. 703, &c.

The mines of rock-ſalt in Cheſhire particularly deſerve notice. They appear to have been known to the Romans, as a place called *Salinæ* is mentioned by the geographer of Ravenna. Leland has deſcribed them in the time of Henry VIII. nor were they unknown even in the Saxon periods. Thoſe of Northwich are the moſt remarkable: at Namptwich and Middlewich, are only ſalt-ſprings; and others occur at Droitwich, in Worceſterſhire, and Weſton in Staffordſhire. The immenſe mines on the ſouth ſide of Northwich, were diſcovered about the beginning of the eighteenth century. The quarries, with their pillars and cryſtal roof, extending over many acres, preſent a beautiful ſpectacle; the ſtratum of ſalt, lies under a bed of whitiſh clay, at the depth of about forty yards.

Marbles and free-ſtone, or calcareous ſand-ſtone, of various colours and textures, alſo occur; the moſt celebrated of the latter are thoſe of Portland, Purbeck, &c. Fine alabaſter appears in Derbyſhire; fullers'-earth in Berkſhire, and ſome other countries. Quarries of beautiful ſlate are likewiſe worked in ſeveral parts; and it is highly to the advantage of the proprietors of all theſe mineral productions, as well as to the public at large, that the mines and quarries are for the moſt part contiguous to the coaſt, whereby their produce can be carried coaſtways, or tranſported to any part of the world.

England preſents an extent of coaſt of great variety and beauty, in every direction except to the north, where it trends upon Scotland. From the mouth of the Tweed at Berwick, to Bamborough-caſtle, the ſhore is ſmooth and ſandy; and the moſt remarkable object is Lindesfarn, or Holy Iſland, divided from Northumberland by a level, which is dry at low water, but out of which the flowing tide oozes ſuddenly, often to the peril of the unwary traveller. From Bamborough-caſtle to Flamborough-head, are moſtly low cliffs of lime-ſtone and other materials; and at Sunderland, of a peculiar ſtone uſed in building, and which ſeems the work of marine inſects. Scarborough ſtands on a vaſt rock, projecting into the waves; but Flamborough-head is a far more magnificent object, being formed of lime-ſtone, of a ſnowy whiteneſs, and ſtupendous height, viſible far off at ſea. "Grand caverns (ſays Pennant) open on the north ſide, giving wide and ſolemn admiſſion, through moſt exalted arches, into the body of the mountain; together with the gradual decline of light; the deep ſilence of the place, unleſs interrupted by the ſtriking of the oar, the colliſion of a ſwelling wave againſt the ſides, or the loud flutter of the pigeons, affrighted from their neſts in the diſtant roof, afford pleaſures of ſcenery, which ſuch formations as this alone can yield. Theſe alſo are wonderfully diverſified. In ſome parts the caverns penetrate far, and end in darkneſs; in others are pervious, and give a romantic paſſage by another opening, equally ſuperb. Many of the rocks are inſulated, of a pyramidal form, and ſoar to a great height. The baſes of moſt are ſolid, but in ſome pierced through and arched. All are covered in the ſeaſon of incubation with innumerable flocks of migratory birds, which reſort here annually to breed, and fill every little projection, every hole, which will give them leave to reſt."

Hence to the Humber are commonly clay cliffs; and near Spurnhead amber is ſometimes found. The extenſive coaſt of Lincolnſhire is flat, part of which appears to have been gained from the ſea; though, in ſome parts, the ſea has in its turn invaded the land, particularly where the remains of the ſub-marine foreſt are viſible under the waves. The county of Lincoln, and part of ſix others, form the low countries of Britain; and the coaſt is diſtinguiſhable by churches, not by hills. The ſhores of Norfolk and Suffolk preſent ſometimes loamy, or clayey precipices, ſometimes hillocks of ſand, and ſometimes low and flat ſpaces. Hunſtanton-cliff riſes to the height of about eighty feet, compoſed of chalk and friable ſtone, reſting on a baſe of what is called iron-coloured pudding ſtone, projecting into the ſea. The coaſt of Eſſex is generally low; but to the ſouth of the Thames, ariſe continued cliffs of chalk, with layers of flint, reſembling maſonry. The North Foreland is a lofty chalky promontory; and the Cliffs of Dover are known to every reader of the immortal Shakeſpeare. This port being moſt contiguous to the coaſt of France, it is on that account, in peaceable times, the principal place of embarkation from England to the continent; and where packets are then conſtantly paſſing and repaſſing to and from Calais, Oſtend, Boulogne, &c.

From Dover, and the South Foreland, the ſhore ſlopes away and becomes flat quite to Dungeneſs, which is the moſt noted headland on the coaſt of Kent, and terminates that tract of land which has always been known by the name of Romney Marſh. From this headland, which is low, the ſouthern coaſt of England might be ſaid to commence, as well as the ſhores of Suſſex. Paſſing the town of Haſtings to the weſtward, Beachy rears its venera-

ble head, a lofty promontory, which projects perpendicularly over the beach, and is called by ſeamen the Seven Cliffs, into which it is divided. Within this point lies Eaſtbourn Seaford, and the elegant town of Brighthelmſtone; which is alſo a place of regular embarkation for the continent in peaceable times, and from whence packets ſail for Dieppe, Havre de Grace, Cherbourg, &c. The coaſt from hence continues low, as the South Downs recede ſomewhat inland, preſenting a ſmooth, ſandy, and ſometimes a deep clayey, ſhore. Culver cliff, and Dunnoſe, are the next objects of elevated grandeur; Bognor rocks being mere pebbles. Within the Wight, the coaſt is more or leſs flat, but ſuperbly variegated with the towns of Portſmouth, Goſport, Eaſt and Weſt Cowes, Yarmouth, the Southampton river, the port of Lymington, Calſhot and Hurſt caſtles, the beautiful verdure of the New Foreſt, Ride, St. Helen's, and other ſubordinate villages. The back of the Wight preſents a leſs pictureſque, though a much more majeſtic, ſcene. From Dunnoſe to St. Catharine's point, the coaſt is rocky and abrupt; but from this lofty eminence to the Needles, the eye is preſented with the moſt ſtupendous cliffs that any where elſe appears, partaking in the fulleſt ſenſe of the ſublime and beautiful. In part of the months of May and June, which is the breeding ſeaſon, theſe ſtupendous rocks have their native whiteneſs darkened by immenſe clouds of large migratory birds, which here annually perform the duties of incubation, and then retire; no naturaliſt knows where, with their accumulated offſpring. Theſe elevated cliffs, and the adjoining coloſſal Needles, which ſtand erect in the ſea, conſtantly braving the moſt tremendous winds and waves, have alike afforded ample ſcope to the genius of the painter and of the poet.

From the Needle rocks to Chriſtchurch the ſhore is flat, where it preſents a grand view of the church, ſituated in a rich fertile vale, which terminates the coaſt of Hampſhire. The ſhores of Dorſet next commence, and lead to the port and handſome county-town of Poole, long enriched by its extenſive trade to Newfoundland. Studland Bay, Swanage, St. Alban's Head, and Ringſtead Bay, lead to the calm and beautiful cove of Weymouth, formed by nature for a royal bathing-place, where the ſoft ſilken ſandy bottom declines with a gentle ſlope into the pureſt water, and ſuits every time of tide, without even a pebble to offend the moſt tender foot; and where the ſurrounding circular expanſe of elevated land ſecludes the valetudinarian from the rude ſcrutinizing eye of the bold and inquiſitive. Yet is our bark no ſooner ſteered from without this calm and unruffled cove, and the point or promontory of the Iſle of Portland weathered, than a ſea preſents itſelf, which, in tempeſtuous weather, fails not to appal the heart of the ſtouteſt ſeaman, and has conſigned too many to the horrors of a watery grave. This is the Race of Portland. On this coaſt the loſs of the Halſewell is for ever to be deplored.

Paſſing Abbotſbury and Lyme, we approach the coaſt of Devonſhire, and enter the ſafe and ſecure anchorage of Torbay, formed by Providence, as an aſylum for our Britiſh channel fleets in tempeſtuous weather. This bay lies between Dartmouth and the broad mouth of the Ex, which carries veſſels of a hundred tons burthen up to the quays of Exeter. Sidmouth is contiguous. The ſpacious haven of Dartmouth is alſo capable of containing a large number of ſhips, ſecure from all winds. Beyond this haven is the Start Point, from which promontory the coaſt is interſected with many little creeks and harbours quite up to Plymouth Sound. In the midſt of the ſea, oppoſite this place of anchorage, is the Eddiſtone light-houſe, a laſting monument of the ſuperior abilities of the late Mr. Smeaton, as a civil engineer and architect.

The coaſt of Cornwall begins with Ram-head, and paſſing Eaſt Looe, extends along to Deadman's Point, and Falmouth haven. The ſhores are here moſt remarkably incurvated, quite up to the Lizard Point; round which we are led into Mount's Bay, and to the Land's End, where the ſouthern coaſt of England terminates. Weathering this remarkable point, the weſtern coaſt of England begins with Penzance, paſſes the northern ſide of the county of Cornwall, and enters the Briſtol channel, which has the ſhores of North Devon and Somerſetſhire on one ſide, and South Wales on the other; paſſing Cardiff and Briſtol, and entering the broad mouth of the Severn, where the contending currents conſtantly preſent a troubled element.

Turning out of the Briſtol channel to the northward, we enter Milford Haven, ſaid to be the moſt commodious harbour belonging to Great-Britain, and ſufficiently ſpacious to contain a thouſand ſail of ſhipping in perfect ſecurity: but its approaches are ſaid to participate of great danger in tempeſtuous weather, and equally hazardous to get out of it, except with particular winds. Within the haven is the town and port of Pembroke, with ſeveral other bays, roads, and creeks. Proceeding hence into St. George's channel, after weathering Greſholm or Gatcholm, we enter St. Bride's Bay; and then paſſing Ramſey Iſle and the ancient city of St. David's, we enter the ſpacious mouth of Cardigan Bay, wherein are many ports and havens on the Welſh coaſt. Turning out of this bay round Bardſey Iſle, we paſs the ſhores of Caernarvon to the Iſle of Angleſea and Holyhead, the celebrated point of embarkation and debarkation, to croſs the Iriſh Sea to and from Dublin. Paſſing round Craven Point, the ſmall portions of the ſhores of Denbigh and Flintſhire preſent themſelves, whence we enter the river Dee, and approach the venerable city of Cheſter. Thus, in paſſing from the Briſtol channel to the mouth of the Dee, the principality of Wales occupies all the central part of the weſtern coaſt, characterized by an almoſt continued range of mountains more or leſs wild and lofty, with interjacent valleys more or leſs extenſive and fertile; and thus out of the twelve Welſh counties, all except three touch the ſea coaſt in ſome part or other of their boundary.

Turning out of the river Dee to the northward, we enter Liverpool harbour, and the Merſey; which, after receiving above Stockport the waters of the Tame, and ſomewhat lower thoſe of the Irwell, brings down a conflux of other ſtreams from Manchester, winds through a rich and extenſive vale, and, after paſſing Warrington, dilates into a wide ſandy eſtuary, which, contracting again, reaches the ſea below Liverpool. Such an acceſſion of ports and creeks, improved by the natural induſtry of the inhabitants, has contributed to diſtinguiſh this part of Lancaſhire, for manufacturing and commercial enterpriſe, eſpecially of late years, beyond every other part of the kingdom. Here, inſtead of haggard jealouſy and narrow-minded oppoſition, the vaſt towns of Manchester and Liverpool are mutual aids to each other in the acquiſition of wealth.

Proceeding along the extended ſhores of Lancaſhire, we enter the Ribble, which is navigable up to Preſton. Bearing ſtill to the north, we enter the expanded ſandy bay which diſjoins the hundred of Furneſs from its appropriate county, runs up to the ſouth-weſtern corner of Weſtmoreland, and admits a navigation for ſmall veſſels up to the port of Lancaſter, the populous and well-built capital of the county, and which carries on a conſiderable trade to the Weſt-Indies. Furneſs, the diſjoined part of the Lancaſhire coaſt, is extremely rugged and romantic, yielding great quantities of iron ore, and ſlate. The long and narrow Iſle of Walney ſerves as its bulwark againſt the waves of the Iriſh Sea. The port of this diſtrict is at Ulverſtone, ſituated on a ſhallow arm of the ſea, into which the Leven and other ſtreams enter. This arm, as well as the broad eſtuary or bay which ſeparates Furneſs from the reſt of Lancaſhire, is continually croſſed by horſes and carriages at low water; though not without frequent accidents, and uniform danger.

After paſſing Walney Iſle, we enter upon the coaſt of the bleak and dreary county of Cumberland; which though barren and mountainous, is extremely rich in mi-

neral productions. Ravenglaſs is the firſt ſmall port which offers itſelf to view; then, after paſſing the mouths of two or three ſmall rivulets, ſucceeds St. Bees-head, a promontory noted for the great reſort of ſea fowl. A little beyond, ſeated on its bay, we reach Whitehaven, a large handſome town, and a port of conſiderable commerce, though entirely of modern date, brought about by the exertions of the late lord Lonſdale, and lord Muncaſter. Its great ſource of traffic is in the collieries ſituated in the vicinity, which are ſome of the moſt remarkable in the kingdom, being wrought under the ſea. Much of the coal is exported to Ireland; and the town has alſo a conſiderable trade with the Weſt Indies. Somewhat further north, is Workington, a port from whence large quantities of coal are likewiſe exported. This was the landing-place of the unfortunate Mary queen of Scots, when ſhe was driven to take refuge in the dominions of her inſidious rival, Elizabeth. In the neighbourhood of this port is a large iron foundery: and at ſome diſtance up the river, at the conflux of the Cocker with the Derwent, is the opulent town of Cockermouth, populous, and thriving very faſt by its manufactories. Further along ſhore lies Maryport, a new town raiſed by the coal-trade. From hence the coaſt proceeds northward to the inlet of Moricambe, at the entrance of Solway Frith. At Burgh-upon-Sands, on this arm of the ſea, died our great and victorious Edward I. Up this Frith alſo, we enter the mouth of the Eden, which leads to the celebrated city of Carliſle. Thus the weſtern coaſt of England terminates like its eaſtern ſide, upon the ſouthern extremity of North Britain, once the hardy and warlike kingdom of Scotland.

Such is the ſhort, but faithful ſketch, of the coaſts and ſhores of England; ſhores which are defended, in conſequence of their peculiar ſituation, and the higher bleſſing of Providence, by unconquerable and imperiſhable bulwarks, againſt the malevolent attacks of an invading foe; namely, the raging ſea, the rough and inconſtant winds, the contending currents, and the beguiling tides, which deceive the eye, by covering the rocks and ledges near land, the conſtant harbingers of deſtruction and death to ſtrangers. While, therefore, the hardy and loyal race of people in England act with becoming ſpirit and unanimity, and in uniſon with its "floating batteries and wooden walls"—its invincible navy,—the theatre of deſtructive war can never reach them, nor, but in a tranſient manner, diſturb their peaceful abodes.

The iſlands which are dependent on or attached to the coaſt of England, are of conſiderable number and importance. In the Engliſh Channel, firſt appears the iſle of Wight, by the Romans called *Vectis*, by the Saxons *Vihtlond*, of an oval form, about twenty miles in length, and twelve in breadth. This iſle is fertile and beautiful, and decorated with many picturesque villas; the principal port is that of Cowes. The chief mineral products are pipe-clay, and fine white ſand, for the fabrication of pure glaſs; and at Alum-bay, on the north ſide of the Needles, have been found conſiderable quantities of native alum. At the diſtance of about ſeventy miles from the Wight, to the ſouth-weſt ariſes the little iſle of Alderney, off Cape la Hogue; which is afterwards followed by the more important iſles of Guernſey and Jerſey; Sark being a ſmall iſle interpoſed between the two latter. Guernſey, the largeſt of theſe iſles, is twelve miles long, nine broad, and about thirty-ſix in circuit. It is verdant, though the ſoil be hilly, and barren of wood. The only town is that of Port St. Pierre. Jerſey is about twelve miles in length, and ſix in breadth, a well watered and fertile iſland, producing excellent butter and honey. The winters are milder, but more windy, than thoſe of England. The inhabitants are computed at 20,000, of which 3000 are capable of arms. Alderney is a ſmall iſle, with a town, and about 1000 inhabitants. Sark has about 300 inhabitants. It is remarkable that theſe iſlands, though ſo much nearer, and even in view of the French coaſt, ſhould have ſo long continued under the dominion of England. This can only be accounted for from the free and open ſpirit of the people, a mixed breed, and their love of liberty and a free conſtitution; and from the great ſuperiority of the Britiſh navy, which conſtantly protects them from the rapacity of their neighbours.

Returning to the Engliſh ſhore, we firſt deſcry the Ediſtone light-houſe, beat by all the fury of the weſtern waves. About thirty miles to the weſt of the land's end, appear the iſles of Scilly, which have been deemed the Caſſiterides of the ancients, though theſe rocks would ſeem to be too minute to have attracted their notice. This cluſter pretends to the name of 145 iſles, covered with graſs or moſs, beſides innumerable dreary rocks. The largeſt is that of St. Mary, which is about five miles in circuit, and has a caſtle and garriſon: inhabitants about ſix hundred. That of St. Agnes is rather fertile: inhabitants about three hundred. The whole inhabitants of the Scilly iſles, are computed at about one thouſand. On turning to the north, firſt appears the little iſle of Lundy, ſituated in the Briſtol channel, about three miles long, but not a mile in breadth, with about five hundred acres of good land, ſome rivulets, and a caſtle. It was formerly a noted retreat for pirates. Some ſmall iſles lye off the Welſh coaſt of Pembrokeſhire and Caernarvon, ſuch as Caldy, Skomar, Bardſey, and others: but the Iſle of Angleſea deſerves more attention, being the Mona of Tacitus, while the Iſle of Man is more properly the Monæda of the ancients. Angleſea is about twenty-five miles in length, and eighteen in breadth. That of Man is about thirty miles in length, and fifteen in its greateſt breadth. In the midſt is a high mountain, called Snafel. The chief mineral productions are black marble, ſlate, lime-ſtone, lead, copper, and iron. There are alſo ſome ſmall iſlands off the eaſtern coaſt, as Lindisfarn and Coquette iſland, near the mouth of the river of that name, in Northumberland. The Iſle of Thanet is now joined to the land of Kent; but Sheppey remains a pleaſant and intereſting iſle. See all theſe, with the various ports and places on the Engliſh coaſt, fully deſcribed under their reſpective names, in this work.

PRIMITIVE HISTORY.

It has ever been found a ſubject of extreme difficulty to aſcertain the origin of the firſt ſettlers, even in a continental country; but particularly in an iſland, like Britain, whoſe ſhores could not but attract the earlieſt attention of thoſe bold and enterpriſing men, who firſt braved the dangers of the ocean in purſuit of commerce, or in view of gain. Hence the Phœnicians, recorded as the moſt ancient enlightened navigators, are generally ſuppoſed to have firſt diſcovered this iſland; which is the largeſt in Europe; and to have ſettled colonies on its coaſts, particularly in Cornwall, for the acquiſition of its tin. Bochart even ſuppoſes the name *Britain*, to be derived from a Phœnician word; and Huet infers that the name *Caſſiterides*, or iſlands of tin, afterwards reſtricted to the iſles of Scilly, was likewiſe given to it by the Greeks, in common with Ireland; but for the various etymologies, ſee the article BRITAIN, vol. iii. p. 415.—The name of *Anglia*, or England, was not given to South Britain until the Saxon heptarchy, when it took that name from the Angles, a people of the ancient Cimbric Cherſoneſe, or modern Jutland, who conquered a conſiderable portion of the iſland. See ANGLES, vol. i. p. 699.

The earlieſt population of this country, however, which can with more plauſibility be traced, is that of the ſouthern Celts, about nine hundred years before the birth of Chriſt, when the Phrygians had acquired the ſovereignty of the Mediterranean Sea. But the events of that period of our hiſtory have been very imperfectly, and in many inſtances unfaithfully, recorded. Add to theſe difficulties which oppoſe our reſearches on this ſubject, that the nations of Europe were then a mixed multitude,

conſiſting of the aboriginal inhabitants, and the ſavage hordes, which proceeding from the northern regions of Aſia, the wilds of Phrygia and Scythia, had diſſolved the petty ſtates which the primeval condition of ſociety had formed, and made themſelves lords of Europe. Amid this confuſion, and claſhing intereſts of nations, it is almoſt impoſſible to trace any regular ſeries of authenticated events. Yet, as the hiſtory of ancient times is not wholly loſt, and as the obſcure and imperfect records in which it is preſerved, may throw ſome light on the turbulent tranſactions of that rude and illiterate age, it may not be unintereſting thus to notice them.

As in later times the Belgic ſettlers in England were ſubdued by the northern Saxons, ſo the Celtic colony from the ſouth was vanquiſhed by the Cimbri of the north, the anceſtors of the Welſh, who ſtyle themſelves Cymri, and their language Cymraig, to this day. The original Gælic inhabitants appear then to have almoſt entirely evacuated the country, and to have retired to Ireland, alſo originally peopled from Gaul. There, and in the Highlands of Scotland, to which a Gælic colony paſſed from Ireland, the Gælic dialect of the Celtic language ſtill exiſts. See the articles CELTÆ and CIMBRI, vol. iv. p. 18, and 597.

To the Celtic population of England ſucceeded the Gothic. The Scythians or Goths, advancing from Aſia, drove the Cimbri or northern Celts before them; and, at a period ſtill preceding the Chriſtian era, had ſeized on that part of Gaul which is neareſt to Britain, where they acquired the provincial denomination of *Belgæ*, or men of tumult. Their paſſage to England followed of courſe: and when Cæſar firſt explored this iſland, he informs us, that the aboriginal inhabitants were driven into the interior parts, while the regions on the ſouth-eaſt were peopled with Belgic colonies. Thoſe Belgæ may therefore be juſtly regarded as the chief anceſtors of the Engliſh nation; for the Saxons, Angles, and other northern invaders, though of diſtinguiſhed courage, were inconſiderable in numbers, when compared with the Belgic ſettlers. "Till a recent period (ſays Mr. Pinkerton), antiquaries had imagined that the Belgæ uſed the Celtic language, and had execrated the cruelties of the Saxons for an extirpation which never happened. But as it appears that two-thirds of England were poſſeſſed by the Belgic Goths, for ſix or ſeven hundred years before the arrival of the Saxons, it is no wonder that no Celtic words are to be found in the Engliſh language, which bears more affinity to the Friſic and Dutch, than to the Jutlandic or Daniſh."—It is not decided, whether the Friſones of Procopius be the Saxons or the Belgæ. The original documents evince, that all theſe northern colonies, while they conquered by ſuperior valour and hardihood, were far from being ſufficiently numerous to form even a ſemblance of population. Scarcely an inſtance occurs of their being accompanied by women; and their invaſions may, in part, be paralleled by the ſubſequent conqueſts of the Danes and Normans. Yet as the period was far more remote and barbarous, the changes were greater; and the Belgic inhabitants, the genuine population, ſeem to have been reduced to various degrees of ſervitude, and to have conſtituted thoſe numerous ſlaves mentioned in the Anglo-Saxon times; while intermarriages, and other fortunate circumſtances, contributed to lighten the Norman yoke. Hence there ſeems little room to doubt that the Belgæ conſtituted the chief anceſtors of the Engliſh nation, and that their language gradually prevailed, though tinged in the north with the Anglic or Daniſh, and in the ſouth with the Saxon. This ſubject has been the longer dwelt upon, becauſe it is not only of eſſential importance in itſelf, but becauſe it has hitherto been clouded with many erroneous aſſertions and opinions.

England, or South Britain, when firſt invaded by the Romans, was divided into ſeventeen diſtinct nations, or ſeparate ſtates, whereof the inhabitants were called Danmonii, Durotriges, Belgæ, Attrebatii, Regni, Cantii, Dobuni, Cattieuchlani, Trinobantes, Iceni, Coritani, Cornavii, Silures, Dimetæ, Ordovices, Brigantes, and Ottadini.

The Danmonii were ſituated in that part of Britain which ſtands a conſiderable way toward the weſt, and is bounded by the Severn ſea on the north; by the Britiſh ocean on the ſouth; and by St. George's channel on the weſt. In the tract now comprehending the counties of Cornwall and Devon, Ptolemy notices the eſtuary Vexalla, formed by the confluence of the two rivers Pedredus and Ivellus, now the Parrett and the Ill; the promontory of Hercules, and the promontory Belerium, which is the moſt weſtern part of the iſland, now known by the name of the Land's End. The principal places, mentioned by the ſame geographer, on the ſouthern coaſt, were Voliba, now Falmouth; the mouth of the Tamara, on which is now ſituated the town of Plymouth; and the mouth of the Iſca, now the Ex. The chief inland towns were Iſca-Danmoniorum, Exeter; Tamare, Taviſtock; and Uxella, according to Camden, Leſtwithiel.

The Durotriges were ſeated to the eaſt of the Danmonii, in that tract which is now called Dorſetſhire. In this part of the county Ptolemy notices one place only, which he calls Dunium. It is, however, generally agreed among the learned, that, inſtead of Dunium, we ſhould read Durnium; and that this was the ancient name of Dorcheſter, the principal town in the county of Dorſet.

The Belgæ appear to have occupied Somerſetſhire, Wiltſhire, and Hampſhire. Ptolemy notices, among their moſt conſiderable towns, thoſe of Magnus Portus, Portſmouth; Triſantonis Portus, Southampton; Venta Belgarum, Wincheſter; Aquæ-calidæ, Bath; and Iſcalis, now Ilcheſter.

The Attrebatii, or inhabitants of Berkſhire, are ſaid to have come originally from Belgic Gaul, and to have retained their ancient name in their new ſettlement. Their chief city was Calcua, now Wallingford. Antoninus mentions another place called Spinæ, Speenhamland, the fauxbourg of Newbury.

The Regni inhabited a tract of country comprehending Surry, Suſſex, and part of the ſea-coaſt of Hampſhire. Ptolemy mentions only one city, viz. Noviomagus, in this part of the iſland; but Antoninus notices Othona, the ſite of the preſent Haſtings; Portus Adurni, now the ſmall village of Ederington; and Regnum, now Ringwood, whither the Regni are ſaid to have fled for protection from their invaders.

The Cantii inhabited that portion of country, on the eaſt of the Belgæ and Attrebatii, which is now diſtinguiſhed by the name of Kent. Their chief towns appear to have been Durovernum, Durobrivis, Durolenum, Portus Dubris, Regulium, and Portus Lemanis; now Canterbury, Rocheſter, Lenham, Dover, Reculver, and Lime.

The Dobunii are placed, by Ptolemy, on the north ſide of the Thames, in the counties of Glouceſterſhire and Oxfordſhire. The principal places in this diſtrict were Durocornovium, which ſtood on the ſite of the preſent town of Cirenceſter; Altone, Alvington or Abingdon; and Glevum, now Glouceſter.

The Cattieuchlani ſeem to have poſſeſſed the greateſt part of Buckinghamſhire, Bedfordſhire, and Hertfordſhire. Antoninus mentions the following places as belonging to this people: Lactodorum, Bedford; Magiovinium, Aſhwell; Durocobrivis, Hertford; and Verulamium, the ruins of which, near St. Alban's, are ſtill called Verulam. Before the arrival of Julius Cæſar, the Cattieuchlani had ſubjugated a conſiderable part of the country belonging to the Dobuni, and were conſtantly engaged in hoſtilities with their neighbours.

The Trinobantes inhabited the preſent counties of Middleſex and Eſſex, and poſſeſſed the city of Londinium, or London, which ſeems to have been founded about the time of Claudius, and is mentioned by Tacitus as a place famous for trade and the concourſe of merchants, though not diſtinguiſhed with the title of colony. The other principal towns of the Trinobantes were Durolitum, Cæſaromagus,

ſaromagus, Conomium, Camalodunum, and Colonia; now Leiton, Burghſtead, Cannonden, Malden, and Colcheſter.

The Iceni occupied the country bordering on that of the Trinobantes, and comprehending the preſent counties of Suffolk, Norfolk, Cambridge, and Huntingdon. Their chief towns, as mentioned by Ptolemy and Antoninus, were Villa Fauſtini, Cambretonium, Sitomagus, Venta Icenorum, Garienis Oſtium, Iciani, Brannodium, and Durobrivæ; now St. Edmund's Bury, Brettenham, Thetford, Yarmouth, Ichborough, Brancaſter, and Dornford: to which we may add Camboritum, on the banks of the Cam, which are at preſent adorned with the town and univerſity of Cambridge.

The Coritanii poſſeſſed an extenſive territory bordering on the Iceni, and comprehending the counties of Northampton, Leiceſter, Rutland, Lincoln, Nottingham, and Derby. Their principal towns were Lindum, Lincoln; Tripontium, Towceſter; Beneventa, Northampton; Ratæ, Leiceſter; Verometum, Burrowhill; and Agelocum, now Idleton. In this country are ſtill viſible the ruins of ſome ancient fortifications and military fences, ſaid to have been erected by Oſtorius, to prevent the irruption of thoſe who inhabited Wales, and the northern parts of Britain.

The Cornavi were ſeated to the weſt of the Coritani, and ſeem to have poſſeſſed Warwickſhire, Worceſterſhire, Staffordſhire, Shropſhire, and Cheſhire. Their principal places were, Præſidium, Warwick; Branogenium, Worceſter; Viroconium, out of whoſe ruins roſe the preſent town of Shrewſbury; Pennocrucium, Penkridge; Deva, Cheſter; Condate, Congleton; and Rutunium, Routon.

The Silures inhabited that diſtrict which is now diſtinguiſhed by the name of South Wales, and compriſes Radnorſhire, Brecknockſhire, and Glamorganſhire, with the counties of Hereford and Monmouth. Tacitus is of opinion, that this people came originally from Spain, on account of their ruddy complexion, their curled hair, and their ſituation over againſt that country. In Herefordſhire ſtood Bletium, now the Old Town on the Manor; Brecknock appears to have been inhabited in the Roman times. Some ruins of Venta Silurum, or the city Venta, are ſtill to be ſeen in Monmouthſhire. Phily caſtle, in Glamorganſhire, is, in the opinion of Camden, the moſt noble piece of ancient architecture remaining in Britain.

The Dimetæ occupied the remaining part of South Wales, comprehending Caermarthenſhire, Pembrokeſhire, and Cardiganſhire. Ptolemy, however, mentions none of their towns, except Loventium, at the mouth of the Tuerobis, and Maridunum, now Caermarthen.

The Ordovices are repreſented as a powerful and warlike nation, who poſſeſſed the diſtrict called North Wales, and comprehending Montgomeryſhire, Merionethſhire, Caernarvonſhire, Denbighſhire, and Flintſhire. In this country are the veſtiges of ſeveral forts raiſed by the Romans to keep the natives in ſubjection; and oppoſite Caernarvonſhire lies the iſland of Mona, now Angleſea, the ancient ſeat of the Druids; firſt attempted by Paulinus Suetonius, and afterwards reduced by Agricola.

The Brigantes, a numerous and powerful people, are ſaid to have inhabited Yorkſhire, Durham, Lancaſhire, Weſtmoreland, and Cumberland. In the weſt riding of Yorkſhire ſtood the city of Danum, now called Doncaſter; near the confluence of the Calder and the Arc ſtood Lageolium, now dwindled to the ſmall village of Caſtleford; and Iſurium Brigantum is ſuppoſed to have occupied the ſite of the preſent village of Aldborough, near Boroughbridge. Eboracum, now York, was both a Roman colony and a municipium, and contained a palace, in which the emperors Septimius Severus and Conſtantius Chlorus died. In the eaſt riding, about ſeven miles from York, ſtood Dewentis, now the village Auldby; and on the promontory Ocellum, or Holderneſſe, ſtood the city of Prætorium, now Patrington. In Lancaſhire were Mancunium, Mancheſter; and Alone, Lancaſter. In Weſtmoreland ſtood Veteræ, now the village Burgh, and Aballaba, which retains its ancient name, being called, by contraction, Apelby. In Cumberland the Romans threw up fortifications on ſuch parts of the ſea-coaſt as were convenient for landing; and various remains of antiquity are ſtill viſible in that county.

The Ottadini were ſituated in the tract of country now called Northumberland. Here are ſtill to be ſeen many veſtiges of antiquity; but the only places taken notice of by the ancients between Bremenium and Edinburgh Frith, are Tavi Oſtium, the mouth of the Tweed; and Caſtra Alata, which moſt antiquaries ſuppoſe to be the ſame with Edinburgh.

Thoſe who reſided beyond the two friths are comprehended, by Dio Caſſius, under the names of Mæatæ and Caledonii; the former of whom poſſeſſed the ſouth part of Britannia Barbara, and the latter the north. From the Caledonii, or Dicalidones, the north part of Britain was called Caledonia; and they appear to have been a diſtinct nation from the Attacotti and Scotti, under the reign of Valentinian and Valens, for Ammianus Marcellinus, writing of that time, obſerves, "The Picts, under which denomination are comprehended the Dicalidones and the Vecturiones, the Attacotti likewiſe, a warlike nation, and the Scotti, roaming about, committed great devaſtations."—Theſe people are deſcribed by Gibbon as follows: "The hand of nature had contributed to mark the ancient diſtinction of the Scots and Picts. The former were the men of the hills, and the latter thoſe of the plain. The eaſtern coaſt of Caledonia may be conſidered as a level and fertile country, which, even in a rude ſtate of tillage, was capable of producing a conſiderable quantity of corn; and the epithet of *cruithnich*, or wheat-eaters, expreſſed the contempt or envy of the Pict, or carnivorous highlander. The cultivation of the earth might introduce a more accurate ſeparation of property, and the habits of a ſedentary life; but the love of arms and rapine was ſtill the ruling paſſion of the Picts: and their warriors, who ſtript themſelves for battle, were diſtinguiſhed, in the eyes of the Romans, by the ſtrange faſhion of painting their naked bodies with gaudy colours and fantaſtic figures, whence their name. The weſtern part of Caledonia irregularly riſes into wild and barren hills, which ſcarcely repay the toil of the huſbandman, and are moſt profitably uſed for the paſture of cattle. The highlanders were condemned to the occupations of ſhepherds and hunters; and as they ſeldom were fixed to any permanent habitation, they acquired the expreſſive name of *Scots*, which, in the Celtic tongue, is ſaid to be equivalent to that of *wanderers* or *vagrants*."

Nothing completely ſatisfactory can be advanced reſpecting the affairs of Britain before the time of Julius Cæſar, who, having ſubjugated all the warlike nations on the oppoſite coaſt, conceived the deſign of bringing the Britons alſo under the dominion of Rome. In order to facilitate the execution of this project, he diſpatched C. Voluſenus with a ſingle galley to view the iſland, to learn the cuſtoms and manners of the inhabitants, and to get ſome knowledge of their ports and havens; while the Roman troops were drawn up in the country of the Morini, now Picardy, and a numerous fleet lay at anchor in readineſs for the deſtined expedition. The Britons, receiving intelligence of theſe preparations, thought proper to elude the impending danger by voluntary conceſſion, and accordingly ſent an embaſſy to Cæſar, offering to ſubmit to the authority of Rome, and to deliver hoſtages for their fidelity. Cæſar received the ambaſſadors with apparent kindneſs, but would not abandon his ſcheme of an invaſion, which the proximity of the iſland to the coaſt of Gaul ſeemed ſtrongly to invite; and which the doubtful intelligence of a pearl fiſhery ſeemed alſo to attract; but Cæſar concealed that ignoble motive, though it is acknowledged by Suetonius.

At that time, according to Cæſar and other hiſtorians, the Britons were very numerous, and had their country well ſtocked with cattle. Their houſes reſembled thoſe

of

of the Gauls; and they uſed copper and iron plates or rings, weighed by a certain ſtandard, as the circulating medium for money. Their towns were a confuſed group of huts, placed at a ſmall diſtance from one another, generally in the middle of a wood, to which all the avenues were guarded by mounds of earth, or with trees. The people were in a ſtate of barbariſm, much reſembling the Gauls and Germanic tribes on the continent. The uſe of clothes was but little regarded: the common inhabitants covered themſelves with the ſkins of beaſts; and this rather to avoid giving offence to ſtrangers, who came to trade with them for corn, tin, and hides, than to defend their bodies from the rigour of the ſeaſons. It was then a cuſtom among the Britons to paint their bodies with the juice of woad, of a light azure blue; which was ſometimes done for ornament, and ſometimes with a view to terriſy their enemies. They ſhaved the beard, all except the upper lip, and wore long hair. The arms, both of the man and woman, who frequently fought by her huſband's ſide, were a ſword, a lance, and a ſhield. Breaſt-plates and helmets they looked upon rather to be incumbrances, and therefore made but little uſe of them. They uſually fought in chariots, ſome of which were armed with ſcythes at the wheels, and which, being driven furiouſly among the thickeſt of the enemy, mowed down multitudes at once. In the rage of war they were fierce and cruel, and extremely blood-thirſty. When driven to diſtreſs, they could ſubſiſt on the hardeſt fare; and would eat even the bark and roots of trees. The ſouthern and middle nations were ſaid to be ſomewhat more civilized; and the Cantii, or inhabitants of Kent, more ſo than any of the reſt; they appeared to poſſeſs loftier ſentiments, and to have had more experience of men and manners.

The general characteriſtic attributed to the Britons, in this barbarous and uncultivated age, ſeems to have been, that, though fierce in the field, and terrible to an enemy, they were nevertheleſs gentle in their domeſtic capacity, and took pride in acts of magnanimity and friendſhip. Among their own tribes, hoſpitality was indulged with the moſt unbounded freedom. The entertainer, when his humble fare was exhauſted, carried his gueſt to the houſe of his next neighbour. Invitations were not waited for; nor was it of conſequence to be invited. A reception equally warm was at all times certain. On theſe occaſions, giving way to the movements of the heart, they delighted in preſents; but they neither thought themſelves entitled to a return for what they gave, nor laid under an obligation for what they received. They yielded to the impulſe of paſſion, and the pleaſure they felt was their recompenſe. Their gifts were directed by no view of an immediate or diſtant advantage; their generoſity was no traffic of intereſt, and proceeded from no motive of deſign. When ſupplied to their deſire with intoxicating liquors, they were no leſs invincible in vice than in valour; yet they applied ſedulouſly to public affairs, and debated concerning peace and war. Every one conſidered himſelf intereſted in the well-being of his particular tribe. They marched, on all weighty occaſions, to the aſſembly of their prince or leader, where a freedom of ſpeech, entire and unlimited, was allowed them. The age, the eloquence, the rank, and the honours acquired in war, were the qualities which procured attention to the ſpeaker; and the people were influenced by perſuaſion, not by authority. A murmur, coarſe and rude, expreſſed their diſſent; whilſt the tinkling of their armour was the mark of their applauſe. Such is to this day the common ſtate of ſavage nations.

In their religion they were groſs, like almoſt all the kingdoms of the earth, in that dark and diſtant age which preceded about fifty-five years the birth of Chriſt. They believed in a plurality of ſubordinate gods; but confided in one Supreme Being, as the author and ruler of the whole. Their groves or druidical temples were appropriated to the uſes of devotion; and, in the awful reſpect inſpired by ſilence in the deep receſſes of their woods, they felt, or pretended to feel, and to acknowledge, the power of their deities, and of the Supreme Being. They conſidered the oak as the emblem of the Almighty; and accordingly chaplets of it were worn by the prieſts and people in their religious ceremonies; the altars were ſtrewed with its leaves, and encircled with its branches. The fruit of it, or rather its paraſitical offſpring, the miſletoe, was thought to contain a divine virtue, and to be the peculiar gift of heaven. It was therefore ſought for on the ſixth day of the moon with the greateſt earneſtneſs and anxiety, and when found, was hailed with raptures of joy, and carefully laid up in their ſacred repoſitories. It was then conſecrated by the prieſts, and adminiſtered as a ſovereign ſpecific in almoſt every diſeaſe to which the natives were ſubject. They were much addicted to augury and divination; and were fond of drawing prognoſtics from the running of waters, the flight of birds, and the neighing of horſes. Their prieſts had greater authority than their kings or chieftains, and they were governed in all their great undertakings, whether of war or of peace, of flight or of battle, by the impulſes or ſuppoſed dictates of their divinities, as revealed or explained to them by their miniſters and bards, the diſpenſers of the druidical doctrines. See BARD, vol. ii. p. 716, and the article DRUIDS, p. 87, of this volume.

The more common office of magiſtrate, if ſuch it might be called in thoſe rude times, was uſually filled by the leader of a tribe, who, with the body of his officers and followers, conſtituted a court, which heard accuſations and determined concerning crimes. Traitors and deſerters were hung on trees. Cowardice, and the crime againſt nature, were conſidered as of equal atrocity; and the perſons convicted of them were choaked in mires and ſwamps by the preſſure of hurdles. A corporal puniſhment, and compenſations in corn and cattle, were the atonements of ſmaller delinquencies.

The remoter and more ſequeſtered tribes, who dwelt principally in caves and foreſts, were not however ſo civilized, nor ſo religiouſly inclined. To the moſt ſavage fierceneſs, they united an unconquerable ſpirit. They clothed themſelves with the ſkins of beaſts, fed chiefly on herbage, and ſlept on the earth. Their chief dependence was on their arrows, and their women accompanied them to the chace, and partook of the prey. A covering, inwrought with boughs, was all the ſhelter which defended their infants from the rigour of ſeaſons, or the ferocity of animals. This predatory life, the fierce inhabitants of the caves and mountains of Wales, preferred to the fatigue of cultivating the earth, or building huts; to the agitations of hope and fear attendant on a care of their own fortunes, and on a connection with thoſe of others. Unapprehenſive of any danger from men, and awed by no terror of the gods, they had reached a ſtate which is nearly unattainable to the utmoſt human endeavours—that of being entirely without a wiſh.

Amongſt all the nations and tribes of Britain, courage, intrepidity, and ſuperior proweſs, were the qualifications which entitled to the office and juriſdiction of a chief; and the general of an army was to command leſs by authority than from example. He drew reſpect and obſervation by his activity, his addreſs, and the ſplendour of his exploits. Even the hopes and ambition of the ſimple individual were made to depend on his perſonal exertion and courage. Yet, with all this attention to merit, and with all their rigidneſs of character, they were prone to deceive and to circumvent. They accounted it meritorious to ſteal upon their enemies in the darkeſt nights; they blackened their ſhields, and painted their bodies, to appear more terrible; and, to give ground, or run away, and unexpectedly to face about and return to the charge, was a common and an admired feat of their prudence. It is alſo remarkable, that, though attentive to juſtice, with a punctilious exactneſs, within the bounds of their particular nations, they deſpiſed it with regard to other ſtates and communities; and hence that continual ſource of diſ-

ſenſion and animoſity, which kept them at perpetual war with each other. At home, to commit violence and depredation was a crime of the deepeſt dye; but when directed againſt a rival nation, though at peace, was a mark of valour, and an expreſſion of virtue. To make incurſions upon a neighbouring tribe, to carry off their cattle, and lay waſte their territory, were actions of renown and greatneſs. Theſe adventures rouſed the ambition of the valorous, and were enterpriſes in which they acquired reputation, and qualified themſelves for ſcenes of greater danger and glory.

The Britiſh nations were therefore brave and reſolute, owing to the continual diſſenſions among themſelves. They conſequently proved very formidable to the Romans; but the ſame diſſenſions which had taught them to be reſolute in war, alſo prevented them from uniting in one common cauſe, the defence of their country. Yet when Cæſar arrived on the coaſt near Dover, he ſaw the "white cliffs of Albion" covered with armed men to oppoſe his landing. But finding it impracticable to gain the ſhore where he firſt intended, he reſolved to chooſe a place of greater ſecurity. The place where he made good his landing, which was in the year before Chriſt 55, was about eight miles farther on, ſome ſuppoſe at Deal, where an inclining ſhore and a level country invited his attempts. Here, however, he alſo found the Britiſh chariots and cavalry drawn up to oppoſe his landing, and a material difficulty proceeded from the conſtruction of his veſſels, which required a conſiderable depth of water, ſo that the ſoldiers, encumbered as they were with heavy armour, were obliged to leap into the ſea, and wade, with extreme difficulty, toward the enemy, who, ſtanding on the beach, or advancing forward, ſecurely threw their darts, and repulſed their aſſailants with great facility. This diſadvantage operated ſo powerfully on the ſpirits of the Romans, that they ſeemed unwilling to continue the engagement; but on Cæſar's cauſing his galleys to advance with their broadſides toward the ſhore, whereby his legions were enabled to come to action with their javelins and arms, the Britons began to give ground; and the ſtandard-bearer of the tenth legion leaping boldly into the ſea, and calling aloud upon his comrades to defend their enſign, the Romans preſſed forward, and began the fight with their accuſtomed fury. The Britons ſuſtained the attack, for ſome time, with undaunted bravery, and even threw their aſſailants into great confuſion; but they were at length overpowered, and compelled to elude deſtruction by a precipitate retreat.

Upon this defeat the Britons thought proper to appeaſe the enemy by timely ſubmiſſions, and accordingly ſent a deputation to ſue for peace. Cæſar, anxious to return to the continent, agreed to pardon them on condition they delivered a certain number of hoſtages. But, in the meanwhile, the tranſports containing the Roman cavalry, were driven back to the ports of Gaul by a tremendous ſtorm; and the fleet which lay in the road was greatly damaged, ſeveral veſſels being daſhed to pieces, and others rendered totally uſeleſs by the loſs of their anchors, cables, and rigging. The ſame night, alſo, the tide roſe ſo high, that the galleys which had been drawn aſhore were all filled with water. Theſe diſaſters excited a general joy in the Britiſh camp, and inſpired the Britons with the hope of deſtroying an enemy who was evidently in want of cavalry, ſhips, and proviſions. Accordingly the chiefs, who had aſſembled to perform their agreement with Cæſar, began to ſteal out of the camp, and to collect their troops with ſuch diligence, that they were ſoon enabled to attack the ſeventh legion, who had been ſent out in queſt of forage, and to revenge their late defeat by putting numbers of them to death. However, Cæſar having haſtened to the relief of his countrymen with all his other troops, the Britons were obliged to retire without completing their deſign. After this action a heavy fall of rain, which continued for ſeveral days, kept the Romans inactive in their camp.

The Britons, in the mean time, were not idle; for, having diſpatched meſſengers into all parts of the iſland to invite their countrymen to force the enemy's camp, they aſſembled a numerous army, and boldly advanced to the Roman intrenchments; but Cæſar drew up his legions ſo advantageouſly, and attacked the undiſciplined Britons ſo vigorouſly, that they were overthrown with great ſlaughter, and purſued through ſeveral of their towns and villages, which were ſacrificed to the vengeance of the Romans, till at length the conqueror returned to his camp, and the vanquiſhed Britons conſented to purchaſe a peace, by ſending double the number of hoſtages which had been required by the former treaty. Cæſar, having obtained this conceſſion, and refitted the greateſt part of his veſſels, deemed it adviſable to haſten his departure, leſt if he remained till the equinox his fleet might be again expoſed to the fury of a ſtorm, and his troops involved in ſome more ſerious embarraſſments. The ſame night, therefore, he weighed anchor, and paſſed over to Gaul, whence he wrote to inform the ſenate at Rome of his ſucceſs; for which a general thankſgiving was appointed for twenty days.

Provoked ſoon after at the neglect of the Britiſh ſtates, of whom two only ſent him hoſtages, Cæſar determined to make another deſcent, the following ſpring, with a more powerful fleet and army. Accordingly, during his winter reſidence at Rome, his lieutenants refitted all the old veſſels, and built ſo great a number of tranſports, that on his return he found ſix hundred ſhips and twenty-eight galleys ready to launch. With this formidable fleet he repaired to the Portus Itius, now Witſand, between Calais and Boulogne, and weighing anchor about ſun-ſet, arrived with his whole fleet the next day, by noon, at the ſame place where he had landed the year before. The Britons, aſtoniſhed at the ſight of ſo numerous an armament, abandoned the ſhore, and retired to the hills, whence they were driven by the Roman cavalry with conſiderable loſs; but, as the day was far ſpent, Cæſar gave up the purſuit of the fugitives, and returned to fortify his camp.

Next morning Cæſar reſolved to march in queſt of the enemy; but when he was come within ſight of their rear, he received the mortifying intelligence that moſt of his ſhips were ſtranded or daſhed to pieces by a violent ſtorm. This diſaſter checked his progreſs, and obliged him to return to the ſea-ſide. However, he ſet all the carpenters in the fleet and army to work; drew all his ſhips, that had eſcaped the tempeſt, on ſhore; and encloſed them within the fortifications of his camp. This extraordinary work being completed, by the diligence of the ſoldiers, in ten days, Cæſar left a ſufficient body of men to defend the intrenchments, and haſtened with the reſidue of his forces to the place where he had laſt ſeen the enemy. Upon his arrival he found their army greatly augmented, under the conduct of Caſſibelan, king of the Trinobantes, to whom the Britons had unanimouſly committed the management of the war. Whilſt the Romans were on their march they were attacked by the Britiſh chariots and cavalry, but the aſſailants were repulſed with great ſlaughter, and compelled to retire to the woods. An unexpected ſally was alſo made whilſt the Romans were buſied in fortifying their camp; and three legions were vigorouſly attacked whilſt in queſt of forage, but the aſſailants were eventually overthrown, and diſperſed with conſiderable loſs. Encouraged by this ſucceſs, Cæſar led his troops toward the Thames, in order to croſs that river, and carry the war into the territories of Caſſibelan; but when he came to the only place where the river could be forded, he perceived that the enemy had fortified the oppoſite bank with ſharp ſtakes, and drawn up a numerous body of forces to oppoſe his landing. However, the enterpriſing general ordered both his cavalry and the legions to advance to the attack. Theſe orders were immediately executed with ſuch alacrity and reſolution, that, though the infantry were up to the chin in water, the

Aborigines of England.

London Published as the Act directs March 10th 1804 by J. Wilkes.

the Britons were compelled to abandon the bank, and Caſſibelan, being unwilling to venture an engagement, diſbanded the major part of his forces, retaining only four thouſand chariots, with which he haraſſed the foraging parties of the enemy, and prevented them from making excurſions.

Meanwhile the Trinobantes ſent an embaſſy to Cæſar, tendering their ſubmiſſions, and requeſting him to appoint Mandubratius their king and governor, inſtead of Caſſibelan, who had forfeited their eſteem by ſome acts of oppreſſion. Theſe requeſts were readily complied with; and the example of the Trinobantes was ſoon followed by ſeveral other ſtates, which voluntarily ſubmitted to the Romans. Cæſar alſo marched with his legions againſt Verulamium, now St. Alban's, Caſſibelan's chief city, which he ſoon reduced, notwithſtanding the natural ſtrength of the fortifications, and the brave reſiſtance of the inhabitants. To repair this heavy loſs, and divert the enemy from purſuing his conqueſts, Caſſibelan perſuaded four petty princes of Kent, viz. Cingetorix, Carvilius, Segonax, and Taximagulus, to raiſe a body of forces, and attack the camp where the ſhips were laid up; but this deſign was rendered abortive by the vigilance of the Romans, and Caſſibelan was eventually compelled to ſue for peace. Cæſar, having now received a number of hoſtages from the Britons for the performance of their treaty, cauſed his fleet to be launched with all convenient expedition, leſt the winter ſhould prevent his voyage; and, weighing anchor about the ſecond watch of the night, reached the continent by break of day, after making himſelf rather the nominal than the real poſſeſſor of Britain —*to which he never after returned.*

In his Commentaries, Cæſar gives the following account of the evolutions of the Britons in battle. "This is their method of fighting from chariots: they firſt ride to all parts and throw their darts, and frequently break our ranks by the prancing of their ſteeds, and rattling of the wheels; and, when they have got amongſt the troops of horſe, they alight from their chariots, and fight on foot; the charioteers in the mean while draw off a little from the engagement, and place themſelves in ſuch a manner, that, if theſe ſhould be overborne by the numbers of the enemy, they may have an eaſy retreat to them. Thus they perform in battle the nimbleneſs of the horſe, and the firmneſs of the foot; and ſo expert are they by conſtant uſe and exerciſe, that they can ſtop their horſes on full gallop down hill, and can check and turn them in a ſmall compaſs, run upon the pole, riſe upon the harneſs, and quickly from thence recover the chariot." Upon the whole, the character given by Cæſar himſelf of his enemies, the Britons, conſidering their then a ſavage ſtate, is much more flattering, than degrading, of their native courage and magnanimous diſpoſition. He makes no other diſtinction between the colonies planted on its coaſts, and theſe interior tribes, than by ſimply calling them *Aborigines*.—The Rev. Geo. Richards, of Oriel College, Oxford, in his deſcription of this people, has drawn the following portrait of the aboriginal Briton:

Rude as the wilds around his ſylvan home
In ſavage grandeur ſee the Briton roam:
Bare were his limbs, and ſtrung with toil and cold,
By untam'd nature caſt in giant mould.
O'er his broad brawny ſhoulders, looſely flung,
Shaggy and long, his yellow ringlets hung.
His waiſt an iron-belted falchion bore,
Maſſy, and purpled deep with human gore;
His ſcarr'd and rudely painted limbs around
Fantaſtic horror-ſtriking figures frown'd,
Which, monſter-like, ev'n to the confines ran
Of Nature's work, and left him hardly man.

Upon the acceſſion of Auguſtus to the imperial purple of Rome, that emperor had formed a deſign of viſiting Britain; but was diverted from it by an unexpected revolt of the Pannonians. Some years after he reſumed his deſign; but being met in his way by the Britiſh embaſſadors, who promiſed the accuſtomed tribute, and made the uſual ſubmiſſions, he deſiſted from his intention. The year following, finding them remiſs in their ſupplies, and untrue to their former profeſſions, he once more prepared for the invaſion of the country; but a well-timed embaſſy again averted his indignation, and the ſubmiſſions he received ſeemed to ſatisfy his reſentment: upon his death-bed he appeared ſenſible of the overgrown extent of the Roman empire, and he recommended it to his ſucceſſors never to enlarge their territories. Tiberius followed the maxims of Auguſtus; and wiſely judging the empire already too extenſive, made no attempt on Britain. Some Roman ſoldiers having been wrecked on the Britiſh coaſt, the inhabitants not only aſſiſted them with the greateſt humanity, but ſent them in ſafety back to their general. In conſequence of theſe friendly diſpoſitions, a conſtant intercourſe of good offices ſubſiſted between the two nations; the principal Britiſh nobility reſorted to Rome, and many received their education there.

From this time the Britons began to improve in many of the arts which contribute to the advancement of human nature. The firſt art which a ſavage people is generally taught by their politer neighbours, is that of war. The Britons, thenceforward, though not wholly addicted to the Roman method of fighting, nevertheleſs adopted ſeveral of their improvements, as well in their arms as in their arrangement in the field. Their ferocity to ſtrangers, for which they had been always remarkable, was mitigated; and they began to permit an intercourſe of commerce in the internal parts of the country. They ſtill, however, continued to live as herdſmen and hunters; whilſt the wild extravagances of Caligula, by which he threatened Britain with an invaſion, ſerved rather to expoſe him to ridicule, than the iſland to danger. The Britons, therefore, for almoſt a century, enjoyed their liberty unmoleſted, till at length the Romans, in the reign of Claudius, began to think ſeriouſly of reducing them completely under their dominion. The expedition for this purpoſe was at firſt conducted by Plautius, with that ſucceſs which uſually attended the Roman arms. Claudius himſelf, in the year of Chriſt 43, finding affairs ſufficiently prepared for his reception, entered the iſland, and received the ſubmiſſion of ſuch ſtates as, living by commerce, were willing to purchaſe tranquillity at the expence of freedom. It is true that many of the inland provinces preferred their native ſimplicity to imported elegance, and, rather than bow their necks to the Roman yoke, opened their boſoms to the ſword. But the ſouthern coaſt, with all the adjacent inland country, was ſeized by the conquerors, who ſecured the poſſeſſion by fortifying camps, building fortreſſes, and planting colonies. The other parts of the country either thought themſelves in no danger, or continued patient ſpectators of the approaching devaſtation.

Caractacus, king of the Silures, was the firſt who ſeemed willing, by a vigorous effort, to reſcue his country, and repel its inſulting and overbearing conquerors. The venality and corruption of the Roman prætors and officers, who were appointed to levy the contributions in Britain, ſerved to excite the indignation of the natives, and give ſpirit to his attempts. This rude ſoldier, though with inferior forces, continued, for about the ſpace of nine years, to oppoſe and haraſs the half-dejected Romans; till at length Oſtorius Scapula was ſent over to command their armies. He was more ſucceſsful than his predeceſſors. He advanced the Roman conqueſts over Britain, pierced the country of the Silures on the banks of the Severn, and at length, A. D. 50, came up with Caractacus, who had taken poſſeſſion of a very advantageous poſt upon an inacceſſible mountain, ſuppoſed to be Caer-Caradoc in Shropſhire, waſhed by a deep and rapid ſtream, formed by the conflux of the Colun and Teme. The heroic Britiſh chief, when he ſaw the enemy approaching, drew up his army, compoſed of different tribes, and, going from rank to rank, exhorted them to ſtrike the

the laſt blow for liberty, ſafety, and life. To theſe exhortations his ſoldiers replied with ſhouts of determined valour. But what could undiſciplined bravery avail againſt the attack of an army ſkilled in all the arts of war, and inſpired by a long train of conqueſts? The Britons were, after an obſtinate reſiſtance, totally routed; and a few days after Caractacus himſelf was impiouſly betrayed and delivered up to the conquerors by Cartiſmandua, queen of the Brigantes, with whom he had taken refuge. Notice of the capture of this prince was received with ſuch joy at Rome, that Claudius commanded that he ſhould be brought from Britain, in order to be exhibited as a ſpectacle to the Roman people. Accordingly, on the day appointed for that purpoſe, the emperor aſcending his throne, ordered the captives, and Caractacus among the number, to be brought into his preſence. The vaſſals of the Britiſh king, with the ſpoils taken in war, were firſt brought forward; theſe were followed by his family; and laſt of all came Caractacus, with an undaunted and a dignified aſpect. He appeared no way dejected at the amazing concourſe of ſpectators that were gathered upon this occaſion. When he came before the imperial throne, he addreſſed Claudius in the following magnanimous and ſenſible ſpeech: "If my moderation in proſperity, O Claudius! had been as conſpicuous as my birth and fortune, I ſhould now have entered this city as a friend, and not as a priſoner; nor would you have diſdained the friendſhip of a prince deſcended from ſuch illuſtrious anceſtors, and governing ſo many nations. My preſent condition, I own, is to you honourable, to me humiliating. I was lately poſſeſſed of ſubjects, horſes, arms, and riches. Can you be ſurpriſed that I endeavoured to preſerve them? If you Romans have a deſire to arrive at univerſal monarchy, muſt all nations, to gratify you, tamely ſubmit to ſervitude? If I had ſubmitted without a ſtruggle, how much would it have diminiſhed the luſtre of my fall, and of your victory? And now, if you reſolve to put me to death, my ſtory will ſoon be buried in oblivion; but if you think proper to preſerve my life, I ſhall remain a laſting monument of your clemency." It is greatly to the honour of Claudius, that he was ſo much charmed with the boldneſs of his illuſtrious priſoner, that he pardoned him and his whole retinue, and commanded their chains to be immediately taken off.

Notwithſtanding their misfortunes, and the capture of their king, the Britons were not yet ſubdued; and this iſland was regarded by the ambitious Romans as a field in which military honour might ſtill be acquired. The Britons made one expiring effort more to recover their liberty, in the time of Nero, by taking advantage of the abſence of Suetonius Paulinus the Roman general, who was employed in ſubduing the Iſle of Angleſey. That ſmall iſland, ſeparated from Britain only by a narrow channel, ſtill continued the chief ſeat of the Druidical ceremonies, and conſtantly afforded a retreat to their defeated forces. It was thought neceſſary therefore to ſubdue that place, in order to extirpate a religion that diſdained ſubmiſſion to foreign laws or leaders; and Suetonius Paulinus, the greateſt general of his age, undertook the taſk, A. D. 59. The Britons endeavoured to obſtruct his landing on that laſt retreat of their falling liberties, both by the force of their arms, and the terrors of their religion. The prieſts and highlanders were drawn up in order of battle upon the ſhore, to oppoſe his landing. The women, dreſſed like furies, with diſhevelled hair, and torches in their hands, poured forth the moſt terrible execrations. Such a ſight at firſt confounded and aſtoniſhed the Romans, and fixed them motionleſs on the ſpot; ſo that they received the firſt aſſault without being able to make the leaſt oppoſition. But Suetonius, exhorting his troops to deſpiſe the terrors of an abſurd ſuperſtition, and the unavailing menaces of poor weak deluded women, impelled them to the attack with redoubled courage; drove the Britons off the field, burnt many of the Druids in the ſame fires they had prepared for their captive enemies, and deſtroyed all their conſecrated groves and altars.

Yet ſtill the principal tribes of the Britons reſolved, by a general inſurrection, to free themſelves at once from that ſtate of abject ſervitude to which they were reduced. They had many motives to aggravate their reſentment; the greatneſs of their taxes, which were levied with unremitting ſeverity; the inſolence of their conquerors, who reproached that very poverty which they had cauſed; but particularly the cruel treatment of Boadicea, queen of the Iceni, drove them at laſt into open rebellion. Praſatagus, king of the Iceni, at his death, had bequeathed one half of his dominions to the Romans, and the other to his daughters; thus hoping, by the ſacrifice of a part, to ſecure the reſt in his family: but it had a different effect; for the Roman procurator immediately took poſſeſſion of the whole; and when Boadicea, the widow of the deceaſed, attempted to remonſtrate, he ordered her to be ſcourged like a ſlave, and violated the chaſtity of her daughters. Theſe outrages excited a revolt through the whole iſland. The Iceni, being the moſt deeply intereſted in the quarrel, were the firſt to take arms; the other ſtates ſoon followed the example: and Boadicea, a princeſs of great beauty, and of an invincible ſpirit, was appointed to head the common forces, which amounted to 230,000 fighting men. Theſe oppreſſed people, exaſperated by their wrongs, attacked ſeveral of the Roman ſettlements and colonies with ſucceſs. Suetonius haſtened to relieve London, which was already a flouriſhing colony; but he was obliged to abandon that place to the fury of the Britons. London was therefore reduced to aſhes; and the Romans, with all other ſtrangers that were found in it, to the number of ſeventy thouſand, were, without diſtinction, put to the ſword. Fluſhed with theſe ſucceſſes, the Britons no longer fought to avoid the enemy, but boldly came to the place where Suetonius awaited their arrival, poſted in a very advantageous manner, with a body of ten thouſand men. The battle was obſtinate and bloody. Boadicea appeared in a chariot with her two daughters, and harangued her army with maſculine intrepidity; declaring, "That ſhe, though a woman, was fully determined to conquer or to die; the men, if they pleaſed, might live and be ſlaves." But the irregular and undiſciplined bravery of her troops was unable to reſiſt the cool intrepidity of the Romans. They were routed with prodigious ſlaughter: eighty thouſand periſhed in the field, and an infinite number were made priſoners, while Boadicea herſelf, fearing to fall into the hands of the victor, put an end to her life by poiſon. Nero ſoon after recalled Suetonius from a government, where, by ſuffering and inflicting ſo many ſeverities, he was judged improper to calm the angry and agitated minds of the natives. After an interval of ſome conſiderable time, during which Petronius Turpilianus, Trebellius Maximus, and Vectius Bolanus, had ſucceeded each other, Cerealis received the chief command from Veſpaſian, and by his bravery propagated the terror of the Roman arms. Julius Frontinus ſucceded Cerealis both in authority and reputation. But the general who finally eſtabliſhed the dominion of the Romans in Britain was Julius Agricola, who governed it during the reigns of Veſpaſian, Titus, and Domitian, and diſtinguiſhed himſelf as well by his courage, as by his great humanity.

Agricola, celebrated in hiſtory both for clemency and wiſdom, formed a regular plan for ſubduing and civilizing the iſland, and thus rendering the acquiſition of it uſeful to the conquerors. As the northern part of the country was leaſt tractable, he carried his victorious arms thither, and defeated the undiſciplined enemy in every encounter. He pierced into the hitherto inacceſſible foreſts and mountains of Caledonia, he drove onward all thoſe fierce and untractable ſpirits who preferred famine to ſlavery, and who, rather than ſubmit, choſe to remain in perpetual hoſtility.

hoſtility. Nor was it without oppoſition that he thus made his way into a country rude and impervious by nature. He was oppoſed by Galgacus, the celebrated Caledonian chief, at the head of a numerous army, whom he defeated in a deciſive action, and in which conſiderable numbers were ſlain. Being thus ſucceſsful, he did not think proper to purſue the enemy into their retreats; but, embarking a body of troops on-board his fleet, he ordered the commander to navigate the whole coaſt of Britain, which they had not diſcovered to be an iſland till the preceding year. This armament, purſuant to his orders, ſteered to the northward, and there ſubdued the Orkneys; then making the tour of the whole iſland, it arrived in the port of Sandwich, without having met with the leaſt diſaſter.

During theſe military enterpriſes, Agricola was ever attentive to the arts of peace. He attempted to humaniſe the fierceneſs of thoſe who acknowledged his power, by introducing the Roman laws, habits, and cuſtoms. He taught them to deſire and to raiſe all the conveniences of life, inſtructed them in the arts of agriculture; and, in order to protect them in their peaceable poſſeſſions, he drew a rampart, and fixed a train of garriſons between them and their northern neighbours, cutting off the ruder and more barren parts of the iſland, and ſecuring the Roman province from the invaſion of a fierce and neceſſitous enemy. Thus, in exchange for liberty and independence, the Britons gained urbanity and civilization—they acquired the manners and language, the arts and ſciences, of the Romans; and, ſecured by the fortification which Agricola had erected, they lived a long time in undiſturbed quiet, without once thinking of the liberty they had loſt. From that time, A. D. 78, the Romans ſeemed more deſirous of ſecuring what they already poſſeſſed in Britain, than of making new conqueſts; and were employed rather in repreſſing, than in puniſhing, their reſtleſs northern invaders.

Nothing remarkable has been recorded concerning the affairs of Britain from this period till the reign of Adrian, A. D. 120, when Priſcus Licinius was ſent over to quell the inroads of the Caledonians; and the emperor himſelf, arriving ſhortly afterward, excited ſuch terror in the breaſts of thoſe marauders, that they haſtily evacuated all the places they had ſeized, and retired toward the more northern part of the inland. Adrian, deeming it adviſable to terminate the war, relinquiſhed all the tract of country lying between the Tyne and the two friths, but cauſed a wall to be built, extending from the Eden in Cumberland to the Tyne in Northumberland, a diſtance of eighty miles, in order to reſtrain the Caledonians from making any irruption into South Britain in future. Having thus ſettled the affairs of the iſland, and redreſſed ſeveral grievances, Adrian returned to Rome, where he was ſaluted with the title of "Reſtorer of Britain."

During the reign of Antoninus Pius, the Brigantes endeavoured to ſhake off the yoke; and the Caledonians, having demoliſhed a conſiderable part of Adrian's rampart, began to make freſh incurſions into the ſouthern territories. However, Lollius Urbicus chaſtiſed the revolted Brigantes; compelled the northern barbarians to retire into their own country; and confined them within narrower bounds than before, by a new wall, extending from the Forth to the Clyde. This wall was paſſed by the Caledonians in the time of Commodus, and ſome dreadful devaſtations were then again committed; but, on the arrival of Ulpius Marcellus, the marauders were defeated, and chaſed into their own territories with prodigious ſlaughter.

The emperor Severus, A. D. 207, divided Britain into two governments, and beſtowed the ſouthern part of the iſland upon Heraclius, and the northern on Virius Lupus. However, the ſouthern territories were ſtill ſo dreadfully ravaged by the Caledonians, that Severus deemed it adviſeable to repair thither in perſon. Accordingly he ſet out, with his two ſons, Caracalla and Geta, at the head of a numerous army, and landing on the iſland, marched with all poſſible expedition into the northern countries, which he ravaged with ſuch ſucceſs, that the Caledonians were compelled to purchaſe a peace by relinquiſhing part of their territories, and delivering up their arms. The victorious emperor then commanded a new wall to be built for a further defence, and retired to York, where he fell ſick and died, A. D. 211. His two ſons Geta and Caracalla ſucceeding to the empire, they immediately repaired to Rome; and from this time to the reign of Diocletian, A. D. 284, there is a chaſm in the Britiſh hiſtory.

In the commencement of Diocletian's reign, Britain was dreadfully infeſted by pirates. To repel their incurſions, it was found neceſſary to create a naval power; and the judicious meaſure was proſecuted with prudence and vigour. Geſſoriacum, or Boulogne, in the ſtraights of the Britiſh channel, was choſen by the emperor for the ſtation of the Roman fleet; and the command of it was entruſted to Carauſius, a Menapean of the meaneſt origin, but who had long ſignalized his ſkill as a pilot, and his valour as a ſoldier. The integrity of the new admiral correſponded not with his abilities. When the German pirates failed from their own harbours, he connived at their paſſage, but he diligently intercepted their return, and appropriated to his own uſe an ample ſhare of the ſpoil which they had acquired. The wealth of Carauſius was, on this occaſion, very juſtly conſidered as an evidence of his guilt; and orders had been already given for his death. But the crafty Menapian foreſaw and prevented the ſeverity of the emperor. By his liberality he had attached to his fortunes the fleet which he commanded, and ſecured the barbarians in his intereſt. From the port of Boulogne he ſailed to Britain, A. D. 287, perſuaded the legion, and the auxiliaries which guarded the iſland, to embrace his party, and boldly aſſuming the ſovereignty of Britain, under the title of Auguſtus, he defied the juſtice and the arms of the legal emperor. While Britain was thus diſmembered from Rome, its importance was ſenſibly felt, and its loſs ſincerely lamented. The Romans celebrated, and then perhaps magnified, the extent of ſo noble an iſland, provided on every ſide with convenient harbours; the temperature of the climate, and the fertility of the ſoil, alike adapted for the production of corn and of cattle; the valuable minerals with which it abounded; its rich paſtures covered with innumerable flocks, and its woods free from wild beaſts or venomous ſerpents. Above all, they regretted the large amount of the revenue of Britain, whilſt they confeſſed, that ſuch a province well deſerved to become the ſeat of an independent monarchy. During the ſpace of ſeven years, it was thus poſſeſſed by Carauſius; and fortune continued propitious to a rebellion, ſupported with courage and ability. The new Britiſh emperor defended the frontiers of his dominions againſt the Caledonians of the north, invited from the continent a great number of ſkilful artiſts, and diſplayed, on a variety of coins that are ſtill extant, his taſte and opulence. Born on the confines of the Franks, he courted the friendſhip of that formidable people, by the flattering imitation of their dreſs and manners. The braveſt of their youth he enliſted among his land or ſea forces; and in return for their uſeful alliance, he communicated to the barbarians a greater knowledge of military and naval arts. Carauſius ſtill preſerved the poſſeſſion of Boulogne and the adjacent country. His fleets rode triumphant in the channel, commanded the mouths of the Seine and of the Rhine, ravaged the coaſts of the ocean, and diffuſed beyond the columns of Hercules the terror of his name. Under his command, Britain, deſtined in a future age to obtain the empire of the ſea, already aſſumed its natural and reſpectable ſtation of a maritime power.

By ſeizing the fleet of Boulogne, Carauſius had deprived the Romans of the means of purſuit and revenge. And when, after a vaſt expence of time and labour, a new

new armament was launched into the water, the imperial troops, unaccuſtomed to that element, were eaſily baffled and defeated by the veteran ſailors of the uſurper. During the three years which Conſtantius employed in preparing another fleet, adequate to the conqueſt of Britain, he ſecured the coaſt of Gaul, invaded the country of the Franks, and deprived the uſurper of the aſſiſtance of thoſe powerful allies. But before the preparations were finiſhed, Conſtantius received intelligence of the tyrant's death. The ſervants of Carauſius imitated the example of treaſon which he had given them. He was murdered by his firſt miniſter Alectus; and the aſſaſſin ſucceeded to his power and to his danger. But he poſſeſſed not equal abilities either to exerciſe the one, or to repel the other. He beheld, with anxious terror, the oppoſite ſhores of the continent, already filled with arms, with troops, and with veſſels; for Conſtantius had very prudently divided his forces, that he might likewiſe divide the attention and reſiſtance of the enemy. The attack was at length made by the principal ſquadron, which, under the command of the præfect Aſclepiodatus, an officer of diſtinguiſhed merit, had been aſſembled in the mouth of the Seine. So imperfect in thoſe times was the art of navigation, that orators have celebrated the daring courage of the Romans, who ventured to ſet ſail with a ſide wind, and on a ſtormy day. The weather proved favourable to their enterpriſe. Under the cover of a thick fog they eſcaped the fleet of Alectus, which had been ſtationed off the Iſle of Wight to receive them, and they landed in ſafety on ſome part of the weſtern coaſt. Aſclepiodatus had no ſooner diſembarked the imperial troops, than he ſet fire to his ſhips; and, as the expedition proved fortunate, his heroic conduct was univerſally admired. The uſurper had poſted himſelf near London, to expect the formidable attack of Conſtantius, who commanded in perſon the fleet of Boulogne; but the deſcent of a new enemy required his immediate preſence in the weſt. He performed this long march in ſo precipitate a manner, that he encountered the whole force of the præfect with a ſmall body of haraſſed and diſheartened troops. The engagement was ſoon terminated by the total defeat and death of Alectus; a ſingle battle, as it has often happened, decided the fate of this great iſland; and when Conſtantius landed on the ſhores of Kent, he found them covered with obedient ſubjects. Their acclamations were loud and unanimous; and the virtues of the conqueror may induce us to believe, that they ſincerely rejoiced in a revolution, which, after a ſeparation of ten years, again reſtored Britain to the body of the Roman empire.

The two emperors, Diocletian and Maximian, having reſigned the imperial dignity to Galerius and Conſtantius, the latter paſſed over into Britain, ſhortly after his acceſſion, and obtained a victory over the turbulent Picts and Caledonians; but he alſo fell ſick and died at York. Conſtantine, the ſon and ſucceſſor of Conſtantius, altered the diviſion of Britain, which had been formed by Severus into two provinces only, but which he now divided into three; viz. Britannia Prima, Britannia Secunda, and Maxima Cæſarienſis. The removal of the imperial ſeat from Rome to Conſtantinople, which happened during this reign, gave the northern nations an opportunity of making ſeveral irruptions into Britain, and emboldened the Picts and Scots to commit many horrid depredations on the ſouthern territories. Six years after the death of Conſtantine, the continued and deſtructive inroads of theſe barbarians, required the preſence of his youngeſt ſon, who reigned in the weſtern empire. Conſtans therefore viſited Britain, A. D. 343. The calamities which the conquered Britons continued to experience, from foreign war and domeſtic tyranny, had been aggravated by the feeble and corrupt adminiſtration of the eunuchs of Conſtantius. The ſums of gold and ſilver which had been liberally tranſmitted for the payment of the troops, were intercepted by the avarice of the commanders; diſcharges, or, at leaſt, exemptions, from the military ſervice, were publicly ſold; the diſtreſs of the ſoldiers, who were injuriouſly deprived of their legal and ſcanty ſubſiſtence, provoked them to frequent deſertion; the nerves of diſcipline were relaxed, and the highways were infeſted with robbers; a fact, which ſeems to have eſcaped the diligence of our Britiſh antiquaries. The oppreſſion of the good, and the impunity of the wicked, equally contributed to diffuſe through the iſland a ſpirit of diſcontent and revolt; and every ambitious ſubject, every deſperate exile, might entertain a reaſonable hope of ſubverting the weak and diſtracted government of the Romans in Britain. The hoſtile tribes of the north, who deteſted the pride and power of the Romans, ſuſpended their domeſtic feuds; and the barbarians of the land and ſea, the Scots, the Picts, and the Saxons, ſpread themſelves, with rapid and irreſiſtible fury, from the wall of Antoninus to the ſhores of Kent. Every production of art and nature, every object of convenience or luxury, which they were incapable of creating by labour, or procuring by trade, had been accumulated in the rich and fruitful province of Britain. "A philoſopher (ſays Gibbon) may deplore the eternal diſcord of the human race, but he will confeſs, that the deſire of ſpoil is a more rational provocation than the vanity of conqueſt." This rapacious ſpirit long continued to inſtigate the poor and hardy Caledonians: and the ſame people, whoſe generous humanity ſeems to inſpire the ſongs of Oſſian, was always diſgraced by a ſavage ignorance of the virtues of peace, and of the laws of war. Their ſouthern neighbours have felt, and perhaps exaggerated, their cruel depredations; and a valiant tribe of Caledonia, the Attacotti, are accuſed, by an eye-witneſs, of delighting in the taſte of human fleſh. When they hunted the woods for prey, it is ſaid, that they attacked the ſhepherd rather than his flock; and that they curiouſly ſelected the moſt delicate and brawny parts, both of males and females, which they prepared for their horrid repaſts. If, in the neighbourhood of the commercial and literary town of Glaſgow, a race of canibals has really exiſted, which is aſſerted in the text of Jerom, and copied by Gibbon, we may contemplate with pleaſure in the preſent period of the Scottiſh hiſtory, the oppoſite extremes of ſavage and civilized life.

During the ſhort reigns of Julian and Jovian, nothing is mentioned, by hiſtorians, concerning the affairs of Britain; but, under Valentinian I. the Picts, Scots, Attacotti, Saxons, and other northern nations, committed ſuch outrages, that the defence, or rather the recovery, of Britain, was entruſted to the abilities of the brave Theodoſius. The exploits of that general, the father of a line of emperors, have been celebrated, with peculiar complacency, by the writers of the age: but his real merit deſerved their applauſe; and his nomination was received in Britain with univerſal joy. He ſeized the favourable moment of navigation, and ſecurely landed his numerous and veteran bands on the Britiſh coaſt, A. D. 367. In his march from Sandwich to London, Theodoſius defeated ſeveral parties of the barbarians, releaſed a multitude of captives, and, after diſtributing to his ſoldiers a ſmall portion of the ſpoil, eſtabliſhed the fame of diſintereſted juſtice, by the reſtitution of the remainder to the rightful proprietors. The citizens of London, who had almoſt deſpaired of their ſafety, threw open their gates; and as ſoon as Theodoſius had obtained the aid of a military lieutenant, and a civil governor, he executed, with wiſdom and vigour, the laborious taſk of the deliverance of Britain. The vagrant ſoldiers were recalled to their ſtandard; an edict of amneſty diſpelled the public apprehenſions; and his cheerful example alleviated the rigour of martial diſcipline. The ſcattered and deſultory warfare of the barbarians, who infeſted the land and ſea, deprived him of the glory of a ſignal victory; but the prudent ſpirit, and conſummate art, of the Roman general were diſplayed in the operations of two campaigns, in the years 368 and 369, which ſucceſſively reſcued every part of the province from the hands of a cruel and rapa-

cious enemy. The peace of the cities, and the ſecurity of the fortifications, were diligently reſtored, by the paternal care of Theodoſius; who with a ſtrong hand confined the trembling Caledonians to the northern angle of the iſland; and perpetuated, by the name and ſettlement of the new province of Valentia, the glories of the reign of Valentinian. The voice of poetry and panegyric may add, perhaps with ſome degree of truth, that the unknown regions of Thule were ſtained with the blood of the Picts; that the oars of Theodoſius daſhed the waves of the Hyperborean ocean; and that the diſtant Orkneys were the ſcene of his naval victory over the Saxon pirates. He then left the province with a fair, as well as ſplendid, reputation, A. D. 370, with the ſatisfaction of having reſtored Britain to perfect tranquillity.

In the joint reign of the ſucceeding emperors, Valentinian II. and Gratian, Maximus uſurped the ſovereignty in Britain. It is not very important to enquire from what cauſes this revolt was produced. Accident is commonly the parent of diſorder; the ſeeds of rebellion had for ſome time been diſſeminated among the legions in the iſland; and the name of Maximus was proclaimed by the tumultuary, but unanimous voice, both of the ſoldiers and of the provincials. The emperor, or the rebel, for his title was not yet aſcertained by fortune, was a native of Spain, the countryman, the fellow-ſoldier, and the rival, of Theodoſius, whoſe elevation he had not ſeen without ſome emotions of envy: the events of his life had long ſince fixed him in Britain; and he is ſaid to have contracted marriage with the daughter of a wealthy lord of Caernarvonſhire. But he was not inveſted with the authority either of governor or general. His abilities, and even his integrity, are flattered by the partial writers of that age. In the midſt of the tumult, he artfully refuſed to aſcend the throne; and ſome credit appears to have been given to his own poſitive declaration, that he was *compelled* to accept the dangerous preſent of the imperial purple.

From the moment that Maximus had violated his allegiance, he could not hope to reign, or even to live, if he confined his ambition within the narrow limits of Britain. He boldly reſolved to prevent the deſigns of Gratian; the youth of Britain crowded to his ſtandard, and he invaded Gaul with a fleet and army, which were long afterwards remembered, as the emigration of a conſiderable part of the Britiſh nation. The whole emigration conſiſted of 30,000 ſoldiers, and 100,000 plebians, who ſettled in Bretagne. The emperor Gratian, in his peaceful reſidence of Paris, was alarmed by their hoſtile approach; and the darts which he idly waſted on lions and bears, might have been employed more honourably againſt the rebels. The armies of Gaul, inſtead of oppoſing the march of Maximus received him with joyful acclamations. The emperor fled towards Lyons, with a train of only three hundred horſe; and, in the cities along the road, where he hoped to find a refuge, or at leaſt a paſſage, he was taught, by cruel experience, that every gate is ſhut againſt the unfortunate. Gratian was amuſed by proteſtations of doubtful fidelity by the perfidious governor of the Lyoneſe, till the arrival of Andragathius, the general of the cavalry of Maximus, put an end to his ſuſpenſe. That ſanguinary officer executed, without remorſe, the orders of the uſurper. Gratian, as he roſe from ſupper, was delivered into the hands of the aſſaſſin; and his body was even denied to the pious entreaties of his brother Valentinian. The uſurper Maximus, however, ſoon after this, met his fate in the plains of Italy, where his head was ſevered from his body by the common ſoldiers in the victorious army of Theodoſius, A.D. 388. Britain, in the mean while, was not forgotten: Theodoſius was aware of the marauding watchfulneſs of the Scots and Picts, and he therefore wiſely counteracted them: theſe warlike nations were kept in awe by Chryſantius, who, being entruſted with the government of the iſland, acquitted himſelf in that capacity with equal juſtice and reputation.

In the early part of the reign of Honorius, A. D. 407, the vigilance of Stilicho, his brave, but ill-fated, general, had ſucceſsfully guarded the iſland of Britain from her inceſſant enemies both of the ocean, the mountains, and the Iriſh coaſt. But thoſe reſtleſs barbarians could not neglect the fair opportunity of the foreign war, when the walls and ſtations of Britain were ſtripped of the Roman troops. If any of the legionaries were permitted to return from the Italian expedition, their report of the court and character of Honorius muſt have tended to diſſolve the bonds of allegiance, and to exaſperate the ſeditious temper of the Britons. The ſpirit of revolt was revived by the capricious violence of the ſoldiers; and the unfortunate, but ambitious, candidates, who were the objects of their choice, were the inſtruments, and at length the victims, of their paſſion. Marcus was the firſt whom, in their phrenzy, they ſet up as the emperor of Britain. They then violated, by the haſty murder of Marcus, the oath of fidelity which they had impoſed on themſelves; and their diſapprobation of his manners may ſeem to inſcribe an honourable epitaph on his tomb. Gratian, another unfortunate Roman, was the next whom they adorned with the title of king of Britain; and, at the end of four months, Gratian experienced the fate of his predeceſſor. The memory of the great Conſtantine, whom the Britiſh legions had given to the church and to the empire, ſuggeſted the ſingular motive of their third choice. They diſcovered in the ranks a private ſoldier of the *name* of Conſtantine, and their impetuous levity had already ſeated him on the throne, before they perceived his incapacity to govern. Yet the authority of Conſtantine was leſs precarious, and his government was more ſucceſsful, than the tranſient reigns of Marcus and of Gratian. He nevertheleſs met a ſimilar fate with his two predeceſſors, and was put to death as a traitor.

The Britons, during the bloody war of the laſt king they had ſet up, with the army of Honorius, became an eaſy prey to their old enemies the Scots, Picts, and other northern nations, who ravaged the country with fire and ſword, and reduced the natives to the moſt deplorable condition. Supplications were now made to Honorius; and one legion was ſent over, which defeated the invaders with great ſlaughter, and chaſed them into their ancient limits: but theſe auxiliaries had no ſooner returned to the continent, than the barbarians poured in upon the Britiſh territories like an overwhelming torrent, and revenged their late defeat by marking their progreſs with ſlaughter, rapine, and deſolation. The Britons again made application to Rome, and again obtained the aſſiſtance of one legion, which proved effectual for their relief: but Honorius, fatigued with theſe repeated expeditions, and reduced to extremities at home, informed the Britons that they muſt no longer look to Rome for ſuccour; he exhorted them to provide for their own ſecurity by an exertion of their ancient bravery; and urged the neceſſity of maintaining their independence againſt an enemy, whoſe ſtrength was not, in reality, ſuperior to their own. He then relinquiſhed all farther claim to Britain, after the greateſt part of it had been ſubject to the Roman empire for the ſpace of near four hundred years.

This revolution diſſolved the artificial fabric of the civil and military government, which had been eſtabliſhed at the expence of much blood and treaſure, in Britain; and the independent country, during a period of forty years, till the deſcent of the Saxons, appears to have been ruled by the authority of the clergy, the nobles, and the municipal towns. Zoſimus, who alone has preſerved the memory of this ſingular event, very accurately obſerves, that the letters of Honorius were addreſſed to the *cities* of Britain. Under the protection of the Romans, ninety-two conſiderable towns had ariſen in the ſeveral parts of the province; and, among theſe, thirty-three

three cities were diſtinguiſhed above the reſt by their ſuperior privileges and importance. Each of theſe cities, as in all the other juriſdictions of the empire, formed a legal corporation, for the purpoſe of regulating their domeſtic policy; and the powers of municipal government were diſtributed among annual magiſtrates, a ſelect ſenate, and the aſſembly of the people, according to the old model of the Roman conſtitution. The management of a common revenue, the exerciſe of civil and criminal juriſdiction, and the habits of public counſel and command, were inherent to theſe petty republics; and when they aſſerted their independence, the youth of the city, and of the adjacent diſtricts, would naturally range themſelves under the ſtandard of the magiſtrate. But the deſire of obtaining the advantages, and of eſcaping the burthens, of a political ſociety, is a perpetual and inexhauſtible ſource of diſcord; nor can it reaſonably be preſumed, that the reſtoration of Britiſh freedom was exempt from tumult and faction.

The juriſdiction of each city over the adjacent country, was ſupported by the patrimonial influence of the principal ſenators; and the ſmaller towns, the villages, and the proprietors of land, conſulted their own ſafety by adhering to the ſhelter of theſe riſing republics. The ſphere of their attraction was proportioned to the reſpective degrees of their wealth and populouſneſs; but the hereditary lords of ample poſſeſſions, who were not oppreſſed by the neighbourhood of any powerful city, aſpired to the rank of independent princes, and boldly exerciſed the rights of peace and war. The gardens and villas, which exhibited ſome faint imitation of Roman elegance, would ſoon be converted into ſtrong caſtles, the refuge, in time of danger, of the adjacent country: the produce of the land was applied to purchaſe arms and horſes; to maintain a military force of ſlaves, of peaſants, and of licentious followers; and the chieftain might aſſume, within his own domain, the powers of a civil magiſtrate. Several of theſe Britiſh chiefs might be the genuine poſterity of their ancient kings; and many more would be tempted to adopt this honourable genealogy, and to vindicate their hereditary claims, ſo long ſuſpended by the uſurpation of the Cæſars. Their ſituation and their hopes would diſpoſe them to affect the dreſs, the language, and the cuſtoms, of their anceſtors. If the princes of Britain relapſed into barbariſm, while the cities ſtudiouſly preſerved the laws and manners of Rome, the whole iſland muſt have been gradually divided by the diſtinction of two national parties; again broken into a thouſand ſubdiviſions of war and faction, by the various provocations of intereſt and reſentment. The public ſtrength, inſtead of being united againſt a foreign enemy, was thus conſumed in obſcure and inteſtine quarrels; and the perſonal merit which had placed a ſucceſsful leader at the head of his equals, might enable him to ſubdue the freedom of ſome neighbouring cities; and to claim a rank among the tyrants, who infeſted Britain after the diſſolution of the Roman government.

The Britiſh church might at that time be compoſed of thirty or forty biſhops, with an adequate proportion of the inferior clergy; and the want of riches (for they ſeem to have been very poor) would compel them to deſerve the public eſteem, by a decent and exemplary behaviour. The intereſt, as well as the temper, of the clergy was favourable to the peace and union of their diſtracted country; thoſe ſalutary leſſons might be frequently inculcated in their popular diſcourſes; and the epiſcopal ſynods were the only councils that could pretend to the weight and authority of a national aſſembly. In ſuch councils, where the princes and magiſtrates ſat promiſcuouſly with the biſhops, and the important affairs of the ſtate, as well as of the church, might be freely debated; differences reconciled, alliances formed, contributions impoſed, wiſe reſolutions concerted, and ſometimes executed; and there is reaſon to believe, that, in moments of extreme danger, a *pendragon*, or dictator, was elected by the general conſent of the Britons. Theſe paſtoral cares, ſo worthy of the epiſcopal character, were interrupted, however, by zeal and ſuperſtition; and the Britiſh clergy inceſſantly laboured to eradicate the Pelagian hereſy, which they abhorred, as the peculiar diſgrace of their native country. See PELAGIUS.

About forty years after the diſſolution of the Roman government, Vortigern appears to have obtained the ſupreme command of the princes and cities of Britain. That unfortunate monarch has been almoſt unanimouſly condemned for the weak and miſchievous policy of inviting a formidable ſtranger, to repel the vexatious inroads of a domeſtic foe. His ambaſſadors are diſpatched, by the graveſt hiſtorians, to the coaſt of Germany; they addreſs a pathetic oration to the general aſſembly of the Saxons, and thoſe warlike people reſolve to aſſiſt with a fleet and army the ſuppliants of a diſtant and unknown iſland. If Britain had, indeed, been *unknown* to the Saxons, the meaſure of its calamities would have been leſs complete. But the ſtrength of the Roman government could not always guard the maritime province againſt the pirates of Germany: the independent and divided ſtates were expoſed to their attacks; and the Saxons often joined the Scots and the Picts, in a tacit, or expreſs, confederacy of rapine and deſtruction. Vortigern could only balance the various perils, which aſſaulted on every ſide his throne and his people; and his policy may deſerve either praiſe or excuſe, if he preferred the alliance of thoſe barbarians, whoſe naval power rendered them the moſt dangerous enemies, and the moſt ſerviceable allies. Hengiſt and Horſa, as they ranged along the eaſtern coaſt, with three ſhips, were engaged, by the promiſe of an ample ſtipend, to embrace the defence of Britain; and their intrepid valour ſoon delivered the country from the Caledonian invaders. The Iſle of Thanet, a ſecure and fertile diſtrict, was allotted for the reſidence of theſe German auxiliaries, and they were ſupplied, according to the treaty, with a plentiful allowance of clothing and proviſions. This favourable reception encouraged five thouſand freſh warriors to embark with their families in ſeventeen veſſels, and the infant power of Hengiſt was fortified by this ſtrong and ſeaſonable reinforcement. The crafty barbarian ſuggeſted to Vortigern the obvious advantage of fixing, in the neighbourhood of the Picts, a colony of faithful allies: a third fleet of forty ſhips, under the command of his ſon and nephew, then ſailed from Germany, ravaged the Orkneys, and diſembarked a new army on the coaſt of Northumberland. It was eaſy to foreſee, but it was impoſſible to prevent, the impending evils. The two nations were ſoon divided and exaſperated by mutual jealouſies. The Saxons magnified all that they had done and ſuffered in the cauſe of an ungrateful people; while the Britons regretted the liberal rewards which could not ſatisfy the avarice of thoſe aſpiring mercenaries. The cauſes of fear and hatred were thus inflamed into an irreconcileable quarrel.

Hengiſt, who had in view the conqueſt of Britain, exhorted his countrymen to embrace the favourable opportunity: he painted in lively colours the fertility of the ſoil, the wealth of the cities, the puſillanimous temper of the natives, and the convenient ſituation of a ſpacious iſland, acceſſible on all ſides to the Saxon fleets. The ſucceſſive colonies which iſſued, in the period of a century, from the mouths of the Elbe, the Weſer, and the Rhine, were principally compoſed of three tribes, or nations of Germany, the Jutes, the old Saxons, and the Angles. The Jutes, who fought under the peculiar banner of Hengiſt, aſſumed the merit of leading their countrymen in the paths of glory, and of erecting the firſt independent kingdom. The fame of the enterpriſe was attributed to the primitive Saxons; and the common laws and language of the conquerors are deſcribed by the national appellation of a people, which, at the end of four hundred years, produced the firſt monarchs of South Britain. The Angles were diſtinguiſhed by their numbers and

and their ſucceſs; and they claimed the honour of fixing a perpetual name on the country, of which they occupied the moſt ample portion. Each intrepid chieftain, according to the meaſure of his fame and fortunes, aſſembled his followers; equipped a fleet of veſſels; choſe the place of the attack; and conducted his ſubſequent operations according to the events of the war, and the dictates of his private intereſt. In the invaſion of Britain many heroes were vanquiſhed and fell; but only ſeven victorious leaders aſſumed, or at leaſt maintained, the title of kings. Seven independent thrones, the Saxon heptarchy, were founded by the conquerors; and ſeven families, one of which has been continued, by female ſucceſſion, to our preſent ſovereign, derived their equal and ſacred lineage from Woden, their provincial god of war. It has been pretended, that this republic of kings was moderated by a general council and a ſupreme magiſtrate. But ſuch an artificial ſcheme of policy is repugnant to the rude and turbulent ſpirit of the Saxons: their laws are ſilent; and their imperfect annals afford only a dark and bloody proſpect of inteſtine diſcord.

Hiſtorians have ſtrangely diſfigured the ſtate of Britain at the time of its ſeparation from the Roman empire. Gildas deſcribes in florid language the improvements of agriculture, the foreign trade which flowed with every tide into the Thames and the Severn, the ſolid and lofty conſtruction of public and private edifices: he accuſes the ſinful luxury of the Britiſh people; of a people, according to the ſame writer, *ignorant* of the moſt ſimple arts, and incapable, without the aid of the Romans, of providing walls of ſtone, or of making weapons of iron for the defence of their native land! But the fact is, that under the long dominion of the emperors, Britain had been inſenſibly moulded into the elegant and ſervile form of a Roman province, whoſe ſafety was entruſted to a foreign power. The ſubjects of Honorius contemplated their new freedom with ſurpriſe and terror; they were left deſtitute of any civil or military conſtitution; and their uncertain rulers wanted either ſkill, or courage, or authority, to direct the public force againſt the common enemy. So averſe were the Britons, or ſo completely eſtranged, from the enjoyment of their ancient liberty, that Honorius expreſſed his ſurpriſe at being obliged to *compel* the reluctant province to accept a privilege, which it ought moſt ardently to have ſolicited. Inſtead of which, the Britons ſeem to have regarded the gift of a free conſtitution as the laſt and moſt cruel evil that could befal them! In ſuch a ſtate of things, the introduction of the Saxons betrayed their weakneſs, and degraded the character both of the prince and people. Their conſternation magnified the danger; the want of union diminiſhed their reſources; and the madneſs of civil factions was more ſolicitous to accuſe, than to remedy, the evils, which they imputed to the miſconduct of their adverſaries. Yet the Britons were ſurely not ignorant; they could not be ignorant of the manufacture or the uſe of arms: the ſucceſſive and diſorderly attacks of the Saxons allowed them to recover from their amazement, and the proſperous or adverſe events of the war added diſcipline and experience to their native valour.

While the continent of Europe and Africa yielded, without reſiſtance, to the barbarians, the Britiſh iſland, alone and unaided, maintained a long, a vigorous, though an unſucceſsful, ſtruggle, againſt the formidable pirates, who, almoſt at the ſame inſtant, aſſaulted the northern, the eaſtern, and the ſouthern, coaſts. The cities which had been fortified with ſkill, were defended with reſolution; the advantages of ground, hills, foreſts, and moraſſes, were diligently improved by the inhabitants; the conqueſt of each diſtrict was purchaſed with blood; and the defeats of the Saxons are ſtrongly atteſted by the diſcreet ſilence of their own annaliſt. Hengiſt might hope to achieve the conqueſt of Britain; but his ambition, in an active reign of thirty-five years, was confined only to the poſſeſſion of Kent; and the numerous colony which he had planted in the north, was extirpated by the ſword of the Britons. The life of Cerdic, one of the braveſt of the children of Woden, was conſumed in the conqueſt of Hampſhire and the Iſle of Wight; and the loſs which he ſuſtained in the battle of Mount Badon, reduced him to a ſtate of inglorious repoſe. Kenric, his valiant ſon, advanced into Wiltſhire; beſieged Sarum, at that time ſeated on a commanding eminence; and vanquiſhed an army which advanced to the relief of the city. In the ſubſequent battle of Beran-birig, near Marlborough, his Britiſh enemies diſplayed their military ſcience. Their troops were formed in three lines; each line conſiſted of three diſtinct bodies; and the cavalry, the archers, and the pikemen, were diſtributed according to the principles of Roman tactics. The Saxons charged in one weighty column, boldly encountered with their ſhort ſwords the long lances of the Britons, and maintained an equal conflict till the approach of night. Two deciſive victories, the death of three Britiſh kings, and the reduction of Cirenceſter, Bath, and Glouceſter, eſtabliſhed the fame and power of Ceaulin, the grandſon of Cerdic, who carried his victorious arms to the banks of the Severn.

After a war of an hundred years, the independent Britons ſtill occupied the whole extent of the weſtern coaſt, from the wall of Antoninus to the extreme promontory of Cornwall; and the principal cities of the inland country ſtill oppoſed the arms of the barbarians. Reſiſtance became more languid, as the number and boldneſs of the aſſailants continually increaſed. Winning their way by ſlow and painful efforts, the Saxons, the Angles, and their various confederates, advanced from the north, from the eaſt, and from the ſouth, till their victorious banners were united in the center of the iſland. Beyond the Severn the Britons ſtill aſſerted their national freedom, which ſurvived even the monarchy of the Saxons. The braveſt warriors who preferred exile to ſlavery, found a ſecure refuge in the mountains of Wales: the reluctant ſubmiſſion of Cornwall was delayed for ſome ages; and a band of fugitives acquired a ſettlement in Gaul, by their own valour, or the liberality of the Merovingian kings. The weſtern angle of Armorica acquired the new appellations of *Cornwall* and the *Leſſer Britain*; and the vacant lands of the Oſiſmii were filled by the people of this iſland, who, under the authority of their counts and biſhops, preſerved the laws and language of their anceſtors. To the feeble deſcendants of Clovis and Charlemagne, the Britons of Armorica refuſed the cuſtomary tribute, ſubdued the neighbouring dioceſes of Vannes, Rennes, and Nantes, and formed the powerful, though vaſſal, ſtate of Bretagne, which was not united to the crown of France till 1532.

In a century of perpetual, or at leaſt implacable, war, much courage, and ſome ſkill, muſt have been exerted for the defence of Britain. Yet if the memory of its champions is almoſt buried in oblivion, we need not repine; ſince every age, however deſtitute of ſcience or virtue, ſufficiently abounds with acts of blood and military renown. The tomb of Vortimer, the ſon of Vortigern, was erected on the margin of the ſea ſhore, as a landmark formidable to the Saxons, whom he had thrice vanquiſhed in the fields of Kent. Ambroſius Aurelian was a Briton deſcended from a noble family of Romans; his modeſty was equal to his valour, and his valour, till the laſt fatal action, was crowned with ſplendid ſucceſs. But every Britiſh name is effaced by the illuſtrious name of *Arthur*, the hereditary prince of the Silures, in South Wales, and the elective king or general of the nation. According to the moſt rational account, he defeated, in twelve ſucceſſive battles, the Angles of the north, and the Saxons of the weſt; but the declining age of the hero was embittered by popular ingratitude and domeſtic miſfortunes. The events of his life are leſs intereſting than the ſingular revolutions of his fame. During a period of five hundred years the tradition of his exploits was preſerved, and rudely embelliſhed, by the obſcure bards of

Wales and Armorica, who were odious to the Saxons, and unknown to the reſt of mankind. Every nation embraced and adorned the popular romance of Arthur, and his Knights of the Round Table: their names were celebrated in Greece and Italy; and the voluminous tales of ſir Lancelot and ſir Triſtram were devoutly ſtudied by the princes and nobles of antiquity.

Reſiſtance, if it cannot avert, muſt increaſe the miſeries of conqueſt; and conqueſt has never appeared more dreadful and deſtructive than in the hands of the Saxons, who hated the valour of their enemies, diſdained the faith of treaties, and violated, without remorſe, the moſt ſacred objects of Chriſtian worſhip. The fields of battle might be traced, almoſt in every diſtrict, by monuments of bones; the fragments of falling towers were ſtained with blood; the Britons, without diſtinction of age or ſex, were maſſacred; and the repetition of ſuch calamities was frequent and familiar. The arts and religion, the laws and language, which the Romans had ſo carefully planted in Britain, were extirpated by their ſavage ſucceſſors. After the deſtruction of the principal churches, the biſhops, who had declined the crown of martyrdom, retired with the holy relics into Wales and Armorica; the remains of their flocks were left deſtitute; the practice, and even the remembrance, of Chriſtianity were aboliſhed. The proceedings of civil and criminal juriſdiction, the titles of honour, the forms of office, the ranks of ſociety, and even the domeſtic rights of marriage, teſtament, and inheritance, were finally ſuppreſſed; and the indiſcriminate crowd of noble and plebeian ſlaves was governed by the traditionary cuſtoms, which had been coarſely framed for the ſhepherds and pirates of Germany. The language of ſcience, of buſineſs, and of converſation, which had been introduced by the Romans, was loſt in one general deſolation.

Out of this ruin of the Roman empire in Britain aroſe the ſeven petty ſtates or kingdoms of the Saxons, which conſtitutes a memorable epoch in its hiſtory. Hengiſt kept his ground in the moſt opulent and commercial part of the country, and founded the kingdom of Kent, fixing his reſidence at Canterbury, and leaving his newly-acquired dominions to his poſterity, A. D. 488. A body of his countrymen, under the command of Ælla and his three ſons, had alſo laid the foundation of the kingdom of the South Saxons, which included Surry and Suſſex, and extended to the frontiers of Kent. Another tribe of Saxons, under the command of Cerdic and his ſon Kenric, had landed in the weſt, and from thence took the name of Weſt Saxons. Their kingdom, called Weſſex, included the counties of Cornwall, Devonſhire, Dorſet, Somerſet, Hants, Wilts, Berks, and the Iſle of Wight. It was in oppoſing this Saxon invader that the celebrated prince Arthur acquired his fame.

Freſh ſwarms of adventurers ſtill pouring over from Germany, one body of them, under the command of Uffa, A. D. 575, ſeized upon the counties of Cambridge, Suffolk, and Norfolk, with the iſle of Ely, and gave their commander the title of king of the Eaſt Angles, which was the fourth Saxon kingdom founded in Britain. Another body of theſe invaders formed a kingdom under the title of Eſſex, or Eaſt Saxony, comprehending Eſſex, Middleſex, and part of Hertfordſhire, A. D. 585. This kingdom, which had been diſmembered from that of Kent, formed the fifth Saxon principality founded in Britain. The kingdom of Mercia was the ſixth which was eſtabliſhed by theſe foreign depredators, comprehending all the middle counties, from the banks of the Severn to the frontiers of the two laſt-named diſtricts: viz. Glouceſter, Hereford, Warwick, Worceſter, Leiceſter, Rutland, Northampton, Lincoln, Huntingdon, Bedford, Buckingham, Oxford, Stafford, Derby, Salop, Nottingham, and the reſt of Hertfordſhire. The ſeventh kingdom which they obtained was that of Northumberland, one of the moſt powerful and extenſive of them all. This was formed from the union of two ſmaller Saxon kingdoms, the one, called Bernicia, containing the preſent county of Northumberland, quite up to the Frith of Edinburgh, and the biſhopric of Durham; the ſubjects of the other, called the Deiri, extending themſelves over Lancaſhire, Yorkſhire, Cumberland, and Weſtmoreland. Theſe kingdoms were united in the perſon of Ethelfrid, king of Northumberland, by the expulſion of Edwin, his brother-in-law, from the kingdom of the Deiri, and the ſeizure of his dominions. In this manner the ſeven kingdoms were eſtabliſhed in Britain, which were afterwards known in hiſtory by the name of the Saxon heptarchy.

This ſtrange ſubverſion of the populous ſtate and improving condition of Britain under the Roman juriſprudence, has perſuaded hiſtorians, and even philoſophers, that the provincials of Britain were totally extirminated; and that the vacant land was again peopled by the perpetual influx, and rapid increaſe, of the German colonies. A partial population doubtleſs ſupplied, in a conſiderable degree, the Engliſh who were driven from the coaſt; but neither reaſon nor facts can juſtify the unnatural ſuppoſition that the Saxons remained alone in the country which they had ſubdued. After the ſanguinary barbarians had ſecured their dominion, it was their intereſt to preſerve the peaſants, as well as the cattle, of the unreſiſting country, and to encourage the trade and population of the ſubjugated natives, in all the interior parts of the iſland.

When the Saxons had eſtabliſhed their government in all the deſirable parts of the iſland, and having no longer the Britons to contend with, they began to quarrel among themſelves. A country divided into a number of petty independent principalities, muſt ever be ſubject to contention, as jealouſy and ambition have more frequent incentives to operate. The wars and revolutions of theſe little rival ſtates were extremely numerous and ſanguinary; and the accounts of them have ſwelled the hiſtoric page. But theſe accounts are ſo confuſedly written, the materials ſo unintereſting, and filled with ſuch improbable adventures, that a repetition of them can neither gratify our curioſity, nor augment our knowledge.

The Chriſtian religion never ſuffered more perſecution than it now underwent in Britain, from the barbarity of the Saxon pagans, who maſſacred all thoſe whom they found profeſſing Chriſtianity. This deplorable ſtate of theology in Britain was firſt taken into conſideration by pope Gregory, ſurnamed Gregory the Great, who undertook to ſend miſſionaries to reclaim the morals of the conquerors. He named St. Auguſtine, and others of the ſame fraternity, to accept this miſſion in Britain. It was not, however, without ſome reluctance, that they undertook ſo dangerous a taſk; but ſome favourable circumſtances ſeemed providentially to prepare the way for their arrival. Ethelbert, king of Kent, in his father's life-time, had married Bertha, the only daughter of Caribert, king of Paris, one of the deſcendents of Clovis, king of Gaul. But before he was admitted to this alliance, he was obliged to ſtipulate that this princeſs ſhould enjoy the free exerciſe of the Chriſtian religion. She was therefore attended to Canterbury, the place of her reſidence, by Luidhard, a Gauliſh prelate, who officiated in a church dedicated to St. Martin, which had been built by the Romans, near the walls of Canterbury. The exemplary conduct of this primitive biſhop, added to the queen's learning and zeal, made very ſtrong impreſſions upon the king, as well as on the reſt of his ſubjects, in favour of Chriſtianity. Auguſtine, therefore, on his firſt landing in the Iſle of Thanet, ſent one of his interpreters to the Kentiſh king, declaring the nature of his miſſion. The king immediately ordered him to be furniſhed with neceſſaries, and even viſited him in perſon. Auguſtine, encouraged by this favourable reception, proceeded with redoubled zeal to preach the goſpel. So much aſſiduity, together with the earneſtneſs of his addreſs, the auſterity of his life, and the example of his followers, at length powerfully operated. The king openly eſpouſed the Chriſtian faith, while his example wrought ſo ſucceſsfully on his ſubjects, that numbers of them came voluntarily to be baptiſed. The heathen temples were now changed into places of Chriſtian wor-

ſhip,

ſhip, and ſuch churches as had been ſuffered to decay were repaired. The more to facilitate the reception of Chriſtianity, the pope enjoined his miſſioner to remove the pagan idols, but not to throw down the altars, obſerving, that the people would be allured to frequent thoſe places which they had formerly been accuſtomed to revere. He alſo permitted thoſe feats and cheerful entertainments which they had been formerly accuſtomed to celebrate near the places of their idolatrous worſhip. The people thus exchanged their ancient opinions with readineſs, ſince they found themſelves indulged in thoſe innocent relaxations which are only immoral when carried to exceſs. Auguſtine was conſecrated archbiſhop of Canterbury, endowed with authority over all the Britiſh churches, and his aſſociates, having ſpread themſelves throughout the country, ſoon completed that converſion which was ſo happily begun.

The kingdom of the heptarchy which next embraced the Chriſtian faith, was that of Northumberland. Edwin, a wiſe, brave, and active, prince, then king of that diſtrict, was married to Ethelburga, the daughter of Ethelbert, who had been ſo lately converted. This princeſs, emulating the glory of her mother, who had been the inſtrument of converting her huſband and his ſubjects to Chriſtianity, carried Paulinus, a learned biſhop, with her into Northumberland, having previouſly ſtipulated for the free exerciſe of her religion. Edwin, whom his queen unceaſingly ſolicited to embrace Chriſtianity, for a long time heſitated on the propoſal, willing to examine its doctrines before he declared in their favour. Accordingly he held ſeveral conferences with Paulinus, diſputed with his counſellors, meditated alone, and, after a ſerious diſcuſſion, declared himſelf a Chriſtian. The high prieſt alſo of the pagan ſuperſtition ſoon after declaring himſelf a convert to the arguments of Paulinus, the whole body of the people unanimouſly followed their example. The authority of Edwin, who was thus converted, ſoon after prevailed upon Earpwold, king of the Eaſt Angles, alſo to embrace Chriſtianity. This monarch, however, after the death of Edwin, relapſed into his former idolatry, at the perſuaſion of his wife. But upon his deceaſe, Sigebert, his half brother, who had been educated in France, reſtored Chriſtianity, and began to introduce literature among the Angles.

Mercia, the moſt powerful kingdom of all the Saxon heptarchy, owed its converſion, like the former, to a woman. The wife of Peada, who was the daughter of Oſwy, king of Northumberland, having been bred in the Chriſtian faith, employed her influence in converting her huſband and his ſubjects. But it ſeems the new religion was attended with ſmall influence on the manners of that fierce people, as we find Otto, one of their new-converted kings, in a few reigns after, treacherouſly deſtroying Ethelbert, king of the Eaſt Angles, at an entertainment to which he had been invited. However, to make atonement for this tranſgreſſion, we find him paying great court to the clergy, giving the tenth of his goods to the church, and making a pilgrimage to Rome, where his riches, more than his penitence, procured him the papal abſolution. It was upon this occaſion, the better to ingratiate himſelf with the pope, that he engaged to pay him a yearly donation for the ſupport of an Engliſh college at Rome; and, in order to raiſe the ſum, he impoſed a tax of a penny on each houſe poſſeſſed of thirty pence a-year. This impoſition being afterwards generally levied throughout the kingdom, went by the name of *Peter-pence*, and in ſucceeding times gave riſe to many eccleſiaſtical abuſes.

In the kingdom of Eſſex, Sebert, who was nephew to Ethelbert, king of Kent, was alſo prevailed upon by his uncle to embrace the Chriſtian religion. His ſons, however, relapſed into paganiſm and idolatry, and baniſhed Melitus, the Chriſtian biſhop, from their territories, becauſe he refuſed to let them eat the white bread which was diſtributed at the communion. But Chriſtianity was reſtored two or three reigns after, by Sigebert the Good; and ſuch was the influence of its doctrines upon Offa, the third in ſucceſſion from him, that he alſo went upon a pilgrimage to Rome, and ſhut himſelf up during the reſt of his life in a cloiſter.

We know but little of the propagation of Chriſtianity in the kingdom of Suſſex; but this being the ſmalleſt principality of the Saxon heptarchy, it is probable that it was governed in its opinions by ſome of its more powerful neighbours. It is ſaid, that, during the reign of Ciſſa, one of its kings, which continued ſeventy-ſix years, the kingdom fell into a total dependence upon that of Weſſex, and to this it is probable that it owed its converſion. The kingdom of Weſſex, which eventually ſwallowed up all the reſt, deſerves more particular attention. This principality, which, as already related, was founded by Cerdic, was, of all the Saxon eſtabliſhments in Britain, the moſt active and warlike. The great oppoſition the invaders of this province originally met with from the natives, ſerved to carry their martial ſpirit to the higheſt pitch. Ceaulin, a prince equally ambitious and enterpriſing, not ſatisfied with conqueſts over the Britons, attacked the Saxons themſelves, till, becoming terrible to all, he provoked a general confederacy againſt him; ſo that he was at laſt expelled the throne, and died in exile and miſery. His two ſons ſucceeded; and, after a ſucceſſion of two more, Kynegils inherited the crown. This prince embraced Chriſtianity through the perſuaſion of Oſwald, the king of Northumberland, his ſon-in-law. After ſome ſucceeding obſcure reigns, Ceodwalla aſcended the throne, an enterpriſing, warlike, and ſucceſsful, prince. He ſubdued entirely the kingdom of Suſſex, and annexed it to his own dominions. He made alſo ſome attempts upon Kent, but was repulſed with vigour. Ina, his ſucceſſor, was the moſt renowned and illuſtrious of all the kings who reigned during the heptarchy. This monarch inherited all the military virtues of Ceodwalla, improved by policy, juſtice, and prudence. He made war upon the Britons, who yet remained in Somerſetſhire; and having totally ſubdued that province, he treated the vanquiſhed with a humanity before unknown to the Saxon conquerors. In leſs than a year after he had aſcended the throne of Weſſex, he was declared monarch of the Anglo-Saxons, a remarkable proof of the great character he had acquired. He compiled a body of laws, which ſerved as the ground-work of thoſe which were afterwards publiſhed by Alfred. He alſo aſſembled a general council of the clergy, in which it was determined, that all churches, monaſteries, and places of religious worſhip, which had gone to decay, ſhould be rebuilt or repaired. At length, after a diſtinguiſhed reign of thirty-ſeven years, and in the decline of life, he made a pilgrimage to Rome; and, on his return, he ſhut himſelf up in a cloiſter, where he died. To him ſucceeded Oſwald, Cudred, Sigebert, Cenulph, and Brithric; all theſe claiming the crown, not entirely by hereditary right, nor yet totally rejecting their family pretenſions.

It was in the reign of the laſt-named monarch, that Egbert, a grand nephew of king Ina, began to grow popular among the Weſt Saxons, both on account of his family and perſonal accompliſhments. Being ſenſible, however, of the danger of popularity under ſuch a jealous monarch as Brithric, he withdrew ſecretly into France, to the court of Charlemagne, the moſt celebrious prince in Europe. This was a ſchool in which young Egbert failed not to make a rapid proficiency; and he ſoon acquired ſuch accompliſhments, both in arts and in arms, as raiſed him greatly ſuperior to any of his countrymen at home. Nor was it long before this prince had an opportunity of diſplaying his natural and acquired talents; for, Brithric being poiſoned by his wife Eadburga, the nobility recalled him from France, in order to fill the throne of his anceſtors. About that time alſo, a fortunate concurrence of events ſeemed to prepare the way for his becoming ſole monarch of the whole country. In all the kingdoms of the heptarchy, an exact rule of ſucceſſion was but little

regarded; while, at the ſame time, family pretenſions were not laid aſide. Every perſon of the collateral line had an equal claim to aſſert his right as thoſe who claimed by direct deſcent; ſo that the reigning monarch was under continual apprehenſions from the princes of the blood, whom he was taught to conſider as rivals, and whoſe death alone could enſure him tranquillity. From this cauſe, together with the monkiſh fancy princes then had of retiring to monaſteries, and the high opinion of merit attending the preſervation of chaſtity, even in a married ſtate; from theſe concurrent cauſes the royal families had been nearly extinguiſhed in all the kingdoms, except that of Weſſex. Thus Egbert was the only ſurviving deſcendant of thoſe conquerors who boaſted their deſcent from Woden; and conſequently, beſide his perſonal merit, he had hereditary pretenſions to the throne of the united kingdoms. It is indeed probable that he had already planned the union of the heptarchy; but, in order to avert the ſuſpicions of the neighbouring ſtates, he attacked the unconquered Britons in Cornwall, and continued to act as mediator among the Saxon princes, whoſe differences were become almoſt irreconcileable. His moderation in theſe good offices, the prudence he manifeſted in his own government, and his known capacity in the affairs of war and peace, procured him ſuch a degree of reputation, that he was ſoon conſidered as the chief of the Saxon heptarchy.

But his ambition was not to be ſatisfied with a mere nominal ſuperiority; he ſtill aimed at breaking down all diſtinctions, and uniting theſe petty ſtates into one great and flouriſhing kingdom. The king of Mercia was the firſt who furniſhed him with a pretext for recovering the part of his dominions which had formerly been diſmembered by that ſtate. Beornulf, the monarch of that country, who had long aimed at the ſovereignty over the heptarchy, taking advantage of Egbert's abſence, invaded his dominions with a numerous army, compoſed of the flower of his country. Egbert was not remiſs in marching to oppoſe him, with a body of troops leſs numerous than thoſe of Beornulf, but more brave and reſolute. Both armies met at Wilton, and a battle enſuing, the Mercians were defeated with terrible ſlaughter.

In the mean time, the victorious Egbert purſued his conqueſt into the enemies' country; and he diſpatched his eldeſt ſon, Ethelwolf, with an army, into the kingdom of Kent, who ſoon made himſelf maſter of that nation, and expelled Baldred, their monarch, to whom his ſubjects had paid a very unwilling obedience. The Eaſt Saxons alſo, and part of Surry, diſſatisfied with their ſubjection to the Mercians, readily ſubmitted to Egbert; nor were the Eaſt Angles backward in ſending ambaſſadors to crave his protection and aſſiſtance, againſt that nation whoſe yoke they had for ſome time endured, and were reſolved no longer to bear. The Mercian king, attempting to repreſs their defection, was defeated and ſlain; and two years after, Ludecan, his ſucceſſor, experienced the ſame fate. Withalf, one of their coldermen, ſoon after put himſelf at their head, but being driven from province to province by the invincible Egbert, he was, at laſt, obliged to take ſhelter in the abbey of Croyland, while Egbert made himſelf maſter of the whole kingdom of Mercia. However, in order to ſeduce that people to his dominion, he permitted Withalf to govern the kingdom as a vaſſal, tributary under him; thus, at once ſatisfying his ambition, and flattering the people with an appearance of their former government.

The king of Northumberland was the laſt that ſubmitted to his authority. This ſtate had been long haraſſed by civil wars and uſurpations; all order had been deſtroyed among the people, and the kingdom was weakened to ſuch a degree, that it was in no condition to withſtand ſo formidable an invader as Egbert. The inhabitants, therefore, unable to reſiſt his power, and deſirous of poſſeſſing ſome eſtabliſhed form of government, cheerfully ſent deputies, who ſubmitted to his authority, and expreſſed their allegiance to him as their ſovereign. By this ſubmiſſion, all the kingdoms of the heptarchy were united under his command; but, to give ſplendour to his authority, a general council of the clergy and laity was ſummoned at Wincheſter, where he was ſolemnly crowned king of ENGLAND, by which name the united nations have been from thenceforth called.

Thus, about four hundred years from the firſt arrival of the Saxons in Britain, A. D. 827, the prudence and policy of Egbert united all the kingdoms of the heptarchy into one great and formidable ſtate; but to introduce knowledge and arts amongſt the inhabitants was a much more arduous taſk. Chriſtianity had not hitherto baniſhed their ignorance, or ſoftened the ferocity of their manners; credulity and ſuperſtition had accompanied the doctrines of Rome; and the reverence towards ſaints and relics ſeems almoſt to have ſupplanted the adoration even of the Supreme Being. Monaſtic obſervances were eſteemed more meritorious than the active virtues; and bounty to the church atoned for every violence againſt ſociety. The ſacerdotal habit was the only object of reſpect; hence the nobility preferred the ſecurity and ſloth of the cloiſter to the tumult and glory of war; and the kings, impoveriſhed by the continual benefactions to the church, were neither able to reward valour, nor retained influence to ſupport their government. Another inconvenience attended this corrupt ſtate of Chriſtianity: the Saxons were taught by the monks a profound veneration for the holy ſee; and the blindneſs and ſubmiſſive diſpoſition of the people encouraged the ſucceſſors of St. Peter to advance every day in their encroachments on the independence of the Engliſh church. In the eighth century, Wilfrid, biſhop of Lindisferne, the ſole prelate of the Northumbrian kingdom, appealed to Rome againſt the deciſions of an Engliſh ſynod, and thus laid the foundation of the papal pretenſions, which were afterwards carried to the moſt diſgraceful heights, and ſubmitted to with the moſt abject venality.

FROM EGBERT, THE FIRST KING OF ENGLAND, TO THE NORMAN CONQUEST.

Scarcely had Egbert ſeated himſelf on the united throne of the ſeven kingdoms of England, than the iſland found itſelf expoſed to freſh invaſions. In the year 819, a mighty ſwarm of thoſe nations bordering on the Baltic, began, under the denomination of Danes and Normans, to infeſt the weſtern coaſts of Europe, and to fill all places, wherever they came, with ſlaughter and devaſtation. Theſe were, in fact, no other than the anceſtors of the very people whom they came to deſpoil, and might be conſidered as the original ſtock from whence the rude colonies that infeſted Britain had migrated ſome centuries before. The Normans fell upon the northern coaſts of France; the Danes chiefly levelled their fury againſt England, their firſt appearance having been when Brithric was king of Weſſex. It was then that a ſmall body of them landed on the coaſts of that kingdom, with a view of ſpying out the ſtate of the country; and having committed ſome ſmall depredations, they fled to their ſhips for ſafety. About ſeven years after this firſt attempt, they made a deſcent upon the coaſt of Northumberland, where they pillaged a monaſtery; but their fleet being ſhattered by a ſtorm, they were defeated by the inhabitants, and put to the ſword. It was not till about five years after the acceſſion of Egbert, that their invaſions became formidable. From that time they continued their attacks with unceaſing ferocity, until the whole kingdom was reduced to a ſtate of the moſt diſtreſsful bondage.

No ſooner had the Saxons began to neglect their naval eſtabliſhment, than the Danes, who ſucceeded them in the empire of the ſea, found no difficulty in landing upon the iſle of Sheppey, in Kent, which they ravaged, and returned to their ſhips loaden with the ſpoil. Their next attempt, the year enſuing, was at the mouth of the Tyne, where they landed fifteen thouſand men, and made good their

EGBERT, THE FIRST KING OF ENGLAND.

London. Publishid as the Act directs Jan.ʸ 10.th 1803 by I. Wilkes.

their ground againſt the efforts of Egbert; who, after an obſtinate battle, was obliged to draw off his forces by night. Within two years after, they landed in Cornwall; and being joined by the independent Britons there, they advanced towards the borders of Devonſhire, where they were totally routed by Egbert, at Hengſdown-hill, near Kellington. By this victory he ſecured the kingdom from invaſion for a conſiderable time; but his death put a period to the ſucceſſes of his country, and invited the enemy to renew their devaſtations with impunity.

He was ſucceeded by Ethelwolf his ſon, A. D. 838, who had neither the courage nor abilities of his father. This prince had been educated in a cloiſter, and had actually taken orders during the life of his elder brother; but, upon his death, he received a diſpenſation to quit the monkiſh habit, and to marry. He was ſcarcely ſettled on the throne, when a fleet of Daniſh veſſels, conſiſting of thirty-three ſail, landed at Southampton, who was repulſed, but not without great ſlaughter on both ſides. However, no defeat could repreſs the obſtinacy, nor any difficulties impede the inroads, of theſe fierce invaders, who ſtill perſevered in their deſcents; and, year after year, made freſh invaſions on the country, marking their way with ſlaughter and deſolation. Though often repulſed, they generally ſucceeded in carrying off the plunder. It was their method to avoid coming, if poſſible, to a general engagement; but ſcattering themſelves over the face of the country, they carried away, indiſcriminately, as well the inhabitants themſelves, as all their moveable poſſeſſions. If the military force of the country was drawn out againſt them, the invaders either ſtood their ground, if ſtrong enough to oppoſe, or retreated to their ſhips, if incapable of reſiſtance. Thus, by making continual and repeated deſcents, every part of England was kept in conſtant alarm, and every county was fearful of giving aſſiſtance to the next, as its own ſafety was in danger. From this general calamity the prieſts and monks were not exempted; they were rather the chief objects on whom the Daniſh idolaters wreaked their reſentment.

In this ſtate of fluctuating ſucceſs affairs continued for ſome time, the Engliſh often repelling, and as often being repulſed by their fierce invaders; till, at length, the Danes reſolved upon making a ſettlement in the country, and landing on the iſle of Thanet, A. D. 852, ſtationed themſelves there. In this place they kept their ground, notwithſtanding a bloody victory gained over them by Ethelwolf. From thence they ſoon after removed to the iſle of Sheppey, which they conſidered as more convenient for their tumultuary depredations. In the mean time Ethelwolf, inſtead of exerting his ſtrength to repel theſe invaders, was more ſolicitous to obey the dictates of monkiſh ſuperſtition. In order to manifeſt his devotion to the pope, he ſent his ſon Alfred to Rome, to receive confirmation from his holineſs; and, not ſatisfied with this teſtimony of his zeal, he undertook a pilgrimage thither in perſon. He paſſed twelve months in that city, and gained no ſmall applauſe for his devotion, which he teſtified by his great liberality to the church. In his return home he married Judith, daughter to the emperor Charles the Bald; but, on his landing in his own dominions, he was ſurpriſed to find his title to the crown diſputed. His ſecond ſon, Ethelbald, upon the death of his elder brother, perceiving the miſerable ſtate to which the kingdom was reduced by the king's weakneſs and ſuperſtition, formed a conſpiracy to expel him from the throne. The people were equally divided between the claims of the father and ſon; ſo that a bloody and unnatural war ſeemed likely to augment the calamities of the times. A diviſion of the ſovereignty at length terminated the diſpute; the king was content with the eaſtern part of the monarchy, while his ſon was appointed to govern the weſtern, which was the moſt powerful, and the moſt expoſed to danger. Having come to this agreement, a council was ſummoned of all the ſtates and nobles of the kingdom; and, beſides the ratification of this grant, a tithe of the produce of the land was ſettled upon the clergy.

Ethelwolf ſurvived this event only two years, when he left the kingdom between his two eldeſt ſons, Ethelbald and Ethelbert; the weſt being aſſigned to the former, the eaſt to the latter. The reign of Ethelbald was ſhort, but diſtinguiſhed by a number of vices. He married Judith, his own mother-in-law; but was prevailed upon to divorce her. The reign of his brother was of longer duration; and, as we are told, more meritorious. Nevertheleſs the kingdom was ſtill infeſted by the Danes, who committed great outrages. Ethelbald was ſucceeded by his brother Ethelred, a brave prince, but whoſe valour was inſufficient to repreſs the Daniſh incurſions. In theſe exploits he was often aſſiſted by his younger brother, Alfred, afterwards ſurnamed the Great, who ſacrificed all private reſentment to the public good, having been deprived by the king of a large patrimony. It was during this prince's reign that the Danes, penetrating into Mercia, took up their winter quarters at Nottingham. Their next ſtation was at Reading, from whence they infeſted the country in every direction. Ethelred, attended by his brother Alfred, marched againſt them at the head of the Weſt Saxons, and after many reciprocations of ſucceſs, and ſeveral obſtinate battles, the king died of a wound, and left to his brother Alfred the inheritance of a kingdom reduced to the brink of ruin.

Nothing could be more deplorable than the ſtate of the country when Alfred came to the throne. The Danes had ſubdued Northumberland and the Eaſt Angles, and had penetrated into the heart of Weſſex. The Mercians were united againſt him; the dependence upon the other provinces of the empire was but precarious: the lands lay uncultivated through fear of continual incurſions; and the churches and monaſteries were burnt to the ground. In this ſituation of affairs, nothing appeared but objects of terror, and every hope was loſt in deſpair. Yet the wiſdom and virtues of one man were alone ſufficient to reſtore happineſs, ſecurity, and order: all theſe calamities found redreſs from the ſagacious Alfred. This prince ſeemed born not only to defend his bleeding country, but even to adorn humanity. He had given very early inſtances of thoſe great virtues which afterwards adorned his reign; and was anointed by pope Leo as future king, when he was ſent by his father for his education to Rome. On his return from thence, he became every day more the object of his father's fond regard; and that, perhaps, was the reaſon why his education was at firſt neglected. He had attained the age of twelve before he was made acquainted with even the firſt elements of literature; but on hearing ſome Saxon poems read, which recounted the praiſe of heroes, his whole mind was ſtimulated, not only to obtain ſimilar glory, but alſo to be able to tranſmit that glory to poſterity. Encouraged by the queen his mother, and inſpired by a penetrating genius, he was ſoon able to read thoſe compoſitions; and proceeded from thence to a knowledge of the Latin authors, who directed his taſte, and rectified his ambition.

He was ſcarcely come to the crown when he was obliged to march againſt the Danes, who had ſeized Wilton, and were exerciſing their uſual ravages on the countries around. He could only oppoſe them with the few troops he could aſſemble on a ſudden, and a deſperate battle was fought, to the diſadvantage of the Engliſh. But it was not in the power of misfortune to abate the king's ardour, though it repreſſed his ability to do good. He was in a little time enabled to hazard another engagement; ſo that the enemy, dreading his courage and activity, propoſed terms of peace, which he did not think proper to refuſe. They had by this treaty bound themſelves to relinquiſh the kingdom; but, inſtead of complying with their engagements, they only removed from one place to another, burning and deſtroying wherever they came, while freſh ſwarms of their countrymen were

pouring in to their aſſiſtance. Alfred, thus oppoſed to an enemy whom no ſtationary force could ſubdue, nor any treaty bind, found himſelf unable to repel the efforts of thoſe barbarians, who from all quarters invaded him. It was in vain that he purſued them, and compelled them to treaties: they broke every league; and continuing their attacks with ferocious perſeverance, they at length diſpirited his army, and induced his ſuperſtitious ſoldiers to believe themſelves abandoned by heaven, ſince it thus permitted the outrages of the fierce idolaters to go on with impunity. Many of them quitted their country, and retired into Wales, or fled to the continent. Others, ſubmitting to the conquerors, purchaſed their lives by bartering their freedom. In this univerſal defection, Alfred vainly attempted to remind them of the duty they owed their country and their king; ſo that, finding his remonſtrances ineffectual, he was obliged to give way to the wretched neceſſity of the times. Accordingly, relinquiſhing all enſigns of dignity, and diſmiſſing his attendants, he dreſſed himſelf in the habit of a peaſant, and lived for ſome time in the houſe of an herdſman, who had been entruſted with the care of his cattle. In this manner, though abandoned by the world, and ſurrounded by enemies in every quarter, ſtill he reſolved to continue in his country, in order to ſeize the ſlighteſt occaſions for bringing it relief. In his ſolitary retreat, which was in the county of Somerſet, at the confluence of the rivers Parret and Thone, he ſolaced himſelf with muſic, and ſupported his humble lot by the hopes of better fortune. It is ſaid that, one day, being ordered by the herdſman's wife, who was ignorant of his quality, to take care of ſome cakes which were baking by the fire, he happened to let them burn, for which ſhe ſeverely reprimanded, or boxed him on the ear.

Previous to his retirement, Alfred had concerted meaſures for aſſembling a few truſty friends, whenever an opportunity ſhould offer of annoying the enemy, who were now in poſſeſſion of all the country. This choſen band, ſtill faithful to their monarch, took ſhelter in the foreſts and marſhes of Somerſet, and from thence made occaſional irruptions upon ſtraggling parties of the Danes. Their ſucceſs, in this predatory method of living, encouraged many more to join them, till at length, ſufficiently augmented, they repaired to Alfred, who was by this time reduced to the laſt extremity.

Mean-while, Ubba, the chief of the Daniſh commanders, had carried terror over the whole land, and now ravaged Wales without oppoſition. The only place where he found reſiſtance was, in his return, from the caſtle of Kenwith, into which the earl of Devonſhire had retired with a ſmall body of troops. This gallant ſoldier finding himſelf unable to ſuſtain a ſiege, and knowing the danger of ſurrendering to a perfidious enemy, was reſolved to force his way through the beſiegers, ſword in hand. The propoſal was embraced by all his followers, while the Danes, ſecure in their numbers, and in their contempt of the enemy, were not only routed with great ſlaughter, but Ubba, their general, was ſlain. This victory gave courage to the diſpirited Saxons; and Alfred, embracing the favourable diſpoſition, prepared to animate them to make a vigorous ſtand. He appriſed them of the place of his retreat, of the veteran band that had attached itſelf to him, and inſtructed them to be ready with all their ſtrength at a minute's warning. But none was found hardy enough to watch and give intelligence of the forces and poſture of the enemy. Not knowing, therefore, a perſon in whom to confide, he undertook this dangerous talk himſelf. In the ſimple dreſs of a ſhepherd, with an harp in his hand, he entered the Daniſh camp, tried all his arts to pleaſe, and was ſo much careſſed, that he was brought into the preſence of Guthrum, the Daniſh prince, with whom he remained ſome days. There he noticed the ſupine ſecurity of the Danes, their contempt of the Engliſh, their negligence in foraging, and their diſſolute waſte of ſuch ill-gotten booty. Having made theſe obſervations, he returned to his retreat, and diſpatched meſſengers to his ſubjects, appointing them to meet him in arms in the foreſt of Selwood—a ſummons which they gladly obeyed.

It was againſt the moſt unguarded quarter of the enemy that Alfred directed his attack. The Danes, ſurpriſed to behold an army of Engliſh, whom they conſidered as totally ſubdued, made but a faint reſiſtance, notwithſtanding the ſuperiority of their number. They were routed with great ſlaughter: and, though ſuch as eſcaped fled for refuge into a fortified camp in the neighbourhood, yet, being unprovided for a ſiege, they were ſoon compelled to ſurrender, A. D. 876. By Alfred's permiſſion, thoſe who did not chuſe to embrace Chriſtianity, embarked for Flanders, under the command of one of their generals, named Haſtings. Guthrum, their prince, became a convert, with thirty of his nobles, and the king himſelf anſwered for him at the font. Of the pagan Danes who had enliſted with Haſtings, a part ſoon returned, contrary to ſtipulation, again to ravage that country where they had been ſo mercifully ſpared; and landing on the coaſt of Kent, they advanced towards Rocheſter, in hopes of ſurpriſing that city. They were deterred, however, from proceeding, by hearing that Alfred was upon his march to oppoſe them. That ſuch depredations might be prevented for the future, this monarch equipped a ſtrong fleet, with which he attacked and deſtroyed ſixteen of their veſſels in the port of Harwich. There was ſtill the port of London open to the invaders; but, as that city was but weakly garriſoned, he ſoon reduced it to capitulation. Having augmented its fortifications, and embelliſhed it with a number of new edifices, he delivered it in charge to his ſon-in-law, Ethelred, and thus ſecured the whole country from foreign depredators.

Alfred had now attained the meridian of glory; he poſſeſſed a greater extent of territory than had ever been enjoyed by any of his predeceſſors; the kings of Wales did him homage for their poſſeſſions; the Northumbrians received a king of his own appointing; and no enemy appeared to give him the leaſt alarm. In this ſtate of tranquillity, which laſted for twelve years, Alfred was diligently employed in cultivating the arts of peace, and in repairing the damages which the kingdom had ſuſtained by war. After rebuilding the towns which had been deſtroyed by the Danes, he eſtabliſhed a regular militia for the defence of the kingdom. He took care that all his ſubjects ſhould be armed and regiſtered; he aſſigned them a regular rotation of duty;—a part was employed to cultivate the land, while others were appointed to military duty. He took care to provide a naval force that was more than a match for the invaders, and trained his ſubjects to naval tactics. A fleet of an hundred and twenty ſhips of war was thus ſtationed along the coaſts; and, being well ſupplied with all things neceſſary both for ſuſtenance and war, it impreſſed the incurſive enemy with awe. Not but that there occaſionally happened ſome very formidable deſcents, which the king found it difficult to repreſs. Haſtings, the Daniſh chieftain in particular, appeared off the coaſt of Kent with a fleet of three hundred and fifty ſail; and, although his forces were vigorouſly oppoſed and repulſed by the vigilance of Alfred, yet he found means to ſecure himſelf in the poſſeſſion of Bamflete, in the county of Eſſex. But it was not long before his garriſon was overpowered by a body of the citizens of London, with great ſlaughter, and his wife and two ſons made captives. Theſe experienced the king's clemency: he reſtored them to Haſtings, on condition that he ſhould immediately depart from the kingdom. Nor were the Eaſt-Anglian Danes, nor the inſurgents of Northumberland, more ſucceſsful. Theſe broke out in open rebellion; and, yielding to their favourite habits of depredation, embarked on board two hundred and forty veſſels, and appeared before the city of Exeter. There, however, they experienced a very bloody reception from Alfred, and were ſo diſcouraged, that

ALFRED the GREAT.

London Published as the Act directs Aug.st 1st 1804. by J. Wilkes.

that they put to sea again without attempting any other enterprise. A third body of piratical Danes were still more unsuccessful than either of the former. Great numbers of them, after the departure of Hastings, seized and fortified Shobury; and, having left a garrison there, marched along the banks of the river till they came to Bodington, in the county of Gloucester, where, being reinforced by a body of Welchmen, they threw up entrenchments to defend this camp; but they were surrounded by the king's forces, and reduced to the utmost extremity. After having eaten their horses, and many of them perishing with hunger, they made a desperate sally, in which numbers were cut to pieces. Those who escaped being pursued by the vigilance of Alfred, were finally dispersed, or totally destroyed. Nor did he treat the Northumbrian rebels with less severity. Falling upon them while they were exercising their ravages in the West, he took twenty of their ships; and having tried all the prisoners at Winchester, he hanged them as the common enemies of the state.

Having, by this vigilance and well-timed severity, given peace and security to his subjects, his next care was to adorn his country by arts, as he had protected it by arms. He is said to have drawn up a code of laws; but those which remain to this day under his name seem to be only the laws already practised in the country by his Saxon ancestors, and to which, probably, he gave his sanction. The trial by jury, mulcts, and fines for offences, by some ascribed to him, are of a much more ancient date. But the care of Alfred for the encouragement of learning, did not a little tend to improve the morals, and restrain the habits, of the people. When he came to the throne, he found the English sunk into the grossest ignorance and barbarism, proceeding from the continued disorders of the government, and from the ravages of the Danes. He himself complains, that, on his accession, he knew not one person south of the Thames who could so much as interpret the Latin service. To remedy this defect, he invited over the most celebrated scholars from all parts of Europe; he founded, or at least re-established, the university of Oxford, and endowed it with many privileges. He gave, by his own example, the strongest incentives to study. He usually divided his time into three equal portions; one was given to the refection of the body, diet, and exercise; another to the dispatch of business; and the third to study and devotion. He made a considerable progress in grammar, rhetoric, philosophy, architecture, and geometry. He was an excellent historian, an adept in music, and was acknowledged to be the best Saxon poet of the age. He left many works, of which some remain to this day. He translated the Pastoral of Gregory I. *Boëthius de Consolatione*, and Bede's Ecclesiastical History, into the Saxon language. Sensible that his illiterate subjects were not much susceptible of speculative instruction, he endeavoured to convey his morality by parables and stories, and is said to have translated from the Greek the fables of Æsop. Nor did he even neglect the more mechanical arts of life. Before his time, the generality of the people chiefly made use of timber in building. Alfred raised his palaces of brick, and the nobility by degrees began to imitate his example. He introduced and encouraged manufactures of all kinds, and no inventor or improver of any ingenious art was suffered to go unrewarded. Even the elegancies of life began to be brought to him from the Mediterranean; and his subjects, by seeing the productions of the peaceful arts, were taught to respect the virtues of justice and industry, by which alone they could be procured. It was after a glorious reign of twenty-nine years, thus spent in the advancement of his subjects' happiness, that he died, A. D. 901, in the vigour of his age, and the full enjoyment of his faculties, an example to princes, and an ornament to human nature.

The character of Alfred seems to have made as near approaches to perfection, as the frailty inseparable from human nature will allow. He was unquestionably, in every respect, one of the greatest men that ever gave splendour to a throne, or dignified the annals of a people. His capacity was naturally brilliant, and was so much improved by cultivation, that he became one of the most politic and intelligent princes of his time. His discernment was quick, his memory retentive, and his judgment sound. His talents and virtues were not only of that splendid kind which qualified him for the exercise of royalty, but were such as would have procured him a high reputation in the sphere of private life. He was bold, active, and enterprising; was possessed of great fortitude and vigour of mind, and the most steady and indefatigable perseverance. Though firm, he was of a mild and placable temper; and, notwithstanding the elevation of his rank, he displayed on all occasions the most easy condescension, and the most winning affability. Some instances of great severity occur in the history of his reign; but even these do not derogate from his general character of lenity and moderation. His acts of rigour were always merited, and never unseasonable; for the disorders of the times, which mildness and forbearance would have encouraged, required, for their extirpation, the use of powerful remedies. He was liberal without profusion, and charitable without ostentation; and, though prudently economical in the disposal of his revenues, he maintained in his court every requisite of regal pomp. His goodness of heart was conspicuous in his whole conduct. He considered himself as born to promote, to the utmost of his power, the accommodation and felicity of his fellow-creatures; and though he was personally reproved by one of his clerical friends for having neglected the occasional complaints of those who petitioned him for redress in the reign of his brother Ethelred, this neglect might, perhaps, generally arise from the weak foundation on which the allegations of injury rested; and if it was justly imputed to him, it was amply atoned by his subsequent behaviour. His affection for his people was ardent and sincere, and was recompensed by a loyalty founded on gratitude and attachment. His administration of justice was distinguished by strict impartiality; and the influence of rank and wealth could never procure from him a more favourable sentence than he would give to the poorest and most unfriendly persons in a similar case. With respect to religion, he was less infected with the superstition of the times than any of his subjects. His devotion, though fervent, was rational; and his firm adherence to Christianity arose not from idle credulity, but from deliberate study and conviction. Thus did this excellent prince diffuse around him the light of knowledge and improvement, and all the blessings which are deducible from a beneficent, liberal, and enlightened, plan of government. He was, in the strictest sense, a patriot king; one who invariably consulted the true interests of his country, and the universal welfare of his people, whom he protected as a sovereign, and loved as a father. He merited, equally with the amiable Titus, the honourable appellation of *humani generis deliciæ*, the delight of human nature; and, while the splendid talents of his mind, and the glorious actions of his reign, claimed and procured to him the surname of Great, the more attractive qualities of his heart, and his constant practice of virtue, entitled him to the epithet of Good. Alfred had, by his wife Ethelswitha, the daughter of a Mercian earl, three sons and three daughters. His eldest son Edmund, died without issue during his father's life-time. His third son Ethelward, inherited his father's passion for letters, and lived a private life. His second son Edward, succeeded him in the sovereignty of England.

Edward was scarcely settled on the throne, when his pretensions were disputed by Ethelwald, his cousin-german, who raised a large party among his Northumbrians to espouse his cause. At first his exertions seemed to be favoured by fortune; but he was soon after killed in battle, and his death freed Edward from a dangerous competitor.

competitor. Nevertheleſs, the death of their leader was not ſufficient to intimidate his turbulent adherents. During the whole of this prince's reign, there were but few intervals free from the attempts and inſurrections of the Northumbrian inſurgents. Many were the battles he fought, and the victories he won; ſo that, though he might be deemed unequal to his father in the arts of peace, he did not fall ſhort of him in military talents. He built ſeveral caſtles, and fortified different cities. He reduced Turkethill, a Daniſh invader, and obliged him to retire with his followers. He ſubdued the Eaſt Angles, and acquired dominion over the Northumbrians themſelves. He was aſſiſted in theſe conqueſts by his ſiſter Ethelfleda, the widow of Ethelbert, earl of Mercia, who, after her huſband's death, retained the government of that province. Thus, after Edward had reduced the whole kingdom to his obedience, and begun to promote the happineſs of his people by the arts of peace, he was prevented by death from the accompliſhment of his deſigns.

To him ſucceeded Athelſtan, his natural ſon, A. D. 925, the illegitimacy of birth not being then deemed an obſtacle to the inheritance of the crown. To this prince, as to the former, there was ſome oppoſition made in the beginning. Alfred, a nobleman of his kindred, is ſaid to have entered into a conſpiracy againſt him, in favour of the legitimate ſons of the deceaſed king, who were yet too young to be capable of governing themſelves. Whatever his attempts might have been, he denied the charge, and offered to clear himſelf of it by oath before the pope. The propoſal was accepted: and it is aſſerted by the legendary, that he had no ſooner ſworn himſelf innocent, than he fell into convulſions, and died in three days. This monarch received alſo ſome diſturbances from the Northumbrian Danes, whom he compelled to ſurrender; and reſenting the conduct of Conſtantine, king of Scotland, who had given them aſſiſtance, he ravaged that country with impunity, till at length he was appeaſed by the humble ſubmiſſions of that monarch. Theſe ſubmiſſions, however, being extorted, were inſincere. Soon after Athelſtan had evacuated that kingdom, Conſtantine entered into a confederacy with a body of Daniſh pirates, and ſome Welſh chiefs, who were jealous of Athelſtan's growing greatneſs. A bloody battle was fought at Brunſburg, in Northumberland, in which the Engliſh monarch was again victorious. After this ſucceſs, Athelſtan enjoyed his crown in tranquillity; and he is regarded as one of the ableſt and moſt active of the Saxon kings. During his reign the Bible was tranſlated into the Saxon language; and ſome alliances were alſo formed with the princes on the continent. He died at Glouceſter, after a reign of ſixteen years, A. D. 941, and was ſucceeded by his brother Edmund.

Edmund, like the reſt of his predeceſſors, met with diſturbances from the Northumbrians on his acceſſion to the throne; but his activity ſoon defeated their attempts. The great end, therefore, which he aimed at, during his reign, was to curb the licentiouſneſs of his people, by extending the mild influence of Chriſtianity. Among other regulations for the benefit of ſociety, he was the firſt monarch who, by law, inſtituted capital puniſhments in England. Remarking, that fines and pecuniary mulcts were inſufficient to repreſs highwaymen and robbers, he enacted, that when gangs of robbers were taken, the oldeſt of them ſhould be condemned to the gallows. This was conſidered a very ſevere law at the time, becauſe among our early anceſtors, all the penal laws were ſingularly mild and merciful. The proviſion made by this monarch againſt men of that deſperate way of living, was the cauſe of his own death. His virtues, abilities, wealth, and temperance, promiſed him a long and happy reign; when, on a certain day, as he was ſolemnizing a feſtival in Glouceſterſhire, he remarked that Léolf, a notorious robber whom he had ſentenced to baniſhment, had yet the boldneſs to enter the hall where he was dining, and to ſit at table among the gueſts. Enraged at this inſolence, he commanded him to leave the room; but, on his refuſing to obey, the king, whoſe temper was haſty, flew at him, and caught him by the hair. The ruffian drew a dagger, and with a furious blow ſtabbed the monarch to the heart, who fell down on the boſom of his murderer. The death of the aſſaſſin, who was inſtantly cut in pieces, was but a ſmall atonement for ſo horrid a crime.

The late king's ſons were too young to undertake the direction of the government; his brother Edred was therefore appointed to ſucceed; and, like his predeceſſors, this monarch found himſelf at the head of a rebellious and refractory people. The Northumbrian Danes, as uſual, made ſeveral attempts to ſhake off the Engliſh yoke; ſo that the king was at laſt obliged to place garriſons in their moſt conſiderable towns, and to appoint an Engliſh governor over them, who might ſuppreſs their inſurrections in the bud. About this time, too, the monks began to aſſume the direction in civil affairs; and, by artfully managing the ſuperſtitions and the fears of the people, erected a clerical authority that was not ſhaken off for ſeveral ſucceeding centuries. Edred had blindly delivered over his conſcience to the guidance of Dunſtan, abbot of Glaſtonbury, who was afterwards canonized; and this man, under the appearance of ſanctity, concealed the moſt boundleſs ambition. The monks had hitherto been a kind of ſecular prieſts, who, though they lived in communities, were neither ſeparated from the reſt of the world, nor uſeleſs to it. They often married; and were aſſiduouſly employed in the education of youth, and ſubject to the commands of temporal ſuperiors. The celibacy and the independency of the clergy, as being a meaſure that would contribute to the eſtabliſhment of the papal power in Europe, was warmly recommended by the ſee of Rome to all eccleſiaſtics in general, but to the monks in particular. The preſent opportunity offered of carrying this meaſure into an eccleſiaſtical law, from the ſuperſtitious character of Edred, and the furious zeal of Dunſtan. Edred implicitly ſubmitted to his directions both in church and ſtate; and the kingdom was in a fair way of being converted into a papal province by this zealous eccleſiaſtic, when he was checked in the midſt of his career by the death of the king, who died of a quinſy, in the tenth year of his reign, A. D. 954.

Edwy, his nephew, who aſcended the throne, as his own ſons were too young to govern, was a prince of great perſonal accompliſhments, and of a martial diſpoſition. But he was to inherit a kingdom wherein he had an enemy to contend with, againſt whom all military virtues could be of little avail. Dunſtan, who had governed during the former reign, was reſolved to remit nothing of his authority in this; ſo that Edwy, immediately upon his acceſſion, found himſelf involved in a quarrel with the monks, whoſe rage his virtues could neither ſoften nor mitigate. He ſeems to have been elected by the ſecular prieſts in oppoſition to the monks; ſo that their whole body, with Dunſtan at their head, purſued him with implacable animoſity while living, and even endeavoured to vilify his character when dead.

There was a lady of the royal blood, named Elgiva, whoſe beauty had made a ſtrong impreſſion on Edwy's heart. He had even ventured to marry her, contrary to the advice of his counſellors, as ſhe was within the degrees of conſanguinity prohibited by the canon law. On the day of his coronation, while his nobility were giving a looſe to the pleaſures of feſtivity in the great hall, Edwy retired to his wife's apartment; where, in company with his mother, he enjoyed the more pleaſing ſatisfaction of her converſation. Dunſtan no ſooner perceived his abſence, than, conjecturing the reaſon, he ruſhed fiercely into the apartment, and, upbraiding him with all the bitterneſs of eccleſiaſtical rancour, dragged him forth in the moſt outrageous manner. Dunſtan, it ſeems, was not without his enemies; for the king was adviſed to puniſh this inſult, by ordering him to account for the money with

with which he had been entrusted during the former reign. This account the haughty priest refused to give; wherefore he was deprived of all the ecclesiastical and civil emoluments of which he had been in possession, and banished the kingdom. But his exile only served to increase the reputation of his sanctity among the people; and Odo, archbishop of Canterbury, was so much enraged, that he pronounced a divorce between Edwy and Elgiva. Ecclesiastical censures were then attended with the most formidable consequences. The king could no longer resist the indignation of the church, but submitted to part with his beautiful wife. Accordingly Odo sent into the palace a party of soldiers, who seized the queen, and, by his orders, branded her on the face with an hot iron. She was then carried by force into Ireland, there to remain in perpetual exile. This injunction, however, was too distressing to her feelings; and, being cured of her wound, which was purposely made to deface her beauty, she once more ventured to return to the king, whom she still tenderly regarded as her husband. But misfortune continued to pursue her. She was taken prisoner by order of Odo, and put to death in the most cruel manner; having the sinews of her legs cut, and her body shamefully mangled. In the mean time, a secret revolt against Edwy became almost general, instigated by the archbishop; and Dunstan returned to England to put himself at the head of the party. The malcontents now proceeded to open rebellion; and, having placed Edgar, the king's younger brother, about thirteen years of age, at their head, they soon put him in possession of all the northern parts of the kingdom. Edwy's power, and the number of his adherents, every day declining, he was obliged to consent to a partition of the kingdom; when his death, which happened soon after, freed his enemies from all further inquietude, and gave Edgar peaceable possession of the government.

Edgar being placed on the throne by the influence of the monks, A. D. 959, affected to be entirely guided by their will in all his succeeding transactions. There has ever been some popular cry, some darling prejudice, amongst the English; and he who has taken the advantage of it, has always found it of excellent assistance to his government. The sanctity of the monks was the cry at that time; and the young king, chiming in with the people, at once promoted their happiness, and his own glory. Few English monarchs have reigned with more fortune, or more splendour, than Edgar. He not only quieted all domestic insurrections, but repressed all foreign invasions; and his power was so well established, and so widely extended, that he is said to have been rowed in his barge by eight tributary kings upon the river Dee. The monks, whom he promoted, are loud in his praise; and yet the example of his continence was no way corresponding with that chastity and forbearance on which they chiefly founded their superior pretensions to sanctity. It is indeed somewhat extraordinary, that one should have been extolled for his virtues by the monks, whose irregularities were so peculiarly opposite to the tenets they preached. His first transgression of this kind was the breaking into a convent, carrying off Editha, a nun, by force, and even committing violence on her person. For this act of sacrilege, no other penance was enjoined than that he should abstain from putting on his crown for seven years. As for the lady, he was permitted to continue his intercourse with her without scandal. There was another mistress of Edgar's, named Elfleda the Fair, with whom he formed a connection in a very singular manner. Being at the house of one of his nobles, and fixing his affections on the nobleman's daughter, he privately requested that the young lady should pass that night with him. The lady's mother, knowing his power, and the impetuosity of his temper, prevailed upon her daughter seemingly to comply; but, in the mean time, substituted a beautiful domestic in the young lady's place. In the morning, when the king awoke, instead of being displeased at the stratagem, he expressed pleasure in the adventure; and, transferring his love to Elfleda, she became his favourite, and maintained an ascendency over him till his marriage with Elfrida, daughter to the earl of Devonshire. The beauty and accomplishments of this lady, as represented by common fame, excited the passions of Edgar, and he resolved to have her; but, unwilling to credit report, he sent Ethelwald, his favourite friend, to see, and inform him, whether Elfrida was indeed that incomparable woman which the world had described her to be. Ethelwald arriving at the earl's, had no sooner cast his eyes upon the lovely fair one, than he became enamoured of her himself. Such was the violence of his passion, that, forgetting his duty to his master, he solicited only his own interests, and demanded for himself the beautiful Elfrida in marriage. The favourite of a king was not likely to find a refusal; the earl gave his consent, and their nuptials were performed in private. Upon his return to court, he assured the king that her riches alone, and her high quality, had been the only cause of her celebrity; and he appeared amazed how the world could talk so much, and so unjustly, of her charms. The king was satisfied, and no longer felt any curiosity, while Ethelwald secretly indulged in all the gratifications of connubial love. When he had, by this deceit, weaned the king from his purpose, he took an opportunity of turning the conversation on Elfrida, representing, that though the fortune of the earl of Devonshire's daughter would be a trifle to a king, yet it would be an immense acquisition to a needy subject like himself. He, therefore, humbly entreated permission to pay his addresses to her, as she was the richest heiress in the kingdom. A request so apparently reasonable was readily complied with; Ethelwald returned to his wife, and their nuptials were solemnized in public. His greatest care, however, was employed in keeping her from court; and he took every precaution to prevent her appearing before a king so susceptible of love, and so capable of inspiring that passion. But it was impossible to keep his treachery concealed. Favourites are never without enemies, who watch every opportunity of rising upon their ruin. Edgar was soon informed of the whole transaction; but, dissembling his resentment, he took occasion to visit that part of the country where this miracle of beauty resided, accompanied by Ethelwald, who reluctantly attended him thither. Upon coming near the lady's habitation, he told him that he had a curiosity to see his wife, of whom he had formerly heard so much, and desired to be introduced as his acquaintance. Ethelwald, thunderstruck at the proposal, did all in his power to dissuade the king from it, but in vain. All he could obtain, was permission to go before, on pretence of preparing adequately for his reception. On his arrival, he fell at his wife's feet, confessing what he had done to be possessed of her charms, and conjuring her to conceal, as much as possible, her beauty from the king, who was but too susceptible of its power. Elfrida, little obliged to him for a passion that had deprived her of a crown, promised compliance; but, prompted either by the vanity of her sex, or by revenge, she adorned her person with the most exquisite art, and called up all her beauty on the occasion. The event answered her expectations; the king no sooner saw, than he loved her, and was instantly resolved to obtain her. The better to effect his intentions, he concealed his passion from the husband, and took leave with a seeming indifference; but his revenge was not the less certain and fatal. Ethelwald was soon after sent into Northumberland, upon pretence of urgent affairs, and was found murdered in a wood by the way. Some say, he was stabbed by the king's own hand; some, that he only commanded the assassination; however this be, Elfrida was brought to court by the king's own order, and their nuptials were performed with the usual solemnity. Such was the criminal passion of a monarch, whom the monks have thought proper to represent as

the moſt perfect of mankind. His reign was ſucceſsful, becauſe it was founded upon a compliance with the prejudices of the people; but it produced very ſenſible evils, and theſe fell upon his ſucceſſor. He died after a reign of ſixteen years, in the thirty-third year of his age, being ſucceeded by his ſon Edward, whom he had by his firſt marriage with the daughter of the earl of Ordmer.

Edward, ſurnamed the Martyr, was made king, A. D. 957, by the intereſt of the monks, but lived only four years after his acceſſion. In his reign there is nothing remarkable, if we except his tragical end. Though this young monarch had been from the beginning oppoſed by Elfrida, his ſtep-mother, who ſeems to have united the greateſt deformity of mind with the higheſt graces of perſon, yet he ever ſhewed her the ſtrongeſt marks of regard, and expreſſed, on all occaſions, the moſt tender affection for her ſon, his half-brother. However, hunting one day near Corfe-caſtle in Dorſetſhire, where Elfrida reſided, he thought it his duty to pay her a viſit, though not attended by any of his retinue. Being thirſty, and deſiring ſome liquor to be brought him, while he was yet holding the cup to his mouth, one of Elfrida's domeſtics, inſtructed for that purpoſe, ſtabbed him in the back. The king, finding himſelf wounded, put ſpurs to his horſe; but, fainting with the loſs of blood, he fell from the ſaddle, and his foot hanging in the ſtirrup, he was dragged by his horſe till he was killed. Being tracked by the blood, his body was found, and privately interred at Wareham by his ſervants.

Ethelred the Second, the ſon of Edgar and Elfrida, ſucceeded to the throne, A. D. 978. He was a weak and irreſolute monarch, incapable of governing the kingdom, or of providing for its ſafety. After a train of diſſenſions and vices, which ſeem to have marked ſome of the former reigns, it is not ſurpriſing that the country was weakened; and the people, taught to rely entirely on preternatural aſſiſtance, were rendered incapable of defending themſelves. During this period, therefore, their old and watchful enemies, the Danes, who ſeem not to have been overloaded with the comforts or luxuries of life, were daily gaining ground. The weakneſs and the inexperience of Ethelred, appeared to give a favourable opportunity for renewing their depredations; and accordingly they landed on ſeveral parts of the coaſts, ſpreading terror and devaſtation. The Engliſh, ill-provided to oppoſe ſuch an enemy, made but a feeble reſiſtance; endeavouring by forbearance and treaty to avert the ſtorm they had not ſpirit to oppoſe. The northern invaders, now perceiving the defenceleſs condition of England, made a powerful deſcent, under Sweyn king of Denmark, and Olave king of Norway, who, ſailing up the Humber, committed on all ſides the moſt deſtructive ravages. The Engliſh oppoſed them with a formidable army, but were repulſed with great ſlaughter. The Danes, encouraged by their ſucceſs, marched into the heart of the kingdom, filling all places through which they paſſed with rapine and cruelty. Ethelred had, upon the former invaſion of theſe pirates, bought them off with money; and he now reſolved to put the ſame expedient in practice. He ſent ambaſſadors, therefore, to the two kings, and offered them ſubſiſtence and tribute, provided they would reſtrain their ravages, and depart the kingdom. It has often been remarked, that buying off an invaſion only ſerves to ſtrengthen the enemy, and to invite a repetition of hoſtilities. Such it happened upon this occaſion: Sweyn and Olave agreed to the terms, and peaceably took up their quarters at Southampton, where the ſum of ſixteen thouſand pounds was paid them. Olave returned to his native country, and never infeſted England more; but Sweyn was leſs ſcrupulous, and allowed but a ſhort interval of peace.

The Engliſh, A. D. 998, found their ſituation, on this account, truly deplorable. The weakneſs of the king, the diviſions of the nobility, the treachery of ſome, and the cowardice of others, fruſtrated all their endeavours for mutual defence. The Danes, well informed of their ſituation, again appeared on the Engliſh ſhore; and, ſeeing the incapacity of the country to oppoſe them, they demanded twenty-five thouſand pounds more. This ſum they alſo received; but this only ſerved to provoke their appetite for freſh exactions, which the ſubſequent events too amply put in their power. The Danes had made ſeveral ſettlements, for many years before, in different parts of the kingdom; and their military ſuperiority was generally acknowledged by all: hence the kings of England had been accuſtomed to keep in pay bodies of Daniſh troops, whom they quartered in different parts of the country. Theſe mercenaries, from an attention to cleanneſs and decency, had attained to ſuch an height of luxury, (according to the writers of thoſe days,) that they combed their hair *once a day*, bathed themſelves *once a week*; till by theſe arts, then eſteemed effeminate, they rendered themſelves ſo agreeable to the fair ſex, that they debauched the wives and daughters of the Engliſh, and diſhonoured many families. To thoſe vices were added the treachery of their conduct upon every threatened invaſion, when they ſhewed their attachment to their own countrymen, againſt thoſe among whom they were permitted to reſide. Theſe were motives ſufficient, in that barbarous age, to inſtigate a general maſſacre; and Ethelred, by a policy incident to weak princes, embraced the horrid reſolution of putting them all to the ſword. This plot was carried on with ſuch ſecrecy, that it was executed in one day, and all the Danes in England were deſtroyed without mercy. But this maſſacre, ſo perfidious in the contriving, and ſo cruel in the execution, inſtead of ending the long miſeries of the people, only prepared the way for greater calamities.

While the Engliſh were congratulating each other upon this deliverance from an inteſtine enemy, Sweyn appeared off the weſtern coaſts with a large fleet, meditating furious revenge. The Engliſh now vainly attempted to ſummon their forces; treachery and cowardice operated to diſpirit their leaders, or to diſſipate their troops. To theſe misfortunes were added a dreadful famine, partly from bad ſeaſons, and partly from the neglect of agriculture. For a while they ſuppoſed that the threats of the Danes might be averted by the payment of thirty thouſand pounds, which the invaders agreed to accept; but this, as in the former caſes, afforded only a temporary relief. For a while they placed their hopes in a powerful navy, which they found means to equip; but this was divided and diſperſed, without affording any actual ſervice. Nothing, therefore, remained, but their ſuffering the juſt indignation of the conqueror, and undergoing all the evils that war, inſtigated by revenge, could inflict. During this period, a general conſternation and diſſenſion prevailed in England. Ceſſations from theſe calamities were purchaſed, one after another, by immenſe ſums; but as they afforded only a ſhort alleviation of the common diſtreſs, no other reſource eventually remained than that of ſubmitting to the Daniſh monarch, of ſwearing allegiance to him, and giving hoſtages or pledges of ſincerity. Ethelred was obliged to fly into Normandy, and the whole country bowed to the ſuperior power of Sweyn, his victorious enemy.

The death of Sweyn, which happened about ſix weeks after, ſeemed to offer a favourable opportunity of reſtoring Ethelred to the throne, and his ſubjects to their liberties. Accordingly he ſeized it with avidity; but his miſtakes were incurable, and his indolence, credulity, and cowardice, obſtructed all ſucceſs: ſo that, after having ſeen the greateſt part of the kingdom wreſted from him by an inſulting enemy, and after refuſing to head his troops to oppoſe them, he retired to London, where he ended an inglorious reign of thirty-five years, leaving two ſons, the eldeſt of whom, Edmund, inherited his crown and his misfortunes.

Edmund ſucceeded to the throne of his father, A. D. 1016, and received the ſurname of Ironſide, from his hardy

hardy oppoſition to the enemy; but this oppoſition was as ineffectual to reſtore the happineſs of his country, as it was inſufficient to continue him in the poſſeſſion of the throne. He was oppoſed by one of the moſt powerful and vigilant monarchs then in Europe; for Canute, afterwards ſurnamed the Great, ſucceeded Sweyn as king of Denmark, and alſo as commander of the Daniſh forces in England. The conteſt between theſe two monarchs was therefore conducted with great obſtinacy and perſeverance; the firſt battle that was fought appeared undeciſive; a ſecond followed, in which the Danes were victorious; but Edmund ſtill having intereſt enough to bring a third army into the field, the Daniſh and Engliſh nobility, equally haraſſed and diſtreſſed by theſe convulſions, obliged theſe monarchs to come to a compromiſe, and divide the kingdom between them. Canute reſerved to himſelf the northern parts of the kingdom; the ſouthern diſtricts were left to Edmund; but this prince being murdered at Oxford, about a month after the treaty, by his two chamberlains, Canute was left in quiet poſſeſſion of the whole kingdom.

Canute, though he had gratified his ambition in obtaining the Engliſh crown, was yet obliged to make ſome mortifying conceſſions; and, in order to gain the intereſt of ſome of the nobility, he conſented to gratify their avarice. But when his power grew ſtronger, and his title more ſecure, he recalled thoſe grants which he had made, and even put many of the Engliſh nobles to death, ſenſible that thoſe who had betrayed their native ſovereign would never be true to him. Nor was he leſs ſevere in his exactions upon the ſubordinate ranks of the people, levying at one time ſeventy-two thouſand pounds upon country, and eleven thouſand more upon the city of London. Having by this ſeverity ſtrengthened his authority, he began to ſhew the merciful ſide of his character. His firſt ſtep to reconcile the Engliſh to his yoke, was, by ſending back to Denmark as many of his followers as he could ſafely ſpare. He made no diſtinction between the Engliſh and Danes in the adminiſtration of juſtice, but reſtored the Saxon cuſtoms in a general aſſembly of the kingdom. The two nations thus uniting with each other, were glad to reſt for a while from the tumult and ſlaughter in which they had mutually involved each other; and, to confirm their amity, the king himſelf married Emma, the ſiſter of Richard duke of Normandy, who had conſtantly eſpouſed the intereſts of the Engliſh.

Canute, thus eſtabliſhed on the Engliſh throne, made a voyage to Denmark, his native dominions, which were then attacked by the king of Sweden. In this expedition, Godwin, an Engliſh earl, was particularly diſtinguiſhed for his valour, whereby he acquired that fame which afterwards laid a foundation for the immenſe power he aſſumed during the ſucceeding reigns. In another voyage which Canute made to Denmark, he attacked Norway; and, expelling Olaus from his kingdom, he annexed it to his own empire. Thus, wearing at once the triple crown of England, Denmark, and Norway, he was conſidered as the moſt warlike and potent prince in Europe.

As his reign was founded in blood, ſo he was, towards the end of it, deſirous to atone for his cruelties and injuſtice, by acts of penitence and devotion. He erected churches, endowed monaſteries, and appointed revenues, for the celebration of maſs. He undertook a pilgrimage to Rome, where he remained a conſiderable time; and, beſides obtaining from the pope ſome privileges for the Engliſh ſchool founded there, he engaged all the princes through whoſe dominions he paſſed, to aboliſh thoſe heavy impoſitions which they were accuſtomed to exact from the Engliſh pilgrims. The piety of the latter part of his life, and the invincible courage of the former, were topics that filled the mouths of his courtiers with flattery and praiſe. They even affected to inſinuate that his power was uncontroulable, and that all things would be obedient to his command. Canute, ſenſible of their adulation, is ſaid to have taken the following method to reprove them. He ordered his chair to be ſet on the ſeaſhore while the tide was coming in, and commanded the ſea to retire. "Thou art under my dominion, (cried he;) the land upon which I ſit is mine; I charge thee, therefore, to approach no farther, nor dare to wet the feet of thy ſovereign." He feigned to ſit ſome time in expectation of ſubmiſſion, till the waves began to ſurround him; then, turning to his courtiers, he obſerved, that the titles of Lord and Maſter belonged only to him whom both earth and ſeas were made to obey. Thus reſpected, he lived many years, honoured with the ſurname of Great, for his power, but deſerving it ſtill more for his virtues. He died at Shafteſbury, in the nineteenth year of his reign, A. D. 1035; leaving three ſons, Sweyn, Harold, and Hardicanute. Sweyn was crowned king of Norway; Hardicanute was put in poſſeſſion of Denmark; and Harold ſucceeded his father on the Engliſh throne.

Harold, ſurnamed Harefoot, from his ſwiftneſs in running, upon his acceſſion to the crown, met with no ſmall oppoſition from his younger brother, Hardicanute. But, by the intervention of the nobles, a compromiſe was made between them; by which it was ſtipulated that Harold ſhould have London, and all the provinces north of the Thames, while the poſſeſſion of the ſouthern parts ſhould be ceded to Hardicanute; and, until that prince ſhould appear in perſon, Emma, his mother, ſhould govern in his ſtead. But this agreement was of ſhort duration; for queen Emma having brought over from Normandy Edward and Alfred, deſcendents of the ancient Saxon kings, Alfred was invited, with the warmeſt profeſſions of friendſhip, by Harold, to London, and treacherouſly waylaid by his orders. Six hundred of his train were murdered in the moſt cruel manner; he himſelf was taken priſoner; and his eyes being put out, he was conducted to the monaſtery of Ely, where he died. Edward and Emma, appriſed of his fate, fled to the continent, and Harold, without reſiſtance, took poſſeſſion of the whole kingdom. He lived to enjoy the fruits of his treachery but four years; and dying, very little regretted by his ſubjects, the ſucceſſion was left open to his brother, A. D. 1040.

Hardicanute's title was readily acknowledged both by the Danes and the Engliſh; and, upon his arrival from the continent, he was received with the greateſt demonſtrations of joy. The ceremony of his coronation was ſcarcely performed, when he gave the firſt ſpecimen of the baſeneſs of his diſpoſition, exemplified in his impotent inſults upon the body of his brother, which he ordered to be dug up, beheaded, and thrown into the Thames. When it was found ſome time after by a fiſherman, and buried, he ordered it to be again dug up, and to be thrown into the Thames a ſecond time. His malice, however, was in the end ineffectual; for it was again found, and buried with the greateſt ſecrecy. Hardicanute's next rigorous act was the impoſition of a grievous tax for the payment of his navy; which was the more intolerable, as the nation was threatened with a famine. In theſe degrading tranſactions, Godwin duke of Weſſex, who had been an inſtrument of treachery and oppreſſion during the former reign, was the principal adviſer. However, his baſe conduct did not ſcreen him from the reſentment of Emma, who had the ſtrongeſt reaſons to believe that he was inſtrumental in the death of prince Alfred her ſon. At her inſtigation, therefore, Alfric, archbiſhop of York, accuſed him of being an accomplice, and demanded juſtice accordingly. Godwin found means to evade the danger, by appealing to the king's avarice, and not to the juſtice of his cauſe. He preſented him with a magnificent galley, curiouſly carved and gilded, rowed by fourſcore men, who wore each of them a gold bracelet on his arm, weighing ſixteen ounces. The king, beguiled by this preſent, permitted him to purge himſelf by oath; and Godwin readily ſwore that he had no hand in the death of Alfred. This king's reign was but of ſhort duration; for he died two years after his

acceſſion, A. D. 1041, in conſequence of exceſſes at the marriage of a Daniſh lord, which was celebrated at Lambeth.

Edward, ſurnamed the Confeſſor, from his great piety, had many rivals, whoſe claims to the crown were, perhaps, better founded than his own. The lineal deſcendents of the laſt Saxon monarch were in being, though at the remote diſtance of the kingdom of Hungary. Sweyn, the eldeſt ſon of Hardicanute, was ſtill alive, but engaged in a deſultory war in Norway. It required therefore the utmoſt diligence and ſagacity in Edward to ſecure his claim, before either of theſe princes could come over to diſpute his title. His own authority, though great in the kingdom, was not ſufficient to accompliſh this end; his pretenſions were therefore ſeconded by Godwin, whoſe power was yet very extenſive. This nobleman, long an enemy to his family, finding, upon the preſent occaſion, that their intereſts were united, he laid aſide all former animoſity, and concurred in fixing him upon the throne. The firſt acts of his reign bore the appearance of injuſtice and ſeverity; for he claimed back all grants that had been made by the crown in former reigns; and he ordered his mother, Emma, who was ever intriguing againſt him, to be ſhut up in a monaſtery. As he had been bred in the Norman court, he ſhewed, in every inſtance, a predilection for the cuſtoms, laws, and even the natives, of that country, in preference to his own; and, though he had married Editha, the daughter of Godwin, yet, either from miſtaken piety, or fixed averſion, during his whole reign he abſtained from her bed.

However theſe actions might have been regarded by many of the king's ſubjects, (for they were all of a doubtful kind,) certain it is that Godwin, who had long grown too powerful for a ſubject, made them the pretext of his oppoſition. He began by complaining of the influence of the Normans in the government; and his animoſities ſoon broke out into action. Euſtace, count of Boulogne, who had married Edward's ſiſter, arrived in England upon a viſit to the king, and was received with great honour and affection. Upon his return to Dover, having ſent a ſervant before him to prepare accommodations, an affray happened between this domeſtic and the townſmen, in which he loſt his life. The count and his attendants attempting to revenge the death of his ſervant, the inhabitants took arms; and both ſides engaging with great fury, the count was obliged to fly, after having loſt about twenty of his men, and ſlain as many of the town's people. Exaſperated at this inſult, he returned to the court at Glouceſter, and demanded juſtice of the king, who very warmly eſpouſed his quarrel. He inſtantly gave orders to Godwin, in whoſe government Dover lay, to go and puniſh the inhabitants for their violation of the peace. This was a juncture highly gratifying to the ſchemes of this aſpiring nobleman; and, thinking that now was the time to ingratiate himſelf with the people, he abſolutely refuſed to obey the king's command. Senſible, however, that obedience would ſoon be enforced, unleſs he could defend his inſolence, he prepared for an immediate attack upon Edward. Under a pretence of repreſſing ſome diſorders in Wales, he ſecretly aſſembled a great army, and attempted to ſurpriſe the king, who continued, without ſuſpicion, at Glouceſter. Nevertheleſs, being ſoon informed of Godwin's treachery, his firſt ſtep was to ſummon all the aſſiſtance he could then get, and, in the mean while, to protract the time by a pretended negociation. But as ſoon as he found himſelf in a capacity to take the field, he marched out to attack Godwin; who, finding himſelf unable to oppoſe his ſuperior force, or to keep his ground, took ſhelter with Baldwin, earl of Flanders. His eſtates, together with thoſe of his ſons, were confiſcated; and the opulence and authority of the family ſeemed, for a time, to be wholly overthrown. But Godwin's power was too ſtrong to be ſhaken by ſo ſlight a blaſt; for, being aſſiſted with a fleet by the earl of Flanders, he landed on the iſle of Wight, where he was joined by his ſon Harold, with a ſquadron which that nobleman had collected in Ireland. From thence, being reinforced by great numbers of his former dependents and followers, he ſailed up the Thames, and, appearing before London, threw the metropolis into the utmoſt confuſion. In this exigence, the king alone ſeemed reſolute, and anxious to engage the enemy; but his nobility, many of whom were ſecretly inclined to Godwin, brought on a negociation, in which it was ſtipulated, that the king ſhould diſmiſs all his foreign ſervants, the primate being among the number, and that Godwin ſhould give hoſtages for his own future good behaviour. But Godwin's death, which ſoon followed, prevented him from reaping the fruits of an agreement, by which the king's authority was almoſt reduced to a ſhadow.

Godwin was ſucceeded in his government and offices by his ſon Harold, who in ambition was equal to his father, but in virtues and abilities far ſuperior. By a modeſt and gentle demeanor he acquired the good-will of Edward, or at leaſt ſoftened thoſe impreſſions of hatred which he had long borne the whole family. He greatly inſinuated himſelf into the affections of the people by his liberality, diſintereſtedneſs, and apparent candour. By theſe arts he not only ſupplanted Algar, duke of Mercia, whom the king raiſed up to rival his power, but he got his brother Toſti made duke of Northumberland, upon the death of Siward, who had long governed that province. Harold's engaging manners increaſed his popularity to ſuch a degree, that he began to be talked of as the moſt proper perſon to ſucceed to the crown. But nothing could be more adverſe to Edward than ſuch an event, as he abhorred a ſucceſſor from the family of Godwin. Rouſed, therefore, by theſe rumours, he ſent for his nephew, Edward, from Hungary, who was, in fact, the lineal deſcendent from the ancient Saxon kings. Prince Edward ſoon arrived, but was ſcarcely landed, when he died, leaving his pretenſions to Edgar Atheling, his ſon, who was too young to avail himſelf of his title. Edward was now thrown into new difficulties. He ſaw the youth and inexperience of Edgar, and dreaded the immoderate ambition of Harold. He could not, without reluctance, think of increaſing the power of a family which had riſen on the ruins of royal authority, and had been tainted with the blood of his own brother. In this dilemma he is ſaid to have caſt his eyes on William duke of Normandy, as a perſon moſt proper to ſucceed him; but of the truth of this conjecture we muſt for ever remain in uncertainty.

In the mean time, Harold remitted nothing of his reſpectful obedience to the king, or his aſſiduities to pleaſe the people; whereby he effectually prepared the way for his advancement, on the firſt vacancy, to the throne. In theſe aims fortune ſeemed conſtantly to aſſiſt him; and two incidents happened about this time, A. D. 1057, which contributed greatly to fix that popularity of which he had been ſo long in purſuit. The Welſh renewing their hoſtilities under prince Griffin, were repelled by him, and rendered tributary to the crown of England. The other incident was no leſs honourable: his brother Toſti, who had been appointed to the government of Northumberland, having grievouſly oppreſſed the people, was expelled in an inſurrection; and Harold was ordered by the king to reinſtate him in his power, and puniſh the inſurgents. While yet at the head of an army, preparing to take vengeance for the injury done to his brother, he was met by a deputation of the people, who had been cruelly governed. They aſſured him that they had no intention to rebel, but had taken up arms merely to protect themſelves from the violence of a rapacious governor. They enumerated the grievances they had ſuſtained from his tyranny, brought the ſtrongeſt proofs of his guilt, and appealed to Harold's equity for redreſs. Convinced of Toſti's unjuſt and rigid government, he ſacrificed fraternal affection to his duty; and not only procured a pardon for the people, but confirmed the governor in his office, whom the Northumbrians had choſen in his room. From

that

that time Harold became the idol of the people; and his virtues certainly merited their regard, had they not been excited by ambition.

Harold, now ſecure in the affections of the Engliſh, no longer ſtrove to conceal his views, but openly aſpired at the ſucceſſion. He every where inſinuated, that as the heir-apparent to the crown was utterly unequal to the taſk of governing, both from age and natural imbecillty, there was none ſo proper as a man of mature experience and tried integrity; he alleged, that a man born in England was only fit to govern Engliſhmen; and that none but an able general could defend them againſt ſo many foreign enemies as they were every day threatened with. The people readily diſcerned to what theſe ſpeeches tended, and, inſtead of diſcountenancing, they encouraged and applauded, them. Edward, broken down with age and infirmities, and engroſſed by the viſions of ſuperſtition, ſaw the danger to which the government was expoſed, but took feeble and irreſolute ſteps to ſecure the ſucceſſion. In this ſtate of indeciſion he was ſeized with a fever, which brought him to his end, on the fifth of January, A. D. 1066, in the ſixty-fifth year of his age, and twenty-fifth of his reign.

This prince, who was reverenced by the monks, under the titles of ſaint and confeſſor, had but weak pretenſions to either, being indolent, irreſolute, and credulous. The tranquillity of his reign was owing rather to the weakneſs of his foreign enemies than to his own exertions or ſtrength. But, though he ſeemed to have few active virtues, yet he certainly had no vices of an atrocious kind; and the want of the paſſions, rather than their reſtraint, was then, as it has been long ſince, the beſt title to canonization. He was the firſt who touched for the king's-evil: the opinion of his ſanctity procured belief to this cure among the people: his ſucceſſors regarded it as a part of their ſtate and grandeur to uphold the ſame opinion. It has been continued down to our time; and the practice was firſt dropped by the preſent royal family, who obſerved, that it could no longer give amazement even to the populace, and was attended with ridicule in the eyes of all men of underſtanding.

Harold, whoſe intrigues and virtues ſeemed to give a right to his pretenſions, ſtepped into the vacant throne without oppoſition. The citizens of London, who had been ever fond of an elective monarchy, ſeconded his claims; the clergy adopted his cauſe; and the body of the people, whoſe friend he had been, ſincerely regarded him. Nor were the firſt acts of his reign unworthy of the general prejudice in his favour. He took the moſt effectual meaſures for an impartial adminiſtration of juſtice; ordered the laws to be reviſed and reformed; and thoſe diſturbers of the public peace to be puniſhed, who had thriven under the lenity of the laſt reign. But neither his valour, his juſtice, nor his popularity, were able to ſecure him from the misfortunes attendant upon an ill-grounded title. The firſt ſymptoms of his danger came from his own brother Toſti, who had taken refuge in Flanders, and had endeavoured to engage the princes on the continent in a league againſt Harold, whom he repreſented as a tyrant and uſurper. Being furniſhed with ſome ſhips by the earl of Flanders, he made a deſcent upon the iſle of Wight, which he laid under contribution, and pillaged the Engliſh coaſt, until he was encountered and routed by Morcar, who had been appointed to the government from which he was expelled.

But he was not yet without ſuccour; for Harfagar, king of Norway, who had been brought over by his entreaties, arrived with a fleet of two hundred ſail at the mouth of the Humber, where he was joined by the ſhattered remains of Toſti's forces. It was in vain that the earls of Mercia and Northumberland attempted to ſtop their progreſs; they were quickly routed, and York was taken by the enemy. Harold was no ſooner informed of this misfortune, than he haſtened to the relief and protection of his people, and manifeſted the utmoſt ardour to ſhow himſelf worthy of their favour. He had given ſo many proofs of an equitable and prudent adminiſtration, that the people flocked to his ſtandard; and, as ſoon as he reached the enemy at Stanford, he found himſelf in a condition to give them battle. The action was obſtinate and bloody; but the victory was deciſive on the ſide of Harold, and ended in the total rout of the Norwegians, Harfagar their king, and Toſti, being both ſlain. Thoſe who eſcaped, owed their ſafety to the perſonal proweſs of a brave Norwegian, who is ſaid to have defended a bridge over the Derwent for three hours, againſt the whole Engliſh army; during which time, he ſlew forty of their beſt men with his battle-ax; but he at length fell by an arrow. Harold, purſuing his victory, made himſelf maſter of the Norwegian fleet that lay in the river Ouſe; and had the generoſity to give prince Olave, the ſon of Harfagar, his liberty, and allowed him to depart with twenty veſſels. There had never before been in England an engagement between two ſuch numerous armies, each being compoſed of no leſs than threeſcore thouſand men. The news of this deciſive victory diffuſed joy over the whole kingdom; they gloried in a monarch who had ſhewn himſelf able to defend them from inſult, and avenge them of their invaders; but they had no long interval for triumph: news was ſoon brought of a freſh invaſion, and that of the moſt formidable kind. This was under the conduct of William, duke of Normandy, who landed at Haſtings, September 29, 1066, with a powerful army of diſciplined veterans, and laid claim to the Engliſh crown.

William, afterwards called the Conqueror, was the natural ſon of Robert, duke of Normandy. His mother's name was Arlette, a beautiful maid of Falaiſe, whom Robert fell in love with as ſhe ſtood gazing at the door whilſt he paſſed through the town. William, who was the offspring of this amour, owed a part of his greatneſs to his birth, but ſtill more to his own perſonal merit. His body was vigorous, his mind capacious and noble, and his courage not to be repreſſed by difficulty or danger. His father Robert, growing old, and, as was common to princes then, ſuperſtitious alſo, reſolved upon a pilgrimage to Jeruſalem, contrary to the advice and opinion of his nobility. As his heart was bent upon the expedition, inſtead of attending to their advice, he ſhewed them his ſon William, whom, though illegitimate, he tenderly loved, and recommended to their care, exacting an oath from them of homage and fealty. He then put him, at ten years of age, under the tutelage of the French king; and ſoon after, going into Aſia, from whence he never returned, left prince William rather the inheritor of his wiſhes, than of his crown. In fact William, from the beginning, found himſelf expoſed to many dangers, and much oppoſition, ariſing from his youth and inexperience, from the reproach of his birth, from a ſuſpected guardian, a diſputed title, and a diſtracted ſtate. The regency, appointed by Robert, were under great difficulties in ſupporting the government againſt this complicated danger; and the young prince, when he came of age, found himſelf ſurrounded with difficulties. But the great qualities which he ſoon diſplayed in the field and the cabinet, gave encouragement to his friends, and ſtruck terror to his enemies. On all ſides he oppoſed his rebellious ſubjects, and repreſſed foreign invaders, while his valour and conduct prevailed in every action. The tranquillity which he had thus eſtabliſhed in his paternal dominions, induced him to extend his views; and ſome overtures, ſaid to have been made to him by Edward the Confeſſor, in the latter part of his reign, if true, muſt have inflamed his ambition with a deſire of ſucceeding to the Engliſh throne. On whatever ſide juſtice might lie, the conſtant pretext on William's part was, that he was appointed heir to the crown of England by Edward the Confeſſor, upon a viſit he had paid that monarch during his lifetime. In conſequence of theſe pretenſions, he laid his claims; but Harold would not admit them, and reſolved

to defend by his valour what his good fortune had won. William, finding that arms alone were to decide the diſpute, prepared to aſſert his claim with vigour. His ſubjects, as they had long been diſtinguiſhed for valour among the European nations, had at this time attained to the higheſt pitch of military glory. His court was the centre of heroiſm; and all who wiſhed for fame in arms, or were naturally fond of chivalry, flocked to put themſelves under his conduct. The fame of his intended invaſion of England was diffuſed over the whole continent; multitudes came to offer him their ſervices in the expedition; ſo that he was embarraſſed rather in the choice of whom he ſhould take into his army, than in levying forces. The pope himſelf was not behind the reſt in favouring his pretenſions; and, either influenced by the apparent juſtice of his claims, or by the hopes of extending the authority of the church, he immediately pronounced Harold an uſurper. He denounced excommunication againſt him, and all his adherents; and ſent the duke a conſecrated banner, to inſpire his troops with confidence. With ſuch favourable incentives, William ſoon found himſelf at the head of a choſen army of ſixty thouſand men, equipped in the moſt warlike and ſplendid manner. The diſcipline of the men, the vigour of the horſes, the luſtre of the arms and accoutrements, were objects that had been ſcarcely ſeen in Europe for ſome ages before. It was in the beginning of ſummer that he embarked this formidable army on board a fleet of three hundred ſail; and, after ſome ſmall oppoſition from the weather, landed at Pevenſey, on the coaſt of Suſſex. William himſelf, as he came on ſhore, happened to ſtumble and fall; but, inſtead of being ſuperſtitiouſly diſcompoſed at the accident, he had the preſence of mind to cry out, that he thus took poſſeſſion of the country. Different from all the invaſions to which England had been formerly accuſtomed, this prince made no ſhow of ravaging a foreign country, but rather of encamping in his own. Here he continued inactive for about a fortnight, either willing to refreſh his troops, or deſirous of knowing the reception his pretenſions to the crown would meet with among the people. After having refreſhed his men at this place, and ſent back his fleet to Normandy, in order that there might be no aſylum for cowardice, he advanced along the ſea-ſide to Haſtings, where he publiſhed a manifeſto, declaring the motives that induced him to undertake this enterpriſe.

He was now informed of the approach of Harold, who was reſolved to defend his right to the crown, and retain that ſovereignty which he had unanimouſly received from the people. Harold was returning, flushed with conqueſt, from the defeat of the Norwegians, with the victorious forces he had employed in that expedition, and all he could invite or collect in the country through which he paſſed. His army was compoſed of active and valiant troops, in high ſpirits, ſtrongly attached to their king, and eager to engage. On the other hand, the army of William conſiſted of the flower of the continent, and had been long inured to danger. The picked men of Bretagne, Boulogne, Flanders, Poictou, Maine, Orleans, France, and Normandy, were voluntarily united under his command. England never before, nor never ſince, ſaw two ſuch armies drawn up to diſpute its crown. The day before the battle, William ſent an offer to Harold to decide their claim by ſingle combat, and thus to ſpare the blood of thouſands; this Harold declined, by ſaying he would leave it to the God of armies to determine their right. Both armies, therefore, drew up in ſight of each other, expecting the dawning of the next day with impatience. The Engliſh paſſed the night in ſongs and feaſting; the Normans in devotion and prayer.

The next morning, at ſeven, both armies were ready to engage. Harold appeared on foot, in the center of his forces, encouraging them by his example of facing the greateſt danger. William fought on horſeback, leading on his army, ſinging the ſong of Roland, one of the famous chiefs of their country. The Normans began the fight with their croſs-bows, which, at firſt, galled and made great havoc among the Engliſh; and, as their ranks were cloſe, their arrows did great execution. But ſoon they came to cloſer fight, and the Engliſh, with their bills, hewed down their adverſaries with great ſlaughter. Confuſion was rapidly ſpreading through the Norman ranks, when William, who ſeeing himſelf on the brink of deſtruction, haſtened, with a ſelect band, to the relief of his forces. His preſence of mind reſtored the ſuſpenſe of battle; he was ſeen in every point of danger, endeavouring to pierce the ranks of the enemy, and had three horſes killed under him. At length, perceiving that the Engliſh line continued impenetrable, he pretended to give ground; which, as he expected, drew the enemy from their firm and cloſe ranks, and he was inſtantly ready to take advantage of their diſorder. Upon a ſignal given, the Normans ſuddenly faced about, and returned to the charge with greater fury than before, broke the Engliſh ranks, and purſued them to a riſing ground. It was in this extremity that Harold was ſeen flying from rank to rank, rallying and inſpiring his troops with freſh vigour; and, though he had toiled all day in front of his Kentiſh men, and in the hotteſt of the battle, yet he ſtill ſeemed unabated in ſtrength or courage, keeping his men rigidly to the poſt of honour. Once more, therefore, the victory ſeemed to turn againſt the Normans, and they fell in great numbers; ſo that the fierceneſs and obſtinacy of this memorable battle was often renewed by the ſuperior courage of the leaders, whenever that of the ſoldiers began to ſlacken. Fortune, at length, determined a victory which valour was unable to decide. Harold, making a furious onſet at the head of his troops, againſt the Norman heavy-armed infantry, was ſhot in the head by an arrow; and his two valiant brothers, fighting by his ſide, ſhared the ſame fate. He fell with his ſword in his hand, amidſt heaps of ſlain; and, after the battle, the royal corpſe could hardly be diſtinguiſhed among the dead. From the moment that he fell, all courage ſeemed to forſake the Engliſh; they gave ground on every ſide, and were purſued with dreadful ſlaughter by the victorious Normans. Thus, after a battle which was fought from morning till ſun-ſet, the invaders proved ſucceſsful, and the Engliſh crown became the reward of victory, October 14, 1066. There fell near fifteen thouſand of the Normans, while the loſs on the ſide of the vanquiſhed was yet more conſiderable, beſides that of the king, and his royal brothers. The next day the dead body of Harold was brought to William, and generouſly reſtored to his mother.

Thus terminated the Saxon monarchy in England, which had exiſted for more than ſix hundred years. Before the reign of Alfred, the kings of this race ſeemed totally immerſed in ignorance; and after his time, they were taken up with combating the ſuperſtition of the monks, or blindly obeying its dictates. As for the crown, during this period, it was neither wholly elective, nor yet totally hereditary, but diſpoſed of either by the will of the former poſſeſſor, or obtained by the intrigues or caprices of the nobles. As for the laws and cuſtoms of this race, they introduced many which had been long in practice among their German anceſtors; they adopted alſo many more which they found among the Britons, or which the Romans left behind them after their abdication. They aſſumed, in imitation of thoſe nations, the title of kings; nay, ſome of them took the Greek appellation of *Baſileus*, though unknown to the countries from whence they came. Their noblemen alſo aſſumed names of Roman authority, and were thence termed dukes or *duces*; while the lower claſſes of the people were bought and ſold with the farms they cultivated; a horrid cuſtom, firſt introduced by the Greeks and Romans, and afterwards adopted by the countries they conquered. Their canon laws alſo, which often controuled the civil authority, had primarily their origin in Rome; and the prieſts

WILLIAM, I. *surnamed the* CONQUEROR.

London Published as the Act directs Nov.r 1st 1803 by J. Wilkes.

and monks, who drew them up, had chiefly their education there. We muſt not, therefore, aſcribe the laws and cuſtoms which then prevailed over England, entirely to Saxon original, ſince many of them were derived from the Britons and Romans. But, when the Saxon monarchy was no more, all cuſtoms and laws, of whatever original, were caſt down into one common maſs, and cemented by thoſe of Norman inſtitution. The whole face of obligation was altered, and the new maſters inſtituted new modes of obedience. The laws were improved; but the taſte of the people for polite literature and philoſophy, for more than four hundred years after, was ſtill to continue the ſame. It appears ſurpriſing, that in ſuch a variety of events, amid ſo many improvements in military ſcience, and ſo many changes in the kingly government, that true politeneſs and refined taſte, ſhould not in all that time have received the ſmalleſt improvement.

From WILLIAM, ſurnamed the CONQUEROR, to the Termination of the direct NORMAN LINE in KING STEPHEN.

After the ſtrength of England had been broken by the diſaſtrous battle of Haſtings, very little remained in the choice of the inhabitants, but a tame ſubmiſſion to the will of the conqueror; and William, ſenſible of their conſternation and terror, was careful not to loſe the fruits of victory by delay. Accordingly, after the purſuit of the flying enemy, and a ſhort refreſhment of his army, he ſet forward on the completion of his deſign; and ſitting down before Dover, took it after a ſlight reſiſtance, and fortified it with freſh redoubts. He then advanced by quick marches towards London, where his approach ſerved to ſpread new alarms. The inhabitants for ſome time heſitated between their terrors and their loyalty; but, caſting their eyes on every ſide, they ſaw no perſon of valour or authority ſufficient to ſupport them in their independence. Edgar Atheling, the rightful heir to the crown, was a weak and feeble prince, without courage or ability; all their other leaders were either deſtroyed, or too remote to lend them aſſiſtance. The clergy, who had a large ſhare in the deliberations, declared openly for a prince whoſe pretenſions were acknowledged, and whoſe arms were bleſſed, by the holy ſee. As ſoon, therefore, as William paſſed the Thames, at Wallingford, Stigand, the primate, made ſubmiſſions to him in the name of the clergy; and, before he came within ſight of the city, all the chief nobility, and Edgar Atheling himſelf, who juſt before had been proclaimed king, came into his camp, and yielded to his authority. The conqueror, though he had it in his power to dictate his own terms, rather than receive them, yet choſe to have his election conſidered rather as the will of his ſubjects, than as a meaſure extorted from them. In order to give his claim the greater ſanction, he was crowned at Weſtminſter by the archbiſhop of York, and took the oath uſual in the times of the Saxon and Daniſh kings; which was, "to protect and defend the church, to obſerve the laws of the realm, and to govern the people with impartiality." Having thus given confidence and new hopes to the vanquiſhed Engliſh, his next care was to reward the brave adventurers who had followed his fortunes. He firſt divided the lands of the Engliſh barons who had oppoſed him among the Norman barons who had aſſiſted his enterpriſe; and ſuch as he could neither ſupply with money nor lands, he appointed to the vacant offices of the ſtate. But, as there were ſtill numbers unprovided for, he quartered them on the rich abbeys of the kingdom, until better means offered for their advancement. This, which gave no ſmall umbrage to the clergy, was but little regretted by the people, who were pleaſed to ſee their own burthens lightened, by having a part of them laid upon ſhoulders that were ſuppoſed much better able to bear them.

But what gave conſiderable alarm was, to ſee him place all the power in the hands of his own countrymen, and to ſuffer them only to have poſſeſſion of the ſword, while he diſarmed all the Engliſh citizens. He nevertheleſs introduced into England that ſtrict execution of juſtice, for which his adminiſtration had been celebrated in Normandy; he reſtrained by ſevere diſcipline the inſolence of his troops; he appeared ſolicitous to unite the Normans and the Engliſh by intermarriages and alliances; he confirmed the liberties and immunities of London, and the other cities of England; and ſeemed deſirous of replacing every thing on the ancient eſtabliſhment. Yet amidſt this apparent confidence, he built citadels in London, Wincheſter, Hereford, Oxford, and the towns beſt ſituated for commanding the kingdom, and truſted to the ſword, rather than to their ſubmiſſion, which he knew to be precarious. By this mixture of vigour and lenity, he had ſo ſoothed or humbled the minds of the Engliſh, that he thought he might ſafely reviſit his native country, and enjoy the congratulations of his ancient ſubjects. Accordingly he ſet out for Normandy, leaving the adminiſtration in the hands of his brother Odo, biſhop of Baieux, and of William Fitz-Oſborne; and, that their authority might be leſs expoſed to danger, he carried over with him the chief of the Engliſh nobles, who, while they ſerved to grace his court by their magnificence, were in reality hoſtages for the fidelity of the nation.

During the abſence of William, affairs took a very unfavourable turn in England. It is probable, the Normans, deſpiſing a people who had ſo eaſily ſubmitted to the yoke, and envying their riches, were deſirous of provoking them to rebellion. Be this as it may, their arrogance certainly multiplied diſcontents and complaints every where; and ſecret conſpiracies were entered into againſt the government. The inhabitants of Kent, who had firſt ſubmitted to the conqueror, were the firſt that attempted to throw off his yoke; and, encouraged by Euſtace count of Boulogne, who had been alſo diſguſted by the Normans, made an unſucceſsful attempt on Dover. Edric the foreſter, whoſe poſſeſſions lay on the banks of the Severn, provoked at the depredations of ſome Norman captains in his neighbourhood, formed an alliance with Blethyn and Rowallen, two Welſh princes, and endeavoured to repel force by force. The diſaffection of the Engliſh daily increaſed; a ſecret project was entertained to perpetuate a maſſacre of the Normans, like that which had been formerly executed upon the Danes; and the animoſity became ſo general and natural, that the vaſſals of earl Coxo having deſired him to head them in an inſurrection, and finding him reſolute in maintaining his fidelity to William, put him to death, as a traitor to his country. The return of the king, however, diſconcerted the plans of the conſpirators; and the confiſcation of their eſtates ſtill farther enriched the Normans. Though highly irritated againſt the Engliſh, William ſtill preſerved the appearance of juſtice in his oppreſſions; he reſtored to their inheritance ſuch as had been arbitrarily expelled during his abſence; but he ſeized this opportunity of renewing the tax of Danegelt on the people, under pretence of being thereby better able to defend them.

This tax rendered his government completely odious: the inhabitants of Exeter roſe in arms; the people of Devonſhire and Cornwall followed their example; but Exeter was ſoon terrified into ſubmiſſion by the preſence of William. A citadel was erected to reſtrain in future their levity; and Devonſhire and Cornwall had juſt implored the clemency of the ſovereign, when a new and more formidable inſurrection in the north excited the general attention, and ſeemed to threaten more important conſequences. At the head of this were Edwin and Morcar, two of the moſt powerful of the Engliſh nobility, who had been encouraged by the aſſurance of ſupport from their nephew, Bleithyn prince of North Wales, from Malcolm king of Scotland, and from Sweyn king of Denmark. The breaſt of Edwin was inflamed with private as well as public wrongs, and he accuſed William of having broken his promiſe, of beſtowing on him his daughter in marriage. Before the earls, however, could concert their meaſures, or receive the foreign ſuccours they expected, they were ſurpriſed by the vigilance of the king. As they

they were incapable of reſiſtance, they condeſcended to ſue for mercy; but, though William pardoned the chiefs, he ſeized and beſtowed on his Norman adherents the lands of their followers; and the numerous colonies of foreigners, which he eſtabliſhed in the north, left the Saxons in that quarter deſtitute of any real power.

The Engliſh now clearly foreſaw that the king was determined to rely on the ſupport and affection of foreigners, and that new forfeitures would be the reſult of every attempt to ſupport their rights. Impreſſed with this diſmal proſpect, many fled into foreign countries: Edgar Atheling himſelf, dreading the inſidious careſſes of William, eſcaped with his ſiſters, Margaret and Chriſtine, into Scotland, where Malcolm, king of Scotland, afterwards eſpouſed Margaret, and by the ſucceſſion of James VI. to the Engliſh throne, the Saxon line was reſtored. Others, however, ſtill hoped to acquire ſecurity from arms; from their retreat in Ireland, Godwin, Edmond, and Magnus, three ſons of Harold, paſſed into England, and landed in Devonſhire; but were repulſed and obliged to return, by Brien, ſon of the count of Brittany. In the north, the inhabitants of Northumberland and York threw off their allegiance, and killed their foreign governors; theſe inſurgents were ſtrengthened by a large body of forces from Denmark, and were animated by the preſence of Edgar Atheling, who quitted Scotland to place himſelf at their head. Hareward, a nobleman of Eaſt Anglia, celebrated for his valour, aſſembled his followers, and taking ſhelter in the iſle of Ely, made frequent inroads on the neighbouring country; while Edric the foreſter, calling in the aſſiſtance of the Welſh, laid ſiege to Shrewſbury.

This general commotion was however ſoon calmed by the policy and vigour of William, who ſtimulated his followers by the promiſe of new forfeitures, purchaſed the retreat of the Danes, and reduced to obedience Northumberland and York. Edgar Atheling again ſought refuge in Scotland; Edric implored the clemency of the conqueror, and was once more received into favour; Hareward alone, confiding in the advantages of his ſituation, ſcorned to make a ſubmiſſion.

Though William ſtill preſerved the language of clemency and forgiveneſs towards the chiefs, his heart was hardened againſt the people. To chaſtiſe the turbulence of the Northumbrians, he laid waſte that fertile country between the Humber and the Tees, deſtroying the houſes, and extirpating the inhabitants; and the lives of an hundred thouſand perſons are computed to have been ſacrificed by this barbarous ſtroke of policy. Taking advantage of the imprudence with which the bulk of the landed property had engaged in theſe inſurrections, he involved the proprietors in confiſcation: their eſtates were tranſferred to the Normans; and the moſt ancient and honourable Engliſh families were reduced to beggary; while every path which led to riches or preferment was carefully ſhut againſt them. The feudal law, which had ſome time been eſtabliſhed in Normandy and France, William introduced into England. He divided, with very few exceptions, beſides the royal demeſnes, the lands of the country into baronies; and conferred them, with the reſervation of ſtated ſervices and payments, on the moſt conſiderable of his adventurers. Theſe barons made grants of a great part of their lands to other foreigners, under the denomination of knights or vaſſals, who paid their lords the ſame duty and ſubmiſſion in peace and war, which the chieftain paid to his ſovereign. The whole kingdom contained about ſeven hundred chief tenants, and 60,215 vaſſals or knights fees; and as none of the native Engliſh were admitted into the firſt rank, the few who retained their landed property were glad to be received into the ſecond, under the protection of ſome powerful Norman.

The doctrine which exalted the papacy above all human power, had gradually diffuſed itſelf from Rome; but at this time, was more prevalent in the ſouthern than in the northern kingdoms of Europe. Pope Alexander, who had aſſiſted William in his conqueſts, naturally expected that he would extend to England the reverence for this ſacred character, and break the ſpiritual independence of the Saxons. As ſoon, therefore, as the Norman prince was eſtabliſhed on the throne, Alexander diſpatched to him Eſmenfroy, biſhop of Sion, as his legate; and the king, though he was probably led by principle to pay reſpect to Rome, embraced the opportunity to degrade thoſe Engliſh prelates who were obnoxious to him. In a council of the principal eccleſiaſtics, he depoſed every native dignitary, and ſupplied their place with Norman clergy, among whom Lanfranc, a Milaneſe monk, was preferred to the ſee of Canterbury. The ſuperſtitious ſpirit, however, which became dangerous to ſome of William's ſucceſſors, was checked by the abilities of that monarch: he prohibited his ſubjects from acknowledging any one for pope whom he himſelf had not previouſly received; nor would he ſuffer any letters or bulls from Rome to be produced without the ſanction of his authority. But he was ſtill more vigilant to humble the Engliſh: he even formed a project of extinguiſhing the Engliſh language; and ordered that in all ſchools youth ſhould be inſtructed in the French tongue; and that all law proceedings ſhould be directed in the ſame idiom; whence ariſes that mixture of French which is at preſent found in the Engliſh tongue, and particularly in legal forms.

The ſituation of the two great earls Edwin and Morcar became daily more diſagreeable. Senſible that they had entirely loſt their dignity, they determined to attempt its recovery by force. While Edwin retired to his eſtate in the north, with a view of commencing an inſurrection, Morcar took ſhelter in Ely with the brave Hareward. To ſubdue that iſle, William ſurrounded it with flat-bottomed boats, and made a cauſeway through the moraſſes to the extent of two miles. The rebels ſurrendered at diſcretion; Hareward alone forced his way ſword in hand through the enemy, and continued his hoſtilities at ſea, till William, admiring his bravery, received him into favour. Morcar was thrown into priſon; Edwin was killed in attempting to eſcape; and Edgar Atheling, weary of a fugitive life, ſubmitted to the conqueror, and obtained a penſion for life, with the liberty of reſiding in England.

Scarcely, however, had William ſettled the inſurrections of the native lords, A. D. 1073, when ſome of the moſt powerful Norman barons aſſociated in arms, provoked by the arrogance of their maſter. Of theſe the chief were Roger, earl of Hereford, and Ralph de Gueder, earl of Norfolk; and carl Waltheof, the laſt of the Engliſh who for ſome generations poſſeſſed any power, and who had married Judith the niece of William, raſhly joined in the league; but on reflection, dreaded the effects of the enterpriſe in which he was engaged. Diſtracted and irreſolute, he imparted the project and his doubts to his wife Judith, who having conceived an impure paſſion for another, conveyed in exaggerated terms the particulars of the conſpiracy to her uncle. Waltheof, in the mean time, had made a full confeſſion of the ſecret to Lanfranc, archbiſhop of Canterbury, who urged him to make atonement for his guilt, by aknowledging it. He accordingly paſſed over to Normandy, where William had for ſome time been, and laid open the whole deſign to the king. The conſpirators, informed of his departure, immediately flew to arms; but before the arrival of the Danes, on whoſe aſſiſtance they had depended, they were defeated and diſperſed. The earl of Hereford was checked by Walter de Lacy, a great baron in the king's intereſt. The earl of Norfolk was defeated by Odo, the king's brother; and the priſoners who were taken had each the right foot cut off, in order to deter others from a ſimilar treaſon. The earl himſelf retired to Denmark; ſo that William, upon his arrival in England, found that nothing remained for him to do but to puniſh the criminals; which was performed with unuſual ſeverity. Many of the rebels were hanged, ſome had their eyes put out, and others their hands cut off. The unfortunate Waltheoff, though promiſed a pardon, found no mercy. He was rich, and an Engliſhman; two faults

that

that ſerved to aggravate his guilt: he was accordingly tried, condemned, and executed. His infamous wife did not long enjoy the fruits of her perfidy; but, falling ſome time after under the king's diſpleaſure, was abandoned by the world, and paſſed the reſt of her life in contempt, remorſe, and miſery. Some aſſert, that this nobleman fell a ſacrifice to the cruelty of Odo, not of William; but, however that may be, it is certain that Waltheoff, and Fitz-Aubert, a noble Norman, who was alſo beheaded on this occaſion, were the only perſons of note that were executed during the reign of William the Conqueror. Having thus re-eſtabliſhed the peace of his government, and extinguiſhed the laſt embers of rebellion with a deluge of blood, William returned once more to the continent, in order to purſue Ralph de Gueder, who, eſcaping from England, had taken refuge with the count of Bretagne. Finding him, however, too powerfully protected by that prince, inſtead of proſecuting his vengeance, he wiſely came to a treaty with the count, in which Gueder was included.

William, A. D. 1076, having thus ſecured the peace of his dominions, naturally expected reſt from his labours. But ſuch is the blindneſs of human hope, that he found enemies where he leaſt expected them, and ſuch too as ſerved to embitter all the latter part of his life. His laſt troubles were excited by his own children, from the deſtruction of whom he could expect to reap neither glory nor gain. He had four ſons, Robert, Richard, William, and Henry, beſides ſeveral daughters. Robert, his eldeſt ſon, ſurnamed Curthoſe, from the ſhortneſs of his legs, was a prince who inherited all the bravery of his family and nation, but was more bold than prudent, and more enterpriſing than politic. Eager after fame, and impatient that his father ſhould ſtand in the way, he aſpired at that independence to which his temper, as well as circumſtances of ſituation, conſpired to invite him. He had formerly been promiſed by his father the government of Maine, a province of France, which had ſubmitted to William, and was alſo declared ſucceſſor to the dukedom of Normandy. However, when he came to demand the execution of theſe engagements, he received an abſolute denial; the king ſhrewdly obſerving, that it was not his cuſtom to throw off his clothes till he went to bed. Robert openly ſhewed his reſentment, and was often heard to expreſs his jealouſy of his two ſurviving brothers, William and Henry, Richard having been killed by a ſtag, in hunting. Theſe younger ſons, by greater aſſiduity, had wrought upon the affections of the king, and were the moſt obnoxious to Robert. A mind, therefore, ſo well prepared for reſentment, ſoon found a cauſe for open rupture. The princes were one day in ſport together, and, in the idle petulance of play, took it in their heads to throw water upon their elder brother as he paſſed through the court. Robert, alive to ſuſpicion, turned this frolic into a ſtudied indignity; and, having theſe jealouſies further inflamed by one of his favourites, he drew his ſword, and ran up ſtairs to take revenge. The whole caſtle was filled with tumult, and it was not without difficulty that the king himſelf was able to appeaſe it. But he never could allay the animoſity which from that moment prevailed in his family. Robert, attended by ſeveral of his confederates, withdrew to Rouen, hoping to ſurpriſe the caſtle; but his deſign was defeated by the governor.

The flame, thus kindled, engaged all the young nobility of Normandy and Maine, as well as of Anjou and Bretagne, to eſpouſe his quarrel; even his mother, it is ſaid, ſupported him by ſecret remittances, and aided his obſtinate reſiſtance of his father by private encouragement. This unnatural conteſt continued for ſeveral years; and William was obliged to have recourſe to England for ſupport againſt his ſon. Accordingly, drawing an army of Engliſhmen together, he led them over into Normandy; where he ſoon compelled Robert and his adherents to quit the field, and he was quickly reinſtated in all his dominions. As for Robert, being no longer able to reſiſt his father, he was obliged to take ſhelter in the caſtle of Gerberoy, which the king of France had provided for him, where he was ſhortly after beſieged by his father. As the garriſon was ſtrong, and conſcious of guilt, they made a moſt gallant defence; and many were the ſkirmiſhes and duels that were fought under its walls. In one of theſe, accident brought the king and his ſon together; but, being both concealed by their helmets, they attacked each other with mutual fury. A fierce and dreadful combat enſued between them, till at laſt the young prince wounded his father in the arm, and threw him from his horſe. The next blow would probably have put an end to the king's life, had he not called for aſſiſtance. Robert immediately recollected his father's voice; and, ſtung with a conſciouſneſs of his crime, he leaped from his horſe, and raiſed the fallen monarch from the ground. He then proſtrated himſelf in his preſence, and craved pardon for his offences, promiſing for the future a ſtrict adherence to his duty. The reſentment harboured by the king was not ſo eaſily appeaſed; perhaps his indignation at being overcome by the ſtripling added to his anger: inſtead, therefore, of pardoning his ſon, he gave him his malediction, and departed for his own camp on Robert's horſe, which the prince had aſſiſted him to mount. However, the conduct of the ſon ſerved, after ſome reflection, to appeaſe the father. As ſoon as William was returned to Rouen, he became reconciled to Robert, and brought him back to England, where he was ſucceſsfully employed in retaliating an invaſion of Malcolm king of Scotland.

William, A. D. 1081, being thus freed from foreign and domeſtic enemies, began to have ſufficient leiſure for a more attentive application to the duties of peace. For this purpoſe, the Doomſday Book was compiled by his order, which contains a general ſurvey of all the lands in the kingdom; their extent in each diſtrict; their proprietors, tenures, value, the quantity of meadow, paſture, wood, and arable land, which they contained; and in ſome counties, the number of tenants, cottagers, and people of all denominations, who lived upon them. This detail enabled him to regulate the taxations in ſuch a manner, that all the inhabitants were compelled to pay their ſhare in proportion to their abilities. He was no leſs careful of the methods of ſaving money than of accumulation. He reſerved a very ample revenue for the crown; and, in the general diſtribution of land among his followers, he kept poſſeſſion of no leſs than fourteen hundred of the choiceſt manors in different parts of the kingdom. Such was his income, that it is juſtly ſaid to have exceeded that of any Engliſh prince either before or ſince his time. No king of England was ever ſo opulent or arbitrary; none ſo able to ſupport the ſplendour and magnificence of a court; none had ſo many places of truſt and profit to beſtow; and none, conſequently, had his commands attended with ſuch implicit obedience.

There was one pleaſure to which William, as well as all the Normans and ancient Saxons, was addicted, which was hunting. To indulge the ſport in its utmoſt extent, he is ſaid to have depopulated that beautiful part of the county of Hants called the New Foreſt, for thirty miles in extent, juſt as he had done in Northumberland; turning out the inhabitants, deſtroying all the villages, and making the wretched outcaſts no compenſation. In the time of the Saxon kings, all noblemen without diſtinction had a right to hunt in the royal foreſts; but William appropriated all theſe to himſelf, and publiſhed very ſevere laws to prohibit his ſubjects from encroaching on this part of his prerogative. The killing of a deer, a wild boar, or even a hare, was puniſhed with the loſs of the delinquent's eyes, at a time when the killing of a man might be atoned for by paying a moderate fine.

As the king's wealth and power were ſo great, it may be eaſily ſuppoſed that the riches of his miniſters were in proportion. Thoſe of his uterine brother Odo, biſhop of Baieux, were ſo great, that he reſolved to purchaſe

the papacy. For this purpoſe, taking the opportunity of of William's abſence, he equipped a veſſel at the Iſle of Wight, on-board of which he ſent immenſe treaſures, and prepared for his embarkation; but he was unfortunately detained by contrary winds. In the mean time William, having had intimation of his deſign, reſolved to prevent the exportation of ſo much wealth from his dominions. Accordingly, returning from Normandy, where he was then employed, he came into England at the very inſtant his brother was ſtepping on-board, and immediately ordered him to be made a priſoner. His attendants, however, reſpecting the immunities of the church, ſcrupled to execute his commands; ſo that the king himſelf was obliged with his own hands to ſeize him. Odo, diſconcerted at ſo unexpected an intervention, appealed to the pope; who, he alleged, was the only perſon upon earth to try a biſhop. To this the king replied, that he did not ſeize him as biſhop of Baieux, but as the earl of Kent; and in that capacity he expected, and would have, an account of his adminiſtration. He was therefore ſent priſoner into Normandy; and, notwithſtanding all the remonſtrances and threats of Gregory, he was detained in cuſtody during the remainder of William's reign.

The king had ſcarcely put an end to this tranſaction, when he felt a very ſevere blow in the death of Matilda, his queen; and, as misfortunes commonly tread on the heels of each other, he received information of a general inſurrection in Maine, the nobility of which had been always averſe to the Norman government. Upon his arrival on the continent, he found that the inſurgents had been ſecretly aſſiſted and excited by the king of France, whoſe policy conſiſted in thus leſſening the Norman power, by creating diſſentions among the nobles of its different provinces. The king's diſpleaſure was not a little increaſed by ſome railleries which that monarch had thrown out againſt him. William, who was become corpulent, had been detained in bed ſome time by ſickneſs; and Philip was heard to ſay, that he only lay in of a big belly. This ſo provoked the Engliſh monarch, that he ſent him word he ſhould ſoon be up, and would at his churching preſent ſuch a number of tapers, as would ſet the kingdom of France in a flame. In order to perform this promiſe, he levied a ſtrong army, and, entering the iſle of France, deſtroyed and burnt all the villages and houſes without oppoſition. He took the town of Mantc, which he reduced to aſhes. But the progreſs of theſe hoſtilities was ſtopped by an accident, which ſhortly after put an end to the Conqueror's life. His horſe, chancing to place his fore-feet on ſome hot aſhes, plunged ſo violently, that the king was thrown forward, and bruiſed upon the pommel of the ſaddle to ſuch a degree, that he ſuffered a relapſe, and was obliged to return to Rouen. Finding his illneſs increaſe, and perceiving the approach of death, he began to turn his eyes to a future ſtate, from which the purſuit of ambition had long eſtranged them. He was now ſtruck with remorſe for all the cruelties and deſolations he had committed: he endeavoured to atone for his former offences, by large preſents to churches and monaſteries, and by giving liberty to many priſoners whom he had unjuſtly detained. He was even prevailed on, though not without reluctance, to conſent, with his dying breath, to the enlargement of his brother Odo. He bequeathed Normandy and Le Maine to his eldeſt ſon Robert; to Henry, he left five thouſand pounds, and his mother's jointure, without the ſmalleſt territory; and, though he would not pretend to eſtabliſh the ſucceſſion of the crown of England, to which he now began to perceive that he had no title, he expreſſed his wiſh that it might devolve to his favourite ſon William, whom he immediately diſpatched with letters to the archbiſhop of Canterbury, entreating his aſſiſtance. Having thus regulated his temporal affairs, he was conveyed in a litter to a village near Rouen, where he died, in the ſixty-firſt year of his age, after having reigned fifty-two years in Normandy, and twenty-one in England. His body was interred in the church at Caen, which he himſelf had founded: but his interment was attended with a remarkable circumſtance. As the body was carrying to the grave, the prelates and prieſts attending with the moſt awful ſilence, a man, who ſtood upon an eminence, was heard to cry out with a loud voice, and to forbid the interment of the body in a ſpot that had been unjuſtly ſeized by the Conqueror: "That very place (cried the man) is the area of my father's houſe; and I now ſummon the departed ſoul before the divine tribunal to do me juſtice, and to atone for ſo great an oppreſſion." The biſhops and attendants were ſtruck with the man's intrepid conduct; they enquired into the truth of his charge, and, finding it juſt, agreed to ſatisfy him for the damages he had ſuſtained.

The character of this prince, ſays lord Lyttleton, has ſeldom been ſet in its true light; ſome eminent writers having been dazzled ſo much by the more ſhining parts of it, that they have hardly ſeen its faults; while others, out of a ſtrong deteſtation of tyranny, have been unwilling to allow him the praiſe he deſerves. He may with juſtice be ranked among the greateſt generals any age has produced. There was united in him activity, vigilance, intrepidity, caution, great force of judgment, and never-failing preſence of mind. He was ſtrict in his diſcipline, and kept his ſoldiers in perfect obedience; yet preſerved their affection. Having been from his very childhood continually in war, and at the head of armies, he joined to all the capacity that genius could give, all the knowledge and ſkill that experience could teach, and was a perfect maſter of the military art, as it was practiſed in the times wherein he lived. His conſtitution enabled him to endure any hardſhips, and very few were equal to him in perſonal ſtrength, which was an excellence of more importance than it is now, from the manner of fighting then in uſe. His aſpect was noble, his ſtature tall, and the compoſition of his muſcles ſo ſtrong, that there was ſcarcely a man to be found who could bend his bow, or handle his arms. His courage was heroic, and he poſſeſſed it not only in the field, but (which is more uncommon) in the cabinet, attempting great things with means that to other men appeared totally unequal to ſuch undertakings, and ſteadily proſecuting what he had boldly reſolved; being never diſturbed or diſheartened by difficulties, in the courſe of his enterpriſes; but having that noble vigour of mind, which, inſtead of bending to oppoſition, riſes againſt it, and ſeems to have a power of controlling and commanding fortune herſelf.

Nor was he leſs ſuperior to pleaſure than to fear: no luxury ſoftened him, no riot diſordered, no ſloth relaxed. It helped not a little to maintain the high reſpect his ſubjects had for him, that the majeſty of his character was never let down by any incontinence or indecent exceſs. His temperance and his chaſtity were conſtant guards, that ſecured his mind from all weakneſs, ſupported its dignity, and kept it always as it were on the throne. Through his whole life he had no partner of his bed but his queen; a moſt extraordinary virtue in one who had lived, even from his earlieſt youth, amidſt all the licence of camps, the allurements of a court, and the ſeductions of ſovereign power! Had he kept his oaths to his people as well as he did his marriage vow, he would have been the beſt of kings; but he indulged other paſſions of a worſe nature, and infinitely more detrimental to the public than thoſe he reſtrained. A luſt of power, which no regard to juſtice could limit, the moſt unrelenting cruelty, and the moſt inſatiable avarice, poſſeſſed his ſoul. It is true, indeed, that among many acts of extreme inhumanity, ſome ſhining inſtances of great clemency may be produced, that were either effects of his policy, which taught him this method of acquiring friends, or of his magnanimity, which made him ſlight a weak and ſubdued enemy, ſuch as was Edgar Atheling, in whom he found neither ſpirit nor talents able to contend with him for the crown. But where he had

had no advantage nor pride in forgiving, his nature diſcovered itſelf to be utterly void of all ſenſe of compaſſion; and ſome barbarities which he committed exceeded the bounds that even tyrants and conquerors preſcribe to themſelves. Moſt of our ancient hiſtorians give him the character of a very religious prince; but his religion was after the faſhion of thoſe times, belief without examination, and devotion without piety. It was a religion that prompted him to endow monaſteries, and at the ſame time allowed him to pillage kingdoms; that threw him on his knees before a relic or croſs, but ſuffered him unreſtrained to trample upon the liberties and rights of mankind.

As to his wiſdom in government, of which ſome modern writers have ſpoken very highly, he was indeed ſo far wiſe, that, through a long unquiet reign, he knew how to ſupport oppreſſion by terror, and employ the propereſt means for the carrying on a very iniquitous and violent adminiſtration. But that which alone deſerves the name of wiſdom in the character of a king, the maintaining of authority by the exerciſe of thoſe virtues which make the happineſs of his people, was what, with all his abilities, he does not appear to have poſſeſſed. Nor did he excel in thoſe ſoothing and popular arts, which ſometimes change the complexion of a tyranny, and give it a fallacious appearance of freedom. His government was harſh and deſpotic, violating even the principles of that conſtitution which he himſelf had eſtabliſhed. Yet ſo far he performed the duty of a ſovereign, that he took care to maintain a good police in his realm; curbing licentiouſneſs with a ſtrong hand, which, in the tumultuous ſtate of his government, was a great and difficult work. How well he performed it we may learn even from the teſtimony of a contemporary Saxon hiſtorian, who ſays, that during his reign a man might have travelled in perfect ſecurity all over the kingdom with his boſom full of gold, nor durſt any kill another in revenge of the greateſt offences, nor offer violence to the chaſtity of a woman. But it was a poor compenſation, that the highways were ſafe, when the courts of juſtice were dens of thieves, and when almoſt every man in authority, or in office, uſed his power to oppreſs and pillage the people. The king himſelf did not only tolerate, but encourage, ſupport, and even ſhare, theſe extortions. Though the greatneſs of the ancient landed eſtate of the crown, and the feudal profits to which he legally was entitled, rendered him one of the richeſt monarchs in Europe, he was not content with all that opulence, but by authorizing the ſheriffs, who collected his revenues in the ſeveral counties, to practiſe the moſt grievous vexations and abuſes, for the raiſing of them higher, by a perpetual auction of the crown lands, ſo that none of his tenants could be ſecure of poſſeſſion, if any other would come and offer more; by various iniquities in the court of exchequer, which was entirely Norman; by forfeitures wrongfully taken; and, laſtly, by arbitrary and illegal taxations, he drew into his treaſury much too great a proportion of the wealth of his kingdom.

It muſt, however, be owned, that if his avarice was inſatiably and unjuſtly rapacious, it was not meanly parſimonious, nor of that ſordid kind which brings on a prince diſhonour and contempt. He ſupported the dignity of his crown with a decent magnificence; and, though he never was laviſh, he ſometimes was liberal, more eſpecially to his ſoldiers and to the church. But, looking on money as a neceſſary means of maintaining and increaſing power, he deſired to accumulate as much as he could, rather, perhaps, from an ambitious than a covetous nature; at leaſt his avarice was ſubſervient to his ambition, and he laid up wealth in his coffers, as he did arms in his magazines, to be drawn out, when any proper occaſion required it, for the defence and enlargement of his dominions. Upon the whole, he had many great qualities, but few virtues; and if thoſe actions that moſt particularly diſtinguiſh the man or the king are impartially conſidered, we ſhall find that in his character there is much to admire, but ſtill more to abhor.

Upon the death of the Conqueror, his ſon William, ſurnamed Rufus from the red colour of his hair and florid complexion, haſtened to take meaſures for ſecuring himſelf on the throne. Arriving, therefore, before the news of his father's death had reached England, his firſt care was, to take poſſeſſion of the treaſure left by the king at Wincheſter, which amounted to the ſum of ſixty thouſand pounds. He then addreſſed the primate Lanfranc, who had always conſidered him with an eye of peculiar affection, and now inſtantly proceeded to the ceremony of his coronation. At the ſame time Robert, who had been appointed ſucceſſor to Normandy, took peaceable poſſeſſion of that government; where his perſon was beloved, and his acceſſion long deſired.

In the beginning of the reign of William II. the Engliſh began to think they had miſtaken this prince's character, who had always appeared to them rude and brutal. He at firſt ſeemed to pay the utmoſt regard to the counſels of Lanfranc, which were mild and gentle, and conſtantly calculated for the benefit of the nation. Nevertheleſs, the Norman barons, who poſſeſſed eſtates both in England and Normandy, were uneaſy at the ſeparation of thoſe territories: they reſpected the claim of primogeniture in Robert, and they preferred his bold and open diſpoſition, to the proud and imperious temper of his brother. A powerful conſpiracy was therefore carried on againſt William; and Odo, the late king's brother, undertook to conduct it to maturity. William, ſenſible of the danger that threatened him, endeavoured to gain the affections of the native Engliſh, whom he prevailed upon, by promiſes of future reward, and preference of the diſtribution of his favours, to eſpouſe his intereſts. He was ſoon in the field; and, at the head of a numerous army, ſhewed himſelf in readineſs to meet all who ſhould diſpute his pretenſions. In the mean time, Odo had written to Robert an account of the conſpiracy in his favour, urging him to uſe diſpatch, and exciting him to arms by the ſplendour of the reward. Robert gave aſſurances of ſpeedy aſſiſtance; but his indolence was not to be excited by diſtant expectations. Inſtead of employing his money in levies to ſupport his friends in England, he ſquandered it away in idle expences; and thus procraſtination, the thief of time, ſtole from him the only favourable opportunity of inheriting the crown of England. Rufus, in the mean while, exerted himſelf with incredible activity to diſſipate the confederacy. Nor was this difficult to effect: the conſpirators had, in expectation of Robert's co-operation, taken poſſeſſion of ſome fortreſſes; but the appearance of the king compelled them to implore for mercy. He granted them their lives, but confiſcated all their eſtates, and baniſhed them the kingdom. William, thus fixed in the peaceable poſſeſſion of the kingdom, ſhewed the firſt inſtance of his perverſe inclinations, in his ingratitude to the Engliſh, who had ſecured him on the throne.

The death of Lanfranc, which followed ſhortly after, took off all reſtraint from his inclinations; and his mind now appeared in its natural deformity, tyrannical and unjuſt. He ordered a new ſurvey to be made of all the lands and property of the kingdom; and wherever he found them undervalued in the Doomſday Book, he raiſed the proportion of taxes accordingly. Even the privileges of the church were but a feeble rampart againſt his uſurpations; he ſeized the vacant biſhoprics, and openly put to ſale ſuch abbeys as he thought proper. And, not content with thus exerting his tyranny over his own dominions, he was reſolved to extend his rapacity over thoſe of his brother. In conſequence of this reſolution, he appeared in Normandy at the head of a numerous army; but the nobility, on both ſides, ſtrongly connected by intereſt and alliances, brought on an accommodation. It was now ſtipulated, that in caſe either of the brothers ſhould die without iſſue, the ſurvivor ſhould inherit all

the dominions. It was in vain that Henry, the other brother, remonſtrated againſt this act of injuſtice; it was in vain that he took arms, and defended his little fortreſs on the coaſt of Normandy againſt their united ſtrength. He was obliged to ſubmit; and thus deſpoiled of the ſmall patrimony that was left him, he wandered about with a few attendants, and was often reduced to great poverty. It was in beſieging the fortreſs of Henry, that a circumſtance or two have been related, which ſerve to mark the character of the two brothers. As William was on horſeback at ſome diſtance from the camp, he perceived two horſemen riding out from the caſtle, who came up and attacked him. In the encounter the king's horſe being killed, it fell over, and lay upon him in ſuch a manner that he could not diſengage himſelf. His antagoniſt, while he remained in this ſituation, lifted up his arm to diſpatch him; when William exclaimed, in a menacing tone, "Hold, villain! I am the king of England." The two ſoldiers were ſtruck with awe; and, helping him up, accommodated him with one of their horſes. William was not ungrateful for this ſervice; he mounted the horſe, and, ordering the ſoldier to follow, took him into his ſervice. Soon after Robert had an occaſion to ſhew ſtill greater marks of generoſity; for, hearing that the garriſon was in great diſtreſs for want of water, he not only ordered that Henry ſhould be permitted to ſupply himſelf, but alſo ſent him ſome pipes of wine for his own table. Rufus did not at all approve of this ill-timed generoſity; but Robert anſwered his remonſtrances by ſaying, "Shall we ſuffer our brother to die with thirſt? Where ſhall we find another when he is gone?"

The petty diſcords that prevailed after this accommodation between Robert and Rufus, are unworthy the attention of hiſtory. They indeed produced more real calamities to the people, than ſplendid invaſions or bloody battles, as the depredations of petty tyrants are ever more ſeverely felt by the poor, than the magnanimous enterpriſes of ambition. A rupture enſued between Rufus and Malcolm, king of Scotland, in which the latter was ultimately defeated and ſlain, by a party from Alnwick caſtle.

A new breach was made, A. D. 1093, between the brothers, in which Rufus found means to encroach ſtill further upon Robert's poſſeſſions in Normandy. An incurſion from the Welſh, A. D. 1094, filled England with alarm; but they were quickly repelled, and obliged to find refuge in their native mountains. A conſpiracy of the Norman barons in England alſo threatened ſerious conſequences; but their ſchemes were prevented and fruſtrated. Robert Mowbray, earl of Northumberland, who was at the head of this plot, was thrown into priſon, where he died, after thirty years confinement. The count of Eu, another conſpirator, denying the charge, fought with his accuſer, in preſence of the court, at Windſor, and being worſted in the combat, was deemed guilty, and condemned to be caſtrated, and to have his eyes put out. Every conſpiracy, thus detected, ſerved to enrich the king, who took care to apply to his own uſe thoſe treaſures that had been amaſſed for the purpoſe of oppoſing him.

But theſe tranſient broils and treaſons were now totally eliplſed by the moſt noted enterpriſes that ever excited the attention of mankind—the croiſades, which were now firſt projected for the recovery of the Holy Land. See the article CROISADE, vol. v. p. 374. But in the midſt of this religious ardour, which diffuſed itſelf all over Europe, men were not entirely forgetful of their temporal concerns; for ſome, hoping a more magnificent ſettlement in the ſoft regions of Aſia, ſold their European property for whatever they could obtain, contented with receiving any thing for what they were predetermined to relinquiſh. Among the princes who felt and acknowledged this new ſpirit of enterpriſe, was Robert duke of Normandy. The croiſade was entirely adapted to his inclinations and his circumſtances; he was brave, zealous, covetous of glory, haraſſed by inſurrections, and, what was more than all, naturally fond of adventure. In order to raiſe money to defray the charges of ſo expenſive an undertaking, he offered to ſell or mortgage his dukedom of Normandy to his brother Rufus for ten thouſand marks; which ſum was readily advanced by Rufus, whoſe ambition was ever upon the watch to enlarge his dominions. In this manner was Normandy once more united to England; and from this union, afterwards, aroſe thoſe numerous wars with France, which, for whole centuries, continued to depopulate both nations, without once conducing to increaſe the power of either. Rufus was not a little pleaſed with this acquiſition; he made a voyage to his new dominion, and took poſſeſſion of it, A. D. 1095, according to agreement with his brother. He alſo demanded of the king of France a part of the territory of Vexin, which he pretended was an appurtenance to his duchy, and even attempted to enforce his claims by arms. But, though the ceſſion of Maine and Normandy greatly increaſed the king's territories, they added but little to his real power; for his new ſubjects were compoſed of men of a turbulent ſpirit, and more ready to diſpute than obey his commands. Many were the revolts and inſurrections which he was obliged to quell in perſon; and no ſooner was the flame of one conſpiracy ſuppreſſed, than another roſe out of its aſhes to give him freſh alarms.

In the midſt of theſe troubles, he found himſelf involved in a diſagreeable diſpute with Anſelm, archbiſhop of Canterbury, a prelate of a haughty diſpoſition, and extremely tenacious of the rights of the clergy. There was at that time a ſchiſm in the church, between Urban and Clement, who both pretended to the papacy; and Anſelm, who had already acknowledged Urban, was determined, without the king's conſent, to introduce his authority into England. William, imitating his father's example, had prohibited his ſubjects from recognizing any pope whom he had not previouſly approved; he was therefore highly incenſed at Anſelm's conduct. A ſynod was ſummoned at Rockingham for depoſing the prelate; but, inſtead of obeying the king, the members of it declared that none but the pope could inflict a cenſure on their primate. To this was ſoon after added a freſh offence. Anſelm being required to furniſh his quota of ſoldiers for an intended expedition againſt the Welſh, he ſent them ſo ill equipped, that Rufus threatened him with a proſecution. As the reſentments on both ſides were increaſed, their mutual anger proceeded to recrimination; and Anſelm, finding it dangerous to remain in the kingdom, deſired permiſſion to retire to Rome. This requeſt the king readily complied with; but, to mortify the prelate, he ſent an officer to ſearch his baggage after he was on-board, and to ſeize all his money, on pretence of a law which forbade the exportation of ſilver. Not content with this, he ordered all his temporalities to be confiſcated, and actually kept poſſeſſion of them the remaining part of his life.

This open infringement of what were deemed the rights of the church, ſerved to exaſperate the pope, as well as all the eccleſiaſtics of his own dominions, againſt him. Urban even menaced him with the ſentence of excommunication; but he happened to be too earneſtly engaged in the croiſade, to attend to any other concern. Rufus, therefore, little regarded thoſe cenſures, which he knew were ineffectual: he had but little religion at beſt; and the amazing infatuation of the times inſpired him with no very high ideas of the wiſdom of its profeſſors. It is reported of him, that he accepted fifty marks of a Jew, whoſe ſon had been converted to Chriſtianity, and who engaged the king by that preſent to aſſiſt in bringing back the youth to Judaiſm. William employed both menaces and perſuaſion for that purpoſe; but, finding his efforts ineffectual, he ſent for the father, and informing him that the new convert was obſtinate in his faith, he returned half the money, keeping the reſt as a remuneration for his labour. At another time, he is ſaid to have ſent for

ſome

WILLIAM II. *surnamed* RUFUS.

London Published As the Act directs Dec.r 5. 1803 by J. Wilkes.

ſome learned Chriſtian theologians and ſome Jewiſh rabbies, and bade them fairly diſpute the points of their religion before him. He was perfectly indifferent, he ſaid, which ſhould prevail; be had his ears open to both, and he would embrace that doctrine, which, upon compariſon, ſhould be found ſupported on the moſt ſolid arguments.

In this manner Rufus proceeded, careleſs of approbation or cenſure, and only intent upon extending his dominions, either by purchaſe or conqueſt. The earl of Poictou and Guienne, having alſo engaged in the croiſade, had gathered an immenſe army for that expedition, but wanted money to forward his preparations. He had recourſe, therefore, to Rufus, and offered to mortgage all his dominions for a very inconſiderable ſum. The king accepted this offer with his uſual avidity, and had prepared a fleet and an army to take poſſeſſion of the rich provinces thus conſigned to his truſt. But a fatal accident put an end to all his ambitious projects, and left a monarch even deſtitute of a friend to perform the laſt ſad office to his remains. His favourite amuſement was hunting. The New Foreſt, which had been depopulated for that purpoſe, was generally the ſcene of his ſport; and there he uſually ſpent thoſe hours which were not employed in buſineſs of a more ſerious nature. One day, as he was mounting his horſe in order to take his cuſtomary amuſement, he is ſaid to have been ſtopped by a monk, who warned him, from ſome dreams he had the night before, to abſtain from that day's diverſion. Rufus, ſmiling at his ſuperſtition, ordered him to be paid for his zeal, but deſired him to dream better dreams in future. Thus, ſetting forward, he began the chaſe, attended by Walter Tyrrel, a French knight, famous for archery. Towards ſun-ſet, they found themſelves ſeparated from the reſt of their retinue; when a ſtag bounded out from a thicket. Rufus, drawing his bow, wounded the animal, yet not ſo mortally but that it fled. He checked his horſe, and had raiſed his hands to guard his eyes from the ſun-beams, when Tyrrel let fly an arrow at the ſtag, which, glancing from a tree, ſtruck the king in the breaſt, and pierced him to the heart. He dropt dead inſtantaneouſly; and Tyrrel, terrified at the accident, put ſpurs to his horſe, haſtened to the ſea-ſhore, embarked for France, and joined the croiſade that was then ſetting out for Jeruſalem. The body, being afterwards found by ſome woodmen, was put into a collier's cart, and conveyed to Wincheſter, a diſtance of about ſeventeen miles; where it was interred in the choir of the cathedral. A raiſed grey ſtone, without any inſcription, ſtill marks the grave of Rufus; and an ornamented cheſt, on the contiguous wall of the choir, contains the bones of his brother Richard, who likewiſe periſhed in the New Foreſt, from being gored by the ſtag he was hunting.

There are various opinions as to the death of Rufus, although what is written above is generally credited. Eadmer gives it as a received opinion, that he fell with an arrow in his hand, and mortally wounded his breaſt. Suger, in his Life of Lewis the Fat, affirms that Tyrrel had, with ſolemn oaths, averred to him that he was not even in that part of the foreſt where the king fell, nor ſaw him there on the day of his death. And John of Saliſbury, comparing the death of William to that of Julian the apoſtate, ſays, that it was equally doubtful (at the time when he wrote) by whom either of them was killed. Yet there is in the New Foreſt a ford called Tyrrel's Ford; there is an eſtate too called Avon Tyrrel, and if (as the tradition of the foreſt affirms) theſe lands have been liable to pay a yearly fine to the exchequer of ſeventeen ſhillings on account of the above-mentioned ford having been ſhewn to the regicide by the then owner of the eſtate, there can be no doubt of Tyrrel's at leaſt preſuming himſelf guilty. A monument (which ſtill exiſts) was erected on the ſpot where Rufus fell, by lord Delaware, who avers that he had ſeen the oak on which the arrow had glanced. In the inſcription it is recorded, that a peaſant named *Purkiſs* drove the cart which conveyed the royal body to Wincheſter; and it is remarkable that two families of the ſaid name ſtill occupy cottages near the ſpot, and that within the laſt century an axle-tree and wheel were preſerved by one of theſe cottagers, which tradition aſſerted to have belonged to the very cart above-mentioned.

William Rufus, in perſon, was ſhort and fat, with eyes of different colours. He inherited all his father's vices, without his few virtues. He was a perfidious, encroaching, and a dangerous, neighbour; an unkind and ungenerous relation; a rapacious and prodigal prince. However, there remain to this day ſome noble monuments of of his public ſpirit; the Tower, Weſtminſter-hall, and London-bridge, were all built by him, and are evidences that the treaſures of government were not wholly expended in vain. William Rufus was ſlain in the thirteenth year of his reign, A. D. 1100, and the fortieth of his age; and, as he never was married, he left no legitimate iſſue behind him. But there were ſtill two competitors for the crown; Robert, who had engaged in the holy war, and Henry, the youngeſt brother, who continued at home. Had Robert been in Normandy when Rufus died, there is no doubt, from the popularity of his character, and from the treaty formerly concluded between the two brothers, but that he would have been elected without oppoſition. This valiant prince having led his followers into Paleſtine, and there diſtinguiſhed himſelf by his courage and generoſity, after the taking of Jeruſalem, began to think of returning home, and of enjoying in tranquillity that glory which he had won in the field againſt the infidels. But, inſtead of taking the direct road to England, he paſſed through Italy, where he fell in love with Sibylla, daughter of count Converſano, a lady of celebrated beauty; and, marrying her, he laviſhed away, in luxuriant repoſe, thoſe hours which ſhould have been employed in the recovery of his kingdom.

In the mean time Henry, who had been hunting in the New Foreſt when his brother was ſlain, took the earlieſt advantage of the occaſion, and haſtening to Wincheſter, reſolved to ſecure the royal treaſure, which he knew to be the beſt aſſiſtant in ſeconding his aims. William de Breteuil, who had the care of the treaſury, informed of the king's death, oppoſed himſelf boldly to Henry's pretenſions. He ventured to aſſure Henry, that the money in his cuſtody, as well as the crown, belonged to his elder brother, and that he was reſolved to continue firm in his juſt allegiance. The diſpute was on the point of producing bloodſhed, when ſeveral of Henry's partizans arriving, compelled Breteuil to ſurrender the treaſure, with a part of which they, in all probability, hoped to be rewarded for their ſervice. Without loſing time, he now haſtened to London, where he procured himſelf to be proclaimed king, and inſtantly proceeded to the exerciſe of the royal functions. The barons, as well as the people, acquieſced in a claim which they were unprepared to reſiſt. Henry eaſily foreſaw, that, to ſecure his uſurped title, his ſubjects were to be indulged, and that his power could only find ſecurity in their affections. His firſt care, therefore, was to make ſeveral conceſſions in their favour. He granted them a charter, eſtabliſhing the churches in poſſeſſion of all their immunities; aboliſhing thoſe exceſſive fines which uſed to be exacted from heirs; granting his barons, and military tenants, the power of bequeathing their money by will; remitting all debts due to the crown; offering a pardon for all former offences, and promiſing to confirm and obſerve all the laws of Edward the Confeſſor. Theſe conceſſions pleaſed the clergy and the people, while the king, who meant only to obſerve them while his power was in diſpute, boaſted of the lenity of his government. Still farther to ingratiate himſelf with the people, Henry expelled from court all the miniſters of his brother's debauchery and arbitrary power; he ſtripped Ralph Flambard of his dignity, who had been his

brother's worſt adviſer, and conſequently obnoxious to the people, and had him confined in the Tower. But what gave him the greateſt popularity was his recalling Anſelm, archbiſhop of Canterbury, who had been baniſhed during the laſt reign, to his former dignity and his favour. One thing only remained to confirm his claims without danger of a rival. The Engliſh ſtill remembered their Saxon monarchs with gratitude, and beheld them excluded the throne with regret. There ſtill remained ſome of the deſcendants of that favourite line, and, among others, Matilda, the niece of Edgar Atheling; which lady, having declined all pretenſions to royalty, was bred up in a convent, and had actually taken the veil. Upon her Henry fixed his eyes as a proper conſort, by whoſe means the long breach between the Saxon and Norman intereſts would be fully united. It only remained to get over the ſcruple of her being a nun; but this a council, devoted to his intereſts, readily admitted; and Matilda being pronounced free to marry, the nuptials were celebrated with great pomp and ſolemnity.

It was at this critical juncture that Robert returned from abroad, and, after taking poſſeſſion of his native dominions, laid claim to the crown of England. But he was now, as in all his former attempts, too late for ſucceſs. However, as he was a man of undaunted reſolution, he reſolved to enforce his right to the crown; and the great fame he had acquired in the eaſt, did not a little ſerve to forward his endeavours. He was alſo excited to theſe reſolutions by Flambard, who had eſcaped from the Tower; together with ſeveral others, as well of the Norman as the Engliſh nobility. Even the ſeamen were affected with the general popularity of his name, and revolted to him with the greateſt part of a fleet that had been equipped to oppoſe his paſſage. Henry, who outwardly affected to ſlight all theſe preparations, yet had penetration enough to perceive, that his ſubjects fluctuated in their inclinations between him and his brother. In this emergency, he had recourſe to the bigotry of the people to ſtifle their ſentiments of juſtice. He paid diligent court to Anſelm, whoſe ſanctity and wiſdom he pretended to revere; and this prelate, in return, employed all his abilities in ſecuring him on the throne. He ſcrupled not to aſſure the nobles of the king's ſincerity in his profeſſions of juſtice, and even rode through the ranks of the army, recommending to the ſoldiery the defence of their king, and promiſing to ſee their valour rewarded. Thus the people were retained in their allegiance to the uſurper, and the army marched cheerfully forward to meet Robert and his forces, which were juſt landed at Portſmouth. When the two armies came in ſight, they both appeared equally unwilling to hazard a battle; and their leaders, who ſaw that much more would be loſt than gained by ſuch a conflict, made propoſals for an accommodation. This, after the removal of a few obſtacles, was agreed to; and it was ſtipulated that Robert, upon the payment of a certain ſum, ſhould reſign his pretenſions to England; and that if either of the princes died without iſſue, the other ſhould ſucceed to his dominions. This treaty being ratified, the armies on each ſide were diſbanded; and Robert having lived two months in the utmoſt harmony with his brother, returned in peace to his dominions in Normandy.

But it was not in the power of formal treaties to bind up the reſentment of a monarch, who felt himſelf injured, and found it in his power to take revenge. Henry ſoon ſhewed his reſolution to puniſh all the heads of the party which had lately oppoſed him; and this he did, under different pretexts, and by repeated proſecutions. The earl of Shrewſbury, Arnulf de Montgomery, and Roger earl of Lancaſter, were baniſhed the kingdom, with the confiſcations of their eſtates. Robert de Pontefract Robert de Mallet, William de Warene, and the earl of Cornwall, were treated with equal ſeverity; ſo that Robert, finding his friends thus oppreſſed, came over to England to intercede in their behalf. Henry received him very coolly, and aſſembled a council to deliberate in what manner he ſhould be treated; ſo that Robert, finding his own liberty to be in danger, was glad to aſk permiſſion to return; which, however, was not granted him till he conſented to give up his penſion. But the conſequences of Robert's indiſcretion were not confined to his own ſafety alone; as he was totally averſe to buſineſs, and only ſtudious of the more ſplendid amuſements or employments of life, his affairs every day began to wear a worſe appearance. His ſervants pillaged him without compunction; and he is deſcribed as lying whole days in bed for want of clothes, of which they had robbed him! His ſubjects were treated ſtill more deplorably; for, being under the command of petty and rapacious tyrants, who plundered them without mercy, the whole country was become a ſcene of violence and depredation. In this miſerable exigence the Normans had recourſe to Henry, from whoſe prudent adminiſtration in his own dominions, they expected a ſimilitude of proſperity, ſhould he take the reins of government in their's. Henry the more readily promiſed to redreſs their grievances, as he knew it would be the direct means to ſecond his own ambition. The year enſuing, therefore, A. D. 1105, he landed in Normandy with a powerful army, took ſome of the principal towns, and ſhewed, by the rapidity of his progreſs, that he meditated the entire conqueſt of the country.

Robert, who had already mortgaged, or given away, the greateſt part of his demeſne, ſpent his time in the moſt indolent amuſements, and looked upon the progreſs of Henry with an eye of perfect indifference. But, being at laſt rouſed from his lethargy, and finding his affairs in a deſperate ſituation, he took the ſtrange reſolution of appealing, in perſon, to Henry's natural affections, which this brave, imprudent man, eſtimated by the emotions of his own heart. Henry received him, not only with coolneſs, but contempt; and ſoon taught him, that no virtues will gain perſonal eſteem who has forfeited his pretenſions to prudence. Robert, thus treated with indignity, quitted his brother in a tranſport of rage, expreſſing an ardent purpoſe of revenge; to which Henry paid no ſort of regard. Robert was reſolved, however, to ſhew himſelf formidable, even in the moſt diſtreſſed ſtate of his affairs. Poſſeſſed with romantic ideas of chivalry, which his expedition to the Holy Land had ſerved to heighten, he was determined to retrieve by valour what he had loſt by indolence. Being ſupported by the earl of Mortaigne and Robert de Beleſme, Henry's inveterate enemies, he raiſed an army, and approached his brother's camp, with the hope of finiſhing, by a deciſive battle, the quarrel between them. While the two armies were in ſight of each other, the clergy employed their mediation to bring on a treaty; but, as Henry inſiſted upon Robert's renouncing the government of his dominions entirely, and one half of the revenue, all accommodation was rejected with diſdain, and both ſides prepared for battle. Robert was now entered on that ſcene of action in which he chiefly gloried, and in which he was always known to excel. He animated his little army by his example, and led them to the encounter with that ſpirit which had formerly made his enemies tremble. There was no withſtanding his firſt onſet; that quarter of the Engliſh army where he made the impreſſion gave way, and he was nearly on the point of gaining a complete victory. But it was different on that quarter where Beleſme commanded; he was put to flight by one of the king's generals, who alſo advancing himſelf with a freſh body of horſe to ſuſtain his centre, his whole army rallied; while Robert's forces, exhauſted and broken, gave way on every ſide, in ſpite of all his efforts and acts of perſonal valour. But, though he now ſaw his army defeated, and numbers falling round him, yet he refuſed to fly, or turn his back upon an enemy that he ſtill diſdained. He was taken priſoner, with near ten thouſand of

J.Chapman sc.

HENRY 9 II.

London Published as the Act directs Dec^r 10 1803 by J. Wilkes.

his men, and all the conſiderable barons who had adhered to his misfortunes. This victory was followed by the final reduction of Normandy, while Henry returned in triumph to England, leading with him his captive brother, who now found himſelf not only deprived of his patrimony and his friends, but alſo of his freedom. Henry, unmindful of his brother's former magnanimity with regard to him, kept him a priſoner during the remainder of his life, which was no leſs than twenty-eight years; and he died a miſerable death in the caſtle of Cardiff, in Glamorganſhire. It is even ſaid that he was deprived of his ſight by a red-hot copper baſon applied before his eyes; while his brother attempted to ſtifle the reproaches of his conſcience, by founding the abbey of Reading, which was in that age conſidered as a ſufficient atonement for every ſpecies of wickedneſs.

The firſt ſtep Henry took after his return to England, was to reform ſome abuſes which had crept in among his courtiers; for, as they were allowed by the feudal law to live upon the king's tenants whenever he travelled, they, under colour of this privilege, committed all manner of ravages with impunity. To remedy this diſorder, he publiſhed an edict, puniſhing with the loſs of ſight all ſuch as ſhould, under pretext of royal authority, commit any depredation in the places through which they paſſed. Some diſputes alſo concerning eccleſiaſtical affairs, which were ſupported by Anſelm, the archbiſhop of Canterbury, were compromiſed and adjuſted. Henry was content to reſign his right of granting eccleſiaſtical inveſtitures, but was allowed to receive homage from his biſhops for all their temporal properties and privileges. The marriage of prieſts was alſo prohibited, and laymen were not allowed to marry within the ſeventh degree of affinity. The laity were alſo prohibited from wearing long hair, a mode of dreſs to which the clergy ſhewed the utmoſt averſion.

Theſe regulations ſerved to give employment to Henry in his peaceful intervals; but the apprehenſions which he had from the diſſatisfaction of his Norman ſubjects, and his fears for the ſucceſſion, filled his hands with too much buſineſs to permit any long intervals of relaxation. His principal concern was to prevent his nephew, William, the ſon of Robert, from ſucceeding to the crown, in prejudice of William, his own ſon, for whom he was ſolicitous to ſecure it. His nephew was but ſix years of age, when he committed him to the care of Helie de St. Saen; and this nobleman diſcharged his truſt in his education with a degree of fidelity uncommon at the barbarous period we are deſcribing. Finding that Henry was deſirous of recovering poſſeſſion of his pupil's perſon, he withdrew, and carried him to the court of Fulk count of Anjou, who afforded him protection. This noble youth, wandering from court to court, evaded all the arts of his inſidious uncle, who was not remiſs in trying every method of ſeizing him, either by treaty or intimidation. In this ſtruggle, Louis king of France took the young adventurer's part, and endeavoured to intereſt the pope in his quarrel. Failing in this, he endeavoured to gain, by force of arms, what his negociations could not obtain. A war enſued between him and Henry, in which many battles were fought, but attended with no deciſive conſequences. In one of theſe, which was fought at Noyon, a city that Louis intended to ſurpriſe, the valour both of the nephew and the uncle were not a little conſpicuous. This young man, who inherited all his father's bravery, charged the van of the Engliſh army with ſuch impetuoſity, that it fell back upon the main body, commanded by the king in perſon, whoſe utmoſt efforts were unequal to the attack. Still, however, exerting all his endeavours to ſtem the torrent of the enemy that was pouring down upon him, a Norman knight, whoſe name was William Criſpin, diſcharged at his head two ſuch furious ſtrokes of a ſabre, that his helmet was cut through, and his head ſeverely wounded. At the ſight of his own blood, which ruſhed down his face, he was animated to a double exertion of his ſtrength, and retorted the blow with ſuch force, that his antagoniſt fell, and was taken priſoner. This decided the victory in favour of the Engliſh, who purſued the French with great ſlaughter; and it alſo ſerved to bring on an accommodation with the king of France, in which the intereſts of the nephew were entirely neglected. From this period, till the time of that brave youth's death, which happened about eight years after, A. D. 1119, he appears to have been employed in ineffectual ſtruggles to gain thoſe dominions to which he had the beſt founded claim, but which he wanted power to enforce.

Fortune now ſeemed to ſmile upon Henry, and to promiſe a long ſucceſſion of felicity. He was in peaceable poſſeſſion of two powerful kingdoms, and had a ſon who was acknowledged the undiſputed heir, arrived at his eighteenth year, whom he tenderly loved. His daughter Matilda was alſo married to the emperor Henry V. of Germany, and ſhe had been ſent to that court for her education. All theſe fair proſpects, however, were at once clouded by unforeſeen misfortunes and diſappointments, which tinctured his remaining years with miſery. The king, from the facility with which he had uſurped the crown, dreading that his family might be ſubverted with the ſame eaſe, took care to have his ſon recognized as his ſucceſſor by the ſtates of England, and carried him over to Normandy to receive the homage of the barons of that duchy. After performing this requiſite ceremony, Henry, returning to England, brought with him a numerous retinue of the chief nobility, who ſeemed to ſhare in his ſucceſſes. In one of the veſſels of the fleet, his ſon, and ſeveral young noblemen, the companions of his pleaſures, aſſociated together to render the paſſage more agreeable. The king ſet ſail from Barfleur, and was ſoon carried by a fair wind out of ſight of land. The prince was detained by ſome accident; and his ſailors, as well as their captain Fitz-Stephen, having ſpent the interval in drinking, became ſo diſordered, that they ran the ſhip upon a rock, and it immediately foundered. The prince was put into the boat, and might have eſcaped, had he not been impelled back by the cries of Maude, his natural ſiſter. He therefore nobly prevailed upon the ſailors to row back and take her in. The approach of the boat giving ſeveral others, who had been left upon the wreck, the hopes of ſaving their lives, numbers leaped in, and the whole went at once to the bottom. Above an hundred and forty young noblemen, of the principal families of England and Normandy, were loſt on this diſtreſſing occaſion. A butcher of Rouen was the only perſon on-board who eſcaped; he clung to the maſt, and was taken up the next morning by ſome fiſhermen. Fitz-Stephen, the captain, while the butcher was thus contending with the waves for his life, ſwam up to him, and enquired if the prince was yet living; when being told that he had periſhed: "Then I will not out-live him," ſaid the captain, and immediately ſunk. The ſhrieks of theſe unfortunate people were heard from the ſhore, and the noiſe even reached the king's ſhip, but the cauſe was then unknown. Henry entertained hopes for three days that his ſon was put into ſome diſtant port of England; but when intelligence of the calamity was brought him, he fainted, and was never ſeen to ſmile from that moment to the day of his death.

The reſidue of the prince's life ſeems a mere blank; his reſtleſs deſires having now nothing left worth contending for, he became more fond of repoſe than of ambition. His daughter Matilda, however, becoming a widow by the death of the emperor, he married her a ſecond time to Geoffry Plantagenet, eldeſt ſon of the count of Anjou, and endeavoured to inſure her acceſſion, by obliging his barons to recognize her as the heir of all his dominions. Some time after, that princeſs was delivered of a ſon, who received the name of Henry; and the king, further to inſure her ſucceſſion, cauſed all the nobility of England and Normandy to renew their oaths of allegiance.

ance. The barons of theſe times were ready enough to ſwear whatever the monarch commanded; but, it ſeems, they obſerved it no longer than while it ſuited their own intereſted views. Henry did not long ſurvive theſe endeavours to ſecure the ſucceſſion in his family. He was ſeized with a ſudden indiſpoſition at St. Denis, in Normandy, from eating too plentifully of lampreys; this brought on his death, Dec. 1, 1135, in the ſixty-ſeventh year of his age, and the thirty-fifth of his reign, leaving, by will, his daughter Matilda heireſs of all his dominions.

This prince was one of the moſt accompliſhed that has filled the Engliſh throne; and poſſeſſed all the qualities both of body and mind, natural and acquired, which could fit him for the high ſtation to which he attained: his perſon was manly; his countenance engaging; his eyes clear, ſerene, and penetrating. The affability of his addreſs encouraged thoſe who might be overawed by the ſenſe of his dignity or his wiſdom; and though he often indulged his facetious humour, he knew how to temper it with diſcretion, and ever kept at a diſtance from all indecent familiarities with his courtiers. His ſuperior eloquence and judgment would have given him an aſcendant, even if he had been born in a private ſtation; and his perſonal bravery would have procured him reſpect, even though it had been leſs ſupported by art and policy. By his great progreſs in literature, he acquired the name of *Beauclerc*, or the Scholar; but his application to ſedentary purſuits abated nothing of the activity and vigilance of his government: and, though the learning of that age was better fitted to corrupt than improve the underſtanding, his natural good ſenſe preſerved itſelf untainted both from the pedantry and ſuperſtition which were then ſo prevalent among men of letters. His temper was very ſuſceptible of the ſentiments as well of friendſhip as of reſentment; and his ambition, though high, might be eſteemed moderate, had not his conduct towards his brother ſhewed, that he was too much diſpoſed to ſacrifice to it all the maxims of juſtice and equity.

As every expedient had been uſed during the life of Henry to fix the ſucceſſion in his family, he, among others, thought that the aggrandiſing his neareſt relations would not be an impolitic ſtep. He only dreaded the deſigns of Robert and his adherents, no way miſtruſting any attempts from another quarter. With theſe views, he was very liberal in heaping favours upon the children of his ſiſter Adela, who had been married to the count of Blois. He thought they would be the ſtrongeſt ſafeguard to protect him from the aſpiring attempts of his brother, or his poſterity; and he was reſolved to load them with favours, as being too far removed from the crown to entertain any hopes of ſucceeding in their deſigns to obtain it. In purſuance of this plan, he had, ſome years before his death, invited Stephen and Henry, the two youngeſt of his ſiſter's ſons, into England, and received them with great honour and eſteem. Thinking he could never do too much to ſecure their affections, he married Stephen to the daughter and heireſs of Euſtace count of Boulogne, who brought him an immenſe fortune. He conferred on him the great eſtates forfeited by Robert Mallet in England, and by the earl of Mortaigne in Normandy. Nor was Stephen's brother Henry without his ſhare in the king's liberalities. He was created abbot of Glaſtonbury, and biſhop of Wincheſter; ſo that the two brothers were thus become by far the moſt opulent perſonages in the kingdom.

Such great riches, ſo much power, and the conſciouſneſs of abilities, were the firſt incentives to Stephen's ambition. Placed at no great diſtance from the throne by birth, and perceiving the ſucceſs of his uncle's uſurpation, he reſolved to run the ſame career, and ſtrike for the crown. For this purpoſe, even during the king's lifetime, he uſed all his arts to procure popularity, and to cultivate the affections of the Engliſh nobility. By his bravery, activity, and vigour, he acquired the eſteem of the barons; by his generoſity and familiar addreſs, he obtained the regard of the people. No ſooner, therefore, was the king known to be dead, than Stephen, conſcious of his own influence, reſolved to ſecure to himſelf the poſſeſſion of what he ſo long deſired. He haſtened from Normandy, where he then was, and, ſetting ſail for England, landed at Dover. But there the garriſon ſhut their gates againſt him. From thence he went to Canterbury, where he was treated with ſimilar diſreſpect; till, paſſing on, he arrived at London, where he was inſtantly ſaluted king by all the lower ranks of the people. Being thus ſecure of the populace, his next object was to gain over the clergy; and for that purpoſe, his brother, the biſhop of Wincheſter, exerted all his influence. The archbiſhop of Canterbury, as he had taken the oaths of allegiance to Matilda, ſeemed for a while the moſt adverſe; but Hugh Bigod, ſteward of the houſehold, averring, upon oath, that the late king had expreſſed his intentions to make Stephen his heir, the archbiſhop anointed him without further ſcruple. Thus was Stephen made king, by one of thoſe ſpeedy revolutions which ever mark the inſtability of a ſtate in which they are cuſtomary. The people acquieſced in his claims from his popularity; the clergy allowed them, being influenced by the intrigues of his brother; and the nobility acknowledged a king, from the weakneſs of whoſe title they might hope to derive power to themſelves.

The firſt acts of an uſurper are always popular. Stephen, in order to ſecure his unſtable throne, paſſed a charter, granting ſeveral privileges to the different orders of the ſtate. To the nobility, a permiſſion to hunt in the royal foreſts; to the clergy, a ſpeedy ſucceſſion to all vacant benefices; and to the people, a reſtoration of the laws of Edward the Confeſſor. To fix himſelf ſtill more ſecurely, he took poſſeſſion of the royal treaſures at Wincheſter, and cauſed his title to be ratified by the pope, with a part of the money. A crown thus obtained, was to be kept only by repeated conceſſions. The nobility and the clergy, in proportion as they were indulged in one demand, ſoon found out others. The barons, in return for their ſubmiſſion, required the right of fortifying their caſtles, and putting themſelves in a poſture of defence; nor could the king refuſe his conſent to ſuch exorbitant demands, becauſe their oppoſition might be fatal. The clergy imitated the ſame pernicious example; and, in a ſhort time, all England was filled with theſe independent fortreſſes, which the noblemen garriſoned with their own vaſſals, or with mercenaries from the continent: nothing could exceed the miſery which the kingdom preſented. Unbounded rapine was exerciſed upon the people for the maintenance of thoſe troops; the private animoſities of the nobility were productive of wars in every quarter; and the whole country preſented a ſcene of petty tyranny and hoſtile preparation. It was in vain that a victory gained by the king over the Scots at Northallerton, A. D. 1138, promiſed to allay the murmurs of the people: their miſeries were riſen to too great a height for ſuch brilliant ſucceſſes to ſtifle or remove.

Not only real, but imaginary, grievances were added, to raiſe the diſcontents of the people, and fill the country with complaints againſt government. The clergy, whoſe power had been ingrafted on the ruins of the regal authority, continued, in imitation of the lay-barons, to erect caſtles, and entertain garriſons, ſenſible that their ſacred pretenſions would be more implicitly obeyed when their temporal power was ſufficient to enforce them. Stephen, who now perceived the miſchiefs attending theſe internal citadels, reſolved to begin with deſtroying thoſe of the clergy, whoſe profeſſion ſeemed averſe to the duties of war. Embracing, therefore, the conſequences of a fray, which had riſen between the vaſſals of the biſhop of Saliſbury and thoſe of the earl of Bretagne, he ſeized that prelate, and obliged both him and the biſhop of Lincoln to deliver up their caſtles which they had lately fortified. This the whole body of the clergy conſidered as a breach of that charter which he had granted upon his acceſſion; they loudly murmured at this infraction; and even the

biſhop of Wincheſter, his brother, reſolved to vindicate the privileges of the church. A ſynod was aſſembled, in which the diſgraced prelates openly inveighed againſt the king. But he, inſtead of anſwering the charge in perſon, deputed one of his barons to plead his cauſe, and intimidate his accuſers. In this critical ſituation of affairs, accounts were brought of Matilda's having landed in England, with a firm reſolution to diſpoſſeſs Stephen of the crown. Matilda, upon the death of the late king, being then in Normandy, found herſelf unable to oppoſe the rapid progreſs of her rival. She was not leſs unfortunate in her continental connexions than in thoſe at home. The Norman barons, unwilling to have the union with England diſſolved, almoſt unanimouſly declared for Stephen, and put him in poſſeſſion of their government; while Geoffry himſelf, Matilda's huſband, was content to reſign his pretenſions, and to receive a penſion from the Engliſh king. He had not, however, long acquieſced in this compromiſe, when he was incited to a renewal of his wife's claims by Robert, earl of Glouceſter, natural ſon of the late king, a nobleman who had, from the beginning, oppoſed the acceſſion of Stephen, and only waited a favourable opportunity to ſet on foot an inſurrection. This haughty baron, having at length ſettled the project of an oppoſition, retired to the court of Matilda, and from thence ſent Stephen a defiance, ſolemnly renouncing his allegiance. It was not long before he was in a capacity effectually to ſecond his declarations; for, ſenſible of the power of his party in England, he landed on the coaſt of Suſſex, in company with Matilda, whoſe claims he profeſſed to ſupport.

The whole of Matilda's retinue, upon this occaſion, amounted to no more than a hundred and forty knights, who immediately took poſſeſſion of Arundel caſtle; but the nature of her claims ſoon increaſed the number of her partiſans. Mean time Stephen, A. D. 1139, aſſured of her arrival, marched to beſiege Arundel, where ſhe had taken refuge, and where ſhe was protected by the queen dowager, who ſecretly favoured her pretenſions. This fortreſs was too feeble to promiſe a long defence; and it would have been ſoon taken, had it not been repreſented to the king, that, as it was a caſtle belonging to the queen dowager, it would be an infringement on the reſpect which was her due, to attempt taking it by force. There was a ſpirit of generoſity mixed with the rudeneſs of the times, that nobly prevailed in many tranſactions; Stephen permitted Matilda to remove in ſafety to Briſtol, another fortreſs, ſtronger than that from whence he permitted her to retire. It would be tedious and unintereſting to relate the various ſkirmiſhes on either ſide, in purſuance of their reſpective claims; ſuffice it to ſay, that Matilda's forces increaſed every day, while her antagoniſt ſeemed every hour to become more unpopular. The troops which Stephen led, were in general foreign mercenaries, commanded by tumultuous barons, more accuſtomed to pillage than to conquer. But, in this fluctuation of ſucceſs, the kingdom was expoſed to ruin, whichever ſide ſhould gain the victory. The caſtles of the nobility were become receptacles for licenſed robbers, who gave their rapine the name of attachment to party. The land was left untilled, the inſtruments of huſbandry were abandoned, and a terrible famine, the reſult of general diſorder, oppreſſed at once the ſpoiled and the ſpoilers. After numberleſs undeciſive conflicts, a complete victory, gained by the forces of Matilda, promiſed to terminate theſe diſputes. Stephen had marched his forces to relieve the city of Lincoln; the earl of Glouceſter led a body of troops to ſecond the efforts of the beſiegers. Theſe two armies engaged within ſight of the city, and a dreadful battle enſued, A. D. 1141. On the firſt onſet, the two wings of Stephen's army, which were compoſed of horſe, were put to flight; and the infantry, ſoon following the example, deſerted their king. All who inherited the blood of the Norman conqueror were brave. Stephen was for ſome time left without attendants, and fought on foot in the midſt of his enemies, aſſaulted by multitudes, and reſiſting all their efforts with aſtoniſhing intrepidity. Being hemmed in on every ſide, he made way for ſome time with his battle-axe; but that breaking, he drew his ſword, and dealt his blows round the circle in which he was incloſed. At length, after performing more than could be naturally expected from a ſingle arm, his ſword flying in pieces, he was obliged to ſurrender himſelf a priſoner. He was conducted to Glouceſter; and though at firſt treated with reſpect, he was ſoon after, on ſome ſuſpicions, thrown into priſon, and laid in irons.

Stephen and his party now appeared entirely overcome. Matilda was poſſeſſed not only of ſuperior power, but alſo of the juſter title. She was conſidered as the rightful ſovereign, and the barons came in daily from all quarters to do her homage. The biſhop of Wincheſter himſelf, who had eſpouſed her cauſe againſt his brother, admitted her claims; he led her in proceſſion into his cathedral, and bleſſed her with the greateſt ſolemnity; the archbiſhop of Canterbury alſo ſwore allegiance, and ſhortly after an eccleſiaſtical council, at which none of the laity aſſiſted, except deputies from the city of London, confirmed her pretenſions; and ſhe was crowned at Wincheſter with all imaginable ſolemnity. Yet ſuch is the vanity of human affairs, and ſuch was the great power of the barons, who were in effect maſters of thoſe they nominally elected as governors, that Matilda remained but a ſhort time in poſſeſſion of the throne. This princeſs, beſide the diſadvantages of her ſex, which weakened her influence over a martial people, was reſolved upon repreſſing the growing power of the nobles, who had left only the ſhadow of authority to their ſovereign. But having neither temper nor policy ſufficient to carry her views into execution, ſhe diſguſted thoſe by her pride to whom ſhe was obliged for her advancement. The firſt petition ſhe refuſed was the enlargement of Stephen; ſhe rejected the remonſtrance of the Londoners, who intreated her to mitigate the ſevere laws of the Norman princes, and revive thoſe of Edward the Confeſſor. She affected to treat the nobility with a degree of diſdain to which they had long been unaccuſtomed; while the fickle nation once more began to pity their depoſed king, and to repent the ſteps they had ſo haſtily taken in her favour. The biſhop of Wincheſter, who probably was never her ſincere friend, was not remiſs in fomenting theſe diſcontents; and when he found the people ripe for revolt, he detached a party of his vaſſals to block up the city of London, where the queen had then her court. At the ſame time meaſures were taken to inſtigate the Londoners againſt her, and to ſeize her perſon. Matilda, having notice of this conſpiracy, retired to Wincheſter, whither the biſhop, ſtill her ſecret enemy, followed her, watching an opportunity to ruin her cauſe. The inſidious prelate was ſoon ſufficiently ſtrong to throw off the maſk, and to beſiege the queen in the very place where ſhe firſt received his benediction. There ſhe continued for ſome time; but the town being oppreſſed by famine, ſhe was obliged to eſcape, while her brother, the earl of Glouceſter, endeavouring to follow, was taken priſoner, and exchanged for Stephen, who had till now remained in captivity. Thus a revolution, as ſudden as the former, took place; Matilda was depoſed, and obliged to ſeek an aſylum in Oxford. Stephen was again recogniſed as king, and taken from a dungeon to be placed on the throne.

The civil war now broke out afreſh, with all its train of deſolations. Many were the battles fought, and various the ſtratagems of thoſe who conducted the affairs of either party. Matilda eſcaped from Oxford, at a time when the fields were covered with ſnow, by being dreſſed in white, with four knights, her attendants, habited in the ſame manner. Stephen was upon another occaſion ſurpriſed by the earl of Glouceſter at Wilton, and narrowly eſcaped by flight. At length the empreſs was obliged to quit the kingdom; and the death of the earl

of Glouceſter ſoon after, who was the life of her party, gave a dreadful blow to her intereſts. Yet ſtill the affairs of Stephen continued to fluctuate. Though this monarch had the good fortune to ſee his rival fly to the continent, and leave him entire poſſeſſion of the kingdom; though his brother was poſſeſſed of the higheſt authority among the clergy; yet he was ſtill inſecure. Finding that the caſtles built by the noblemen of his own party encouraged a ſpirit of independence, and were little leſs dangerous than thoſe which remained in the hands of the enemy, he endeavoured to gain theſe; and this attempt united many of his own adherents againſt him. His danger was increaſed by the oppoſition of the clergy, who, from having been on his ſide, began to declare loudly in favour of his opponents. The pope laid his whole party under an interdict, for having refuſed to ſend deputies, to be named by himſelf, to the general council at Rheims. By this ſentence, which was now firſt practiſed in England, divine ſervice was prohibited, and all the forms of religion ceaſed, except baptiſm and extreme unction. This ſtate of Stephen's affairs looked ſo unpromiſing, that a revolution was once more expected, when his ſubmiſſion to the ſee of Rome for a while ſuſpended the threatened blow.

Stephen had hitherto been oppoſed only by men who ſeconded the pretenſions of another; and who conſequently wanted that popularity which is uſually attached to thoſe who fight their battles. But he was now to enter the liſts with a rival, who was every day coming to maturity, and growing more formidable. This was Henry, the ſon of Matilda, who had now, A. D. 1149, reached his ſixteenth year, and gave the greateſt hopes of future magnanimity and proweſs. It was the cuſtom of thoſe days for young noblemen to receive the honour of knighthood before they were permitted to carry arms; and Henry propoſed to receive his admiſſion from his great uncle, David, king of Scotland. With this view, and in hopes of once more inſpiring his mother's party, he landed in England with a vaſt retinue of knights and ſoldiers, accompanied by many of the nobility, as well Engliſh as foreigners. The ceremony was performed by the Scots' king at Carliſle, amidſt a multitude of people aſſembled on this occaſion, who all, pleaſed with the vigour, the addreſs, and ſtill more perhaps with the noble mein, of the young prince, ſecretly began to wiſh for a revolution in his favour. Soon after his return to Normandy, he was, by his mother's conſent, inveſted with that duchy, which had ſome time before revolted to her. He was alſo, upon the death of his father Geoffrey Plantagenet, ſecured in the poſſeſſion of his dominions; and, to add ſtill more to his increaſing power, he married Eleanor the daughter and heireſs of the duke of Guienne and Poictou; and took poſſeſſion of theſe extenſive territories. With this great acceſſion of power young Henry was reſolved to claim the hereditary crown of England, and to diſpute once more Stephen's uſurped pretenſions. For this purpoſe, being previouſly aſſured of the diſpoſitions of the majority of the people in his favour, he made an invaſion on England, A. D. 1158, where he was joined by almoſt all the barons of the kingdom. Though it was the middle of winter, he advanced to beſiege Malmſbury; and took the town, after having defeated a body of the enemy that attempted to oppoſe his march. Soon after, the caſtle of Reading, and above thirty other fortreſſes, ſubmitted to his arms.

In the mean time Stephen, alarmed at the popularity and ſucceſs of his young rival, had been trying every method to anticipate the purpoſe of his invaſion, by depriving him of a ſucceſſion he ſo earneſtly ſought after. He had convoked a council in London, where he propoſed his own ſon Euſtace, a weak prince, for his aſſociate in the government, as well as for his ſucceſſor. He had even expreſſed a deſire of immediately proceeding to the coronation; but was mortified to find that the archbiſhop of Canterbury refuſed to perform the ceremony. It was then no time to proſecute his reſentment, when his rival was landed, and making haſty ſtrides to the throne; he therefore marched with all poſſible diligence to oppoſe him, while he was beſieging Wallingford; and, coming in ſight, he reſted his army to prepare for battle. In this ſituation the two armies remained for ſome time, within a quarter of a mile of each other, a deciſive action being expected every day. But while they continued in this menacing poſture, a treaty was ſet on foot by the interpoſition of William earl of Arundel, for terminating the diſpute without blood. The death of Stephen's ſon, which happened during the courſe of the treaty, facilitated its concluſion. It was therefore agreed by all parties, that Stephen ſhould reign during the reſidue of his life; and that juſtice ſhould be adminiſtered in his name; that Henry ſhould on Stephen's death, ſucceed to the kingdom; and William, Stephen's ſon, ſhould inherit Boulogne and his patrimonial eſtate. After all the barons had ſworn to this treaty, which filled the kingdom with gratulation, Henry evacuated England, and Stephen returned to the peaceable enjoyment of his throne. His reign, however, was ſhortly after terminated by his death, which happened at Canterbury, Oct. 25, 1154;—in the cathedral of which city he was interred.

The good fortune and brilliant ſucceſs of many princes, gives them, with poſterity, the reputation of wiſdom and virtue: Stephen wanted ſucceſs in all his ſchemes but that of aſcending the throne; and conſequently his virtues and abilities remain clouded and doubtful. If we eſtimate them by the happineſs of his ſubjects, they will appear in a very humble point of view, ſince England was never more rent with internal commotion and inquietude, than during his reign; but if we conſider them as they appear in his private conduct, few monarchs can boaſt more. Active, generous, and brave, his ſole aim was to deſtroy a vile ariſtocracy that oppreſſed the people; but the abilities of no man, however politic or intrepid, were then ſufficient to reſiſt an evil that was too firmly rooted, and interwoven with the very exiſtence of the prince. The moſt prominent faults, therefore, of this monarch's reign, are chiefly to be imputed to the ungovernable ſpirit of the people; but his virtues were his own.

From the COMMENCEMENT of the PLANTAGENETS, in the perſon of HENRY II. to the ſigning of MAGNA CHARTA and DEATH of KING JOHN.

Henry Plantagenet, when called to the throne of England, was maſter, in right of his father, of Anjou and Touraine; in that of his mother, of Normandy and Maine; in that of his wife, of Guienne, Poictou, Xaintonge, Auvergne, Perigord, Angoumois, and the Limoſin; and he ſoon after annexed Brittany to his other dominions; all which rendered him one of the moſt powerful monarchs in Chriſtendom, and an object of dread and jealouſy to the king of France. But to diminiſh the glory of ſwaying the ſceptre over ſuch extenſive territories, the ſubjects of Henry were diſunited by ſituation and by law, by language and by manners; and the prince himſelf, from his reſidence in England, was conſidered as a kind of foreigner in his French dominions, and but little regarded. Yet under every circumſtance, the riſing grandeur of the houſe of Plantagenet, could not fail to impreſs with terror the king of France. Louis VII. had ever maintained a ſtrict union with Stephen, and had endeavoured to prop the unſtable fortunes of that aſpiring uſurper. But after his death, it was too late to think of oppoſing the ſucceſſion of Henry, who had been received in England with the acclamations of all orders of the people.

The firſt acts of Henry the Second's reign, alſo correſponded to the flattering hopes entertained of his abilities. Conſcious of his ſtrength, he began to correct thoſe abuſes, and to reſume thoſe privileges which had been extorted from the weakneſs or the credulity of his predeceſſors. He immediately diſmiſſed all thoſe mercenary ſoldiers who committed infinite diſorders in the nation. He or-

dered

HENRY II.

London Published as the Act directs Janr. 13 1804 by J Wilkes

dered all the caſtles, which wer erected ſince the death of Henry the Firſt, and were become receptacles of rapine, to be demoliſhed, except a few which he retained in his own hands for the protection of the kingdom. The adulterated coin was cried down, and new money ſtruck of the right value and ſtandard. He reſumed many of thoſe benefactions which had been made to churches and monaſteries in the former reigns. He gave charters to ſeveral towns, by which the citizens claimed their freedom and privileges, independent of any ſuperior but himſelf. Theſe charters were the ground-work of Britiſh liberty. The ſtruggles which had long exiſted, whether the king, or the barons, or the clergy, ſhould be deſpotic over the people, now began to aſſume a new aſpect; and a fourth order, namely, that of the more opulent of the people, began to claim a ſhare in adminiſtration. Thus was the feudal government at firſt impaired; and liberty began to dawn more equably throughout the nation.

In the mean time his brother Geoffrey, by the voluntary election of the inhabitants, had acquired the city and county of Nantz; but dying ſoon after he had taken poſſeſſion of them, Henry, as his heir, claimed thoſe territories. By a contract of marriage which he entered into between his ſon, then only five years old, and a daughter of Louis VII. ſtill in her cradle, he prevailed on the latter prince not to oppoſe his pretenſions; and croſſing the ſeas, he entered Brittany with a formidable army. The able conduct of Henry procured him ſtill more important advantages; by his addreſs he concluded another marriage between his third ſon, Geoffrey, and the daughter and heireſs of the duke of Brittany: the duke of Brittany died ſoon after; and Henry, as the guardian of his infant ſon and daughter-in-law, took poſſeſſion of that principality. The French king had been a ſilent ſpectator of the progreſs of Henry in Brittany; but he reſiſted his attempts to ſeize the country of Thouloufe. An open war was kindled between the two monarchs; but it was productive of no memorable event; and the differences of theſe potent rivals were accommodated by the mediation of the pope; upon which Henry did homage to the king of France, under the feudal ſyſtem, for all the territories he held on the continent.

On his return to England, A. D. 1161, Henry directed his attention towards reſtricting the encroachments of Rome: theſe had grown with a rapidity not to be brooked by a prince of his high ſpirit; and to facilitate his deſign of ſuppreſſing them, he advanced to the dignity of chief metropolitan, Becket, his chancellor, of whoſe flexibility of temper he had made a very miſtaken eſtimate. That prelate had early inſinuated himſelf into the favour of Theobald archbiſhop of Canterbury, and obtained from him conſiderable preferment. This enabled him to purſue at Boulogne, the ſtudy of civil and canon law; and by gradual advances, he roſe to the dignity of chancellor of England. Being of a gay and ſplendid turn, and apparently little tenacious of eccleſiaſtical privileges, Henry thought him the fitteſt perſon, on the death of Theobald, for the high ſtation of archbiſhop of Canterbury; but no ſooner was he inſtalled in this dignity, than he altered his demeanor and conduct. He maintained in his retinue and attendants his ancient pomp and luſtre; but in his own perſon he affected the greateſt auſterity; ſeemed perpetually employed in reciting prayers and pious lectures; and all men of penetration plainly foreſaw that he was meditating ſome political innovation.

Henry, though he perceived that Becket was wholly intent on promoting the intereſts of his order, was far from relinquiſhing his deſign of retrenching the clerical uſurpations. The ſchiſm for the papacy which divided all Europe, afforded him an opportunity favourable to his projects. Among other inventions to obtain money, the clergy had inſiſted upon the neceſſity of a ſpecific penance as an atonement for ſin; and the ſums of money that were received by the prieſts in lieu of theſe penances, are ſaid to have exceeded the amount of the king's revenue. To eaſe his people of ſo heavy and impious an impoſition, Henry demanded that a civil officer of his appointment ſhould be preſent in all eccleſiaſtical courts, and ſhould for the future give his conſent to every bargain which was to be made with ſinners for their ſpiritual offences. The eccleſiaſtics in that age had renounced all immediate ſubordination to the magiſtrate; and as many of them were of low character, crimes of the blackeſt dye were committed with impunity by them. An hundred murders ſince Henry's acceſſion had been perpetrated by men in holy orders. A prieſt in Worceſterſhire, having debauched a gentleman's daughter, had proceeded to murder the father; the general indignation againſt the crime, moved the king to attempt the remedy of an abuſe which had become ſo infamous; he required that the prieſt ſhould be delivered up, and receive condign puniſhment from the magiſtrate. Becket inſiſted on the privileges of the church, and maintained that no greater puniſhment could be inflicted on the criminal than degradation. Henry, exaſperated, ſummoned an aſſembly of the prelates of England; and demanded whether they were willing to ſubmit the affair to the ancient laws of the kingdom: and though at firſt they endeavoured to evade the queſtion, by the exception of their own order, they yielded ſoon after to his menaces. Becket, however, for a long time remained inflexible; and at laſt rather complied in conſequence of the deſires of the court of Rome, than of the threats of the king. But Henry was not content with a declaration in general terms: he reſolved to define expreſsly thoſe laws to which he required obedience; and in order to mark the limits between the civil and eccleſiaſtical juriſdiction, he ſummoned a general council of the nobility and prelates at Clarendon; when by his influence or authority, the laws ſo favourable to prerogative, known by the name of the *Conſtitutions of Clarendon*, were voted without oppoſition.

Henry, by thus reducing the ancient cuſtoms of the realm to writing, endeavoured to prevent all future diſpute on the ſubjects to which they related; and thought he had thus fully eſtabliſhed the ſuperiority of the legiſlature above all ſpiritual canons. Apprehenſive, however, that the biſhops might retract their conſent to theſe conſtitutions, he required that they ſhould ſet their ſeal to them. Becket, of all the prelates, alone oppoſed his will; but, finding himſelf deſerted even by his brethren, he at length gave way, and engaged by oath, legally, with good faith, and without fraud or reſervation, to obſerve them. The ratification of the pope was ſtill thought requiſite; but, though Alexander owed the higheſt obligations to Henry, he rejected the conſtitutions of Clarendon, which he plainly ſaw would render England independent of the papal power; and therefore offered, for the ſake of peace, to ratify a few of the leaſt important articles. Becket no ſooner perceived the determination of the Roman pontiff, than he expreſſed the deepeſt ſorrow for his compliance, and endeavoured to engage the other biſhops to adhere to their common rights, in which he repreſented the intereſt and honour of God to be concerned. To make him feel his reſentment, Henry inſtituted againſt him a proſecution for ſome land that he held; and, when the primate excuſed himſelf, on account of indiſpoſition, from appearing, that prince ſummoned a great council at Northampton, in which Becket was arraigned as guilty of a contempt of the king's court; and being condemned, all his goods and chattels were confiſcated. Henry, not ſatisfied with this ſentence, however haſty and oppreſſive, ſoon after required Becket to give in the accounts of his adminiſtration while chancellor; and eſtimated the balance in arrear at forty-four thouſand marks, for which he demanded ſureties. In this emergency, ſeveral of the primate's friends adviſed him to reſign his ſee, on condition of receiving an acquittal; but the daring ſpirit of Becket rejected theſe timid counſels; and he determined to brave his enemies. After celebrating maſs, where he had previouſly ordered that the

entrois

entroit to the communion ſervice ſhould begin with the words, *princes ſat and ſpake againſt me*, arrayed in the ſacred veſtments, and bearing the croſs before him, he entered the royal apartments, and declared that he put both himſelf and his ſee under the protection of the ſupreme pontiff. This appeal to the pope in a civil cauſe, was a matter new and unprecedented; but Becket perſevered in it. He refuſed to hear the ſentence which the barons and ſheriffs had paſſed on the king's claim; and, having in vain aſked permiſſion to leave Northampton, he withdrew ſecretly to the ſea-coaſt, and found a veſſel which conveyed him to France, where he was received with every token of regard.

To provide againſt the conſequences of the breach which was impending between England and the apoſtolic ſee, Henry inhibited, under ſevere penalties, all appeals to the pope or archbiſhop: he declared it treaſonable to bring from either of them an interdict upon the kingdom, and puniſhable, in ſecular clergymen, by the loſs of their eyes, and caſtration; in regulars, by amputation of their feet; and in laics, with death. On the other hand, Becket not only iſſued a cenſure, excommunicating the king's chief miniſters by name, but alſo abrogated and annulled the Conſtitutions of Clarendon; and declared that he ſuſpended the ſpiritual thunder over Henry himſelf, ſolely that the prince might avoid the blow by a timely repentance.

Henry eluded the immediate danger, by flattering Alexander with the proſpect of a ſpeedy reconciliation between himſelf and Becket, which at length took place; and Becket was allowed to return, on conditions which may be conſidered both honourable and advantageous to that prelate. He was not required to give up any rights of the church, or reſign any of thoſe pretenſions which had been the original ground of the controverſy. It was agreed that all theſe queſtions ſhould be buried in oblivion; but that Becket and his adherents ſhould, without making farther ſubmiſſion, be reſtored to all their livings, and that even the poſſeſſors of ſuch benefices as depended on the ſee of Canterbury, and had been filled during the primate's abſence, ſhould be expelled, and Becket have liberty to ſupply the vacancies. In return for conceſſions which trenched ſo deeply on the honour and dignity of the crown, Henry reaped only the advantage of ſeeing his miniſters abſolved from the ſentence of excommunication pronounced againſt them, and of preventing the interdict, with which his kingdom had been threatened. It was eaſy indeed to ſee how much he dreaded that event, when a prince of ſo high a ſpirit, on one occaſion humiliated himſelf ſo far as to hold the ſtirrup of the haughty Becket, while he mounted his horſe!

Henry did not even gain a temporary tranquillity by this conceſſion. While he daily dreaded the ſentence of excommunication, he had thought it prudent to aſſociate his ſon prince Henry in the royalty. The ceremony had been performed by the archbiſhop of York; but Becket pretended, as archbiſhop of Canterbury, that he had the ſole right to officiate, and therefore, in the name of the pope, he ſuſpended the archbiſhop of York, and excommunicated the biſhops of London and Saliſbury, with others who had aſſiſted at the coronation of the prince. The king, who was then at Baieux, being extremely agitated on hearing of this new inſtance of Becket's malignant behaviour, burſt forth into an exclamation againſt his ſervants, whoſe want of zeal, he ſaid, had ſo long expoſed him to the arrogance of that ungrateful and imperious prelate. Four gentlemen of his houſehold, Reginald Fitz-Urſe, William de Traci, Hugh de Moreville, and Richard Brito, taking theſe poignant expreſſions to be a hint for the primate's death, immediately communicated their thoughts to each other; and ſwearing to avenge their prince's quarrel, ſecretly withdrew from court. Some menacing expreſſions which they had dropped, gave a ſuſpicion of their deſign; and the king diſpatched a meſſenger after them, charging them to attempt nothing againſt the perſon of Becket: but theſe orders arrived too late to prevent their fatal purpoſe. The four aſſaſſins, though they took different roads to England, arrived nearly at the ſame time at Saltwood, near Canterbury, and from thence proceeded to the archiepiſcopal palace. They found the primate, who truſted entirely to the ſacredneſs of his character, very ſlenderly attended; and, though they threw out many menaces and reproaches againſt him, he was ſo devoid of fear, that, without uſing any precautions, he immediately proceeded to St. Benedict's church to veſpers. They followed him thither, attacked him before the altar, and having cloven his head with many blows, retired without any oppoſition. Such was the tragical end of Thomas à Becket, a prelate of the moſt lofty, intrepid, and inflexible, ſpirit, who was able to maſk the enterpriſes of pride and ambition, under the diſguiſe of ſanctity, and of zeal for the intereſts of religion; but who certainly was a bad ſubject, and therefore could not be a good man.

Henry, on the firſt report of Becket's violent meaſures, had purpoſed to have him arreſted, and had already taken ſome ſteps towards the execution of that deſign; but the intelligence of his murder threw the prince into great conſternation; and he immediately felt the dangerous conſequences which he had reaſon to apprehend from ſo horrible an event. An archbiſhop of the higheſt reputed ſanctity, aſſaſſinated before the altar in the exerciſe of his function, and on account of his zeal in maintaining eccleſiaſtical privileges, could not fail to attain the higheſt honours of martyrdom; while his reputed murderer would be ranked among the moſt bloody tyrants of the age. Theſe conſiderations gave the king the utmoſt anxiety; and, as it was extremely his intereſt to clear himſelf from all ſuſpicion, he took no care to conceal the depth of his affliction. He ſhut himſelf up from the light of day, and from all commerce with mankind; he even refuſed, during three days, all food and ſuſtenance. The courtiers, apprehending dangerous effects from his deſpair, were at laſt obliged to break in upon his ſolitude; and, employing every means of conſolation, induced him to accept of nouriſhment, and occupied his leiſure in taking precautions againſt the conſequences which he ſo juſtly apprehended.

The moſt important point which Henry had to eſtabliſh, was to convince the world and the pope of his innocence; or rather to diſſuade him from proceeding with his excommunications againſt England. The archbiſhop of Rouen, the biſhops of Worceſter and Evreux, with five perſons of inferior quality, were forthwith diſpatched to Rome; they were with difficulty admitted to an audience; and the rage of Alexander was not appeaſed until they made oath before the whole conſiſtory, of their ſovereign's innocence, and engaged that he would make every ſubmiſſion to the holy ſee, that ſhould be required of him. Though the rage of the clergy was thus diverted from the king, their zeal for the memory of Becket found ample employment in extolling the merits of his martyrdom. Endleſs were the panegyrics on his virtues; and the miracles wrought at his ſhrine were more numerous, more ridiculous, and more impudently atteſted, than thoſe which ever filled the ſuperſtitious legend of any confeſſor or martyr. Two years after his death he was canonized by pope Alexander; a ſolemn jubilee was eſtabliſhed for celebrating his memory: his body was enriched with preſents from all parts of Chriſtendom; pilgrimages were performed to obtain his interceſſion with heaven; and it was computed, that in one year, above an hundred thouſand pilgrims arrived in Canterbury, and paid their devotions at his tomb.

In the mean time Henry, thus delivered from the thunders of the Vatican, A. D. 1172, undertook an expedition againſt Ireland. That iſland, about the middle of the twelfth century, beſides ſeveral ſmall tribes, contained the principal ſovereignties of Munſter, Leinſter, Meath, Ulſter,

Ulſter, and Connaught; and, as it had been uſual for the one or the other of theſe ſtates to take the lead in their wars, there was commonly ſome prince who ſeemed, for the time, to act as monarch of Ireland. Roderic O'Connor, king of Connaught, was then advanced to this dignity; but his government, ill obeyed even within his own territory, could not unite the people in any meaſures, either for the eſtabliſhment of order, or for defence againſt foreigners. The ambition of Henry had, very early in his reign, been moved by the proſpect of theſe advantages, to attempt the ſubjugation of Ireland; and a pretence was only wanting to invade a people, who, being always confined to their own iſland, had never given offence to their neighbours. For this acquiſition, Henry had recourſe to Rome, which aſſumed a right to diſpoſe of kingdoms and empires; and, not foreſeeing the dangerous diſputes which he was one day to maintain with that ſee, he aſſiſted to give ſanctions to claims which were now become dangerous to all ſovereigns. Adrian III. who then filled the papal chair, was by birth an Engliſhman; and, being on that account the more diſpoſed to oblige Henry, he readily countenanced the plan; ſo that Henry only waited for a favourable opportunity of carrying his arms into Ireland.

Dermot Macmorrogh king of Leinſter, having rendered himſelf obnoxious by his licentious tyranny, had been expelled his dominions by a confederacy, of which the king of Connaught was the chief. The exiled prince applied to Henry for ſuccour, who furniſhed him with letters patent, by which he empowered his ſubjects to aid him in the recovery of his dominions. Dermot engaged with Richard, ſurnamed Strongbow, earl of Strigul; who ſtipulated, for this aſſiſtance, the hand of his daughter Eva, and a promiſe that he ſhould be declared heir to his territories. While Richard was aſſembling his vaſſals, Dermot went into Wales; and, meeting with Robert Fitz-Stephens, conſtable of Abertevi, and Maurice Fitz-Gerald, he alſo engaged them in his ſervice, and obtained their promiſe of invading Ireland: he himſelf immediately croſſed the Iriſh ſea, concealed himſelf in a monaſtery that he had founded, and prepared every thing for the reception of his Engliſh allies. The troops of Fitz-Stephens were firſt ready. He landed in Ireland with thirty knights, ſixty eſquires, and three hundred archers; and, with this ſmall body, ſtruck a great terror into the native inhabitants. The conjunction of Maurice de Pendergaſt, who, about the ſame time, brought over ten knights and ſixty archers, enabled Fitz-Stephens to attempt the ſiege of Wexford, a town then inhabited by the Danes; and, after gaining an advantage, he made himſelf maſter of the place. Soon after, Fitz-Gerald arrived with ten knights, thirty eſquires, and a hundred archers; and, being joined by the former adventurers, they compoſed a force which nothing in Ireland was able to withſtand.

Roderic, the chief monarch of the iſland, was foiled in different actions; the prince of Oſſory was obliged to ſubmit, and give hoſtages for his peaceable behaviour; and Dermot, not content with being reſtored to his kingdom of Leinſter, projected the dethroning of Roderic, and aſpired to the ſole dominion of Ireland. In proſecution of theſe views, he ſent over a meſſenger to the earl of Strigul, challenging the performance of his promiſe, and diſplaying the mighty advantages which might be reaped by a reinforcement of warlike troops from England. Strongbow firſt ſent over Raymond, one of his retinue, with ten knights and ſeventy archers, who, landing near Waterford, defeated a body of three thouſand Iriſh that had ventured to attack him; and, as Richard himſelf, who brought over two hundred horſe and a body of archers, joined them a few days after, the victorious Engliſh made themſelves maſters of Waterford, and proceeded to Dublin, which was taken by aſſault. Roderic, in revenge, cut off the head of Dermot's natural ſon, who had been left as a hoſtage in his hands; and Richard, marrying Eva, became ſoon after, by the death of Dermot, maſter of the kingdom of Leinſter, and prepared to extend his authority over all Ireland. Roderic and the other Iriſh princes, alarmed at the danger, and combining together, beſieged Dublin with an army of thirty thouſand men; but earl Richard, making a ſudden ſally at the head of ninety knights, with their followers, put this numerous army to rout, and purſued them with great ſlaughter. Henry, now become jealous of the progreſs of his own ſubjects, ſent orders to recall the Engliſh, and himſelf landed in Ireland, at the head of five hundred knights. The adventurers appeaſed him by offering to hold their acquiſitions in vaſſallage to his majeſty; and, the ſpirits of the Iriſh being broken, nothing remained but to receive their ſubmiſſion. The whole iſland was formally annexed to the Engliſh crown; and Henry, after a few months ſtay, returned in triumph to England.

The joy which this conqueſt diffuſed throughout the realm was very great; and Henry ſeemed now to have attained the ſummit of his utmoſt wiſhes. He was the undiſputed monarch of the greateſt domain in Europe; father of a numerous progeny, that gave both luſtre and authority to his crown; victorious over all his enemies, and implicitly obeyed by all his ſubjects. Henry, his eldeſt ſon, had been anointed king, and was acknowledged as undoubted ſucceſſor; Richard, his ſecond ſon, was inveſted with the duchy of Guienne and Poictou; Geoffrey, his third ſon, inherited, in right of his wife, the duchy of Bretagne; and John, his youngeſt, was deſigned to be king in Ireland. Such was the proſpect of grandeur before the royal eyes; but ſuch is the inſtability of human affairs, that this very exaltation of his family proved the means of embittering his future life, and of diſturbing the peace of his government.

Among the few vices aſcribed to this monarch, unreſtrained gallantry was one. Queen Eleanor, whom he had married from motives of ambition, and who had been divorced from her former conſort for her incontinence, was long become diſagreeable to Henry; and he ſought in others thoſe ſatisfactions he could not find in her. Among the number of his miſtreſſes we have the name of Fair Roſamond, whoſe perſonal charms, and whoſe ſorrowful death, make ſo conſpicuous a figure in the romances of that period. It is true that the ſeverity of criticiſm has rejected moſt of theſe accounts as fabulous; yet well-known fables, when much celebrated, make a part of the hiſtory, at leaſt of the manners, of the age. Roſamond Clifford is ſaid to have been the moſt beautiful woman of her day. Henry loved her with a moſt faithful attachment; and, in order to ſecure her from the reſentment of his queen, who, from having been formerly incontinent herſelf, now became jealous of his incontinence, he concealed her in a labyrinth in Woodſtock Park, where he paſſed in her company his hours of relaxation and pleaſure. How long this intercourſe continued, is not known; but it was not ſo cloſely concealed but that it came to the queen's knowledge, who, as the ſtory goes, being guided by a clue of ſilk to her fair rival's retreat, compelled her, by holding a drawn dagger to her breaſt, to ſwallow poiſon. Whatever may be the veracity of this account, certain it is, that this imperious queen, though formerly offenſive by her own gallantries, was now no leſs ſo by her jealouſy; and ſhe it was who firſt ſowed the ſeeds of diſſenſion between the king and his children.

Young Henry was taught to believe himſelf injured, when, upon being crowned as partner in the kingdom, he was not admitted into an active ſhare of the adminiſtration. The diſcontent of young Henry was ſoon followed by that of his brothers Geoffrey and Richard, whom the queen had perſuaded to aſſert their title to the territories reſpectively aſſigned them; and, upon the king's refuſing their demands, they all fled ſecretly to the court of France, where Louis gave them countenance and protection. Queen Eleanor herſelf was meditating an eſcape

to the ſame court, and had put on man's apparel for that purpoſe, when ſhe was ſeized by the king's order, and put into confinement. Thus Henry ſaw all his long-concerted views of future happineſs totally clouded; his ſons, ſcarcely yet arrived at manhood, eager to ſhare the ſpoils of their father's poſſeſſions; his queen warmly encouraging thoſe undutiful princes in their rebellion; and many potentates of Europe not aſhamed to encourage and ſupport their pretenſions. Nor were his proſpects much more flattering when extended to his nobles and ſubjects: his licentious barons, diſguſted with a vigilant adminiſtration, wiſhed to be governed by princes whom they could flatter or intimidate: the clergy had not yet forgotten Becket's death; and the people conſidered him as a ſaint and a martyr, whoſe blood had not yet been ſufficiently atoned. In this univerſal diſaffection, Henry ſupported that intrepidity of character which he had ſhewn through life, and prepared for a conteſt from which he could expect to reap neither profit nor glory.

It was not long before the young princes had ſufficient influence upon the continent to raiſe a powerful confederacy in their favour. Beſide the king of France, Philip count of Flanders, Matthew count of Boulogne, Theobald count of Blois, and Henry count of Eu, all declared themſelves in their intereſts. William king of Scotland alſo made one of this aſſociation, and a plan was concerted for a general invaſion of Henry's extenſive dominions. This was put into execution, A. D. 1173. The king's continental dominions were attacked on one ſide by the counts of Flanders and Boulogne; and, on the other, by the king of France with a large army, which the young Engliſh princes animated by their preſence and popularity. But Henry found means to diſcomfit them in every quarter; the count of Boulogne being mortally wounded in the aſſault of the town of Driencourt, his death ſtopped the progreſs of the Flemiſh arms on that ſide. The French army being obliged to retire from the ſiege of Verneuil, Henry attacked their rear, put them to the rout, and took many priſoners. The barons of Bretagne alſo, who had riſen in favour of the young princes, ſhared no better fate; their army was driven from the field, and, taking ſhelter in the town of Dol, were there made priſoners of war. Theſe ſucceſſes repreſſed the pride and the expectations of the confederated forces, and a conference was ſolicited by the French king, to which Henry readily agreed. In this interview, he had the mortification to ſee his three ſons ranged on the ſide of his mortal and inveterate enemy; but he was ſtill more aggravated to find that their demands roſe in proportion to their incapacity to obtain them.

While Henry was thus quelling the inſolence of his foreign enemies, his Engliſh ſubjects were on the point of revolting from their obedience at home. The nobility were in general united to oppoſe him; and an irruption at this time by the king of Scotland aſſiſted their ſchemes of inſurrection. The earl of Leiceſter, at the head of a body of Flemings, invaded Suffolk, but was repulſed with great ſlaughter. The earl of Ferrars, Roger de Mowbray, and many others of equal dignity, roſe in arms; while the king of Scotland broke into the northern provinces, with an army of eighty thouſand men, and made the country one extenſive ſcene of deſolation. Henry, after defeating his enemies in France, haſtened to oppoſe thoſe in England; but he imagined that his long diſſenſions with Becket ſtill operated to his diſadvantage in the minds of the people, and it was his determination effectually to do them away. As ſoon, therefore, as he came within ſight of the church of Canterbury, alighting from his horſe, he walked barefoot towards the town, proſtrated himſelf before the ſhrine of the ſaint, remained in faſting and prayer a whole day, watched all night the holy relics, made a grant of fifty pounds a year to the convent for a conſtant ſupply of tapers to illuminate the ſhrine; and, not ſatisfied with theſe ſubmiſſions, he aſſembled a chapter of monks, diſrobed before them, put a ſcourge of diſcipline into each of their hands, and preſented his bare ſhoulders to their infliction. Next day he received abſolution; and, departing for London, received the agreeable news of a victory over the Scots, ſaid to have been obtained in the very hour of his penitential diſcipline.

Having in this ſuperſtitious manner made his peace with the church, and brought over the minds of the people, he fought upon ſurer grounds; every victory he obtained was imputed to the favour of the reconciled ſaint, and every ſucceſs thus tended to aſcertain the growing confidence of his party. The victory which was gained over the Scots was ſignal and deciſive. William, their king, after having committed the moſt horrible depredations upon the northern frontiers, had thought proper to retreat, upon the advance of an Engliſh army, commanded by Ralph de Glanville, the famous Engliſh lawyer. As he had fixed his ſtation at Alnwick, he thought himſelf perfectly ſecure, from the remoteneſs of the enemy, againſt any attack. In this, however, he was deceived; for Glanville made a haſty and fatiguing march to the place of his encampment, and approached it during the obſcurity of a miſt. The Scots were ſurpriſed in the morning to find themſelves attacked by the enemy, which they thought at ſuch a diſtance; and their king, venturing with a ſmall body of a hundred horſe to oppoſe the aſſailants, was quickly ſurrounded, and taken priſoner. His troops fled on all ſides with the utmoſt precipitation, and made the beſt of their way to their own country.

Henry's affairs now began to wear a better aſpect; the barons, who were preparing for a revolt, made inſtant ſubmiſſion; they delivered up their caſtles to the victor, and England in a few weeks was reſtored to perfect tranquillity. Young Henry, who was ready to embark with a large army, to ſecond the efforts of the Engliſh inſurgents, finding all diſturbances quieted at home, abandoned all thoughts of the expedition. Louis attempted in vain to beſiege Rouen, which Henry haſtened over to ſuccour. A ceſſation of arms, and a conference, were once more agreed upon by the two monarchs. Henry granted his ſons much leſs advantageous terms than they formerly refuſed to accept; the moſt material, were ſome penſions for their ſupport, ſome caſtles for their reſidence, and an indemnity to all their adherents. Thus England emerged from the numerous calamities that threatened to overwhelm it, and the king was anxious to make various proviſions for the glory, the happineſs, and the ſecurity, of his people.

His firſt care was to make his priſoner, the king of Scots, undergo a proper puniſhment for his unmerited and ungenerous attack. That prince was obliged to ſign a treaty, by which he was compelled to do homage to Henry for his dominions in Scotland. It was agreed, that his barons and biſhops alſo ſhould do the ſame; and that the fortreſſes of Edinburgh, Stirling, Berwick, Roxborough, and Jedborough, ſhould be delivered into the hands of the conqueror till the articles were performed. This treaty was rigorouſly executed; and the king, barons, and prelates, of Scotland, did homage to Henry in the cathedral of York. His domeſtic regulations were as judicious as his political conduct was ſplendid. He enacted ſevere penalties againſt robbery, murder, falſe coining, and burning of houſes; ordaining, that theſe crimes ſhould be puniſhed by the amputation of the right hand and right foot. He partitioned out the kingdom into four diviſions; and appointed judges to go their reſpective circuits to try cauſes, to reſtrain the cruelties of their barons, and to protect the lower ranks of the people in ſecurity. He renewed the trial by juries, which, by the ferocious cuſtom of camp-fight, had almoſt grown obſolete; and, to ſecure the kingdom more effectually againſt invaſion, he eſtabliſhed a well-armed militia, capable of defending the realm upon any emergency.

But it was not in the power of human ability to conciliate the turbulent and ambitious diſpoſition of his ſons; who,

who, not content with rebelling againſt their father, now warmly proſecuted their enmities againſt each other. Richard, whom Henry had made maſter of Guienne, and who had already diſplayed uncommon valour in humbling his mutinous barons, refuſed to obey his father's orders in doing homage to his elder brother for that duchy. Young Henry and Geoffrey, A. D. 1180, uniting their arms, carried an implacable war into their brother's dominions; and while the king was endeavouring to compoſe their differences, he found himſelf ſecretly conſpired againſt by them all. What the reſult of this conſpiracy might have been, is uncertain; but it was defeated by the death of young Henry, who expired in the twenty-ſixth year of his age, at Martel-caſtle, near Turenne, not without the deepeſt remorſe for his undutiful conduct towards his father; who alſo ſhortly after loſt his ſon Geoffrey, who was killed in a tournament at Paris, A. D. 1183. The loſs of this prince gave few, except the king himſelf, any uneaſineſs, as he was univerſally hated, and went among the people under the opprobrious name of *The Child of Perdition*.

But the death of the prince did not wholly remove the cauſe of his revolt; for Philip the Great, or Auguſtus, then king of France, diſputed his title to the wardſhip of Arthur, the ſon of Geoffrey, who inherited Bretagne on the death of his father. Some other cauſes of diſſenſion inflamed the diſpute between the two monarchs. Philip had again allured Richard from his duty; and inſiſted upon his marriage being completed with Adelais, his ſiſter, to whom he had been affianced. In conſequence of this claim, another conference was held between Giſors and Trie, under a vaſt elm, ſaid to have ſhaded more than an acre. It was in the midſt of this conference upon their mutual rights, that a new object of intereſt was offered to their deliberation, which quickly bore down all ſecular conſiderations before it. This was no leſs than the projection of a ſecond cruſade to the Holy Land. Richard, who had long wiſhed to partake in the glory of ſuch an expedition, and who could not bear to have even his father a partner in his victories, entered into a confederacy with the king of France, who promiſed to confirm him in thoſe wiſhes, at which he ſo ardently aſpired. He therefore began by making an inroad into the territories of the count of Thouloufe, a vaſſal of the king of France; and this monarch, in order to retaliate, carried the war into Berri and Auvergne. Henry, who was appriſed of their ſecret confederacy, made depredations in turn upon the dominions of the French king. Conferences were again propoſed, attended, and diſmiſſed. At length, Henry found himſelf compelled to enter upon a war with France and his eldeſt ſon, who were thus unnaturally leagued againſt him. He now ſaw the confederacy daily gaining ground. Ferte-Bernard fell firſt into the hands of the enemy; Mans was next taken by aſſault; Amboiſe, Chaumont, and Château de Loire, threw open their gates; Tours was inveſted; and the king, who had retired to Saumur, had daily inſtances of the cowardice and defection of his governors. While in this ſtate of deſpondency, the duke of Burgundy, the count of Flanders, and archbiſhop of Rheims, interpoſed their good offices; and a treaty was concluded, in which he ſubmitted to many mortifying conceſſions. It was agreed that Richard ſhould marry the princeſs Adelais, and be crowned king of England during the life-time of his father. It was ſtipulated, that Henry ſhould pay twenty thouſand marks to the king of France, as a compenſation for the charges of the war; that his own barons ſhould engage to make him obſerve this treaty; and in caſe of violating it, to be at liberty to join Philip and Richard againſt him; and that all thoſe who had fought on the ſide of Richard, ſhould receive a free pardon. Theſe were terms ſufficiently humiliating to a prince, who had always been accuſtomed to give, not receive, ſtipulations: but what was his aſtoniſhment, when upon demanding a liſt of the perſons who had lifted the ſword againſt him, he found his ſon John, his favourite child, among the number. He had long borne an infirm ſtate of body with calm reſignation; he had ſeen his children rebel without much emotion; he ſaw his own ſon his conqueror, himſelf bereft of his power, reduced to the condition of a fugitive, and almoſt ſuppliant, in his old age; and all this he endured with equanimity of temper: but when he ſaw that child, whoſe intereſts always lay next his heart, among the number of thoſe who were in rebellion againſt him, he could no longer contain his indignation. He broke out into expreſſions of the utmoſt deſpair; curſed the day in which he had received his birth; and beſtowed on his ungrateful children a malediction which he never after could be prevailed upon to retract. The more his heart was diſpoſed to friendſhip and affection, the more he reſented this unnatural return; and now, not having one corner in his heart where he could look for comfort, or fly for refuge from his conflicting paſſions, he loſt all his former vivacity. A lingering fever ſoon terminated his life and his miſeries. He died at the caſtle of Chinon, near Saumur, July 6, 1189, in the fifty-eighth year of his age, and the thirty-fifth of his reign. His corpſe was conveyed to the nunnery of Fonteverard; and next day, while it lay in the abbey church, Richard chancing to enter, was ſtruck with horror at the ſight. At his approach the blood was ſeen to guſh out at the mouth and noſtrils of the corpſe; and this, which, without doubt, was accidental, was interpreted by the ſuperſtition of the times as the moſt awful rebuke. Richard could not endure the ſight; he exclaimed, "that he was his father's murderer;" and expreſſed a ſtrong, though late, ſenſe of that undutiful conduct which brought his parent to an untimely grave.

Thus died Henry II. the firſt monarch of the houſe of Plantagenet, the greateſt prince of his time for wiſdom, virtue, and ability, and the moſt powerful in extent of dominion, of all thoſe that had ever filled the throne of England. His character, both in public and private life, is almoſt without a blemiſh; and he ſeems to have poſſeſſed every accompliſhment, both of body and mind, which makes a man eſtimable or amiable. He was of a middle ſtature, ſtrong, and well proportioned; his countenance was lively and engaging; his converſation affable and entertaining; his elocution eaſy, perſuaſive, and ever at command. He loved peace, but poſſeſſed both conduct and bravery in war; was provident without timidity; ſevere in the execution of juſtice without rigour; and temperate without auſterity. He preſerved health, and kept himſelf from corpulency, to which he was ſomewhat inclined, by an abſtemious diet, and by frequent exerciſe, particularly by hunting. When he could enjoy leiſure, he recreated himſelf in learned converſation, or in reading; and he cultivated his natural talents by ſtudy, above any prince of his time. His affections, as well as his enmities, were warm and durable; and his long experience of ingratitude and infidelity of men never deſtroyed the natural ſenſibility of his temper, which diſpoſed him to friendſhip and ſociety. His death was deeply lamented by his ſubjects, whoſe happineſs ſeems to have been the chief aim of all his endeavours. He not only enacted wholeſome laws, but ſaw them executed with great punctuality. He was generous, even to admiration, with regard to thoſe who committed offences againſt his own perſon; but he never forgave the injuries that were offered to his people; in thoſe caſes atrocious crimes were puniſhed ſeverely, without reſpect of perſons. He was eloquent, agreeable, and facetious; remarkably courteous and polite; compaſſionate to all in diſtreſs; ſo charitable, that he conſtantly allotted one-tenth of his houſhold proviſions to the poor, and in time of dearth he maintained ten thouſand indigent perſons, from the beginning of ſpring till the end of autumn. His talents, naturally good, he had cultivated with great aſſiduity, and delighted in the converſation of learned men, to whom he was a generous benefactor. His memory was ſo ſurpriſingly tenacious, that he never forgot a face nor a circumſtance that

was worth remembering. Though ſuperior to his contemporaries in ſtrength, riches, true courage, and military ſkill, he never engaged in war without reluctance, and was ſo averſe to bloodſhed, that he expreſſed an uncommon grief at the loſs of every private ſoldier. Yet he was not entirely exempt from human frailties; his paſſions, naturally violent, often hurried him to exceſs; he was prone to anger, tranſported with the luſt of power, and particularly accuſed of incontinence, not only in the affair of Roſamond, but alſo in a ſuppoſed commerce with the French princeſs Adelais, who was bred in England as the future wife of his ſon Richard. This infamous breach of honour and hoſpitality, if he was actually guilty, is the foulеſt ſtain upon his character; though the fact is doubtful, and we hope the charge untrue.

Henry left two legitimate ſons, Richard who ſucceeded him, and John, who inherited no territory, and therefore received the ſurname of *Lackland*. He left three legitimate daughters, Maud, who was married to the duke of Saxony; Eleanor, married to Alphonſo king of Caſtile; and Joan, to William king of Sicily. He left two natural ſons by Roſamond; Richard Longſword, who was afterwards married to the daughter and heireſs of the earl of Saliſbury; and Geoffrey, who was afterwards archbiſhop of York.

Richard, ſurnamed *Cœur de Lion*, now aſcended the throne of his father, and ſeemed reſolved to diſcourage future diſobedience, by diſmiſſing from his ſervice all thoſe who had encouraged his former undutiful behaviour. He retained in his ſervice all the loyal adherents of the late king; and more than once obſerved, that thoſe who were faithful to one ſovereign would probably continue ſo to another. He eagerly releaſed his mother from confinement, and was profuſe in heaping favours upon his brother John, who made but a very indifferent return for his indulgence.

Richard, agreeable to the knight-errantry of the times, had conſtantly formed a romantic deſire for heroic adventures; and an immoderate zeal for the external rites of Chriſtianity was become the ruling paſſion of Richard and his aſſociates. The Jews, who had been for ſome time increaſing in the kingdom, were the firſt who fell a ſacrifice to this enthuſiaſtic zeal; and great numbers of them were ſlaughtered by the citizens of London, upon the very day of the king's coronation. Five hundred of that perſecuted people had retired into York caſtle for ſafety; but finding themſelves unable to defend the place, they reſolved to periſh by killing one another, rather than meet the fury of their purſuers. Having taken this dreadful reſolution, they firſt murdered their wives and children; threw the dead bodies over the wall againſt their enemies, who attempted to ſcale it; and then, ſetting fire to the houſes, periſhed voluntarily in the flames.

After this ſhocking ſpecimen of the mild influence of Chriſtianity upon the royal mind, Richard determined upon an expedition to the Holy Land, and took every method to raiſe ſupplies for ſo expenſive an undertaking. His father had left him in poſſeſſion of above a hundred thouſand marks; and this ſum he endeavoured to augment by all expedients, however pernicious to the public, or ſubverſive of royal authority. He put up to ſale the revenues and manors of the crown, and ſeveral offices of the greateſt truſt and power. Liberties, charters, caſtles, and employments, were given to the beſt bidders. When his friends intimated the danger of this venality, he told them he would ſell London itſelf, if he could find a purchaſer. In theſe times we find but one man who was honeſt enough to retire from employment when places were become thus ignominious. This was the great lawyer Glanville, who reſigned his poſt of juſticiary, and took the croſs. Richard was not much diſpleaſed at his reſignation, as he was able ſhortly after to ſell his employment to Hugh biſhop of Durham, who gave a thouſand marks for the office. Thus the king, elated with the hopes of fame, was blind to every other conſideration. Numerous exactions were practiſed upon people of all ranks and ſtations; menaces, promiſes, expoſtulations, were uſed to frighten the timid, or allure the avaricious. At length, Richard having got together a ſufficient ſupply for his adventure, and having even ſold his royal prerogative over Scotland, he ſet out for the Holy Land, whither he was impelled by repeated meſſages from Philip Auguſtus king of France, who waited to embark with him in the ſame enterpriſe.

The place of rendezvous for the armies of England and France, was the plain of Vezelay, on the borders of Burgundy; where, when Richard and Philip arrived, they found at their command a choſen body of a hundred thouſand fighting men. This formidable army, not long after, put to ſea; and were obliged, by ſtreſs of weather, to take ſhelter in Meſſina, the capital of Sicily, where they were detained during the whole winter. Richard took up his quarters in the ſuburbs, and poſſeſſed himſelf of a ſmall fort, which commanded the harbour. Philip quartered his troops in the city, and lived upon the beſt terms with the Sicilian king. But it happened that the Meſſineſe ſoon took occaſion to treat the Engliſh with great inſolence; ſhut their gates, manned their walls, and ſet the king of England at defiance. Richard endeavoured to uſe the mediation of Philip to compromiſe this inſult; but while the two monarchs were in deliberation, a body of Sicilians iſſued from the town, and attacked the Engliſh with great impetuoſity. This was ſufficient to excite the fury of Richard, who attacked the city with ſuch fury, that it was ſoon taken, and the ſtandard of England diſplayed on the ramparts. Philip, who conſidered the place as his quarters, exclaimed againſt this mark of ſuperiority, and ordered ſome of his troops to pull down the Engliſh colours. To this, however, Richard returned for anſwer, that he himſelf would take down the ſtandard, ſince it diſpleaſed his aſſociate; but that no power on earth ſhould *compel* him to do ſo. This produced a mutual jealouſy between the two monarchs, which never after ſubſided. At length, however, having ſettled all controverſies, they ſet ſail for the Holy Land, where the French arrived much ſooner than the Engliſh. Richard's fleet encountered a violent tempeſt, and two of his ſhips were driven upon the iſland of Cyprus. Iſaac, prince of that country, either impelled by avarice, or willing to diſcourage the reſt of Richard's fleet from landing, pillaged the ſhips that were ſtranded, and threw the ſeamen and ſoldiers into priſon. But Richard, who ſoon after arrived, took ample revenge for the injury. He diſembarked his troops, defeated the petty tyrant, entered the capital by ſtorm, obliged Iſaac to ſurrender at diſcretion, and took the whole iſland into his poſſeſſion. It was there that Richard married Berengaria, daughter to the king of Navarre, who had attended him in his expedition; and whom he had preferred to Adelais, the king of France's ſiſter, whoſe charms were not ſo powerful, or whoſe fidelity was more ſuſpected. Upon the arrival of the Chriſtian armies in Paleſtine, fortune was ſeen to declare in a moſt extraordinary manner in favour of the Engliſh king. But for the exploits of Richard, and the event of this cruſade, ſee the article EGYPT, p. 323, &c. of this volume.

Richard, having concluded his expedition to the Holy Land with more glory than advantage, began to think of carrying his laurels home; but was at a total loſs how to effect his purpoſe. Taking ſhipping for Italy, he was wreeked, near Aquileia. From thence directing his travels towards Raguſa, and putting on the diſguiſe of a pilgrim, he reſolved to make his way, in that humble manner, through Germany. But, unfortunately, his intentions and perſon were not ſo concealed, but that his quality was ſuſpected; and the governor of Iſtria purſued him, in order to make him a priſoner. Being thus forced from the direct road, he was obliged to paſs by Vienna, where his expenees and liberalities betraying his dignity, he was recogniſed by the infatiable Leopold duke of Auſtria, who commanded him to be impriſoned and loaded with ſhackles,

RICHARD I. *surnamed* COEUR DE LION.

London Published as the Act directs Jan.1 1803 by J Wilkes

ſhackles, to the diſgrace of honour and humanity. This prince had ſerved under Richard at the ſiege of Acre; and being diſguſted at ſome affront offered him on that occaſion, he took this baſe method of retaliating the injury. Henry the Sixth, then emperor of Germany, was equally an enemy to Richard, on account of the alliance contracted between him and Tancred king of Sicily, by his marriage with Berengaria. When, therefore, he received the news of Richard's being in the cuſtody of Leopold, he required the priſoner to be delivered up to him, engaging to pay one half of the expected ranſom to the duke, as a reward for this ſervice. Thus the king of England, who had filled the eaſtern world with his fame, was baſely thrown into a dungeon, loaded with irons, and bought and ſold, by thoſe fellow Chriſtians who now expected to reap a ſordid advantage from his misfortunes. It was a long time before his ſubjects in England knew what was become of their ſovereign. So little intercourſe was there between different nations at that time, that this diſcovery is ſaid by ſome to have been made by a poor French minſtrel, who playing upon his harp, near the fortreſs in which Richard was confined, a tune which he knew that unhappy monarch was fond of, he was anſwered by the king from within, who with his harp played the ſame tune; and this diſcovered the place of his confinement.

The emperor, in order to make him ſubmit to the payment of a large ranſom, treated him with the greateſt ſeverity, and reduced him to a condition worſe than that of the meaneſt malefactor. Richard, however, was too high-ſpirited to be meanly depreſſed by thoſe indignities. As he did not know what extremities he might be reduced to, or what condeſcenſions he might be compelled to make, he wrote to the juſticiary of England to obey no orders that ſhould come from him, if they ſeemed in the leaſt derogatory to his honour, or the good of the nation. His precautions were well founded; for the emperor accuſed him at the diet of Worms of many crimes and miſdemeanors, partly to juſtify his malevolence, and partly to ſwell the ranſom. There he charged the king of England with making an alliance with Tancred, the uſurper of Sicily; of turning the arms of the cruſade againſt a Chriſtian prince; of affronting the duke of Auſtria before Acre; of obſtructing the progreſs of the Chriſtian arms by his conteſts with the king of France; of concluding a truce with Saladin, and leaving Jeruſalem in the hands of the infidels. Theſe frivolous charges were heard by Richard with becoming indignation. He even waved his dignity to anſwer them; and ſo fully vindicated himſelf before the princes who compoſed the diet, that they exclaimed loudly againſt the conduct of the emperor, while the pope even threatened him with excommunication. This avaricious monarch now ſaw that he could no longer detain his priſoner; he therefore courted terms of accommodation. A ranſom was agreed upon, which amounted to no leſs than a hundred and fifty thouſand marks, or about three hundred thouſand pounds of our money. Of this, Richard was to pay one hundred thouſand before his enlargement, and ſixty-ſeven hoſtages were to be delivered for the remainder. The agreement being thus made, Richard ſent Hubert, one of his faithful followers in the Holy Land, to England, with the terms upon which he was to receive his liberty, and with a commiſſion to raiſe money for that purpoſe. In the feudal times, every military tenant was, by law, obliged to give aid for the ranſom of his lord from captivity. The tax ariſing from this obligation was accordingly raiſed throughout the kingdom. But the ardour of the people greatly outſtript the operation of the law: vaſt ſums were raiſed by voluntary contribution, to purchaſe the freedom of their king. The churches and monaſteries melted down their plate; the biſhops, abbots, and nobles, paid a fourth of their annual income; the inferior clergy contributed a tenth of their tithes; ſo that the requiſite ſum was ſoon raiſed, with which queen Eleanor, and the juſticiary, ſet out for Germany.

While the Engliſh were thus ſedulouſly employed in preparing the ranſom of their king, Philip Auguſtus was as aſſiduouſly occupied in endeavouring to prolong Richard's captivity. But in this the inſidious French monarch failed. Richard's enlargement was performed with great ceremony at Mentz, in preſence of the German nobility; the money was paid by queen Eleanor, the hoſtages were delivered as a ſecurity for the remainder, and the king of England once more reſtored to the boſom of his ſubjects. Nothing could exceed the joy of the Engliſh upon ſeeing their monarch return, after all his achievements and ſufferings. He made his entry into London in triumph; and ſuch was the profuſion of wealth ſhown by the citizens, that the German lords who attended him were heard to ſay, that if the emperor had known of their affluence, he would not ſo eaſily have parted with their king. He, ſoon after, ordered himſelf to be crowned anew at Wincheſter. He convoked a general council at Nottingham, at which he confiſcated all his traitorous brother's poſſeſſions; and then, having made proper preparations for avenging himſelf on the king of France, he ſet ſail with a numerous body of forces for Normandy.

Richard was but one day landed, A. D. 1194, when his faithleſs brother John came to make ſubmiſſion, and to throw himſelf at the monarch's feet. It was not without ſome degree of reſentment, that Richard received a prince who had all along been leagued with his moſt inveterate enemy. However, at the interceſſion of queen Eleanor, he was received into favour. "I forgive him," ſaid the king, "and I wiſh I could as eaſily forget his offences as he will forget my pardon." This condeſcenſion was not loſt upon a man, whoſe heart, though naturally bad, was not yet dead to every ſentiment of humanity. From that time he ſerved him faithfully; and did him ſignal ſervices in his battles with the king of France, which followed ſoon after. Theſe wars, which, like all others, produced no permanent good, only ſerved to keep alive the animoſity of the two nations. The moſt remarkable circumſtance in the journals of thoſe tranſactions, is the taking the biſhop of Beauvais captive, at the head of his vaſſals, and his being put in priſon by Richard. When the pope demanded his liberty, and claimed him as an inoffenſive child of the church, the king ſent his holineſs the bloody coat of mail which that prelate had worn in battle; aſking whether that was the coat of his ſon? The inhumanity of both parties was in this manner inflamed by inſult and revenge. Both kings frequently put out the eyes of their priſoners; and treaties were concluded and broken with little repugnance. At length, the pope's legate commenced a treaty, which promiſed to be attended with a firm reconciliation; but the premature death of Richard put an end to the conteſt.

Aymar, viſcount of Limoges, a vaſſal of the crown, had taken poſſeſſion of a treaſure, which was found by one of his peaſants in digging a field; and, to ſecure the remainder, he ſent a part of it to the king. Richard, as ſuperior lord, ſenſible that he had a right to the whole, inſiſted on its being ſent him; and, upon refuſal, attacked the caſtle of Chalus, where he underſtood this treaſure had been depoſited. On the fourth day of the ſiege, as he was riding round the place to obſerve where the aſſault might be made with the moſt promiſing ſucceſs, he was aimed at by Bertram de Gourdon, an archer, from the caſtle, and pierced in the ſhoulder with an arrow. The wound was not in itſelf dangerous; but an unſkilful ſurgeon endeavouring to diſengage the arrow, ſo mangled the fleſh, that it brought on a mortification. Richard, when he found his end approaching, made a will, in which he bequeathed the kingdom, with all his treaſure, to his brother John, except a fourth part, which he diſtributed among his ſervants. He ordered alſo that the archer who

ſhot him ſhould be brought into his preſence, when he demanded "what injury he had done him, that he ſhould take away his life?" The priſoner anſwered with deliberate intrepidity: "You killed with your own hands my father and my two brothers; and you intended to have hanged me. I am now in your power, and my torments may give you revenge; but I will endure them with pleaſure, ſince it is my conſolation that I have rid the world of a tyrant." Richard, ſtruck with this anſwer, ordered the ſoldier to be preſented with one hundred ſhillings, and ſet at liberty; but Marcadé, the king's general, ordered him to be flayed alive, and then hanged. Richard died, April 6, 1199, in the tenth year of his reign, and the forty-ſecond of his age, leaving one natural ſon, named Philip.

The moſt ſhining part of this prince's character was his military talents; no man ever in that romantic age carried courage and intrepidity to a greater height; and this quality gained him the appellation of the lion-hearted *cœur de lion*. He paſſionately loved glory; and, as his conduct in the field was not inferior to his valour, he ſeems to have poſſeſſed every talent neceſſary for acquiring it: his reſentments alſo were high, his pride unconquerable, and his ſubjects, as well as his neighbours, had therefore reaſon to apprehend, from the continuance of his reign, a perpetual ſcene of blood and violence. Of an impetuous and vehement ſpirit, he was diſtinguiſhed by all the good, as well as the bad, qualities which are incident to that character. He was open, frank, generous, ſincere, and brave; he was revengeful, domineering, ambitious, haughty, and cruel; and was thus better calculated to dazzle men by the glare of his enterpriſes, than either to promote their happineſs, or his own grandeur, by a ſound and well-regulated policy. As military talents make great impreſſion on the people, he ſeems to have been much beloved by his Engliſh ſubjects; and he is remarked to have been the firſt reigning prince over Normandy who bore a ſincere affection and regard for them. He paſſed, however, only four months of his reign in that kingdom: the croiſade employed him near three years: he was detained about four months in captivity; the reſt of his reign was ſpent either in war, or preparations for war, againſt France: and he was ſo pleaſed with the fame which he had acquired in the eaſt, that he ſeemed determined, notwithſtanding all his paſt misfortunes, to have further exhauſted his kingdom, and to have expoſed himſelf to new hazards, by conducting another croiſade againſt the infidels. In his perſon he was tall, ſtrong, ſtraight, and well-proportioned. His arms were remarkably long; his eyes blue, and full of vivacity; his hair was of a yellowiſh colour; his countenance fair and comely, and his air majeſtic. He was endowed with good natural underſtanding; his penetration was uncommon; he poſſeſſed a fund of manly eloquence; his converſation was ſpirited; and he was much admired for his talents of repartee. He was interred at Fonteverard, in the ſame monaſtery with his brother Henry.

John, who had nothing to fear from a diſputed ſucceſſion, immediately aſcended the Britiſh throne. The king of France, who was the only monarch that could aſſiſt the pretenſions of a rival, had long declared for John's title; and, during the life of his brother, had given him the moſt flattering proofs of ſincerity and friendſhip. But it was otherwiſe now Richard was no more. Philip began to ſhew that his former friendſhips were calculated not to ſerve John, but to harraſs England; not to diſtribute juſtice, but to augment his own power. There was an old claimant of the crown, whom indeed Richard had declared heir to the throne; but who was afterwards ſet aſide, at the inſtance of the dowager-queen. This was Arthur, the ſon of his brother Geoffrey, a youth who, though but twelve years of age, promiſed to be deſerving of the imperial dignity. Philip, who anxiouſly deſired to embarraſs John, reſolved to ſecond this young prince's claim; and ſeveral of the continental barons then declared in favour of Arthur.

John after being put in poſſeſſion of the Engliſh throne, loſt no time in regulating his intereſt on the continent; and his firſt care was to recover the revolted provinces from young Arthur, his nephew. The war, therefore, between John and Philip Auguſtus, was renewed with all its former animoſity. At length however a treaty put an end to thoſe conteſts which only ſerved to thin mankind; and it was haſtened by a circumſtance peculiarly favourable. Arthur, together with Conſtantia his mother, miſtruſting the deſigns of the king of France, who only intended to betray them, came and threw themſelves on the mercy of John, and reſtored to him the provinces which continued in their intereſt. Thus, after a ſhort conteſt, John ſaw himſelf undiſputed monarch of all the dominions which were annexed to the Engliſh throne. But he very ſoon loſt all his power and pre-eminence by his folly and imprudence. His firſt unpardonable conduct was his marriage with Iſabella daughter of the count of Angouléme, while his queen was yet alive; and what ſtill increaſed the adulterous connection, while Iſabella belonged to another huſband, the count of Marche, who ardently loved her. This open violation of the rights of civilized ſociety, produced an inſurrection; to repreſs which, John was obliged to have recourſe to his Engliſh ſubjects for aſſiſtance, by whoſe means the confederacy was ſoon broken; and he imagined from his preſent ſucceſs, that he might in future commit every ſpecies of violence with impunity. But an event yet remained to render John more hateful to his ſubjects, and deſervedly abhorred by all good and virtuous men. Young Arthur, who, with his mother, had reſigned themſelves to the king's protection, ſoon perceived their error, and found that nothing honourable was to be expected from a prince of his abandoned character; they therefore fled from Mans, where he detained them, and once more took refuge with the king of France. They were received by Philip with every mark of diſtinction; and young Arthur's intereſts were vigorouſly ſupported. One town after another ſubmitted to his authority; and his arms ſeemed every where attended with ſucceſs. But his unreaſonable ardour ſoon put an end to his hopes and his claims. Being of an enterpriſing diſpoſition, he had laid ſiege to a fortreſs, with a very ſmall force, in which the dowager-queen was protected. John, therefore, falling upon the rear of his little army before they were aware of his approach, the young prince was taken priſoner, together with the moſt conſiderable of the revolted barons. The greater part of the priſoners were ſent over to England; but the young prince was ſhut up in the caſtle of Falaiſe. John, thus finding his nephew at his mercy, began to meditate upon meaſures which would moſt effectually remove his future apprehenſions. No other expedient ſuggeſted itſelf, but what is foremoſt in the mind of tyrants; namely, the young prince's death. The king therefore hired one aſſaſſin after another, who engaged to diſpatch him; but the cruelty of their hearts relented, and each ruffian returned without accompliſhing the murder. John, thus finding that all his emiſſaries had more compunction than himſelf, reſolved, with his own hands, to execute the bloody deed; and, for that purpoſe, ordered prince Arthur to be removed to the caſtle of Rouen, the capital of Normandy, ſituated on the Seine. John came in a boat to the place at midnight, and ordered the young prince to be brought before him; who, ſuſpecting that his death was meditated, threw himſelf in the moſt ſuppliant manner upon his knees before his uncle, and implored for mercy. But his youth, his affinity, his merits, were all diſregarded: the unfeeling tyrant made no reply, but ſtabbed him in cool blood with his own hand; and, faſtening a ſtone to the dead body, threw it into the Seine!

All men were ſtruck with horror and deteſtation of the perpetrator of this cruel deed; and, as John had in his hands Eleanor, the ſiſter to Arthur, the people of Bretagne choſe for their ſovereign Alice, the younger daughter of Conſtantia by a ſecond marriage. They ſolicited

KING JOHN.

London. Published as the Act directs Feb.y 1. 1804. by J. Wilkes

the aſſiſtance of Philip Auguſtus, who received their application with pleaſure; ſummoned John to a trial under the feudal law; and, on his non-appearance, declared him to have forfeited to his ſuperior lord all his fiefs in France. Nor was this a vain threat. Philip extended his conqueſts along the banks of the Loire, while John conſumed his hours in laſcivious pleaſures at Rouen. "Let the French go on, (ſaid he,) I will retake in a day what it has coſt them years to acquire." Yet, inſtead of fulfilling this vain boaſt, he meanly claimed the protection and interpoſition of the Roman pontiff; but Philip, inſtead of retiring at the command of the pope's legates, laid ſiege to Chateau Gaillard, A. D. 1204, which was the moſt conſiderable fortreſs on the frontiers of Normandy; and which, being taken in a night-aſſault, Rouen alone maintained ſome reſiſtance, and the citizens demanded thirty days to advertiſe their prince of their danger. Upon the expiration of that term they opened their gates; and Philip, not ſatisfied with this acquiſition, carried his victorious arms into the weſtern provinces, and ſoon reduced Anjou, Maine, Touraine, and part of Poictou. To recover theſe foreign dominions, John landed with a conſiderable army at Rochelle, in 1206; but, on the approach of Philip, he deſerted his troops in a moſt cowardly manner, and returned to England covered with ſhame; and, though he obtained a ſhort reſpite from war, by a truce for two years with the French monarch, that interval was ſtill more diſgraceful to him, by the alternate weakneſs and deſpotiſm of his government, and by the encroachments and arrogance of the pope.

Innocent the Third, a lofty and enterpriſing genius, availing himſelf of a diſpute which had ariſen from an irregular election for the ſee of Canterbury, now claimed the right of nominating the primate of England. He commanded the monks or canons of Chriſtchurch, who had hitherto poſſeſſed that important privilege, to chooſe, on pain of excommunication, cardinal Langton, an Engliſhman by birth, but warmly attached to the ſee of Rome. In vain the monks repreſented, that an election, without a previous writ from the king, would be highly irregular: one only had the courage to perſevere in his oppoſition; the reſt, overcome by the menaces of the pope, complied with his mandate. John, inflamed with the utmoſt rage at this interference of the court of Rome, expelled from the monaſtery the prior and the monks of Chriſtchurch; and, when threatened with the reſentment of Innocent, he burſt out into violent invectives, and ſwore if the pope preſumed to lay his kingdom under the cenſures of the church, that he would expel all the biſhops and clergy in England, and confiſcate all their eſtates. Theſe ſallies of paſſion, however, were far from ſhaking the reſolution of the Roman pontiff, who, ſenſible that the king had loſt the confidence of his people, fulminated againſt him the ſentence of interdict. The execution of this ſentence was calculated to ſtrike a ſuperſtitious people with the deepeſt awe. The nation was of a ſudden deprived of all the exterior forms of its religion; the altars were deſpoiled of their ornaments; the dead, inſtead of being interred in conſecrated ground, were thrown into ditches, or buried in the common fields; marriage was ſolemnized in the church-yards; and every circumſtance carried ſymptoms of the moſt immediate apprehenſion of divine vengeance.

John now confiſcated the eſtates of all the clergy who obeyed the interdict; and treated with the utmoſt rigour the adherents of the church of Rome. Though ſome of the clergy yielded to his threats, and celebrated divine ſervice, they complied with reluctance, and were regarded both by themſelves and the people, as men who ſacrificed their conſciences to their fears or their intereſt. During this conteſt, the king attempted military expeditions againſt Scotland, againſt Ireland, and againſt the Welſh; and commonly prevailed more from the weakneſs of his enemies, than his own vigour or abilities; and ſo great was his want of juſtice and generoſity, that the luſtre of theſe enterpriſes was obſcured by the tyranny of his government, and the licentiouſneſs of his private conduct.

The court of Rome, in 1213, finding that the interdict had not produced the deſired effect, determined to proceed to ſentence of excommunication. John, alarmed at this ſtep, now offered to acknowledge Langton as primate, and to reſtore the exiled clergy; but Langton inſiſting on full reparation for the rents of their confiſcated eſtates, the king broke off the conference. The haughty pope, without temporizing any longer, abſolved John's ſubjects from their oaths of fidelity and allegiance; but declared him to have forfeited, by his contumacy, his crown and kingdom; and he offered it to the king of France. Philip could no how withſtand this tempting prize. He levied a powerful army, and collected in the ports of Normandy and Picardy one thouſand ſeven hundred veſſels. To oppoſe him, John aſſembled at Dover ſixty thouſand men; a force ſufficient, had they been animated with zeal; but the minds of the common people were impreſſed by ſuperſtition; and alienated from their duty by the arrogance of the tyrant. The difficulties of John were alſo augmented by his cowardice and incapacity. Inſtead of braving, he reſolved to yield to the tempeſt; and, in a conference with Pandulf, the pope's legate, he acquieſced in all the exorbitant demands of his infallible maſter; and even paſſed a charter, in which he declared he had, for the remiſſion of his own ſins, reſigned England and Ireland to God, to St. Peter and St. Paul, and to pope Innocent, and his ſucceſſors in the apoſtolic chair for ever; agreeing to hold thoſe dominions as feudatories of the church of Rome, by the annual payment of a thouſand marks. He did homage to Pandulf in the moſt abject manner; and paid part of the tribute, which he owed for his kingdom as the patrimony of St. Peter; while the legate, elated by the triumph of ſacerdotal power, trampled on the money that was laid at his feet, as an earneſt of the ſubjection of the kingdom.

Philip ſoon heard, that England was placed under the protection of the ſee of Rome, and perceived with indignation, that the pope had over-reached him in politics. He therefore complained of being fruſtrated in an expedition which had coſt him ſo much money; and declared his intentions to perſevere, notwithſtanding the inhibitions of the legate. But the vigour and activity of the earl of Saliſbury, John's natural brother, who commanded the Engliſh fleet, was more effectual than the menaces of Pandulf; he ſurpriſed the French ſhips in their harbours; and, by the deſtruction of the greater part of them, compelled Philip to abandon the enterpriſe, without the remuneration he expected. In the mean while John, to retaliate ſome of the injuries he had received, attempted to penetrate with a large army into France; but the intelligence of a deciſive victory which Philip obtained at Bovines over one hundred and fifty thouſand Germans, led by the emperor Otho, inſpired him with humbler thoughts; his hopes were confined to ruling peaceably over England: but even this was denied him; and a much more humiliating ſcene of calamity ſtill awaited him.

The feudal ſyſtem, which had long been eſtabliſhed in England, gave ſuch influence to the ariſtocracy, that the royal authority was in a great meaſure borne down by that of the nobles. When the conqueſt of England was achieved by William, the neceſſity of entruſting great power in the hands of a prince who was to maintain a military dominion over a vanquiſhed nation, had engaged the Norman barons to ſubmit to a more ſevere and abſolute prerogative, than that to which men of ſimilar rank were commonly ſubjected; and England, during a courſe of an hundred and fifty years, was governed by an authority unknown in the ſame degree, to all the other kingdoms founded by the northern conquerors. Henry the Firſt, that he might allure the people to exclude his elder brother

ther Robert from the ſucceſſion, had granted them a charter highly favourable to their liberties; Stephen had renewed the grant; Henry the Second had confirmed it; but the conceſſions of all theſe princes now remained a dead letter; ſo that John, equally odious and contemptible, both in public and private life, provoked the people to form a general confederacy to vindicate their rights by arms. Nothing forwarded this confederacy ſo much as the concurrence of Langton, archbiſhop of Canterbury; a man, whoſe memory, though he was obtruded on the nation by a palpable encroachment, on the ſee of Rome, ought always to be reſpected by the Engliſh. This prelate formed the plan of reforming the government, and paved the way for it, by inſerting a clauſe in the oath, which he adminiſtered to the king, before he would abſolve him from excommunication, "that he would re-eſtabliſh the good laws of his predeceſſors, and aboliſh the wicked ones; and maintain juſtice and right throughout all his dominions. Soon after, he ſhewed to ſome of the barons a copy of the charter of Henry the Firſt, which was almoſt forgotten, and adviſed them to inſiſt on its renewal. The barons ſwore to each other that they would ſooner loſe their lives, than deſiſt from ſo reaſonable a demand: the confederacy ſpread wider; a more numerous meeting was ſummoned at St. Edmond's Bury, under colour of devotion; and the members, inflamed by the eloquence of Langton, and incited by the ſenſe of their own wrongs, took an oath before the altar to adhere to each other, and to make endleſs war on the king, until he ſhould reſtore their liberties.

On an appointed day, A. D. 1215, after having prepared themſelves to maintain their engagements by arms, the barons appeared in London, and required the king, in conſequence of his oath before the primate, to renew the charter of Henry, and confirm the laws of Edward the Confeſſor; time for conſideration was aſked and granted; and the interval was employed by John to influence the pope in his favour. Innocent, foreſaw that if the adminiſtration fell into the hands of the nobility, they would vindicate the rights of their country; but he adviſed the king to grant ſuch demands as ſhould appear reaſonable, and expreſſed his diſapprobation of the conduct of the barons; exhorting the prelates to interpoſe, and put an end to civil diſcord. The barons heard with perfect indifference the diſpleaſure of the court of Rome; and, as ſoon as the time granted to the king was expired, they met at Stamford, and collected their forces, conſiſting of above two thouſand knights, beſides retainers and inferior perſons without number. Elated with their power, they advanced in a body to Brackley, within twenty miles of Oxford, the place where the court then reſided; and ſent to the king a ſchedule containing their principal demands. John had no ſooner peruſed it, than he burſt into a furious paſſion, ſwearing he would never grant ſuch privileges as muſt reduce himſelf to ſlavery.

The confederated nobles, informed of his anſwer, had recourſe to their ſwords; they beſieged the caſtle of Northampton, were admitted into that of Bedford, occupied Ware, and entered London without oppoſition. They laid waſte the royal parks and palaces, and compelled the other barons to join them, on pain of ravaging their eſtates. So formidable indeed were their menaces, and ſo univerſal the diſaffection, that the king was left at Odiham, in Hampſhire, with a retinue of only ſeven knights; and, after in vain offering to ſubmit all differences to the arbitration of the pope, he found himſelf at laſt obliged to yield unconditionally to the will of the barons. It was at Runnymede, between Windſor and Staines, a ſpot which will ever be celebrated in Engliſh hiſtory, that the conference took place between John and his people on this intereſting occaſion. After a deliberation of ſome days, the king, with a facility ſomewhat unexpected, ſigned and ſcaled the famous deed called MAGNA CHARTA, or the *Great Charter of England*, on June 19, 1215; which was the ground-work of Britiſh liberty, and the corner-ſtone of that noble fabric which in time reſulted from it—the unperiſhable CONSTITUTION OF ENGLAND.

To ſecure the execution of this charter, London was left in the hands of the barons, and the Tower was conſigned to the cuſtody of the primate. With the conſent of the king, the confederates choſe from their own body twenty-five members as conſervators of the public liberty, to whoſe authority no limits were preſcribed, either in extent or duration. All men throughout the kingdom were obliged, under the penalty of confiſcation, to ſwear obedience to them: twelve knights from each county, choſen by the freeholders, were to make reports of ſuch evil cuſtoms as required redreſs, conformable to the tenor of the great charter; and this affords a very ſtriking proof that the houſe of commons was not then in being, or ſuch an election would not have been neceſſary.

John, although he apparently ſubmitted to theſe regulations and conceſſions with great cheerfulneſs, yet he only waited a proper opportunity for annulling them. Retiring to the Iſle of Wight, he meditated the moſt fatal vengeance againſt his people. He ſecretly ſent abroad his emiſſaries to invite the rapacious Brabançons (ſoldiers of fortune) into his ſervice; he diſpatched a meſſenger to Rome, to complain before that tribunal of the violence impoſed upon him; and pope Innocent, conſidering himſelf as feudal lord of the kingdom, iſſued a bull, by which he annulled the whole charter. He prohibited the barons from exacting the obſervance of it; he prohibited the king from paying any regard to it; and he pronounced a general ſentence of excommunication againſt every one who ſhould perſevere in maintaining ſuch iniquitous pretenſions. Under the ſanction of this bull, John, as ſoon as he had collected his foreign forces, threw off the maſk. The barons, ſeduced into a fatal ſecurity, had taken no rational meaſures for re-aſſembling their forces. The king was maſter of the field: his rapacious mercenaries were let looſe againſt the eſtates, the tenants, the houſes, and parks, of the nobility; nothing was to be ſeen but the flames of villages and caſtles reduced to aſhes, and the conſternation and miſery of the inhabitants; while the king, marching through the whole extent of England from Dover to Berwick, laid the provinces waſte on every ſide, as if he had been in an enemy's country.

The barons, reduced to this diſtreſſed ſituation, had recourſe to a remedy no leſs deſperate, and offered the king of France to acknowledge Louis, his eldeſt ſon, as their ſovereign, provided he would protect them from the further violence of the tyrant. The proſpect of ſuch a prize rendered Philip Auguſtus regardleſs of the menaces of the court of Rome, which threatened him with excommunication if he attacked a prince under the protection of the holy ſee; but he refuſed to intruſt his ſon and heir to the caprice of the Engliſh barons, without ſome pledge for his ſafety. He therefore demanded of them twenty-five of the moſt illuſtrious nobles; and no ſooner had he received theſe hoſtages, than he ſent over Louis in perſon with a numerous army. When that young prince appeared in England, John's foreign troops, being moſtly levied in Flanders, refuſed to ſerve againſt the heir apparent of their own monarchy. The barons either haſtened to join the ſtandard of Louis, or throw open to him the gates of their caſtles. Louis having landed in Kent, took Rocheſter caſtle, and was actually received in London with every demonſtration of joy. The friends and ſoldiers of John began to abandon him; and the French prince might have cruſhed him with eaſe, had he not made a raſh vow not to advance before he had reduced Dover caſtle. This was in conſequence of Philip's remark to his ſon, "that unleſs he reduced Dover caſtle, he would gain no footing in England." While he ſtrove for this in vain, the Engliſh barons had time to reflect on the evils their country might ſuſtain from a foreign king; and even to entertain ſuch ſuſpicions of Louis's integrity, that they determined to quit his party and (under reſtrictions)

reſtrictions) to reſtore the abhorred John. But that wicked and unfortunate prince was doomed to receive no benefit from their good intenſions. A violent flood had ſwept away his money, his proviſions, and even his regalia, as he marched along the ſhores of Lincolnſhire: no conſciouſneſs of rectitude, no magnanimity, was at hand to ſupport him under this unexpected calamity; with difficulty he reached Newark caſtle; and in that fortreſs broken-hearted and unlamented, he breathed his laſt. John had ſo ſtrong an attachment to Lynn in Norfolk, that he had given it a charter, and had girded the firſt mayor with his own ſword, a relic ſtill preſerved in that town. He alſo kept there his crown and other regalia; and it was in attempting to remove theſe to a ſtronger fortreſs that he met with the laſt misfortune.

A worſe prince never diſgraced any throne; and the hiſtorian may ſurely ſave himſelf the odious taſk of drawing up his character, by referring the reader to the annals of his life, as ſon, uncle, and king. He died in the forty-ninth year of his age, leaving five legitimate children, Henry (who ſucceeded him), and Richard earl of Cornwall; Joan, queen of Scotland; Eleanor, counteſs of Leiceſter; and Iſabella, wife of Frederic II. emperor of Germany. He had ſix natural children, whoſe names and poſterity are recorded at length by Sandford.

The perſon of John was tall and well-favoured; though it has not been well authenticated by his biographers. If, in the black gloom of his ſullen ſoul there was a ſingle ſpark of patriotiſm, it pointed its ray towards the navy. In the firſt year of his reign he had aſſerted the ſuperiority of the Engliſh flag by an ordinance; and in 1213, he had annihilated the naval power of France, by a gallant and ſucceſsful battle; and in his diſtreſs in 1215, the affection of the ſeamen (of the Cinque Ports particularly) was his only refuge. He even lived night and day on ſhip-board, for fear of being betrayed. Nor ſhould it be concealed that, from the beginning of his reign this inconſiſtent prince had ſhewn a ſingular readineſs to convert demeſne-towns into corporate burghs; a meaſure inimical to all deſpotiſm. Trifling too as the merit may appear, we muſt allow to John the honour of having been the firſt Engliſh king who perfected the coining of pure ſterling money. Had hiſtorians no ſtronger reaſons to accuſe this hated prince of impiety, than his pointing to a fat deer, and ſaying, "ſee how plump he is; and yet he has never heard maſs," we might have allowed ſomewhat for the humourous alluſion to the wonderful gluttony of the monks in his days. But John was uniformly wicked; and laughed at every obligation which the ſouls of men eſteem as ſacred. Matthew Paris, however, (who abhorred him,) owns, that once, when he was perſuaded to deface a ſplendid tomb erected over an enemy; he chid the adviſer, and added "would to heaven all my foes were as handſomely intombed."

From the Epoch of MAGNA CHARTA, and DEATH of KING JOHN, to the Aſſaſſination of RICHARD II.

On the death of king John, the crown of England devolved to his eldeſt ſon Henry, who was but nine years of age. The earl of Pembroke, a nobleman of great worth and valour, who had faithfully adhered to John in all the fluctuations of his fortune, was at the time of that prince's death marſhal of England, and conſequently at the head of the army. This nobleman determined to ſupport the intereſts of the young prince, and had him ſolemnly crowned by the biſhops of Wincheſter and Bath, at Glouceſter. In order alſo to enlarge and confirm his own authority, a general council of the barons was ſummoned at Briſtol, where the earl was choſen guardian to the king, and protector of the kingdom. One of the firſt acts of his adminiſtration was to renew the Great Charter of their liberties, a judicious meaſure, the darling objection which the people had ſet their hearts, and which brought great popularity to the royal cauſe. To this was added alſo a charter, aſcertaining the juriſdiction and the boundaries of the royal foreſts, which from thence was called *Charta foreſta*. By this it was enacted, that all the foreſts which had been incloſed ſince the reign of Henry the Second, ſhould be again reſtored to the rightful owners. Offences on the foreſts were no longer declared to be capital, but puniſhable by milder laws; and all the proprietors of land were granted a power of cutting and uſing their own timber at pleaſure. To theſe meaſures, which gave univerſal ſatisfaction, Pembroke took care to add his more active endeavours againſt the enemy. He wrote letters, in the king's name, to all the malcontent barons, aſſuring them of his reſolution to govern them by their own charters; and repreſented the danger which they incurred by their adherence to a French monarch, who only ſought to oppreſs them. Theſe aſſurances were attended with the deſired effect. The party in the intereſt of Louis began to loſe ground, and the earls of Saliſbury, Arundel, and Warenne, together with William Marſhall, eldeſt ſon of the protector, ſwore allegiance to the young king; and all the reſt of the barons appeared deſirous of an opportunity of following their example.

The count de Perche, in the mean while, who commanded for Louis, at the head of a ſuperior army, marched into Lincoln, and beſieged the caſtle. The protector, ſenſible that a deciſive blow was to be ſtruck, ſummoned his forces from every quarter to relieve a place of ſo much importance; and thus he, in turn, appeared ſo much ſuperior to the French, that they ſhut themſelves up in the city. But the governor of the caſtle having received a ſtrong reinforcement, made a vigorous ſally upon the beſiegers, while the Engliſh army aſſaulted them from without; and, ſcaling the walls, entered the city ſword in hand. Lincoln was now delivered over to be pillaged; the French army was totally routed in the ſtreets; the commander in chief was killed, and the principal officers made priſoners. This misfortune of the French was the immediate forerunner of another. Their fleet, which was bringing over reinforcements both of men and money, was attacked in the channel by the Engliſh under the command of Philip d'Albiney, and repulſed with conſiderable loſs. Louis, after theſe deciſive actions, was glad to ſubmit to any conditions favourable to his retreat. He concluded a peace with the protector, in which he agreed to quit the kingdom, upon an indemnity being granted for all his adherents. Thus, A. D. 1216, ended a civil war, which had drenched the kingdom in blood; and which threatened the ſubverſion of the laws, and the ſubjugation of the people, to the yoke of France.

Henry the Third was of a character the very oppoſite to that of his father; for as he grew up, he was found to be gentle, merciful, and humane. Without activity or vigour, he was ill qualified to conduct a war; without ſuſpicion, he was impoſed upon in times of peace. A king of ſuch beneficent qualifications was inadequate to the government of England, where every order was aſpiring to independence, and riſing on the ſpoils of the prerogative. Theſe evils ſoon became viſible after the death of the protector, who was ſucceeded in his office by Peter biſhop of Wincheſter, and Hubert de Burgh, high juſticiary; but no delegated authority could controul men who had been long uſed to civil diſcord, and who caught every ſlight occaſion to magnify misfortunes into public grievances. The nobles were now the tyrants of the people: for having almoſt deſtroyed the power of the crown, and being encouraged by the weakneſs of a minority, they conſidered the laws as the inſtruments of an arbitrary authority, with which they alone were to govern. They retained by force the royal caſtles which had been uſurped during the former convulſions; they oppreſſed their vaſſals, plundered their neighbours, and invited all diſorderly people to take refuge under their authority. In this unqualified ſtate of things, the barons being required to give up their caſtles, they not only re-

 fuſed,

fuſed, but ſeveral of them entered into a conſpiracy to ſurpriſe London; and, with the earls of Cheſter and Albemarle at their head, advanced as far as Waltham with that intention. Their aims, however, were fruſtrated by the diligence and vigour of the government. Moſt of the fortreſſes were at length ſurrendered; and the number at that time is ſaid to have amounted to above a thouſand. But though Henry gained this advantage by the prudence of his miniſter, yet his throne ſtood upon a very weak foundation. A conteſt with his brother Richard earl of Cornwall, who had amaſſed ſuch ſums of money as to be thought the richeſt prince in Europe, ſoon ſhowed the weakneſs both of his power and his policy. Richard had unjuſtly expelled a baron from his manor; and the king inſiſted upon his reſtoring him. The other perſiſting in his refuſal, a confederacy was formed, and an army aſſembled, which the king had neither inclination nor courage to reſiſt. Richard's injuſtice was now declared legal; and his reſentment was mollified by grants of much greater importance than the manor which had been the ground of the quarrel. Thus did Henry tamely ſubmit to all the demands of his haughty vaſſal; and had ſcarcely any perſon who ſeemed ſolicitous for his intereſts, but Hubert de Burgh, whom, nevertheleſs, he diſcarded in a ſudden caprice, and thus expoſed to the violent perſecution of his enemies. The pretence ſet up for the diſmiſſion of Hubert, was his ill management of the king's affairs on the continent; particularly on the death of Philip Auguſtus, and the ſucceſſion of his ſon Louis VIII. That prince, on his departure from England, and as part of the treaty of peace, is ſaid to have engaged to reſtore Normandy to the king of England, on his ſucceſſion to the crown of France. But when the performance of this article was demanded, Louis not only treated the demand with contempt, but prepared to invade Poictou, which ſtill belonged to England. After a deſultory war, which laſted only from 1225 to 1227, a truce was agreed upon for three years; but, before it expired, Louis VIII. died.

But as weak princes are never without governing favourites, the place of Hubert was ſoon ſupplied by Peter de Roches, biſhop of Wincheſter, a Poictevin by birth, who was equally remarkable for his arbitrary conduct, and for his courage and abilities. Henry, in purſuance of this prelate's advice, A. D. 1231, invited over a great number of Poictevins, and other foreigners, who, having neither principles nor fortunes at home, were willing to adopt whatever ſchemes their employer ſhould propoſe. Every office and command were beſtowed on theſe unprincipled ſtrangers, whoſe avarice and rapacity were exceeded only by their pride and inſolence. So unjuſt a partiality to ſtrangers naturally excited the jealouſy of the barons; and they even ventured to aſſure the king, that if he did not diſmiſs all foreigners from court, they would drive both him and them out of the kingdom. But the biſhop of Wincheſter had counteracted their meaſures ſo effectually, that he brought over many of the moſt powerful confederates, and the eſtates of the weaker barons were confiſcated for the benefit of his needy countrymen. In theſe flagrant acts of injuſtice the king was a calm ſpectator; he was contented with preſent advantages; and while theſe confiſcations procured immediate wealth, he little regarded the means by which it came. But as Henry was eaſily ſwayed by tumultuary remonſtrances, another confederacy broke out, at the head of which was the archbiſhop of Canterbury, by whom he was induced to diſmiſs his favourite miniſter, and to ſend him and his needy countrymen out of the kingdom. Encouragement to foreigners had long been the chief complaint againſt the king; and it was now expected that this unaccountable predilection would have been at an end. But their hopes were vain: for the king having married Eleanor, daughter of the count of Provence, A. D. 1236, he transferred his favours to the ſtrangers of that country, whom he careſſed with the fondeſt regard, and enriched with the moſt imprudent generoſity. Places, dignities, and treaſures, were laviſhed upon them; many young noblemen, who were wards to the crown, were married to wives of that country; and when the ſources of the king's treaſury were dried up, he reſumed all the grants he had formerly made, in order to continue theſe favours. The reſentment of all ranks of people was excited by this miſchievous attachment; but what muſt have been their reſentments, when they ſaw a new ſwarm of intruders brought over from Gaſcony, with Iſabella, the king's mother, who had been married to the count of Marche? To theſe juſt cauſes of complaint were added the king's unſucceſsful expeditions to the continent, his total want of economy, and his oppreſſive exactions, which were enforced as the only means of nouriſhing a race of vipers. The kingdom, therefore, waited with ſullen patience, reſolving to take ample vengeance when the general diſcontents were arrived at maturity.

To theſe domeſtic evils might be added thoſe ariſing from the rapacity of the ſee of Rome. The clergy of England, while they were contending for the power of the pope, were not aware that they were effectually oppoſing their own intereſts; for the pontiff having, by various arts, obtained the inveſtiture of all livings and prelacies in the kingdom, failed not to fill up every vacancy with his own creatures. His power being eſtabliſhed, he now began to turn it to his profit, and to enrich the church by every art of extortion and avarice. At this time, A. D. 1253, all the chief benefices of the kingdom were conferred on Italians. Great numbers of that nation were ſent over at one time to be provided for; the king's chaplain alone is ſaid to have held at once ſeven hundred eccleſiaſtical benefices! Theſe abuſes became too glaring even for the blind ſuperſtition of the people to ſubmit to; they roſe in tumults againſt the Italian clergy, pillaged their barns, waſted their fields, and inſulted their perſons. But theſe were tranſient obſtacles to the papal encroachments. The pontiff, claiming ſuperiority over the king of England, in conſequence of the grant from John, exacted the revenues of all vacant benefices, the twentieth of all eccleſiaſtical livings without exception; the third of ſuch as exceeded a hundred marks a-year, and the half of ſuch as were held by non-reſidents; he claimed the goods of all inteſtate clergymen; he pretended a right of inheriting all money got by uſury, and he levied voluntary contributions on the people. But the impoſitions of the church appeared in their moſt conſpicuous point of view in a tranſaction between the pope and the king. The court of Rome, ſome time before, had reduced the kingdom of Sicily to the ſame ſtate of vaſſalage to which England had ſubmitted; but Mainfroy, an uſurper, under pretence of governing the kingdom for the lawful heir, had ſeized upon the crown, and was reſolved to reject the pope's authority. As the pontiff found that his own force was not ſufficient to vindicate his claims, he had recourſe to Richard earl of Cornwall, the king's brother, whoſe wealth he was not ignorant of; and to him, and his heirs, he offered the kingdom of Sicily, provided he would regain it from the hands of the uſurper. Richard was too ſenſible of the difficulty of the enterpriſe, to comply with ſuch a propoſal; but when the offer was afterwards made to the king, the weak monarch, dazzled with the ſplendour of ſuch a conqueſt, embraced the propoſal with ardour. This was all the pope deſired; he ſoon brought Henry in debtor for more than a hundred thouſand marks. Henry was mortified at the greatneſs of the ſum, and ſtill more at the little proſpect of ſucceſs; but he dreaded the pope's diſpleaſure, and therefore reſolved to have recourſe to the barons for the money.

In this univerſal ſtate of degradation, it may readily be imagined that the barons were more liberal of complaints than of ſupplies. They determined not to laviſh their money on favourites without merit, and expeditions without a proſpect of ſucceſs. The clergy even began to turn againſt their ſpiritual father; and the biſhop of London boldly aſſerted, that if the king and the pope ſhould take

the

HENRY III.

London Published as the Act directs Jan.1.1812 by J Wilkes

the mitre from his head, he would put on a helmet. But though the biſhops and clergy were obliged to acquieſce in furniſhing a part of this wanton expence, the barons ſtill continued refractory; and, inſtead of ſupplies, anſwered with expoſtulations. They urged the king's partiality to foreigners; they aggravated the injuſtice of his favourites, and the unfair ſeizures made by his officers from men of mercantile profeſſions. The parliament therefore was diſſolved (for ſo the general aſſembly of the nation began now to be called), and another was ſoon after convened with as little ſucceſs. The urgency of the king's affairs required that money ſhould be procured; and yet the legate never failed, upon thoſe occaſions, to obſtruct the king's demands, by making others for the pope. It was on this occaſion that Henry went amongſt ſuch of his ſubjects as were attached to him, and begged for aſſiſtance at their own houſes. At one time, he would get money by pretending to take up the croſs, on an expedition to the Holy Land; at another, he would prevail by aſſerting that he was reſolved to re-conquer his French dominions; till his barons, perceiving the diſtreſs to which he was reduced, reſolved, in mere pity, to grant him aid; and a very liberal ſupply was raiſed, for which he renewed their charter with more than uſual ſolemnity. All the prelates and abbots were aſſembled, A. D. 1205, with burning tapers in their hands; the Magna Charta was read in their preſence; and they denounced ſentence of excommunication againſt all who ſhould infringe its articles. Thus ſolemn were their mutual engagements; but the wretched Henry had no ſooner received the ſupplies for which his parliament had been convoked, than he forgot every article of what he had ſo ſolemnly agreed to obſerve.

About this time an inſurrection broke out in Gaſcony, which then formed a part of the Engliſh dominions; and that people even invited the king of Caſtile to take poſſeſſion of their country. But Henry, however unwarlike, reſolved to undertake an expedition to quell this rebellion. Accordingly he ſummoned all his military tenants to meet him at Portſmouth, and on the 15th of Auguſt, 1254, he arrived at Bourdeaux with a gallant army, which ſoon reſtored the province to order, and obliged the king of Caſtile to renounce his pretenſions to Gaſcony. The reconciliation was ſo complete, that a marriage was concluded between the king's ſon Edward, heir apparent of England, and Eleanora, princeſs of Caſtile. On this occaſion we have one of the moſt ſtriking inſtances of the low cunning and mean character of Henry: being ſtill covetous of gold to diſtribute among his friends in this new alliance, he carefully concealed the ſucceſs of his arms, and ſent over his commands to the queen and his brother earl of Cornwall, regents of England in his abſence, to call a parliament, and demand a further ſupply for carrying on the expedition. A parliament was aſſembled; but the wary barons refuſed to grant the aid, until they were better informed of the progreſs of the war. The earl of Leiceſter arriving from Gaſcony in the interim, made known the true ſtate of the king's affairs, and expoſed Henry's diſhonourable arts to impoſe on the people, which effectually ſerved to revive their former diſtruſt of his government, and contempt of his perſon.

Such imprudent meaſures eventually encouraged Simon de Montfort, earl of Leiceſter, to attempt to wreſt the ſceptre from the feeble hand which held it. This nobleman had eſpouſed Eleanor, dowager to William earl of Pembroke, and ſiſter to the king. His addreſs gained him the affections of all orders of men, but could not protect him againſt the levity of his ſovereign. He had alternately enjoyed the favour, and been expoſed to the hatred, of Henry; and, being of too independent a ſpirit to become ſubſervient to the minions of that prince, he found more honour and advantage in cultivating his intereſt with the public. He filled every place with complaints againſt the infringement of the great charter; and a quarrel which he had with William de Valence, the king's half brother, determined him, if poſſible, to ſtop the further encroachments of the dependents and favourites of the king. He ſecretly called a meeting of the moſt powerful barons, particularly Humphrey de Bohun, high conſtable, Roger Bigod earl mariſchal, and the earls of Warwick and Glouceſter. To theſe he depicted in glowing colours the oppreſſions exerciſed againſt all orders of the people; the violation of the barons' privileges, and the continual depredations made on the clergy; and while he magnified the generoſity of their anceſtors, who at the expence of their blood had extorted the great charter from the crown, he lamented their own degeneracy, who allowed ſo important an advantage to be wreſted from them by a weak prince, and a tribe of inſolent paraſites.

Theſe topics being well ſuited to the ſentiments of the people, the barons embraced a reſolution of redreſſing the public grievances, by taking into their own hands the adminiſtration of government. They entered the parliament clad in complete armour, with their ſwords by their ſides; and when the king, ſtruck with their martial appearance, aſked, whether they intended to make him priſoner? Roger de Bigod replied for the reſt, "That he was not their priſoner, but their ſovereign; but as he had ſo frequently ſuffered himſelf to be carried away by ill-adviſers, he muſt now yield to more ſtrict regulations, and confer authority on thoſe who were willing and able to redreſs the national grievances." Henry, partly allured by the hopes of a ſupply, and partly intimidated by the menacing aſpect of the barons, acquieſced, and ſummoned another parliament at Oxford, in order to digeſt the new plan of government. This parliament, which from the confuſion that attended its meaſures, was afterwards denominated the *mad parliament*, choſe twelve barons, to whom were added twelve more choſen by the king's miniſters. Theſe twenty-four barons, with the earl of Leiceſter at their head, were endowed with ſupreme authority, and authoriſed to reform the abuſes of the ſtate. Their firſt ſtep, June 11, 1258, was calculated for the good of the people, as it marked the rude outline of the houſe of commons. They ordered that four knights ſhould be choſen by each county, who ſhould examine into the grievances of their reſpective conſtituents, and to attend at the enſuing parliament, to give information of their complaints. They ordained that three ſeſſions of parliament ſhould be regularly holden every year; that a new high ſheriff ſhould be annually choſen; that no wards nor caſtles ſhould be truſted in the hands of foreigners; no new foreſts made; nor the revenues of any of the counties let to farm. Theſe regulations were ſo juſt, and their beneficial effects ſo obvious, that they merited the praiſe and approbation of every candid and ingenuous mind. But ſo dangerous and ſo deluſive is the exerciſe of arbitrary power, that it became no longer the ſecurity of the people, but the uncontrolled eſtabliſhment of its own authority, that this confederacy endeavoured to effect. Inſtead of reſigning when they had fulfilled the purpoſes of their appointment, they ſtill maintained themſelves in full power; at one time pretending that they had not yet digeſted the affairs of the ſtate; at another, that their continuance in authority was the only remedy the people had againſt the faithleſs character of the king. The whole ſtate accordingly underwent a complete alteration: its former officers were all removed, and dependents of the twenty-four barons were put in their room; they even impoſed an oath upon every individual of the nation, binding them to an implicit obedience of all the laws and regulations then ſuggeſted, or to be ſuggeſted, by themſelves. They not only abridged the authority of the king, but deſtroyed the efficacy of parliament, by giving up to twelve perſons all parliamentary power between each ſeſſion. Thus theſe ambitious nobles, after having trampled upon the crown, threw proſtrate all the rights of the people; and a vile oligarchy was on the point of being eſtabliſhed upon the ruins of their liberties.

The

The firſt oppoſition made to theſe uſurpations aroſe out of that very power which they had ſo lately conſtituted to check the encroachments of the king. The knights of the ſhire, who for ſome time had begun to be regularly aſſembled in a ſeparate houſe, now firſt aſſailed this dangerous hydra. Theſe bold and patriotic men ſtrongly remonſtrated againſt the proceedings of their twenty-four rulers; and, for the firſt time, began to ſhow that ſpirit of juſt interference, which has ever ſince actuated the commons houſe of parliament. They repreſented, that though the king had on his part acceded to the conditions required of him, the twenty-four barons had too long ſwerved from their line of duty, and were only intent upon the aggrandiſement of themſelves, and the oppreſſion of others. They therefore called upon the king's eldeſt ſon, prince Edward, to interpoſe his authority, and ſave the ſinking nation. The heir apparent was at this time about twenty-two years of age, when the hopes which were conceived of his abilities and his integrity, rendered him an important perſonage in the tranſactions of the times, which in ſome meaſure atoned for his father's imbecility; and upon this occaſion his conduct was evidently calculated to impreſs the people with the higheſt opinion of his piety and juſtice. He alleged, when appealed to, that he had ſworn to the Conſtitutions of Oxford, which, though contrary to his own private ſentiments, he yet reſolved by no means to infringe. At the ſame time, however, he ſent a meſſage to the barons, requiring them to ſurrender up their authority to the parliament, or otherwiſe to expect the moſt vigorous oppoſition to their uſurpation. To this the barons replied by publiſhing a new code of laws, which, though it contained ſcarcely any thing material, yet they ſuppoſed would, for a while, dazzle the eyes of the people, until they could take meaſures to confirm their authority upon a firmer foundation. In this manner, and under various pretences, they continued in power for three years, while the whole nation perceived their drift, and condemned their treachery. The pope himſelf beheld them with indignation, and abſolved the king and all his ſubjects from the oath which they had taken to obſerve the Conſtitutions of Oxford.

The people now only wanted a leader to enable them to aboliſh this baronial tyranny. The king himſelf was weak, timid, irreſolute, and ſuperſtitious, and in a manner leagued with thoſe who oppoſed and depreſſed him; the clergy, who formerly gave the people redreſs, were become an independent body, and little regretted the commotions of the ſtate, which conſtantly tended to their aggrandiſement. In this dilemma they had recourſe to prince Edward, who for ſome time declined the people's earneſt application; but being at laſt perſuaded of the neceſſity, he directed a parliament to be called, in which the king reſumed his priſtine authority; and the barons, after making one fruitleſs effort more to take him by ſurpriſe at Wincheſter, were obliged to ſubmit to what they could not oppoſe. But in the mean time the earl of Leiceſter ſucceſsfully counteracted this momentary triumph of the king's friends. He formed a powerful confederacy with the prince of Wales, who invaded England with an army of thirty thouſand men; to which Leiceſter ſoon joined his own forces, and the whole kingdom was again expoſed to all the devaſtations of a civil war. The citizens of London alſo ſupported his cauſe, and under the command of their mayor, Thomas Fitz-Richard, they fell upon the inoffenſive Jews, and other wealthy inhabitants, pillaging and deſtroying wherever they came.

In this adverſe ſtate of the nation, nothing could be ſought for but an accommodation with the inſurgent barons; and, after ſome debate, a treaty was concluded, but upon the moſt diſadvantageous terms to the king and his party. The Conſtitutions of Oxford were again enforced, A. D. 1263, and the barons were re-eſtabliſhed in the ſovereignty of the kingdom. They immediately took poſſeſſion of all the royal caſtles and fortreſſes; they named the officers even of the king's houſehold; and ſummoned a parliament to meet at Weſtminſter, in order more fully to ſettle the plan of their government. By this aſſembly it was reſolved, that the authority of the twenty-four barons ſhould continue, not only during the reign of the king, but alſo during that of prince Edward. But theſe conditions, though ſubmitted to by the king, were reſiſted with ſpirit and dignity by the young prince, who was now determined to aſſert his father's prerogative, and defend his own right of inheritance. He appealed to the king of France, to whom he offered to refer all matters of animoſity and diſpute; and to which, after ſome previous explanation, the earl of Leiceſter, in the name of the twenty-four barons, readily agreed. Louis IX. who for his great wiſdom and virtue was afterwards canonized, undertook with alacrity and candour the kindly office of peace-maker; and for that purpoſe ſummoned the ſtates of France to meet at Amiens, on the 23d of January, 1264, to hear and diſcuſs the merits, in preſence of all the parties. On the 3d of February following, Louis publiſhed his award, as follows: "That the Conſtitutions of Oxford ſhould be annulled, as ſubverſive of the ancient conſtitution: that the king be reſtored to the poſſeſſion of his caſtles, lands, and revennes; to the nomination of the great officers of ſtate, and of his houſehold; and to all the inherent rights and privileges of the crown: and that a general amneſty ſhould be granted for all paſt offences; and the people reſtored to their ancient liberties." The earl of Leiceſter rejected this award with contempt; on which prince Edward reſolved to have recourſe to arms. Accordingly, ſummoning the king's military vaſſals from all quarters, and being reinforced by many of the more equitable barons, he took the field. His firſt attempts were ſucceſsful; Northampton, Leiceſter, and Nottingham, ſubmitted to his power; and he proceeded into the county of Derby, in order to ravage the eſtates of thoſe who had eſpouſed the oppoſite cauſe. On the other ſide, the earl of Leiceſter was beſieging Rocheſter, when he was informed of the king's ſucceſs; upon which he raiſed the ſiege, and retreated to London, where he was joined by a body of the citizens, amounting to fifteen thouſand men. Both armies being reſolved to come to an engagement, Leiceſter halted within about two miles of Lewes in Suſſex; offering, at the ſame time, terms of accommodation, which he well knew the king could not accept. Upon the refuſal of theſe, both ſides prepared for a battle. The royal army was formed in three diviſions: prince Edward commanded on the right; Richard, the king's brother, who had been ſome time before made king of the Romans, was poſted on the left wing; and Henry himſelf occupied the centre. The earl's army was divided into four bodies: the firſt was conducted by Henry de Montfort, ſon of the general; the ſecond was commanded by the earl of Glouceſter; the third was under the command of Leiceſter himſelf; and the fourth, conſiſting of Londoners, was under the direction of Nicholas Seagrave. To encourage the inſurgents, the biſhop of Chicheſter gave a general abſolution to their party, accompanied with aſſurances, on the principles of Mahomet, that if any of them fell in the action, they would infallibly be received into heaven, as a reward for their ſuffering in ſo meritorious a cauſe. The battle was begun by prince Edward, who ruſhed upon the Londoners with ſuch impetuoſity, that they were unable to ſuſtain the charge, and fled with great precipitation. The prince tranſported with this gleam of victory, purſued them far beyond the field of battle, cauſing a terrible ſlaughter. In the mean while the earl of Leiceſter, who was a ſkilful commander, puſhed with all his forces againſt the enemies' left wing, ſoon put them to the rout, and took both the king and his brother priſoners. It was a dreadful reverſe of victory, therefore, when the young prince returned, to find that his father and his uncle were defeated and taken. In this conflict of the filial feelings and paſſions, Edward at firſt endeavoured to inſpire his

remaining

remaining troops with ardour and revenge; but being artfully amuſed by Leiceſter with a pretended negociation, he quickly found his little army ſurrounded, and he himſelf obliged to ſubmit to ſuch terms as the conqueror thought fit to impoſe. Theſe terms were ſhort, and immediate: prince Edward, and his couſin Henry d'Almaine, ſon of Richard earl of Cornwall, were to ſurrender themſelves as pledges in the place of the king and his brother, who were releaſed. The Conſtitutions of Oxford were to remain in force, but to be reviſed by ſix perſons appointed by the king of France, three prelates, and three noblemen, who, with three more of their own chooſing, were to be inveſted with full powers to ſettle all diſputes. This convention was called the *Miſe of Lewes*, as having taken place in that town, in 1264.

Theſe advantages were no ſooner gained by Leiceſter, than he reſolved to poſſeſs himſelf of that power for which he had ſo long been ſtruggling. Inſtead of referring the ſubjects in diſpute to the parties agreed on, he kept Richard earl of Coventry and king of the Romans, ſtill a priſoner; and though he had confined prince Edward, and Henry, Richard's ſon, in Dover caſtle, yet he effectually took care ſtill to continue the king alſo in bondage. To add to his injuſtice, he made uſe of the king's name for purpoſes the moſt inimical to the royal intereſts; and while he every where diſarmed the king's adherents, he kept his own partiſans in a poſture of defence. The king, a poor contemptible ſpectator of his own degradation, was carried about from place to place, and compelled to give his governors directions to deliver their caſtles into the hands of his enemy. To this uſurpation of the king's authority, Leiceſter added the moſt rapacious avarice. He ſeized the eſtates of no leſs than eighteen barons, for his ſhare of the ſpoil in the battle of Lewes. He converted to his own uſe the ranſom of all the priſoners; he monopoliſed the ſale of wool to foreign markets; and, to fix himſelf completely in authority, he ordained that the kingly power ſhould be exerciſed by a council of nine perſons, who were to be choſen by himſelf, the earl of Glouceſter, and the biſhop of Chicheſter. To eſtabliſh or confirm this new-fangled authority, the earl of Leiceſter was obliged to have recourſe to an aid till now unknown in England, namely, that of the body of the people. He called a parliament, Jan. 20, 1265, where, beſides the barons of his own party, the knights of ſhires, and ſeveral eccleſiaſtics who were not immediate tenants of the crown; he ordered returns to be made of deputies from the cities and boroughs, which had been hitherto conſidered as too inconſiderable to have a voice in legiſlation. This is the firſt confirmed outline of the meeting of a general houſe of commons, recorded in the Engliſh hiſtory.

A parliament, aſſembled in this multifarious manner, was found not ſo compliant as the earl of Leiceſter expected. Many of the barons who had long adhered to his party, appeared diſguſted at his unqualified ambition; and many of the people, who found that a change of maſters was not a change from miſery to happineſs, began to wiſh for the re-eſtabliſhment of the royal family. In this exigency, Leiceſter finding himſelf unable to oppoſe the concurring wiſhes of the nation, was reſolved to make a merit of what he could not prevent; and he accordingly releaſed prince Edward from confinement, and introduced him at Weſtminſter-hall, where his freedom was confirmed by the unanimous voice of the barons. But though Leiceſter acquired the popularity of reſtoring the prince, yet he was politic enough to keep him ſtill guarded by emiſſaries, who watched his motions, and fruſtrated his deſigns. But the prince, who had too much penetration not to perceive that he was made the tool of Leiceſter's ambition, ardently watched an opportunity to regain that freedom of which he then enjoyed but the ſhadow: and this opportunity ſoon offered. The earl of Glouceſter, one of Leiceſter's party, being diſconcerted, retired in diſguſt, and began to raiſe an army on the borders of Wales. Leiceſter was not ſlow in purſuing him; and to give greater authority to his arms, he took the king and the prince of Wales with him. This afforded the happy opportunity ſo long coveted by young Edward for effecting his eſcape. Being furniſhed with a horſe of extraordinary ſwiftneſs, under a pretence of taking the air with ſome of Leiceſter's retinue, who were in reality appointed to guard him, he propoſed that they ſhould run their horſes one againſt the other. When he perceived that his horſe had completely the advantage, he politely bid his attendants farewel. They followed him for ſome time; but the appearance of a body of troops belonging to the earl of Glouceſter, ſoon put an end to the purſuit. This event ſeemed the ſignal for the whole body of the royaliſts to riſe. The well-known valour of the young prince, the long train of grievances which the people endured, and the countenance of the earl of Glouceſter, a man of great power, all combined to increaſe their numbers, and inſpire their activity. An army was quickly aſſembled, which Leiceſter had no power to withſtand. His ſon, Henry Montford, attempting to bring a reinforcement of troops from London, was, by a vigorous march of prince Edward, ſurpriſed near Eveſham, and his army cut to pieces. Not long after, the earl himſelf, ignorant of his ſon's fate, paſſed the Severn, in expectation of the London army; but inſtead of the troops he expected, he ſoon perceived that the indefatigable prince was coming up to give him battle. He did not, however, abandon all hopes of victory; but drew up his men in a compact circle, and exhorted them to fight like men who had all to gain, or all to loſe. At the ſame time he obliged poor old king Henry to put on armour, and take his ſtation in front of the army. The battle ſoon began; but the earl's army, exhauſted by famine and fatigue, were but ill able to ſuſtain the impetuoſity of young Edward's attack, who aſſailed them with incredible fury. During this terrible day, Leiceſter behaved with aſtoniſhing intrepidity, and kept up the ſpirit of the action from two o'clock in the afternoon till nine at night. At laſt, his horſe being killed under him, he was compelled to fight on foot; and though he demanded quarter, the adverſe party refuſed it, with an inhumanity too common in thoſe barbarous times. The king had been wounded in the ſhoulder; and, not being known by his friends, was on the point of being killed by a ſoldier, when he cried out, "I am Henry of Wincheſter, the king!" Prince Edward, hearing the voice of his father, flew to the ſpot where he lay, and had him conducted to a place of ſafety. The body of Leiceſter being found among the dead, was ſhamefully mangled by Roger Mortimer; and then, with an accumulation of brutality, ſent to the wretched widow, as a teſtimony of the royal party's ſucceſs.

This victory proved deciſive; and, to the ſhame of the victors, thoſe who were formerly perſecuted, now became oppreſſors in their turn. The king, who was grown vindictive from his ſufferings, reſolved to take a ſignal vengeance on the citizens of London, who had long encouraged the inveteracy of his opponents. In this exigence, ſubmiſſion was their only reſource; and Henry was hardly reſtrained from totally deſtroying the city. The rebels every where ſubmitted, or were purſued with rigour; and their caſtles were taken and demoliſhed. Among the few who ſtill continued refractory, was Adam Gordon, formerly governor of Dunſter caſtle, and much celebrated for his prodigious ſtrength and great bravery. This vindictive baron maintained himſelf for ſome time in the foreſts of Hampſhire, and ravaged the counties of Berks and Surrey. Prince Edward was obliged to lead a body of troops into that part of the country, to force his camp. Urged by the natural impetuoſity of youth, he leapt over the trench by which it was defended, attended only by a few followers; and thus found himſelf unexpectedly cut off from the reſt of his army. Gordon ſoon diſtinguiſhed him from his attendants; and a ſingle combat took place between theſe two celebrated champions, which, for a

long time, continued doubtful. But the prince's fortune at length prevailed: Gordon's foot happening to ſlip, he received a wound, which diſabled him from continuing the action; and he lay at the mercy of the conqueror. Edward, merciful as brave, not only granted him his life, but introduced him that very night to his conſort at Guildford; procured him a pardon, ſecured to him his eſtate, and received him into favour. Gordon was not ungrateful; he ever after followed the fortunes of his prince, and was often found combating by his ſide in the hotteſt of the battle.

Edward having thus reſtored peace to the kingdom, found his affairs ſo firmly eſtabliſhed, that it was not in the power of any ſlight inſurrection to ſhake them. The earl of Glouceſter, however, who had been thus inſtrumental in reſtoring the king to the crown, thought no recompence could reward his merits, and became diſguſted. He therefore engaged in a new rebellion; but was ſoon brought to ſubmiſſion by Edward, who obliged him to enter into a bond of twenty thouſand marks, never to diſturb the peace in future. The kingdom being thus compoſed, that ſpirit of ardour and military glory, which ſhone forth in Edward's actions, impelled him to undertake an expedition againſt the infidels in the Holy Land. His proweſs in that vain and romantic warfare may be ſeen under EGYPT, p. 326, of this volume.

Edward had ſcarcely departed upon this holy expedition, when the health of king Henry began to decline; and he found, not only his own conſtitution, but alſo that of the ſtate, in ſuch a dangerous ſituation, that he wrote a letter for his immediate recal, preſſing him to return with all diſpatch. The former calamities again threatened the kingdom; and the barons, taking advantage of the king's weakneſs, oppreſſed the people with impunity. Robbers infeſted various parts of the nation; and the populace of London reſumed their accuſtomed licentiouſneſs. To add to the king's diſtreſſes, his brother Richard died, who had long aſſiſted him under all emergencies. At laſt, overcome by the cares of government, and the infirmities of age, he ordered himſelf to be removed, by eaſy journeys, from Bury St. Edmund's to Weſtminſter, where, ſending for the earl of Glouceſter, he obliged him to ſwear that he would preſerve the peace of the kingdom, and, to the utmoſt of his power, maintain the intereſts of his ſon. That ſame night he expired, November 16, 1272, in the ſixty-fifth year of his age, and the fifty-ſeventh of his reign, the longeſt to be met with in the Engliſh annals.

Henry III. ſurnamed of Wincheſter, was in his perſon of middle ſtature, of a robuſt conſtitution, but unpleaſing countenance; his left eye-brow hanging down, and almoſt covering his eye. This prince was certainly not poſſeſſed of great intellectual abilities, much leſs of true wiſdom, and the right art of governing; yet his underſtanding does not ſeem to have been remarkably defective, but had unhappily taken a turn towards low diſhoneſt cunning. As the ends which he had in view were often bad, and ſuch as could not be openly avowed, he endeavoured to attain them by the indirect ways of treachery and deceit. Some of Henry's repartees are preſerved in hiſtory, which do not beſpeak him to have been that ſimple fool he is often repreſented. When the archbiſhop of Canterbury, with the biſhops of Wincheſter, Saliſbury, and Carliſle, were ſent by parliament, in 1253, to preſent a very ſtrong remonſtrance againſt uncanonical and forced elections to vacant ſees: "It is true (replied he) I have been ſomewhat faulty in that particular: I obtruded you, my lord of Canterbury, upon your ſee: I was obliged to employ both entreaties and menaces, my lord of Wincheſter, to get you elected, when you ſhould have been rather ſent to ſchool: my proceedings were, indeed, very irregular and violent, my lords of Saliſbury and Carliſle, when I raiſed you from the loweſt ſtations to your preſent dignities. It will become you, therefore, my lords, to ſet an example of reformation, by reſigning your preſent benefices, and try to obtain preferment in a more regular manner." But this prince was much more defective in perſonal courage than in underſtanding; and, as appears from the whole courſe of his hiſtory, as well as from many anecdotes, was of a very cowardly and timorous nature. In the year 1258, when the royal authority was much eclipſed, and the earl of Leiceſter was in his glory, the king, in going to the Tower by water, was overtaken in a ſtorm of thunder and lightning, with which he was greatly terrified, and ordered his barge to be put a-ſhore at the firſt landing-place. But being met by the earl of Leiceſter at his landing, his terrors redoubled, and he exhibited all the marks of the greateſt conſternation in his countenance, which made the earl obſerve, that the ſtorm was now over, and he had no further reaſon to be afraid; to which the king replied, "I am indeed beyond meaſure afraid of thunder and lightning; but, by God's head, I fear thee more than all the thunder in the univerſe." Henry was ſtill more deſtitute of the noble virtues of ſincerity in making, and fidelity in obſerving, his engagements, than he was of courage. Whenever he was hard puſhed by the diſcontented barons, he ſubmitted to any terms they thought fit to preſcribe, and confirmed them by all the moſt awful oaths and ſolemnities they could deviſe; but the moment he thought he could do it with ſafety, he violated all his promiſes and oaths without heſitation, ſatisfying himſelf with the abſolution of his good friend the pope, which he eaſily obtained. This wicked prevarication was not more odious than it was pernicious to his affairs, and obliged the barons to proceed to much greater extremities than otherwiſe they would have done, plainly perceiving that nothing could make him keep his promiſes, but putting it out of his power to break them. But the moſt ſingular feature in this prince's character, was his incorrigible partiality and affection to foreigners, which attended him through his whole life, and occaſioned infinite vexations to himſelf and his ſubjects. No ſooner was one ſet of theſe foreign favourites driven from the royal preſence, by attacks which ſhook the throne itſelf, than others took their place, and were cheriſhed with equal fondneſs, and diſplaced with equal difficulties and dangers. It is highly probable, that theſe foreigners, having their fortunes to make, were much more ſupple and inſinuating, and more ready to comply with all his humours, than the Engliſh barons, who were conſcious of their own power and importance. The piety of this prince is much extolled by the monkiſh writers of thoſe times. He was no doubt a very uſeful and liberal ſon to his holy father the pope, whom he aſſiſted with all his might in fleecing his ſubjects. He was alſo a moſt devout worſhipper of ruſty nails and rotten bones, particularly thoſe of his favourite, Saint Edward the Confeſſor, which he placed in a ſhrine of gold, adorned with precious ſtones. One of the moſt commendable parts of this prince's character is hardly ever mentioned by our hiſtorians, his love of the arts; for the encouragement of which he expended great ſums of money. It muſt further be owned, that he was a very warm and generous, though not a very conſtant, friend, a faithful huſband, and an affectionate parent. He left two ſons; Edward his ſucceſſor, and Edmund ſurnamed Crouch-back, titular king of Sicily, and earl of Lancaſter, Leiceſter, and Derby, and high ſteward of England; and two daughters, Margaret, married to Alexander III. king of Scots, and Beatrix, married to John duke of Britanny.

Though Edward I. was at a diſtance from England when his father died, the ſplendour of his character ſecured his peaceable ſucceſſion, and perſons of all ranks readily ſwore fealty to him. In an aſſembly of the nobility, held on the day after the funeral of his father, the archbiſhop of York, the earls of Cornwall and Glouceſter, were choſen regents of the kingdom; and this choice was confirmed by parliament, in January 1273. Edward was in Sicily, on his return from the Holy Land, when he received the news of his father's death, and of his

EDWARD I.

London Published as the Act directs Feb.1.1804 by J.Wilkes

own undiſputed acceſſion. But he very narrowly eſcaped aſſaſſination while in Paleſtine. Richard Cœur de Lion having, in a former croiſade, dealt death and devaſtation among the affrighted Moſlems; and prince Edward endeavouring to tread heroically in his uncle's ſteps, a Mahomedan ruffian undertook to murder him. In order to gain admittance to Edward's preſence, he pretended to have letters to deliver from the governor of Joppa, now Jaffa. He found Edward ſitting alone, in a looſe garment; when looking round, to ſee that no help was near, he drew a dagger, and attempted to plunge it into the prince's boſom. Edward, perceiving the murderer's intention, with great preſence of mind received the blow upon his arm; and wreſting the weapon from the ruffian's hand, plunged it inſtantly in his heart. The wound the prince had received was the more dangerous, as having been inflicted with a poiſoned dagger; but the ſurgeon, by making deep inciſions, and cutting away the mortified parts, completed the cure in little more than a fortnight. The prince being aſſured of the perfect tranquillity of his dominions, made no haſte to take poſſeſſion of the crown. After ſpending ſome time at Rome, and other parts of Italy, he viſited the court of France, and performed his homage for the territories which he held of that crown. Having ſuppreſſed an inſurrection in Gaſcony, and ſettled ſome commercial diſputes with the earl of Flanders, he embarked for England, landed at Dover, Auguſt 2, 1274, and was crowned at Weſtminſter on the 19th of the ſame month, together with his queen Eleanora, the amiable and affectionate companion of his travels.

As England at this time enjoyed a profound peace, Edward very wiſely ſeized that favourable opportunity of enquiring into the ſtate of the lands and revenues of the crown; and into the conduct of the ſheriffs and other officers, who had both defrauded the king and oppreſſed the people in the late reign. He was at no leſs pains to reſtore the internal police of the kingdom, and the vigorous execution of the laws, which the late troubles and the feeble adminiſtration of Henry had rendered contemptible. The Jews were the only part of his ſubjects who were refuſed that equal juſtice which the king now made a boaſt of diſtributing. As Edward had been bred up in prejudices againſt them, he ſeemed to have no compaſſion upon their ſufferings. Many were the arbitrary taxes levied upon them; two hundred and eighty of them were hanged at once, upon a charge of adulterating the coin of the kingdom; the goods of the reſt were confiſcated, and all of that religion utterly baniſhed the kingdom. By the advice of his parliament, which met at Weſtminſter in May, 1275, many good and wholeſome laws were enacted, which have been ever ſince diſtinguiſhed by the name of the *Statutes of Weſtminſter*. But it was not long before Edward was interrupted in theſe ſalutary works of peace, and involved in deſolating ſcenes of war.

The only vaſſal of the crown of England who had made any ſcruple of paying homage and fealty to Edward, was Lewellyn prince of Wales. This prince had been ſeveral times ſummoned to come to court, and perform his homage; but, without directly refuſing, he ſtill delayed to do this, under various pretences. At length Edward determined to bring this powerful and refractory vaſſal to obedience; and he therefore marched into Wales with a conſiderable army. Upon the approach of Edward, A. D. 1277, the Welſh prince took refuge among the inacceſſible mountains of Snowdon, and there reſolved to maintain his ground, without truſting to the chance of a battle. Theſe were the ſteep retreats that had for many ages defended his anceſtors againſt all the attempts of the Norman and Saxon conquerors. But Edward, equally vigorous and cautious, having explored every part of his way, pierced into the very centre of Lewellyn's territories, and approached the Welſh army in its laſt retreat. Lewellyn at firſt little regarded the progreſs of an enemy that he ſuppoſed would make only a tranſient invaſion; but his contempt was turned into conſternation, when he ſaw Edward draw up his forces at the foot of the mountains, and ſurround his army, in order to ſubdue it by famine. Deſtitute of every means of relief, the Welſh prince was obliged to ſubmit, and on ſuch terms as the victor was pleaſed to impoſe. Lewellyn conſented to pay fifty thouſand pounds, as a ſatisfaction for the expences of the war; to do homage to the crown of England for the territory of Wales; to permit all other barons, except four near Snowdon, to ſwear fealty in the ſame manner; and to relinquiſh the whole country between Cheſhire and the river Conway.

But this compulſive treaty was of ſhort duration; the oppreſſion of the conqueror, and the indignant pride of the conquered nation, could not long remain without producing new diſſenſions. The lords of the Marches committed all kinds of depredation on their Welſh neighbours; and, although Edward generouſly remitted the fine of fifty-thouſand pounds, yet he laid other reſtrictions upon Lewellyn, which that prince conſidered as more injurious. He particularly exacted a promiſe from him at Worceſter, that he would retain no perſon in his principality that ſhould be diſapproved by the Engliſh monarch. Theſe were indignities not to be endured, and therefore the Welſh again flew to arms. A body of their forces took the field under the command of David, brother of Lewellyn, who ravaged the plain country, took the caſtle of Harwardin, made ſir Roger Clifford priſoner, and ſoon after laid ſiege to the caſtle of Rhudlan. When the account of theſe hoſtilities reached Edward, he aſſembled a numerous army, and ſet out with a firm reſolution to exterminate Lewellyn and his whole family. At firſt, however, the king's endeavours were not attended with ſucceſs; having cauſed a bridge of boats to be laid over the river Menay, a body of forces, commanded by Latimer and De Thonis, paſſed over before it was completely finiſhed. The Welſh remained in their faſtneſſes till they ſaw the tide flowing in beyond the end of the bridge, at which inſtant they poured down from the mountains with incredible fury, and put the whole body that had got over to the ſword. This ſucceſs revived the drooping ſpirits of the Welſh, and they felt ſufficiently bold to hazard a deciſive battle againſt the Engliſh. With this view he marched into Radnorſhire; and, paſſing the river Wey, his troops were ſurpriſed and defeated by Edward Mortimer, while he himſelf was abſent, upon a conference with ſome of the barons of that county. Upon his return, ſeeing that all was loſt, he ran deſperately into the midſt of the enemy, and fought for that death which alone could put an end to his perplexity and diſgrace. One of the Engliſh captains, recognizing his countenance, ſevered his head from his body, and it was ſent to London, where it was expoſed on the walls of the Tower; and his quarters were ſent with the ſame intention to York, Briſtol, Northampton, and Winchester. In this cruel and relentleſs manner did Edward ſhed the blood of the laſt of the ancient Cimbric ſovereigns of Wales, none of whom had ever before been conquered. David, the brother of this unfortunate prince, ſoon after ſhared the ſame fate; being totally abandoned, he was obliged to hide himſelf in one of the obſcure caverns of the country; till his retreat being ſoon after diſcovered, he was taken, tried, and condemned, as a traitor. His ſentence was executed with the moſt rigorous ſeverity; he was hanged, drawn, and quartered, only for having bravely defended the expiring liberties of his native country. With him expired the government and independence of Wales. It was ſoon after united to the kingdom of England, and made a principality, by giving title to the eldeſt ſon of the crown. Foreign conqueſt might add to the glory, but this added to the felicity, of the kingdom. The Welſh were now blended with the conquerors; and, in the revolution of a few ages, all national animoſity was entirely forgotten.

At

At the time of the conqueſt, however, the Welſh ſubmitted with extreme reluctance; and few nations ever bowed to a foreign yoke with greater indignation. The bards of the country, whoſe employment conſiſted in rehearſing the glorious deeds of their anceſtors, were particularly obnoxious to Edward, who, conſidering that while they continued to keep the ancient flame alive, he muſt expect no peace in his new acquiſitions; he therefore, from motives of ſavage policy, ordered them all to be maſſacred. To ingratiate himſelf, however, with the Welſh barons, he left his queen to be delivered in the caſtle of Caernarvon, and afterwards preſented the child, whom he named Edward, to the Welſh nobles, as a native of their country, and as their future prince. The Welſh received him with acclamations of joy; and ever ſince the government of both nations has continued to flow in one uninterrupted channel.

This important conqueſt was quickly followed by another of much greater conſequence. Alexander III. king of Scotland, had been killed by a fall from his horſe, leaving only Margaret, his grand-daughter, heir to the crown, who died ſoon after him. The death of this princeſs occaſioned much doubt and difficulty in aſcertaining the lineal ſucceſſion to the Scottiſh throne, which was now claimed by no leſs than twelve anxious competitors. The nation was divided into as many factions as there were diſtinct claimants; but the guardians of the realm would not undertake to decide a diſpute of ſo much conſequence: they therefore agreed to refer the conteſt to the determination of the king of England. The claims of all the candidates were at laſt reduced to three, who were the deſcendants of the earl of Huntingdon by three daughters: John Haſtings, who claimed in right of his mother, as one of the co-heireſſes of the crown; John Baliol, who alleged his right, as being deſcended from the eldeſt daughter, who was his grandmother; and Robert Bruce, who was the actual ſon of the ſecond daughter. In this conteſt, which was referred to Edward, he affected the utmoſt degree of deliberation; and, although he had long formed his plan, yet he directed every enquiry to be made on the ſubject, that he might be maſter of all the arguments that could be advanced on every ſide of the queſtion. In this inveſtigation he diſcovered, that ſome paſſages in old chronicles might be produced to favour a claim of his own; and therefore, without heſitation, he advanced with a formidable army to the frontiers of Scotland.

The Scottiſh barons were petrified at this bold ſtep of England; and, though they felt extreme indignation, they had no alternative but to obey his ſummons to meet at the caſtle of Norham, on the ſouthern banks of the Tweed, where he convened the parliament of that country. He there produced the proofs of his ſuperior right to Scotland, which aroſe out of the partial conqueſts made in that country by his anceſtors; but, above all, he claimed the ſovereignty in conſequence of the homage and fealty performed by William ſurnamed the Lion, to Henry II. for the whole kingdom of Scotland. To a propoſition that appeared in itſelf ſo unreaſonable, no immediate anſwer could be given; for, where all is defective, it is not eaſy to ſubmit to the combating a part: the barons, therefore, continued ſilent; and Edward interpreting this for a conſent, addreſſed himſelf to the ſeveral claimants of the crown; and, previous to his appointing one of them as his vaſſal, he required their unequivocal acknowledgment of his ſuperior right. He naturally concluded that none of them would venture to reſiſt his power: nor was he deceived; he found them all equally obſequious to his will. Robert Bruce was the firſt who made the acknowledgment, and the reſt followed his example. Edward being thus made the ſovereign, he was next to conſider which of the candidates would be the fitteſt to be appointed under him. To give this deliberation the appearance of impartiality, an hundred commiſſioners were appointed, forty of them being choſen by the candidates who were in the intereſts of John Baliol; forty by thoſe in the intereſts of Robert Bruce; and twenty, who were choſen by Edward himſelf. Having thus fitted matters to his own mind, he left the commiſſioners to ſit at Berwick, and marched ſouthward with his army, to free their deliberations from all ſhadow of reſtraint. The ſubject of debate was, whether Baliol, who was deſcended from the elder ſiſter, but farther removed by one degree, was to be preferred before Bruce, who was actually the younger ſiſter's ſon? The commiſſioners unanimouſly concurred in affirming Baliol's ſuperior claim. Edward, therefore, pronounced their award in his favour; and that candidate, upon renewing his oath of fealty to Edward, was put in poſſeſſion of the Scottiſh kingdom, and all its fortreſſes, in truſt for the king of England.

Edward, inſtead of gradually accuſtoming the Scots to bear the Engliſh yoke, and of ſliding into his new power by ſlow and imperceptible degrees, he began at once to exerciſe the iron arm of arbitrary power. A merchant of Gaſcony had preſented a petition to him, importing that Alexander, late king of Scotland, was indebted to him in a large ſum, which was ſtill unpaid, notwithſtanding all his ſolicitations to Baliol, the preſent king, for payment. Edward eagerly embraced this opportunity of ſummoning the king of Scotland to appear at Weſtminſter, to anſwer in perſon the merchant's complaint. Upon ſubjects equally trivial he ſent ſix different ſummonſes in one year; ſo that Baliol ſoon perceived he was poſſeſſed of the name, but not the authority, of a ſovereign. Determined, therefore, to ſhake off the yoke of Edward, he revolted, and obtained the pope's abſolution from his oaths of homage. To ſtrengthen his hands, he entered into a treaty with Philip the Fair, king of France, which commenced an union between thoſe nations, which for two centuries diſturbed the peace and the intereſts of England. To confirm this alliance, the king of Scotland ſtipulated a marriage between his eldeſt ſon, and the daughter of Philip de Valois.

Edward, to whom theſe tranſactions were no ſecret, endeavoured to throw all blame upon Baliol, by making him the firſt aggreſſor; and accordingly ſummoned him to perform the duty of a vaſſal, and to ſend a ſupply of forces againſt an expected invaſion from France. He alſo ſummoned him to ſurrender his principal forts, and to appear at a parliament which was to be holden at Newcaſtle. None of theſe commands being complied with, Edward reſolved to enforce obedience by marching a body of thirty thouſand foot, and four thouſand horſe, into the heart of Scotland. In the mean time Baliol raiſed an army of forty thouſand men, and marched to the frontiers, which Edward was now preparing to attack. But ſome of the moſt conſiderable of the Scottiſh nobility, among whom were Robert Bruce and his ſon, endeavoured to ingratiate themſelves with Edward by an early ſubmiſſion, which ſerved not a little to intimidate thoſe who adhered to Baliol. The progreſs, therefore, of the Engliſh arms was extremely rapid; Berwick was taken by aſſault, ſir William Douglas made priſoner, and a garriſon of ſeven thouſand men put to the ſword. After this ſucceſs, Edward diſpatched earl Warenne, with ten thouſand men, to lay ſiege to Dunbar; and the Scots, ſenſible of the importance of that garriſon, advanced with their whole army, under the command of the earls of Mar, Buchan, and Lenox, to relieve it. Although the ſuperiority of numbers was greatly on their ſide, yet courage and diſcipline remained only with the Engliſh. The conflict was ſhort; the Scots were ſoon thrown into confuſion; and, turning their backs, twenty thouſand of their men were ſlain in running from the field of battle. The caſtle of Dunbar ſurrendered the day following; and Edward led on the main body of his army into the country to certain conqueſt. The caſtles of the greateſt ſtrength and importance opened their gates to him without reſiſtance; and the whole ſouthern part of the country

try acknowledged the conqueror. Baliol now found that a ready ſubmiſſion was more to be preferred than an obſtinate reſiſtance. He haſtened, therefore, to make his peace with the victor, and expreſſed the deepeſt concern for his diſloyalty. To ſatisfy Edward ſtill farther, he made a ſolemn reſignation of the crown into his hands; and the whole kingdom ſubmitted to his authority. But the unfortunate monarch was carried priſoner to London, and committed to the Tower. Two years afterwards he was baniſhed to France, where he died.

Theſe ſucceſſes determined Edward to turn his arms to the continent, where he hoped to recover a part of thoſe territories that had been wreſted from his crown during the imbecility of his predeceſſors. Nor was Edward remiſs in making treaties with ſeveral of the continental princes, whoſe aſſiſtance he purchaſed, though greatly to the diminution of his revenues. He even collected an army from the Engliſh jails, which had been filled with robbers in the former reign, and who were now made ſerviceable to the ſtate. This army, though at firſt ſucceſsful, under the command of John de Bretagne earl of Richmond, was eventually repulſed by the French, under the command of Charles, brother to the king of France. Yet it was not eaſy to diſcourage Edward. In about three years after, he again renewed his attempts upon Guienne, with an army of ſeven thouſand men, under the command of his brother, the earl of Lancaſter. That prince gained ſome advantages over the French at Bourdeaux: but being ſeized with a diſtemper, of which he died at Bayonne, his army was diſbanded.

The king, finding theſe attempts unſucceſsful, reſolved to attack France in a different quarter. He formed an alliance with John earl of Holland, by giving him his daughter Elizabeth in marriage; and alſo with Guy earl of Flanders, whoſe aſſiſtance he bought for ſeventy-five thouſand pounds. By theſe aſſiſtants he entertained hopes of recovering his French dominions; and he accordingly ſet about providing money for the arduous undertaking. Theſe negotiations however occaſioned ſo much delay, that when he took the field in Flanders, at the head of an army of fifty thouſand men, the ſeaſon of action was loſt; yet the king of France was glad to come to an accommodation; and Edward agreed to ſubmit their differences to the arbitration of the pope. By this mediation their friendſhip was cemented by a double marriage; that of Edward with Margaret, Philip's ſiſter; and that of the prince of Wales with Iſabella, the French monarch's daughter. Philip alſo reſtored Guienne to the Engliſh.

But though this expedition was thus amicably terminated, yet the expences of fitting it out were not only burthenſome to the king, but in the event even threatened to ſhake him on his throne. In order to conciliate the regard of his people, he raiſed his ſupplies through the organ of his parliament; and that auguſt body was now modelled by him into the form in which it continues at this day. He iſſued writs to the ſheriffs, enjoining them to ſend to parliament, two knights of each ſhire, (as in the former reign,) and two deputies from each principal town within the ſhire, empowered by their conſtituents to grant ſuch demands as they ſhould think reaſonable for the ſafety of the ſtate. The charges of theſe deputies were to be borne by the borough which ſent them; and ſo far were they from conſidering this privilege as an honour, that nothing could be more diſpleaſing to any borough than to be thus obliged to ſend a deputy, nor to any individual than to be thus choſen. Such was the conſtitution of that parliament, to which Edward applied for aſſiſtance againſt France. He obtained from the barons and knights, a grant of the twelfth of their moveables; from the boroughs, an eighth; and from the clergy he determined to exact a fifth; but he there found an unexpected reſiſtance. The pope had ſome time before iſſued a bull, prohibiting the clergy from paying taxes to any temporal prince, without permiſſion from the ſee of Rome; and thoſe of England now pleaded conſcience, in refuſing to comply with the king's demand. They alleged, that they owed obedience to two ſovereigns, a ſpiritual and a temporal: that their eternal happineſs bound them to obey one, while only their worldly affairs led them to acknowledge the other. Edward was highly diſpleaſed with their duplicity, and employed their own arguments with great force againſt them. He refuſed them his temporal protection, ordered his judges to hear no cauſe brought before them by the clergy, but to decide all cauſes in which they were defendants: and to do every man ſtrict juſtice againſt them. In this outlawed ſituation, they ſuffered numberleſs evils from the hand of every ruffian, while the king's officers remained unconcerned ſpectators of their oppreſſion. Whenever the clergy ventured from home, they were plundered or robbed of their clothes; the primate himſelf was attacked on the highway, and ſtripped of his equipage and furniture. Theſe ſeverities at length prevailed; and the clergy agreed to leave the ſums they were taxed in their churches to be taken away by the king's officers. Thus at once they obeyed the king, without incurring the cenſure of the pope. But though theſe ſums were very great, yet they were by no means adequate to the wants of the ſtate. New taxes were therefore impoſed. Edward laid a duty of forty ſhillings a ſack upon wool; he required the ſheriffs of each county to ſupply him with two thouſand quarters of wheat, and as many of oats, without conſidering how they were to be obtained. Theſe he levied by the way of loans, promiſing to pay an equivalent, whenever the affairs of the ſtate would allow him ſo to do. Such modes of oppreſſion were not to be endured by the people, without murmuring; and the powerful barons, jealous of their own privileges, as well as of the national liberty, gave countenance to the general diſcontent.

The firſt ſymptoms of this ſpirit of diſcontent appeared upon the king's ordering Humphrey Bohun, the conſtable, and Roger Bigod, the marcſchal, of England, to take the command of an army deſtined for Gaſcony, while he himſelf intended to make a diverſion on the ſide of Flanders. Theſe two powerful noblemen refuſed to obey his orders, alleging, that they were obliged by their offices to attend him only in the wars, and not to conduct his armies. A violent altercation enſued. The king, addreſſing himſelf to the conſtable, cried out, "Sir earl, by God, you ſhall either go or be hanged." To which the haughty baron replied, "Sir king, by God, I will neither go nor be hanged." This oppoſition defeated the campaign, and taught the king a uſeful leſſon: he found he had driven prerogative too far; and, with that preſence of mind which was ever at his command, he deſired to be reconciled to his barons, to the church, and to his people. He pleaded the urgent neceſſities of the ſtate, and promiſed to redreſs all grievances, to reſtore the due execution of the laws, and to make his ſubjects compenſation for the loſſes which they had ſuſtained. Theſe generous profeſſions at once allayed the diſcontents of the nation; and the king embarked for the continent in Auguſt 1297, where he negotiated a truce with Philip; but not till after he had paid his continental allies immenſe ſums, for which no ſervices whatever had been performed. During his abſence, the two noblemen Bigod and Bohun, attended by a great body of cavalry and infantry, took poſſeſſion of the city gates, and obliged the king's council to ſign the Magna Charta, and to add a clauſe, to ſecure the nation for ever againſt all impoſitions and taxes, without the previous conſent of parliament. This the council agreed to ſign; and the king himſelf, when it was ſent over to him in Flanders, did the ſame. Theſe conceſſions he confirmed upon his return; and thus, after the ſtruggles of an age, the Magna Charta was finally eſtabliſhed; nor was it the leaſt honourable circumſtance in its favour, that its confirmation was eſtabliſhed by one of the greateſt princes that ever ſwayed the Engliſh ſceptre.

But though the confirmation of the Great Charter was

obtained without violence, yet it is probable, that the diſturbance given by Scotland about the ſame time, might have haſtened its final execution. That fierce nation, which had been conquered ſome time before, ſtill diſcovered a ſpirit of independence which no ſeverity could reſtrain. Earl Warenne had been left juſticiary in that kingdom; and his prudence and moderation were equal to his valour. He governed the people with ſtrict juſtice; but being obliged by the bad ſtate of his health to return to England, he left the adminiſtration in the hands of two very improper perſons: the one, whoſe name was Ormeſby, was rigorous and cruel; the other, Creſſingham, was avaricious and mean. Under ſo different an adminiſtration little ſtability could be expected; and their injuſtice ſoon drove the Scots into open rebellion. They were headed by William Wallace, ſo celebrious in Scottiſh ſtory, the younger ſon of a gentleman who lived in the weſtern part of the kingdom. He was a man of gigantic ſtature, incredible ſtrength, and ſingular intrepidity; deſirous of independence, and poſſeſſed with the moſt diſintereſted patriotiſm. His firſt exploits were confined to petty ravages, and occaſional attacks upon the Engliſh. As his forces increaſed, his efforts became more formidable; every day brought accounts of his great actions. The Scots were now too powerful for the Engliſh that were appointed to govern them; many of their barons now joined Wallace; ſir William Douglas was among the foremoſt, while Robert Bruce ſecretly favoured and promoted the cauſe. To oppoſe this inſurrection, earl Warenne was diſpatched with an army of forty thouſand men to attack the Scots, who had croſſed the borders, and begun to ravage the country. He ſuddenly entered Annandale, and by forced marches came up with the inſurgents at Irvine, where he took them by ſurpriſe, obliged them to capitulate, and compelled them to give hoſtages for their future fidelity. Moſt of the nobility renewed their oaths; but only waited a more favourable occaſion for vindicating their freedom. Wallace alone diſdained ſubmiſſion; and with a few followers, marched northwards, full of indignation and diſappointment. In the mean time Warenne advanced in purſuit, and overtook him in the neighbourhood of Stirling, on the other ſide of the Forth. The earl, perceiving the favourable ground he had choſen, was for declining the engagement; but being preſſed by Creſſingham, whoſe private revenge operated over his judgment, the old earl was at length perſuaded to comply, and he paſſed over a part of his army to begin the attack. Wallace boldly advanced upon them before they had time to form, and put them entirely to the rout. Part were driven into the river which lay in the rear, and the reſt were cut to pieces. Among the ſlain was Creſſingham himſelf, whoſe memory was ſo odious to the Scots, that they flayed his dead body, and made ſaddles of his ſkin. Warenne retired with the remains of his army to Berwick, while the victors took ſuch caſtles as were but ill provided with a ſiege. Edward now haſtened back from Flanders, impatient to reſtore his authority, and ſecure his former conqueſts. Leſt the diſcontents of his people ſhould not have entirely ſubſided, he took every popular meaſure that he thought would give them ſatisfaction. He reſtored to the citizens of London the power of electing their own magiſtrates, of which they had been deprived in the latter part of his father's reign. He ordered ſtrict enquiries to be made concerning the quantity of corn which he had arbitrarily ſeized for the uſe of his armies, as if he intended to pay the value to the owners. Thus having ſatisfied all complaints, he levied the whole force of his dominions; and, at the head of a hundred thouſand men, he directed his march towards the north, to take vengeance upon the Scots for their defection.

It will eaſily be imagined that the Scots, even if united, were wholly incompetent to reſiſt ſuch an army; but their own mutual diſſenſions ſerved to render them ſtill more unequal to the conteſt, and to prepare Edward's way to an eaſy triumph. The Scots were headed by three commanders, who each claimed equal authority; theſe were the ſteward of Scotland, Comyn of Badenoch, and William Wallace, who offered to give up his command, but whoſe party refuſed to follow any other leader. The Scotch army was judiciouſly poſted at Falkirk, determined to await the aſſault of the Engliſh. They were drawn up in three diviſions, each forming a complete body of pikemen, and the intervals filled with archers. Their horſe were placed in the rear, and their front was ſecured with paliſadoes. Edward, though he ſaw the advantage of ground was againſt him, little regarded ſuch a ſuperiority, confident of his own ſkill and his numbers; wherefore, dividing his forces alſo into three bodies, he led them to the attack. Juſt as he advanced at the head of his troops, the Scots ſet up ſo horrid a ſhout, that the horſe upon which the king rode took fright, threw, and kicked him on the ribs; but the intrepid monarch quickly re-mounted, and ordered the Welſh brigade to begin the attack. Theſe made but a feeble reſiſtance againſt the impetuous Scots, who fought with determined valour. Edward, ſeeing them begin to give ground, advanced in perſon at the head of another battalion; and having pulled up the paliſadoes, charged the enemy with ſuch impetuoſity, that they were no longer able to reſiſt. In this bloody conteſt Wallace did all that lay in the power of man to ſuſtain and avert the ſhock; but the diviſion commanded by Comyn quitting the field, the diviſion of the lord ſteward, as well as that of Wallace, lay open to the Engliſh archers, who at that era began to excel thoſe of all other nations. Wallace long maintained an unequal conteſt with his pikemen; but, finding himſelf in danger of being ſurrounded, he was obliged to draw off the remnant of his troops behind the river Carron. Such was the famous battle of Falkirk, fought July 22, 1298, in which Edward gained a complete victory, leaving twelve thouſand of the Scots, or, as ſome more marvellouſly write, fifty thouſand, dead upon the field of battle, while the Engliſh had not an hundred ſlain! This blow, though dreadful, did not cruſh the ſpirits of the Scots; and after a ſhort interval, they began to prepare for further reſiſtance. Wallace, who had gained their regards by his valour, ſhowed that he merited them more by his declining the rewards of ambition. Perceiving how much he was envied by the nobility, and knowing how advantageous their unanimity would prove to the intereſts of his country, he reſigned the regency of the kingdom, and returned to a private ſtation. He propoſed John Comyn earl of Badenoch, as the moſt eligible perſon to ſupply his place; and that nobleman endeavoured to ſhow himſelf worthy of the appointment. He ſoon began to annoy the Engliſh; and not content with a defenſive war, he made incurſions into thoſe countries which Edward had fondly imagined were wholly ſubdued. In 1302, they attacked an Engliſh army lying at Roſlin, near Edinburgh, and gained a complete victory. The renown of the Scottiſh arms now began to ſpread diſmay among the Engliſh garriſons in that kingdom; and they evacuated all the fortreſſes of which they had for a long time had poſſeſſion. Thus the taſk of conqueſt was to be performed over again; and, in proportion to their loſſes, the Scots ſeemed to be endued with freſh obſtinacy.

But it was not poſſible for any circumſtances of ſucceſsful revolt to depreſs the enterpriſing ſpirit of the king. He aſſembled a great fleet and army; and, early in 1303, entered the frontiers of Scotland with a force, which the enemy could not think of reſiſting in the open field. The fleet furniſhed the land army with all neceſſary proviſions; while theſe traverſed the kingdom from one end to the other, ravaging the open country, taking all the caſtles, and receiving the ſubmiſſions of the nobles and people as they went forward. This conqueſt employed Edward for the ſpace of two years; but he ſeemed, by the ſeverity of his conduct, to make the natives pay dear for the trouble to which they had put him. He abrogated all the

Scottiſh laws and cuſtoms; he endeavoured to ſubſtitute thoſe of England in their place; he raiſed or deſtroyed all their monuments of antiquity, and endeavoured to blot out even the memory of their former independence and freedom. There ſeemed to remain only one obſtacle to the final deſtruction of the Scottiſh monarchy; and that was William Wallace, who ſtill continued refractory, and, wandering from one dreary mountain to another, ſtill preſerved his native independence and uſual good fortune. But even all their feeble hopes from this ſingular veteran were ſoon diſappointed; he was betrayed into the king's hands by ſir John Monteith, a falſe and treacherous friend, whom he had made acquainted with the place of his concealment; and was ſurpriſed and taken by him as he lay aſleep in the neighbourhood of Glaſgow. The inexorable king, determined to ſtrike the Scots with an awful example of ſeverity, ordered him to be conducted in chains to London, whither he was carried amidſt infinite crowds of ſpectators, who flocked to ſee a man that had filled the country with ſo much alarm. On the day after his arrival he was brought to trial as a traitor, at Weſtminſter-hall, where he was placed upon a high chair, and inviduouſly crowned with laurel in deriſion. Being accuſed of various imputed crimes, he pleaded not guilty, and refuſed to own the juriſdiction of the court, affirming that it was equally unjuſt and abſurd to charge him with treaſon againſt a prince whoſe title he had never acknowledged; and as he was born under the laws of another country, it was cruel to try him by thoſe to which he was a ſtranger. The judges diſregarded his defence; for conſidering Edward as the rightful ſovereign of Scotland, they found him guilty of high treaſon, and condemned him to be hanged, drawn, and quartered. This ſentence was executed with the moſt rigorous ſeverity; and his head and quarters were expoſed in the chief cities of England. Such was the wretched end of a brave man, who had, through a courſe of many years, with ſignal perſeverance and magnanimity, defended his native country againſt an unjuſt invader.

Robert Bruce was among thoſe on whom the cruel fate of Wallace had made the deepeſt impreſſion. This nobleman, who was a competitor for the crown, and whoſe claims, though ſet aſide by Edward, were ſtill ſecretly purſued, was now actually in the Engliſh army. He never was ſincerely attached to the Engliſh monarch, whom he was in ſome meaſure compelled to follow; and an interview with Wallace, ſome time before that champion was taken, confirmed him in his reſolution to ſet his country free. But as he was now grown old and infirm, he was obliged to give up the flattering ambition of being the deliverer of his people, and to leave it in charge to his ſon, whoſe name was Robert Bruce alſo, and who received his father's injunction with ardour. This young nobleman was brave, active, and prudent; and a favourable conjuncture of circumſtances ſeemed to conſpire with its views. John Baliol, whom Edward had dethroned, and baniſhed into France, had lately died in that country; his eldeſt ſon continued a captive in the ſame place; ſo that there was none to diſpute his pretenſions, except Comyn, who was regent of the kingdom; and he alſo was ſoon after brought over to ſecond his intereſts. He therefore ſolemnly reſolved upon freeing his country from the Engliſh yoke; and although he attended the court of Edward, yet he began to make ſecret preparations for his intended revolt. Edward, who had been informed not only of his intentions, but of his actual engagements, contented himſelf with ſetting ſpies upon his conduct, and ordered all his motions to be guarded, that he might not eſcape. Bruce was buſily employed in forwarding his plans, unconſcious of being ſuſpected, or even of having a watch ſet upon his conduct; but he was taught to underſtand his danger by a preſent ſent him by a young nobleman, of a pair of gilt ſpurs, and a purſe of gold. This he conſidered as a warning to make his eſcape, which he did, by ordering his horſes to be ſhod with their ſhoes turned backwards, to prevent his being tracked in the ſnow which had juſt fallen. He travelled from London to Lochmaben, which is near four hundred miles, in ſeven days. Comyn, who had in the beginning concurred in his ſchemes, was privately known to have communicated the whole to Edward; and Bruce was reſolved to take vengeance upon him for his perfidy. Hearing that he was at Dumfries, he went thither; and meeting him in the cloiſters of a monaſtery belonging to the Grey Friars, reproached him, in ſevere terms, with his treachery; and drawing his ſword, inſtantly plunged it in his breaſt. Bruce, by this action, not only rendered himſelf the object of Edward's reſentment, but involved all his party in the miſchief. They had now no reſource left, but to confirm, by deſperate valour, what they had begun in cruelty; and they ſoon expelled ſuch of the Engliſh forces as had remained to guard the kingdom. Bruce was ſolemnly crowned king of Scotland by the biſhop of St. Andrew's, in the abbey of Scone; and numbers flocked to his ſtandard, determined to ſhare in his fortunes. Thus, after twice conquering the kingdom, and as often pardoning the delinquents; after having ſpread his victories in every part of the country, and received the moſt humble ſubmiſſions, king Edward ſaw that his whole work was to begin afreſh, and that nothing but the final deſtruction of the inhabitants could give him aſſurance of tranquillity. But no difficulties could repreſs the ardour of this monarch; who, though verging towards his decline, was reſolved to ſtrike a deciſive blow, and make the Scots once more tremble at his appearance. He vowed ſignal revenge againſt the whole nation; and averred, that nothing but complete bondage ſhould ſatisfy his reſentment. He ſummoned the prelates, nobility, and all who held by knight's ſervice, to meet him at Carliſle, which was made the general place of rendezvous; and he detached a body of forces before him into Scotland, under the command of Aymer de Valence, who began the threatened vengeance by a complete victory over Bruce, near Methuen, in Perthſhire. That heroic prince fought with great vigour and obſtinacy; he was thrice diſmounted from his horſe, and as often recovered his place in the hotteſt of the action; at laſt he was overwhelmed, and obliged to take ſhelter, with a few followers, in the Weſtern Iſles. The earl of Athol, ſir Simon Fraſer, and ſir Chriſtopher Seton, who had been taken priſoners, were executed as traitors on the ſpot. Edward himſelf now entered Scotland with his army divided into two parts, when the ſevereſt puniſhments were expected to be inflicted on the poor defeated Scots people. But the temper of Edward was never cruel but from motives of political neceſſity. His anger was ſoon appeaſed by their humiliation; and he was aſhamed to extirpate thoſe who only oppoſed patience to his indignation. It was upon the confederated nobles of the country that his anger fell. The ſiſter of Bruce, and the counteſs of Buchan, were ſhut up in wooden cages, and hung over the battlements of a fortreſs; and his two brothers fell by the hands of the executioner. The obſtinacy of Robert Bruce himſelf operated ſtill to inflame the king's reſentment. He continued to excite freſh commotions in the Highlands; and, though often overcome, perſiſted in unſhaken oppoſition. Edward, irritated beyond meaſure, now reſolved, at the head of a great army, again to enter Scotland, to exterminate the whole race of inſurgents, and to give no quarter. But Edward's ſudden death put an end to theſe fearful denunciations. He ſickened at Carliſle, and died of a dyſentery in his tent about five miles from that city, on the 5th of July, 1307; after enjoining his ſon, with his laſt breath, to proſecute the enterpriſe, and never to deſiſt till he had finally ſubdued the Scottiſh kingdom. He expired in the ſixty ninth year of his age and the thirty-fifth of his reign, after having added more to the ſolid intereſts of the kingdom than any of his predeceſſors, who had ever filled the throne of England.

The character of Edward I. ſtands high on the records of

of hiſtory. He reſtored permanent authority to the government, which had been diſordered by the weakneſs of his father; he maintained the laws againſt all the efforts of his turbulent barons; he fully annexed to the crown the principality of Wales; he took the wiſeſt and moſt effectual meaſures for reducing Scotland to a like condition; and though the equity of this latter enterpriſe may reaſonably be queſtioned, the circumſtances of the two kingdoms promiſed ſuch ſucceſs, and the advantage was ſo viſible, of uniting the whole iſland under one head, that thoſe who give great indulgence to reaſons of ſtate in the meaſures of princes, will not be apt to regard this part of his conduct with much ſeverity. But Edward, however exceptionable his character may appear on the head of juſtice, is the model of a politic and warlike king. He poſſeſſed induſtry, penetration, courage, vigour, and enterpriſe. He was frugal in all expences that were not neceſſary; he knew how to open the public treaſures on proper occaſions; he puniſhed criminals with ſeverity; he was gracious and affable to his ſervants and courtiers; and was as well qualified to captivate the populace by his exterior demeanour, as to gain the approbation of men of ſenſe by his more ſolid virtues. He poſſeſſed a very dignified appearance, tall in ſtature; regular and comely in his features; with keen piercing eyes, and of an aſpect that commanded reſpect and eſteem. His conſtitution was robuſt; his ſtrength and dexterity perhaps unequalled in his kingdom; and his ſhape was perfect in all other reſpects except that of his legs, which are ſaid to have been too long in proportion to his body, whence he derived the epithet of *Longſhanks*. In mental endowments he has been juſtly celebrated. He was cool, ſagacious, and circumſpect. The remoteſt corners of the earth reſounded with the fame of his courage; and all over Europe he was conſidered as the flower of chivalry. Nor was he leſs conſummate in his legiſlative capacity, than eminent for his proweſs. He may be ſtiled the Engliſh Juſtinian: for, beſides the excellent ſtatutes that were enacted in his reign, he new-modelled the adminiſtration of juſtice, ſo as to render it more ſure and ſummary; he fixed proper bounds to the courts of juriſdiction; ſettled a new and eaſy method of collecting the revenue, and eſtabliſhed wiſe and effectual methods of preſerving peace and order among his ſubjects. Yet, with all theſe good qualities, he cheriſhed a dangerous ambition, to which he did not ſcruple to ſacrifice the good of his country, whenever it ſtood in the way of his private views. Though celebrated for his chaſtity and regular deportment, there is not, in the whole courſe of his reign, one inſtance on record of his public liberality and munificence.

King Edward was firſt married to the princeſs Eleanor of Caſtille, by whom he had four ſons and eleven daughters. The three eldeſt of theſe ſons, John, Henry, and Alphonſo, died unmarried, long before their father; the youngeſt, Edward, ſurvived, and ſucceeded him. Four of the daughters of this marriage, Eleanor, Joan of Acres, Margaret, and Elizabeth, were married to the earls of Bar and Glouceſter, the duke of Brabant, and earl of Holland; ſix of them died in their infancy; one of them, Mary, was a nun, and ſurvived her father. Edward's ſecond queen was Margaret of France, by whom he had two ſons, Thomas of Brotherton earl of Norfolk, and Edmund of Woodſtock earl of Kent, and one daughter, Eleanor, who died in her infancy.

Edward II. was in the twenty-third year of his age when he aſcended the throne of his father. He was of an agreeable figure, of a mild harmleſs diſpoſition, and apparently addicted to few vices. But he ſoon gave ſymptoms of his unfitneſs to ſucceed ſo great a monarch as Edward I. The young king appeared more fond of the enjoyment of his power, than of the art of ſecuring it; and, lulled by the flattery of his courtiers, he thought he had done enough for glory, when he had put on the crown. Inſtead, therefore, of proſecuting the war againſt Scotland, according to the injunctions laid upon him by his dying father, he took no ſteps to check the progreſs of Robert Bruce; his march into that country being rather a proceſſion of pageantry than a military expedition. Bruce, no longer dreading the great conqueror by whom he had been oppoſed, boldly iſſued from his retreat, and even obtained a conſiderable advantage over Aymer de Valence, who commanded the Engliſh forces. Young Edward looked tamely on, and, inſtead of chaſtiſing the enemy, endeavoured to come to an accommodation. The Engliſh barons, who had been kept in check during the preceding reign, now ſaw that the ſceptre was fallen into ſuch feeble hands, that they might reſume their former power and independence.

To confirm the inauſpicious conjectures already formed of this reign; Edward recalled one of his favourites, who had been baniſhed by his father for corrupting the prince's morals. The name of this diſſipated youth was Piers Gaveſtone, the ſon of a Gaſcon knight, who had been employed in the ſervice of the late king. This young man was of an inſinuating exterior; but was utterly deſtitute of thoſe amiable qualities of heart and underſtanding which are calculated to procure eſteem. Yet he was witty, brave, and active; but then he was vicious, effeminate, debauched, and trifling. Theſe were qualities entirely adapted to the taſte of the young monarch's mind. He therefore took Gaveſtone into his particular favour, and thought no rewards equal to his deſerts. He endowed him with the earldom of Cornwall, and married him to his own niece, giving him the ſum of thirty-two thouſand pounds, which the late king had ſuperſtitiouſly reſerved for the maintenance of one hundred and forty knights, who had undertaken to carry his heart to Jeruſalem. Theſe unbounded favours could not fail to excite the indignation of the barons; and Gaveſtone was no way ſolicitous to ſoften their reſentment. Intoxicated with power, he became haughty and extravagant. Whenever there was a diſplay of pomp and magnificence, Gaveſtone was ſure to eclipſe the Engliſh nobility, not only by his ſuperior ſplendour, but by his ſuperior inſolence.

This preſumptuous favourite was appointed regent of England, during a journey the king made to Paris, to eſpouſe the princeſs Iſabella, to whom he had been long betrothed. The barons, extremely provoked at this elevation of the favourite, concerted meaſures, previous to the arrival of the princeſs, who was imperious and intriguing, to make her of their party, by affecting to give her a timely caution againſt the intrigues of Gaveſtone. A conſpiracy was ſoon formed againſt him, at the head of which queen Iſabella, and the earl of Lancaſter, were aſſociated. They reciprocally bound themſelves to expel Gaveſtone; and began to throw off all reverence for the royal authority, which they ſaw wholly ingroſſed by this overgrown favourite. At length, the king found himſelf obliged to ſubmit to their united clamour; and he removed Gaveſtone, by appointing him lord-lieutenant of Ireland. But his abſence was of very ſhort duration; for the weak monarch, long habituated to his company, could not live without him; and having obtained a diſpenſation from the pope for his breach of faith, he once more recalled Gaveſtone, and even went down to Cheſter to meet him on his firſt landing. A parliament was aſſembled, wherein the king had influence ſufficient to have his late conduct approved; but this ſerved only to increaſe his ridiculous attachment, and to render Gaveſtone ſtill more odious. It was eaſy to perceive that a combination of the nobles, while the queen ſecretly aſſiſted their deſigns, would be too powerful for the efforts of a weak king and a vain courtier. They were bent upon the fall of Gaveſtone, even though that of Edward himſelf ſhould be involved in the ſame ruin. They ſoon, therefore, aſſembled, in a tumultuary parliament, contrary to the king's expreſs command, attended with a numerous retinue of armed followers; and began a barefaced uſurpation, by giving laws to the king. They compelled him, March 16, 1308, to ſign a commiſſion, by which the whole authority

of

EDWARD II.

London Published as the Act directs March 1.1806 by J.Wilkes.

of the government was to be delegated to twelve perſons, to be choſen by themſelves. Theſe were to have the management of the kingdom, and the regulation of the king's houſehold. They were to enact ordinances for the good of the ſtate, and the honour of the king; their commiſſion was to continue for ſix months; and then they were to lay down their authority. Many of their ordinances were accordingly put in force; and ſome of them appeared for the advantage of the nation: ſuch as the requiring that the ſheriffs ſhould be men of property; the prohibiting the adulteration of the coin; the excluding foreigners from farming the revenues; and the revoking all the late exorbitant grants of the crown. All theſe the king, who ſaw himſelf entirely ſtripped of his power, could very patiently ſubmit to; but when he found that Gaveſtone was to be baniſhed for ever from his dominions, he was no longer maſter of his temper; but removing to York, where he was at a diſtance from the immediate terror of the confederated power, he inſtantly invited Gaveſtone back from Flanders, whither the barons had baniſhed him; and declaring his puniſhment and ſentence to be illegal, he openly reinſtated him, in 1312, in all his former authorities. This was ſufficient to ſpread an alarm over the whole kingdom; the barons flew to arms; the earl of Lancaſter put himſelf at the head of this irreſiſtible confederacy; Guy earl of Warwick entered into it with anxious zeal; the earl of Hereford, the earl of Pembroke, and earl Warenne, all embraced the ſame cauſe; whilſt the archbiſhop of Canterbury brought over the majority of the eccleſiaſtics, and conſequently of the people. The ſupine and miſerable Edward, inſtead of attempting reſiſtance, ſought only for ſafety: happy in the excluſive ſociety of his favourite, he embarked at Teignmouth, and ſailed with him to the caſtle of Scarborough, where he left Gaveſtone, as in a place of ſafety; and then went back to York, either to raiſe an army, or to allay the animoſity of his barons. In the mean time, Gaveſtone was beſieged in Scarborough by the earl of Pembroke; and being unable to make reſiſtance, he took the earlieſt opportunity to offer terms of capitulation. He ſtipulated, that he ſhould remain in Pembroke's hands, as a priſoner, for two months; and that endeavours ſhould be uſed, in the mean time, for a general accommodation. But Pembroke had no intention that he ſhould eſcape ſo eaſily: the other leading barons were conſulted; when, without heſitation or trial, the unfortunate favourite's head was ſevered from his body, to the diſgrace of humanity, and in violation of the eſtabliſhed laws.

The king, at firſt, ſeemed to feel all the reſentment which ſo ſenſible an injury ought to have produced; but, equally weak in his attachment and in his revenge, he was ſoon appeaſed, and granted the murderers a free pardon, upon their making a ſhow of ſubmiſſion and repentance. An apparent tranquillity was for a time eſtabliſhed among the contending parties; and that reſentment which they had exerciſed upon each other, was now turned againſt the Scots, who were conſidered as the common enemy. A war had been declared ſome time before with this nation, in order to recover that ſovereignty over them which had been eſtabliſhed in the former reign, and a truce was concluded; but the terms of it being ill obſerved on both ſides, the animoſities were kindled afreſh, and the whole military force of England was called out by the king, and ſeconded by the barons; together with very large reinforcements from the continent, and other parts of the Engliſh dominions. Edward's army amounted to a hundred thouſand men; while Bruce, king of Scotland, could bring only thirty thouſand to oppoſe him. Both armies met at Bannockburn, within two miles of Stirling; the one confident in numbers, the other relying wholly on their advantageous poſition. Bruce had a hill on his right flank, and a bog on his left; with a rivulet in front, on the banks of which he had cauſed ſeveral deep pits to be dug, with pointed ſtakes driven into them, and the whole carefully concealed from the view of the enemy. The attack was made by the Engliſh; and a furious engagement enſued between the cavalry on both ſides. The fortune and intrepidity of Bruce gave the firſt turn to the day. He engaged in ſingle combat with Henry de Bohun, of the houſe of Hereford; and at one ſtroke clove his ſkull with his battle-axe. So favourable a beginning was only interrupted by the night; for the battle renewing at the dawn of the enſuing day, the Engliſh cavalry once more attempted to attack the Scottiſh army, but unexpectedly found themſelves entangled among thoſe pits which Bruce had previouſly dug for them. The earl of Glouceſter, the king's nephew, was overthrown and ſlain, which ſerved to intimidate the Engliſh army; but they were much more alarmed by the appearance of a freſh army, as they ſuppoſed it to be, that was preparing, from a neighbouring height, to fall upon their rear. This was only compoſed of waggoners and attendants upon the Scottiſh camp, who had been ſupplied by the king with ſtandards, and ordered to make as formidable a ſhow as they poſſibly could. The ſtratagem ſucceeded; the Engliſh, intimidated by their loſſes, and diſtracted by their fears, began to fly on all ſides; and, throwing away their arms, were purſued with great ſlaughter as far as Berwick. Edward himſelf narrowly eſcaped by flight to Dunbar, where he was received by the earl of Marche, and thence conveyed by ſea to Berwick. This battle was deciſive in favour of Scotland. It ſecured the independence of the crown of that kingdom; and ſuch was the influence of this defeat upon the minds of the Engliſh, that for ſome time after no ſuperiority of numbers could induce them to keep the field againſt their formidable adverſaries.

Want of ſucceſs is uſually attended with want of authority. The king having ſuffered not only a defeat from the Scots, but alſo having been diſtracted by inſurrections among the Welſh and Iriſh, yet found his greateſt affliction in the turbulence and inſolence of his ſubjects at home. The barons, ever refractory, now took the advantage of his feeble ſituation to depreſs his power, and re-eſtabliſh their own. The earl of Lancaſter and thoſe of his party, A. D. 1314, no ſooner ſaw the unfortunate monarch return in diſgrace, than they renewed their demands, and were reinſtated in their former power of governing the kingdom. It was declared, that all offices ſhould be filled from time to time by the votes of parliament, which as they were influenced by the great barons, theſe effectually took all government into their own hands. Thus, from every new calamity, the ſtate ſuffered; the barons acquired new power; and their aims were not ſo much to repreſs the enemies of their country, as to foment new animoſities, by which they might ſtrengthen their own hands.

The king, finding himſelf thus counteracted and cut off from all reſources, had recourſe to another favourite, on whom he repoſed the utmoſt confidence, and from whoſe connections he hoped for aſſiſtance. This was Hugh De Spenſer, a young man of noble Engliſh family, and engaging accompliſhments. His father was a perſon of eſtimable character, venerable from his years, and reſpected for his wiſdom, valour, and integrity. But theſe excellent qualities were all vilified, from the moment he and his ſon began to ſhare the king's favour. The turbulent barons, with Lancaſter at their head, regarded them as rivals, and taught the people to deſpiſe thoſe accompliſhments that only ſerved to eclipſe their own. The king equally weak in his attachments, inſtead of profiting by the wiſdom of the father, endeavoured only to ſtrengthen himſelf by their power. For this purpoſe he married the young Spenſer to his niece; he ſettled upon him ſome large poſſeſſions in Wales; and even diſpoſſeſſed ſome lords unjuſtly of their eſtates, in order to accumulate them upon his favourite. This was a pretext the king's enemies wiſhed for: the earls of Lancaſter and Hereford flew to arms; and the lords Audley and Ammori, who had been diſpoſſeſſed, joined them with all

their forces. Their firſt meaſure was to require the king to diſmiſs his favourite, the young Spenſer; menacing him, in caſe of a refuſal, with a determination to obtain by force what ſhould be denied to their importunities. To ſhow themſelves in earneſt, they began by pillaging the lands of young Spenſer, and burning his houſes. The eſtates of the father ſoon ſhared the ſame fate; and the inſurgents having thus wreaked their vengeance, marched to London, to inflict a ſimilar puniſhment on their adverſaries. Finding a free entrance into the city, they ſo intimidated the parliament that was then ſitting, that a ſentence was procured of perpetual exile againſt the two Spenſers, and a forfeiture of their fortune and eſtates. But an act of this kind, extorted by violence, was not likely to bind the king any longer than neceſſity compelled him. Some time after, having aſſembled a ſmall army to puniſh one of the barons, who had offered an indignity to the queen, he thought it a convenient opportunity to take revenge on all his enemies at once, and to recall the two Spenſers, who had been ſo unjuſtly expelled their native country. In this manner the civil war was kindled afreſh, and the kingdom involved in all the horrors of ſlaughter and devaſtation.

Edward had now got the ſtart of his adverſaries, and haſtened, by forced marches, towards the borders of Wales, where the enemy's chief power lay. Lancaſter, however, was not ſlow in making head againſt him: he ſummoned together all his vaſſals and retainers, and was quickly joined by the earl of Hereford. Still farther to ſtrengthen his party, he formed an alliance with the king of Scotland, with whom he had long been privately connected. But his diligence proved ineffectual; the king, at the head of thirty thouſand men, preſſed him ſo cloſely, that he had not time to collect his forces together; and, flying from one place to another, he was at laſt attacked in his way to Scotland by ſir Andrew Harcla, who repulſed his forces in a ſkirmiſh, in which the earl of Hereford was ſlain, and Lancaſter himſelf taken priſoner. As he had formerly ſhewn ſo little mercy to Gaveſtone, the ſame meaſure of puniſhment was meted to him. He was condemned by the court-martial; and led, mounted on a lean horſe, to an eminence near Pomfret, in circumſtances of the greateſt indignity, where he was beheaded. The people, with whom he had juſt before been a favourite, ſeemed to have quite forſaken him in his diſgrace; they reviled him, as he was paſſed along to execution, with every kind of opprobrious language. About eighteen more of the principal inſurgents were afterwards condemned and executed in a more legal manner, while others conſulted their ſafety by eſcaping to the continent. This ſeverity only ſerved to increaſe the pride and rapacity of young Spenſer; moſt of the forfeitures were ſeized for his uſe; and, in his promptitude to puniſh the delinquents, he was guilty of many acts of rapine and injuſtice. Thus he laid the train for his own future misfortunes.

The king of France, A. D. 1324, taking advantage of Edward's imbecility, reſolved to confiſcate all his foreign dominions. After a fruitleſs embaſſy from Edward, the queen of England deſired to negotiate the buſineſs with her brother Charles the Fair, then king of France, in order to avert the ſtorm. The French king, though he gave his ſiſter the kindeſt reception, was reſolved to liſten to no accommodation, unleſs Edward in perſon ſhould appear, and do him feudal homage for the dominions he held under him. This was conſidered as a very dangerous ſtep; and what the king of England ſhould not think of complying with. In this exigence the queen ſtarted a new expedient, which ſeemed calculated to get rid of all difficulties. It was, that Edward ſhould reſign the dominion of Guienne to his ſon, then about thirteen years of age; and that the young prince ſhould go with the queen to Paris, to pay that homage which had been required of the father. With this propoſal all parties acquieſced; young Edward was ſent to Paris; and the queen, a haughty and imperious woman, having thus got her ſon in her power, was reſolved to detain him abroad till her own deſires were complied with. The principal of theſe was the expulſion of the Spenſers, againſt whom ſhe had conceived a moſt implacable hatred. In conſequence of this reſolution, ſhe protracted the negociation at her brother's court for ſome time; and, being at laſt required by the king to return, ſhe replied that ſhe would never again appear in England till Spenſer was removed from the royal preſence, and baniſhed the kingdom. By this reply ſhe gained two points: ſhe became popular in England where Spenſer was deſpiſed; and ſhe could indulge in the ſociety of a young nobleman, whoſe name was Mortimer, upon whom ſhe had caſt her affections. This youth had, in ſome former inſurrection, been condemned for high treaſon, but had the ſentence commuted into perpetual impriſonment in the Tower. From thence he had the good fortune to eſcape to France, and ſoon became diſtinguiſhed for his violent antipathy to Spenſer. The graces of his perſon, and his abhorrence of the favourite, rendered him very acceptable to the queen; ſo that, from being a partizan, he became a lover, and indulged in all the voluptuous pleaſures her criminal paſſion could confer. The queen's court in Guienne became a ſanctuary for all the malcontents who were baniſhed their country; a correſpondence was ſecretly carried on with the diſcontented at home; and a combination formed to deſtroy the favourites, and dethrone the king.

To ſecond the queen's efforts, many of the principal nobles prepared their vaſſals, and openly declared againſt the favourite. The king's brother, the earl of Kent, joined the party; the earl of Norfolk was prevailed upon to enter ſecretly into the conſpiracy; the brother and heir to the earl of Lancaſter was from principle attached to the cauſe; the archbiſhop of Canterbury expreſſed his approbation of the queen's meaſures; and the minds of the people were inflamed by all thoſe arts which the deſigning and vindictive practiſe upon the weak and ignorant. In this univerſal defection, the queen prepared for her return to England; and, accompanied by three thouſand men at arms, ſet out from Dort harbour, and landed, without oppoſition, on the coaſt of Suffolk, September 24, 1326. She no ſooner appeared, than a general revolt in her favour took place; three prelates, the biſhops of Ely, Lincoln, and Hereford, brought in all their vaſſals; and Robert de Watteville, who had been detached to oppoſe her progreſs, went over to her with all his forces. In this exigence the unfortunate Edward vainly attempted to collect his friends; he was obliged to quit the capital for ſafety; and the populace, immediately on his flight, broke out into thoſe violent exceſſes which are the ſure conſequence of unreſtrained liberty and licentiouſneſs. They ſeized the biſhop of Exeter, as he was paſſing through the city, beheaded him without any form of trial, and threw his body into the Thames. They ſeized upon the Tower, and ſhewed mercy to none who ventured to oppoſe them: all government was diſſolved, the courts of juſtice ſhut, and a mob called *the riflers*, plundered and murdered with impunity. The affrighted king found the ſpirit of revolt not confined to the capital alone, but diffuſed over the whole kingdom. He had placed ſome hopes upon the garriſon which was ſtationed in the caſtle of Briſtol, under the command of the elder Spenſer; but they mutinied againſt their governor, and that unfortunate nobleman was condemned by the tumultuous barons to the moſt ignominious death. He was hanged on a gibbet in his armour, his body was cut to pieces and thrown to the dogs, and his head was ſent to be expoſed at Wincheſter, where it was ſet on a pole. Thus fell the elder favourite, in his ninetieth year; yet his character, even the malevolence of party could not tarniſh. He had paſſed a youth of tranquillity and unſullied reputation; but his unfortunate connection with an ill-conducted government, involved his age in ruin. Young Spenſer, the ill-fated ſon, did not long ſurvive the father; he was taken in an ob-

ſcure convent in Wales; and the mercileſs victors reſolved to glut their revenge by adding inſult to cruelty. The queen, callous to every feeling of humanity, waited not the formality of a trial; but ordered the wretched victim to be led forth, that ſhe might feaſt her eyes, with ſavage pleaſure in beholding his diſtreſs. The gibbet erected for his execution was fifty feet high; his head was ſent to London, where the citizens carried it in brutal triumph, and fixed it on the bridge.

In the mean time, the perſecuted king, who hoped to find refuge in Wales, was cloſely purſued by his triumphant enemies. Finding no hopes of ſuccour in that part of the country, he took ſhipping for Ireland; but even there his misfortunes purſued him: he was driven back by contrary winds, and eventually delivered up to his adverſaries, who expreſſed their brutal rage by the groſſneſs of their treatment. He was conducted to the capital, amidſt the inſults and reproaches of the people, and confined in the Tower. A charge fulminated by the queen and Mortimer was exhibited againſt him; in which no other crimes but his incapacity to govern, his indolence, his love of pleaſure, and his being ſwayed by evil counſellors, were objected againſt him. He was depoſed January 20, 1327; a penſion was aſſigned him for his ſupport; his ſon Edward, then about fourteen, was declared his ſucceſſor, and the queen was appointed regent during the minority.

The depoſed monarch but a ſhort time ſurvived this degradation; he was ſent from priſon to priſon, a wretched outcaſt, and the ſport of fortune. He had been at firſt conſigned to the cuſtody of the earl of Lancaſter; but this nobleman, betraying ſome marks of reſpect and pity, he was taken out of his hands, and delivered over to the lords Berkeley, Montravers, and Gournay, who were entruſted with the charge of guarding him a month each in turn. Whatever his treatment from lord Berkeley might have been, the other two ſeemed reſolved that he ſhould enjoy none of the comforts of life while in their cuſtody. They practiſed every kind of indignity upon him, as if their deſign had been to accelerate his death by the bitterneſs of his ſufferings. Theſe cruelties began at length to operate upon the minds of the people, whoſe rage was ſoftened, and pity for their perſecuted ſovereign excited in proportion as the adulterous connection between the queen and Mortimer came into view. The queen, therefore, dreading a revolution in his favour, ſent orders to Gournay and Montravers to diſpatch him at once. Theſe monſters, in the ſhape of men, accordingly went to Berkeley caſtle, where Edward was confined; and, having concerted a method of putting him to death without any external ſigns of violence, they threw him on a bed, holding him down by a table, which they placed over him. They then ran a red-hot iron through a tube of horn up his fundament, and thus burnt his bowels, without diſfiguring his body. By this cruel artifice they expected their crime would be concealed; but his dreadful ſhrieks, which were heard at a diſtance from the caſtle, ſoon gave a ſuſpicion of the murder; and the whole was brought to light by the confeſſion of one of the accomplices. Thus miſerably periſhed the unthinking, dethroned, perſecuted, king of England, on the 21ſt of Sept. 1327.

Edward II. ſurnamed of Caernarvon, is ſaid to have borne a great reſemblance to his illuſtrious father in the ſtature, ſtrength, and beauty, of his perſon; but unhappily the reſemblance was not ſo great in the qualities of the mind. Though not remarkably deficient in perſonal courage, he had no talents for war; nor was he better qualified for the conduct of political intrigues, being paſſionate, incautious, and irreſolute. He was guilty of many follies, but of few vices; and ſpent his time rather in frivolity, than in criminal indulgences. But the moſt ſtriking feature in this prince's character, was his unbounded and inviolable attachment to his favourites, Gaveſtone and Spenſer. This was the only real cauſe of all the calamities of his reign, the miſeries of his life, and the violence of his death. Edward had, by his queen Iſabella of France, two ſons and two daughters, viz. Edward, his eldeſt ſon and ſucceſſor, born at Windſor, November 13, 1312; John, his youngeſt ſon, born at Eltham, Auguſt 1, 1316, and died at Perth, unmarried, in 1334; his eldeſt daughter Jane, born in the Tower of London, and married to David Bruce king of Scotland; and Eleanor, born at Woodſtock, and married to the duke of Guilders.

When Edward III. was raiſed to the throne of England, Jan. 13, 1327, twelve perſons were choſen as his privy-council, to direct the affairs of government. Mortimer, the queen's paramour, declined being of the number, under a pretended ſhow of diſintereſtedneſs; but at the ſame time he ſecretly influenced all the meaſures of the cabinet. He procured the greateſt part of the royal revenues to be ſettled on the queen-dowager, and diſdained to conſult the miniſters of government in any public meaſure. The young king was ſo ſurrounded by the favourite's creatures, that no acceſs could be had to him, and the whole ſovereign authority was engroſſed by Mortimer and the queen, with a view to give permanence to her criminal attachment. But the ſlighteſt ſhock was ſufficient to overturn a government formed on the ruins of virtue and honour. An irruption of the Scots gave the firſt blow to Mortimer's credit; and young Edward's own abilities contributed to his fall. The Scots, who had no connection with either party, were ſedulous to take advantage of the feeble ſtate of the nation; and therefore invaded the northern counties with an army of twenty thouſand men. Edward, even at this early age, diſcovered that martial diſpoſition, for which he was afterwards ſo famous. He reſolved to intercept them in their retreat; and began his march in the middle of July, 1327, at the head of an army of ſixty thouſand men; but, after ſuſtaining incredible fatigues in purſuing them through woods and moraſſes, he was unable either to come up with or even diſcover the route of the enemy, except from the ravages they had made, and the ſmoking ruins of villages, which travelled before them. The rapid motion of this detachment of the Scots army, aroſe from their being mounted on horſeback. At length the perſevering Edward came up with them, poſted in an advantageous ſituation, on the oppoſite banks of the Were.

It was on this occaſion that the reſentment of the young king was publicly manifeſted againſt Mortimer. Edward, eager and anxious to engage, reſolved that night, at all events, not to allow the ravagers to eſcape with impunity; but Mortimer oppoſed the will of the king, and prevented an engagement, fearing it might prove deſtructive to his intereſts, whether the battle were won or loſt. Shortly after, a choſen band of intrepid Scots, under the command of Douglas, ſtole into the Engliſh camp by night, and arrived at the tent in which the king was ſleeping. But the young monarch happened to be awakened by the noiſe, and made a valiant defence; his chamberlain and chaplain, were killed fighting by his ſide; and he thus had time given him to eſcape in the dark. The Scots, thus fruſtrated in their deſign upon the king, fled into their own country, leaving their tents ſtanding, without a perſon with them, except ſix Engliſh priſoners, whoſe legs had been broken, to prevent their carrying intelligence to their countrymen. The valour of the young king was every where applauded; and the people began anxiouſly to wiſh for a removal of that authority which ſtood between them and the monarch; and ſpared no pains to magnify the ſhameleſs conduct of the queen-dowager and her paramour, or to extol the riſing genius of their young ſovereign.

Mortimer now began to find himſelf in a very precarious ſituation; and reſolved to procure a peace with Scotland, in order to concentrate his power at home. A treaty was accordingly concluded between the two nations,

tions, in which the government, for the lucre of gain, renounced all further title to the ſovereignty over the ſiſter kingdom; and the Scots, in return, agreed to pay thirty thouſand marks as a compenſation. The next wretched ſtep that Mortimer thought neceſſary for his ſecurity, was to ſeize the inoffenſive earl of Kent, brother to the late king; who, under a perſuaſion that his brother was ſtill alive, and concealed in ſome ſecret priſon, entered into a deſign of reſtoring him to liberty, and of re-inſtating him in his former power. Him, therefore, Mortimer reſolved to deſtroy; and had him accuſed, condemned, and executed, even before the young king had time to interpoſe in his behalf. In proportion too as Mortimer got rid of his enemies, he was careful to enrich himſelf with their ſpoils. The eſtate of the unfortunate earl was ſeized upon for the uſe of the favourite's youngeſt ſon; and the immenſe fortunes of the Spenſers were in like manner converted to his own uſe.

In this ſtate of public affairs, Edward reſolved to ſhake off that authority which had long become derogatory to the nation, and a ſcandal to himſelf. But ſuch was the power of the favourite, that it required as much precaution to overturn the uſurper as to eſtabliſh the throne. The queen and Mortimer had for ſome time choſen the caſtle of Nottingham for the place of their voluptuous embraces: it was ſtrictly guarded, the gates locked every evening, and the keys laid under the queen's pillow. It was therefore agreed between the king, and ſome of his barons, who ſecretly entered into his deſigns, to ſeize upon them in this fortreſs; and, for that purpoſe, ſir William Eland, the governor, was induced to admit them by a ſubterraneous way, which had been formerly contrived for a ſecret outlet. By this paſſage the noblemen in the king's intereſts entered the caſtle in the night; and Mortimer, without having it in his power to make the ſmalleſt reſiſtance, was ſeized and ſecured. It was in vain that the queen endeavoured to protect him; in vain ſhe implored the king to ſpare her "gentle Mortimer." Deaf to her entreaties, the barons and the parliament proceeded to his condemnation. He was hanged on a gibbet at Elmes, near London, November 29, 1330, and his body was exhibited to the people for two days after. A ſimilar ſentence was meditated againſt Gournay and Montravers, the murderers of the late king; but they contrived to elude puniſhment, by eſcaping to the continent. The queen, who was by far the moſt culpable, was ſhielded by the dignity of her ſituation; ſhe was, however, deprived of all ſhare of power, and confined for life to the caſtle of Riſings, with a penſion of three thouſand pounds a-year. From this confinement ſhe was never ſet free; and, though the king annually paid her a viſit of filial ceremony, yet ſhe found herſelf abandoned to univerſal contempt and deteſtation; and continued, for above twenty-five years after, a miſerable monument of blaſted virtue.

Edward, thus freed from the controul of a baſe and unnatural confederacy, reſolved to make himſelf popular by an expedient, which ſeldom failed to ſecure the affections of the Engliſh. He knew that a conquering monarch was the fitteſt to pleaſe a warlike people. The weakneſs of the Scottiſh government, which was at that time under a minority, gave him a favourable opportunity of renewing hoſtilities; and the turbulent ſpirit of the nobles of that country contributed to promote his views. Edward Baliol, whoſe father John had been crowned king of Scotland, alſo now laid claim to the crown; and Edward reſolved to ſupport his pretenſions. He therefore gave him permiſſion to levy what forces he was able in England; and, with not above three thouſand adventurers thus fortuitouſly united, Baliol gained a conſiderable victory over his countrymen, in which twelve thouſand of them were ſlain. This victory, which was followed by ſome others, ſo intimidated the Scots, that Baliol found no difficulty in getting himſelf crowned king at Scone; and all this diſaffected and conquered diſtrict ſubmitted to his authority. But he did not long enjoy his ſuperiority; he was unexpectedly attacked and defeated by ſir Archibald Douglas, and obliged to take refuge in England. The bad ſucceſs of Baliol only ſerved to inflame the ardour of Edward; and he now claimed fealty and homage from Baliol, for the kingdom of Scotland. This the fugitive king complied with; and Edward forthwith prepared, with all his forces, to re-inſtate Baliol in the ſovereignty of that government, which he fondly hoped would ever after be ſubordinate to his own. He immediately laid ſiege to Berwick, which capitulated after a vigorous defence. In attempting to relieve this city, a general engagement enſued between the Scots and the Engliſh, at Halidown-hill, near Berwick, on the 19th July, 1333. The fortune of Edward prevailed. Douglas, the Scottiſh general was ſlain, and the whole army put to the rout. This victory was in a great meaſure obtained by the expertneſs of the Engliſh archers. Almoſt all the Scottiſh nobles in the intereſt of Bruce were either killed or taken; near thirty thouſand of their men fell in the action, while the loſs of the Engliſh is ſaid to have only amounted to *fifteen* men; an inequality incredible. This victory decided the fate of Scotland; Baliol was put in poſſeſſion of the country; and Edward retained many of the principal towns in Scotland, which were declared to be annexed to the Engliſh monarchy. Theſe victories, however, were more ſplendid than advantageous; for, the Scots having conceived an inſurmountable averſion to the Engliſh government, Edward's forces were no ſooner withdrawn, than they revolted againſt Baliol, and determined to expel him the kingdom. Edward's appearance a ſecond time brought them to ſubjection; but they quickly renewed their animoſities upon his retiring. It was in vain that he employed the arts of diſſimulation, and the terrors of war, to induce them to ſubmiſſion; this invincible people ſtill perſiſted in their obſtinacy, which was kept alive by promiſes of ſuccour from France.

That kingdom, which had for a long time diſcontinued its animoſities againſt England, began to be an object of Edward's ambition. A new ſcene began to be opened in France, pregnant with miſchief and misfortune; and the king ſhared in the general calamity. The three ſons of Philip the Fair accuſed their wives before the parliament of adultery; and, in conſequence of this accuſation being ſubſtantiated, they were condemned and impriſoned for life. Lewis Hutin, his ſucceſſor, alſo cauſed his wife to be ſtrangled, and her paramours to be flayed alive. After his death, as he left only a daughter, his next brother, Philip the Tall, aſſumed the crown in prejudice of the daughter; and vindicated his title by the Salic law, which enacted, that no female ſhould ſucceed to the crown. This law, however, was not univerſally acknowledged, nor ſufficiently confirmed by precedents, to decide the fact. Charles the Fair, therefore, jealous of his elder brother's aggrandiſement, oppoſed his pretenſions, and aſſerted the claim of the late king's daughter. The cauſe, thus warmly conteſted between the two brothers, was at laſt carried before the parliament of France; and they decided, upon the Salic law, in favour of Philip the elder. This monarch enjoyed the crown but a ſhort time; and dying, left only daughters to ſucceed him. Charles, therefore, without a male opponent, ſeized upon the crown, and enjoyed it for ſome time; but he alſo dying, left his wife pregnant. As there was now no apparent heir, the regency was conteſted by two illuſtrious perſons, who laid claim to the ſovereignty upon this occaſion. Edward the Third of England urged his pretenſions, as being by his mother Iſabella, who was daughter to Philip the Fair, and ſiſter to the three laſt kings of France, rightful heir to the crown. Philip Valois, on the other hand, put himſelf in actual poſſeſſion of the government, as being next of kin by the male ſucceſſion. He was, for this reaſon, conſtituted regent of France; and the queen-dowager being unfortunately, ſome time after,

J. Chapman Sculp.

EDWARD III.

Publish'd as the Act directs July 15th 1795.

after, brought to bed of a daughter, he was unanimouſly elected king. Being crowned amidſt the congratulations of his ſubjects, he received the appellation of Philip the Fortunate.

A brewer of Ghent in the mean while perſuaded Edward to aſſume the title of king of France. This citizen's name was James Arteveld, a man grown too rich and powerful for a ſubject; and one of thoſe whom, according to Machiavel, kings ought to flatter or deſtroy. With the aſſiſtance of this man, therefore, Edward reſolved to undertake the conqueſt of France. He firſt, however, conſulted his parliament on the propriety of the undertaking, obtained their approbation, received adequate ſupplies, and with a gallant army, July 16, 1338, he ſailed over to Flanders. Edward's firſt ſtep was to aſſert his claim to the French crown; to aſſume the title of king of the country, and brand Philip, his rival, with the title of uſurper. Philip, on the other hand, made vigorous preparations to oppoſe him; he even challenged the invader to try their fortune in ſingle combat, upon equal terms, in ſome appointed plain. Edward accepted the challenge; but various obſtacles prevented its taking place.

The firſt ſignal advantage gained by the Engliſh, was in a naval engagement on the coaſt of Flanders, in which the French loſt two hundred and thirty ſhips, and had thirty thouſand ſeamen, and two of their admirals, ſlain. None of Philip's courtiers, it is ſaid, dared to inform him of the event, till his jeſter gave him a hint, by which he diſcovered the loſs he had ſuſtained. This victory brought on a truce, which neither ſide ſeemed willing to break, till the ambition of Edward was once more excited by the invitation of the count de Montfort, who had poſſeſſed himſelf of the province of Bretagne, and applied to Edward to ſecond his claim. This entirely coincided with Edward's moſt ſanguine deſires, ſince it promiſed to open to him an entrance into the heart of France. Theſe flattering proſpects, however, were for a while clouded, by the impriſonment of Montfort, who was ſoon after beſieged in the city of Nantes, and taken. But Jane of Flanders, his wife, more than made up for the loſs of her huſband. This lady, the moſt extraordinary woman of her age, courageouſly undertook to ſupport the falling fortunes of her family. She aſſembled the inhabitants of Rennes; and, carrying her infant ſon in her arms, deplored her misfortunes, and called loudly upon the citizens to eſpouſe her cauſe. The inhabitants of Nantes, and of all the fortreſſes of Bretagne, embraced the ſame reſolution; and the king of England, appriſed of her efforts, anxiouſly forwarded ſuccours to the town of Hennebonne, in which place ſhe reſolved to ſuſtain the attacks of the enemy. Charles de Blois, Philip's general, eager to make himſelf maſter of ſo important a fortreſs, and ſtill more to take the counteſs priſoner, ſat down before the caſtle with a large army, and conducted the ſiege with indefatigable labour. The defence was no leſs reſolute: ſeveral ſallies were made by the garriſon, in which the counteſs herſelf was always moſt forward, and led on to the aſſault. Obſerving one day that the whole army of the enemy had quitted the camp to join in a general ſtorm, ſhe ſallied out by a poſtern-gate, at the head of three hundred horſe, ſet fire to their tents and baggage, put the ſutlers to the ſword, and occaſioned ſuch an alarm, that the French army deſiſted from the aſſault, in order to cut off her retreat to the town. Thus intercepted, ſhe retired to Auray, where ſhe continued for five or ſix days; then, returning at the head of five hundred horſe, ſhe fought her way through the French camp, and returned to her faithful citizens in triumph. But mere unſupported valour could not long withſtand the impreſſions of an active and vigorous enemy. The beſiegers had made ſeveral breaches in the walls; and a capitulation was ſet on foot, when the counteſs, who had mounted on a high tower, and was looking towards the ſea, deſcried ſome ſhips at a diſtance. She immediately exclaimed that ſuccours were at hand, and forbade any further capitulation. She was not diſappointed in her expectations; the fleet ſhe deſcried was from England, with ſix thouſand archers, whom Edward had ſent for the relief of Hennebonne, but who had long been detained by contrary winds. They entered the harbour, under the conduct of ſir Walter Manny, a moſt valiant commander, who kept up the drooping ſpirits of the Bretons, until the time appointed by the late truce with Edward was expired, when he would be at liberty to renew the war in perſon.

The king of England, therefore, ſailed from Sandwich on the 5th of October 1342, and landed at Morbian, near Vannes, with an army of twelve thouſand men; and being maſter of the field, where no enemy dared to appear againſt him, he endeavoured to give luſtre to his arms, by beſieging ſome of the moſt capital of the enemies' fortifications. The vigour of his operations led to another truce; and this was ſoon after followed by a freſh infraction. The truth is that neither ſide obſerved a truce longer than it coincided with their intereſts; and both had always ſufficient art to throw the blame of perfidy on the other. The earl of Derby was ſent by Edward to defend the province of Guienne, with inſtructions alſo to take every poſſible advantage that circumſtances might offer. At firſt his ſucceſſes were rapid and brilliant; but as ſoon as the French king appeared in force, he met with a very unexpected reſiſtance; ſo that the Engliſh general was compelled to act only on the defenſive. One fortreſs after another was ſurrendered to the French; and nothing was expected but a total extinction of the power of England upon the continent. In this ſituation of affairs, Edward reſolved to appear at the head of his foreign ſubjects and allies; and accordingly embarked at Southampton, and ſet ſail from St. Helen's with a fleet of near a thouſand ſhips on the 10th of July, 1346. He carried with him, beſides the chief nobility of England, his eldeſt ſon, the prince of Wales, ſurnamed the Black Prince, a youth only verging to his ſixteenth year; but whoſe ſtrength of body, and vigour of mind, greatly ſurpaſſed his age, and ſet him above all his competitors. The army of the king of England conſiſted of four thouſand men at arms, ten thouſand archers, ten thouſand Welch infantry, and ſix thouſand Iriſh, all which he landed ſafely at La Hogue in Normandy, which country he determined to make the ſeat of war.

The intelligence of Edward's landing with ſo formidable an army, ſpread conſternation and terror through the French court. The rich city of Caen was taken and plundered by the Engliſh; the villages and towns, even to the gates of Paris, ſhared the ſame fate; and the French had no other reſource but by breaking down their bridges, to ſtop the invader's career. In the mean time Philip exerted every effort in his power to repreſs the incurſions of the enemy. He had ſtationed one of his generals, Gondemar de Faye, with an army on the oppoſite ſide of the river Somme, over which Edward was to paſs; while he himſelf, at the head of a hundred thouſand men, advanced on the contrary ſide to give him battle. Edward thus, in the midſt of his victories, unexpectedly expoſed to the danger of being ſurrounded and ſtarved in an enemy's country, publiſhed a reward to any that ſhould bring him intelligence of a paſſage over the Somme. This was diſcovered by a peaſant of the country; and Edward had juſt time to get his army over the river, when Philip appeared in his rear.

Though Edward had thus far overcome all obſtacles, and eluded or defeated his enemies, he became ſenſible, that it would be extremely dangerous to purſue his march with an army ſo much ſuperior to his own, eſpecially in cavalry, hanging on his rear. He determined therefore to make a ſtand, and to give his purſuers a check. For this purpoſe, he choſe his ground with great judgment, on the gentle declivity of a hill, with a thick wood in his rear. He ordered deep entrenchments to be made on each flank, and waited with firmneſs the approach of his

enemies. The king of France, dreading nothing ſo much as the eſcape of the Engliſh, began the march of his great army from Abbeville early in the morning, Auguſt 26, and continued ſeveral hours with great eagerneſs, till he received intelligence that the Engliſh had halted at Crecy, and were waiting to give him battle. He was adviſed not to engage that day, when his troops were much fatigued with their march, and in great diſorder; and he was diſpoſed to have taken this advice: but the diſcipline of the army was ſo imperfect, that the orders given for halting were not obeyed; and one corps of this mighty hoſt impelling another forward, they continued advancing till they came into the preſence of their enemies in much confuſion.

Edward had employed the forenoon of this important day in drawing up his army in the moſt excellent order, in three lines. The firſt line, which conſiſted of 800 men at arms, 4000 Engliſh archers, and 600 Welſh foot, was commanded by his young, amiable, and heroic, ſon, the prince of Wales, aſſiſted by the earls of Warwick and Oxford, and ſeveral other noblemen; the ſecond line, compoſed of 800 men at arms, 4000 halbardiers, and 2400 archers, was led by the earls of Arundel and Northampton; the laſt line, or reſerve, in which were 700 men at arms, 5300 billmen, and 6000 archers, was ranged along the ſummit of the hill, and conducted by the king in perſon, attended by the lords Moubray, Mortimer, and others. When the army was completely formed, Edward rode along the lines, and by his words and geſtures inſpired his troops with the moſt ardent courage. He then commanded the cavalry to diſmount, and the whole army to ſit down upon the graſs, in their ranks, and refreſh themſelves with meat, drink, and reſt. As ſoon as the French came in view, they ſpring from the ground, full of ſtrength and vigour, and with cool and determined courage ſtood ready to receive them.

The king of France, aſſiſted by the kings of Bohemia and Majorca, the dukes of Lorraine and Savoy, and ſeveral other ſovereign princes, with the flower of the French nobility, laboured to reſtore ſome degree of order to his prodigious army, and drew it up alſo in three lines, but very indiſtinctly formed. The firſt line was commanded in chief by the veteran king of Bohemia, the ſecond by the earl of Alençon, the king of France's brother; and the third by Philip in perſon; and each of theſe lines contained a greater number of troops than the whole Engliſh army.

The battle of Crecy was begun about three o'clock in the afternoon, Auguſt 26, by a great body of Genoeſe croſs-bow men, in the French ſervice, who let fly their quarrels at too great a diſtance to do any execution, and were preſently routed by a ſhower of arrows from the Engliſh archers. The earl of Alençon, after trampling to death many of the flying Genoeſe, advanced to the charge, and made a furious attack on that corps commanded by the young prince of Wales. The earls of Arundel and Northampton advanced with the ſecond line to ſuſtain the prince, and Alençon was ſupported by more troops than could crowd to his aſſiſtance. Here the battle raged for ſome time with deſtructive fury; and the earl of Warwick, anxious for the fate of the day and the ſafety of the prince, ſent a meſſenger to the king, intreating him to advance with the third line. Edward, who had taken his ſtand on a windmill on the top of the hill, from whence he had a full view of the motions of both armies, aſked the meſſenger if his ſon was unhorſed, or wounded, or killed; and, being anſwered that the prince was unhurt, and performing prodigies of valour, "Go, then, (ſaid he) and tell my ſon, and his brave companions, that I will not deprive them of any part of the glory of their victory." This flattering meſſage being made known, inſpired the prince and his troops with redoubled courage, juſt at the moſt important criſis of the battle. The king of Bohemia, a ſoldier of great reputation and experience, but almoſt blind through age, and the loſs of one of his eyes in the Italian wars, ſeeing his diviſion almoſt beaten or deſtroyed, with unparalleled fortitude called about him the chief commanders of his forces, and thus addreſſed them: "You have been my companions in many a bloody field, and have ever obeyed my commands with readineſs; receive, therefore, with the ſame reſpect my laſt injunction; bring me forward that I may deal among theſe Engliſhmen one good ſtroke of my ſword, and I ſhall die with ſatisfaction." Without heſitating they agreed to obey him, though death ſhould be the reſult of their obedience; and, that they might not by any extremity be ſeparated from each other, they faſtened their horſes' bridles together, and thus advancing to the hotteſt of the battle, they courageouſly charged the Engliſh prince; but, unable to withſtand the power of that young hero and his valiant aſſailants, they were all ſlain, and the next day found dead about the body of their king, with their horſes' bridles tied together. Thus fell the moſt noble and warlike king of Bohemia, leaving the honour of his death to adorn the blooming laurels of the young prince of Wales. His arms were three oſtrich feathers, with this motto, ICH DIEN, ſignifying, in the German language, I SERVE; and, his ſtandard being taken by the young prince, he afterwards uſed the ſame device, which has ever ſince been borne by the princes of Wales his ſucceſſors.

After this total defeat of the two firſt diviſions of the French army, Philip, undiſmayed at the ſlaughter of his troops, and the fall of ſo many brave princes, advanced to the charge with the line under his immediate command. But this body ſoon ſhared the ſame fate with the other two; and Philip, after having been unhorſed, and wounded in the neck and thigh, was carried off the field by John of Hainault, and fled with no more than five knights and about ſixty ſoldiers in his company, out of all his mighty hoſt, which, at the beginning of the battle, conſiſted of more than 120,000 men. Such was the famous victory of Crecy, the greateſt ever gained by any king of England. From the era of this memorable battle, the French began to diſtinguiſh young Edward by the epithet *Le Noir*, or Black Prince, as well from the terror of his arms, as from the darkneſs of his coat armour.

After the battle, the king flew into the arms of the prince, and, graſping him to his boſom, cried, in an ecſtacy of joy, "My dear ſon, you have this day ſhewed yourſelf worthy of the knighthood which you lately received, and of the crown for which you have ſo bravely fought; perſevere in your honourable courſe." The prince, as modeſt as he was brave, ſunk down on his knees, his face covered with bluſhes, and begged his father's bleſſing. Edward continued with his army at Crecy three days, employed in numbering and burying the dead. The French had left on this bloody ſcene the king of Bohemia, eleven other princes, eighty bannerets, 1200 knights, 1500 gentlemen, 4000 men at arms, and 30,000 other ſoldiers.

Never did a more glorious year than that of 1346, paſs over the head of any Engliſh monarch, the arms of Edward being every where crowned with the moſt ſignal ſucceſs. In Guienne, the duke of Normandy had been obliged to raiſe the ſiege of Aiguillon with precipitation, on Auguſt 20, after having loſt a great part of his army before its walls, in many vain aſſaults; and the earl of Derby made himſelf maſter of that whole province, with all its ſtrong places. David Bruce king of Scotland, having, at the inſtigation of France, invaded England with an army of 50,000 men, was, on October 12, at Nevil's croſs near Durham, defeated in a great battle, taken priſoner, and carried to the tower of London. The parliament of England, dazzled with the luſtre of ſo many victories, granted the king a very large ſupply, to enable him to proſecute the war with vigour.

Edward marched his victorious army from Crecy, September 1, through the Boulonnois, towards Calais, which he

he inveſted on the eighth of that month; and, being well acquainted with its importance, he reſolved to make himſelf maſter of it at all events; but ſoon found that it could not be taken by force, without the deſtruction of great multitudes of his men. He therefore turned the ſiege into a blockade; and, having made ſtrong entrenchments to ſecure his army from the enemy, huts to protect them from the inclemency of the weather, and ſtationed a fleet before the harbour to prevent the introduction of proviſions, he reſolved to wait with patience till the place fell into his hands by famine. The beſieged, diſcovering his intention, turned ſeventeen hundred women, children, and old people, out of the town to ſave their proviſions; and Edward had the conſummate humanity, after entertaining them with a dinner, and giving them two-pence a-piece, to ſuffer them to paſs his lines. While Edward lay before Calais, his troops in Brittany, commanded by ſir Thomas Dagworth, defeated Charles de Blois, June 20, and took him, with two of his ſons, and many other noblemen, priſoners.

Philip beheld the progreſs of the ſiege of Calais with unſpeakable anxiety, and, determining to make one great effort to ſave it, he ſummoned all his allies and vaſſals to rendezvous at Amiens, in Whitſun-week. By this means he raiſed an army of 150,000 men, with which he approached the Engliſh entrenchments, July 27. But, finding theſe impregnable, and every avenue to the town effectually guarded, after ſending Edward ſome abſurd challenges to come out and fight him, he decamped, Auguſt 2, marched back to Amiens, and diſbanded his army.

The garriſon and inhabitants of Calais had by this time conſumed all their proviſions, and eaten all the horſes, dogs, cats, and vermin, in the place, and were enduring the moſt cruel extremities of famine, in hopes of relief. But, when they beheld the retreat of the French army, theſe hopes entirely vaniſhed; and the next day the governor, John de Vienne, appeared upon the walls, and offered to capitulate. Edward, greatly incenſed at their obſtinate reſiſtance, which had detained him eleven months under their walls, at an immenſe expence both of men and money, ſent ſir Walter Manny to acquaint the governor, that he would grant them no terms; but that they muſt ſurrender at diſcretion. At length, however, on the ſpirited remonſtrances of the governor, and the perſuaſions of ſir Walter Manny, Edward conſented to grant their lives to all the garriſon and inhabitants, except ſix of the principal burgeſſes, who ſhould deliver to him the keys of the city, with ropes about their necks. When theſe terms were made known to the people of Calais, they were plunged into the deepeſt diſtreſs; and, after all the miſeries they had ſuffered, they could not think without horror of giving up ſix of their fellow-citizens to certain death. In this extremity, when the whole people were drowned in tears, and at a loſs what to do, Euſtace de Pierre, one of the richeſt merchants in the place, ſtepped forth, and voluntarily offered himſelf to be one of theſe ſix devoted victims. His noble example was ſoon imitated by the other five of the moſt wealthy citizens. Theſe true patriots, barefooted and bareheaded, with ropes about their necks, were attended to the gates by the whole inhabitants, with tears, bleſſings, and prayers, for their ſafety. When they came into Edward's preſence, they laid the keys of the city at his feet, and, falling on their knees, implored his mercy in ſuch moving ſtrains, that all the noble ſpectators melted into tears. The king's reſentment was ſo ſtrong for the many toils and loſſes he had ſuffered in this tedious ſiege, that he was in ſome danger of forgetting his wonted humanity; when the queen, falling upon her knees before him, earneſtly begged, and obtained, their lives. This great and good princeſs conducted the virtuous citizens, whoſe lives ſhe had ſaved, to her own apartment, entertained them honourably, and diſmiſſed them with preſents.

Edward took poſſeſſion of Calais Auguſt 4, 1347; and, in order to ſecure a conqueſt of ſo great importance, and which had coſt him ſo dear, he found it neceſſary to turn out all the ancient inhabitants, who had diſcovered ſo ſtrong an attachment to their native prince, and to people it with Engliſh. He alſo made it the ſtaple for wool, leather, tin, and lead, which were the principal Engliſh commodities for which there was any conſiderable demand upon the continent. All the Engliſh were obliged to bring their goods thither; and foreign merchants came to the ſame place to purchaſe them. By theſe means Calais ſoon became populous, rich, and flouriſhing; and, although it had nearly been taken ſome time after by treachery, it continued for above two centuries in the poſſeſſion of the Engliſh, and braved all the military power of France.

The treachery, which had like to have reſtored it to the French, aroſe from the perfidy of Aymer de Pavia, an Italian, who had been appointed governor of the place. He agreed to deliver it up to the enemy; but his perfidy was diſcovered by Edward, who obliged him to carry on the treaty, and to perſuade the enemy that he was ſtill in their intereſts. Accordingly a day was appointed for the admiſſion of the French troops, while the king, with a ſtrong body of forces, were prepared for their reception. All thoſe who entered the city were immediately cut to pieces; and the garriſon, with Edward and ſir Walter Manny at their head, ruſhing out in purſuit of the reſt, a fierce and bloody conflict enſued, in which king Edward overthrew and took Euſtace de Ribaumont, a knight of remarkable ſtrength and valour.

In this manner the war between the Engliſh and French was carried on with mutual acrimony, until a truce was brought about through the mediation of the pope. But this was in a ſhort time diſſolved by the death of Philip, who was ſucceeded by his eldeſt ſon John, A. D. 1350, when his dominions were rent with domeſtic feuds and violent animoſities. Edward, well pleaſed with the factions that thus prevailed in France, was reſolved to ſeize the favourable opportunity of increaſing its diſtreſſes. Accordingly the Black Prince was ſent into France with his army, on-board a fleet of a hundred ſail; and, landing in Gaſcony, carried his victorious troops into the heart of the country. On the other hand, Edward himſelf made an irruption on the ſide of Calais, and ravaged all the open country. In the mean time John, who was as yet unprepared to oppoſe the progreſs of the Engliſh, continued a quiet ſpectator of their victories; nor was it till the ſucceeding ſummer's campaign, A. D. 1355, that he reſolved to attack the Black Prince, whoſe army then conſiſted of about twelve thouſand men. With ſuch a trifling force had this young warrior ventured to penetrate into the very heart of France, with a deſign of joining his troops to thoſe of the duke of Lancaſter. But he ſoon found that his ſcheme was impracticable; the country before him was too well guarded to ſuffer him to advance farther; and all the bridges in his rear were broken down, which effectually cut off his retreat. In this embarraſſing ſituation his perplexity was increaſed, by being informed that the king of France was actually marching at the head of ſixty thouſand men to intercept him. He at firſt thought of retreating; but ſeeing it impoſſible, he determined calmly to wait the approach of the enemy; and, notwithſtanding the diſparity of numbers, to commit all to the hazard of a battle. Both armies came in ſight of each other at a place called Maupertuis, near Poictiers. The French king might here have eaſily ſtarved the Engliſh into any terms; but ſuch was the impatience of the French nobility, and ſuch their confidence of victory, that it might have produced civil diſcord had they not been ſuffered to engage. In the mean time, while both armies were drawn out, and expecting the ſignal to begin, they were ſtopped by the appearance of the cardinal de Talarande, of Perigord, who attempted to be a mediator between them. However John, the French king, would liſten to no other terms than the reſtitution of Calais; with which the Black Prince refuſing to comply, the on-

ſet

ſet was deferred till the next morning, for which both ſides waited in anxious ſuſpence.

It was during this interval that the prince of Wales ſhewed himſelf worthy of conqueſt. Being now to fight for honour, liberty, and life, againſt an army eight times the number of his own, he drew up his troops with that conſummate judgment which neither age nor experience could have ſurpaſſed. His ground was choſen in a ſmall inclining plain, ſurrounded with woods, vineyards, hedges, and hollow ways, and acceſſible only by one narrow defile in his front. Behind the vineyard he placed ſix hundred men in ambuſh, with directions to make a circuit, and fall on the enemy's rear as ſoon as the battle began. He lined the hedges on both ſides of the defile with his beſt archers, and placed a ſtrong body of the ſame troops at the head of it, in the front of his army. The reſt of his forces were formed into three lines; the van commanded by the earl of Warwick, the main body by the prince himſelf, and the rear by the earls of Saliſbury and Suffolk. As ſoon as theſe diſpoſitions were made, the prince mounted his horſe, and, riding gently along the lines, with a countenance in which modeſty, goodneſs, and fortitude, were ſtrongly depicted, he addreſſed himſelf to every corps, exhorting them to fight valiantly for their king and country, aſſuring them that victory did not depend on numbers, but on the will of Heaven; that, for his own part, he was determined to conquer or die; and that England never ſhould have his ranſom to pay.

The French army, drawn up alſo in three lines, the firſt commanded by the duke of Orleans, the king's brother; the ſecond by the dauphin, with his two brothers Louis and John; the third by the king, attended by his youngeſt ſon Philip, advanced to the charge. The battle was begun by three hundred choſen men in complete armour, and nobly mounted, who were ordered to paſs the defile, to diſſipate the body of archers at the head of it, and make way for the reſt of the army. They obeyed theſe orders with great reſolution; but one half of them fell in the paſſage, and the other was cut in pieces at the outlet. A great body of men at arms, on foot, then entered the defile, commanded by the marſhals Clermont and Andrechan; but the former of theſe generals being killed, and the latter taken priſoner, and many of their men ſlain by the archers who lined the hedges, and by the firſt line of the Engliſh army, the reſt fell back with great terror and precipitation, and threw the whole firſt line of the French army into confuſion. The ſecond line, commanded by the dauphin, then advanced to the charge; but at that inſtant the Engliſh archers and men at arms iſſuing from the ambuſcade, made a moſt furious attack upon their flank ſo unexpectedly, that they were ſeized with a panic, and began to fly. The noblemen who had the charge of the dauphin and his two brothers, anxious for their ſafety, carried them off the field; upon which that whole line diſbanded, and fled on all ſides. The prince of Wales and the other Engliſh generals obſerving the confuſion and flight of their numerous enemies, and determining not to give them time to recover from their conſternation, mounted on horſeback with their followers, and ruſhing out into the plain, completed the diſorder. They firſt encountered and killed the duke of Athenes, conſtable of France, and diſſipated his brigade; and then, falling upon a great body of German horſe, they put them to flight, after killing the counts Sarbruck and Nydo, two of their leaders, and taking the count of Naſſau, their other general, priſoner. The king of France himſelf made the utmoſt efforts to retrieve by his perſonal valour what his raſhneſs had forfeited; but his ſingle courage was unable to ſtop that conſternation which became general through his army; and his cavalry ſoon flying, he found himſelf totally expoſed to the enemy's fury. He ſaw his nobles falling round him, valiantly fighting in his defence, and his youngeſt ſon wounded by his ſide. At length, ſpent with fatigue, and deſpairing of ſucceſs, he thought of yielding himſelf a priſoner; and frequently cried out that he was ready to deliver himſelf to his couſin the prince of Wales. The honour of taking him, however, was reſerved for a much more ignoble hand; he was ſeized by Dennis de Morbec, a knight of Artois, who had been obliged to fly his country for murder.

The ſucceſs of this memorable day was chiefly owing to the valour and conduct of the Black Prince; but his moderation in victory was a nobler triumph than had ever graced any former conqueror. He came forth to meet the royal captive with an air of complacent modeſty; he adminiſtered every conſolation to him under his misfortunes, and ſoftened the anguiſh of his feelings, by reminding him that he had done every thing in the power of magnanimity and heroiſm, to enſure a victory: and at table the prince actually refuſed to ſit down, but ſtood behind the king's chair, declaring that it beſt became him to have the honour of waiting upon ſo illuſtrious a monarch. In April following, A. D. 1357, the prince conducted his royal priſoner through London, attended by an infinite concourſe of people of all ranks and ſtations. His modeſty upon this occaſion was not leſs than before; the king of France was clad in royal apparel, and mounted on a white ſteed, diſtinguiſhed by its ſize and beauty; while the prince himſelf rode by his ſide upon a meaner horſe, and in plain attire.

Two kings, priſoners in the ſame court, and at the ſame time, were conſidered as glorious achievements, unparalleled in the European world; but all that England gained by them was glory. Whatever was won in France, with all the dangers of war, and the expence of preparation, was ſucceſſively, and in a manner ſilently, loſt, without the mortification of a defeat. It may be eaſily ſuppoſed, that the treaties which were made with the captive kings were highly advantageous to the conquerors; but theſe treaties were no longer obſerved than while the Engliſh had it in their power to enforce obedience on the ſpot. It is true that John held to his engagements as far as he was able; but, by being a priſoner, he loſt his authority, and his misfortunes had rendered him contemptible at home. The dauphin, and the ſtates of France, rejected the treaties he had been induced to ſign; and prepared, in good earneſt, to repel the meditated invaſions of the conqueror; who, in 1358, paſſed over to the continent with a numerous army, to enforce the treaty ſigned by the captive king. But all the conſiderable towns were put in a poſture of defence; and every thing valuable was ſecured in fortified places. It was in vain, therefore, that Edward tried to allure the dauphin to hazard a battle, by ſending him a defiance; it was impoſſible to make that cautious prince change the plan of his operations; it was in vain that Edward alleged the obligation of the treaties which had been ſigned at London; and to no purpoſe that he plundered the country round to provoke an engagement. Thus tired out, he at length thought fit to liſten to equitable terms of peace, which was concluded upon condition that king John ſhould be reſtored to liberty, on paying a ranſom of about a million and a half of our money. It was ſtipulated that Edward ſhould for ever renounce all claim to the kingdom of France; and ſhould only remain poſſeſſed of the territories of Poictou, Saintonge, l'Agenois, Perigord, the Limouſin, Quercy, Rouergue, l'Angoumois, and other diſtricts in that quarter; together with Calais, Guiſnes, Montreuil, and the county of Ponthieu, on the other ſide of France: ſome other ſtipulations were made in favour of the allies of England, and forty hoſtages were ſent to the court of London, as a ſecurity for the execution of theſe conditions.

Upon John's return to France, he found himſelf very ill able to comply with thoſe terms of peace that had been juſt concluded. He was without finances, at the head of an exhauſted ſtate; his ſoldiers without diſcipline, and his people without ſubordination. Such was the ſtate of that wretched kingdom, upon the return of

its captive monarch; and yet, such was his absurdity, that he prepared for a croisade to the Holy Land. Had his exhausted subjects been able to equip him for this project of knight-errantry, it is probable he would have gone through with it; but their miseries were such that they were even too poor to pay his ransom. This was a breach of treaty that John would not submit to; and he was heard to express himself in a very noble manner upon the occasion: "Though (says he) good faith should be banished from the rest of the earth, yet she ought still to retain her habitation in the breast of kings." In consequence of this declaration he actually returned to England, and yielded himself up a prisoner, since he could not be set honourably free. It has been said, that his passion for the countess of Salisbury was the real cause of this journey; but we have no foundation for such report. He was lodged in the Savoy, the palace where he had before resided; and where he soon after closed a long and unfortunate reign, by his death, which happened on the 8th of April, 1364.

Charles, surnamed the Wise, succeeded his father on the throne of France; and this monarch, merely by the force of a finely conducted policy, restored his country once more to tranquillity and power. He quelled and dissipated a set of banditti, who had associated themselves under the name of Companions, *Les Compagnées*, and who had long been a terror to the peaceable inhabitants. He had them inrolled into a body, and led them into the kingdom of Castile against Peter surnamed the Cruel, whom his subjects had dethroned, and who, by means of an alliance with the English, endeavoured to get himself reinstated upon the throne. In consequence of these alliances, the English, who supported the interest of Peter, and the French, who maintained that of Henry, again came to an engagement; their armies on the one side commanded by the Black Prince; on the other, by Henry of Transtamare, and Bertrand du Guesclin, one of the most consummate generals in the French service. In this battle, which was fought April 3, 1367, the usual good fortune of the prince of Wales prevailed; the French lost above twenty thousand men, while only four knights and forty private men on the side of the English were slain. Nevertheless, these victories were attended with but few good effects. The English, by their unlimited supplies, had been quite exhausted, and were unable to continue an army in the field. Charles, on the other hand, cautiously forbore coming to an engagement, but was contented to let his enemies waste their strength in attempts to plunder a fortified country. As often as they retired, he was sure to sally forth, and possess himself of such places as they were not strong enough to defend. He first fell upon Ponthieu; the citizens of Abbeville opened their gates to him; those of St. Valois, Rue, and Crotoy, followed the example; and the whole country was, in a little time, thus reduced to total submission. The southern provinces were, in the same manner, reduced with equal success; while the Black Prince, destitute of supplies from England, and wasted by a consumptive disorder, was obliged to return to his native country, leaving the affairs of France in a tottering condition.

These untoward circumstances excited the resentment of the king of England to the utmost pitch; and he resolved to take signal vengeance on his enemies on the continent. But the favourable opportunity had passed by; and all his great designs were uniformly abortive. The earl of Pembroke, with his whole army, were intercepted at sea, and taken prisoners by Henry king of Castile. This nobleman in person attempted to embark with an army for Bourdeaux; but was detained by contrary winds, and obliged to lay aside the expedition. Sir Robert Knolles, one of his generals on the continent, at the head of thirty thousand men, was defeated by Bertrand du Guesclin; while the duke of Lancaster, at the head of twenty-five thousand men, had the mortification of seeing his troops diminished by desertion, without ever coming to battle. Such were the fading laurels of Edward III. in the wane of life; when, too, he had the mortification to see his authority despised at home. In vain he sought solace, in his old age, in the arms of Alice Pierce, a favourite courtezan; this only served to exasperate his people against him, and to turn their pity into contempt. But what, of all other things, served to cast a gloom upon the latter part of this splendid reign, was the approaching death of his most magnanimous son, Edward the Black Prince, whose constitution bowed to the symptoms of a speedy dissolution. This valiant and accomplished hero died on June 8, 1376, in the forty-sixth year of his age, leaving behind him one son, and a character without spot or blemish. His affability, clemency, courage, and liberal disposition, have been celebrated by innumerable historians. Though born in the iron age in which military virtues alone were held in esteem, he cultivated the arts of peace; and seemed ever most happy in harmonizing the discordance of parties, and in promoting the blessings of domestic life. The parliament testified their veneration for his memory, by attending his remains to the cathedral of Caterbury, where he was interred.

The king was most sensibly afflicted at the death of his son; and tried every art to remove his sorrow. He had banished Alice from his presence some time before; but took her again, in hopes of finding consolation in her company. He removed himself entirely from the duties of the state, and from active life; and left his kingdom to be plundered by a set of rapacious ministers. He did not long survive the consequences of his degenerate conduct; but died about a year after the prince, at Shene, in Surry, deserted by all his courtiers, and plundered by his faithless courtezan. He expired in the sixty-fifth year of his age, and the fifty-first of his reign, on the first of June, 1377.

Edward III. was in his person well shaped, tall, strong, and active; his countenance was comely, his air majestic, and his address engaging. He much excelled, and greatly delighted, in the manly exercises of those times, particularly tournaments, which were often celebrated at his court with great magnificence. His genius, both for learning, politics, and war, was far above the common rate. He understood several languages, and was well versed in the learning of his time, as well as a munificent patron of learning and learned men. England enjoyed, by the prudence and vigour of Edward's administration, a longer interval of domestic peace and tranquillity, than she had been blest with in any former period, or than she experienced for many years after. He gained the affections of the great, and curbed their licentiousness: he made them feel his power, without their daring, or even being inclined, to murmur; his affable and obliging behaviour, his munificence and generosity, made them submit with pleasure to his dominion; his valour and conduct made them successful in most of their enterprises; and their unquiet spirits, directed against a public enemy, had no leisure to breed disturbances, to which they were naturally so much inclined, and which the spirit of the government seemed so much to authorise. This was the chief benefit which resulted from Edward's victories and conquests. His foreign wars were, in other respects, neither founded in justice, nor directed to any very salutary purpose. His attempt against the king of Scotland, a minor, and a brother-in-law, and the revival of his grandfather's claim of superiority over that kingdom, were both unreasonable and ungenerous: and he allowed himself to be too soon seduced by the glaring prospects of French conquest, from the acquisition of a point which was practicable, and which might really, if attained, have been of lasting utility to his country and to his successors. The love of glory was certainly the predominant passion of Edward, to the gratification of which he did not scruple to sacrifice the feelings of humanity, the lives

of his ſubjects, and the intereſts of his country. And nothing could have induced or enabled his people to bear the load of taxes with which they were encumbered in his reign, but the love and admiration of his perſon, the fame of his victories, and the excellent laws and regulations which the parliament enacted with his advice and concurrence.

It was in this reign, A. D. 1349, that the order of the Garter was inſtituted; the number received into which was to conſiſt of twenty-four perſons, beſide the king. The counteſs of Saliſbury, at a ball, happening to drop her garter, the king took it up, and preſented it to her with theſe words: "Honi ſoit qui mal y penſe;" *Evil to him that evil thinks*—which accident, it is ſaid, gave riſe both to the order and the motto.

Edward had a numerous poſterity by his queen, Philippa of Hainault. His eldeſt ſon, the heroic Edward prince of Wales, eſpouſed his couſin Joan, commonly called the Fair Maid of Kent, daughter and heir of his uncle the earl of Kent, who was beheaded in the beginning of this reign. By her the prince had a ſon named Richard, who ſucceeded to the crown of his grandfather. The ſecond ſon of king Edward was Lionel duke of Clarence, who, dying while young, left only one daughter, married to Edmund Mortimer earl of Marche. Of all the family, he reſembled moſt his father and elder brother in his noble qualities. Edward's third ſon was John of Gaunt, ſo called from the place of his birth: he was created duke of Lancaſter; and from him ſprang that branch which afterwards poſſeſſed the crown. The fourth ſon of this royal houſe was Edmund, created duke of York; and the fifth was Thomas, who received the title of duke of Glouceſter. By his queen, Edward had alſo four daughters, who arrived at maturity, and who all married.

Richard II. the only ſurviving ſon of Edward the Black Prince, came to the throne of his grandfather when but eleven years old. As the king was a minor, the government was veſted in the hands of his three uncles, the dukes of Lancaſter, York, and Glouceſter; the difference of whoſe diſpoſitions, it was imagined, would ſerve to check the defects of each other. Lancaſter, though experienced in the affairs of government, was neither popular nor enterpriſing; York was indolent and weak; Glouceſter turbulent, popular, and ambitious. Under the ſecret influence of theſe, without any ſettled regency, the whole ſyſtem of government was kept together for ſome years, though not without many dangerous commotions. As Edward had left the kingdom involved in ſeveral expenſive wars, and as theſe demanded large and conſtant ſupplies to carry on, the murmurs of the people increaſed in proportion as the operations were languid and unſucceſsful. The duke of Lancaſter laid claim to the crown of Caſtile, and made a fruitleſs expedition for its recovery; the war with France produced no enterpriſe of luſtre; and that with Scotland was far from ſucceſsful. The expences, however, of the armaments to face the enemy on every ſide, and a want of economy in the adminiſtration, entirely exhauſted the treaſury; ſo that a new tax of three groats, on every perſon above fifteen, was granted by parliament as a ſupply. The indignation of the people had been for ſome time increaſing; but a tax ſo unequal, in which the rich paid no more than the poor, kindled their reſentment into flame.

The minds of the peaſants being thus ripened for inſurrection, the manner of collecting this poll-tax ſoon furniſhed them with a pretext for beginning the revolt. It began in Eſſex, where a blackſmith, well known by the name of Wat Tyler, was the firſt that excited them to arms. The tax-gatherers coming to this man's houſe while he was at work, demanded payment for his daughter; which he refuſed, alleging that ſhe was under the age mentioned in the act. One of the brutal collectors inſiſted on her being of the age of puberty, and immediately ſeizing the girl, attempted to give a very indecent proof of his aſſertion. The enraged father inſtantly ſtruck him dead with a blow of his hammer; and the ſtanders-by applauded his ſpirit; one and all reſolving to defend his conduct. He was conſidered as a champion in the cauſe, and appointed the leader and ſpokeſman of the people. It is eaſy to imagine the diſorders committed by this tumultuous rabble: the whole neighbourhood roſe in arms; they burnt and plundered the houſes of thoſe who had ſupported the tax. As the diſcontent was general, the inſurgents increaſed in proportion as they approached the capital. The flame ſoon propagated itſelf into Kent, Hertfordſhire, Surrey, Suſſex, Suffolk, Norfolk, Cambridge, and Lincoln. They were found to amount to above a hundred thouſand men by the time they were arrived at Blackheath; from whence they ſent a meſſage to the king, who had taken ſhelter in the Tower, deſiring a conference with him. With this meſſage Richard was deſirous of complying, but was intimidated by their fierce demeanor. In the mean time they entered the city, broke into the Savoy palace, belonging to the duke of Lancaſter, and put ſeveral of his houſehold to death. Their animoſity was particularly levelled againſt the lawyers, to whom they ſhewed no mercy. Such was the vehemence of their fury, that the king began to tremble for his own ſafety; and, knowing that the Tower was not proof againſt their aſſault, he went out among them, and deſired to know their demands. To this they made a very humble remonſtrance, requiring a general pardon, the abolition of ſlavery, freedom of commerce in market-towns, and a fixed rent inſtead of thoſe ſervices required by the tenure of villanage. As theſe requeſts were reaſonable, the king ſoon complied; and charters were accordingly made out, ratifying the grant. In the mean time, another body of theſe inſurgents broke into the Tower, and murdered the chancellor, the primate, and the treaſurer, with ſome other officers of diſtinction. They then divided themſelves into parties, and took up their quarters in different diſtricts of the city: at the head of one of theſe was Wat Tyler, who led his men into Smithfield, where he was met by the king, who invited him to a conference for the purpoſe of hearing and redreſſing his grievances. Tyler, ordering his companions to retire till he ſhould give them a ſignal, boldly ventured to meet the king in the midſt of his retinue; and accordingly began the conference. He required that all ſlaves ſhould be ſet free; that all commonages ſhould be open to the poor as well as to the rich, and that a general pardon ſhould be paſſed for the late outrages. Whilſt he made theſe demands, he now and then lifted up his ſword in a menacing manner; which ſo raiſed the indignation of William Walworth, then mayor of London, attending on the king, that, without conſidering the danger, he ſtunned Tyler with a blow of his mace; while one of the king's knights, riding up, diſpatched him with his ſword. The mutineers, ſeeing their leader fall, prepared to take inſtant revenge; and their bows were bent for immediate execution, when Richard, though not yet quite ſixteen years of age, rode up to the rebels, and, with admirable preſence of mind, cried out, "What, my people, will you then kill your king? Be not concerned for the loſs of your leader: I myſelf will now be your leader; follow me into the field, and you ſhall have whatever you deſire." The awed multitude immediately deſiſted; they followed the king into the fields, and there he granted them the ſame charter that he had before given to their former companions.

Theſe grants, for a ſhort time, gained the king great popularity; and it is probable it was his own deſire to have them continued: but the nobles had long taſted the ſweets of power, and were unwilling to admit any other to a participation. The parliament ſoon revoked theſe charters of enfranchiſement and pardon; and the cruelty which was exerciſed againſt the popular leaders upon this occaſion, created no ſmall enmity againſt the king. He had firſt granted them a charter, which implied the juſ-

tice

RICHARD II.

Published as the Act directs April 1 1799.

tice of their demands; and he was ſeen, ſoon after, weak enough to revoke what he had before allowed to be juſtice. It is probable, alſo, that his uncles were not backward in increaſing the general murmurs againſt him; as by that means they were the more likely to continue in authority. His own capricious conduct, indeed, might very well countenance them in the reſtrictions they placed upon him; as he very ſoon teſtified an eager deſire to govern, without any of the requiſites to fit him for ſuch a difficult taſk. He ſoon diſcovered an attachment to favourites, without any merit on their ſide to entitle them to ſuch flattering diſtinctions. Robert Vere earl of Oxford, a young man whoſe perſon was faultleſs, but whoſe morals were debauched, had acquired an entire aſcendant over him. This nobleman was firſt created marquis of Dublin, and then duke of Ireland, with the ſovereignty, during life, of that iſland. He gave him his own couſin in marriage; and ſoon after permitted him to repudiate her for another woman, of whom he was enamoured. Thus the favourite ſoon became the channel through which all royal favour paſſed to the people; and he poſſeſſed the power, while the king himſelf had only the ſhadow, of royalty. Partiality in princes fails not to produce animoſity among their ſubjects. Thoſe noblemen, who were either treated with diſreſpect by the favourite, or who thought themſelves better entitled to favour, took the alarm, and combined againſt him. At the head of this aſſociation were, Mowbray earl of Nottingham, Fitz-Alan earl of Arundel, Percy earl of Northumberland, Montacute earl of Saliſbury, and Beauchamp earl of Warwick. Theſe, uniting, reſolved on the deſtruction of the favourite; and they began by marking out Michael de la Pole earl of Suffolk, who was then chancellor, and the earl of Oxford's chief friend, as the firſt object of their vengeance. He was accordingly impeached in parliament; and, although nothing material was alleged againſt him, ſuch was the intereſt of the conſpiring barons, that he was condemned, and deprived of his office.

The French, encouraged by theſe diſſenſions, and by the abſence of the duke of Lancaſter, with the flower of the Engliſh military force, in proſecution of his idle claim on Caſtille, attempted the invaſion of England. The vauntingly irrational character of the French in their invaſions and wars, has been uniformly the ſame. Even in this projected invaſion againſt Richard II. in 1385, their warriors on their march to the port of embarkation were far more terrible to their own peaceable countrymen, than to the Engliſh, who waited for them in arms. "The whole country (ſays Froiſſart) was devoured. They took all, and paid for nothing. If the farmer complained of loſing his grain, he was beaten, if not murdered. The fiſh-ponds were robbed, and the houſes on the road demoliſhed to be converted into fuel. The Engliſh (had they landed in France) could not have done more miſchief than theſe French ſoldiers. The poor oppreſſed farmers muttered curſes againſt theſe ruffians. 'Go! (they whiſpered) go to England! and may Heaven grant that none of you may ever return!" 'Each French gentleman (ſays Dulaure) had a domeſtic with him ſtiled *un pillard*, a plunderer; and Pierre de Lautrec in particular had in his ſuite nine men at arms, each of whom was attended by a *pillard* and a page.' How completely has this national character of rapine and plunder been verified by the French under Bonaparte, even as high as the completion of the eighteenth and commencement of the nineteenth centuries! The preparations of the French, in that early time, were immenſe; twenty thouſand horſe, twenty thouſand croſs-bow men, and twenty thouſand infantry, were but a part of the force; 1287 ſail (of which ſixty were large ſhips of war) were to waft over the troops. But the moſt aſtoniſhing article of the equipment was a complete wooden fortreſs, formed circularly with towers and baſtions, one thouſand paces in diameter. This vaſt edifice was ranged on flat-bottomed boats faſtened together; and might be taken to pieces, landed, and erected, within twenty-four hours. But human projects are vain. The duke of Berri was ſomewhat later than he promiſed in joining the expedition. The wind aroſe; the waves beat upon the fleet and diſjointed the boats; and fragments of the ill-fated city of timber became the laughing-ſtock, ſays Mercier, of thoſe who dwelt on the banks of the Thames! Such, perhaps, will ever be the fate of French invaſions.

In the mean time, Glouceſter and his aſſociates fabricated their machinations againſt the king's perſon and dignity. Under a pretence that he was too young to govern, although he was at that time twenty-one, they appointed a commiſſion of fourteen perſons, A. D. 1386, upon whom the ſovereign power was to be transferred for a year. This, in fact, was depriving the king of his prerogative, and oppreſſing the kingdom with a confirmed ariſtocracy. The meaſure being driven forward by the duke of Glouceſter, none but thoſe of his own faction were admitted as members of the committee. It was not without a ſtruggle that the king ſaw himſelf thus deprived of his authority; and he endeavoured to gain over the parliament to his intereſts, by influencing the ſheriffs of each county, who were then the only returning officers. This meaſure failing, he applied to the judges; who declared, that the commiſſion which had deprived him of his authority was unlawful, and that thoſe who procured or adviſed it were puniſhable with death. This opinion of the judges was quickly oppoſed by declarations from the lords: the duke of Glouceſter ſaw his danger, if the king ſhould prevail; and, ſecretly aſſembling his party, appeared in arms at Haringay park near Highgate, at the head of a body of men, more than ſufficient to intimidate the king and all his adherents. Theſe inſurgents, ſenſible of their own power, demanded of the king the names of all thoſe who had adviſed him to his late meaſures againſt the eſtabliſhed government; they appeared armed in his preſence, and accuſed, by name, the archbiſhop of York, the duke of Ireland, the earl of Suffolk, ſir Robert Treſilian, and ſir Nicholas Bember, as dangerous enemies to the ſtate. It was now too late for the oppoſite party to attempt any other vindication of their conduct than by arms. The duke of Ireland fled into Cheſhire, where he attempted to raiſe a body of forces; but was eventually obliged to retire into Flanders, on the arrival of the duke of Glouceſter with a ſuperior army. The king was ſoon after compelled to ſummon a parliament, when an accuſation was drawn up againſt five of his counſellors; and ſir Nicholas Bember was found guilty, condemned, and executed, together with ſir Robert Treſilian, one of the judges. But the blood of one or two of the loyal and diſintereſted barons was not ſufficient to ſatiate the vengeance of the duke of Glouceſter; lord Beauchamp of Holt was ſhortly after condemned and executed; and ſir Simon Burleigh, who had been appointed the king's governor, ſhared the ſame fate, although the queen is ſaid to have continued for three hours on her knees imploring his pardon of the inexorable Glouceſter. It might be ſuppoſed that, after ſuch a total ſubverſion of the royal authority, there would be no more ſtruggles during this reign, between the prince and his nominal ſubjects; but, whether from the fluctuation of opinions among the people, or from the influence of a military force which was levying againſt France, we find Richard once more reſolved to ſhake off that power which had ſo long controuled him, and actually bringing the parliament to ſecond his endeavours.

In a council of the nobility, aſſembled at Eaſter, 1339, he, to the aſtoniſhment of all preſent, deſired to know his age; and being told that he was turned of two-and-twenty, he alleged, that it was high time for him to govern without help, and that he knew of no reaſon why he ſhould be deprived of thoſe rights which the meaneſt of his ſubjects enjoyed. The lords anſwering, in ſome confuſion, that he had certainly an indiſputable right to take upon himſelf

himſelf the government of the kingdom. "Yes, (replied he,) I have long been under the government of tutors; and I will now firſt ſhew my right to power by their removal." He then ordered Thomas Arundel, whom the commiſſioners had appointed chancellor, to give up the ſeals, which he next day delivered to William of Wykeham, biſhop of Wincheſter. He next removed the duke of Glouceſter, the earl of Warwick, and other lords of the oppoſition, from the council. The biſhop of Hereford loſt his office of treaſurer; the earl of Arundel was deprived of the poſt of high-admiral; all the great officers of the houſehold, as well as the judges, were changed; and all the offices felt the influence of this unexpected revolution.

The king, thus for the firſt time at liberty to conduct his own affairs, began by extending his moderation towards thoſe who had endeavoured to depreſs his power: he appeared to be entirely reconciled to his uncles; and he remitted ſome taxes, which gained for a time the affections of the people. But he was unfortunately deficient in that conduct and demeanour which commands reſpect: he was fond of idle pleaſure and vain oſtentation; he admitted the meaneſt ranks to his familiarity; and his converſation betrayed alike the want of morals and abilities. His military talents, on which mankind ever place a high value, were ſeldom exerted, and never with ſucceſs. The French war was ſcarcely heard of; and ſome ſucceſsful inroads of the Scots, particularly that which brought on the diſputed victory at Otterbourne, were only oppoſed by thoſe barons whoſe poſſeſſions lay along the frontier. Richard gained indeed ſome reputation for arms in Ireland; but his ſucceſſes there were too indefinite to give him a deciſive character. From this natural deficiency of vigour and action, the ſmall regard which the public bore his perſon, diſpoſed them to murmur againſt his adminiſtration, and to receive with avidity every complaint ſuggeſted to his prejudice.

Whether the duke of Glouceſter was hurt at this obvious imbecility in his royal nephew, or aſpired to the throne by fomenting jealouſies againſt him, muſt for ever remain undecided; but certain it is, that he uſed every artifice to increaſe the averſion of the nation againſt him, and to eſtabliſh his own popularity. He repreſented the peace which had been concluded with France, A. D. 1396, as the reſult of the king's cowardice; and plauſibly appeared to lament that Richard ſhould have degenerated ſo far from the heroic virtues of his father. He frequently ſpoke with contempt of the king's perſon and government, and deliberated concerning the lawfulneſs of throwing off all allegiance to ſuch a ſovereign. Theſe were inſults that betrayed a diſpoſition to rebel; and therefore the king's friends adviſed the ridding himſelf entirely both of him and his faction. He accordingly ordered his uncle of Glouceſter to be arreſted and ſent to Calais, at which place there was no danger of a reſcue from his numerous adherents. The earls of Arundel and Warwick were ſeized at the ſame time; and a parliament was ſummoned at Weſtminſter, which the king knew would be obedient to his will. This parliament annulled for ever the commiſſion of fourteen, which had uſurped his authority; they repealed all thoſe acts which had condemned the king's miniſters; and revoked the general pardon which the king had granted, upon his aſſuming the reins of government. In conſequence of this revolution in ſtate affairs, ſeveral of the party of Glouceſter were impeached, condemned, and executed. Fitz-Alan, archbiſhop of Canterbury, was baniſhed the realm, and his temporalities ſequeſtered. The earl of Arundel in vain pleaded the king's general pardon, to ſtop his execution; the earl of Warwick, ſhewing ſigns of contrition, had his life ſpared, but was baniſhed to the iſle of Man. A warrant was next iſſued to the governor of Calais, to bring over the duke of Glouceſter, and to take his trial, as other leaders of the confederacy had already done; but he had been previouſly diſpatched in priſon by his keepers, as the ſureſt expedient to ſuppreſs his party.

The private aſſaſſination of a nobleman ſo popular as the duke of Glouceſter, failed not to increaſe thoſe animoſities which had taken deep root in the kingdom. The aggrandiſement of ſome new favourites contributed to make the king odious; but it was his weak and arbitrary government which finally ſet his ſubjects againſt him. After the deſtruction of the duke of Glouceſter, and the leaders of his party, a miſunderſtanding broke out among thoſe noblemen who inſtituted the proſecution. The earl of Hereford appeared in parliament, and accuſed the duke of Norfolk of having ſpoken treaſon againſt the king. Norfolk denied the charge; and offered to prove his innocence by ſingle combat. As proofs were wanting for legal trial, the lords readily acquieſced in that mode of determination; the time and place were appointed; and the whole nation waited with anxious ſuſpenſe for the event. At length the day arrived on which this duel was to be fought; and as combats of this kind are ſtill in force by our law, (ſee the article BATTEL, vol. ii. p. 809,) it may not be amiſs to deſcribe the ceremonies on this ſolemn occaſion. Hereford, the challenger, firſt appeared on a white charger, gaily capariſoned, armed at all points, and holding his drawn ſword. When he approached the liſts, the mareſchal demanded his name and buſineſs; to which he replied, "I am Henry of Lancaſter earl of Hereford, come hither according to my duty, againſt Thomas Mowbray duke of Norfolk, a falſe traitor to God and the king, the realm and me." Then taking the oath that his quarrel was juſt and true, he deſired to enter the liſts, which being granted, he ſheathed his ſword, pulled down his beaver, croſſed himſelf on the forehead, ſeized his lance, paſſed the barrier, alighted, and ſat down in a chair of green velvet, placed at one end of the liſts. He had ſcarcely taken his ſeat, when the king came into the field with great pomp, attended by the lords, the count de St. Pol, who came from France on purpoſe to ſee this famous trial, and ten thouſand men at arms, to prevent tumults and diſturbances. Richard being ſeated in his chair of ſtate, the king at arms proclaimed that none but ſuch as were appointed to marſhal the field, ſhould preſume to touch the liſts upon pain of death. Then another herald proclaimed aloud, "Behold here Henry of Lancaſter earl of Hereford, who has entered the liſts to perform his devoir againſt Thomas Mowbray duke of Norfolk, on pain of being counted falſe and recreant." Juſt then the duke of Norfolk appeared in arms, mounted upon a barbed horſe, with a coat of arms of crimſon velvet, embroidered with lions of ſilver and mulberry-trees; and, having taken his oath before the conſtable and mareſchal, entered the field, exclaiming aloud, "God defend the right." Then, alighting from his horſe, he placed himſelf in a chair of crimſon velvet oppoſite to his antagoniſt, at the other end of the liſts. After which the mareſchal having meaſured their lances, delivered one to the challenger, and ſent a knight with the other to the duke of Norfolk; and proclamation was made that they ſhould prepare for the combat. Accordingly, mounting their horſes, and cloſing their beavers, the trumpets ſounded to the charge. The earl of Hereford began his career with great violence; but, before he could join his antagoniſt, the king threw down his warder, and the heralds interpoſed. By the advice and authority of his parliamentary commiſſioners he ſtopped the combat, and ordered both the champions to leave the kingdom. The duke of Norfolk he baniſhed for life, but the earl of Hereford only for ten years. Thus the one was condemned to exile without being charged with any offence, and the other without being convicted of any crime. The duke of Norfolk was overwhelmed with grief at the judgment awarded againſt him; he retired to Venice, where he died of a broken heart. Hereford's behaviour on this occaſion was reſigned and ſubmiſſive,

which

which ſo pleaſed the king, that he conſented to ſhorten his baniſhment to four years; and he alſo granted him letters patent, inſuring him the enjoyment of any inheritance which ſhould fall to him during his abſence. But nothing could be more fluctuating than Richard's regard to friendſhip. The earl of Hereford retiring into Flanders, and from thence to Paris, found there a very favourable reception from the French king. He even opened a treaty of marriage with the daughter of the duke of Berry, uncle to the king of France; but was prevented from completing the alliance by the intereſt of Richard, who, dreading the increaſing power of the baniſhed earl, ſent over the earl of Saliſbury to Paris, with orders to ſet aſide the match. Such an injury could not fail to aggravate the reſentment of Hereford; but he had ſtill other reaſons for anger, upon the death of his father the duke of Lancaſter, which happened ſhortly after. Richard, as before obſerved, had given him letters patent, empowering him to poſſeſs any ſucceſſions that ſhould fall to him while abroad; but, being now afraid of ſtrengthening the hands of a man whom he had injured, he revoked the patent, and appropriated the eſtate of the houſe of Lancaſter to himſelf.

Hereford, no longer able to bear ſuch flagrant acts of injuſtice, conceived the revengeful project of dethroning the king. Few men were better qualified for an enterprife of this nature than the earl of Hereford; who was cool, cautious, diſcerning, and reſolute. The earl of Marche, preſumptive heir to the crown, had juſt been ſlain in a ſkirmiſh in Ireland, which ſo incenſed Richard, that, unmindful of his precarious ſituation at home, he reſolved, with a numerous army, to go in perſon, and revenge his death. The duke of Lancaſter, which title Hereford aſſumed upon the death of his father, being informed of Richard's departure for Ireland, inſtantly embarked at Nants, with a retinue of ſixty perſons, in three ſmall veſſels, and landed at Ravenſpur in Yorkſhire. The earl of Northumberland, and Henry Percy his ſon, who, from his ardent valour was ſurnamed Hotſpur, immediately joined him with their forces. After which, the concourſe of people coming to liſt under his banner was ſo great, that, in a few days, his army amounted to ſixty thouſand men. The duke of York, who had been left guardian of the realm during Richard's abſence, aſſembled a body of forty thouſand men at St. Alban's; but found them either quite diſpirited, or more attached to the cauſe of the rebels than of the crown. It had been Hereford's policy to hide the real motives of his expedition, and to give out that he only aimed at the recovery of his patrimonial dukedom. Upon the preſent occaſion, therefore, he entreated the duke of York not to oppoſe a loyal and humble ſuppliant in the recovery of his juſt rights; but to concur in a meaſure that was more likely to promote the king's honour, than injure his intereſts. The duke of York, deceived by theſe ſpecious profeſſions, declared that he would not only approve, but aſſiſt in forwarding his pretenſions; and both armies meeting, embraced with acclamations of friendſhip and joy.

Whilſt theſe things were tranſacting in England, Richard continued in Ireland in perfect ſecurity. Contrary winds, which continued to blow for three weeks together, prevented his receiving any intelligence of the rebellion in his native dominions. Upon the firſt information, however, he impriſoned the earl of Hereford's brothers, whom he had taken over with him, and then reſolved to return inſtantly to England, to fight the enemy in perſon. But ever wavering in his reſolutions, he was perſuaded to ſtay till he could prepare ſhips to tranſport all his forces together. This delay completed his ruin; ſo that when he landed at Milford-haven with an army of twenty thouſand men, he had the mortification to find that the duke of York had eſpouſed the cauſe of his rival, and that his force was greatly inferior to that of the enemy. He now perceived himſelf in a dreadful ſituation, in the midſt of a diſaffected people, without any friend on whom to rely, and forſaken by thoſe, who, in the meridian of his power, had only contributed to increaſe his follies. His little army began gradually to deſert, until at laſt he had not above ſix thouſand men, who followed his ſtandard. Thus, not knowing where to turn, he ſaw no other alternative but to throw himſelf upon the generoſity of his enemy; and he therefore ſent a meſſenger to Hereford, earneſtly deſiring a conference. The earl appointed to meet at a caſtle within about ten miles of Cheſter, A. D. 1399, where he came the next day with his whole army. Richard, who had been brought thither by the earl of Northumberland, deſerying his rival's approach from the walls, went down to receive him; while Hereford, after ſome ceremony, entered the caſtle in complete armour, with his head bare, in compliment to the fallen king. Richard received him with that complacency for which he had been ever praiſeworthy, and kindly bade him welcome. "My lord the king (returned Hereford, with a cool reſpectful bow) I am come ſooner than you appointed, becauſe your people ſay, that for one-and-twenty years you have governed with rigour and indiſcretion. They are very ill ſatisfied with your conduct; but, if it pleaſe God, I will help you to govern them better for the time to come." To this declaration the king made no other anſwer, but, "Fair couſin, ſince it pleaſes you, it pleaſes us likewiſe."

But Hereford's auſtere anſwer was not the only mortification the unfortunate Richard was to endure. After a ſhort converſation with ſome of the king's attendants, Hereford ordered the king's horſes to be brought out of the ſtable; and two wretched worn-down animals being produced, Richard was placed upon one, and his favourite, the earl of Saliſbury, upon the other. In this mean condition they rode to Cheſter, and were conveyed to the caſtle with a great noiſe of trumpets, and through a vaſt concourſe of people. In this manner he was conducted from town to town, amidſt multitudes who ſcoffed at him, and extolled his rival. "Long live the good duke of Lancaſter, our deliverer!" was the general cry; but as for the king, to uſe the pathetic words of the poet, "none cried, God bleſs him!" Thus, after a long journey, marked with repeated indignities, he was confined a cloſe priſoner in the Tower; there, if poſſible, to undergo a ſtill greater variety of ſtudied inſolence, and fragrant contempt. The wretched monarch, thus humbled, felt no difficulty in ſigning a deed, by which he renounced his crown, and acknowledged himſelf unqualified for governing the kingdom. Upon this reſignation the duke of Lancaſter founded his claim: but, willing to act with every appearance of juſtice, he called a parliament, which was eaſily brought to approve and confirm his pretenſions. A frivolous charge of thirty-three articles was drawn up, and found valid againſt the king; upon which he was ſolemnly depoſed, and the duke of Lancaſter elected king, by the title of Henry IV. Thus began the conteſt between the houſes of York and Lancaſter, which, for many years, deluged the country with blood; and yet, in the end, contributed to ſettle and confirm the preſent happy conſtitution.

When Richard was depoſed, the earl of Northumberland made a motion in the houſe of peers, demanding the advice of parliament, with regard to the future treatment of the depoſed king. To this they replied, that he ſhould be impriſoned in ſome ſecure place, where his partizans ſhould not be able to have acceſs to him. This was accordingly put in practice; but, while he ſtill continued alive, the uſurper could not conceive himſelf in ſafety. Some conſpiracies alſo, which followed ſoon after, induced Henry to wiſh for Richard's death; in conſequence of which, a hired aſſaſſin went down to the place of this unfortunate monarch's confinement in Pomfret caſtle, and, with eight of his followers, ruſhed into his apartment. The king, perceiving their deſign was to take away his life, reſolved not to fall unrevenged; wherefore wreſting a pole-axe from one of the murderers, he ſoon

laid four of their number dead at his feet. But he was at length overpowered, and ſtruck dead by the blow of a pole-axe; although ſome writers aſſert, that he was ſtarved in priſon.

Richard II. ſurnamed of Bourdeaux, the place of his birth, was remarkably handſome in his perſon, and does not ſeem to have been naturally defective either in courage or underſtanding: for on ſome occaſions, particularly in the dangerous inſurrection of Wat Tyler, he acted with a degree of ſpirit and prudence greatly ſuperior to his years. But his education was miſerably neglected, or rather he was intentionally corrupted and debauched by his three ambitious uncles, who, being deſirous of retaining the management of ſtate affairs, encouraged him to ſpend his time in the company of diſſolute young people of both ſexes, and in a continued round of feaſting and diſſipation. By this means he contracted a taſte for oſtentatious pleaſure, and a diſlike to the cares of government. The greateſt foible in the character of this unhappy prince, was an exceſſive fondneſs for, and unbounded liberality towards, his favourites, which enraged his uncles, particularly the duke of Glouceſter, and diſguſted ſuch of the nobility as did not partake of his bounty. Yet he was an affectionate huſband, a generous maſter, and a faithful friend; and, if he had received a proper education, might have proved a great and a good king. Richard was dethroned in the twenty-third year of his reign, and the thirty-fourth of his age, and never had any children. If a juſt regard had been paid to the conſtitution or the rights of blood, he would have been ſucceeded by Edmund Mortimer earl of March, deſcended from Lionel duke of Clarence, third ſon of Edward III. and elder brother to John of Gaunt duke of Lancaſter. But in the tumult of faction which attended this revolution, that young nobleman's name and rights were hardly ever mentioned, though his father, Roger Mortimer earl of March, had been declared preſumptive heir of the crown, by act of parliament, in 1385.

Though we find no ſplendid acts of munificence in the encouragement of the arts, recorded in Richard the Second's reign, yet his biographers agree, that he excelled all his predeceſſors in hoſpitality, and fed a thouſand poor every day with the ſuperabundance of his kitchen.

From the ACCESSION of the HOUSE of LANCASTER, to the DEPOSITION of HENRY VI.

The duke of Lancaſter, knowing the weakneſs of his title, was at leaſt determined to give his coronation all poſſible ſolemnity, and to make religion a cloak to cover his uſurpation. Theſe meaſures were perhaps taken to quiet his own fears; for the heir of the houſe of Mortimer, who had been declared the true heir to the crown, was alive, though only ſeven years of age. Him Henry cautiouſly detained, together with his younger brother, in the caſtle of Windſor. But, notwithſtanding theſe precautions for his ſecurity, Henry ſoon found that the throne of an uſurper is a bed of thorns. Such violent animoſities broke out among the barons, in the firſt meeting of his parliament, that, to its eternal diſgrace, forty challenges were given and received. But though theſe commotions were apparently ſuppreſſed, yet they ſoon broke out into open rebellion; and a conſpiracy was ſet on foot for ſeizing Henry at Windſor, and replacing Richard on the throne, who was ſuppoſed to be ſtill alive. This plot was ſet on foot by the earls of Rutland, Kent, Huntingdon, and lord Spenſer, whom Henry had degraded from ſuperior titles conferred upon them by the late king. The particulars of their intended operations were committed to writing, and each of the conſpirators had a copy ſigned by all the reſt. Among the number of theſe, the earl of Rutland was one, furniſhed with a paper, which he accidentally let fall from his boſom as he was ſitting at dinner with his father the duke of York. The duke perceiving ſomething fall, privately took it up, and, to his great aſtoniſhment, read the contents, which he reſolved to make known to the king; and accordingly rode off to Windſor, where the court reſided. The ſon, finding the miſchance that had happened, and ſuſpecting the cauſe of his father's haſty departure, made a virtue of neceſſity, and, travelling by a ſhorter way, diſcloſed the whole to the king, and obtained the royal pardon, before his father reached Windſor.

In the mean time, while Henry employed the moſt vigorous efforts to diſpel the riſing ſtorm, the conſpirators, finding their firſt intentions fruſtrated, dreſſed up one of the late king's ſervants, named Maudlin, in royal robes, giving out that he was the depoſed monarch, whom they had taken from his priſon, and were determined to replace on the throne. Humanity and commiſeration ſeem ever to have formed the aggregate of the Engliſh character; and from feelings of this generous nature the people were induced to flock round the ſtandard of the conſpirators. Their army ſoon became conſiderable, and encamped near Cirenceſter, while the leaders took up their head-quarters within the city; yet ſo careleſs or confident were they, that they neglected to place guards at the gates and avenues of the town. This being perceived by the mayor, who was in the intereſt of the king, he aſſembled four hundred men in the night, ſecured the gates ſo as to exclude the army from without, and then fell upon the chiefs within. The earls of Kent and Saliſbury were taken, after an obſtinate reſiſtance, and beheaded on the ſpot by the mayor's order. The earl of Huntingdon and lord Spenſer eſcaped over the tops of the houſes into the camp, in hopes of ſtorming the town at the head of their forces; but they had the mortification to find the tents and baggage abandoned by the ſoldiers; who, upon hearing the tumult in the town, concluded that a party of the king's army had entered privately to co-operate with the townſmen; and, under this impreſſion, they fled in all directions. The two noble lords, perceiving that all was loſt, endeavoured to conceal themſelves; but they were ſoon after taken, and beheaded by the king's order. Their deaths were followed by thoſe of ſir Thomas Blount and ſir Benedict Sely; and, when the bleeding quarters of theſe unhappy men were brought to London, no leſs than eighteen biſhops, and thirty-four mitred abbots, joined the cavalcade, expreſſing the moſt ſavage exultation. In this ſhocking proceſſion was ſeen the earl of Rutland carrying the head of lord Spenſer, his brother-in-law, on a pole, after having betrayed him. This miſcreant had been long inured to blood and treachery: he was inſtrumental in the murder of his uncle the duke of Glouceſter, to pleaſe the ill-fated king Richard; he ſoon after deſerted the fallen fortunes of that monarch, and joined Henry; he then entered into a conſpiracy againſt this monarch, after having ſworn allegiance to him; and at laſt betrayed thoſe very aſſociates whom he had drawn into the conſpiracy, carrying in triumph the marks of his execrable villanies.

But the ſuppreſſion of a ſingle rebellion was inadequate to give repoſe to a kingdom threatened with foreign invaſions, and torn by inteſtine broils. The king of France had actually raiſed a vaſt armament to invade England; but a truce was ſoon after concluded for eight-and-twenty years; and it was agreed, that queen Iſabella, who had been married to Richard, but whoſe marriage had never been conſummated, ſhould return to France, her native country. The Scots, ſhortly after, began to renew their ancient diſturbances; and, while the Engliſh army marched northward to oppoſe their incurſions, the Welſh, under the conduct of Owen Glendour, attacked the kingdom in the contrary quarter. Many were the petty victories gained, and the ravages committed, in theſe unavailing conteſts. The name of Owen Glendour is reſpected among the Welſh to this very day; but, as all his conqueſts procured no laſting advantage, and as all his victories only terminated in fame, they are ſcarcely worthy notice in the page of hiſtory. It will be ſufficient to obſerve, that whatever honour the Engliſh loſt on the

HENRY IV.

Publishd as the Act directs May 1.1799

ſide of Wales, they gained on that of Scotland; the Welſh maintained their ground, although their chieftain, Glendour, was taken priſoner, while the Scots uniformly retreated before the Engliſh, and would neither ſubmit, nor give them battle.

It was in a ſkirmiſh between the Scots and the Engliſh, A. D. 1402, that Archibald earl of Douglas, with many of the Scottiſh nobility, were taken priſoners by the earl of Northumberland, and carried to Alnwick caſtle. This ſucceſs was conſidered as of ſignal advantage; but it was ſoon attended with conſequences fatal to the victors. When Henry received intelligence of this victory, he ſent the earl orders not to ranſom his priſoners, as he intended to detain them, in order to increaſe his demands in making peace with Scotland. This meſſage was highly reſented by the earl of Northumberland, who, by the laws of war in that age, had a right to the ranſom of whomſoever he had taken in battle. The command was ſtill more irkſome, as he conſidered the king as his debtor, both for his ſecurity and his crown. Accordingly, ſtung with this ſuppoſed injury, he reſolved to overturn a throne, which he had had the chief hand in eſtabliſhing. A ſcheme was laid, in which the Scots and Welſh were to unite their forces, and to aſſiſt the earl of Northumberland in elevating Mortimer as the true heir to the crown of England. When all the things were prepared, the earl had the mortification to find himſelf unable to head the troops, being ſeized with a ſudden illneſs at Berwick. But the want of his preſence was well ſupplied by his ſon Henry Percy, ſurnamed Hotſpur, who took the command of the troops, and marched them towards Shrewſbury, in order to join his forces with thoſe of Glendour, who, ſome time before, had been exchanged from priſon, and had now advanced with his forces into Shropſhire. Upon the junction of theſe two armies, they publiſhed a manifeſto, which aggravated their real grievances, and invented more. In the mean time, Henry, who had no intelligence of their deſigns, was greatly ſurpriſed at the news of this rebellion. But fortune ſeemed ſtill to befriend him: he had a ſmall army in readineſs, which he had intended againſt Scotland; and, knowing the importance of diſpatch, he inſtantly marched to Shrewſbury to give the rebels battle.

Upon the approach of the two armies, both ſides ſeemed willing to give a colour to their cauſe, by ſhewing a deſire of reconciliation; but, when they came to open their mutual demands, the treaty was turned into abuſe and recrimination: on one ſide was objected rebellion and ingratitude; on the other, tyranny and uſurpation. The two armies were nearly equal, each conſiſting of about fourteen thouſand men; the animoſity was inflamed to the higheſt pitch; and a very bloody engagement enſued, in which the generals on both ſides exerted the greateſt bravery. Henry was ſeen every where in the thickeſt of the fight; while his valiant ſon, afterwards deſtined to be the renowned conqueror of France, fought by his father's ſide, and, though wounded in the face by an arrow, ſtill kept the field, and performed prodigies of valour. On the other ſide, the impetuous Hotſpur ſupported that renown which he had acquired in ſo many arduous engagements, and every where fought out the king as the nobleſt object of his indignation. At laſt, however, his death, from an unknown hand, decided the victory; and the fortune of Henry prevailed. On that bloody day, it is ſaid that no leſs than 2300 gentlemen were ſlain, and about 6000 private men, of whom two-thirds were of Hotſpur's army. Such was the battle of Shrewſbury, fought July 21, 1403. The earl of Northumberland, who had recovered from his indiſpoſition, was at this critical juncture advancing with an army to reinforce the malcontents, and take upon himſelf the command; but hearing by the way of his ſon's and his brother's defeat, he diſmiſſed his troops, and threw himſelf upon the mercy of the king. Appearing before Henry, at York, he pretended that his ſole intention in arming, was to become a mediator between the two parties; and this, though a weak apology, ſeemed to ſatisfy the king. Northumberland therefore received a pardon; Henry probably thinking that he was ſufficiently puniſhed by the loſs of his army, and the death of his favourite ſon.

The ſuppreſſion of one rebellion, however, only ſeemed to give riſe to another. The archbiſhop of York, who had been promoted during the late reign, entered into a confederacy with the earl of Nottingham; and the earl of Northumberland, who had been ſo lately pardoned, united with them to dethrone the king, and ſet up Mortimer. The inſurgents took the field, and publiſhed a manifeſto, in which they reproached Henry with uſurpation, tyranny, and murder; they required that the rightful heir ſhould be reſtored to the crown, and all grievances redreſſed. The earl of Weſtmoreland, who had been ſent againſt them with a very inferior force, demanded a conference, to which they readily conſented. The chiefs on each ſide met at Skipton, near York, and, in the preſence of both armies, entered upon the ſubject of their grievances. The archbiſhop deplored the nation's injuries and his own; the earl of Weſtmoreland not only allowed the juſtneſs of his remonſtrances, but begged of him to propoſe the remedies. The archbiſhop entered upon many ſtipulations, and the earl granted them all. He now therefore entreated, that ſince they had nothing more to aſk or to fear, they would diſmiſs their forces, and truſt to his honour for the performance. His ſpecious promiſes, and plauſible manners, led them to their ruin. The inſurgents, A. D. 1405, diſbanded their troops, while he gave private orders that his own army ſhould not diſperſe till farther notice; and thus having diſqualified them for defence, he inſtantly ſeized the archbiſhop and the earl of Northampton, and carried them to the king. The ceremony of a trial was quite unneceſſary to men whoſe fate was pre-determined; Scrope archbiſhop of York was the firſt prelate who was capitally puniſhed in England; the earl of Nottingham ſhared the ſame fate; and the earl of Northumberland for ſafety retired into Scotland; but he was afterwards ſlain by ſir Thomas Rokeſby, ſheriff of Yorkſhire.

Theſe advantages ſeemed to promiſe the country ſome repoſe from civil war and diſcord; but a new calamity now began to appear, which, though ſmall at firſt, became, in the courſe of ages, of the moſt deſtructive conſequences. Since Wickliffe had publiſhed his opinions in the former reign, his doctrines met with ſo many partiſans, that the clergy began to tremble for their influence over the minds of the people. They therefore uſed all their intereſt to bring the king over to their party; who had more than once, in former times, declared himſelf in favour of the new doctrine. But at preſent, as he was conſcious of the weakneſs of his title to the crown, he was reſolved to make uſe of every expedient to prop his pretenſions; and, among others, that offered him by the clergy was by no means to be neglected. He ſeemed to liſten with earneſtneſs to their complaints; and directed his parliament to attend to the conſervation of the church, which he aſſerted was then in danger. How reluctant ſoever the houſe of commons might have been to proſecute a ſect, whoſe crime at worſt was but error of opinion, the credit of the court, and the cabals of the clergy, obtained an act for burning obſtinate heretics. This ſtatute was no ſooner paſſed, than the clergy reſolved to ſhew that it was not hung out as an empty terror. William Sawtre, a follower of Wickliffe, and rector of St. Oſithe's, London, had been condemned by the convocation of Canterbury, and was ſoon after burnt alive, by virtue of the king's writ, delivered to the lord-mayor of London. This was the firſt martyr that ſuffered death in England for the ſake of religion; but the fires once kindled were not likely to be extinguiſhed, while the clergy had the power of kindling the flame. They cunningly perceived that a

power

power of burning their enemies would revive that ſhare of temporal authority which they had poſſeſſed ſome centuries before; and in this they were not miſtaken.

Henry, by theſe wily meaſures, ſeemed to ſurmount all his troubles; and the temporary calm which was thus produced, was employed by him to recover that popularity, which he had loſt by the ſeverities of the preceding part of his reign. With that view, he permitted the houſe of commons to aſſume powers which had not been uſually exerciſed by their predeceſſors. In the ſixth year of his reign, A. D. 1407, when they voted him the ſupplies, they appointed treaſurers of their own, to ſee the money diſburſed for the purpoſes intended; and required them to deliver in their accounts to the houſe. They propoſed thirty very important articles for the government of the king's houſehold; and, on the whole, preſerved their privileges and freedom more entire, during his reign, than that of any of his predeceſſors. But while the king thus laboured to retrieve the reputation he had loſt, his ſon Henry, prince of Wales, ſeemed equally bent on incurring the public averſion. He became notorious for all kinds of debauchery; and ever choſe to be ſurrounded by a ſet of thieves, who took pride in committing the moſt illegal acts, with the prince at their head. The king was not a little mortified at this degeneracy in his eldeſt ſon, who ſeemed entirely forgetful of his ſtation, although he had exhibited the higheſt proofs of his valour and generoſity. Such were the exceſſes into which he ran, that one of his diſſolute companions being brought to trial before ſir William Gaſcoigne, chief-juſtice of the king's bench, the prince was ſo exaſperated at the condition, that he ſtruck the judge in open court. The venerable magiſtrate, behaved with that dignity which became his office, and immediately committed his royal highneſs to priſon. When this tranſaction was reported to the king, he could not help exclaiming, "Happy is the king that has a magiſtrate endowed with courage to execute the laws upon ſuch an offender; ſtill more happy, in having a ſon willing to ſubmit to ſuch a chaſtiſement." This, in truth, is one of the firſt noble inſtances in the Engliſh hiſtory of a magiſtrate doing juſtice in oppoſition to power; ſince, upon many former occaſions, we find the judges only the agents of royal caprice.

Henry, whoſe health had for ſome time been declining, did not long out-live this tranſaction. He was ſubject to fits, which bereaved him of his ſenſes; and which, at laſt, brought on the near approach of death, at Weſtminſter. As his conſtitution decayed, his fears of loſing the crown alarmed him even to a childiſh anxiety. He could not ſleep, unleſs the royal diadem was laid upon his pillow. He reſolved to take the croſs, and fight the cauſe of the pilgrims at Jeruſalem; and even imparted his deſigns to a great council; but his diſorder increaſing to a violent degree, he was obliged to lay aſide that viſionary ſcheme, and prepare for a journey of much greater importance. As the king lay in a violent paroxiſm, the prince of Wales took up the crown, and carried it into another apartment; but the king ſoon after recovering, and miſſing the crown, haſtily demanded what was become of it? Being informed that the prince of Wales had carried it off: "What! (ſaid the king,) would he rob me of my right before my death?" But the prince, juſt then entering the room, aſſured his father that he had no ſuch motives; went and replaced the crown where he had found it; and, having receiving his father's bleſſing, dutifully retired. The king was taken with his laſt fit while at his devotions before the ſhrine of St. Edward the Confeſſor, in Weſtminſter Abbey, and from thence he was carried to the Jeruſalem Chamber. When he had recovered from his ſwoon, perceiving himſelf in a ſtrange place, he deſired to know where he was, and if the apartment had any particular name: being informed that it was called the Jeruſalem Chamber, he ſaid, that he then perceived a prophecy was fulfilled, which declared that he ſhould die in Jeruſalem. Thus ſaying he expired, in the forty-ſixth year of his age, and the fourteenth of his reign.

Henry IV. was, in ſtature, a little below the middle ſize, but robuſt and well made. He excelled in all the martial and manly exerciſes of his times; and his courage was at once calm and undaunted. His head was better than his heart; his ſchemes being formed with prudence, and generally ſucceſsful, but not always innocent, and ſeldom generous. As jealous as he was fond of power, he ſtuck at nothing to obtain and keep it; and was not very prone to pardon thoſe who attempted to deprive him of it. From policy more than principle, he protected the church and perſecuted heretics. Ambition was his ruling paſſion; and that, impelled by a violent gale of popular favour, hurried him into a throne, which involved him in many crimes and cares, and his country in many calamities. He would have been both a better and happier man, if he had never been a king. Henry, by his firſt wife, Mary de Bohun, one of the co-heireſſes of Humphry de Bohun earl of Hereford, had four ſons and two daughters, viz. Henry, who ſucceeded him in the throne, Thomas duke of Clarence, John duke of Bedford, Humphry duke of Glouceſter, Blanche ducheſs of Bavaria, and Philippa queen of Denmark. By his ſecond wife, Jane ducheſs of Britanny, he had no iſſue.

Henry V. furnamed Henry of Monmouth, was proclaimed at London, March 21, and crowned at Weſtminſter, April 9, 1413; and, whatever objections might have been made to his title, no prince ever aſcended a throne more peaceably, and few with greater applauſe. His father, Henry IV. had loſt all his popularity long before his death, which made the news of that event, and of his ſon's ſucceſſion, to be received with joy. The firſt ſteps taken by the young king confirmed all the public hopes entertained in his favour. He called together his former companions, acquainted them with his intended reformation; exhorted them to follow his example; and thus diſmiſſed them from his preſence, allowing them a competency to ſubſiſt upon, till he ſaw them worthy of higher promotion. The more rigid and virtuous miniſters of his father began to tremble for their ſafety; but he ſoon eaſed them of their fears, by taking them into his friendſhip and confidence. Sir William Gaſcoigne, who had committed the prince, met with praiſes inſtead of reproaches, and was exhorted to perſevere in the ſame rigorous and impartial execution of juſtice. Henry ſeemed to deplore not only his own private errors, but thoſe of the former reign. He expreſſed the deepeſt ſorrow for the fate of the unhappy Richard, and ordered his funeral obſequies to be performed with great ſolemnity. He ſeemed anxious to bury all party diſtinctions in oblivion; the good men of either party were alone dear to him; and the bad vainly alleged their loyalty in extenuation of their vices. The exhortations, as well as the example of the prince, gave encouragement to virtue; all parties were equally attached to ſo juſt a prince, and the defects of his title were forgot, amidſt the luſtre of his amiable qualities.

Thus the people ſeemed happy in their new king; but it is not in the power of any human being to raiſe himſelf entirely above the prejudices of the age in which he lives, or to correct thoſe abuſes which often employ the ſagacity of ages to overcome. The vices of the clergy had drawn upon them the contempt and deteſtation of the people; but they were reſolved to continue their eccleſiaſtical power, not by reforming themſelves, but by perſecuting thoſe who oppoſed them. The hereſy of Wickliffe, or Lollardiſm, as it was called, began to ſpread every day more and more, while it received a new luſtre from the protection and preaching of ſir John Oldcaſtle, baron of Cobham, who had been one of the king's domeſtics, and ſtood high in his favour. His character, both for civil and military excellence, pointed him out

to

HENRY V.

London Published as the Act directs Nov.r 5. 1803 by J.Wilkes.

to Arundel archbiſhop of Canterbury, as the proper victim of clerical vengeance; and he applied to the king for permiſſion to indict lord Cobham as a dangerous heretic. But the generous nature of the prince was wholly averſe to ſuch ſanguinary methods of converſion; and he reſolved firſt to try what effects the arts of reaſon and perſuaſion would produce upon this bold leader of his ſect. He accordingly deſired a private conference with lord Cobham; but he found that nobleman obſtinate in his opinions, and determined rather to part with his life than his religion. The king, finding him immoveable, gave him up to the fury of his enemies. Perſecution ever propagates thoſe errors which it aims at aboliſhing. The primate indicted lord Cobham; and, with the aſſiſtance of his ſuffragans, condemned him, as an heretic, to be burnt alive. Cobham, however, eſcaping from the Tower, only the day before his intended execution, privately went among his party; and, ſtimulating their zeal, led them up to London, to take a ſignal revenge of his enemies. But the king, appriſed of his intentions, ordered that the city gates ſhould be ſhut; and, coming out by night with his guards into St. Giles's Fields, ſeized ſuch of the conſpirators as appeared, and afterwards laid hold of ſeveral parties that were haſtening to the appointed place. Some of them were executed; but the greater number was pardoned. Lord Cobham found means of eſcaping for that time; but he was taken about four years after; and never did the cruelty of man invent, or crimes draw down, ſuch torments as he was deſtined to endure. He was hung up with a chain by the middle; and at a ſlow fire burnt, or rather roaſted, alive.

Such cruelties as theſe would naturally excite the diſguſt of the people, not only againſt the clergy, but the government alſo. Henry, to wean his people from ſuch hideous ſcenes, reſolved to take advantage of the inquietudes in France, to recover his patrimonial dominions. Charles the Fifth, who then filled the Gallic throne, was ſubject to frequent fits of lunacy, which diſqualified him from reigning. The ambition of his vaſſals and courtiers had thus room for exertion; and they grew powerful from their ſovereign's infirmity. The adminiſtration of affairs was diſputed between his brother, the duke of Orleans, and his couſin-germain, John duke of Burgundy. Iſabella, his queen, alſo had her party; and the king vainly attempted to ſecure a ſuperior one of his own. Each of theſe, as they happened to prevail, branded their competitors with the name of traitors; and the gibbets were at once filled with the bodies of the accuſed and the accuſers. This, therefore, was thought by Henry a favourable opportunity to recover his rights from France. But, previous to his intended expedition, he ſent ambaſſadors to Paris, offering perpetual peace and alliance, on condition of being put in poſſeſſion of all thoſe provinces which had been wreſted from his anceſtors during the former reign, and of eſpouſing Catharine, the French king's daughter, with a ſuitable dowry. Though the French court was extremely averſe to war, yet the magnitude of theſe demands could not be complied with; which Henry moſt probably foreſaw. He therefore aſſembled a great fleet and army at Southampton; and, having ſolicited all the military men of the kingdom to attend him, he put to ſea, and landed near Harfleur, at the head of an army of ſix thouſand men at arms, and twenty-four thouſand foot, moſtly archers.

His firſt operations were directed againſt Harfleur, which, being preſſed hard, promiſed at a certain day to ſurrender, unleſs relieved before that time. The day arriving, and the garriſon ſtill reſolving to defend the place, Henry took the town by ſtorm, and put all the garriſon to the ſword. From thence the Engliſh advanced into the interior, and laid the country waſte. But, although the enemy made a feeble reſiſtance, the climate ſeemed to fight againſt the Engliſh, a contagious dyſentery carrying off three parts of Henry's army. In that ſituation, he challenged the dauphin, who commanded the French army, to ſingle combat, offering to ſtake all his claims upon the iſſue of the event. This challenge was declined; and the French, ſeeing the common danger, waved their domeſtic feuds. An army of fourteen thouſand men at arms, and forty thouſand foot, was aſſembled, under the command of count Albert, and directed to intercept Henry's weakened forces on their return. The Engliſh monarch took every precaution to inſpire his troops with patience and perſeverance; and manifeſted in his own perſon the nobleſt example of fortitude and reſignation. He was continually haraſſed in his march by flying parties of the enemy; and, whenever he attempted to paſs the Somme, over which his route lay, he ſaw troops poſted on the other ſide, ready to diſpute his paſſage. However, he ſeized by ſurpriſe a paſſage near St. Quintin, which had not been ſufficiently guarded: and there he ſafely carried over his army.

The enemy, however, was ſtill reſolved to cut off his retreat; and, after he had paſſed the ſmall river of Tertois at Blangi, he beheld, from the heights, the whole French army drawn up in the plains of Agincourt; ſo that it was impoſſible for him to proceed, without coming to an engagement. No ſituation could be more unfavourable than that in which he then found himſelf. His army was waſted with diſeaſe, his ſoldiers worn down with fatigue, deſtitute of proviſions, and diſcouraged by a retreat. Their whole number amounted but to ten thouſand men, who were to ſuſtain the ſhock of an enemy more than ten times as many, headed by expert generals, and plentifully ſupplied with proviſions. This diſparity, as it depreſſed the Engliſh, naturally raiſed the courage of the French; and ſo confident were they of victory, that they began to treat for the ranſom of their priſoners. Henry, on the other hand, though ſenſible of his extreme danger, did not omit any circumſtance that could ſtrengthen his ſituation. As the enemy were ſo much ſuperior, he drew up his army on a narrow ground between two woods, which covered each flank; and he patiently waited, in that poſition, the attack of the enemy. The conſtable of France was at the head of one army; and Henry himſelf, with Edward duke of York, commanded the other. For a time both armies ſilently gazed at each other, unwilling to break their ranks, as if fearful of the event of the day; which Henry perceiving, he, with a cheerful countenance, cried out, "Come, my friends, ſince they will not begin, it is with us to ſet them the example: come on! and the bleſſed Trinity be our protection." Upon this the whole army moved forward with a ſhout, while the French ſtill kept their poſition. The Engliſh archers, long famous for their ſkill, firſt let fly a ſhower of arrows, three feet long, which did prodigious execution. The French cavalry advancing to repel the archers, two hundred bow-men, who lay in ambuſh, riſing on a ſudden, produced ſuch a conſternation, that the archers, throwing away their arrows, fell upon them ſword in hand; ſo that the French were obliged to give way, and were totally defeated. But for the particulars of this ever memorable battle, ſee the article AGINCOURT, vol. i. p. 199.

The battle of Agincourt was fought October 25, 1415; and was very fatal to France, from the number of princes and prime nobility killed or taken priſoners. Henry carried his illuſtrious priſoners to Calais, and from thence to England, where the parliament, dazzled with the ſplendour of his victories, granted him new levies, though unequal to the expences of a campaign. With theſe ſupplies he once more landed an army of twenty-five thouſand men in Normandy, A. D. 1417, and prepared to ſtrike a deciſive blow for the crown of France, to which the Engliſh monarchs had long made their claim. That devoted country was then in a moſt deplorable ſituation. The whole kingdom appeared as one vaſt theatre of felony, murder, injuſtice, and devaſtation. The duke of

Orleans was aſſaſſinated by the duke of Burgundy; and the duke of Burgundy, in his turn, fell by the treachery of the dauphin. At the ſame time, the duke's ſon, deſirous of revenging his father's death, entered into a treaty with the Engliſh; and a league was concluded at Arras, between Henry and the young duke of Burgundy. Henry, therefore, proceeded in his conqueſts without much oppoſition. Many towns and provinces ſurrendered on his approach; the city of Rouen was beſieged and taken; Pontoiſe and Giſors ſubmitted to his arms; and he even threatened Paris, which obliged the court to remove to Troye. It was at this city that the duke of Burgundy, who had taken upon him the protection of the French king, met Henry, in order to ratify that treaty which was formerly begun, and by which the crown of France was to be transferred to the king of England. The imbecillity into which Charles VI. had fallen, made him paſſive in this remarkable treaty: and Henry dictated the terms throughout the whole negociation. The principal articles were, that Henry ſhould eſpouſe the princeſs Catharine; that Charles ſhould enjoy the title and dignity of king of France for life, but that Henry ſhould be declared heir to the crown, and ſhould be entruſted with the then adminiſtration of the government; that France and England ſhould for ever be united under one king, but ſhould ſtill retain their reſpective laws and privileges; that Henry ſhould unite his arms with thoſe of king Charles and the duke of Burgundy, to ſubdue the dauphin and his partizans. Such was the outline of a treaty, too repugnant to the real intereſts of both kingdoms to be of long duration; but the contracting parties were too much blinded by ſelf-intereſt and ambition, to be aware that it is not in the power of princes to barter away their kingdoms, contrary to the real intereſts and conſent of the people.

It was not long after this memorable treaty, that Henry eſpouſed the princeſs Catharine; after which he carried his father-in-law to Paris, and took formal poſſeſſion of that capital. There he obtained, from the eſtates of the kingdom, a ratification of the compact; and then turned his arms, with ſucceſs, againſt the adherents of the dauphin. But Henry's ſupplies were not furniſhed in ſuch plenty, as to enable him to carry on the war without returning in perſon, to prevail upon his parliament for freſh ſuccours; and, upon his arrival in England, though he found his ſubjects highly gratified with the ſplendour of his conqueſts, yet they ſeemed doubtful as to the advantage of them. A treaty, which in its conſequences was likely to transfer the ſeat of empire from England to France, was not much reliſhed by the parliament. They, therefore, under various pretences, refuſed him a ſupply equal to his exigencies; yet he was reſolved on purſuing his conqueſts; and, joining to the ſupplies granted at home the contributions levied on the conquered provinces, he was able once more to aſſemble an army of twenty-eight thouſand men, with which he landed with great renown at Calais.

In the mean time, the dauphin, who poſſeſſed great prudence and activity, had omitted no opportunity of taking advantage of Henry's abſence from France. He prevailed upon the regent of Scotland to ſend him a body of eight thouſand men from that kingdom; and with theſe, and ſome forces of his own, he had attacked the duke of Clarence, who commanded in Henry's abſence, and obtained a complete victory. This was the firſt action which turned the tide in favour of the French. But it was of ſhort duration, for Henry ſoon after appearing with a conſiderable army, the dauphin fled at his approach; while many of the places which held out for the dauphin, in the neighbourhood of Paris, ſurrendered to the conqueror. In this manner, while Henry was every where victorious, he fixed his reſidence at Paris; and, while Charles had but a ſmall court, Henry was attended with a very magnificent one. On Whitſunday, A.D. 1421, the two kings and their two queens, with crowns on their heads, dined together in public; Charles receiving apparent homage, but Henry commanding with abſolute authority.

At this critical juncture, when the glory of the Engliſh monarch had nearly reached its ſummit, and both crowns were devolving upon him, Henry was ſeized with a fiſtula; a diſorder which, from the unſkilfulneſs of the times, ſoon became mortal. Perceiving that his end was approaching, he ſent for his brother the duke of Bedford, the earl of Warwick, and ſome other noblemen whom he had honoured with his confidence; and to them he delivered his laſt will, with regard to the government of his kingdom and family. He expreſſed great indifference at the approach of death; devoutly waited its arrival, and expired with the ſame intrepidity with which he had lived, on the 31ſt of Auguſt, 1422, in the thirty-fourth year of his age, and the tenth year of his reign; leaving iſſue only one child, a ſon, by his queen, Catharine of France.

Thus died, in the prime of life, and in the full career of glory, Henry V. one of the beſt, braveſt, and moſt fortunate, princes that ever wore the diadem of England. His perſon is thus deſcribed by one who had often ſeen him: "In ſtature he was a little above the middle ſize; his countenance was beautiful, his neck long, his body ſlender, and his limbs moſt elegantly formed. He was very ſtrong, and ſo ſwift, that, with two companions, without either dogs or miſſive weapons, he catched a doe, one of the fleeteſt animals. He was a lover of muſic, and excelled in all martial and manly exerciſes." Some of our contemporary hiſtorians have heaped upon this prince, with a liberal but injudicious hand, all the praiſes they could collect, expreſſed in the moſt extravagant and bombaſtic language. It may, however, be affirmed, without the leaſt exaggeration, that he poſſeſſed an excellent underſtanding, which enabled him to form his deſigns with judgment, and to chooſe the moſt effectual means, and favourable ſeaſons, for carrying them into execution. His heart was as warm as his head was cool, and his courage equal to his wiſdom, which emboldened him to encounter the greateſt dangers, and ſurmount the greateſt difficulties. His virtues were not inferior to his abilities, being a dutiful ſon, a fond huſband, an affectionate brother, a ſteady and generous friend, and an indulgent maſter. His youthful exceſſes proceeded rather from redundancy of ſpirit than depravity of heart. His intolerance and ſeverity to thoſe who diſſented from the eſtabliſhed ſyſtem of religion, was the vice of the age rather than of the man. The injuſtice of his attempt to obtain the crown of France cannot be denied; but the probability of its ſucceſs, from the diſtracted ſtate of that kingdom, was too flattering a temptation to be reſiſted by a young, warlike, and ambitious, prince. In a word, Henry V. though not without his failings, merits the character of an amiable and accompliſhed man, a great and benevolent king.

Henry VI. being only nine months old at the time of his father's deceaſe, the parliament appointed the duke of Bedford protector or guardian of the kingdom, inveſting the duke of Glouceſter with the ſame dignity, during the abſence of his elder brother, who was then conducting the war in France; and, in order to limit the power of both theſe princes, they appointed a council, without whoſe advice and approbation no meaſure of importance could be determined. The perſon and education of the infant prince was committed to Henry Beaufort, biſhop of Wincheſter, his great uncle, who, as his family could never have any pretenſions to the crown, might ſafely, they thought, be intruſted with that important charge.

The entire conqueſt of France was the firſt object of the new government; and, on a ſuperficial view of the relative ſituation of both countries, every advantage ſeemed to be on the ſide of the Engliſh, who were already maſters of Paris, and of almoſt all that kingdom; and though Henry VI. was but an infant he was, A.D. 1423, ſolemnly

HENRY VI.

Publish'd as the Act directs May 10 1804

ſolemnly acknowledged by the pope's legate, and by the people of France, as their king. The duke of Bedford, who was at the head of the Engliſh affairs, was alſo the moſt accompliſhed prince of his age, and the whole power of England was at his command. He commanded armies accuſtomed to victory; he was ſeconded by the moſt renowned generals of his time; and he was maſter not only of Paris, but of almoſt all the northern provinces.

Charles VI. died ſoon after his ſon-in-law, the king of England; and though our Henry VI. had been proclaimed at Paris, yet the advocates of the dauphin proclaimed him alſo as the rightful heir; and Charles VII. notwithſtanding his apparent inferiority, was ſoon found to poſſeſs advantages, which ſerved to turn the ſcale. He was the true and undoubted repreſentative of the monarchy; and all Frenchmen who knew the intereſt, or deſired the independence, of their country, turned their eyes towards him as their ſole reſource. Though only in his twentieth year, he was of the moſt friendly and benign diſpoſition, of eaſy and familiar manners, and of a juſt, though not of a very vigorous, underſtanding. The love of pleaſure often ſeduced him into indolence; but amidſt all his irregularities, the goodneſs of his heart ſtill ſhone forth; and by exerting at intervals his courage and activity, he proved that his remiſſneſs proceeded not from habitual errors or defects. Yet the reſentment of the duke of Burgundy againſt Charles ſtill continued; and the duke of Bedford, that he might corroborate national connections by private ties, concluded his own marriage with the princeſs of Burgundy, which had been ſtipulated at the treaty of Arras.

While the vigilance of the duke of Bedford was employed in gaining or confirming French alliances, he did not overlook the ſtate of more remote countries. The duke of Albany, regent of Scotland, had expired; and his power had devolved on Murdac, his ſon, a prince of a weak underſtanding and indolent diſpoſition. The ardour of the Scots to ſerve in France, where Charles treated them with great diſtinction, and where the regent's brother enjoyed the dignity of a conſtable, broke out afreſh; and new ſuccours daily expatriated, and filled the armies of the French king. The duke of Bedford, therefore, perſuaded the Engliſh council to form an alliance with James of Scotland, their priſoner; to free him from captivity, and to marry him to a daughter of the earl of Somerſet, and couſin of the young king. Murdac, tired of his ſtation, entered ſincerely into the treaty; and for a ranſom of forty thouſand pounds, the king of Scotland was reſtored to the throne of his anceſtors. To theſe negotiations ſucceeded the operations of war. Charles, ſtill deſirous of employing his enemies in the provinces north of the Loire, conteſted every caſtle with heroic obſtinacy. He had been lately reinforced by numbers of the Scots; and John Stuart, conſtable of Scotland, with the Lord of Eſſiſſac, had formed the ſiege of Crevant in Burgundy. The earls of Saliſbury and Suffolk marching to its relief, the beſiegers were routed, with the loſs of above a thouſand men; and the conſtable of Scotland, with the count of Ventadour, were taken priſoners.

Meanwhile, the duke of Bedford was engaged in the ſiege of Yvri in Normandy; and the governor, finding his reſources exhauſted, had agreed to ſurrender the town, unleſs relieved by a certain day. The king of France, hoping by a ſucceſsful enterpriſe, to reſtore the luſtre of his arms, and to preſerve Yvri, collected with diligence an army of fourteen thouſand men, of whom one half were Scots; and entruſted it to the valour and experience of the earl of Buchan, conſtable of France, who had already diſtinguiſhed himſelf by the defeat of the duke of Clarence. That general, however, arrived too late to ſuccour Yvri, which had opened her gates; but he immediately inveſted Verneuil, and carried it without difficulty. But he had no time to ſecure this conqueſt, before he was informed of the approach of the duke of Bedford. A council of war was immediately aſſembled to determine what conduct they ſhould purſue. In vain did the moſt experienced French officers remonſtrate on the imprudence of hazarding an army, the laſt reſource of their king: the Scots rejected with contempt the indignity of retiring before the Engliſh; their opinions were eſpouſed by the raſh and preſumptuous; and it was finally reſolved to wait the arrival of the duke of Bedford. The armies came in ſight of each other near Verneuil, and were equally balanced in point of numbers. The earl of Buchan reſolved to wait with patient firmneſs the charge of the enemy; but his meaſures were diſconcerted by the impatience of the viſcount Narbonne. After a bloody conflict, the French being preſſed on all ſides, began to retreat; and that retreat was ſoon changed into a tumultuous flight. Four thouſand of their braveſt ſoldiers, with the earls of Buchan and Douglas, the counts of Aumale, Ventadour, and Narbonne, periſhed in the field. The victors, however, purchaſed their triumph at the expence of ſixteen hundred men; a loſs ſo unuſual, that the duke of Bedford forbad all rejoicings for his ſucceſs.

The deſtruction of Charles now appeared inevitable; and from the danger which threatened to overwhelm him, he could only be ſaved by the diſſenſions of his enemies, which, fortunately for him, roſe to a height that forbad him to deſpair. Jaqueline, heireſs of Hainault and Holland, had eſpouſed John duke of Brabant, couſin-german to the duke of Burgundy. The marriage had been dictated by policy; but the maſculine ſpirit and brilliant capacity of the princeſs deſpiſed her ill-matched conſort, who was equally feeble in body and mind. Contempt was ſoon the parent of antipathy; and, impatient of the dilatory meaſures and doubtful determination of the court of Rome, ſhe eſcaped into England, and ſolicited the protection of the duke of Glouceſter. The impetuous paſſions of that prince blinded him to the true intereſts of his country; the charms and the inheritance of the counteſs, preſented themſelves to his view; and without any further ceremony, he entered into a marriage contract with Jaqueline, and immediately attempted to render himſelf maſter of her dominions.

The duke of Burgundy reſented the injury offered to his kinſman the duke of Brabant; and, at length, openly declared in his favour, and marched troops to his ſupport. The quarrel, which at firſt was political, ſoon became perſonal; and the duke of Glouceſter ſtill perſiſting in preſſing the war in the Low Countries, the duke of Bedford, inſtead of improving the victory of Verneuil, was obliged to croſs the ſeas to England, that he might try, by his counſels and authority, to check the mad career of his brother. He found the Engliſh miniſtry diſtracted by jealouſies; the biſhop of Wincheſter, to whom the care of the young king's education was entruſted, had continual diſputes with his nephew the protector; and the duke of Bedford was obliged to employ the authority of parliament to reconcile them. The rivals now ſwore to bury all quarrels in oblivion; and time alſo ſeemed to open expedients for compoſing the difference with the duke of Burgundy. The pope having declared the contract void, between Humphrey of Glouceſter and Jaqueline, the duke, deſpairing of ſucceſs, married another woman, who had lived ſome time with him as his miſtreſs. The duke of Brabant died ſoon after; and his widow, before ſhe could recover poſſeſſion of her dominions, was obliged to declare the duke of Burgundy her heir, in caſe ſhe ſhould die without iſſue, and to promiſe never to marry without his conſent. But the advantage which the latter prince reaped from the accommodation of theſe differences, did not prevent him in future from regarding the Engliſh with jealouſy; and the ſatisfaction which the regent enjoyed from reconciling one ally, was ſoon alloyed by the unexpected deſertion of the duke of Brittany and the earl of Richemont, who now joined the ſtandard of their legitimate ſovereign, Charles VII.

During

During theſe political ſtruggles, an Engliſh army of three thouſand men, under the command of the earl of Warwick, A. D. 1426, had formed the ſiege of Montarges, and that place was reduced to the laſt extremity. Charles collected a body of ſixteen hundred men, and entruſted them to a natural ſon of that duke of Orleans who had been aſſaſſinated by the duke of Burgundy. This general, who was afterwards ſo famous under the titles of Baſtard of Orleans, and count of Dunois, attacked the enemy's entrenchments, and compelled the Engliſh to abandon the ſiege with diſgrace. The duke of Bedford, in the mean time, indignant at the defection of the duke of Brittany, on his arrival in France had ſecretly aſſembled a conſiderable army to chaſtiſe that prince; and ſuddenly invading the province, unprepared for reſiſtance, he compelled its ſovereign to renounce his alliance with France, and to yield homage to Henry for his duchy. Succeſsful in this enterpriſe, he entered on another equally important, and determined to inveſt the city of Orleans. The army deſtined for this ſiege, conſiſting of ten thouſand men, he entruſted to the veteran abilities of the earl of Saliſbury; while, on the other hand, Charles reinforcing the garriſon, and repleniſhing the magazines, appointed as governor the lord of Gaucour, a brave and experienced officer.

Soon after the ſiege commenced, A. D. 1428, the earl of Saliſbury was killed by a cannon ball, in a ſpirited and ſucceſsful attempt on the fortifications. The command, on his death, devolved on the earl of Suffolk. The army was reinforced by large bodies of the French and Burgundians; and Orleans, under his directions, was completely inveſted. The inclemency of the ſeaſon, and the rigour of the winter, could not overcome the perſeverance of the beſiegers; a chain of forts was arduouſly conſtructed; yet the vacant ſpaces ſtill allowed ſuccours to be introduced; and the garriſon, before the return of ſpring, was ſwelled by frequent ſupplies from twelve hundred to three thouſand men; while their hopes were raiſed, and their efforts encouraged by the preſence and example of the baſtard of Orleans. In order to diſtreſs the beſiegers, the French had ravaged and exhauſted the adjacent country; and the Engliſh were compelled to draw their ſubſiſtence from a conſiderable diſtance. A convoy of proviſions was entruſted to the conduct of ſir John Falſtoffe, with a detachment of two thouſand five hundred men. The king of France, determined to ſtrain every nerve for the preſervation of the city, collecting a body of troops, in number about four thouſand, appointed the count of Clermont to command them. On the approach of the French, Falſtoffe moſt judiciouſly drew up his men behind the waggons, and calmly received the fury of their charge. The French were broken by their own impetuoſity; and five hundred periſhed on the field. Fruſtrated in this attempt to relieve Orleans, the king of France endeavoured to preſerve it by policy. The duke of Orleans, ſtill a priſoner in England, had obtained from the duke of Glouceſter, and his council, the promiſe of a neutrality in his demeſnes; and that they ſhould be ſequeſtered during the war into the hands of the duke of Burgundy: but this expedient was firmly rejected by the duke of Bedford: and to the importunities of the duke of Burgundy he coolly replied, "he was not in a humour to beat the buſhes, whilſt others ran away with the game." Diſguſted at this refuſal, Burgundy ſeparated his forces from thoſe of the Engliſh; but the latter ſtill preſſed the ſiege with increaſe of ardour; when Orleans was preſerved by an occurrence ſo ſingular as almoſt to ſtagger belief, were it not confirmed by the united teſtimony of contemporary hiſtorians.

Charles, reduced to deſpair, had already begun to meditate a retreat into Dauphiné. From this intention, however, he was diverted by the intreaties of his queen, Mary of Anjou, a princeſs of prudence and ſpirit; and by the more perſuaſive remonſtrances of his beautiful miſtreſs, the celebrated Agnes de Sorele. Undetermined how to act, and in hourly expectation of receiving intelligence that Orleans had ſurrendered, his attention was arreſted by the appearance of a village girl, deſtined to prop his falling fortunes, and reſtore him to the dominions of his anceſtors. This was no other than Joan d'Arc, the Maid of Orleans; for whoſe hiſtory, proweſs, and unfortunate end, ſee vol. i. p. 43.

The Engliſh heard with contempt the preparations of Charles, under the guidance of this woman, and derided, in ludicrous terms, the heavenly commiſſion of Joan; but the minds of the common ſoldiers were inſenſibly impreſſed with dread, and they awaited the event with ſuperſtitious fear. The earl of Suffolk, appriſed of the diſpoſition of his troops, vainly flattered himſelf that time would diſpel their apprehenſions, and baniſh the illuſion. He determined to remain quietly within his intrenchments, while a convoy entered the city with Joan, and the French army returned to Blois without interruption. A ſecond convoy ſoon followed on the ſide of Beauſſe, and was alſo ſuffered to paſs without reſiſtance. Hence the French aſſumed new ſpirits; while the Engliſh, formerly elated with victory, and impatient for action, beheld the enterpriſes of their enemies with ſilent aſtoniſhment and religious awe. The enthuſiaſm of Joan, however, could not be reſtrained within the walls of Orleans: ſhe exhorted the garriſon to liſten to her voice, and imitate her example. The count of Dunois conſented to ſeize the moment of returning fortune; the garriſon ſallied out with Joan at their head; the Engliſh were ſucceſſively chaſed from their poſts, with the loſs of above ſix thouſand men; and the French, animated by this firſt eſſay of the holy maid, prepared to improve their advantage, and avail themſelves of the ſuperſtitious terrors of their adverſaries. With ſix thouſand ſelect troops, the earl of Suffolk had retreated to Jergeau: he was attacked there by the French, commanded by Joan; the place was obſtinately defended; but the Engliſh were at length overpowered, and Suffolk was obliged to yield himſelf priſoner. The remainder of the Engliſh army under the conduct of Falſtoffe, Scales, and Talbot, were preſſed by the conſtable Richemont; they were overtaken at the village of Patay; and, oppreſſed by their fears, they never ſtood the charge of the enemy. Falſtoffe himſelf, who had ſo lately triumphed, was the firſt to fly: two thouſand of the Engliſh were ſlaughtered; and both Scales and Talbot were made priſoners.

The maid of Orleans, who had fulfilled part of her promiſe, was now determined to conduct the king to receive the crown at Rheims. The city itſelf lay diſtant from any place poſſeſſed by Charles; it was in the hands of the Engliſh; and the whole road which led to it was occupied by their garriſons. Yet Joan inſiſted on the execution of her miſſion; the king himſelf ſhook off his general indolence, and reſolved to follow the exhortations of his warlike propheteſs; the nobility of France crowded to the ſtandard of their youthful ſovereign, who began his march at the head of twelve thouſand men; and paſſing without interruption through an enemy's country, received in his progreſs the ſubmiſſion of Troyes; was inſtantly admitted into Rheims; and in that city was ſolemnly inaugurated, A. D. 1429. The claim of Charles, from his coronation at Rheims, received new luſtre; and many towns in the neighbourhood diſputed the honour of firſt acknowledging the authority of their lawful ſovereign.

The character of the duke of Bedford was never diſplayed to more advantage than amidſt theſe ſtorms of adverſity. He reinforced the garriſons of the different towns, repleniſhed their magazines, and overawed the inclinations of the inhabitants, ripe for revolt. The Pariſians were retained in obedience by alternate careſſes and menaces; and his arts ſoothed the angry paſſions of the duke of Burgundy, and deferred the fatal hour of his final defection. Haraſſed by the vigilance of the regent, the army of France, which had been compoſed chiefly of

volunteers, at length diſbanded; Charles, after having poſſeſſed himſelf of Lava, Lagni, and St. Denys, retired to Bourges; while Bedford carried over the young Henry VI. to Paris, and celebrating the ceremony of his coronation in that capital, exacted an oath of allegiance from ſuch as ſtill acknowledged the authority of the Engliſh. But whatever luſtre the coronation of the infant king might reflect on his cauſe, the regent expected to derive more ſolid advantage from an accident which ſoon after took place. Joan d'Arc had declared, that with the inauguration of Charles at Rheims, her miſſion expired; and that it was her wiſh, after having fulfilled her promiſes, to retire to her former condition. The count of Dunois had exhorted her to perſevere till the Engliſh were finally expelled. Overcome by his importunities, ſhe had thrown herſelf into Compeigne, which at that time was beſieged by the duke of Burgundy, aſſiſted by the earls of Arundel and Suffolk. In a ſally, ſhe was deſerted by her friends, probably out of envy, and being ſurrounded by her enemies, after a gallant reſiſtance, was taken priſoner.

The duke of Bedford purchaſed from John of Luxemburg, into whoſe hands ſhe had fallen, this important captive, and commenced a proſecution againſt her, which, whether undertaken from policy or revenge, ſtains for ever his accompliſhed character. She was accuſed of ſorcery, impiety, idolatry, and magic, and burnt in the market-place of Rouen. But the inhumanity of the Engliſh contributed not to advance their intereſts: the illuſion which had ſo long oppreſſed them with terror was indeed diſpelled, but the tide of fortune ſtill continued to flow rapidly againſt them; the French triumphed in repeated encounters; and their ſucceſs was enſured by a rupture between the dukes of Burgundy and Bedford. The bands of friendſhip had been looſened by the death of the ducheſs of the latter; and the former complained, that the memory of his ſiſter was inſulted by the haſty marriage of the regent with Jaqueline of Luxemburg. All advances toward a reconciliation were diſdained by two princes equally tenacious of their dignity; and Charles availed himſelf of the diſcontent of the duke of Burgundy to negociate the celebrated treaty, ſince known by the name of the treaty of Arras, concluded in Sept. 1435.

Very ſoon after this tranſaction the duke of Bedford expired, a prince of many virtues, and of the moſt brilliant military character. After his death, the court of Henry was diſtracted by the rival parties of the duke of Glouceſter and the cardinal of Wincheſter; and it was ſeven months before Richard duke of York, ſon to the earl of Cambridge who had been executed in the laſt reign, was appointed to the command in France. On his arrival, the new governor found the capital already loſt; the Pariſians, attached to the houſe of Burgundy, imitated the example of that duke; they opened their gates to the count of Richemont, and proclaimed the French king, Charles VII. Lord Willoughby, with an Engliſh garriſon of 1500 men, maintained himſelf for ſome time in the Baſtille; but his valour and ſkill only ſerved to procure a capitulation, by which he was allowed with his troops a free paſſage to Rouen.

For five years the duke of York ſtruggled againſt the difficulties of his ſituation; and, being aſſiſted by the valour of lord Talbot, afterwards earl of Shrewſbury, he performed many brilliant, but indeciſive actions. At laſt both parties, weary of hoſtilities, ſeemed deſirous of peace, and they ſet on foot negociations for that purpoſe. But the propoſals of France, and the demands of England, were ſtill ſo wide of each other, that all hope of accommodation vaniſhed. The Engliſh ambaſſadors demanded full and entire reſtitution of all the provinces which had formerly been annexed to England, together with the final ceſſion of Calais and its diſtrict: the French offered only a part of Guienne, part of Normandy, and Calais, loaded with the uſual burthen of homage. It appeared in vain to continue the negociation, while there was ſo little proſpect of agreement. The Engliſh were ſtill too haughty to ſtoop from the vaſt hopes which they had formed of complete conqueſt; and the French had gained too much, not to expect the acquiſition of more. The captivity of five princes of the blood, taken priſoners in the battle of Agincourt, was a conſiderable advantage which England long enjoyed over its enemy; but this ſuperiority was now loſt. Some of theſe princes had died; ſome had been ranſomed; and the duke of Orleans, the moſt powerful among them, was the laſt that remained in the hands of the Engliſh. He offered the ſum of fifty-four thouſand nobles for his liberty; and, when this propoſal was laid before the council of England, the party of the duke of Glouceſter oppoſed it, and that of the cardinal of Wincheſter ſupported it with zeal. The party of the latter, as uſual, prevailed; and the duke of Orleans was releaſed; after a melancholy captivity of twenty-five years.

The ſentiments of cardinal Beaufort ſoon after prevailed in another more eſſential point. That prelate had always encouraged every propoſal of accommodation with France, and had repreſented the utter impoſſibility of puſhing farther the conqueſts in that kingdom; but the duke of Glouceſter, high-ſpirited and haughty, and educated in the lofty pretenſions which the firſt ſucceſſes of his two brothers had rendered familiar to him, could not endure theſe humble counſels. The influence of his rival, however, turned the ſcale, and the earl of Suffolk, who adhered to the cardinal's party, was diſpatched to Tours, A. D. 1440, to negociate with the French miniſters. As it was found impoſſible to adjuſt the terms of a laſting peace, he concluded a truce for twenty-two months; and proceeded to the execution of another buſineſs, which ſeems to have been rather implied than expreſſed in his commiſſion.

As Henry advanced in years, his character developed itſelf. He was found to be of the moſt unaffected manners, but of the moſt ſlender capacity. Hence it was eaſy to foreſee that his reign would prove a perpetual minority. As he had now reached the twenty-third year of his age, it was natural, however, to think of chooſing him a queen. The duke of Glouceſter propoſed a daughter of the count of Armagnac; but the cardinal and his friends caſt their eyes on Margaret of Anjou, daughter of Regnier, titular king of Sicily, Naples, and Jeruſalem; a princeſs accompliſhed both in perſon and mind; of a maſculine ſpirit and enterpriſing temper, and which had even become conſpicuous in the privacy of her father's family. The earl of Suffolk, in concert with his aſſociates of the Engliſh council, made propoſals of marriage to Margaret, which were accepted. But this nobleman, beſides pre-occupying the princeſs's favour, by being the chief means of her advancement, endeavoured farther to ingratiate himſelf with her and her family, by very extraordinary conceſſions. Though Margaret brought no dowry with her, he ventured, of himſelf, without any direct authority from the council, but probably with the approbation of the cardinal and the ruling members, to engage, by a ſecret article, that the province of Maine, which was at that time in the hands of the Engliſh, ſhould be ceded to Charles of Anjou, her uncle, who was prime miniſter, and favourite of the French king, and who had already received from his maſter the grant of that province as his appanage. The treaty of marriage was ratified in England, in 1443. Suffolk obtained, firſt the title of marquis, then that of duke; and even received the thanks of parliament for his ſervices in concluding it. The princeſs fell immediately into cloſe connection with the cardinal and his party, who, fortified by her powerful patronage, reſolved on the final ruin of the duke of Glouceſter.

This generous prince, ill ſuited for court intrigues, but poſſeſſing, in a high degree, the favour of the public, had already received from his rivals a cruel mortification, which it was impoſſible a perſon of his ſpirit and huma-

nity could ever forgive. His duchefs, the daughter of Reginald lord Cobham, had been accufed of the crime of witchcraft, under the pretence, that there was found in her poffeffion a waxen figure of the king, which fhe and her affociates, fir Roger Bolingbroke, a prieft, and one Margery Jordan, of Eye, melted in a magical manner before a flow fire, with an intention of making Henry's force and vigour wafte away, by like infenfible degrees. The accufation was well calculated to affect the weak and credulous mind of the king, and to gain belief in a fuperftitious age; and the duchefs was brought to trial with her confederates. A charge of this ridiculous nature feemed always to exempt the accufers from obferving the rules of common fenfe in their evidence: the prifoners were pronounced guilty; the duchefs was condemned to do public penance, and to fuffer perpetual imprifonment; while her reputed affociates in the ideal crime, were put to death.

Having proceeded to fuch unpardonable lengths, the cardinal and his party were fenfible it was neceffary to deftroy a man whom they had already fo deeply injured. In order to effect this purpofe, a parliament was fummoned at St. Edmundfbury. As foon as the duke of Glouceffer appeared, he was accufed of treafon, and thrown into prifon: he was foon after found dead in his bed; and, though it was pretended that his death was natural, and his body bore no marks of outward violence, no one doubted but that he had fallen a victim to the vengeance of his enemies. The cardinal of Winchefter died fix weeks after his nephew, whofe murder was univerfally afcribed to him as well as to the duke of Suffolk, and which, it is faid, gave him more remorfe in his laft moments, than could naturally be expected from a man hardened, during the courfe of a long life, in falfehood and in politics. What fhare the queen had in this guilt, is uncertain; her ufual activity and fpirit made the public conclude, with fome reafon, that the duke's enemies durft not have ventured on fuch a deed without her privity. But there happened, foon after, an event, of which fhe and her favourite, the duke of Suffolk, bore inconteftibly the whole odium.

The article of the marriage treaty, by which Maine was to be ceded to Charles of Anjou, had hitherto been kept fecret; but, as the court of France infifted on the performance of it, orders were difpatched to Surienne, governor of Mans, to furrender that place. The governor, queftioning probably the legality of the order, refufed to comply, until he had fuftained a fiege from the count of Dunois. When reduced to capitulate, he retired with his garrifon towards Normandy; but the duke of Somerfet, to whom the provinces of France, ftill occupied by the Englifh, were entrufted, refufed to admit him. This military adventurer immediately directing his march towards Brittany, exacted contributions from that province: the duke of Brittany complained of this violence to the king of France, his liege lord; and Charles remonftrated with the duke of Somerfet, who replied, that the injury was done without his privity, and that he had no authority over Surienne and his companions. Though this anfwer was plaufible, Charles never would admit of the apology. He ftill infifted that thefe plunderers fhould be recalled, and that reparation fhould be made to the duke of Brittany for all the damages which he had fuftained; and, in order to render an accommodation abfolutely impracticable, he eftimated the lofs at no lefs a fum than 1,600,000 crowns.

Senfible of the fuperiority which the prefent ftate of his affairs gave him over England, he was determined to take advantage of it; and, accordingly, A. D. 1448, four formidable armies entered Normandy at once; the firft, commanded by the king of France himfelf; the fecond, by the duke of Brittany; the third, by the duke of Alençon; and the fourth, by the count of Dunois. The inhabitants of Normandy opened their gates as foon as the French appeared before them. The duke of Somerfet, fo far from having an army which could take the field and relieve thefe places, was not able to fupply them with the neceffary garrifons and provifions. He retired, therefore, with the few troops of which he was maffer, into Rouen; and thought it fufficient, for the prefent, if he could fave that capital from the general fate of the province. The king of France, at the head of a formidable army, fifty thoufand ftrong, prefented himfelf before the gates: the dangerous example of revolt had affected the inhabitants; and they called aloud for a capitulation. Somerfet, unable to refift, at once, both the enemies within and from without, purchafed a retreat to Harfleur by the payment of fifty-fix thoufand crowns, by engaging to furrender Arques, Tancarville, Caudebec, Honfleur, and other places in the higher Normandy, and by delivering hoftages for the performance of articles. The governor of Honfleur refufed to obey his orders; upon which the earl of Shrewfbury, who was one of the hoftages, was detained prifoner; and the Englifh were thus deprived of the only general capable of recovering them from their prefent diftreffed fituation. Harfleur made a refolute defence under fir Thomas Curfon the governor; but was finally obliged to open its gates to Dunois.

A fuccour of four thoufand men at laft arrived from England, and landed at Cherbourg; but thefe were foon after routed at Fourmigni, by the count of Clermont. This battle, or rather fkirmifh, was the only action fought by the Englifh for the defence of their dominions in France, which they had purchafed at fuch an expence of blood and treafure. Somerfet, fhut up in Caen, without any profpect of relief, found it neceffary to capitulate; Falaife opened its gates, on condition that the earl of Shrewfbury fhould be reftored to liberty: and Cherbourg, the laft place in Normandy which remained in the hands of the Englifh, being delivered up, the conqueft of that important province was fpeedily finifhed by the vigilant Charles. A like rapid fuccefs attended the French arms in Guienne; no refiftance was made in the field; and the Englifh were expelled, in a few months, from a province which they had held for near three centuries. One feeble effort alone was made to recover it; and, though no peace was concluded, the war feemed to be at an end; and from the continent the attention of the Englifh was wholly recalled to their own domeftic concerns.

The palpable weaknefs of Henry VI. had encouraged a pretender to the crown, A. D. 1450, and the Englifh were doomed to pay, though late, the penalty of their turbulence under Richard II. and of their levity in violating, without any neceffity, the lineal fucceffion of their monarchs. The male line of the houfe of Mortimer was extinct; but Anne, the fifter of the laft earl of Marche, having efpoufed the earl of Cambridge, beheaded in the reign of Henry V. had tranfmitted her latent, but not yet forgotten, claim to her fon Richard duke of York. This prince, defcended by his mother from Philippa, only daughter of the duke of Clarence, fecond fon of Edward III. evidently ftood in the order of fucceffion before the king, who derived his defcent from the duke of Lancafter, third fon of that monarch; and that claim could not, in many refpects, have fallen into more dangerous hands than thofe of the duke of York. Richard was a man of valour and abilities, of prudence and mildnefs: he had enjoyed an opportunity of difplaying thefe virtues in his government of France; and, though recalled from that command by the intrigues and fuperior intereft of the duke of Somerfet, he had been very fuccefsful in Ireland; and had even been able to attach to his perfon and family the whole nation, whom he was fent to fubdue. In the right of his father, he bore the rank of firft prince of the blood; and by this ftation he gave a luftre to his title derived from the family of Mortimer, which, however, had been eclipfed by the royal defcent of the houfe of Lancafter. He poffeffed an immenfe fortune from the union of fo many fucceffions; thofe of Cambridge and

York on the one hand, with thoſe of Mortimer on the other: which laſt inheritance had before been augmented by an union of the eſtates of Clarence and Ulſter with the patrimonial poſſeſſions of the family of Marche. The alliances too of Richard, by his marrying the daughter of Ralph Nevil earl of Weſtmoreland, had widely extended his intereſt among the nobility, and had procured him many connections in that formidable order.

Among the reſt, he was nearly allied to the earl of Warwick, commonly known, from the ſubſequent events, by the appellation of the King-maker. This nobleman had diſtinguiſhed himſelf by his gallantry in the field, the hoſpitality of his table, by the magnificence, and ſtill more by the generoſity of his expences, and by the ſpirited and engaging manners which attended him in all his actions. The frankneſs and openneſs of his character rendered his conqueſt over men's affections the more certain. No leſs than thirty thouſand perſons are ſaid to have lived daily at his expence; and his munificence and hoſpitality, with the multitude of his retainers, diſtinguiſh him as the laſt of thoſe mighty barons who formerly overawed the crown. But though the duke of York had numerous and powerful partizans, his chief dependence was on the diſcontents which univerſally prevailed. The people repined at the loſs of the provinces in France; and this made them conſider queen Margaret as a Frenchwoman, and a latent enemy to the kingdom. But the moſt fatal blow given to the popularity of the houſe of Lancaſter, was the aſſaſſination of the virtuous duke of Glouceſter: by this crime the reigning family ſuffered a double prejudice; it was deprived of its firmeſt ſupport, and it was loaded with the infamy of premeditated murder.

The duke of Suffolk was known to have had an active hand in the crime; and the murmurs which aroſe againſt him as a miniſter, and favourite of the queen, were thereby raiſed to a dangerous height. The neceſſities of the crown had impelled him to many arbitrary meaſures; and the commons, provoked by his imprudence, and challenging an enquiry into his conduct, ſent up an impeachment againſt him to the houſe of peers. As Suffolk ſeems to have been a bad man as well as a bad miniſter, it is probable many of the alleged charges would be proved againſt him, though he made a reſolute defence. The court, alarmed at the proſecution, fell on an expedient to ſave him from preſent ruin. The king ſummoned all the lords, ſpiritual and temporal, to his apartment: the priſoner was produced before them, and aſked what he could ſay in his own defence? He denied the charge, but ſubmitted to the king's mercy: Henry expreſſed himſelf not ſatisfied with regard to the firſt impeachment for treaſon; but, in conſideration of the ſecond, for miſdemeanors, he declared, that, by virtue of Suffolk's own ſubmiſſion, not by any judicial authority, he baniſhed him the kingdom during five years. The lords remained ſilent; but, as ſoon as they returned to the houſe, they entered a proteſt, that his ſentence ſhould nowiſe infringe their privileges; and that, if Suffolk had inſiſted upon his right, and had not volutarily ſubmitted to the king's commands, he was entitled to a trial by his peers. It required little penetration to gueſs, that theſe irregular proceedings were meant to favour Suffolk, and that, as he ſtill poſſeſſed the queen's confidence, he would, on the firſt favourable opportunity, be reſtored to his country, and be reinſtated in his former power and credit. A captain of a veſſel was therefore employed by his enemies to intercept him in his paſſage to France: he was ſeized near Dover; his head ſtruck off on the ſide of a long-boat, and his body thrown into the ſea. Such was the imbecility of the government, that no enquiry was made after the actors and accomplices in this atrocious act of violence.

The duke of Somerſet now roſe as a miniſter and favourite; and, as he was the perſon under whom the French provinces had been loſt, the public, who always judge by the event, ſoon made him equally the object of their animoſity and hatred with his predeceſſor. The duke of York was abſent in Ireland during all theſe tranſactions; and, however much he might be ſuſpected of influencing late events, the jealouſy of the court was not yet awakened againſt this popular prince. The humours of the people, however, once ſet a-float by the parliamentary impeachment, and by the fall of ſo great a favourite as Suffolk, broke out in various commotions, which were not eaſily ſuppreſſed; but an inſurrection in Kent was attended with conſequences that deſerve to be regarded. John Cade, a native of Ireland, of low condition, who had been obliged to fly into France for his crimes, on his return to England, obſerving the diſcontents of the people, availed himſelf of them, to execute a plan at once original and daring. He took the name of John Mortimer, intending, as is ſuppoſed, to paſs himſelf for a ſon of ſir John Mortimer, who had been ſentenced to death by parliament, and executed, in the beginning of this reign, without any trial or evidence, merely upon an indictment of high treaſon preferred againſt him.

On the firſt mention of that popular name, the common people of Kent, to the number of twenty thouſand, flocked to Cade's ſtandard, and he inflamed their zeal by publiſhing complaints againſt the numerous abuſes in government, and demanding a redreſs of grievances. The court, not yet aware of the danger, ſent a ſmall force againſt the inſurgents, under the command of ſir Humphrey Stafford, who was defeated and ſlain near Seven Oaks; and Cade, advancing with his followers towards London, encamped on Blackheath. Though elated by his victory, he ſtill maintained the appearance of moderation; and, tranſmitting to the court a plauſible liſt of grievances, promiſed, that when theſe ſhould be redreſſed, and lord Say the treaſurer, and Cromer ſheriff of Kent, ſhould be puniſhed for their malverſations, he would immediately lay down his arms. The council, perceiving the public reluctance to fight againſt men ſo reaſonable in their pretenſions, carried the king, for preſent ſafety, to Kenilworth; and the city of London immediately opened its gates to Cade, who maintained, during ſome time, great order and diſcipline among his followers. But being obliged, in order to gratify their malevolence againſt Say and Cromer, to put theſe men to death without a legal trial, he found that, after the commiſſion of this crime, he was no longer able to controul their riotous diſpoſition, and that his authority was deſpiſed. Proceeding to acts of plunder and violence, the citizens, who had hitherto been paſſive, now took the alarm; and, being ſeconded by a detachment of ſoldiers, ſent them by lord Scales governor of the Tower, they repulſed the rebels with great ſlaughter. The Kentiſhmen were ſo diſcouraged by the blow, that, upon receiving a general pardon from the primate, then chancellor, they retreated towards Rocheſter, and there diſperſed. The pardon, however, was ſoon after annulled, as extorted by violence: a price was ſet on Cade's head, who was killed by one Iden, a gentleman of Suſſex; and many of his followers were brought to condign puniſhment.

A ſtrong ſuſpicion exiſted among the royal party, that the duke of York had ſecretly inſtigated Cade to this attempt, to ſound the diſpoſitions of the people towards his title and family; and, fearing he meant to return from Ireland with an armed force, they iſſued orders forbidding his return to England. The duke refuted his enemies by landing with only his ordinary retinue; but their precautions ſoon convinced him of his danger. He now began to ſee the impoſſibility of remaining a quiet ſubject, and the neceſſity of proceeding forward in ſupport of his claim. His partizans therefore were inſtructed to inſiſt upon his right by ſucceſſion, and by the eſtabliſhed conſtitution of the kingdom; and the arguments adduced by his adherents and thoſe of the reigning family, ſoon divided and diſtracted the people. The earl

of

of Courtney and the duke of Norfolk eſpouſed the cauſe of the duke of York; but the earl of Northumberland adhered to the eſtabliſhed government; and even the earl of Weſtmoreland, though the head of the Nevil family, was prevailed on to ſupport the cauſe of Henry. The hoſtile ſpirit, however, which appeared in parliament, increaſed the expectations of the Yorkiſts. The commons ventured to preſent a petition againſt the duke of Somerſet, lord Dudley, and ſeveral others of inferior rank, praying the king to remove them for ever from his perſon and councils. This was a violent attack, and ſupported but by few precedents; yet the king durſt not openly oppoſe it, and ſatisfied himſelf with a temporizing reply, which only the more expoſed his weakneſs.

The duke of York, truſting to theſe ſymptoms of diſaffection, raiſed an army of ten thouſand men, with which he marched towards London, demanding a reformation of the government, and the removal of the duke of Somerſet from all power and authority. He unexpectedly found the gates of the city ſhut againſt him; and, on his retreating into Kent, he was followed by the king, at the head of a ſuperior army. A parley enſued: the removal of Somerſet, and of his ſubmitting to a trial in parliament, were ſtill inſiſted on; and, the court pretending to comply with the demand, that nobleman was put in arreſt. The duke of York was then perſuaded to pay his reſpects to the king in his tent; and, on repeating his charge againſt the duke of Somerſet, he was ſurpriſed to ſee that miniſter ſtep from behind the curtain, and offer to maintain his innocence. Richard now found that he had been betrayed; and that it was become neceſſary, for his own ſafety, to lower his pretenſions. No violence, however, was attempted againſt him: the nation was not in a diſpoſition to bear the deſtruction of ſo popular a prince; and his ſon, who was not in the power of the court, might ſtill be able to revenge a father's death on all his enemies. He was therefore diſmiſſed; and retired to his ſeat of Wigmore, on the borders of Wales. While the duke of York lived in this retreat, an incident occurred, which, by increaſing the public diſcontents, proved favourable to his pretenſions, had he been ardent in urging them. Several Gaſcon lords, attached to the Engliſh government, and diſguſted at the new dominion of the French, came to London, and offered to return to their allegiance under Henry. The earl of Shrewſbury, with a body of eight thouſand men, was ſent over to ſupport them. Bourdeaux opened its gates to him: he made himſelf maſter of Fronſac, Caſtillon, and ſome other places; but, as Charles haſtened to reſiſt this new invaſion, the fortunes of the Engliſh were ſoon reverſed. Shrewſbury, a venerable warrior, above fourſcore years of age, fell in battle: his conqueſts were loſt; and all hopes of recovering the province of Gaſcony were for ever extinguiſhed.

On this occaſion the people expreſſed great diſcontent, and threw all the blame on the miniſtry. While they were in this diſpoſition, the queen's delivery of a ſon, who received the name of Edward, increaſed their diſſatisfaction, as it removed all hopes of the peaceable ſucceſſion of the duke of York, who was, otherwiſe, both in the right of his father, and by the laws enacted ſince the acceſſion of the houſe of Lancaſter, next heir to the crown. The duke himſelf, however, was incapable of violent counſels; and even when no viſible obſtacle lay between him and the throne, he was prevented by his own ſcruples from ſeizing it. Henry, at all times unfit to exerciſe the government, fell into a diſtemper which ſo far increaſed his natural imbecility, as to render him incapable of ſupporting even the appearance of royalty. The queen and the council, deſtitute of this ſupport, and finding themſelves unable to reſiſt the York party, were obliged to yield to the torrent. They ſent Somerſet to the Tower; and appointed Richard duke of York lieutenant of the kingdom, with powers to open and hold a ſeſſion of parliament. That aſſembly alſo, taking into conſideration the ſtate of the kingdom, created him protector during pleaſure. Yet the duke, inſtead of puſhing them to make farther conceſſions, appeared timid and irreſolute even in receiving the power with which they had inveſted him. He deſired that it might be recorded in parliament, that this authority was conferred on him from their own free motion, without any application on his own part; and expreſſed his hopes that they would aſſiſt him in the exerciſe of it. This moderation of Richard was certainly very unuſual, though very amiable; yet it was attended with bad conſequences in the preſent juncture, and, by giving time to the animoſities of faction to riſe and ferment, proved the ſource of all thoſe furious wars and commotions which enſued.

The enemies of the duke of York ſoon found it in their power to take advantage of his exceſſive caution. Henry being ſo far recovered from his diſtemper as to be able in appearance to exerciſe the royal functions, was moved to reſume his authority, to annul the protectorſhip of the duke of York, to releaſe Somerſet from the Tower, and to commit the adminiſtration into the hands of that nobleman. Richard, ſenſible of the dangers to which he was expoſed, levied an army; but ſtill without advancing any pretenſions to the crown. He complained only of the king's miniſters, and demanded a reformation of the government. A battle, however, was fought at St. Alban's, in which the Yorkiſts, without ſuffering any material loſs, ſlew about five thouſand of their enemies; among whom were the duke of Somerſet, the earl of Northumberland, the earl of Stafford, eldeſt ſon of the duke of Buckingham, lord Clifford, and many other perſons of diſtinction. The king himſelf fell into the hands of the duke of York, who treated him with great reſpect and tenderneſs; and he was only obliged, which he regarded indeed as no hardſhip, to commit the whole authority of the crown into the hands of his rival. This was the firſt blood ſpilt in that fatal quarrel between the houſes of York and Lancaſter, which laſted during thirty years, and which is computed to have coſt the lives of eighty princes of the blood, and almoſt entirely annihilated the ancient nobility of England.

After all, it was not difficult to wreſt power from hands ſo little tenacious as thoſe of the duke of York. Margaret, availing herſelf of that prince's abſence, and of rather a better ſtate of health in Henry, produced the latter before the houſe of lords, where he declared his intention of reſuming the government. To this meaſure the houſe of lords aſſented, though they had recently acknowledged Richard as protector; and the king was reinſtated in his authority without any open oppoſition. An outward reconciliation was procured by means of the archbiſhop of Canterbury, between the rival factions; but it was impoſſible to reſtore truſt and confidence. One of the king's retinue, having inſulted a retainer of the earl of Warwick's, their companions on both ſides took part in the quarrel: a fierce combat enſued; and the earl, apprehending his life to be aimed at, fled to Calais; the government of which gave him the command of the only regular military force maintained by England; and both parties, in every county, made preparations for deciding the conteſt by force of arms.

The earl of Saliſbury, marching to join the duke of York, was overtaken at Blore-heath, on the borders of Staffordſhire, by lord Audley, who commanded much ſuperior forces. A ſmall rivulet with ſteep banks ran between the armies. Saliſbury here ſupplied his defect in numbers by ſtratagem. He feigned a retreat, and allured Audley to follow him with precipitation; but when the van of the royal army had paſſed the brook, Saliſbury ſuddenly turned upon them; and partly by ſurpriſe, partly by the diviſion of the enemies' forces, put them to the rout; and reached the general rendezvous of the Yorkiſts at Ludlow. To the ſame place the earl of Warwick brought over a choice body of veterans from Calais, on whom it was thought the fortune of the war would much depend;

depend; but this reinforcement occaſioned, in the iſſue, the immediate ruin of the duke of York's party. When the royal army approached, and a general action was every hour expected, ſir Andrew Trollop, who commanded the veterans, deſerted to the king in the night-time; and the Yorkiſts were ſo diſmayed at this inſtance of treachery, which made every man ſuſpicious of his fellow, that they ſeparated next day, without ſtriking a ſtroke. The duke fled to Ireland; and the earl of Warwick, attended by many of the other leaders, eſcaped to Calais, where his great popularity among all orders of men ſoon drew to him partiſans; while the friends of the houſe of York, in England, kept themſelves in ſecret readineſs, to riſe on the firſt ſummons.

Warwick having met with ſome ſucceſſes at ſea, landed in Kent, with the earl of Saliſbury, and the earl of Marche, eldeſt ſon of the duke of York; and being met by the primate and other perſons of diſtinction, he marched, amidſt the acclamations of the people, to London. The city immediately opened its gates to him; and his troops increaſing on every day's march, he ſoon found himſelf in a condition to face the royal army, which haſtened from Coventry to attack him. A battle was fought at Northampton; and was ſoon decided againſt the royaliſts by the infidelity of lord Grey of Ruthin, who, commanding Henry's van, deſerted to the enemy during the heat of action, and ſpread a conſternation through the troops. The duke of Buckingham, the earl of Shrewſbury, the lords Beaumont and Egremont, and ſir William Lucie, with many other perſons of quality, were killed in the action; the common people were ſpared by order of the earls of Warwick and Marche. Henry himſelf was again taken priſoner; and as the innocence and ſimplicity of his manners, together with his misfortunes, rendered him an intereſting object, he was treated with abundant reſpect.

A parliament being ſummoned in the king's name at Weſtminſter, the duke ſoon after appeared there from Ireland; and ſtating to the houſe of peers his own claim, exhorted them to do juſtice to the lineal ſucceſſion. The lords remained for ſome time in ſuſpenſe; but at length declared in favour of the claim of the duke of York. It was decreed, however, that Henry ſhould continue to poſſeſs the crown during the remainder of his life; that the adminiſtration of the country ſhould in the mean while remain with Richard; and that he ſhould be acknowledged the true and lawful heir of the monarchy. In this deciſion the duke acquieſced; and Henry, had he even been at liberty, would not probably have objected to it.

The high-ſpirited Margaret, however, ſpurned at the compact, and reſolved to aſſert in arms the rights of her family. After the battle of Northampton, ſhe fled to the north, where her affability, inſinuation, and addreſs, among the northern barons, raiſed her an army at leaſt twenty thouſand ſtrong, with a celerity which was neither expected by her friends, nor apprehended by her enemies. The duke of York, informed of her intentions, haſtened with a body of five thouſand men, to check her progreſs; but on his arrival at Wakefield, finding himſelf ſo much outnumbered by the enemy, he threw himſelf into Sandal caſtle; and was adviſed by the earl of Saliſbury, and other prudent counſellors, to remain in that fortreſs, till his ſon, the earl of Marche, who was levying forces on the borders of Wales, could advance to his aſſiſtance. The duke, however, who poſſeſſed perſonal bravery in an eminent degree, thought that he ſhould be for ever diſgraced, if by taking ſhelter behind walls, he ſhould for a moment reſign the victory to a woman. He therefore deſcended into the plain, and offered battle to the enemy, which was inſtantly accepted. The great inequality of numbers was ſufficient alone to decide the victory; but the queen, by ſending a detachment, who fell on the rear of the duke's army, rendered her advantage ſtill more certain and undiſputed. The duke himſelf was killed in the action; and his head was, by Margaret's orders, fixed on the gates of York, with a paper crown, in deriſion of his claim. His ſon, the earl of Rutland, a very promiſing youth of ſeventeen, was murdered in cool blood, by lord Clifford, in revenge for the loſs of his father, at the battle of St. Albans. The earl of Saliſbury was wounded and taken priſoner, and immediately beheaded, with ſeveral other perſons of diſtinction, by martial law, at Pomfret. There fell near three thouſand Yorkiſts in this battle: the duke himſelf was greatly and juſtly lamented by his own party. He periſhed in the fiftieth year of his age, and left three ſons, Edward, George, and Richard, with three daughters, Anne, Elizabeth, and Margaret.

The queen, elated with this victory, divided her army. She ſent the ſmaller diviſion, under Jaſper Tudor earl of Pembroke, half brother to the king, againſt Edward, the new duke of York; and herſelf marched with the larger towards London, where the earl of Warwick had been left with the command of the Yorkiſts. Pembroke was defeated by Edward, at Mortimer's croſs in Herefordſhire, with the loſs of near four thouſand men. He himſelf eſcaped by flight; but his father, ſir Owen Tudor, was taken priſoner, and immediately beheaded by Edward's orders. Margaret, however, compenſated this defeat by a victory which ſhe obtained over the earl of Warwick, at St. Albans. About two thouſand three hundred of the vanquiſhed, periſhed in the battle; and the perſon of the king fell again into the hands of his own party. But the queen reaped no great advantage from her victory. Edward duke of York advanced upon her from the other ſide; and collecting the remains of Warwick's army, was ſoon in a condition to give her battle with ſuperior forces. Senſible of her danger, ſhe found it neceſſary to retreat towards the north; and Edward entered London amidſt the acclamations of the citizens. Inſtead of evincing the timid caution of his father, he determined to avail himſelf of his popularity, and to aſſume at once the name and dignity of king. His army was ordered to aſſemble in St. John's Fields; great numbers of people ſurrounded them; a ſuitable harangue was pronounced to this mixed multitude; and when it was demanded, whether they would accept of Edward, eldeſt ſon of the late duke of York, for their king? they expreſſed their aſſent by loud and joyful acclamations. A great number of biſhops, lords, and magiſtrates, and other perſons of diſtinction, were next aſſembled at Baynard's caſtle, who ratified the popular election; and the new king was proclaimed in London, A. D. 1461. Thus terminated the inglorious reign of Henry VI. a monarch, who while in his cradle, had been proclaimed king both of France and England; but who loſt all the conqueſts of his illuſtrious father, and the hereditary dominions of his family in France, and at laſt the crown of England. His perſonal appearance was mean, and his countenance melancholy. But the weakneſs of his underſtanding, and the facility of his temper, were his moſt fatal defects; the one rendering him quite unfit for holding the reins of government, the other making him a paſſive inſtrument in the hands of thoſe by whom he was ſurrounded. In private life, he was harmleſs and inoffenſive, devout, chaſte, temperate, humble in proſperity, and patient in adverſity: but the weakneſs of his underſtanding degraded all his virtues. In a word, Henry VI. was much fitter for a monk than for a monarch, and would have made a better figure in a cloiſter than in a court. But that inſignificancy which loſt him his crown, ſaved his life; for when he fell into the hands of his ſucceſſor, he permitted him to live, not thinking his death neceſſary to his own ſecurity. Yet this prince could not in truth be conſidered as an uſurper; and the defence which he made for himſelf, when he was accuſed of that crime in the tower, ſeems to be ſatisfactory: "My father (ſaid he) and grandfather were kings of England; I was enthroned when I was an infant, crowned when I was a child, received the voluntary homage of all my ſubjects, and enjoyed the royal authority, unchallenged, almoſt forty years." He reigned thirty-eight years and ſix months. His only child, Edward prince of Wales,

was in the ſeventh year of his age at the time his father was deprived of his crown.

The moſt remarkable law which paſſed in this reign, was for regulating the election of knights of the ſhire. After the fall of the feudal ſyſtem, every freeholder was, by degrees, admitted to give his vote; but in the eighth and tenth of Henry VI. laws were enacted which limited the electors to ſuch as poſſeſſed not leſs than forty ſhillings a year in land, free from all burdens; a ſum equivalent to near twenty pounds of our preſent money. It ſhould alſo be obſerved, that the firſt inſtance of debt being contracted on parliamentary ſecurity, occurs in this reign.

From the ACCESSION of the HOUSE of YORK, to the final EXTINCTION of the PLANTAGENETS.

Edward IV. was in the bloom of youth, being hardly nineteen years of age, when he aſcended the throne of England; beautiful in his perſon, engaging in his deportment, excelling in all manly exerciſes, brave, active, and even prudent beyond his years. Inſtead of ſpending his time in vain amuſements, he applied to buſineſs with ſo much ardour, that the firſt diviſion of his army, conducted by the earl of Warwick, left London, March 7; and, five days after, he followed with the reſt of his forces. On that ſame day, he gave a ſpecimen of the cruelty which afterwards ſtained his character, by ordering the execution of Walter Walker, a grocer, for having ſpoken contemptuouſly of his title to the crown. His army increaſed as he advanced; and when he reached Pomfret, March 27, he found himſelf at the head of an army of near 50,000 men.

Queen Margaret, and the nobles of her party, after their return into the north, had been very active in recruiting their army, which lay at York, and amounted to 60,000 men. The duke of Somerſet was appointed commander in chief; leaving the king, queen, and prince of Wales, at York. Early in the morning of Palm Sunday, March 29, theſe two mighty armies, inflamed with the moſt violent animoſity, were drawn up in order of battle on the fields between the villages Saxton and Towton, about ten miles ſouth of York. Edward iſſued expreſs orders to his troops to take no priſoners, and give no quarter; nor is it improbable that the orders on the other ſide were in the ſame ſanguinary ſtrain. The action began at nine in the morning, in the midſt of a heavy ſhower of ſnow, which was blown with great violence in the faces of the Lancaſtrians, and prevented them from ſeeing the enemy diſtinctly, or judging rightly of their diſtance. Lord Fauconbridge, taking advantage of this circumſtance, commanded his archers to advance briſkly a few paces, and ſhoot their arrows with all their force, and then fall back. The Yorkiſts advanced; and, pouring in ſhowers of arrows upon their enemies, did great execution, and made them ruſh on to a cloſe engagement, with ſwords, ſpears, battle-axes, &c. The conflict now became fierce and bloody, and continued between four and five hours, victory ſometimes inclining to one ſide, and ſometimes to the other. At length the Lancaſtrians began to give way; and, being hard preſſed, they broke, and fled on all ſides, and were purſued with great ſlaughter. This was one of the moſt bloody battles that ever was fought in Britain. Thoſe who were employed to number and bury the dead, declared, that their number amounted to 38,000. Amongſt theſe were the earls of Northumberland, Weſtmoreland, and Shrewſbury; the lords Clifford, Beaumont, Nevil, Willoughby, Wells, Roos, Scales, Grey, Dacres, and Molineux; beſides a prodigious number of knights and gentlemen. This was the fourth pitched battle fought in leſs than three months in England, in which above 60,000 of her braveſt ſons periſhed; among whom were ſeveral princes of the blood, and many of the prime nobility. The dukes of Somerſet and Exeter, when they ſaw that all was loſt, returned to York, attended by ſeveral lords and gentlemen; and, taking with them the king, queen, and prince of Wales, fled into Scotland; and never thought themſelves ſafe till they had reached the capital of that kingdom.

Edward, in the mean time, not ſatiated with the ſlaughter of the battle, cauſed much noble blood to be ſhed on the ſcaffold. The earl of Devonſhire and ſir W. Hill, being taken in their flight, were beheaded at York, and their heads were ſet upon the walls of that city, inſtead of that of the duke of York, the king's father, and that of the earl of Saliſbury, which were now taken down. The earl of Ormond and Wiltſhire was beheaded at Newcaſtle, and ſir Thomas Fulford at Hexham. Edward then marched as far north as Newcaſtle; and having left the earl of Warwick with a competent force, to keep that part of the country in ſubjection, he returned to London, June 26; and three days after he was crowned at Weſtminſter with the uſual ſolemnity.

While theſe reſentful and ſanguinary perſecutions were going on in England, the Scots remained in a manner paſſive: the then king James III. was a minor, and the regency was diſputed by the queen-dowager and the family of Douglas. Margaret found Scotland little leſs diſtracted than England; but on her offering to the council to deliver to them immediately the important town and fortreſs of Berwick, and to contract her ſon in marriage with a ſiſter of James, they promiſed the aſſiſtance of their arms to reinſtate her family on the throne of England. As the danger from that quarter, however, did not appear urgent, Edward, inſtead of purſuing the fugitive king and queen, ſummoned a parliament for ſettling the government. That aſſembly no longer heſitated between the two families; they eſtabliſhed the title of Edward, and paſſed an act of attainder againſt Henry and Margaret, againſt their infant ſon Edward, and ſeveral of their principal adherents.

Domeſtic peace, however, was not yet reſtored to England; nor was there wanting danger from the efforts of foreign powers. Louis XI. of France, was of an intriguing and politic temper, and, to keep alive the flames of civil diſcord in England, he ſent a body of two thouſand men at arms to the aſſiſtance of the depoſed Henry. Thus Margaret was again enabled to take the field; but, though reinforced by a numerous train of adventurers from Scotland, and by many partizans of the family of Lancaſter, ſhe received a check at Hedgley-moor, from lord Montagu, brother to the earl of Warwick; who was ſo elated with this ſucceſs, that while a numerous reinforcement was on their march to join him by orders from Edward, he ventured with his own handful of troops to attack the Lancaſtrians at Hexham, and obtained a complete victory over them. The duke of Somerſet, the lords Rous and Hungerford were taken in the purſuit, and immediately beheaded. Summary puniſhment was in like manner executed on ſeveral perſons of rank. All thoſe who were ſpared in the field ſuffered on the ſcaffold; and the utter extermination of their adverſaries was now become the object of the York party.

The hard fate of the ex-royal family deſerves to be recorded. Margaret, flying with her ſon into a foreſt, was beſet, during the darkneſs of the night, by a gang of robbers, who deſpoiled her of her rings and jewels, and treated her with the utmoſt indignity. The partition of this rich booty raiſed a quarrel among them; and while their attention was thus engaged, ſhe took the opportunity of plunging with her ſon into the depths of the foreſt, where ſhe wandered for a long time, ſpent with hunger and fatigue, and overwhelmed with terror and affliction. While in this wretched condition, ſhe ſaw a robber approach with his naked ſword; and finding that ſhe had no means of eſcape, with ſingular preſence of mind, ſhe advanced towards him; and preſenting to him the young prince, exclaimed, "Here, my friend, I commit to your care the ſafety of your king's ſon." The man, whoſe generous ſpirit had been obſcured by his vicious courſe of life, was charmed with the confidence repoſed in him; and vowed

EDWARD IV.

London. Publish'd as the Act directs Mar 10 1804 by J Wilkes.

vowed, not only to abſtain from all injury againſt the princeſs, but to devote himſelf entirely to her ſervice. By his means ſhe lived ſome time concealed in the foreſt, and was at laſt conducted to the ſea-coaſt, whence ſhe made her eſcape into Flanders. She paſſed thence to her father's court, where ſhe lived ſeveral years in privacy and retirement. Her royal conſort was neither ſo fortunate nor ſo dexterous in finding the means of eſcape. Some of his friends took him under their protection, and conveyed him into Lancaſhire; where he remained concealed during a year; but he was diſcovered A. D. 1465, and delivered up to Edward, and thrown into the Tower.

The impriſonment of Henry, the expulſion of Margaret, and the execution and confiſcation of all the moſt eminent Lancaſtrians, ſeemed to give full ſecurity to Edward's government. But the prince had no ſooner vanquiſhed his domeſtic enemies, than he delivered himſelf up to the impulſe of his amorous paſſions. Elizabeth Grey, the daughter of the ducheſs of Bedford, by her ſecond marriage with ſir Richard Woodville, and the widow of ſir John Grey of Groby, who had been ſlain in the ſecond battle of St. Albans, fighting on the ſide of Lancaſter, finding her huſband's eſtate confiſcated, ſeized the opportunity, when the king was on a viſit to the ducheſs of Bedford, to intreat his pity for her impoveriſhed and diſtreſſed children. The ſight of ſo much beauty in affliction, ſoon found its way to Edward's heart; and he was reduced, in his turn, to the poſture of an humble ſuppliant at the feet of Elizabeth. But the lady was either averſe to diſhonourable love, or inflamed with ambition; ſo that the importunities of Edward proved fruitleſs againſt her rigid and inflexible virtue. His paſſion, ſtimulated by a denial, carried him beyond all bounds; and he offered to ſhare with her his heart, as well as his throne. The marriage was privately celebrated at Grafton; and the ſecret was carefully kept for a time, from the dilemma to which the king was reduced.

Before this interview with Elizabeth Grey, Edward had caſt his eye on Bona of Savoy, ſiſter of the queen of France, who, he hoped, would, by her marriage, enſure him the friendſhip of that power, which was then both able and inclined to give ſupport and aſſiſtance to his rival. To render the negociation more ſucceſsful, the earl of Warwick had been diſpatched to Paris, where the princeſs then reſided. This nobleman had demanded Bona in marriage for the king; his propoſals had been accepted; and nothing remained but the ratification of the terms agreed on, and the bringing over the princeſs to England. Matters were in this ſtate, when the ſecret of Edward's ſtolen marriage broke out, and the haughty earl, deeming himſelf affronted, immediately returned to England, inflamed with rage and indignation, which Edward ſeemed little diſpoſed to ſoften by explanation or apology. Every incident, therefore, now tended to widen the breach between the king and this powerful nobleman. All preferments and honours were laviſhed on the queen's friends and relations. Warwick bore with impatience the diminution of his influence; and the nobility of England, envying the ſudden growth of the Woodvilles, partook of his diſcontent; but the moſt conſiderable aſſociate that he gained was George duke of Clarence, the king's ſecond brother. This prince was allured by the offer in marriage of the elder daughter of Warwick, co-heireſs to his immenſe fortunes, to join the party of that earl; and thus an extenſive and dangerous combination was inſenſibly formed againſt Edward and his miniſtry.

To ſecure himſelf againſt this faction, Edward, A. D. 1469, entered into an alliance with Charles, ſurnamed the Bold, duke of Burgundy, whoſe rich demeſnes marked him as the proper perſon to oppoſe the dark and dangerous ambition of Louis XI. Edward alſo formed a league with the duke of Brittany; but from theſe foreign negociations his attention was withdrawn by domeſtic inſurrection. The improper application of ſome part of the revenue of St. Leonard's hoſpital, near York, which had been deſtined for the relief of the poor, provoked the common people to riſe in arms. Theſe being headed by ſir Henry Nevil and ſir John Conyers, defeated and put to death the earl of Pembroke; and ſeizing the earl of Rivers, the father of the queen, with his ſon John, immediately executed them.

A dark ſhade reſts on this part of the Engliſh hiſtory, and the real views and objects of the principal actors cannot now be developed with any degree of certainty. At the commencement of this rebellion, Warwick reſided, together with his ſon-in-law, the duke of Clarence, in his government of Calais; and it appears, that his brother Montagu acted with vigour againſt the northern rebels. We may thence preſume, that the inſurrection had not proceeded from the ſecret counſels and inſtigation of Warwick. He and Clarence indeed came over to England, offered their ſervice to Edward, were received without any apparent ſuſpicion, and were entruſted by him in the higheſt commands. Soon after, we find the rebels quieted and diſperſed by a general pardon granted by Edward, on the ſuggeſtion of the earl of Warwick; but why ſo courageous a prince, if ſecure of Warwick's fidelity, ſhould have granted a general pardon to men who had been guilty of ſuch violent and perſonal outrages, is not intelligible; nor why that nobleman, if unfaithful, ſhould have endeavoured to appeaſe a rebellion, from which he was able to reap ſuch advantages. To ſolve this difficulty, we may preſume, that, after this inſurrection, there was an interval of peace, during which the king loaded the family of Nevil with honours and favours of the higheſt nature; yet, it was not long after, that Edward, being invited to a feaſt by the archbiſhop of York, a younger brother of Warwick, entertained a ſudden ſuſpicion that they intended to ſeize his perſon, or to murder him; and in conſequence abruptly left the entertainment.

Another rebellion, which is as little accounted for as the preceding events, ſoon followed this; but it does not appear that the family of Nevil had any particular intereſt in the quarter where it broke out, or were at all ſuſpected in fomenting it. It aroſe in Lincolnſhire, and was headed by ſir Robert Welles, ſon to the lord of that name. The army of the rebels amounted to thirty thouſand men; but the king having defeated them, took their commander priſoner, and ordered him immediately to execution. Edward, during theſe tranſactions, had entertained ſo little jealouſy of the earl of Warwick or duke of Clarence, that he ſent them to levy forces againſt the rebels; but theſe malcontents, as ſoon as they left the court, raiſed troops in their own name, iſſued declarations againſt the government, and complained of grievances, oppreſſions, and bad miniſters. The unexpected defeat of Welles diſconcerted all their meaſures; and they were obliged to diſband their army, and to fly into Devonſhire, whence they embarked, and made ſail towards Calais.

The deputy-governor, whom Warwick had left at Calais, was named Vaucler, a Gaſcon, who ſeeing him return in this miſerable condition, refuſed him admittance; nor would he permit even the ducheſs of Clarence to land, though a few days before ſhe had been delivered on ſhip-board of a ſon, and was at that time much indiſpoſed. A little wine for the uſe of the ladies was all that he would ſuffer to be carried on-board; but he ſecretly palliated his conduct to Warwick, by alleging that the fortreſs was ill ſupplied with proviſions, and that he could not rely on the obedience of the garriſon. The earl at leaſt affected to be convinced; and Warwick immediately repaired to the court of Paris. The king of France received him with the greateſt regard; and jealous of the alliance between Edward and the duke of Burgundy, he hoped to make him his inſtrument for reeſtabliſhing the houſe of Lancaſter. Nothing could exceed the animoſity which had prevailed between that houſe and the earl of Warwick. But his preſent diſtreſſes, and the entreaties of Louis, made him hearken to terms

of

of accommodation; and Margaret, being ſent for from Angers, where ſhe then reſided, an agreement, dictated by mutual intereſt, was ſoon concluded between them. It was ſtipulated that Warwick ſhould eſpouſe the cauſe of Henry, and endeavour to reſtore him to liberty, and to re-eſtabliſh him on the throne; that the adminiſtration of the government during the minority of young Edward, Henry's ſon, ſhould be entruſted conjointly to the earl of Warwick and the duke of Clarence; that prince Edward ſhould marry the lady Anne, ſecond daughter of that nobleman; and that the crown, in caſe of the failure of male iſſue in that prince, ſhould deſcend to the duke of Clarence, to the entire excluſion of the reigning king and his poſterity.

Edward, A. D. 1470, appriſed of what had taken place, foreſaw that it would be eaſy to diſſolve an alliance compoſed of ſuch diſcordant materials. He employed a lady in the train of the ducheſs of Clarence, to repreſent to the duke the imprudence of the connection he had formed with the murderers of his father, and the implacable enemies of his family; ſo that Clarence, ſtruck with the danger of his ſituation, on a promiſe of forgiveneſs, ſecretly engaged to abandon the Lancaſtrian party. During this negociation, Warwick too was ſecretly carrying on a correſpondence of the ſame nature with his brother, the marquis of Montague, who was entirely confided in by Edward; and like motives produced a like reſolution in that nobleman. In conſequence of this promiſe of ſupport, Warwick availed himſelf of a ſtorm to eroſs the channel with a body of French troops, and landed at Dartmouth, accompanied by the duke of Clarence.

Edward, though brave and active, had little foreſight. He had made no preparation for this event; and when warned by the duke of Burgundy of his danger, he had anſwered, he wiſhed for nothing more than to ſee Warwick on Engliſh ground. The prodigious popularity, however, of that nobleman, the zeal of the Lancaſtrian party, and the ſpirit of diſcontent with which many were infected, drew ſuch multitudes to his ſtandard, that in a very few days his army amounted to ſixty thouſand men, and was continually increaſing. Edward, who had been engaged in ſuppreſſing a rebellion in the north, now haſtened ſouthwards to encounter him; and the two armies approached each other near Nottingham. The rapidity of Warwick's progreſs had incapacitated the duke of Clarence from executing his plan of treachery; but the marquis of Montague, having concerted meaſures with his adherents, took to arms in the night-time, and haſtened with loud acclamations to Edward's quarters. The king was alarmed at the noiſe, and ſtarting from bed, heard the cry of war uſually employed by the Lancaſtrian party. Lord Haſtings, his chamberlain, informing him of the danger, urged him to make his eſcape by ſpeedy flight, from an army where he had ſo many concealed enemies, and where few ſeemed zealouſly attached to his ſervice. He had juſt time to get on horſeback, and to hurry with a ſmall retinue to Lynn in Norfolk, where finding ſome ſhips ready, he inſtantly embarked. Thus, the earl of Warwick, in no longer ſpace than eleven days from his firſt landing, was left entire maſter of the kingdom.

But Edward's danger did not end with his embarkation. The Eaſterlings or Hans-towns were then at war both with France and England; and ſome ſhips of theſe people hovering on the Engliſh coaſt, eſpied the king's veſſels, and gave chaſe to them; nor was it without extreme difficulty that he made his eſcape into the port of Alcmaer in Holland, where he landed, almoſt deſtitute of every thing. The duke of Burgundy was embarraſſed how to receive the abdicated monarch; and began already to hold out, that his connections were with the kingdom of England, not with the king. Vaucler, the deputy-governor of Calais, declared with great energy for his old party; and every thing promiſed a full reſtoration of the crown in the family of Lancaſter. Henry, A. D. 1471, was delivered from the Tower, and proclaimed king with great ſolemnity; every ſtatute made during the reign of Edward was repealed; and that prince declared an uſurper.

Edward, however, being aſſiſted by the duke of Burgundy, his brother-in-law, though in a covert way, haſtened to return; and impatient to take revenge on his enemies, made an attempt to land with his forces, which exceeded not two thouſand men, on the coaſt of Norfolk. Being there repulſed, he ſailed northwards, and diſembarked at Ravenſpur in Yorkſhire. Finding that the new magiſtrates, who had been appointed by the earl of Warwick, kept the people every where from joining him, he pretended, and even made oath, that he came not to challenge the crown, but only the inheritance of the houſe of York, which of right belonged to him; and that he did not intend to diſturb the peace of the kingdom. This affected moderation brought new partizans to his ſtandard: he was admitted into the city of York; and was ſoon in ſuch a ſituation as gave him hopes of ſucceeding in all his former claims. Warwick aſſembled an army at Leiceſter, with an intention of giving battle; but Edward, by taking another road, paſſed unmoleſted, and preſented himſelf before the gates of London. He was readily admitted into a capital, the inhabitants of which ſtill dwelt with pleaſure on his former courteous demeanor; and Henry, deſtined to be the perpetual ſport of fortune, again fell into the hands of his enemies.

Warwick, without waiting the arrival of queen Margaret, who was haſtening to England; being reinforced by his ſon-in-law Clarence, and his brother the marquis Montague, took poſt at Barnet, in the vicinity of London. His brother Montague ſeems to have remained ſincerely attached to the intereſts of his family: but his ſon-in-law, though bound to him by every tie of honour and gratitude, though he ſhared the power of the regency, though he had been inveſted by Warwick in all the honours and patrimony of the houſe of York, reſolved to fulfil the ſecret engagements which he had made with his brother. Accordingly, he deſerted to Edward in the night-time, and carried with him a body of twelve thouſand men. Warwick was now too far advanced to retreat; and, as he rejected with diſdain the terms of accommodation offered by Edward and Clarence, he was obliged to hazard a deciſive engagement. The battle was fought on Eaſter-Sunday, April 14, 1471, with equal obſtinacy on both ſides, and the victory remained long in ſuſpenſe; but an accident threw the balance to the ſide of the Yorkiſts. Edward's device was a ſun; that of Warwick a ſtar with rays; and the miſtineſs of the morning rendering it difficult to diſtinguiſh them; the earl of Oxford, who fought on the ſide of the Lancaſtrians, was, by miſtake, attacked by his friends, and chaſed off the field of battle. Warwick, contrary to his uſual practice, engaged that day on foot, reſolving to ſhew his army that he meant to ſhare every fortune with them, and was ſlain in the thickeſt of the engagement. His brother underwent the ſame fate; and as Edward had iſſued orders not to give any quarter, a great and undiſtinguiſhed ſlaughter was made.

The very day on which this deciſive battle was fought, queen Margaret and her ſon, now about eighteen years of age, and a prince of great hopes, landed at Weymouth, ſupported by a ſmall body of French forces. When this princeſs received intelligence of Henry's captivity, and of the defeat and death of the earl of Warwick, her courage, which had ſupported her under ſo many diſaſtrous events, now forſook her; and ſhe anticipated the calamities which were to follow. At firſt ſhe took ſanctuary in the abbey of Beaulieu in Hampſhire; but being encouraged by the appearance of Tudor earl of Pembroke, Courtney earl of Devonſhire, the lords Wenloc and St. John, with other men of rank, who exhorted her ſtill to hope for ſucceſs, ſhe reſumed her former ſpirit, and determined to defend to the utmoſt the ruins of her fallen fortunes. Rapidly advancing through the counties of

Devon, Somerſet, and Glouceſter, ſhe increaſed her army on each day's march; but was at laſt overtaken by the rapid and expeditious Edward at Tewkeſbury, on the banks of the Severn. The Lancaſtrians were here totally defeated; the earl of Devonſhire and lord Wenloc were killed in the field; the duke of Somerſet, and about twenty other perſons of diſtinction, having taken ſhelter in the church, were dragged out and beheaded; and the army entirely diſperſed.

Queen Margaret and her unfortunate ſon being taken priſoners, and brought before the king, he aſked the prince, in an inſulting manner, how he dared to invade his dominions? The young prince, more mindful of his high birth than of his preſent fortune, replied, that he came thither to claim his juſt inheritance. The ungenerous Edward, indignant at his anſwer, and inſenſible to pity, ſtruck him on the face with his gauntlet; and the dukes of Clarence and Glouceſter, lord Haſtings, and ſir Thomas Gray, taking the blow as a ſignal for further violence, hurried the prince into the next apartment, and there diſpatched him with their daggers. Margaret was thrown into the Tower; where her degraded conſort had expired a few days after the battle of Tewkeſbury; but whether he died a natural or a violent death, will remain for ever uncertain. It is pretended, and was generally believed, that the duke of Glouceſter, afterwards Richard III. killed him with his own hands; but the univerſal odium which that prince incurred, inclined the nation perhaps to aggravate his crimes, by adding ſurmiſes to facts.

Edward, now firmly eſtabliſhed on the throne, A. D. 1472, began to devote himſelf to libidinous pleaſures; but he was ſoon roufed from his folly by the proſpect of foreign conqueſts. He formed a league with the duke of Burgundy to invade France; for this purpoſe he obtained from parliament a tenth of rents, or two ſhillings in the pound; which produced only 31,460l. and they added to this ſupply a whole fifteenth, and three quarters of another: but, as the king deemed theſe ſums ſtill unequal to the undertaking, he attempted to levy money by way of benevolence; a kind of exaction which, except during the reigns of Henry III. and Richard II. had not been practiſed in former times, and which, though the conſent of the parties was pretended to be gained, could not be deemed entirely voluntary. With theſe aids, in 1475, the king paſſed over to Calais, at the head of an army of fifteen hundred men at arms, and fifteen thouſand archers; but all his hopes of conqueſt were damped, by finding that the conſtable, St. Pol, on whoſe revolt he depended, neither received him into the towns of which he was maſter, nor did the duke of Burgundy bring him the ſmalleſt aſſiſtance. This defection gave him great diſguſt, and inclined him to liſten to the pacific propoſals of Louis XI. who conſented to pay Edward ſeventy-five thouſand crowns, on condition that he ſhould immediately withdraw his army from France; and promiſed to pay him fifty thouſand crowns a year during their joint lives. It was farther ſtipulated that the dauphin, when of age, ſhould marry Edward's eldeſt daughter; and theſe articles were ſolemnly ratified in a perſonal interview which the two monarchs had near Amiens.

Such were the principal articles of this treaty, which reflected but little honour to either party. Louis, however, did himſelf ſome credit by ſtipulating for the liberty of queen Margaret, who, though, after the death of Henry, and of her ſon, ſhe could no longer be formidable to government, was ſtill confined in the Tower by Edward. Louis paid fifty thouſand crowns for her ranſom; and that princeſs, who had been ſo active on the ſtage of the world, and who had experienced ſuch a variety of fortune, paſſed the remainder of her days in privacy, till the year 1482, when ſhe died.

Though Edward had ſo little reaſon to be ſatisfied with the conduct of the duke of Burgundy, he reſerved to that prince a power of acceding to the late treaty; but Charles, when the offer was made him, haughtily replied, that he was able to ſupport himſelf without the aſſiſtance of England, and that he would make no peace with Louis till three months after Edward's return into his own country. This prince poſſeſſed all the ambition and courage of a conqueror; but, being defective in policy and prudence, periſhed at laſt in battle againſt the Swiſs; a people whom he deſpiſed, and who, though brave and free, had hitherto been in a manner overlooked among the nations of Europe.

For ſome time Edward had relapſed into his fatal love of pleaſure, from which he ſeemed only to awake to exerciſe an act of diſgraceful tyranny on his own family. The duke of Clarence, after all his ſervices in deſerting Warwick, had never been able to regain the king's confidence. He was alſo an object of diſpleaſure to the queen, as well as to his brother the duke of Glouceſter, a prince of the deepeſt policy, and the moſt unrelenting ambition. The execution of ſeveral of his friends on the moſt trivial offences, warned him of the combination againſt himſelf; but, inſtead of ſecuring his life by ſilence and reſerve, he was open and loud in his reſentments. The king, highly offended with his freedom, or uſing that pretence, committed him to the Tower, ſummoned a parliament, and tried him for his life before the houſe of peers, on charges too frivolous to deſerve the name of crimes. A ſentence of condemnation, however, was procured againſt him; and the only favour which the king granted his brother, was to leave him the choice of his death; and he was privately drowned in a butt of malmeſey in the Tower; a whimſical choice, which implied that he had an extraordinary predilection for that liquor. The duke left two children by the elder daughter of the earl of Warwick; a ſon, created an earl by his grandfather's title; and a daughter, afterwards counteſs of Saliſbury. Both this prince and princeſs were unfortunate in their end, and died a violent death; a fate which for many years attended almoſt all the deſcendants of the royal blood in England.

All the energies of Edward's reign ſeem to have terminated with the civil wars: his ſpirit afterwards ſunk into indolence and diſſipation. There was no object on which he was more intent, than to have his daughters ſettled in ſplendid marriages; but moſt of theſe princeſſes were yet in their infancy, and a chain of accidents fruſtrated his views. His eldeſt daughter Elizabeth was contracted to the dauphin; but Louis XI. who paid no regard to treaties, found his advantage in affiancing the dauphin to the princeſs Margaret, daughter of the emperor Maximilian. Edward, however, notwithſtanding his depravity, prepared to avenge the inſult: when the French monarch, to divert the blow, by a proper diſtribution of preſents in the court of Scotland, incited James to make war upon England.

This prince, who lived on bad terms with his own nobility, and whoſe force was always unequal to the enterpriſe, levied an army; but, when he was ready to enter England, the barons, conſpiring againſt his favourites, put them to death without trial; and the army preſently diſbanded. The duke of Glouceſter, attended by the duke of Albany, James's brother, who had been baniſhed his country, entered Scotland at the head of a powerful army, took Berwick, and obliged the Scots to accept of a peace, by which they reſigned that garriſon to Edward. This ſucceſs determined the king to think more ſeriouſly of a French war; but, while he was making preparations for that enterpriſe, an enemy againſt whom there is no defence ſoon put a period to all his projects. He died at Weſtminſter, April 9, 1482, in the forty-firſt year of his age, and the twenty-third of his reign; but of what diſeaſe is not certainly known. He had iſſue by his queen three ſons and ſeven daughters, of whom one ſon and two daughters died before him; and two ſons and five daughters ſurvived him; viz. Edward, his eldeſt ſon and ſucceſſor; Richard duke of York; Elizabeth, courted by

Richard III. and afterwards married to Henry VII. Cecilia, married to John viſcount Wells; Anne, married to Thomas Howard duke of Norfolk; Bridget, who became a nun at Dartford; and Catharine, contracted to the infanta of Spain, but married to William Courteney earl of Devonſhire.

Edward IV. was much admired, in his youth, for the beauty of his features and the elegance of his perſon; but, before his death, he became corpulent and bloated by intemperance. His addreſs was eaſy, engaging, and familiar, which gained him the hearts of many, and the money of not a few, particularly of the fair ſex. He never forgot the name or face of any perſon with whom he had once converſed; and he is even ſaid to have known the characters and circumſtances of every nobleman or gentleman of any conſequence in his dominions. His great ſucceſs in war (having gained nine pitched battles, in which he was preſent, and fought on foot, and never loſt one) may be admitted as a ſufficient proof of his military ſkill and courage, as well as of his good fortune. In a word, if his virtues had been equal to his endowments, he would have been both a great and a good king. But that was not the caſe. His piety is, indeed, celebrated by the monk of Croyland; but it did not prevent him from violating his moſt ſolemn oaths, when he was prompted to it by paſſion, or the proſpect of advantage. He was guilty of many acts of cruelty; and the unnatural murder of his brother Clarence muſt fix an indelible ſtain upon his character. Whenever he enjoyed peace, he abandoned himſelf to the gratification of his appetites. On his paſſion for women he laid no reſtraint; and his imprudent and criminal indulgence of it plunged him into much diſtreſs and guilt, produced almoſt all the diſorders of his reign, and all the calamities that befel his friends and family. The indulgence of vicious paſſions is alike pernicious to princes and to private perſons.

Edward prince of Wales, his eldeſt ſon, was proclaimed king in London, April 9, 1483, by the name of Edward V. He was then only in the thirteenth year of his age; but his title was ſo clear, that it was not imagined any diſpute could poſſibly ariſe about his poſſeſſion of the throne. The kingdom was at that time divided into two great factions. The queen's family, who, during the laſt reign, had grown into power, was become obnoxious to the old nobility, who could not bear to act in ſubordination to perſons whom they conſidered as inferiors. The king, during his life-time, had been able to overawe theſe animoſities; and on his death-bed endeavoured to guard againſt their future increaſe. He expreſſed a deſire that his brother, the duke of Glouceſter, ſhould be entruſted with the regency, and recommended peace and unanimity during the minority of his ſon. But the king was no ſooner dead than the parties broke out with all their former reſentments; and the duke of Glouceſter, a crafty, wicked, and ambitious, prince, reſolved to profit by their mutual contentions. His firſt aim was to foment the diſcontents of the old nobility, by inſinuating that the queen wanted to hide the meanneſs of her original in a multitude of new promotions; at the ſame time he redoubled his profeſſions of zeal and attachment to that princeſs, and thus entirely gained her confidence. Having ſucceeded thus far, he gained over the duke of Buckingham, and ſome other lords, to his intereſt, and prevailed upon them, by the lure of reward, to ſecond him in his attempts to get the guardianſhip of the young king conferred upon him, together with the cuſtody of his perſon.

Being now ſure of the co-operation of theſe noblemen, he reſolved to take the young king out of the cuſtody of the earl of Rivers, his uncle by the mother's ſide; and, having procured that nobleman to be arreſted, he met young Edward at Stoney-Stratford, and, with the moſt profound reſpect, offered to conduct him to London. Having thus ſecured the perſon of the king, his next ſtep was to get the charge of the king's brother, the duke of York, then about ſeven years old, who, with the queen, his mother, had taken ſanctuary in Weſtminſter abbey. The queen, who had miſgivings of the dangers that threatened her family, was very hardly perſuaded to deliver up her child; but, at the interceſſion of the primate, and the archbiſhop of York, ſhe was at laſt induced to comply: when tenderly embracing him, and bedewing him with her tears, ſhe bade him an eternal adieu! The young king, finding that he was to have the pleaſure of his brother's company, was greatly rejoiced at the queen's compliance, not conſidering the fatal intent of theſe preparations; for, in a few days, the duke of Glouceſter, who had been made protector of the realm, upon a pretence of guarding their perſons from danger, conveyed them both to the Tower. Having thus ſecured their perſons, his next ſtep was to ſpread a report of their illegitimacy; and, by pretended obſtacles, to put off the day appointed for the young king's coronation. Lord Stanley, a man of deep penetration, was the firſt to diſcloſe his fears of the protector's ill deſigns: and communicated his ſuſpicions to lord Haſtings, who had long been firmly attached to the king's family. Haſtings would at firſt give the ſurmiſe no credit; and probably his wiſhes that ſuch a project might not be true, influenced his judgment, and confirmed his ſecurity. But he was ſoon undeceived; for Cateſby, a vile inſtrument of the protector, was ſent to ſound him, and to try whether he could not be brought over to aſſiſt the projected uſurpation. Haſtings treated the propoſal with horror; he profeſſed himſelf immoveable in his adherence to the king; and his death was, therefore, reſolved on by the protector.

In the mean time, orders had been diſpatched to execute the lords Rivers, Gray, and Vaughan, who had been confined in Pomfret caſtle, and whoſe only crime was their attachment to the young king. On the very day on which they were beheaded, the protector ſummoned a council in the Tower, whither lord Haſtings, amongſt others, repaired, no way ſuſpecting that his own life was in danger. The duke of Glouceſter was capable of committing the moſt bloody and treacherous murders with the greateſt coolneſs and deliberation. He came thither at nine o'clock in the morning, with the moſt cheerful countenance, ſaluting the members with the utmoſt affability and good humour. He complimented the biſhop of Ely on his early ſtrawberries, deſiring to have a diſh of them. He then left the council, as if called away by other buſineſs; but deſired that his abſence might not interrupt the debates. In about an hour he returned with a ſtern countenance, knitting his brows, biting his lips, and ſhewing ſome ſigns of inward perturbation. A profound ſilence enſued, and the lords looked upon each other, expecting ſome horrid cataſtrophe. At length he broke out: "My lords, what puniſhment do they deſerve who have conſpired againſt my life?" This queſtion redoubled the aſtoniſhment of the aſſembly; and, the ſilence continuing, lord Haſtings at length made anſwer, that whoever did ſo, deſerved to be puniſhed as a traitor. "Theſe traitors (cried the protector) are the ſorcereſs my brother's wife, and Jane Shore his miſtreſs, with their aſſociates. See to what a condition they have reduced me by their incantations and witchcrafts." Upon which he ſhewed his arm, all ſhrivelled and decayed; but which was known to have been a natural defect. The amazement of the council ſeemed to increaſe at this terrible accuſation; and lord Haſtings again ſaid: "If they have committed ſuch a crime, they deſerve puniſhment." "*If!* (cried the hypocrite with a loud voice) doſt thou anſwer me with ifs? I tell thee that they have conſpired my death; and that thou, traitor, art an accomplice in their crime!" He then violently ſtruck the table with his hand; and the room was inſtantly filled with guards. "I arreſt thee (continues he, turning to Haſtings,) for high treaſon;" and at the ſame time gave him in charge to the ſoldiers. In the mean time the council-room was

EDWARD V

London Publish'd as the Act directs April 28 1804 by J Wilkes

filled with tumult and confuſion; and, though no reſcue was offered, yet the ſoldiers cauſed a buſtle, as if they apprehended danger. One of them narrowly miſſed cleaving lord Stanley's head with a battle-axe; but he fortunately eſcaped by ſhrinking under the table. However, though he eſcaped the blow, he was arreſted by the protector's order, who was well appriſed of his attachment to the young king. As for lord Haſtings, he was hurried out to the little green before the Tower chapel, and there beheaded on a log of wood that accidentally lay in the way. Two hours after, a proclamation very well drawn, was read to the citizens of London, enumerating his offences, and palliating the ſuddenneſs of his puniſhment. It was remarked, by a merchant among the auditors, that the proclamation was certainly drawn up by a ſpirit of prophecy.

The protector, having thus got rid of thoſe he moſt feared, was willing to pleaſe the populace, and manifeſt his own ſanctity and virtue, by puniſhing Jane Shore, the late king's miſtreſs. This unfortunate woman was an enemy too humble to excite his jealouſy; yet, as he had accuſed her of witchcraft, of which all the world ſaw ſhe was innocent, he thought proper to make her an example for thoſe faults of which ſhe was really guilty. Jane Shore had been formerly deluded from her huſband, who was a goldſmith in Lombard-ſtreet, and continued to live with the late king Edward, the moſt guiltleſs miſtreſs in his abandoned court. She was ever known to intercede for the diſtreſſed, and was uſually applied to as mediator for mercy. She was benevolent, generous, and of a moſt pleaſing converſation; her wit being as irreſiſtible as her beauty. As ſhe was blameleſs in other reſpects, the protector ordered her to be ſued for incontinency, as having left her huſband to live in adultery with another. It is very probable that the people were not diſpleaſed at ſeeing one humbled, who had for a while been raiſed above them, and enjoyed the ſmiles of a court. The charge againſt her was too notorious to be denied; ſhe pleaded guilty, and was accordingly condemned to walk bareſoot through the city, and to do penance in St. Paul's church in a white ſheet, with a wax-taper in her hand, before thouſands of ſpectators. She lived above forty years after this ſentence, reduced to the moſt extreme wretchedneſs; and ſir Thomas More, in the ſucceeding reign, aſſures us, that he ſaw her gathering herbs in a field near the city for her nightly repaſt; an extraordinary example of the fleeting favours of courts, and the reverſes of fortune.

The protector now began to throw off the maſk, and to deny his pretended attachment to the ſons of the late king, thinking it high time to aſpire at the throne more openly. He directed the duke of Buckingham, therefore, to infuſe into the people an opinion of the baſtardy of the late king, and alſo that of his children. Doctor Shaw, a popular preacher, was hired to harangue the audience from St. Paul's croſs to the ſame purpoſe; where, after having diſplayed the incontinence of the queen, and inſiſting on the illegality of the young king's title, he expatiated on the virtues of the protector. "It is the protector (cried he) who carries in his face the image of virtue, and the marks of a true deſcent. He alone can reſtore the loſt honour and glory of the nation." It was expected that ſome of the populace would have cried out, "Long live king Richard;" but the audience remaining ſilent, the duke of Buckingham undertook to perſuade them, in his turn. His ſpeech was copious upon the calamities of the laſt reign, and the baſtardy of the preſent race; he ſaw only one method of ſhielding off the miſeries that threatened the ſtate, which was, to elect the protector; but he ſeemed apprehenſive that he would never be prevailed on to accept of a crown, accompanied with ſuch difficulty and danger. He then aſked his auditors, whether they would have the protector for their king; but was mortified to find them ſtill ſilent. The mayor, Fitz-Williams, who was in the ſecret, willing to relieve him in this embarraſſment, obſerved, that the citizens were not accuſtomed to be harangued by a perſon of ſuch quality, and would only give an anſwer to their recorder. This officer then repeated the duke's ſpeech; but the people ſtill continuing mute, "This is ſtrange obſtinacy! (cried the duke) we only require of you, in plain terms, to declare, whether or not you will have the duke of Glouceſter for your king; as the lords and commons have ſufficient power without your concurrence?" After all theſe efforts, ſome of the meaneſt apprentices, incited by the protector's and Buckingham's ſervants, raiſing a feeble cry of, "God ſave king Richard!" a deſpicable mob repeated the cry, and, throwing up their caps, repeated, a Richard! a Richard!

The duke of Buckingham took advantage of this falſe and forced approbation; and the next day, at the head of the mayor and aldermen, he waited upon the protector, at Baynard's caſtle, with offers of the crown. When Richard was told that a great multitude was waiting at the door, he, with his uſual hypocriſy, appeared to the crowd in a gallery between two biſhops, and at firſt ſeemed quite ſurpriſed at ſuch a concourſe of people. But when he was informed that their buſineſs was to offer him the crown, he declared againſt accepting it; alleging his love for the late king his brother, his affection for the children under his care, and his own inſufficiency. Buckingham, pretending to be diſpleaſed with this anſwer, muttered out, "That it was needleſs to refuſe, for the people were bent on making him king; that they had now proceeded too far to recede; and therefore, in caſe of his refuſal, were determined to offer the crown where it would meet a more ready acceptance." This was a reſource to which the protector's tenderneſs for his people would not ſuffer them to be driven. "I perceive (cried he, in a modeſt tone,) that the kingdom is reſolved to load me with preferments, unequal to my abilities or my choice; yet, ſince it is my duty to obey the dictates of a free people, I will, though reluctantly, accept their petition. I, therefore, from this moment, enter upon the government of England and France, with a reſolution to defend the one, and ſubdue the other." The crowd being thus diſmiſſed, each man returned home, pondering upon the extraordinary proceedings of the day; and making ſuch remarks as paſſion, intereſt, or party, might ſuggeſt.

Richard III. was no ſooner ſeated upon the throne, A. D. 1483, than he ſent the governor of the Tower orders to put the two young princes to death; but this conſcientious man, whoſe name was Brackenbury, refuſed to be made the inſtrument of the tyrant's will; and anſwered, that he knew not how to embrue his hands in innocent blood. A fit ſubſtitute, however, was not long wanted; ſir James Tyrrel readily undertook the office, and Brackenbury was ordered to reſign to him the keys for only one night. Tyrrel chooſing three aſſociates, Slater, Dighton, and Foreſt, came in the dead of night to the door of the chamber where the princes were lodged; and, ſending in the aſſaſſins, he bid them execute their commiſſion, while he ſtaid without. They found the young princes in bed, and fallen into a ſound ſleep; after ſuffocating them with the bolſter and pillows, they ſhewed their naked bodies to Tyrrel; who ordered them to be buried at the ſtair-foot, deep in the ground, under an heap of ſtones. Theſe facts appeared in the ſucceeding reign, being confeſſed by the perpetrators; who, however, eſcaped puniſhment for the crime. The bodies of the princes were afterwards ſought for by Henry VII. but could not be found; however, in the reign of Charles II. the bones of two children, anſwering their age, were diſcovered in the very ſpot where it was ſaid they were buried; and they were interred in a marble monument, by order of the king, in Weſtminſter abbey.

Richard having waded through every obſtacle to the throne, began, after the manner of all uſurpers, to ſtrengthen his ill-got power by foreign connections. Senſible alſo of the influence of pageantry and ſhow upon the minds of the vulgar, he cauſed himſelf, and his conſort Anne Nevile,

vile, to be crowned firſt at London, and afterwards at York. The clergy he gained over by great indulgencies; and his friends were ſecured by beſtowing rewards on them, in proportion as they were inſtrumental in placing him on the throne. Yet he found his peace and ſafety threatened from a quarter where he leaſt expected. The inſatiable duke of Buckingham, though he had received the greateſt rewards for his infamous conduct, yet coveted more. He made a demand of the confiſcated eſtates in Herefordſhire, to which his family had an ancient claim; but Richard either reluctantly complied with his requeſt, or but partially indulged it, ſo that a coolneſs enſued; and, no ſooner had Buckingham ſuppoſed himſelf injured, than he reſolved to pull down a monarch, whom he had ſo lately been the wicked inſtrument of ſetting up. At firſt he was in doubt, whether he ſhould claim the crown for himſelf, or propoſe it for another; but, the latter reſolution prevailing, he determined to declare for Henry earl of Richmond, who was detained in a kind of honourable cuſtody by the duke of Bretagne. He was one of thoſe who had the good fortune to eſcape the numerous maſſacres of the preceding reigns; but, as he was a deſcendant of John of Gaunt, and the only ſurviving branch of the houſe of Lancaſter, by the female line, his preſence was conſidered dangerous, and he was for that reaſon obnoxious to thoſe in power. He had long lived in exile; and was, at one time, delivered up to the ambaſſadors of Edward, who were preparing to carry him over to England, when the prince, who delivered him, repented of what he had done, and took him from the ambaſſadors juſt as they were leading him on ſhip-board. This was the youth on whom the duke of Buckingham now caſt his eye to ſucceed to the crown; and a negociation was begun between them for that purpoſe. Henry's hereditary right to the throne was in ſome meaſure doubtful; but the crimes of the uſurper ſerved to ſtrengthen his claims. However, ſtill further to improve his title, a marriage was projected between him and the princeſs Elizabeth, eldeſt daughter of the late king; and the queen-dowager was prevailed on heartily to accede to the meaſure.

Richard, in the mean time, either informed by his creatures, or become diſtruſtful by conſcious guilt, began to ſuſpect Buckingham's fidelity; and the ſecret informations which he daily received, left him no room to doubt of the truth of his ſuſpicions. Impreſſed with this jealouſy, he formed a reſolution of ſending for him to court; and the duke's refuſing to obey the ſummons, confirmed him in his ſuſpicion. But he ſoon had evident proof of Buckingham's enmity, intelligence arriving that this nobleman was at the head of a large body of men in arms, and marching towards the weſtern ſhore. Richard, whoſe courage no danger could allay, immediately levied ſome troops in the north, and prepared to meet the inſurgents with his uſual intrepidity. But fortune ſeemed his friend, and rendered his preſent preparations unneceſſary. As Buckingham was advancing by haſty marches towards Glouceſter, where he deſigned to croſs the Severn, he found that river ſwoln to ſuch a degree, that the country on both ſides was deluged, and the inundation continued for ten days; during which, Buckingham's army, compoſed of Welſhmen, could neither paſs the river, nor find ſubſiſtence on their own ſide; they were therefore obliged to diſperſe, notwithſtanding all the duke's efforts to prolong their ſtay. In this helpleſs ſituation, the duke, after a ſhort deliberation, took refuge at the houſe of one Baniſter, who had been his ſervant, and who had received repeated obligations from his family. But the wicked ſeldom find, as they ſeldom deſerve, friendſhip. Baniſter, unable to reſiſt the temptation of a large reward that was ſet upon the duke's head, betrayed him to the ſheriff of Shropſhire, who, ſurrounding the houſe with armed men, ſeized the duke, in the habit of a peaſant, and conducted him to Saliſbury, where he was inſtantly tried, condemned, and executed.

In the mean time the earl of Richmond landed in England; but finding his hopes fruſtrated by the failure of Buckingham, he haſtily ſet ſail again, and returned to Bretagne. Thus every coincidence ſeemed to promiſe Richard a long poſſeſſion of the crown; however, the authority of parliament was ſtill wanting to give ſanction to the injuſtice of his proceedings; but in thoſe times of ignorance and guilt that was eaſily procured. An act was paſſed, confirming the illegitimacy of Edward's children; an act of attainder alſo was confirmed againſt Henry earl of Richmond; and all the uſurper's wiſhes ſeemed to be the aim of their deliberations. One thing only was wanting to complete Richard's ſecurity, which was the death of his rival; to effect this, he ſent ambaſſadors to the duke of Bretagne, ſeemingly upon buſineſs of a public nature; but, in reality, to treat with Landois, that prince's miniſter, to deliver up Richmond. The miniſter was baſe enough to enter into the negociation; but Richmond, having had timely notice, fled into France, and juſt reached the confines of that kingdom, when he found that he was purſued by the ungenerous Landois.

Richard, thus finding his inſidious attempts abortive, became every day more cruel, as his power grew more precarious. Among thoſe who chiefly excited his jealouſy, was lord Stanley, who was married to the widow of Edward; and to keep him ſtedfaſt in obedience, he took his ſon as an hoſtage for the father's behaviour. He now alſo reſolved to get rid of his queen, Anne Nevile, to make room for a match with his niece, the princeſs Elizabeth, by whoſe alliance he hoped to ſtrengthen his claims to the throne. The lady whom he deſired to get rid of, was the youngeſt daughter of the great earl of Warwick, and widow of the young prince of Wales, whom Richard, when duke of Glouceſter, had murdered with his own hands at Tewkeſbury; and it is no ſlight indication of the barbarity of the times, that the widow ſhould accept for her ſecond lord the murderer of her former huſband. But ſhe was now rewarded for her former indecorous conduct: Richard treated her with ſo much inhumanity and neglect, that ſhe died with grief. However, his amorous deſires were not crowned with ſucceſs in his applications to Elizabeth; the queen-mother, indeed, was eager for the inceſtuous match; but the princeſs herſelf treated his addreſſes with contempt and deriſion.

At the moment when Richard had to endure the mortification of a refuſal from a princeſs, who with ſo baſe a conſort had courage and virtue to refuſe a crown, he received information that the earl of Richmond had ſailed from Harfleur, and was arrived at Milford-Haven, in Pembrokeſhire, where he had landed without oppoſition. Upon this alarming news, Richard inſtantly reſolved to meet his antagoniſt, and decide their mutual claims by a pitched battle. Richmond, being reinforced by ſir Thomas Bourchier, ſir Walter Hungerford, and others, to the number of about ſix thouſand, boldly advanced with the ſame intention; and, in a few days, both armies drew up in Boſworth field to determine a conteſt that had for more than forty years filled the kingdom with civil commotions, and deluged its plains with blood. The army of Richard was more than double that of Henry; but the chief confidence of the latter lay in the friendſhip and ſecret aſſurances of lord Stanley, who, with a body of ſeven thouſand men, hovered near the field of battle, but joining neither ſide.

Richard perceiving his enemy advance, judiciouſly drew up his army, conſiſting of about thirteen thouſand men; he gave the command of the van-guard to the duke of Norfolk, while he led the main body himſelf, with the crown on his head, deſigning by this diſtinction either to impreſs the enemy with awe, or to render himſelf conſpicuous to his own army. The van of Richmond's army, conſiſting of archers, was commanded by John earl Oxford; ſir Gilbert Talbot led the right wing, ſir John Savage the left; while the earl himſelf, accompanied by his

his uncle, the earl of Pembroke, placed himſelf in the main body. Lord Stanley, in the mean time, poſted himſelf on one flank, between the two armies, while his brother took his ſtation on the other, which was oppoſite. Richard ſeeing him thus in a ſituation equally convenient for joining either army, ſent him orders to unite himſelf to the main body, which the other refuſing, he gave inſtant orders for beheading lord Stanley's ſon, whom he ſtill kept as an hoſtage. He was perſuaded, however, to poſtpone the execution till after the fight; and attending to the more important tranſactions of the moment, he directed the trumpets to ſound for the charge. The two armies approaching each other, the battle began with a ſhower of arrows, and ſoon the adverſe fronts were ſeen cloſing. This was the critical moment for which lord Stanley had been waiting, who now joined the earl of Richmond, and thus turned the fortune of the day. This meaſure, ſo unexpected to the men, though not to their leaders, had a proportioned effect on both armies; it inſpired invincible courage into Henry's ſoldiers, and threw Richard's into confuſion. The enraged tyrant, perceiving the danger of his ſituation, ſpurred his horſe into the thickeſt of the fight, while Richmond quitted his ſtation in the rear, to encourage his troops by his preſence in the front. Richard perceiving him, was deſirous of ending all by one blow; and with irreſiſtible fury preſſed through the ranks to attack him. He ſlew ſir William Brandon, the earl's ſtandard bearer, who attempted to ſtop his career. Sir John Cheyne having taken Brandon's place, was inſtantly thrown to the ground. Richmond in the mean time, came forward to oppoſe him; but they were ſeparated by the interpoſing crowd. Richard, thus diſappointed, and perceiving his army every where yielding or flying, ruſhed with impetuoſity into the midſt of the enemy, and there met a better death than his crimes and cruelties deſerved. After the battle, which was fought on Monday Auguſt 23, 1485, his body was found ſtripped, among a heap of ſlain, covered with wounds, and the eyes frightfully ſtaring; an evident proof that he died in extreme agony. The corpſe was thrown acroſs a horſe, and carried to Leiceſter. It lay there two days expoſed to public view, and was then buried without ſtate or ceremony, in the church of the Grey friars. Richard's crown being found by one of Henry's ſoldiers on the field of battle, it was immediately placed upon the head of the conqueror; while the whole army cried out, "Long live king Henry!"

Thus ended the bloody reign of Richard; and, by his death, the race of the Plantagenet kings, who had been in poſſeſſion of the crown during the ſpace of three hundred and thirty years, became extinct. Thus ended alſo the conteſts between the houſes of York and Lancaſter, by which moſt of the ancient families of the kingdom were extinguiſhed, and more than an hundred thouſand men prematurely loſt their lives, either by the ſword or the executioner.

Richard III. was the moſt abandoned tyrant, that ever waded through ſlaughter to a throne. He ſeems to have been an utter ſtranger to the tender emotions of the human heart, and entirely deſtitute of every ſocial feeling. His ruling paſſion was ambition; for the gratification of which he trampled upon every law, both human and divine; but this thirſt of dominion was unattended with the leaſt work of generoſity, or any deſire of rendering himſelf agreeable to his fellow-creatures: it was the ambition of a ſavage, not of a prince; for he was a ſolitary king, altogether detached from the reſt of mankind, and incapable of that amelioration of the heart, which reſults from private friendſhip and philanthropy. He was dark, ſilent, and reſerved, and ſo much maſter of diſſimulation, that it was impoſſible to dive into his real ſentiments, when he either wiſhed to take an advantage, or conceal his deſign. If he had been a prince unſtained with blood, he would have been the only one of his houſe, who lived to a mature age, exempt from that defilement; his enemies allow, however, that his judgment was ſound and penetrating, and his courage undaunted. To heighten the common deteſtation of this prince, writers have deſcribed him as a crooked, hump-backed, withered, monſter, who remained two years in his mother's womb, and, at laſt, was born with teeth, and hair reaching down to his ſhoulders, to intimate how careful Providence was, when it formed a tyrant, to give timely warning of what was to be expected! "Yet theſe portents," ſays Mr. Walpole, "were far from prognoſticating a tyrant; becauſe other tyrants have been born without theſe prognoſtics. The truth appears to be, that Richard, who was not the moſt elegantly formed, had the right ſhoulder higher than the left; a defect eaſily ſwelled by the magnifying glaſs of party, the diſtance of time, and the amplification of tradition, into the utmoſt deformity. Philip de Comines, his cotemporary, mentions the beauty of Edward IV. but ſays nothing of the deformity of his brother Richard; and the counteſs de Deſmonde, who had danced with Richard, declares he was the handſomeſt man in the room except his brother Edward; and John Rous the antiquary of Warwickſhire, who ſaw Richard at Warwick, deſcribing his perſon, mentions no other defect than the inequality of his ſhoulders, and the harſhneſs of his features. Indeed the vigour and activity with which he exerted himſelf in battle, are an evident proof of his being poſſeſſed of that bodily ſtrength which can never be enjoyed by perſons much deformed.

Richard was thirty-two years of age when he died; and had reigned two years and two months. His death terminated the conteſt between what was called *the two roſes*, which had not only depopulated the country, but had introduced a ſavage ferocity of manners, and preſented a wide ſcene of inhumanity, ſlaughter, and deſolation, throughout the kingdom.

From the ACCESSION of the HOUSE of TUDOR, to the UNION with SCOTLAND under JAMES I.

Henry VII. aſcended the throne of England A. D. 1485; under whoſe mild and auſpicious reign human wiſdom, as if rouſed from a lethargy of thirteen hundred years, began to exert her utmoſt efforts to ſubdue the natural ferocity of the nation, and to introduce the arts of peace, and a more enlightened juriſprudence. His title came through Catharine, queen of Henry V. by a ſecond marriage with Owen Tudor, a Welſh prince, by whom ſhe had Edmund Tudor earl of Richmond, who married Margaret, only daughter of John Beaufort duke of Somerſet, grandſon of John of Gaunt duke of Lancaſter; the iſſue of which marriage was Henry earl of Richmond, who now aſcended the throne. Henry's firſt care, after his acceſſion, was to marry the princeſs Elizabeth, daughter of Edward IV. and thus he united the intereſts of the two houſes of York and Lancaſter, ſo that ever after they were inſeparable. Nevertheleſs, being apprehenſive that the people might ſuppoſe he claimed the crown in right of this union, he deferred the queen's coronation till two years after, by which he made the priority of his own claim inconteſtable. His reign alſo happily commenced with an obedience to the forms of law, of which England had hitherto ſeen but few examples. An act had been paſſed in the preceding reign for the attainder of his friends and followers, which continued ſtill in force; and the names of many members of that houſe, by which it was to be repealed, were expreſsly mentioned in the attainder. To ſuffer theſe to join in repealing that ſtatute, would be admitting them as judges in their own cauſe; but to this Henry prudently objected, obliging them to leave the houſe, till an act was paſſed for reverſing their attainder.

Before this reign, it had been uſual, when any perſon was attainted and executed, for the king to give away his eſtates to any of the court favourites that happened to be moſt in confidence. Henry wiſely perceived that

that this cuſtom was attended with two bad effects: the cruelty of the meaſure in the firſt place excited indignation; and it alſo made the favourite too powerful for a ſubject. In order to remedy theſe inconveniences, he made a law to deprive thoſe who were found in arms of their eſtates and effects, but which ſhould ever after eſcheat to the crown. Much of the miſery of his predeceſſors had proceeded from their poverty, which was generally occaſioned by riot and diſſipation. Henry ſaw that money alone could turn the ſcale of power in his favour; and therefore hoarded up all the confiſcations of his enemies with the utmoſt frugality. From hence he has been accuſed by many hiſtorians of avarice; but that avarice which tends to ſtrengthen the hands of government, and repreſs ſedition, is not only excuſable, but praiſeworthy. Liberality in a king is too often a miſplaced virtue. What is thus given is commonly extorted from the induſtrious and needy, to be laviſhed as rewards on the rich, the inſidious, and the fawning, ſycophants of a court. Henry ſhewed himſelf ſuperior to his predeceſſors in theſe reſpects, as he gave very few rewards to the courtiers about his perſon; and none, except the needy, ſhared his benefactions. He releaſed all priſoners for debt in his dominions, whoſe debts did not amount to forty ſhillings, and paid their creditors from the royal coffers. Thus his act of inſolvency was founded in juſtice; and his economy rendered him not only a protector of the poor, but enabled him to fulfil every pecuniary engagement with honour and punctuality, both abroad and at home. With regard to the king's ſervants, he was himſelf the only acting miniſter; and he did not chooſe his under agents from among the nobility, as had been uſual, but pitched upon John Morton, and Richard Fox, two clergymen, perſons of induſtry, vigilance, and capacity, to whom he chiefly confided his ſecret councils. They had ſhared with him in all his former dangers and adverſity; and he now took care that they ſhould participate in his good fortune; the one being created biſhop of Ely, the other biſhop of Exeter.

Immediately after his marriage with Elizabeth, he iſſued a general pardon to all who had been in rebellion; but thoſe haughty barons who had been the favourites of the laſt reign, and long accuſtomed to turbulence, refuſed his proffered lenity, and flew to arms. Lord Lovel, with Humphrey and Thomas Stafford, placed themſelves at the head of this inſurrection; but Henry ſent the duke of Bedford to oppoſe them, with orders to try what might be firſt done by offering them pardon. The duke obeyed his inſtructions; and this humane and generous endeavour to ſpare the effuſion of human blood had ſuch an effect upon the army, that it immediately diſperſed. Lovel made his eſcape into Flanders, where he was protected by the ducheſs of Burgundy; and the two Staffords took ſanctuary in the church at Colnham, near Abingdon; but it appearing that this church had not the privilege of giving protection, they were taken thence; the eldeſt Stafford was executed at Tyburn; the younger, pleading that he was miſled by his brother, obtained his pardon. Yet, after all, the diſaffected were become ſo turbulent and factious by a long courſe of civil war, that neither law nor lenity could reſtrain them; ſo that one rebellion ſeemed extinguiſhed only to give birth to another. The king, in the beginning of his reign, had given orders that the ſon of that duke of Clarence who had been drowned in a butt of malmſey, ſhould be liberated from the priſon where he had been confined by the bloody Richard, and brought to the Tower. This unfortunate youth, who was ſtyled the earl of Warwick, was, by long confinement, totally unacquainted with the world; and though perfectly harmleſs and inoffenſive, was made an inſtrument to delude the people. There lived in Oxford a prieſt named Richard Simon, who, poſſeſſing ſome ſubtlety, and more raſhneſs, trained up a daring youth named Lambert Simnel, a baker's ſon, to counterfeit the perſon of the earl of Warwick; and he was previouſly inſtructed to talk upon many facts and occurrences, as having happened to him in the court of Edward. The plot unfolded to their wiſhes; and Henry had the mortification to find that his mother-in-law, the queen-dowager, was at the bottom of it.

It was in Ireland where the ſcene was firſt opened; that country had been governed by Clarence, and was ſtill attached to his memory; and no ſooner did the wily prieſt preſent Simnel to the earl of Kildare, and claim his protection as the unfortunate Warwick, than that credulous nobleman acknowledged him; while the city of Dublin followed the example of the earl, and tendered its allegiance to Simnel as the true Plantagenet; and he was crowned with great ſolemnity by the chancellor of Ireland. Henry, perplexed at the news of this revolt, firſt ſeized the queen-dowager, and impriſoned her in the nunnery of Bermondſey, where ſhe ended her life in poverty and ſolitude. He next ſhewed the young earl of Warwick through the ſtreets of London; but though this had its effect in England, it convinced not the people of Ireland, who reproached Henry with having ſhewn a counterfeit perſonage. The conſpiracy ſoon extending, it was entered into by the earl of Lincoln, ſon of the duke of Suffolk by Elizabeth, eldeſt ſiſter of Edward IV. a nobleman of courage and ambition. Having eſtabliſhed a correſpondence in Lancaſhire, he had returned to Flanders, where Lovel had arrived before him; and he lived in the court of his aunt, the ducheſs of Burgundy. That princeſs, the widow of Charles the Bold, had acquired great authority among the Flemings, and hearing with indignation of the malignant jealouſy entertained by Henry againſt her family, ſhe was determined to make him repent of that enmity, to which ſo many of her friends had fallen victims. After conſulting with Lincoln and Lovel, ſhe hired a body of two thouſand mercenary Germans, under the command of Martin Swart, a brave and experienced officer; and ſent them over, together with theſe two noblemen, to join Simnel in Ireland. The countenance given by perſons of ſuch high rank, and the acceſſion of this military force, raiſed much higher the rebellious diſpoſition of the Iriſh; whence they came to a reſolution of invading England, as well for the ſake of plunder, as of revenge for pretended injuries.

Henry, apprized of their deſign, prepared for a timely defence. He ordered troops to be levied in different parts of the kingdom, and put them under the command of the duke of Bedford and the earl of Oxford. And, to gratify the people by an appearance of devotion, he made a pilgrimage to our lady of Walſingham; and there offered up prayers for ſucceſs, and for deliverance from his enemies. Being informed that Simnel was landed at Foudrey in Lancaſhire, he drew together his forces, and advanced towards the enemy as far as Coventry. The rebels had entertained hopes that the diſaffected in the north would riſe in their favour; but the people in general, convinced of Lambert's impoſture, and kept in awe by the king's reputation for courage and conduct, either remained in tranquillity, or gave their aſſiſtance to the royal army. The earl of Lincoln, therefore, who commanded the rebels, finding no hopes but in victory, was determined to bring the matter to a ſpeedy deciſion; and the king, ſupported by the native courage of his temper, and emboldened by a great acceſſion of volunteers, declined not the conflict. The hoſtile armies met at Stoke, in the county of Nottingham, A. D. 1488, and a bloody and obſtinate battle enſued. The leaders of the rebels were reſolved to conquer or to periſh; and they inſpired their troops with like reſolution. The Germans alſo, being experienced ſoldiers, kept the event long in ſuſpence; and even the Iriſh, though ill-armed and almoſt defenceleſs, ſhewed themſelves not defective in ſpirit and bravery. The king's victory, though purchaſed with loſs, was entirely deciſive. Lincoln, Broughton, and Swart, periſhed in the field of battle, with four thouſand of their followers, and as Lovel was never more heard of,

he

he was believed to have undergone the ſame fate. But on the authority of the late Mr. Thomas Warton, poet-laureat, ſome light ſeems to have been recently thrown on the fate of this diſtinguiſhed nobleman. The walls of his once magnificent ſeat at Minſter Lovel, Oxfordſhire, of which ſome ſmall ruins ſtill remain, being pulled down for the ſake of the materials, early in the eighteenth century, a ſecret chamber was diſcovered with a trap-door, and in it a ſkeleton of a perſon in complete armour was found. From hence it was ſuppoſed, and on probable grounds, that this was the body of lord Lovel, who, after eſcaping from the battle of Stoke, took refuge in this place, and from ſome cauſe, not now to be accounted for, was left to periſh in his concealment. Simnel, and his tutor Simon, were taken priſoners. Simon, being a prieſt, was only committed to cloſe cuſtody; and Simnel, as being too contemptible to be an object either of apprehenſion or reſentment, was pardoned, and made a ſcullion in the king's kitchen; whence he was afterwards advanced to the rank of king's falconer, in which employment he died. Thus ended an inſurrection, which, under a leſs judicious monarch, might have been very dangerous. Henry now returned to London in triumph from the north, and paid a viſit to his queen at Wincheſter, who was there prematurely delivered of a ſon, September 20, 1486. The young prince was named Arthur, in honour of the renowned Britiſh prince of that name, from whom the king derived his deſcent, by his grandfather, Owen Tudor.

The proſperous ſituation of Henry's domeſtic affairs now afforded him leiſure to obſerve the ſituation of the neighbouring nations. The throne of Scotland was filled by James III. a prince of little induſtry and narrow genius. Spain, by the union of Caſtille and Arragon, in the perſons of Ferdinand and Iſabella, and by the conqueſt of Granada from the Moors, began to make a great figure in the tranſactions of Europe. France, during the two preceding reigns, had attained a mighty increaſe of power and dominion; moſt of the great fiefs, Normandy, Champagne, Anjou, Dauphiny, Guienne, Provence, and Burgundy, had been united to the crown; and during the minority of Charles VIII. Anne, lady of Beaujeu, who, as his ſiſter, had obtained the regency, formed the project of acquiring Brittany, the laſt independent fief of the monarchy. The reigning duke was of ſlender capacity; and by abandoning himſelf to the counſels of Peter Landais, a man of mean birth, had diſguſted his nobles. They had ſeized the obnoxious miniſter, and had put him to death; and their apprehenſions of the reſentment of their prince, induced them to invite the court of France to an invaſion of their country.

The French people ſeldom required much importunity to ſeize ſuch an advantage: they preſently over-ran Brittany; and the duke of that province was obliged to ſeek ſhelter in Nantz. He in vain implored the aſſiſtance of England, and reminded Henry of the protection he had granted him in his diſtreſs. That monarch was not ignorant of what an important acquiſition Brittany would be to France; but he was averſe to the expence and hazard of a continental war; and he flattered himſelf ſome unforeſeen event would ariſe to defeat the deſigns of the French. But while he reſted in this expectation, he received the unwelcome intelligence that the Bretons had been defeated in a deciſive action; and that many perſons of high rank were made priſoners. The death of the duke, which followed ſoon after, threw affairs into ſtill greater confuſion; and Henry now ſeemed determined to act with vigour. An inſurrection which had been excited in the north on account of ſome new tax, had been quelled by the earl of Surrey, whom the king had reſtored to liberty, and had taken into favour; and, no longer alarmed by domeſtic enemies, he diſpatched lord Broke with ſix thouſand men to the defence of Brittany: but though the Engliſh and the Bretons were for ſome time maſters of the field, affairs were in ſuch confuſion, that the general was obliged to re-embark his troops for England.

Mean while, Anne ducheſs of Brittany, preſſed on every ſide, had conſented to eſpouſe Maximilian king of the Romans, and the ceremony was performed by proxy. Yet this did not prevent the lady of Beaujeu from entertaining the proſpect of obtaining her hand for Charles VIII, and though the affections of Anne were fixed on Maximilian, and ſhe was ſtrongly prejudiced againſt Charles, as the author of all the calamities which had befallen her family, ſuch was the diſtreſs to which ſhe was reduced, that ſhe was compelled to ſubmit, and was married at Langay, in Touraine, to the king of France. The rage of Maximilian at this event was unbounded; and even Henry had never more reaſon to reproach himſelf with miſconduct. He immediately declared his reſolution to invade France; and under that exigency he iſſued a commiſſion for levying a *benevolence* on his people; though a ſpecies of taxation which had been aboliſhed. Archbiſhop Morton, the chancellor, inſtructed the commiſſioners to employ a dilemma, in which every one might be comprehended: if the perſons applied to lived frugally, they were told that their parſimony muſt neceſſarily have enriched them; if their method of living was ſplendid and hoſpitable, they were concluded to be opulent on account of their expences. This device was by ſome called chancellor Morton's fork, by others his crutch. Both the parliament and the nobles readily countenanced the invaſion: the former granted him two fifteenths; the latter collected their vaſſals to attend him. On the 6th of October, 1492, the king arrived at Calais with an army of twenty-five thouſand foot, and ſixteen hundred horſe, and laid ſiege to Bullogne; but it was ſoon apparent that he had no ſerious intention of puſhing on the war to ſuch extremities as he pretended, and a negociation was opened between him and Charles. The latter anxious to ſecure Brittany, and eager to invade Italy, conſented to pay Henry ſeven hundred and forty-five thouſand crowns, and ſtipulated a yearly penſion to him and his heirs of twenty-five thouſand crowns. Thus the king, as remarked by his hiſtorian, made profit upon his ſubjects for the war, and upon his enemies for the peace.

Circumſtances now ſeemed to leave Henry in poſſeſſion of durable tranquillity; but his inveterate enemies ſoon raiſed him an adverſary, who long kept him in diſquietude. The ducheſs of Burgundy, full of reſentment for the depreſſion of her family, had propagated a report that her nephew, Richard Plantagenet duke of York, had eſcaped from the tower of London, and was ſtill alive; and ſhe had been looking out for ſome young man proper to perſonate that prince. Warbeck, a renegado Jew of Tournay, who had viſited London in the reign of Edward IV. having had opportunities of being known to the king, and obtaining his favour, he prevailed with that prince, whoſe manners were very affable, to ſtand godfather to a ſon, born in this country, to whom he gave the name of Peter, corrupted, after the Flemiſh manner, into Peterkin or Perkin. It was by ſome believed that Edward, among his amorous adventures, had a ſecret commerce with Warbeck's wife, and people thence accounted for that ſuppoſed reſemblance, which was afterwards remarked between young Perkin and that monarch. Some years after the birth of this child, Warbeck returned to Tournay, whence Perkin his ſon, by different accidents, was carried from place to place, and his birth and fortune became thereby unknown, or difficult to be traced. The variety of his adventures had much favoured the natural verſatility and ſagacity of his genius; and he ſeemed to be a youth perfectly fitted to act any part, or aſſume any character. In this light he had been repreſented to the ducheſs of Burgundy; who, ſtruck with the concurrence of ſo many circumſtances ſuited to her purpoſes, deſired to be made acquainted with him. She found him to exceed her moſt ſanguine expectations;

ſo comely did he appear in his perſon, ſo graceful in his air, ſo courtly in his addreſs, ſo full of docility and good ſenſe in his behaviour and converſation. The leſſons neceſſary to be taught him, in order to his perſonating the duke of York, were ſoon learned by a youth of ſuch quick apprehenſion; but as the ſeaſon ſeemed not then favourable for the enterpriſe, Margaret, in order the better to conceal him, ſent him, under the care of lady Brampton, into Portugal, where he remained a year, in perfect ſecrecy.

The war which was then ready to break out between France and England, ſeemed to afford a proper opportunity for launching this impoſtor; and Ireland, which ſtill retained its attachment to the houſe of York, was choſen as the theatre for his firſt appearance. He landed at Cork, and immediately aſſuming the name of Richard Plantagenet, drew to him numerous partiſans among that credulous people. He wrote letters to the earls of Deſmond and Kildare, inviting them to join his party; and diſperſed every where the ſtrange intelligence of his eſcape from the cruelty of his uncle Richard; while men, fond of every thing new and marvellous, began to make him the general ſubject of their diſcourſe, and even the object of their regard. The news ſoon reached France; and Charles, prompted by the ſolicitations of the ducheſs of Burgundy, ſent Perkin an invitation to repair to him at Paris. He received him with all the marks of regard due to the duke of York, ſettled on him a handſome penſion, aſſigned him magnificent lodgings, and gave him a guard to attend his perſon. The French courtiers readily embraced a fiction, which their ſovereign thought it his intereſt to adopt; and Perkin, both by his deportment and perſonal qualities, was well qualified to ſupport the prepoſſeſſion which was ſpread abroad of his royal pedigree. From France, the admiration and credulity diffuſed themſelves over England: ſir George Nevile, ſir John Taylor, and above a hundred gentlemen more, went to Paris to offer their ſervices to the ſuppoſed duke of York, and to ſhare his fortunes; and the impoſtor, having now the appearance of a court attending him, began really to fancy himſelf the character he aſſumed.

Henry had now the ſuperior policy to conclude a peace with France; and Charles, in conſequence, conſented to diſmiſs Perkin, who found refuge with the ducheſs of Burgundy. That princeſs affected to put on the appearance of diſguſt, and it was not till after a long and ſevere ſcrutiny, that ſhe pretended to burſt out into joy and admiration, and embraced Perkin as the true image of Edward, and the ſole heir of the Plantagenets. Numbers of the Engliſh favoured the impoſture; among the reſt, ſir Robert Clifford and ſir William Stanley. The king, informed of theſe particulars, proceeded deliberately, in counterworking the projects of his enemies. His firſt object was to aſcertain the death of the real duke of York, and to confirm the opinion that had always prevailed with regard to that cataſtrophe. Five perſons had been employed by Richard, in the murder of his nephews, or could give evidence with regard to it; but as only two of them were now alive, and as the bodies were ſuppoſed to have been removed, by Richard's orders, from the place where they were firſt interred, and could not now be found, it was not in Henry's power to eſtabliſh the fact beyond all doubt and controverſy. He was, however, more ſucceſsful in detecting who this wonderful perſon was, who now advanced pretenſions to his crown. He engaged Clifford, who had been admitted into the ſecret, by the hopes of rewards and pardon, to betray the ſecret; and ſuch was the diligence of his ſpies, that in the iſſue the whole plan of the conſpiracy was clearly laid before him, with the pedigree, adventures, life, and converſation, of the pretended duke of York; and the latter part of the ſtory was immediately publiſhed for the ſatisfaction and aſtoniſhment of the credulous nation.

Several of the conſpirators were immediately arreſted. Some of inferior note were rapidly arraigned, convicted, and executed; but more ſolemnity was neceſſary in the proceeding againſt ſir William Stanley, one of the moſt opulent ſubjects in the kingdom. After ſix weeks delay, which was interpoſed, in order to ſhew that the king was reſtrained by doubts and ſcruples, the priſoner was brought to his trial, condemned, and beheaded. The fate of Stanley ſtruck the adherents of Perkin with the deepeſt diſmay; yet the impoſtor reſolved to attempt ſomething which might revive the hopes and expectation of his partizans. Having collected a band of outlaws, pirates, robbers, and deſperadoes, of all nations, to the number of ſix hundred men, he put to ſea, with a reſolution of making a deſcent in England. Information being brought him that the king had made a progreſs to the north, he caſt anchor on the coaſt of Kent, and ſent ſome of his retainers aſhore, who invited the country to join him. The gentlemen of Kent aſſembled ſome troops to oppoſe him; but they purpoſed to do more eſſential ſervice, than by repelling the invaſion: they carried the ſemblance of friendſhip to Perkin, and invited him to come himſelf aſhore, in order to take the command over them. But the wary youth, obſerving that they had more order and regularity in their movements than could be ſuppoſed in new levied forces who had taken arms againſt eſtabliſhed authority, refuſed to entruſt himſelf into their hands; and the Kentiſh men, deſpairing of ſucceſs in their ſtratagem, fell upon ſuch of his retainers as were already landed; and killing ſome, took a hundred and fifty priſoners, who were tried, condemned, and executed, by orders from the king.

In Ireland, the king's authority appeared equally effective and uncontrolled. Sir Edward Poynings, who had been ſent over to that country, with an intention of quelling the partizans of the houſe of York, and of reducing the natives to ſubjection, having ſummoned a parliament to Dublin, he then obtained the memorable ſtatute, which ſtill bears his name, and which eſtabliſhed the paramount authority of the Engliſh government over Ireland. By this ſtatute all the former laws of England were made to be in force in Ireland; and in future no bill could be introduced into the Iriſh parliament, unleſs it had previouſly received the ſanction of the council of England. By the late act of union, theſe regulations, which were often the object of jealouſy and contention, are happily rendered obſolete.

After the retreat of Perkin from the coaſt of Kent, he ſought ſhelter in Ireland; but tired of the wandering life he was compelled to lead in that country, he paſſed over to Scotland, where he was well received by James IV. and obtained in marriage the lady Catharine Gordon, daughter of the earl of Huntley. The jealouſy which then ſubſiſted between the courts of England and Scotland, induced the latter to arm in his behalf; but James was ſoon convinced that the Engliſh would never receive a prince from neighbours whom they hated; and perceived that Perkin's pretenſions were become obſolete, even in the eyes of the populace. To repel the threatening Scots, parliament had granted to Henry a ſubſidy of one hundred and twenty thouſand pounds, with two fifteenths; which heavy impoſition excited conſiderable oppoſition, particularly in Cornwall; where the people were inſtigated to reſiſtance by Michael Joſeph, of Bodmin, who, by thruſting himſelf forward on every occaſion, and being loudeſt in every complaint againſt the government, had acquired an authority among his townſmen. Thomas Flammoc too, a lawyer in the neighbourhood, encouraged the ſedition, by informing them that the tax was entirely illegal; that the northern nobility were bound by their tenures to defend the nation againſt the Scots; and that the Corniſhmen muſt deliver a petition to the king, ſeconded by ſuch a force as would give it authority.

Encouraged by theſe inflammatory ſpeeches, the multitude flocked together, and armed themſelves with axes, bills,

bills, bows, and ſuch weapons as were then in uſe. Flammoc and Joſeph were their leaders, who ſoon conducted the Corniſhmen through the county of Devon, and reached that of Somerſet. At Taunton, the rebels killed an officious commiſſioner of the ſubſidy; and when they reached Wells, they were joined by lord Audley, a nobleman popular in his diſtrict; but vain, ambitious, and reſtleſs in his temper. Proud of the countenance given them by ſo conſiderable a perſonage, they continued their march, breathing deſtruction to the king's miniſters and favourites, particularly to Morton, and ſir Reginald Bray, who were deemed the moſt active inſtruments of oppreſſions. Notwithſtanding their rage againſt the adminiſtration, as they met with no reſiſtance, they committed neither violence nor diſorder during their progreſs.

Henry, to oppoſe the Scots, had an army in readineſs; but though it was his uſual ſaying, "that he deſired but to ſee the rebels," it was not until he had ſelected all his forces, that he ventured to attack them. They had advanced to the very gates of London, and were formidable from their numbers and their valour; but being ill diſciplined, ignorant, and ill armed, were not a match for the regular troops. After a ſhort reſiſtance, they were broke and put to flight on Blackheath. Lord Audley, Flammoc, and Joſeph, their leaders, were taken and executed; but Henry, pitying the ignorance and ſimplicity of the multitude, to the eternal honour of the ſovereign power, diſmiſſed them without puniſhment. Meanwhile, the Scottiſh king had laid ſiege to the caſtle of Norham, in Northumberland; but on the appearance of the earl of Surrey, he abandoned the enterpriſe. A truce was afterwards concluded between the two crowns, and James perceiving that while Perkin remained in Scotland he ſhould never enjoy peace with Henry, privately deſired him to depart.

For ſome time after quitting Scotland, Perkin concealed himſelf in the wilds and faſtneſſes of Ireland. Impatient, however, of this kind of fugitive life, he held conſultations with his followers, Herne, Skelton, and Aſtley, three broken tradeſmen; and by their advice he reſolved to try the affections of the Corniſh people, whoſe mutinous diſpoſition, notwithſtanding the king's lenity, ſtill ſubſiſted. No ſooner did he appear at Bodmin, than the populace, to the number of three thouſand, flocked to his ſtandard; and Perkin, elated with this appearance of ſucceſs, took on him, for the firſt time, the appellation of Richard IV. king of England. Not to ſuffer the expectations of his followers to languiſh, he preſented himſelf before Exeter; and, finding that the inhabitants ſhut their gates againſt him, he laid ſiege to the place; but being unprovided with artillery, ammunition, and every thing requiſite for the attempt, he made no progreſs in his undertaking. When Henry was informed that Perkin lay before Exeter, he expreſſed great joy at his being ſo near, and prepared himſelf with alacrity to attack him. The courtiers, ſenſible that their activity on this occaſion would be the moſt acceptable ſervice which they could render the king, diſplayed equal zeal for the enterpriſe. The lords Daubeney and Broke, with ſir Rice ap Thomas, haſtened forward with a ſmall body of troops to the relief of Exeter. The earl of Devonſhire, and the moſt conſiderable gentlemen of the county of that name, took arms of their own accord, and marched to join the king's generals. The duke of Buckingham put himſelf at the head of a troop, conſiſting of young nobility and gentry, who ſerved as volunteers; and the king himſelf prepared to follow with a conſiderable army. Perkin, informed of theſe great preparations, raiſed the ſiege of Exeter, and retired to Taunton. Though his followers ſeemed ſtill reſolute to maintain his cauſe, he himſelf deſpaired of ſucceſs, and ſecretly withdrew to the ſanctuary of Beaulieu, in the New Foreſt. The Corniſh rebels ſubmitted to the king's well-known mercy, and found that his forgiveneſs was not yet exhauſted. Except a few perſons of deſperate fortunes who were executed, and ſome others who were ſeverely fined, all were diſmiſſed with impunity. Lady Catharine Gordon, wife to Perkin, fell into the hands of the victor, and was treated with a generoſity which does him honour. He placed her in a reputable ſtation about the queen, and aſſigned her a penſion, which ſhe enjoyed for life.

Perkin, being perſuaded to quit his ſanctuary, A. D. 1498, was conducted in a kind of mock triumph to London. His own confeſſion of his impoſture and adventures was publiſhed; but, though his life was granted him, he was ſtill detained in cuſtody, and ſent to the Tower, where his habits of intrigue and enterpriſe ſtill followed him. He inſinuated himſelf into the confidence of four ſervants of ſir John Digby, lieutenant of the Tower; and, by their means, opened a correſpondence with the young unoffending earl of Warwick, who was confined in the ſame place. This unfortunate prince, who had from his earlieſt youth been ſhut up from the commerce of men, and who was ignorant even of the moſt common affairs of life, was eaſily ſuſceptible of any impreſſion. The natural love of liberty engaged him to embrace a project for his eſcape, by the murder of the lieutenant; and Perkin offered to conduct the whole enterpriſe. The conſpiracy, however, eſcaped not the king's vigilance; and Perkin, by this new attempt, having rendered himſelf totally unworthy of mercy, was arraigned, condemned, and hanged at Tyburn, acknowledging his impoſture to the laſt. In a few days after Perkin's execution, the wretched earl of Warwick was tried by his peers; and, being convicted of high-treaſon, in conſequence of pleading guilty, he was beheaded on Tower-hill; and in him ended the laſt male branch of the houſe of Plantagenet. The deplorable end of this innocent nobleman, and the fate of Perkin, who, notwithſtanding all the impoſtures that had been proved againſt him, was, by the credulous and ignorant, who are ever the greateſt number, ſtill deemed the real ſon of king Edward, had filled the kingdom with ſuch an averſion to the government of Henry, that, to throw the odium from himſelf, he diſingenuouſly laid it to the account of his ally, Ferdinand of Arragon, who, he ſaid, refuſed him his alliance, while any prince of the houſe of York remained alive.

There had been hitherto nothing active in this reign but plots, treaſons, impoſtures, and inſurrections; and it is probable that Henry's ſeverity proceeded from the continual alarms in which theſe inquietudes held him. It is certain that no prince ever valued peace more than himſelf; and much of the ill-will of his ſubjects aroſe from his endeavours to repreſs their inclination for war. The uſual preface to all his treaties was, "That when Chriſt came into the world, peace was ſung; and when he went out of the world, peace was bequeathed." He had no ambition to extend his power, except only by treaties and by wiſdom: by theſe he rendered himſelf much more formidable to his neighbours than his predeceſſors had ever done by their victories; they indeed became terrible to their own ſubjects; but he was chiefly dreaded by rival kings.

Henry had all along two principal points in view; one to repreſs the nobility and clergy; the other to exalt and humanize the populace. From the ambition and turbulence of the former, and from the wretchedneſs and credulity of the latter, almoſt all the troubles in the former reigns had taken their origin. In the feudal times, every nobleman was poſſeſſed of a certain number of vaſſals, over whom he had an abſolute controul; and, upon every ſlight diſguſt, he was able to compel them to join him in whatever principle he choſe to uphold. Henry, therefore, wiſely conſidered, that the giving theſe petty tyrants a power of ſelling their eſtates, which before this time were unalienable, would eventually tend to weaken their intereſt. With this view he paſſed an act, by which the nobility had free liberty to diſpoſe of their eſtates; a law infinitely pleaſing to them all, ſince they had thus

an immediate reſource for ſupplying their taſte for prodigality, and a ready means of anſwering at all times the demands of their creditors. The blow, indeed, only reached their poſterity; and they were too ignorant to be affected by ſuch diſtant conſiderations.

His next regulation was to prevent their giving uniforms to many hundreds of their dependents, who were thus retained to ſerve their lord, and kept like the ſoldiers of a ſtanding army, to be ready at the command of their leader. By an act paſſed in this reign, none but menial ſervants were permitted to wear a livery, under ſevere penalties; and this law was enforced with the moſt punctual obſervance. The king one day paying a viſit to the earl of Oxford, was entertained with all poſſible ſplendour and hoſpitality. When he was ready to depart, he ſaw ranged upon each ſide a long avenue of men dreſſed up in rich uniforms. The king, ſurpriſed at the number, aſked lord Oxford whether he conſtantly entertained ſuch a regiment of domeſtics; to which the earl very innocently replied, that they were only men whom he kept in pay to do him honour upon ſuch occaſions. At this the king ſtarted back, and ſaid, "By my faith, my lord, I thank you for your good cheer; but I muſt not ſuffer to have the laws broken before my face; my attorney-general muſt talk with you." Oxford is ſaid to have paid no leſs than fifteen thouſand marks as a fine for this unadviſed ſhow of oſtentation.

We have it recorded, in a thouſand inſtances, what a perverted uſe was made of monaſteries, and other places appropriated to religious worſhip, by the number of criminals who found ſanctuary and protection therein. This privilege the clergy aſſumed as their religious prerogative; and theſe places of pretended ſanctity were now become the abode of murderers, robbers, conſpirators, and of every ſpecies of felons. Witches and magicians were the only perſons that were forbidden to avail themſelves of the ſecurity theſe ſanctuaries afforded. Henry uſed all his intereſt with the pope to get theſe ſanctuaries aboliſhed; but he was not able to ſucceed. All that he could procure was, that if thieves, murderers, or robbers, regiſtered as ſanctuary men, ſhould ſally out, and commit freſh offences, and retreat again, in ſuch caſes they might be taken out of the ſanctuary, and delivered over to public juſtice. Yet all this while Henry was not remiſs in abridging the pope's power, though at the ſame time he profeſſed the utmoſt ſubmiſſion to his will, and the greateſt reſpect for the clergy. The pope at one time was ſo far impoſed upon by his ſeeming attachment to the church, that he even invited him to renew the croiſades for recovering the Holy Land. Henry's anſwer deſerves to be remembered. He aſſured his holineſs that no prince in Chriſtendom would be more forward to undertake ſo glorious an expedition; but, as his dominions lay very diſtant from Conſtantinople, it would be better to apply to the kings of France and Spain for their aſſiſtance; and in the mean time he would go to their aid himſelf, as ſoon as all the differences between the Chriſtian princes ſhould be compromiſed. This was at once a polite refuſal, and an oblique reproach.

Yet while he thus employed his power in lowering the influence of the nobles and clergy, he was uſing every art to extend the privileges of the people. In former reigns they were ſure to ſuffer on whatever ſide they fought, when they were unſucceſsful. This rendered each party deſperate in a declared civil war, ſince no hopes of pardon remained, and conſequently terrible ſlaughters were ſeen to enſue. Henry therefore paſſed an act, by which it was declared, that no perſon ſhould be impeached or attainted for aſſiſting the king for the time being; or, in other words, the ſovereign who ſhould be then actually in poſſeſſion of the throne. This excellent ſtatute ſerved to repreſs the incitements to civil war; and hence the common people, no longer maintained in vicious idleneſs by their ſuperiors, were obliged to become induſtrious for their ſupport. The nobility, inſtead of vying with each other in the number and boldneſs of their vaſſals, acquired by degrees a more civilized ſpecies of emulation; and endeavoured to excel in the ſplendour and elegance of their equipages and tables. In fact, the king's greateſt efforts were directed to promote trade and commerce, becauſe this not only enriched the treaſury, but naturally introduced a ſpirit of liberty among the people, and diſengaged them from all dependence, except upon their own induſtry, the laws, and the king. Before this great era, all our towns were crowded near ſome ſtrong caſtle, where ſome powerful lord reſided. Theſe were at once fortreſſes for protection, and priſons for all ſorts of criminals. To theſe ſeats of protection, artificers, victuallers, and ſhop-keepers, naturally reſorted, and ſettled on ſome adjacent ſpot to furniſh the lord and his attendants with all the neceſſaries they might require. The farmers alſo, and the huſbandmen in the neighbourhood, built their houſes there, to be protected againſt the numerous gangs of robbers, called *Robertſmen*, who hid themſelves in the woods by day, and infeſted the open country by night. Henry now endeavoured to bring the towns from ſuch a neighbourhood, by ſhewing the inhabitants the ſuperior advantages of a commercial ſituation. He attempted to teach them frugality, and a juſt payment of debts; and never once omitted the rights of the merchant, in all his treaties with foreign princes.

But it muſt not be concealed, that, from a long contemplation upon the relative advantages of money, Henry at laſt grew into an habit of conſidering it as valuable for itſelf alone. As he grew old, his avarice ſeemed to preponderate over his ambition; and the methods he took to increaſe his treaſures cannot be juſtified by his moſt ardent biographers. He had found two miniſters, Empſon and Dudley, perfectly qualified to ſecond his avaricious intentions. They were both lawyers; the firſt of mean birth, brutal manners, and an unrelenting temper; the ſecond, better born, and better bred, but equally inflexible. It was their uſual practice to commit, by indictment, ſuch perſons to priſon as they intended to oppreſs; from whence they ſeldom got free, but by paying heavy fines, which were called mitigations and compoſitions. By degrees, as they were grown more hardened in oppreſſion, the very forms of law were omitted; they determined in a ſummary way upon the properties of the ſubject, and confiſcated their effects to the royal treaſury. But the chief inſtruments of oppreſſion employed by theſe miniſters were the penal ſtatutes, which, without the conſideration of rank, quality, or ſervices, were rigidly put in execution againſt all men. In this manner was the latter part of this active monarch's reign employed, in many a degrading ſcheme for amaſſing money. In the year 1500, he had the ſatisfaction of completing a marriage between his eldeſt ſon Arthur prince of Wales, and the infanta Catharine of Spain, which had been negociated ſeven years before. But this marriage proved, in the event, unproſperous. The young prince ſickened and died in a few months after, very much regretted by the whole nation; and the princeſs was then obliged to marry his ſecond ſon, Henry, who was created prince of Wales, in the room of his brother. The prince himſelf made all the oppoſition to this union which a youth of twelve years of age was capable of; but, as the crowned heads perſiſted in their reſolution, the marriage was, by the pope's diſpenſation, ſhortly after ſolemnized.

The magnificence of theſe nuptials was followed up by the accidental arrival of Philip archduke of Caſtile, with Joan his conſort. Theſe noble perſonages had embarked for Spain, in order to take the advantage of an invitation, which the people of that country had offered, to place them upon the Spaniſh throne. Meeting, however, with a violent tempeſt at ſea, they were obliged to take ſhelter in Weymouth harbour, where they were honourably received by ſir John Trenchard, a gentleman of authority in the county of Dorſet. The king, being informed of their arrival, A. D. 1506, ſent the earl of

Arundel to compliment them on their ſafe landing; and to inform them that he intended paying them a viſit in perſon. Philip, for the ſake of diſpatch, reſolved to anticipate the viſit by ſtepping up to Windſor. Henry received him with all magnificence and cordiality; but was reſolved to reimburſe himſelf for the expence, by advantages that would be more ſubſtantially conducive to his own intereſts, and thoſe of the nation. There had been a plot carried on againſt him by the earl of Suffolk; for which ſir James Tyrrel and ſir James Windham had been condemned and executed, while Suffolk, the original contriver, had made his eſcape into the Low Countries, where he found protection from Philip. But he was now given up at Henry's requeſt; and, being brought to England, he was impriſoned in the Tower. A treaty of commerce was alſo agreed upon between the two ſovereigns; which was at that time of the greateſt benefit to England, and continues to remain the ground-work of all other commercial treaties to this day.

Henry having thus lived to ſee England in a great meaſure civilized by his exertions, his people ariſing the taxes without conſtraint, the nobles confeſſing a due ſubordination, the laws alone inflicting puniſhment, the towns beginning to flouriſh, and becoming independent of the powerful barons, commerce increaſing, the ſpirit of faction extinguiſhed, and foreigners either fearing England, or ſeeking her alliance, he began to feel the approaches of his end. He then reſolved to reconcile himſelf to heaven; and, by diſtributing alms, founding religious houſes, and granting a general pardon to all his ſubjects, to make an atonement for the errors of his paſt life. In this diſpoſition he died, April 21, 1509, in the twenty-fourth year of his reign, and fifty-fourth of his age. He had rendered his ſubjects powerful and happy, and wrought a greater change in the manners of the people, than it was poſſible to ſuppoſe could have been effected in ſo ſhort a time. If he had any fault that deſerves to be marked with great reproach, it was that, having begun his reign with economy, as he grew old his deſires ſeemed to change their object from the uſe of money, to the pleaſure of hoarding it. But he ought even in this to be pardoned, becauſe he ſaved for the public; the royal coffers being then the only treaſure of the ſtate; and, in proportion to the king's finances, the public might be ſaid to be either rich or indigent. As an apology for Henry's avarice, let it be remembered that he expended fourteen thouſand pounds in building one ſhip, called the Great Harry. This, properly ſpeaking, was the firſt ſhip of war in the Engliſh navy. Before this period, when the king wanted a fleet, he had no other expedient but to hire ſhips from the merchants. He was alſo the founder of the chapel in Weſtminſter abbey, which has ever ſince gone by the name of Henry the Seventh's chapel.

Henry VII. was in ſtature a little above the middle ſize, ſlender, ſtrong, and active. His deportment was, in general, grave, reſerved, and ſtately; but he could put on a ſmiling countenance, and aſſume a gracious engaging manner, when he ſaw it convenient. In perſonal courage he was not defective; but it was attended with caution, and not of the impetuous enterpriſing kind. Though he ſometimes threatened, he never really intended to engage in any foreign war; becauſe he knew it was exceedingly expenſive, and peculiarly dangerous to a prince with a diſputed title and diſcontented ſubjects. From theſe conſiderations, rather than from timidity, he cultivated peace with all the neighbouring princes. In application to buſineſs he was indefatigable, and deſcended to the moſt minute details. He was his own miniſter, impenetrably ſecret in all his ſchemes, and preſcribed to his ſervants the parts they were to act, without acquainting them with his views. His underſtanding was good, but neither quick nor comprehenſive: but he ſupplied the want of quickneſs by mature deliberation; and the ſucceſs with which all his meaſures were crowned, procured him the appellation of *Solomon the Wiſe*. He has been highly praiſed for diminiſhing the exorbitant power of the great barons, which had often endangered the crown and oppreſſed the people. This he certainly in part accompliſhed: but it was far from being a difficult taſk. The civil wars had ruined two-thirds of the great families, and at his acceſſion there were only twenty-ſeven temporal peers in England. The great defects in the character of this prince proceeded not from the weakneſs of his head, but the obduracy of his heart, which was exceedingly ſelfiſh and unfeeling; little ſuſceptible of the impreſſions of love, friendſhip, pity, or any benevolent affection. He was an unkind huſband to an amiable conſort; never had a friend, and rarely forgave an enemy. As a ſon, he treated his venerable mother with formal reſpect, but allowed her no influence; as a father, he was ſolicitous, but not affectionate. His arbitrary actions of various kinds, his ſeverity to ſir William Stanley, and his cruelty to the noble earl of Warwick, have procured him, and not unjuſtly, the odious name of tyrant. An inordinate love of money, and an unrelenting hatred to the houſe of York, were his ruling paſſions, and the chief ſources of all his vexations, and of all his vices.

Henry VII. had iſſue four ſons and four daughters. 1. Arthur, born September 20, 1486; died April 2, 1502. 2. Henry, who ſucceeded to the crown, was born in June, 1492. 3. Edmund, who died at five years old. 4. Edward, born in February, 1500, died in his infancy. 5. Margaret, married in 1502 to James IV. king of Scotland, which eventually occaſioned the union of the two kingdoms. 6. Catharine, who died in her infancy. 7. Mary, married December 17, 1508, to Charles archduke of Auſtria, prince of Caſtile. 8. Elizabeth, born in 1503, died ſoon after the queen, whoſe death was occaſioned by her birth.

Henry VIII. aſcended the throne of England, A. D. 1509. He had then completed his ſeventeenth year, and had been occupied entirely in the purſuits of literature, and manly exerciſes; and the proficiency which he made in each, gave no bad prognoſtic of his parts and ingenuity. Even the follies of vehemence, ardour, and impatience, to which he was prone, and which afterwards degenerated into tyranny, were conſidered only as foibles incident to unguarded youth, which would be corrected by time. And, as the contending titles of York and Lancaſter were united in his perſon, men juſtly expected from a prince, obnoxious to no party, that impartiality of adminiſtration which the conſtitution of England was intended to promulgate; but unfortunately this was not the caſe. The firſt public act of unprovoked ſeverity, was the puniſhment of Empſon and Dudley, who were obnoxious to the populace for having been the inſtruments of the late king's avarice. They were cited before the council to anſwer for this conduct; and Empſon, in his defence alleged, that ſo far from deſerving cenſure, he was confident he had merited reward and approbation. Though a ſtrict execution of the law was the crime of which he and Dudley were accuſed; and though theſe laws had been eſtabliſhed by the voluntary conſent of the people; yet Empſon and Dudley were ſolemnly brought to their trial, and the jury were ſo far infected with popular prejudice, that they gave a verdict againſt them; and they were both executed by a warrant from the king.

This meaſure, which betrayed an unjuſt compliance with popular clamour, was followed by another highly detrimental to the nation, although ſtill more pleaſing to the people. Julius II. was at that time pope, and had filled all Europe with his intrigues and ambition; but his chief reſentment happened to be levelled againſt Louis XII. of France, who was in poſſeſſion of ſome valuable provinces of Italy, from which he hoped, by his intrigues, to remove him. For this purpoſe he entered into a treaty with Ferdinand king of Spain, and Henry of England; to each of whom he propoſed ſuch advantages

as

as were moſt likely to inflame their ambition, in caſe they fell upon Louis on their reſpective quarters; while he undertook himſelf to make war againſt him in Italy. Henry, who had no other motives than military renown, and the vanity of receiving the title of the Moſt Chriſtian King, which the pope aſſured him would ſoon be wreſted from Louis, to be conferred upon him, readily undertook to defend his cauſe; and his parliament as readily granted ſupplies for a purpoſe ſo congenial to the minds of the people. The ſpirit of chivalry and foreign conqueſt was not yet extinguiſhed in England; the kingdom of France was ſtill an object they deſired to poſſeſs, and Henry, in compliance with their wiſhes, gave out that he intended ſtriking for the crown. It was in vain that the old prudent counſellors of his deceaſed father objected, or contended that conqueſts on the continent would only drain the kingdom, without enriching it: the young king, deaf to all remonſtrances, reſolved to undertake the war. The marquis of Dorſet was firſt ſent over, with a large body of forces, to Fontarabia, to aſſiſt the operations of Ferdinand; but that faithleſs and crafty monarch had no intentions of effectually ſeconding their attempts, wherefore they were obliged to return in diſgrace.

A conſiderable fleet was next equipped, to annoy the enemy by ſea, and the command given to ſir Edward Howard; who, after ſcouring the Channel, preſented himſelf before Breſt, where the French navy lay, and challenged them to battle. But they determined to wait for a reinforcement, which they expected, under the command of Prejeant de Bidoux, from the Mediterranean. But in this the gallant Howard was reſolved to diſappoint them; and, upon the appearance of Prejeant with ſix gallies, who had time to take refuge behind ſome batteries erected on the rocks, he boldly rowed up with two gallies, followed by barges filled with officers of diſtinction. Upon coming up to Prejeant's ſhip, he immediately faſtened upon it, and leaped on board, followed by Carroz, a Spaniſh cavalier, and ſeventeen Engliſhmen. The cable, mean while, which faſtened both ſhips together, was cut by the enemy, and the admiral was thus left in the hands of the French; but as he ſtill continued to fight with great gallantry, he was puſhed overboard by their pikes, and periſhed in the ſea. Upon this misfortune the fleet retired from before Breſt. This repulſe, however, only ſerved to inflame the king's ardour for war; and he ſent a body of eight thouſand men to Calais, under the command of the earl of Shrewſbury; and another body of ſix thouſand, under the conduct of lord Herbert. He alſo embarked himſelf with the main body and rear, and arrived at Calais, attended by numbers of the Engliſh nobility. But he ſoon had an attendant, who did him ſtill greater honour. This was no leſs a perſonage than Maximilian, emperor of Germany, who had ſtipulated to aſſiſt him with eight thouſand men, but, being unable to perform his engagements, he joined the Engliſh army with ſome German and Flemiſh ſoldiers, who were uſeful in giving an example of diſcipline to Henry's new-levied ſoldiers. He even enliſted himſelf in the Engliſh ſervice, wore the croſs of St. George, and received pay, 100 crowns per day, as one of Henry's ſubjects and captains.

Henry being now at the head of fifty thouſand men, France began to tremble for her ſafety. But that kingdom was not threatened by the Engliſh alone; the Swiſs, on another quarter, with twenty-five thouſand men, were preparing to invade it; while Ferdinand of Arragon, whom no treaties could bind, was only waiting a convenient opportunity for an attack on his ſide. Never was the French monarchy in a more diſtreſſed ſituation; but the errors of its aſſailants provided for its ſafety. The Swiſs entered into a truce with Trimouille, the French general, who gave them their own terms, ſatisfied that his maſter would reſcind them all, as not having given him any powers to treat; Ferdinand continued to remain a quiet ſpectator, vainly waiting for ſome effectual blow to be ſtruck by his allies; and Henry ſpent his time in beſieging towns, which could neither ſecure his conqueſts, nor advance his reputation. The firſt of theſe was Terouenne, on the frontiers of Picardy. The beſieged, falling ſhort of proviſions, a bold and deſperate attempt was made to ſupply them, which ſucceeded. A French captain, whoſe name was Fontrailles, led up a body of eighteen hundred cavalry, each of whom carried a bag of gunpowder and two quarters of bacon behind him. With this ſmall force he made a fierce and unexpected irruption through the Engliſh camp; and, ſurmounting all reſiſtance, advanced to the gates of the town, where each horſeman delivered his burthen. Then returning upon the gallop, they were again ſo fortunate as to break through the Engliſh without much loſs in the undertaking. But the party of cavalry ſent to cover their retreat, was not ſo fortunate: though this body of troops was commanded by the boldeſt and braveſt officers of the French army, yet on ſight of the Engliſh they were ſeized with an unaccountable panic, and immediately fled; but, ſome of their beſt officers were taken. This action was called by the French, the battle of Guinegate, from the place where it was fought; but, by the Engliſh, the battle of the Spurs; as the French, on that day, made more uſe of their Spurs, than of their ſwords.

After this victory, which might have been followed with very important advantages, had the Engliſh army marched forward to Paris; Henry was perſuaded to lay ſiege to Tournay, a city of Flanders, at that time in the hands of the French. This ſiege, though ſhort, yet when added to the reſt, contributed ſtill to retard the great object, which was the conqueſt of France; and Henry hearing that the Swiſs had returned home, and being elated with theſe petty ſucceſſes, reſolved to tranſport his army back to England, where flattery was put to the torture to make him happy in the glory of his beſieging expedition. A truce was concluded ſoon after between the belligerent powers; and Henry continued to diſſipate, in more peaceful follies, thoſe immenſe ſums which had been amaſſed by his predeceſſor for very different purpoſes.

The ſucceſs which, during his foreign expedition, attended his arms in the North of England, was much more important and deciſive. A war having been declared between the Engliſh and Scots, the king of that country ſummoned out the whole force of his kingdom; and, having paſſed the Tweed with a body of fifty thouſand men, ravaged thoſe parts of Northumberland which lay along the banks of that river. But as his forces were numerous, and the country barren of proviſions, his men deſerted, and many returned to their native country. In the mean time the earl of Surrey, at the head of twenty-ſix thouſand men, came up with the Scots, who were encamped at the foot of the Cheviot hills. The river Till ran between the two armies, and prevented an engagement; wherefore the earl of Surrey ſent a herald to the Scots' camp, challenging the enemy to deſcend into the plain, which lay to the ſouth, and there to try their valour on equal ground. This offer not being accepted, he made a feint, as if he intended to march for Berwick; which putting the Scots in motion to annoy his rear, he took advantage of a great ſmoke cauſed by the firing their huts, and forded the river which had hitherto prevented the engagement. Both armies now approaching each other, they prepared for battle with great compoſure and magnanimity. The Engliſh divided their army into two lines; lord Howard led the main body of the firſt line; ſir Edmund Howard the right wing, and ſir Marmaduke Conſtable the left; the earl of Surrey himſelf commanded the centre of the ſecond line, aſſiſted by lord Dacres and ſir Edward Stanley on the right and left. The Scots drew up in three diviſions; the middle commanded by the king in perſon; the right by the earl of Huntley, and the left by the earls of Lenox and Argyle; a battalion under the earl of Bothwell, formed a body of reſerve.

Lord

Lord Huntley began the onſet, charging the diviſion of lord Howard with ſuch fury, that it was ſoon routed. But this diviſion was ſo ſeaſonably ſupported by lord Dacres, that the men rallied, and the battle became general. Both ſides fought with incredible valour, until the Highlanders, being galled by the Engliſh artillery, broke in, ſword in hand, upon the line commanded by the earl of Surrey; and at their head king James fought with the moſt forward of the nobility. The rear diviſion, however, could not advance in time to ſupport the advanced troops, ſo that a body of Engliſh intercepted their retreat. James, though almoſt ſurrounded, refuſed to quit the field; but, alighting from his horſe, formed his little troop into an orb, and in this poſture fought with ſuch deſperate courage, as reſtored the battle. The Engliſh therefore were again obliged to have recourſe to their artillery and arrows, which made a terrible havock; but night ſeparating the combatants, it was not before the morning that lord Howard perceived he had gained a great and glorious victory. The Engliſh had loſt no perſons of note; but almoſt the flower of the Scots' nobility fell in the battle. Ten thouſand of the common men were cut off; and a body, ſuppoſed to be that of king James, was ſent to London, where it remained unburied, becauſe a ſentence of excommunication* ſtill exiſted againſt James, for having leagued with France againſt the Holy See. But upon Henry's ardent application to the pope, abſolution was granted, and the body interred. However, the populace of Scotland ſtill continued to think their king alive; and it was given out among them that he had ſecretly departed on a pilgrimage to Jeruſalem.

Theſe ſucceſſes only ſerved to intoxicate Henry with pride and ſelf-importance; and while his idle pleaſures engroſſed his time, the preparations for repeated expeditions exhauſted his treaſures. As it was natural to ſuppoſe the old miniſters, who were appointed to direct him by his father, would not concur in theſe projects, Henry had for ſome time diſcontinued their advice, and chiefly confided in the counſels of Thomas, afterwards cardinal Wolſey, who countenanced and applauded all his favourite purſuits. Wolſey was the ſon of a private gentleman, and not of a butcher, as is commonly reported, of Ipſwich. He was ſent to Oxford ſo early, that he was a bachelor at fourteen, and at that time was called *the boy bachelor*. He roſe by degrees from one preferment to another, till he was made rector of Lymington in Hants, by the marquis of Dorſet, to whoſe children he had been preceptor. He had not long reſided on that living, when one of the juſtices of the peace put him in the ſtocks for being drunk, and raiſing diſturbances at a neighbouring fair. This diſgrace, however, did not retard his promotion; for he was recommended as chaplain to Henry VII. and being employed by that monarch in a ſecret negociation reſpecting his intended marriage with Margaret of Savoy, he acquitted himſelf with equal diligence and dexterity. That prince having given him a commiſſion to Maximilian, then at Bruſſels, was ſurpriſed, in leſs than three weeks, to ſee Wolſey preſent himſelf, with an aſſurance that he had ſucceſsfully fulfilled all his majeſty's commands. His dexterity on that occaſion procured him the deanery of Lincoln; and under that preferment, he was introduced by Fox, biſhop of Winchеſter, to Henry VIII. in hopes that he would have talents to ſupplant the earl of Surrey, the favourite at that time; and in this Fox was not miſtaken. Wolſey uſed every art to ſuit himſelf to the royal temper; he ſung, laughed, and danced with all the libertines of the court; neither his years, nor his diſcretion, nor his dignity as an elevated clergyman, were any check upon the vicious habits of the king, or his government. His character thus coming into a conſpicuous point of view, began to manifeſt itſelf the more. He was inſatiable in his acquiſitions, but ſtill more magnificent in his expence; of extenſive capacity, but ſtill more unbounded in enterpriſe; ambitious of power, but ſtill more deſirous of glory; inſinuating, engaging, perſuaſive, and at other times lofty, elevated, and commanding; haughty to his equals, but affable to his dependents; oppreſſive to the people, but liberal to his friends; more generous than grateful; formed to take the aſcendant in every intercourſe, but vain enough not to cover the deſigns of his real ſuperiority.

He had been advanced from the deanery to the biſhopric of Lincoln; but this he reſigned, on being promoted to the archbiſhopric of York. Upon the capture of Tournay, he had been promoted to the ſee of that place; but beſides, he got poſſeſſion, at very low leaſes, of the revenues of Bath, Worceſter, and Hereford, biſhoprics then filled by Italians, who were allowed to reſide abroad, and who were glad to compound for this indulgence, by parting with a conſiderable ſhare of their profits. Beſides many other church-preferments, he was allowed to unite with the ſee of York, firſt that of Durham, next that of Winchеſter; and his appetite ſeemed to ſharpen by the means that were taken to ſatisfy it. The pope, obſerving his great influence over the king, was deſirous of engaging him in his intereſts, and created him a cardinal. His houſehold conſiſted of eight hundred ſervants, of whom many were knights and gentlemen. Some even of the nobility put their children into his family, as a place of education; and whoever were diſtinguiſhed by any art or ſcience, paid court to the cardinal, and were often liberally rewarded. He was the firſt clergyman in England who wore ſilk and gold, not only on his habit, but alſo on his ſaddles, and the trappings of his horſes. Beſides theſe various diſtinctions, the pope conferred upon him that of legate, with a deſign to make him inſtrumental in draining the kingdom of money, upon pretence of employing it in a holy war againſt the Turks, but in reality to fill his own coffers. In this he ſo well ſerved the court of Rome, that the poſt of legate was conferred upon him for life; and he united in his perſon the dignified offices of legate, cardinal, archbiſhop, and prime miniſter.

It was now that Warham, lord chancellor, and archbiſhop of Canterbury, a man of a moderate temper, choſe rather to retire from public employment, than maintain an unequal conteſt with this haughty cardinal. Wolſey inſtantly ſeized on the chancellorſhip, and is ſaid to have exerciſed the duties of that employment with great impartiality. The duke of Norfolk, finding the king's treaſures exhauſted, and his taſte for expence increaſing, was glad to reſign his office of treaſurer, and retire from court. Fox, biſhop of Winchеſter, who had been the inſtrument of Wolſey's elevation, withdrew himſelf in diſguſt; the duke of Suffolk alſo went home with a reſolution to remain private; whilſt Wolſey availed himſelf of their ſalaries, and filled up their places by his creatures, or his perſonal aſſiduity. Theſe were vaſt ſtretches of power; and yet the churchman was ſtill inſatiable. He procured a bull from the pope, empowering him to make knights and counts, to legitimate baſtards, to give degrees in arts, law, phyſic, and divinity, and to grant all ſorts of diſpenſations. So much pride and power could not avoid giving high offence to the nobility; yet none dared to vent their indignation.

In order to divert the public attention, he entered into a correſpondence with Francis I. of France, who had taken various methods to work upon his vanity, and at laſt ſucceeded. In conſequence of that monarch's wiſhes, Henry was perſuaded by the cardinal to deliver up Tournay to the French; and he alſo agreed to an interview with that monarch. This ſplendid congreſs was held A. D. 1520, between Guiſnes and Ardres, near Calais, within the Engliſh pale, in compliment to Henry for croſſing the ſea. The two monarchs ſaluted each other in the moſt cordial manner, and retired into a tent erected for the purpoſe, where Henry produced the articles of their intended alliance. As he began to read the firſt words of it, "I, Henry, king," he ſtopped a moment, and then ſubjoined only "of England," without adding *France*,

the uſual title of the Engliſh monarchs. Francis remarked this delicacy, and expreſſed his approbation by a ſmile. Nothing could exceed the magnificence of the nobility of both courts on this occaſion. Many of them involved themſelves in large debts; and the penury of a whole life was ſcarcely ſufficient to reimburſe the extravagance of a few days. There was however ſomething illiberal in the mutual diſtruſts that were conſpicuous on this occaſion: the two kings never met without having the number of their guards counted on both ſides; every ſtep was carefully adjuſted; they paſſed each other in the middle point between both places, when they went to viſit their queens; and at the ſame inſtant that Henry entered Ardres, Francis put himſelf into the hands of the Engliſh at Guiſnes. But Francis, who is conſidered as the firſt reſtorer of genuine politeneſs in Europe, put an end to this low and ſuſpicious dealing. Taking with him two gentlemen and a page, he rode directly into Guiſnes, crying out to the Engliſh guards, that they were their priſoners, and deſired to be carried before the king their maſter. Henry was ſenſibly affected with the manly conduct and candour of Francis; and, taking him in his arms, "My brother (ſaid he) you have given me the moſt agreeable ſurpriſe; you have convinced me of the full confidence I may place in you; I ſurrender myſelf your priſoner from this moment." He then took from his neck a collar of pearls of great value, and putting it on Francis, begged him to wear it for the ſake of his priſoner. Francis accepted the noble preſent; and giving him a bracelet of double the value of the former, inſiſted on his wearing it for his ſake. Henry went the next day to Ardres, without guards or attendants; and confidence being now ſufficiently eſtabliſhed between theſe monarchs, they employed the reſt of the time in ſumptuous feaſts and tournaments. So gorgeous and ſtately was this tournament kept, that a defiance had been ſent through all the chief cities of Europe, importing, that Henry and Francis, with fourteen aids, would be ready in the plains of Picardy to anſwer all comers that were gentlemen, at tilt and tourney. Accordingly the monarchs, richly appareled, entered the liſts on horſeback; Francis ſurrounded with Henry's guards, and Henry with thoſe of Francis. They were both at that time the moſt comely perſonages of their age, and prided themſelves on their expertneſs in the military exerciſes. The ladies were always the umpires in theſe feats of chivalry; and they put an end to the encounter whenever they thought proper. It is ſuppoſed that the crafty French monarch was willing to gratify Henry's vanity by allowing him to enjoy a pre-eminence in theſe paſtimes. He ran a tilt againſt monſieur Grandeval, whom he diſabled at the firſt encounter. He engaged the valiant Montmorency, whom, however, he could not throw from his ſaddle. He fought at faulchion with a French nobleman, who gave up his courſer, in token of ſubmiſſion.

But ſuch unmeaning ſplendours were not calculated to appeaſe the jealouſy of the nobles at home, or quiet the murmurs of the people. The duke of Buckingham, a ſon of him who loſt his life in the reign of Richard III. was the foremoſt to complain. He had often been heard to treat the cardinal's pride and profuſion with contempt; but carrying his reſentment perhaps to an improper length, ſome court hirelings took care that Wolſey ſhould be appriſed of it. The ſubſtance of his impeachment was, that he had conſulted a fortune-teller concerning his ſucceſſion to the crown. This was but a weak pretext to take away the life of a nobleman, whoſe father had died in defence of the late king: but he was brought to a trial; and the duke of Norfolk, whoſe ſon had married his daughter, was created lord high ſteward, to preſide at this ſolemn procedure. He was condemned as a traitor, by a jury, conſiſting of a duke, a marquis, ſeven earls, and twelve barons; and was executed on Tower-hill, A. D. 1521.

The immenſe treaſures of Henry VII. were at length exhauſted on empty pageants, guilty pleaſures, or vain treaties and expeditions. But the king relied on Wolſey alone for repleniſhing his coffers. A treaty with France, which threatened a breach with the emperor, induced Henry to demand ſupplies; but as the parliament teſtified a reluctance to indulge his wiſhes, he followed the advice of Wolſey, and made uſe of his prerogative alone for that purpoſe. He iſſued out commiſſions to all the counties of England, for levying four ſhillings in the pound on the clergy, and three ſhillings and four-pence from the laity; nor did he attempt to cover the violence of the meaſure by giving it the name either of benevolence or loan. This unwarrantable ſtretch of royal power was ſoon oppoſed by the people; they were unwilling to ſubmit to impoſitions unknown till now; and a general inſurrection threatened to enſue. Henry had the prudence to ſtop ſhort in that dangerous path into which he had entered; and declared, by circular letters to all the counties, that what was demanded was only by way of benevolence. But the ſpirit of oppoſition, once roufed, was not ſo eaſily allayed; the citizens of London heſitated at the demand; and in ſome parts of the country inſurrections were actually begun, which were ſuppreſſed by the duke of Suffolk. Theſe impoſts, firſt adviſed by Wolſey, not ſucceeding, he began to loſe a little of his favour with the king; and this diſpleaſure was ſtill more increaſed by the complaints of the clergy, who accuſed him of extortion. Henry ſeverely reproved Wolſey, which rendered him more cautious and artful for the future. As an inſtance of his cunning, having built a noble palace, called York-place, at Weſtminſter, for his own uſe, fearing now the general cenſure againſt him, he made a preſent of it to the king, aſſuring him that from the moment the firſt ſtone was laid, he intended it as a preſent to his majeſty. Thus Wolſey's impunity ſerved to pave the way to greater extortions. In order to have a pretext for amaſſing ſuch ſums, he undertook to found two new colleges in Oxford, for which he received freſh grants from the pope and the king. To execute this favourite ſcheme, he obtained a liberty of ſuppreſſing ſeveral monaſteries, and converting their revenues to the benefit of his new foundation. Whatever might have been the pope's inducement to grant him theſe privileges, nothing could be more fatal to the pontiff's intereſts; for Henry was thus himſelf taught ſhortly afterwards to imitate what he had ſeen a ſubject perform with impunity.

Hitherto the adminiſtration of affairs was carried on by Wolſey; for the king was contented to loſe, in the embraces of his women, all the complaints of his ſubjects; and the cardinal undertook to keep him ignorant, in order to continue his own uncontrouled authority. But a period was approaching, that was to put an end to this miniſter's exorbitant power. One of the moſt extraordinary and important revolutions that ever employed the attention of man, was now ripe for execution. This was no other than the glorious Reformation, which ſhook off the fetters of Rome. To have an adequate idea of the riſe of this memorable event, it will be proper to take a curſory view of the ſtate of the church at that time, and to obſerve by what ſeemingly contradictory means Providence produces the moſt happy events.

The church of Rome had, for more than a thouſand years, been corrupting the ancient ſimplicity of the goſpel, and converting into a temporality the kingdom of another world. The popes had been frequently ſeen at the head of their own armies, fighting for their dominions with the arm of fleſh, and forgetting, in cruel maxims of ſtate, all the ſanctity of religion. The cardinals, prelates, and dignitaries of the church, lived like voluptuous princes, and ſome of them poſſeſſed eight or nine biſhoprics at once. Wherever the church governed, its power was marked with cruelty; ſo that to their luxuries, were added the crime of tyranny. But what moſt increaſed the hatred of the people againſt them, was the

ſelling

felling pardons and abfolutions for ſin at certain ſtated prices. A deacon, or ſubdeacon, who committed murder, was abfolved from his crime, and allowed to poſſeſs three benefices, upon paying twenty crowns. A biſhop or abbot might commit murder for about ten pounds of our money. Every crime had its ſtated value; and abſolutions were given for ſins not only already committed, but ſuch as ſhould be committed hereafter. The wiſeſt of the people looked with ſilent deteſtation on theſe impoſitions; and the ignorant themſelves began to open their eyes to ſuch glaring abſurdities.

Theſe vices and impoſitions were now almoſt come to a head; and the increaſe of arts and learning among the laity, propagated by means of the art of printing, which had been lately invented, ſoon taught them to reſiſt that power which was originally founded on deceit. Leo X. A. D. 1519, was at that time pope, and fedulouſly employed in building the noble church of St. Peter, at Rome. To procure money for carrying on the undertaking, he gave an unlimited commiſſion for felling indulgences. Theſe were to free the purchaſer from the pains of purgatory; and they would ſerve even for one's friends, if purchaſed with that intention. Shops were every where opened for their ſale; but in general they were to be had at taverns, brothels, and gaming-houſes. The Auguſtine friars had been employed in Saxony to preach up the virtue of theſe indulgences, and from this truſt had derived both profit and conſideration; but the pope's miniſter, ſuppoſing that they had found out illicit methods of ſecreting the money, transferred the employment from them to the Dominicans. Martin Luther, profeſſor in the univerſity of Wirtemberg, was an Auguſtine monk, and one of thoſe who reſented this tranſfer of the ſale of indulgences from their order to that of another. He began to ſhew his indignation by preaching againſt their efficacy; and being naturally of a fiery temper, he queſtioned even the authority of the pope himſelf. The people, who had long groaned under the papal tyranny, heard his diſcourſes with pleaſure, and defended him againſt the fury of his enemies. Frederic, elector of Saxony, ſurnamed the Wiſe, openly encouraged him; the republic of Zurich even reformed their church according to the new model; and Luther, who was naturally inflexible, was incapable, either from promiſes of advancement, or terrors of ſeverity, to recede from the part he had taken. It was in vain, therefore, that the pope iſſued out his bulls againſt Luther; it was in vain that the Dominican friars procured his books to be burnt; he expoſed the hypocriſy of the Dominicans, and burnt, in his turn, the pope's bull in the ſtreets of Wirtemberg. In the mean time, the diſpute was warmly conteſted by controverſial writing on both ſides. Luther, though oppoſed by the pope, the conclave, and all the clergy, ſupported his cauſe ſingly, and with ſucceſs. As the controverſy was new, his ignorance of many parts of the ſubject was not greater than theirs; and, ill as he wrote, they replied ſtill worſe. Opinions are often inculcated upon the minds of mankind, rather by confidence and perſeverance, than by ſtrength of reaſoning, or beauty of diction; and no man had more confidence or more perſeverance than he. In this diſpute it was the fate of Henry to be a champion on both ſides. His father, who had given him the education of a ſcholar, permitted him to be inſtructed in ſchool-divinity, which then was the principal object of learned enquiry. Henry, therefore, willing to convince the world of his abilities in that ſcience, obtained the pope's permiſſion to read the works of Luther, which had been forbidden under pain of excommunication. In conſequence of this, the king defended the ſeven ſacraments, out of St. Thomas Aquinas, with conſiderable dexterity; though it is ſuppoſed that Wolſey had the chief hand in directing him. The book being thus finiſhed, was ſent to Rome for the pope's approbation, which it is natural to ſuppoſe would not be withheld. The pontiff, raviſhed with its eloquence and depth, compared it to the labours of St. Jerome or St. Auguſtine; and rewarded the author with the title of *Defender of the Faith*, which has ever ſince remained as one of the titles of the Engliſh kings.

Beſides the religious obſervances, which contributed to render the Romiſh church odious and contemptible, there were ſtill others, proceeding from political meaſures. Clement VII. had ſucceeded Leo; and the hereditary animoſity between the emperor and the pope breaking out into open war, Clement was impriſoned in the caſtle of St. Angelo; and with thirteen cardinals, his adherents, kept in cuſtody for his ranſom. As the demands of the emperor were exorbitant, Henry undertook to negociate for the pope, and was procuring him a favourable treaty; when his holineſs, corrupting his guards, made his eſcape from confinement; and, leaving the treaty unfiniſhed, wrote Henry a letter of thanks for his mediation. The violence of the emperor taught Henry that popes might be injured with impunity; and the behaviour of the pope manifeſted but little of that ſanctity or infallibility to which the pontiffs had pretended. Beſides, as Henry had laid the pope thus under obligations, he ſuppoſed that he might, upon any emergency, expect a grateful return.

It was in this predicament of the church and the pope, that a new ſcene was to be opened, which was to produce endleſs diſturbances, and to change the whole ſyſtem of affairs in Europe. Henry had, A. D. 1527, been eighteen years married to Catharine of Arragon, who, as we have related, had been brought over from Spain to marry his elder brother, who died a few months after cohabitation. But, notwithſtanding the ſubmiſſive deference paid to the indulgence of the church, Henry's marriage with this princeſs did not paſs without ſcruple and heſitation. The prejudices of the people were in general bent againſt a conjugal union between ſuch near relations; and the late king, though he had ſolemnized the eſpouſals when his ſon was but twelve years of age, gave many intimations that he intended to annul them at a proper opportunity. Theſe circumſtances might have given Henry ſome doubts and ſcruples concerning the legitimacy of his marriage; but as he had three children by the princeſs, and as her character and conduct were blameleſs, he for a while kept his intentions private. But the queen was ſix years older than him; and the decay of her beauty, together with particular infirmities, had contributed to make him deſirous of another conſort. However, though he felt appalled at her perſon, yet for a long time he broke out into no flagrant act of contempt; but was contented to range from beauty to beauty among the ladies of his court, with whom his rank procured him an eaſy compliance. But Henry was carried forward by a motive much more powerful than the tacit ſuggeſtions of his conſcience. Among the maids of honour to the queen, was Anna Boleyn, the daughter of ſir Thomas Boleyn, a gentleman of diſtinction, and related to moſt of the nobility. He had been employed by the king in ſeveral embaſſies, and was married to a daughter of the duke of Norfolk. The beauty of Anna far ſurpaſſed that of all others who had hitherto appeared at this voluptuous court: and her education, which had been finiſhed at Paris, tended to ſet off her perſonal charms. Henry, who had never learnt the art of reſtraining any paſſion that he wiſhed to gratify, ſaw, and loved her; but, after ſeveral efforts to induce her to gratify his criminal deſires, he found that without marriage he had no chance of ſucceeding. This obſtacle, therefore, he undertook to remove; and, as his own queen was become hateful to him, in order to procure a divorce, he alleged that his conſcience rebuked him for having ſo long lived in inceſt with the wife of his brother. In this pretended perplexity, he applied to pope Clement VII. who owed him many obligations, deſiring him to diſſolve the bull of the former pope, which had given him permiſſion to marry Catharine; and to declare that it was not in the power, even of the holy ſee, to diſpenſe with a law ſo completely

completely at variance with the holy ſcriptures. The pope was now in the utmoſt dilemma: queen Catharine was aunt to the emperor who had lately made him a priſoner, and whoſe reſentment he dreaded to rekindle by injuring ſo near a relation; beſides, he could not in prudence declare the bull of the former pope illicit, for this would be giving a fatal blow to the doctrine of papal infallibility. On the other hand, Henry was his protector and friend, the dominions of England were the chief reſource from whence his finances were ſupplied, and the king of France, ſome time before, had obtained a bull of divorce in ſomewhat ſimilar circumſtances. In this exigence, he thought it the wiſeſt method to ſpin out the affair by a negociation: and in the mean time ſent over a commiſſion to Wolſey, in conjunction with the archbiſhop of Canterbury, to examine the validity of the king's marriage, and the former diſpenſation; granting them alſo a proviſional diſpenſation for the king's marriage with any other perſon. When this meſſage was laid before the council in England, they prudently conſidered that an advice given by the pope in this ſecret manner, might very eaſily be diſavowed in public; and that a clandeſtine marriage would totally invalidate the legitimacy of any iſſue the king ſhould have by ſuch a match. In conſequence of this, freſh meſſengers were diſpatched to Rome, and evaſive anſwers returned, the pope ſtill continuing to promiſe, recant, diſpute, and temporiſe; hoping that the king's paſſion would never hold out during the tedious courſe of an eccleſiaſtical controverſy. In this he was entirely miſtaken. Henry had been long taught to diſpute as well as the pope; and he quickly found, or perverted, many texts of ſcripture to favour his opinions. To his arguments he alſo added threats, aſſuring the pope, that the Engliſh were already ſufficiently diſpoſed to withdraw from the holy ſee; and that if he continued to refuſe his compliance, the whole country would readily follow the example of a monarch who, ſtung by ingratitude, ſhould deny all obedience to a pontiff by whom he had been treated with falſehood and duplicity.

The pope, at firſt dreading the reſentment of the king, had thoughts of complying with his ſolicitations, and ſent cardinal Campegio, his legate, to London, who, with Wolſey, opened a court for trying the legitimacy of the king's preſent marriage, and cited the king and the queen to appear before them. They both preſented themſelves; and the king anſwered to his name when called: but the queen, inſtead of anſwering to hers, roſe from her ſeat, and, throwing herſelf at the king's feet, in the moſt pathetic manner entreated him to have pity upon her helpleſs ſituation. A ſtranger, unprotected, unbefriended, ſhe could only rely on him as her guardian and defender, on him alone who knew her ſubmiſſion and her innocence, and not upon any court, in which her enemies prevailed, and would torture the laws to make them ſubſervient to their purpoſe; ſhe therefore rejected all ſubmiſſion to a trial, where ſhe could expect neither juſtice nor impartiality. Yet, notwithſtanding the queen's objections, the court proceeded, and Henry flattered himſelf that he ſhould now ſoon revel in the arms of Anna Boleyn. The principal point which came before the legates, was the proof of prince Arthur's conſummation of his marriage with Catharine, which ſome of his own expreſſions to that purpoſe tended to confirm. Other topics were preparing, tending to prove the inability of the pope himſelf to grant ſuch a diſpenſation; and the buſineſs ſeemed now to be drawing near a period, when Campegio, to the aſtoniſhment of all, prorogued the court, and transferred the cauſe to the court of Rome.

During theſe perplexing negociations, Henry expected to find in his favourite Wolſey, a warm defender, and a ſteady adherent; but in this he was deceived. Wolſey ſeemed to be in much the ſame dilemma with the pope. On the one hand, he was to pleaſe his maſter the king, from whom he had received a thouſand favours; and on the other, he dreaded to offend the pope, whoſe ſervant he more immediately was, and who had power to puniſh his diſobedience. He therefore reſolved to continue neuter; and, though of all men the moſt haughty, he gave way on this occaſion to Campegio, in all things, pretending a deference to his ſuperior ſkill in canon law. Wolſey's ſcheme of temporiſing was highly diſpleaſing to the king; but for a while he endeavoured to ſtifle his reſentment, until it could act with certainty. He for ſome time looked out for a man of equal abilities and leſs art; and it was not long before accident threw in his way Thomas Cranmer, of greater talents, and probably of more integrity. Cranmer was a profeſſor at Cambridge, but had loſt his office upon marrying contrary to the canon law, which enjoined celibacy to all the clergy. He had travelled in his youth into Germany; and it was there he became acquainted with Luther's works, and embraced his doctrines. This man happening to fall into company with Gardiner, ſecretary of ſtate, and Fox, the king's almoner, the buſineſs of the divorce became the ſubject of converſation. He gave it as his opinion, that the readieſt way to quiet the king's conſcience, or to extort the pope's conſent, would be to conſult all the univerſities of Europe upon the affair; an advice which pleaſed the king ſo much, that Cranmer was immediately taken into favour. Henry finding himſelf thus provided with a perſon who could ſupply Wolſey's place, he appeared leſs ſcrupulous in his reſentments againſt him. The attorney-general was ordered to prepare a bill of indictment againſt him; and he was ſoon after commanded to reſign the great ſeal. Crimes are eaſily found againſt a favourite in diſgrace, and the courtiers were not wanting to increaſe the catalogue of his errors. He was ordered to depart from York-place palace; and all his furniture and plate were ſeized for the king's uſe. The parliament alſo confirmed the ſentence of the court of Star-chamber againſt him, and he was ordered to retire to a country ſeat which he poſſeſſed at Eſher, and there await the king's further pleaſure. Still, however, he poſſeſſed the archbiſhopric of York, and biſhopric of Wincheſter; and the king gave him diſtant gleams of hope, by ſending him a ring, accompanied with a gracious meſſage. Wolſey, like every other imperious character, proud to his equals, and mean to thoſe above him, happening to meet the king's meſſenger on horſeback, immediately alighted, and throwing himſelf on his knees in the dirt, received, in that abject manner, thoſe marks of his majeſty's condeſcenſion. But all his hopes ſoon vaniſhed; for, after he had remained ſome time at Eſher, he was ordered to remove to his ſee of York; where he took up his reſidence at Cawood, and rendered himſelf popular by his great affability. He was not allowed to remain long unmoleſted in this retreat. He was arreſted by the earl of Northumberland, at the king's command, for high treaſon; and preparations were made for conducting him to London, in order to his trial. He at firſt refuſed to comply with the requiſition, as being a cardinal; but finding the earl bent on performing his commiſſion, he complied, and ſet out on the journey. In his way, he ſtaid a fortnight at the earl of Shrewſbury's; where one day, at dinner, he was ſuddenly ſeized with violent ſickneſs, which furniſhed a ſuſpicion that he had taken poiſon. Being brought forward from thence, he with much difficulty reached Leiceſter-abbey; where the monks coming out to meet him, he ſaid, "Father abbot, I am come to lay my bones among you;" and immediately ordered his bed to be prepared. As his diſorder increaſed, an officer being placed near, at once to guard and attend him, he ſpoke to him, a little before he expired, to this effect: "I pray you have me heartily recommended to his royal majeſty; he is a prince of a moſt royal carriage, and hath a princely heart; and rather than he will miſs, or want any part of his will, he will endanger one half of his kingdom. I have kneeled before him, for three hours together, to perſuade him from his will and appetite, but could not prevail. Had I

but ſerved God as diligently as I have ſerved the king, he would not have given me over in my grey hairs. But this is the juſt reward that I muſt receive for my indulgent pains and ſtudy, not regarding my ſervice to God, but only to my prince." He died November 29, 1530; and left two natural children, one of whom, being a prieſt, was loaded with church preferments.

Henry thus freed from the controul of a perſon who had for ſome time been an obſtacle to his views, he, by Cranmer's advice, had the legality of his marriage canvaſſed in all the noted univerſities of Europe. It was very extraordinary to ſee the king of England on one ſide ſoliciting the univerſities to be favourable to his paſſion; and, on the other, the emperor of Germany preſſing them with equal ardour to be favourable to his aunt. Henry liberally rewarded thoſe who declared on his ſide; and the emperor granted benefices to ſuch as voted in conformity to his wiſhes. Time has completely developed theſe intrigues. In this conteſt the liberalities, and conſequently the votes, of Henry prevailed. All the colleges of Italy and France unanimouſly declared his marriage with Catharine to have been repugnant to all law divine and human; and therefore alleged, that it was not in the power of the pope himſelf to grant a diſpenſation. The only places where this deciſion was moſt warmly oppoſed, were at Oxford and Cambridge: but they alſo finally concurred in the ſame opinion. But the agents of Henry were not content with the ſuffrages of the univerſities alone; the opinions of the Jewiſh rabbies were alſo demanded, becauſe their ſuffrages were eaſily bought up.

Henry, thus ſupported by the ſuffrages of the univerſities, was reſolved to oppoſe even the pope himſelf, and began in parliament by reviving an old law againſt the clergy, by which it was decreed, that all thoſe who had ſubmitted to the legatine authority, had incurred ſevere penalties. The clergy, to conciliate the king's favour, were obliged to pay a fine of 118,000l. A confeſſion was likewiſe extorted from them, that the king alone was the protector and ſupreme head of the church and the clergy of England. By theſe conceſſions a great part of the profits, and ſtill more of the power, of the church of Rome was cut off. An act was alſo paſſed againſt levying the firſt fruits, or a year's rent, of all the biſhoprics that fell vacant. The tie that held Henry to the church being thus broken, he determined to keep no further meaſures with the pontiff. He therefore privately married Anna Boleyn, whom he had created marchioneſs of Pembroke; the duke of Norfolk, uncle to the new queen, her father, mother, and doctor Cranmer, being all preſent at the ceremony. Soon after, finding the queen pregnant, he publicly acknowledged his marriage, and, to give his renunciation of the pope an appearance of triumph, he paſſed with his beautiful bride through London, with a magnificence greater than had ever been known before. The ſtreets were ſtrewed with flowers, the walls of the houſes were hung with tapeſtries, the conduits ran with wine, and an univerſal joy pervaded all ranks of the people, who were more pleaſed with the feſtivity, than ſolicitous about the motives of it. Catharine, who had all along ſupported her claims with reſolution, and yet with modeſty, was cited to a trial; but, refuſing to appear, ſhe was pronounced contumacious, and judgment given againſt the validity of her marriage with the king. At length, finding the inutility of further reſiſtance, ſhe retired to Ampthill, near Dunſtable, were ſhe wore out the reſt of her life in privacy and peace.

In the mean time, this intelligence had no ſooner reached the court of Rome, than the conclave was in commotion; and the pope, incited by their ardour, and terrified by the menaces of the emperor, publiſhed a bull, declaring queen Catharine alone to be Henry's lawful wife; and requiring him to take her again, with a denunciation of cenſures in caſe of a refuſal. On the other hand, Henry, finding his ſubjects had taken part with him, and willing to break the papal yoke, reſolved no longer to renew theſe ſubmiſſions, which had never been in their power to extort. The people had been prepared by degrees for this great innovation: care had been taken for ſome years to inculcate the doctrine, that the pope was entitled to no authority beyond the limits of his own dioceſe. The king, therefore, no longer heſitated. The parliament was at his devotion; the majority of the clergy was for him, as they had already declared againſt the pope, by decreeing in favour of the divorce; and the people, above all, wiſhed to ſee the church humbled, which had ſo long controuled them, and grown opulent by their labours and diſtreſſes. Thus all things conſpiring to cooperate with his deſigns, he ordered himſelf to be declared by his clergy the ſupreme head of the church, A. D. 1534; the parliament confirmed the title, aboliſhed all authority of the pope in England, voted all tributes formerly paid to the holy ſee as illegal, and entruſted the king with the collation to all eccleſiaſtical benefices. The nation came into the king's meaſures with joy, and now firſt took an oath, called the oath of ſupremacy; all the credit of the pope, that had ſubſiſted for ages, was at once overthrown, and none ſeemed to repine at the revolution, except thoſe who were immediately intereſted by their dependence on the court of Rome.

But, though Henry had thus ſeparated from the papal church, yet he not attached himſelf to the ſyſtem of any reformer. The young queen, however, engaged by intereſt as well as inclination, favoured the cauſe of Luther. Thomas Cromwell, who, from being a creature of Wolſey, and who, by an admirable defence of the conduct of his old maſter, had been taken into the confidence of the king, embraced the ſame views. Being a man of prudence and ability, he was very ſucceſsful in promoting the reformation, though in a concealed manner. Cranmer, who was now become archbiſhop of Canterbury, had all along adopted the proteſtant tenets, and had gained Henry's friendſhip by his candour and ſincerity. On the other hand, the duke of Norfolk adhered to the old mode of worſhip; and, by the greatneſs of his rank, as well as by his talents for peace and war, he had great weight in the king's council. Gardiner, lately created biſhop of Wincheſter, had enliſted himſelf in the ſame party; and the ſuppleneſs of his character, and the dexterity of his conduct, had rendered him extremely uſeful to it. The king, mean while, who held the balance between theſe contending factions, was enabled, by the courtſhip paid him by both proteſtants and catholics, to aſſume an immeaſurable authority. Yet, as the minds of thoſe who were of oppoſite ſentiments, were extremely exaſperated with each other, it naturally followed that ſeveral muſt fall a ſacrifice in the conteſt between ancient eſtabliſhments and modern reformation. The reformers were the firſt exhibited as unhappy ſpectacles of the vindictive fury of thoſe who ſupported ancient ſuperſtitions. James Bainham, a gentleman of the Temple, being accuſed of favouring the doctrines of Luther, had been brought before ſir Thomas More during his chancellorſhip; and, after being put to the torture, was condemned as a heretic, and burnt in Smithfield. Thomas Bilney, a prieſt, had embraced the new doctrine; but, being terrified into an abjuration, he was ſo ſtung with remorſe, that he went into Norfolk, publicly recanting, and expoſing the errors of popery. He alſo was ſeized, tried in the biſhop's court, condemned, and burnt. On the other hand, Henry was not remiſs in puniſhing thoſe who dared to call in queſtion the propriety of his late defection from Rome; and the monks, as they ſuffered moſt by the reformation, ſo they were the moſt free to the royal reſentment. To bring them more readily to puniſhment, the parliament had made it capital to deny the king's ſupremacy over the church; and many eccleſiaſtics loſt their lives by this new ſpecies of crime. But of all who fell a ſacrifice to this law, none are ſo much to

be regretted as John Fiſher biſhop of Rocheſter, and the celebrated ſir Thomas More.

The concurrence which the people gave to theſe ſeverities, added to the great authority which Henry, from his auſtere adminiſtration, poſſeſſed, induced him to proceed ſtill further in his ſcheme of innovation. As the monks had ſhewn him the greateſt reſiſtance, he reſolved to deprive them of future power. He accordingly directed Cromwell, ſecretary of ſtate, to ſend commiſſioners into every county, to inſpect the monaſteries. This was done with ſcrupulous exactneſs; and the commiſſioners are ſaid to have diſcovered monſtrous abuſes in many of the religious houſes. Whole convents of women were abandoned to all manner of lewdneſs; friars and monks accomplices in their crimes; pious frauds practiſed to impoſe on the liberality of the people; and cruel and inveterate factions maintained between the members of theſe ridiculous inſtitutions.

Henry thought he might with ſome degree of popularity, aboliſh theſe inſtitutions; but, willing to proceed gently at firſt, he gave directions to parliament, A. D. 1536, to go no further than to ſuppreſs the leſſer monaſteries, which poſſeſſed revenues below the value of two hundred pounds a year. By this act, three hundred and ſeventy-ſix monaſteries were ſuppreſſed; and their revenues, amounting to thirty-two thouſand pounds a year, were granted to the king, beſides their goods and plate, computed at a hundred thouſand pounds more. About two years after, he determined upon the entire deſtruction of all monaſteries whatſoever in England. Theſe, on the whole, amounted to ſix hundred and forty-five, of which twenty-eight had abbots, who enjoyed a ſeat in parliament. Ninety colleges were demoliſhed in ſeveral counties; 2374 chantries and free chapels, and a hundred and ten hoſpitals. The whole revenue of theſe eſtabliſhments amounted to one hundred and ſixty-one thouſand pounds, which was about a twentieth part of the national income. The loſs which was ſuſtained by the clergy upon this occaſion, was by no means ſo mortifying as the inſults and reproaches to which they were expoſed, for their former frauds and voluptuouſneſs. The numberleſs relics which they had amaſſed, to delude and extort money from the people, were now brought forward, and expoſed before the populace with marked contempt. Such were the violent meaſures with which the king proceeded againſt theſe feats of impoſture; but, as great murmurs were excited, he took care that all thoſe who could be uſeful to him, or even dangerous in caſes of oppoſition, ſhould be ſharers in the ſpoil. He either made a gift of the revenues of the convents to his principal courtiers, or ſold them at low prices. He alſo erected ſix new biſhoprics, Weſtminſter, Oxford, Peterborough, Briſtol, Cheſter, and Glouceſter, of which the laſt five ſtill continue. He alſo ſettled ſalaries on the abbots and priors, proportioned to their former revenues; and each monk was allowed a yearly penſion of eight marks for his ſubſiſtence.

Still, however, the monks became Henry's moſt formidable enemies, who, having their principal dependence on the pope, apprehended their total ruin would be the conſequence of aboliſhing his authority in England. Some of theſe entered into a conſpiracy that proved fatal to themſelves. Elizabeth Barton, commonly called the Holy Maid of Kent, had been ſubject to hyſterical fits, which threw her into unuſual convulſions. The ſilly people in the neighbourhood were ſtruck with theſe appearances, which they imagined to be ſupernatural; and Richard Maſters, vicar of the pariſh, founded on them a project, from which he hoped to acquire both profit and conſideration. He went to Warham archbiſhop of Canterbury; and, having given him a wonderful account of Elizabeth's fits, he ſo far wrought on that ſuperſtitious prelate, as to receive orders to attend her in her trances, and carefully to note down all her ſayings. The regard paid her by a perſon of ſo high a rank, ſoon rendered her an object of public conſideration; and it was eaſy for Maſters to perſuade the world, as well as the Maid herſelf, that her ravings were inſpirations of the Holy Ghoſt. Knavery ſoon after ſucceeding to deluſion, ſhe learnt to counterfeit trances; and then uttered ſuch ſpeeches as were dictated to her by her ſpiritual director. Maſters aſſociated with him Dr. Bocking, canon of Canterbury; and, though their deſign at firſt was only to raiſe the credit of an image of the Virgin, finding their impoſture ſucceeded, they extended their views, and taught their penitent to declaim againſt the new doctrines of the ſtate, and to prophecy the death of the king, if he perſiſted in his intended divorce from queen Catharine. Henry at length began to think the matter worthy of his attention; and, having ordered Elizabeth and her accomplices to be arreſted, they confeſſed, and ſuffered for their guilt. See the whole of this impoſture, under BARTON, vol. ii. p. 765.

Though the king had now entirely ſeparated himſelf from Rome, yet he was unwilling to follow any guide in conducting a new ſyſtem. He would not therefore wholly aboliſh thoſe practices, by which prieſtcraft had been carried to ſuch a height of abſurdity. He gave orders for the Bible to be tranſlated into the Engliſh tongue; but it was not permitted to be put into the hands of the laity. It was a capital crime to believe in the pope's ſupremacy; and yet equally heinous to be of the reformed religion. The incoherence of the king's opinions were at length delivered in a law, which, from its horrid conſequences, was termed the *bloody ſtatute*, by which it was ordained, that whoever denied tranſubſtantiation, whoever maintained that the communion in both kinds was neceſſary, whoever aſſerted that it was lawful for prieſts to marry, whoever alleged that vows of chaſtity might be broken, whoever maintained that private maſſes were unprofitable, or that auricular confeſſion was unneceſſary, ſhould be found guilty of hereſy, and burnt or hanged as the court ſhould determine. As the people were chiefly compoſed of thoſe who followed the opinions of Luther, and ſuch as ſtill adhered to the pope, this ſtatute, with Henry's former decrees, in a great meaſure excluded both, and opened a field for perſecution, which too ſoon had its full and fatal harveſt.

Theſe perſecutions, however, were preceded by one of a different nature, ariſing neither from religious nor political cauſes, but from ſheer brutality and inordinate luſt. Anna Boleyn, his queen, had been always a favourer of the reformation, and conſequently had many enemies on that account. The king's paſſion for her was allayed; and he now languiſhed for a freſh beauty, the amiable Jane Seymour, maid of honour to the queen. As ſoon, therefore, as the queen's enemies perceived the king's diſguſt, they reſolved on framing imaginary crimes againſt her, which they knew his paſſions would quickly magnify into real. The counteſs of Rochford in particular, who was married to the queen's brother, herſelf a woman of infamous character, began with the moſt cruel inſinuations againſt the reputation of her ſiſter-in-law. She pretended that her own huſband was engaged in an inceſtuous correſpondence with his ſiſter; and repreſented all the harmleſs levities of the queen as favours of a criminal nature. The king's jealouſy was firſt publicly manifeſted in a tournament at Greenwich, on the 1ſt of May, 1536; where the queen happened to drop her handkerchief, as was inſinuated, to one of her minions to wipe his face. Though this might have been very harmleſs, or wholly unintended, yet the king abruptly retired, and ſent orders to have the queen confined to her apartment. Anna ſmiled, thinking the king was in jeſt; but, when ſhe found it was a ſerious affair, ſhe received the ſacrament in her cloſet, ſenſible of what little mercy ſhe had to expect from ſo implacable a tyrant.

In the mean time her enemies were not remiſs in inflaming the accuſation. The duke of Norfolk, from his attachment to the old religion, took care to produce ſeve-

ral witneſſes, accuſing her of incontinency with ſome of the meaner ſervants of the court. Four perſons were particularly pointed out as her paramours; Henry Norris, groom of the ſtole; Weſton and Brereton, gentlemen of the king's bed-chamber; and Mark Smeton, a muſician. As theſe had ſerved her with much aſſiduity, their reſpect was the more eaſily conſtrued into a criminal attachment; and under this pretence ſhe was committed to the Tower. Every perſon at court abandoned the queen in her diſtreſs, except archbiſhop Cranmer, who wrote a letter to the king in her behalf, but without effect. On the twelfth of the ſame fatal month of May, Norris, Weſton, Brereton, and Smeton, were tried in Weſtminſter-hall, when Smeton was prevailed upon, by the promiſe of a pardon, to confeſs a criminal correſpondence with the queen; but he was never confronted by her he accuſed; and his execution with the reſt, ſhortly after, ſerved to acquit her of the charge. Norris, who had been much in the king's favour, had an offer of his life, if he would confeſs his crime, and accuſe his miſtreſs; but he rejected the propoſal with contempt, and died, profeſſing her innocence to the laſt.

After this ſcene of arbitrary and ſavage perſecution, the queen and her brother were tried by a jury of peers; but upon what proof the crime of inceſt was urged againſt them, has no where appeared. The chief evidence, it is ſaid, amounted to no more than that Rochford, her own brother, had been ſeen to lean on her bed before company. Part of the charge was, that ſhe had declared that the king never had her heart; which was ſtrained into a breach of a late ſtatute, by which it had been declared criminal to throw any ſlander upon the king, queen, or their iſſue. The queen, unaſſiſted by counſel, defended herſelf with ſuch confident integrity and preſence of mind, that the ſpectators could not refrain from publicly declaring her innocent. She anſwered diſtinctly to all the charges brought againſt her: but the king's authority was not to be controuled; ſhe was declared guilty by the hirelings of the court, who ſentenced her to be burnt or beheaded, at the king's pleaſure. When this terrible ſentence was pronounced, ſhe could not help offering up an invocation to Heaven, vindicating her innocence; and, in a moſt pathetic ſpeech to her judges, averred the injuſtice of her condemnation. She was beheaded on the 19th of May, 1536, by the executioner of Calais, who was brought over, as being more expert than any one in England. Her body was thrown into a common cheſt of elm-tree, made to hold arrows, and was buried in the Tower. Anna Boleyn appeared to be guilty of no other crime than that of having ſurvived the king's affections; and, although many crowned heads had been put to death in England, ſhe was the firſt that underwent all the ſolemnities of the law in ſuch caſes, being formally beheaded on a ſcaffold. See particulars of her life, and execution, under BOLEYN, vol. iii. p. 156.

The people beheld her fate with pity; but with reſentment, when they diſcovered the true cauſe of the tyrant's impatience to deſtroy her; for the very next day after her execution, he married lady Jane Seymour, his callous heart being no way ſoftened by the wretched fate of one who had been ſo lately the object of his warmeſt affections. He alſo ordered his parliament to grant him a divorce between her ſentence and execution; and thus he endeavoured to baſtardiſe the illuſtrious queen Elizabeth, the only child he had by Anna Boleyn, as he had in the ſame manner formerly baſtardiſed Mary, his only child by queen Catharine.

It is eaſy to imagine that ſuch capricious cruelties were not obſerved by the people without indignation; but their murmurs were fruitleſs, and their complaints of little avail. Henry now made himſelf umpire between thoſe of the ancient ſuperſtition, and the modern reformation; both looked up to him for aſſiſtance, and at mutual enmity with each other: he took advantage of them all. He had the powerful men of the nation on his ſide, by the many grants he had made of the lands and goods of which he had deſpoiled the monaſteries. It was eaſy for him, therefore, to quell the various inſurrections which his conduct produced, as they were neither headed by any powerful man, nor conducted upon any principle of foreſight. The firſt inſurrection was in Lincolnſhire, headed by Mackrel, prior of Barlings; and, though this tumultuary army amounted to twenty thouſand men, yet, upon a proclamation being made with aſſurances of pardon, the populace diſperſed; and Mackrel, with ſome more of the leaders, falling into the king's hands, were put to death. Another inſurrection broke out in the north, amounting to above forty thouſand men, who were preceded by prieſts, carrying enſigns before the army, and all chiefly inſpired with enmity againſt Cromwell, whom they conſidered as the inſtigator of the king's ſeverities. But theſe alſo diſperſed upon finding their proviſions ſhort; after having in vain endeavoured to attack the duke of Norfolk's army, which was ſeparated by a rivulet that was ſwoln by heavy rains. A new inſurrection then broke out, headed by Muſgrave and Tilby; but the inſurgents were defeated by the duke of Norfolk; after which, lord d'Arcy, ſir Robert Conſtable, ſir John Bulmer, ſir Thomas Percy, ſir Stephen Hamilton, Nicholas Tempeſt, and William lord Lumley, were condemned and executed. Henry, enraged by theſe revolts, was reſolved to ſuffer no bounds to his ſeverities; but the birth of a prince, afterwards Edward VI. and the death of the queen, who ſurvived the birth only two days, made a ſmall pauſe in the fierceneſs of his ſavage unrelenting mind.

In the midſt of theſe violent meaſures, A. D. 1537, the fires of Smithfield blazed with the combuſtion of human fleſh. Thoſe who adhered to the pope, or thoſe who followed the doctrines of Luther, were alike the objects of royal vengeance, and of eccleſiaſtical perſecution. The principal victim of Henry's pretended zeal, was poor John Lambert, a ſchoolmaſter in London, who was ſentenced to the flames, for denying tranſubſtantiation, or the doctrine of *the real preſence*. He was therefore burnt at a ſlow fire, his legs and thighs being firſt conſumed; and, when there appeared no end of his tortures, ſome of the guards, more merciful than the reſt, lifted him on their halberts into the midſt of the flames, and thus put a more ſpeedy end to his ſufferings. This poor man's death was the ſignal for that of many more. The ſtatute of ſix articles was now paſſed, A. D. 1539, called the *bloody ſtatute*; and no leſs than five hundred perſons were impriſoned and perſecuted for contradicting the opinions ſet forth in that ſhameful formula of eccleſiaſtical law.

During theſe horrid tranſactions, the libidinous Henry was reſoved to take another queen, and, after ſome negociation upon the continent, he contracted a marriage with Anne of Cleves; to fortify, as he pretended, his alliances with the princes of Germany. The king, upon her landing, went privately to meet her at Rocheſter, where he was very much damped in his amorous deſires. He found her not only coarſe and maſculine, but utterly devoid of grace and beauty. To Cromwell, who had been principally active in making up the match, he gave her the epithet of the *great Flanders mare*; and ſwore that he could never ſettle his affections upon her. In ſhort, Henry's averſion to his new queen increaſed every day; and he reſolved to get rid of her and his prime-miniſter together. The fall of this favourite was ardently wiſhed for by the nation. The nobility naturally hated a man, who, from mean birth, was placed before the firſt perſons in the kingdom; for, beſides being vicar-general, which gave him almoſt abſolute authority over the clergy, he was lord-privy-ſeal, lord-chamberlain, maſter of the wards, and knight of the garter; and, to carry his exaltation ſtill higher, he had been recently made earl of Eſſex. The proteſtants diſliked him for his concurrence with the king's will in their perſecution; and the papiſts deteſted him, as the inveterate enemy of their religion.

It

It only remained, therefore, with the king, to haſten or retard the deſtruction of a man who had no partiſan in the nation, except himſelf. But he had already a new motive for increaſing his diſpleaſure. He had fixed his luſtful eye on Catharine Howard, niece to the duke of Norfolk; and the only means of gratifying this inſatiate paſſion was, as in former caſes, by diſcarding the preſent queen, to make room for a new one. The duke of Norfolk had long been Cromwell's mortal enemy, and eagerly embraced this opportunity to deſtroy a man he conſidered as his rival. He therefore made uſe of every artifice to ruin the favourite; and when his project was ripe for execution, he obtained a commiſſion from the king to arreſt Cromwell for high-treaſon. His diſgrace was no ſooner known, than all his friends forſook him, except Cranmer, who earneſtly pleaded for him; but in vain. He was accuſed in parliament of hereſy and treaſon, and, without being ever heard in his own defence, was condemned to ſuffer the pains of death, as the king ſhould think proper to direct. Cromwell's fortitude ſeemed wholly to forſake him in this dreadful exigency. On the 28th of July, 1540, he ſubmitted his neck to the executioner, who mangled him in a ſhocking manner. A few days after his death, a number of people were executed together upon very different accuſations; ſome for having denied the king's ſupremacy, and others for having maintained the doctrines of Luther.

The parliament, upon very ſlight grounds, pronounced a divorce between Henry and his wife Anne of Cleves: ſhe quietly accepted a penſion, and continued to reſide in England. About a month after the death of Cromwell, the king publicly declared his marriage with Catharine Howard. This was regarded as a favourable incident by the catholic party; and the ſubſequent events for a while turned out to their wiſh. The king's councils being entirely directed by Norfolk and Gardiner, a furious perſecution commenced againſt the proteſtants; and the law of the bloody ſtatute was executed with rigour; inſomuch that a foreigner, then reſiding in England, obſerved, that thoſe who were againſt the pope were burned, and thoſe who were for him were hanged. The king, with an oſtentatious impartiality, reduced all parties to an equal ſhare of ſubordination, and infuſed terror into every breaſt. But the meaſure of his abſurdities was not yet filled up. He had thought himſelf happy in his new marriage. He was ſo captivated with the queen's accompliſhments, that he gave public thanks for his felicity, and deſired his confeſſor to join with him in the ſame thankſgiving. This joy, however, was of ſhort duration. While the king was at York, upon an intended conference with the king of Scotland, a man of the name Laſcelles, waited upon archbiſhop Cranmer at London; and, from the information of this man's ſiſter, who had been ſervant to the ducheſs-dowager of Norfolk, he gave a very unexpected account of the queen's incontinence. He averred that ſhe had led a very lewd courſe of life before her marriage, and had carried on a criminal correſpondence with two men, named Derham, and Mannock; and that ſhe continued to indulge herſelf in the ſame laſcivious pleaſures ſince ſhe had been raiſed to the crown. Cranmer, equally ſurpriſed and embarraſſed at this intelligence, made the king acquainted with the whole affair, on his return to London. Henry at firſt diſbelieved the report; he therefore ordered the keeper of the privy-ſeal to examine Laſcelles, who perſiſted in his former narrative, and even produced his ſiſter to confirm the fact. Upon this, Derham and Mannock, being arreſted, confeſſed their guilt, and the queen's incontinence. They went ſtill further, by impeaching the old lady Rochford, who had formerly been inſtrumental in procuring the death of Anna Boleyn. They alſo alleged that this lady had introduced one Culpepper into the queen's bed-chamber, who ſtayed with her from eleven at night till four in the morning. When the queen was firſt examined, ſhe totally denied the charge; but finding that her accomplices were her accuſers, ſhe confeſſed her incontinence before marriage, but denied her having diſhonoured the king's bed ſince their union. But three maids of honour, who had been admitted to her ſecrets, ſtill further alleged her guilt; and ſome of them even confeſſed having paſſed the night in the ſame bed with her and her paramours. The king was ſo affected, that he burſt into a flood of tears, not knowing how to vent his rage, or hide his ſhame, at having been ſo completely duped. Derham, Mannock, and Culpepper, were executed; but Henry was reſolved to throw the odium of the queen's death upon the parliament, who had always ſhewn themſelves the ready miniſters of his will. Theſe tools of arbitrary authority, being informed of the queen's crime and confeſſion, quickly found her guilty, and petitioned the king that ſhe might be puniſhed with death; that the ſame ſentence might be inflicted on lady Rochford, the accomplice of her debaucheries; and that her grand-mother, the ducheſs-dowager of Norfolk, together with her father, mother, and nine others, as having been privy to the queen's irregularities, ſhould participate in her puniſhment. With this petition the king was highly pleaſed, and they were all condemned to death by an act of attainder. The queen was beheaded on Tower-Hill, February 12, 1542, together with lady Rochford, who found but little compaſſion with the public. The queen was more pitied, as ſhe owned that ſhe had led a diſſolute life before marriage, but moſt ſeriouſly denied that ſhe had ever been untrue to the king's bed.

Henry having thus, by various acts of tyranny, proved himſelf deſtitute of juſtice, morals, or humanity, took it into his head to compoſe a book of religion, by which his ſubjects were in future to regulate all their belief and actions. Having procured an act of parliament, A. D. 1541, in which all ſpiritual ſupremacy was declared to be veſted in himſelf, he publiſhed a ſmall volume, called the "Inſtitution of a Chriſtian Man," which was received by the convocation, and voted to be the infallible rule of orthodoxy. All the abſtruſe points of juſtification, faith, free will, good works, and grace, are there defined, upon nearly the principles of the reformers; while the ſacraments, which a few years before were only allowed to be three, are increaſed to their old number of ſeven, conformable to the catholics. But the king was not long ſatisfied with this rule of belief. He ſoon after procured a new book to be compoſed, called the "Erudition of a Chriſtian Man," which he publiſhed upon his own authority; and though this new creed differed a great deal from the former, yet he was no leſs poſitive in requiring univerſal aſſent to this, than he had before been to that of the other. In both theſe books he was very ſtrenuous in enforcing the doctrine of paſſive obedience. And to heighten his tyranny, the parliament made a law, by which the king's proclamations were to have the ſame force as the ſtatutes; and to facilitate the execution of this act, by which all ſhadow of liberty was totally annihilated, they appointed that any nine of the privy-council ſhould form a legal court for puniſhing diſobedience to his will. Thus the king was empowered to iſſue a proclamation to deſtroy the lives, or take away the properties of any of his ſubjects; and the only appeal was to himſelf in council.

In the year 1543, Henry once more changed his condition, by marrying his laſt wife, Catharine Parr. She had been the wife of the late lord Latimer, and was conſidered as a woman of diſcretion and virtue. She had already paſſed the meridian of life, and knew how to manage this capricious tyrant with prudence and ſucceſs. Henry was now in his dotage, and verging on imbecility: he was almoſt choaked with fat, and had contracted a moroſe air, and forbidding aſpect. Nevertheleſs, this woman, ſacrificing her appetites to her ambition, ſo far prevailed in gaining his confidence, that ſhe was appointed regent of the kingdom during his abſence in France, whither he vainly paſſed over at the head of thirty thouſand men, to

profecute a war which had been declared between him and the French king. He there behaved, as in all his former expeditions, with ineffectual oftentation. Inftead of marching his troops into the heart of the country, he fat down before Boulogne, which was obliged to capitulate; while his ally, the emperor of Germany, made a feparate peace. Henry was thus obliged to return to England, where he found his fubjects ready to offer him their accuftomed adulation, for an enterprife which had only betrayed his weaknefs and folly. Upon his return from this fruitlefs and expenfive expedition, his obfequious parliament granted him a fubfidy equal to his demands, and added to it a gift, which will make their memory for ever odious to pofterity. By one vote they beftowed upon him all the revenues of the two univerfities, and of all places of education and public worfhip. But rapacious as this monarch was, he refrained from defpoiling thofe venerable feats of learning of their ancient endowments; however, they owed their fafety to his lenity, and not to the protection of this bafe and degenerate parliament. Nor was he lefs juft with regard to the fuggeftions of his council, who had long conceived an hatred againft Cranmer, and laboured to deftroy him; and alfo againft the queen, whofe rectitude and fidelity they endeavoured to impeach. Henry, in thofe two inftances, fhewed himfelf fuperior to the machinations of wicked and defigning men.

Still, however, the king's feverity on the fcore of religion, continued as violent as ever. For fome time he had been afflicted with an ulcer in his leg; the pain of which, added to his great corpulency, and other infirmities, increafed his natural irafcibility, fo that none could approach him without terror. It was not to be expected, therefore, that any who differed from him in religious opinions, could hope for pardon. Among the many, whofe unmerited fufferings excite pity and indignation, the fate of Anne Afkew will ever be remembered. This lady was a woman of merit as well as beauty; and for her attachment to the reformation, was condemned to be burnt alive. With her fuffered in the fame caufe, Nicholas Belenian, a prieft; John Lafcelles, of the king's houfehold; and John Adams, a tailor; who, upon being tied to the ftake, were informed, that upon recanting, they would be granted their lives. But they refufed, and faw with tranquillity the executioner kindle the flames which confumed them.

Though the king's health was now rapidly declining, yet his implacable cruelties were not the lefs frequent or violent. His refentments were diffufed indifcriminately to all; at one time a proteftant, and at another a catholic, were the objects of his feverity. The duke of Norfolk, and his fon the earl of Surrey, were the laft that felt the injuftice of this tyrant's perfecution. The duke was a nobleman who had ferved the king with great fidelity; his fon was a young man of the moft promifing hopes, who excelled in every accomplifhment that became a fcholar, a gentleman, and a foldier. He excelled in all the military exercifes, and was the firft who brought our language, in his poetical pieces, to any degree of refinement. Thefe qualifications, however, were no fafeguard againft Henry's implacable malevolence. The earl of Surrey had dropt fome expreffions of refentment againft the king's minifters, upon being difplaced from the government of Boulogne; and the whole family were become obnoxious by the fate of Catharine Howard, the late queen. From thefe motives, therefore, orders were given to arreft the father and fon; and they were both committed to the Tower. Surrey being a commoner, his trial was the more expeditious; and there were many informers bafe enough to betray the intimacies of private converfation, and all the connections of blood. The ducheffs dowager of Richmond, Surrey's own fifter, appeared among the number of his accufers; and fir Richard Southwell alfo, his moft intimate friend, charged him with infidelity to the king. He was therefore condemned for high treafon, and executed on Tower-hill, January 19, 1547. In the mean time the duke endeavoured to mollify the king by letters and fubmiffions; but the monfter's heart was callous to tender impreffions. The parliament found a bill of attainder againft the duke of Norfolk, though the only crime his accufers could allege againft him was, "that he had faid the king was fickly, and could not hold out long; and that the kingdom was likely to be torn between contending parties of different perfuafions." Cranmer, though engaged for many years in an oppofite party to Norfolk, would have no hand in fo unjuft a profecution; but retired to his feat at Croydon. However, the death-warrant was made out, and immediately fent to the lieutenant of the Tower. The duke prepared to meet his fate, and the following morning was to be his laft; but an event of greater confequence to the kingdom intervened, and prevented his execution.

The king had been for fome time approaching towards his end; and for feveral days all thofe about his perfon plainly faw that his fpeedy diffolution was inevitable. His anguifh and remorfe were at this time greater than can be expreffed; he defired that Cranmer might be fent for; but before that prelate could arrive, he was fpeechlefs. Cranmer defiring him to give fome fign of his dying in the Chriftian faith, he fqueezed his hand, and immediately expired, on Friday the 28th of January, 1547, after a reign of thirty-feven years and nine months, in the fifty-fixth year of his age.

Henry was fix times married: two of his queens were beheaded; two of them divorced; one of them died foon after her marriage; the laft, after narrowly efcaping the block, furvived him. By his firft queen, Catharine of Spain, he had two fons, who died in their infancy, and one daughter named Mary, afterwards queen of England. By his fecond queen, Anna Boleyn, he had one daughter, named Elizabeth, who fucceeded her fifter in the throne. By his third queen, Jane Seymour, he had one fon, named Edward, his immediate fucceffor. By his laft three queens he had no iffue. By Elizabeth Blount, daughter of fir John Blount, he had a natural fon, named Henry, of whom he was exceedingly fond, but who died when he was only about feventeen years old.

By his laft will, for fettling the fucceffion, Henry bequeathed his crown and dominions to his fon prince Edward, and the heirs of his body lawfully begotten; failing fuch heirs, to his daughter the princefs Mary, and her heirs; failing thefe, to his daughter the princefs Elizabeth, and her heirs; failing thefe, to the lady Frances, eldeft daughter of his late fifter the French queen, and her heirs; failing thefe, to lady Eleanor, youngeft daughter of the French queen, and her heirs; and failing thefe, to his next lawful heir. His two daughters, Mary and Elizabeth, being unmarried, it was declared, that if they married without the confent of his executors, or the major part of them, they fhould lofe their right to the fucceffion, and be confidered as being dead without lawful heirs. To each of thefe two daughters he gave 10,000l. in plate, jewels, and furniture, as a marriage portion, and an annuity of 3000l. to live upon while they were unmarried. To fhew the faith in which he died, he did not forget to appoint a great number of maffes to be faid for the health of his foul.

Very different characters have been drawn of Henry VIII. by different authors. Some have repreſented him as a brave, wife, juft, and merciful, prince, with few vices or imperfections; while others have painted him in the blackeft colours, as a cruel unrelenting tyrant, with few or no virtues or good qualities. Thofe, however, who have delineated his character with the greateft care and candour, have purfued a middle courfe, by doing juftice to his good actions and commendable qualifications, while they have not overlooked his criminal paffions and his vices. The following fhort defcription of the moft ftriking features in the character of this prince may, it is imagined, be juftified by authentic monuments, and the real tranfactions of his reign. He was very tall, and in his youth handfome, ftrong, and active. He delighted and excelled

in all manly exercifes; as riding, tilting, hunting, hawking, leaping, wreſtling, &c. His mien was ſtately, and his air majeſtic. Theſe perſonal accompliſhments gained him great popularity in the early part of his reign. He was fond of muſic, a good performer on ſeveral inſtruments, and no contemptible compoſer. Great pains had been taken with his education, and he had a genius capable of acquiring knowledge. He ſpoke ſeveral languages fluently, particularly the Latin and French: but unfortunately his favourite ſtudy was ſchool-divinity; in which he imagined himſelf ſo great a doctor, that he entered the liſts with Martin Luther, in his famous book *De Septem Sacramentis*; for which he received ſuch a deluge of praiſe as no author of an inferior rank muſt ever expect. We have no reaſon to ſuſpect that he was deficient in perſonal courage, though he was not forward in expoſing himſelf to danger. His underſtanding was good, when not blinded by thoſe paſſions which were the ſources of all his errors and of all his crimes. In his youth the love of pleaſure was conſtantly predominant, with an extravagant fondneſs for royal feaſts, tilts, tournaments, and other pompous diverſions of thoſe times. As he advanced in years, paſſions of a darker complexion and more dangerous tendency appeared. From his father he inherited an extreme jealouſy of all who were related to the royal family, and could be ſuppoſed to entertain the moſt diſtant thoughts of the throne. To this ſeveral perſons of high rank fell a ſacrifice. His exceſſive ſelf-conceit, and the high opinion he entertained of his own wiſdom, though it was rather a ridiculous than a criminal paſſion, had the very worſt effects. It rendered him greedy of flattery, and highly pleaſed with adulation. The two great parties, the friends of the pope, and the favourers of the reformation, tried to exceed one another in a ſervile compliance with all his humours, which rendered him intolerably proud, and impatient of contradiction. This alſo increaſed his authority, ſubjected both theſe parties to his will, and put it in his power to do whatever he pleaſed. The court that was paid him by the two great rivals, the emperor of Germany and the king of France, contributed ſtill further to inflame his pride; and, in ſpite of all his faults, it rendered him popular among his own ſubjects, who were pleaſed to ſee their ſovereign the arbiter of Europe. Though prodigality and avarice are oppoſite paſſions, they were poſſeſſed by Henry in the extreme. Of his prodigality, the immenſe ſums he ſquandered are a ſufficient proof; and his hiſtory affords ſufficient evidence of his avarice. At two different times he borrowed great ſums from many of his ſubjects, and procured acts from his ſervile parliaments, abſolving him from the obligation of repaying them, though he had given his creditors ſecurity under the privy ſeal. But of all his failings, his implacable malice was the moſt terrible. When he conceived a diſlike of any perſon, their ruin was inevitable; no ſubmiſſions, no ſupplications, no interceſſions, no evidence of their innocence, could ſave them from deſtruction. In a word, the character he is ſaid to have given of himſelf, "That he had never ſpared a man in his anger, nor a woman in his luſt," ſeems to be but too well founded; and juſtifies thoſe who have denominated him a tyrant. Yet, in the midſt of his cruelties and perſecuting zeal, he was poſſeſſed of ſome valuable accompliſhments, and was capable at times of generous and laudable actions, and of kind affections. He was certainly the inſtrument, in the hand of Providence, of much good to his poſterity, by diſſolving the ſupremacy of the church of Rome, and laying the foundation of the proteſtant faith.

Edward VI. ſucceeded to the throne in the ninth year of his age, A. D. 1547. The late king, in his will, fixed the majority of the young prince at the completion of his eighteenth year; and, in the mean time, appointed ſixteen executors of his will, to whom, during the minority, he entruſted the government of the king and kingdom. The firſt act of the executors was to chooſe the earl of Hertford, afterwards made duke of Somerſet, as lord protector; and in him was veſted all the regal power, with a privilege of naming his own privy-council. This was a favourable ſeaſon for thoſe who profeſſed the reformed religion. They no longer ſtifled their ſentiments, but maintained their doctrines openly, both in preaching and in teaching, even while the laws againſt them continued in force. The protector had long been regarded as the partizan of the reformers; and, being now freed from reſtraint, he ſcrupled not to expreſs his intention of correcting all the abuſes of the ancient religion, and of adopting ſtill more the doctrines of Luther. His power was not a little augmented by his ſucceſs againſt an incurſion of the Scots, in which about eight hundred of their army were ſlain; and the popularity which he gained upon this occaſion, ſeconded his views in the propagation of the new doctrines. But the character of Somerſet did not ſtand in need of props acquired in this manner; for he was naturally affable and courteous to the meaneſt ſuitor, while all his actions were directed by motives of piety and candour. In this view the protector, in his ſchemes for advancing the reformation, had always recourſe to the counſels of Cranmer, the primate; who, being a man of moderation and prudence, was averſe to violent changes, and determined to bring over the people by inſenſible degrees to the reformed ſyſtem. The perſon who oppoſed with the greateſt authority theſe advances, was Gardiner biſhop of Winchester; who, though he had not obtained a place at the council-board, yet, from his age and experience, was regarded by moſt men with veneration. Upon a general viſitation of the church, Gardiner ſtill defended the uſe of images, which was now very openly attacked by the proteſtants; he even wrote an apology for holy water; but he particularly alleged, that it was unlawful to make any change in religion during the king's minority. This oppoſition of Gardiner drew on him the indignation of the council; and he was ſent to the Fleet priſon, where he was treated with much ſeverity.

Theſe internal regulations were ſomewhat retarded by the war with Scotland, which ſtill continued to rage with violence. But a defeat which that nation ſuffered at Muſſelborough, in which above ten thouſand periſhed on the field of battle, induced them to ſue for peace; and the protector returned to ſettle the buſineſs of the reformation, which was as yet only in its infancy. But, though he acquired great popularity by this expedition, he did not fail to attract the envy of ſeveral noblemen, and even of the queen-mother. However, he ſtill encouraged the reformation, and gave more conſiſtency to the tenets of the church. The cup was reſtored in the ſacrament of the Lord's ſupper; private maſſes were aboliſhed; the king was empowered to create biſhops; vagabonds were adjudged to be ſlaves, and marked with a red-hot iron; an act commonly ſuppoſed to be levelled againſt the ſtrolling prieſts and friars. An order was alſo iſſued for the removal of all images from the churches; a regulation which was much deſired by the reformers, and which alone, with regard to the populace, amounted almoſt to a perfect change of the eſtabliſhed religion.

Theſe innovations, evidently calculated for the good of the people, were not brought about without great ſtruggles at home, while the protector himſelf was buſily employed againſt the Scots, who, ſeconded by France, were puſhing on their depredations with unceaſing vigilance. There was ſtill another enemy that he had to fear more than any of the former; and this was his own brother, admiral lord Seymour; a man of great talents, but proud, turbulent, and untractable. This nobleman could not endure the diſtinction which the king had always made between him and his elder brother; ſo that they divided the whole court and the kingdom by their oppoſite cabals and diſſenſions. Seymour, by his flattery and addreſs, had ſo inſinuated himſelf with the queen-dowager, that, forgetting her uſual prudence, ſhe indecently married him immediately upon the deceaſe of the late king, her huſband. He then bribed the king's domeſtics

to

to his intereſt; and young Edward frequently went to his houſe, on pretence of viſiting the queen. There he ingratiated himſelf with his ſovereign, by the moſt officious aſſiduities, particularly by ſupplying him with money to diſtribute among his favourites. His conſort, the queen-dowager, eagerly fed the natural ambition of her huſband, and ſuggeſted ideas to lord Seymour, bordering on high treaſon. In this conjuncture ſhe died in child-bed, A. D. 1548: but this accident, far from repreſſing his ambitious ſchemes, only ſerved to promote them. He now made his addreſſes to the princeſs Elizabeth; and it is ſaid ſhe liſtened to his inſinuations, notwithſtanding her father had excluded her the ſucceſſion, in caſe ſhe married without the conſent of council. Seymour, however, had projects of getting over that objection; and his plans ſeemed to indicate an attempt to ſeize the crown. By promiſes and perſuaſions he brought over many of the principal nobility to join his party; he neglected not even the moſt popular perſons of inferior rank; and he computed that he could command ten thouſand men among his ſervants, tenants, and retainers. He had already provided arms for their uſe; and having engaged in his intereſts ſir John Sharrington, maſter of the mint at Briſtol, he flattered himſelf that money would not be wanting.

Somerſet, the protector, being informed of theſe alarming circumſtances, endeavoured, by every expedient in his power, to draw him from his deſigns. He reaſoned, he threatened, he heaped new favours upon him; but to no purpoſe. At laſt he reſolved to make uſe of a dreadful remedy, to attaint his own brother of high treaſon. In conſequence of this reſolution, he deprived him of his office of high-admiral, and ſigned a warrant for committing him to the Tower. Yet ſtill the protector ſuſpended the blow, and ſhewed reluctance to ruin one ſo nearly connected in the tie of blood. He offered once more to be ſincerely reconciled, and give him his life, if he would be contented to ſpend the remainder of his days in retirement. But finding it impoſſible to work on the inflexible temper of his brother, he ordered a charge to be drawn up againſt him, conſiſting of thirty-three articles; and the whole to be brought before the parliament. The charge being firſt adduced in the houſe of lords, ſeveral peers gave an account of what they knew concerning lord Seymour's conduct, and his criminal intentions. In the houſe of commons the bill paſſed on a diviſion, near four hundred voting for it, and not above nine or ten againſt it. The ſentence was executed, by beheading him on Tower-hill, A. D. 1549.

This obſtacle being removed, the protector went on to reform and regulate the new ſyſtem of religion, which was now become the chief concern of the nation. A committee of biſhops and divines had been appointed to frame a liturgy for the ſervice of the church; and this work was executed with great moderation and accuracy. A diſpenſation was alſo paſſed, permitting prieſts to marry; the ceremony of auricular confeſſion, though not aboliſhed, was left at the diſcretion of the people; but the doctrine of the real preſence was the laſt tenet of popery that was wholly abandoned by the people, as both the clergy and laity were unwilling to renounce ſo miraculous a benefit as it was aſſerted to be. However, not only this, but all the principal opinions and practices of the catholic religion, contrary to what the ſcriptures authorize, were at laſt aboliſhed; and the reformation, ſuch as we have it, was almoſt entirely completed in England, A. D. 1549. It had been well for the credit of the reformers, had they ſtopt here; inſtead of which, they reſolved to become perſecutors in their turn; and though their own doctrines had been founded on a true ſpirit of toleration, yet they could not bear that any ſhould controvert what they had been at ſo much pains to eſtabliſh. Among the number of thoſe who were ſuppoſed to incur guilt upon this occaſion, was Joan Boucher, commonly called Joan of Kent; and Van Paris, a Dutchman; both of whom, principally at the inſtigation of Crannier, and contrary to the king's expreſs deſire, were committed to the flames.

Although meaſures had been taken for the benefit of the nation, and to the advantage of ſociety, yet they were attended with many inconveniences, to which all ſudden changes are liable. When the monaſteries were ſuppreſſed, a prodigious number of their dependants were obliged to earn their ſubſiſtence by labour; ſo that all kinds of buſineſs were overſtocked. The lands of the monaſteries too had been farmed out to the common people, ſo as to employ a great number of hands; and the rents being moderate, they were able to maintain their families on the profits of agriculture. But now theſe lands being poſſeſſed by the nobility, the rents were advanced; and the farmers, perceiving that ſheep and wool were a better commodity than corn, turned all their fields into paſture. In conſequence of this practice, the price of bread roſe, to the unſpeakable hardſhip of the lower claſs of people. To add to the general calamity, all the gold coin of the kingdom was hoarded up, or exported abroad, while a baſe metal was coined in great abundance; and this the poor were obliged to take, but could not diſburſe at an equal advantage. Thus an univerſal ſtagnation of commerce took place; and nothing but murmurs and complaints were heard in every quarter. The protector generouſly eſpouſed the cauſe of the ſufferers. He appointed commiſſioners to examine whether the poſſeſſors of the church-lands had fulfilled the conditions on which thoſe lands had been ſold by the crown; and ordered all encroachments on the commons to be laid open for the benefit of the poor. As the object of this commiſſion was very offenſive to the nobility, they called it arbitrary and illegal; while the common people, fearing it would be eluded, and being impatient of redreſs, roſe in great numbers, and reſorted to arms. The riſing began at once in ſeveral parts of England, as if an univerſal conſpiracy had been formed among the people. The rebels in Wiltſhire were diſperſed by ſir William Herbert; thoſe of Oxford and Glouceſter, by lord Grey of Wilton; the commotions in Hampſhire, Suſſex, and Kent, were quieted by gentle methods; but the diſorders in Devonſhire and and Norfolk were the moſt obſtinate, and threatened the greateſt danger. In Devonſhire, the inſurgents, amounting to ten thouſand men, were headed by Humphry Arundel, an experienced ſoldier; and they were ſtill more encouraged by ſermons, which gave their revolt the air of a religious confederacy. They accordingly ſent a ſet of articles to court, which required an abolition of the ſtatutes made in favour of the reformation; but the council rejected their demands with contempt, at the ſame time offering a pardon to all that would lay down their arms, and return to their habitations. But the inſurgents, encouraged by the monks who were with them, laid ſiege to Exeter, carrying before them crucifixes, banners, holy water, and other implements of their ancient ſuperſtition; but the town was gallantly defended by the inhabitants. Lord Ruſſel was ſent to relieve the city; and, being joined by lord Grey and others, he attacked and drove the inſurgents from their entrenchments. Great ſlaughter was made upon theſe deluded creatures, both in the action and the purſuit. Arundel, their leader, and ſeveral others, were ſent to London, where they were condemned and executed.

The ſedition in Norfolk appeared more formidable. The inſurgents there amounted to twenty thouſand men; and, as their forces were numerous, their demands were exorbitant. They required the ſuppreſſion of the nobility, the placing new counſellors about the king, and the eſtabliſhment of their ancient rights. One Ket, a tanner, had aſſumed a priority among them; he erected his tribunal near Norwich, under an oak, which was termed the Oak of Reformation. He undertook the ſiege of Norwich, which having reduced, he impriſoned the mayor, and ſome of the principal citizens. The marquis of

Northampton was ſent againſt him, but met with a repulſe; the earl of Warwick followed, and, coming to a general engagement, put them entirely to the rout. Two thouſand of them fell in the fight; Ket was hanged at Norwich caſtle; nine of his followers on the boughs of the Oak of Reformation; and the inſurrection, which was the laſt in favour of popery, was thus entirely ſuppreſſed.

Though the ſuppreſſion of theſe diſorders appeared to be favourable to the intereſts of the protector, yet the authority which the earl of Warwick gained in quelling them, terminated in Somerſet's ruin. Of all the miniſters at that time in the council, Dudley earl of Warwick was the moſt artful, ambitious, and unprincipled. Reſolved at any rate to poſſeſs the principal place under the king, he cared not by what means he acquired it. However, unwilling to throw off the maſk, he covered the moſt exorbitant views under the faireſt appearances. Having aſſociated himſelf with the earl of Southampton, he formed a ſtrong party in the council, who were determined to free themſelves from the controul the protector had ſo long aſſumed over them. That nobleman was, in fact, grown obnoxious to the prevailing party in the kingdom. He was envied by the nobles for his power; he was hated by the catholic party for his regard to the reformation; and he was condemned by many for his ſeverity to his brother: beſides, the great eſtate he had raiſed at the expence of the church and the crown, rendered him obnoxious to all. The palace which he was then building in the Strand, ſerved alſo, by its magnificence, and ſtill more by the unjuſt methods that were taken to raiſe it, to expoſe him to the cenſures of the public. The pariſh church of St. Mary, with three biſhops' houſes, were pulled down to furniſh ſufficient ſpace and materials for the ſtructure.

Theſe imprudences were ſoon enlarged upon by Somerſet's enemies. They repreſented him as a parricide, a ſacrilegious tyrant, and an uſurper upon the privileges of the council, and the rights of the king. In conſequence of this, lord St. John, preſident of the council, the earls of Warwick, Southampton, and Arundel, with five others, met at Ely-houſe, October 6, 1549; and aſſuming to themſelves the whole power of the government, began to act independent of the protector, whom they pretended to conſider as the author of every public grievance. They wrote letters to the nobility of England, informing them of the preſent meaſures, and requiring their aſſiſtance. They ſent for the mayor and aldermen of London, and enjoined them to concur in their authority, which they repreſented as the only means of ſaving the nation.

Somerſet no ſooner heard of theſe tranſactions, than he ſent the king to Windſor, and armed the inhabitants of Hampton and Windſor alſo for his ſecurity. But finding that no man of rank, except Cranmer and lord Paget, adhered to his cauſe, and that the people did not riſe at his ſummons; perceiving that he was in a manner deſerted by all, and that reſiſtance was fruitleſs, he reſolved to throw himſelf on the mercy of his enemies. This gave freſh confidence to the party of Warwick; they aſſured the king, with the humbleſt profeſſions of obedience, that their only aim was to put the council on the ſame footing on which it had been ordained by the will of his father, and to reſcue his authority from the hands of a man who had aſſumed all power to himſelf. The king, who never much regarded Somerſet, gave their addreſs a favourable reception; and the protector was ſent to the Tower, with ſome of his friends and partizans, among whom was Cecil, afterwards earl of Saliſbury. Mean while, the council deputed ſix noblemen to act as governors to the king, two at a time, officiating alternately. It was then, for the firſt time, that the earl of Warwick's ambition began to appear in full view: he ſet himſelf forward as the principal promoter of the protector's ruin; and his colleagues, without the leaſt oppoſition, permitted him to aſſume the reins of government.

It was now expected that Somerſet's fate was decided. A bill of attainder was preferred againſt him in the houſe of lords; but he contrived, for this time, to elude the rigour of their ſentence, by confeſſing the charge before the members of the council. This confeſſion, which he ſigned with his own hand, was alleged and read againſt him at the bar of the houſe, who then ſent a deputation to him, to know whether the confeſſion was voluntary or extorted. Somerſet thanked them for their candour; owned that it was his voluntary act, but ſtrenuouſly inſiſted, that he had never harboured a ſiniſter thought againſt the king or the commonwealth. In conſequence of this ſtrong feature of his innocence, he was ſet at liberty, and re-admitted into the council.

The catholics had been extremely elevated at the protector's fall; and they began to entertain hopes of a revolution in their favour. But they were deceived in their opinion of Warwick, who now took the lead, as ambition was the only principle in his breaſt; and to that he was reſolved to ſacrifice all others. He ſoon gave inſtances of his ſeverity in religious points, by inflicting on biſhop Gardiner the penalties preſcribed againſt diſobedience. Many of the prelates were ſtill addicted to their ancient communion. A reſolution was therefore taken to deprive them of their fees; and it was thought proper to begin with him, in order to ſtrike a terror into the reſt. He had already been two years in priſon, when the council ſent him ſeveral articles to ſubſcribe, among which was one, acknowledging the juſtice of the order for his confinement. He was likewiſe to acknowledge the king's ſupremacy; and that the Common Prayer Book was a preferable and more godly form than the Miſſal. Gardiner was willing to put his hand to all the articles, except that by which he accuſed himſelf, which he refuſed to do, juſtly perceiving that their aim was either to ruin or diſhonour him. For this refuſal he was deprived of his biſhopric, committed to cloſer cuſtody, his books and papers ſeized, all company denied him, and not even permitted the uſe of pen and ink. But the reformers did not ſtop here: Warwick and his aſſociates deprived, in the ſame manner, Day biſhop of Chicheſter, Heathe of Worceſter, and Voiſy of Exeter. The biſhops of Landaff, Saliſbury, and Coventry, came off ſomething better, by ſacrificing the moſt conſiderable part of their eccleſiaſtical revenues. The libraries of Weſtminſter and Oxford were now ordered to be ranſacked, and purged of the Romiſh miſſals, legends, and other ſuperſtitious volumes; in which ſearch great devaſtation was made even in uſeful literature. Many volumes, claſped in ſilver, were deſtroyed for the ſake of their rich bindings; many valuable works in geometry, aſtronomy, and the mathematics, being ſuppoſed by the ignorant to be conjuring books, met with no mercy. The venerable univerſity, unable to ſtop theſe ravages, ſilently looked on, and trembled for its own ſafety.

Warwick had hopes of gaining popularity with the public by theſe humiliations of the church; and, perceiving that the king was extremely attached to the reformation, he perceived that he could not make his court to the young monarch better than by a ſeeming zeal in the cauſe. But he was ſtill ſteadfaſtly bent on enlarging his own power; and, as the earl of Northumberland had died without iſſue or heirs, Warwick procured for himſelf a grant of his ample poſſeſſions, and obtained the title alſo of duke of Northumberland. The duke of Somerſet was now the only perſon who ſtood in his way; for, though fallen, yet he ſtill preſerved a ſhare of popularity, which rendered him formidable to this aſpirer. He was, therefore, by Northumberland's command, arreſted, with many others, accuſed of being his partizans; and he was, with his wife the ducheſs, thrown into priſon. He was now accuſed of having formed a deſign to raiſe an inſurrection in the north; of attacking the train-bands on a muſter-day; of plotting to ſecure the Tower, and to excite a rebellion in London. Theſe charges he moſt ſolemnly

ſolemnly denied; but he confeſſed one of as heinous a nature, which was, that he had laid a plan for murdering Northumberland, Northampton, and Pembroke. He was therefore brought to trial before the marquis of Wincheſter, who ſat as high ſteward, with twenty-ſeven peers, including Northumberland himſelf, Pembroke, and Northampton, who were at once his judges and accuſers. He was charged with an intention to ſecure the perſon of the king; to re-aſſume the adminiſtration of affairs; to aſſaſſinate the duke of Northumberland; and raiſe an inſurrection in the city. He pleaded not guilty to the firſt part of the charge, and of this he was acquitted; but he was found guilty of conſpiring the death of a privy counſellor, which crime had been made felony in the reign of Henry VII. and for this he was condemned to death. The populace ſeeing him re-conveyed to the Tower without the axe, imagined he had been acquitted, and in repeated ſhouts and acclamations manifeſted their joy; but this was ſuddenly damped, when they were informed of his doom. Care, in the mean time, had been taken to prepoſſeſs the young king againſt his uncle; and, leſt he ſhould relent, no acceſs was permitted to any of Somerſet's friends. At length the priſoner was brought to the ſcaffold on Tower-hill, where he appeared, without the leaſt emotion, in the midſt of a vaſt concourſe of the populace, by whom he was beloved. He ſpoke to them with great compoſure, proteſting that he had always promoted the ſervice of his king, and the intereſts of true religion, to the beſt of his power. The people atteſted their belief to what he ſaid, by crying out, "It is moſt true." An univerſal tumult was beginning to take place; but Somerſet deſiring them to be ſtill, and not to interrupt his laſt meditations, but to join with him in prayer, he laid down his head, and ſubmitted to the ſtroke of the executioner, A. D. 1552. Sir Ralph Vane and ſir Miles Partridge, were hanged; and ſir Michael Stanhope and ſir Thomas Arundel, were beheaded, as his accomplices.

Nothing could have been more unpopular than the meaſure of deſtroying Somerſet, who, though many actions of his life were certainly exceptionable, yet ſtill conſulted the good of the people. The houſe of commons was particularly attached to him; and of this Northumberland was ſenſible. He therefore determined to diſſolve the parliament, and call another that would be more obſequious to his will. For this purpoſe he engaged the king to write circular letters to all the ſheriffs, in which he enjoined them to chooſe ſuch men as he and the privy-council ſhould recommend. With this deſpotic mandate the ſheriffs complied; and the members returned fully anſwered Northumberland's purpoſe. He had long aimed at abſolute authority; and the infirm ſtate of the king's health opened the proſpects of his ambition. He repreſented to that young prince, that his ſiſters, Mary and Elizabeth, who were appointed by Henry's will to ſucceed on the failure of male heirs to the crown, had been both declared illegitimate by parliament; that the queen of Scots, his aunt, ſtood excluded by the king's will, and being an alien alſo, loſt all right of ſucceeding; that as theſe three princeſſes were thus legally excluded, the ſucceſſion naturally devolved on the marchioneſs of Dorſet, whoſe next heir was lady Jane Grey. The king, who had long been deluded by this deſigning miniſter, agreed to have the ſucceſſion inveſtigated by the privy-council, with whom Northumberland was ſure of carrying his point.

In the mean time, as the king's health rapidly declined, the miniſter laboured to ſtrengthen his own connections. His firſt aim was to ſecure the intereſts of the marquis of Dorſet, father to lady Jane Grey, by procuring for him the title of duke of Suffolk, which had lately become extinct. He then propoſed a match between his fourth ſon, lord Guilford Dudley, and lady Jane Grey, who he intended to advance to the throne. Bent on extending his intereſts as widely as poſſible, he married his own daughter to lord Haſtings, and had the nuptials ſolemnized with all poſſible pomp and feſtivity. Meanwhile Edward continued to languiſh; and ſeveral fatal ſymptoms of conſumption appeared. It was hoped, however, that his youth and temperance might get the better of his malady; and from their love, the people were unwilling to think him in danger. It had been remarked indeed by ſome, that his health was viſibly ſeen to decline, from the time the Dudleys were brought about his perſon. The character of Northumberland alſo gave colour to ſuſpicion; and his removing every one, except his own emiſſaries, from about the king, further increaſed the diſguſts of the people. Northumberland diſregarded their murmurs; he was aſſiduous only in his attendance upon the king, and profeſſed the moſt anxious concern for his ſafety, but ſtill drove forward his darling ſcheme of transferring the ſucceſſion to his own daughter-in-law. The judges, who were appointed to frame the king's letters-patent for that purpoſe, warmly objected to the meaſure, and gave their reaſons before the council. They inſiſted that a parliament ought to be ſummoned, both to give it force, and free its projectors from danger; for that the form was invalid, and would not only implicate the judges who drew it, but every counſellor who ſigned it, to a charge of treaſon. Northumberland could not brook theſe demurs; he threatened them with the dread of his authority; called one of them a traitor; and ſaid he would fight in his ſhirt with any man in ſo juſt a cauſe as that of lady Jane's ſucceſſion. A ſcheme was therefore ſuggeſted of ſcreening the judges from danger, by granting them the king's pardon for what they ſhould draw up; and at length, after much deliberation, the patent for changing the ſucceſſion was completed. By this patent Mary and Elizabeth were ſet aſide, and the crown was ſettled on the heirs of the ducheſs of Suffolk; for the ducheſs herſelf choſe to forego her claim.

Northumberland having ſo far ſucceeded, thought phyſicians no longer neceſſary in the king's complaint; they were diſmiſſed by his advice; and Edward was put into the hands of a female empiric, who very confidently undertook his cure. After the uſe of her medicines, all the bad ſymptoms increaſed in a moſt violent degree; he felt a difficulty of ſpeech and breathing; his pulſe failed, his legs ſwelled, his colour changed, and every ſymptom appeared of his approaching end. He expired at Greenwich, July 6, 1553, in the ſixteenth year of his age, and the ſeventh of his reign, greatly regretted by all, as his early virtues gave a fair proſpect of future proſperity to the country.

The character of Edward VI. has been alike celebrious in the contemplation of all his biographers. Had he been permitted to live to years of maturity, he would, moſt probably, have approved himſelf an able and reſpectable monarch. Of natural capacity he had a great ſhare; and he ſeems to have had a genius for government. He reflected much on the concerns of his dignified ſtation; he was ſedulous in his enquiries into the ſtate of his kingdom; he was acute in diſcovering the abuſes which prevailed; he planned ſchemes of improvement and reformation; he encouraged every meaſure which he conſidered as conducive to the intereſts and the happineſs of his people. He cultivated foreign politics with eagerneſs, and aſtoniſhed the ambaſſadors of Europe by the variety of his knowledge, and the ſagacity of his obſervations. He patronized the arts, as well liberal as mechanical; and he was a friend to merit of every denomination. The navy, that bulwark of an inſular ſituation, was improved under his auſpices; and on commerce, that promoter of national aggrandizement, he beſtowed a high degree of attention. Among the writings which are attributed to him, we find the heads of a judicious ſcheme for the eſtabliſhment of a general mart of European commerce in England. He has been always celebrated for the mildneſs and humanity of his diſpoſition, for the modeſty and humility of his deportment, for his regard to juſtice and equity, for his

combination of liberality with economy, and for his vigorous application to public buſineſs. His literary character has alſo been the ſubject of extraordinary panegyric. At an early age he diſtinguiſhed himſelf by his acquiſitions in philology; he was acquainted with the controverſial points of divinity; and he had made a great proficiency in philoſophical purſuits. Cardan, the celebrated Italian phyſician, paſſing ſome time at his court, was ſurpriſed at the multifarious accompliſhments which he obſerved in this princely youth; and he has borne teſtimony to Edward's acquaintance with ancient and modern languages; to his ſkill in logic, muſic, and natural philoſophy; to his dignity of demeanor, and complacency of temper. But, notwithſtanding all the encomiums which have been paſſed on his character, ſome blemiſhes may be remarked. His early initiation in the doctrines of the reformers, had given him ſo rooted a diſguſt to whatever was repugnant to his own religious ideas, that his devotion may juſtly be ſaid to have been tinctured with bigotry; and, though he deſerves our commendation for having teſtified ſuch reluctance to the execution of Joan of Kent and Van Paris, who were the only perſons committed to the flames in his reign, (and it is much to be regretted, for the honour of the proteſtants, that even two ſhould ſuffer for opinions under their ſway,) it would have been more honourable if he had carried to a greater extent his oppoſition to ſuch unjuſtifiable cruelty. In another inſtance, there ſeems to be ſufficient reaſon for blaming his want of mental vigour. We allude to the death of his uncle the duke of Somerſet, a faithful ſervant of the crown, whom, from a facility in believing the inſinuations of his enemies, and from an apparent defect in manly firmneſs, he gave up to the malice of faction. The ſacrifice of his other uncle was leſs reprehenſible, as the guilt of that nobleman was leſs problematical.

This monarch was never married, though an alliance had been projected between him and one of the daughters of Henry II. of France. He was the founder of ſome valuable inſtitutions. Chriſt's hoſpital in London, that of St. Thomas in Southwark, and ſeveral free-ſchools in different parts of the realm, owe their eſtabliſhment to his bounty.

On the death of Edward, a ſanguine cloud prepared to overcaſt the horizon of England; and no fewer than four princeſſes were ready to aſſert their pretenſions to the crown. Mary, who ſtood firſt upon Henry's will, had been declared illegitimate by an act of parliament, which was never repealed: Elizabeth was next; and though ſhe had been declared illegitimate, yet ſhe had been reſtored to her rights during her father's life-time. Margaret queen of Scotland, Henry's eldeſt ſiſter, was firſt in right, ſuppoſing the two daughters illegitimate; while lady Jane Grey, beſides her right of ſucceſſion after the line of Margaret, was made to allege the will of the late king as a claim of priority in her favour. The ambitious Northumberland, therefore, took every ſtep to ſeize the princeſſes as priſoners, and to fix the crown on the head of lady Jane. In the mean time Mary and Elizabeth were actually on the road to the court, allured thither by a feigned meſſage from the duke of Northumberland; but the news of the king's death gave them warning of the deceit; and Mary, flying into Suffolk, found every one eager to arm in her cauſe. The deteſtation, indeed, in which the duke of Northumberland was held, rendered every project in favour of his family fruitleſs; and the unfortunate though amiable Jane, who, after many refuſals, had been prevailed on by her father and huſband to accept the crown, reſigned it with real and unaffected pleaſure, after a joyleſs reign of ten days. Mary, at the head of a numerous army, a thouſand of which had been levied by the princeſs Elizabeth, entered London, and aſcended the throne. Nor did the mean conduct of Northumberland ſave his life; although, on finding himſelf deſerted by his army, he had caſt up his cap for Mary, and had fallen on his knees to lord Arundel, her general, who apprehended him; while, at that humiliating moment, a woman held up to the daſtardly ſuppliant's face a handkerchief, dipped, as ſhe ſaid, in the innocent blood of Somerſet, whom he had murdered. He was immediately tried and condemned by his peers for treaſon, and beheaded on Tower-hill, with Palmer and Gates, his intimate aſſociates.

As it was the wiſh of Mary to acquire popularity, ſhe ſhed no more blood on the preſent occaſion; and, to attract the attention of the multitude, ſhe rode through London in pomp, crowned by a circle of gold and precious ſtones, ſo heavy, that ſhe was forced to ſupport her head with her hand. Behind her came in a chariot the princeſs Elizabeth and lady Anne of Cleves. So careful was Mary not to irritate or offend her ſubjects, that though lady Jane Grey, with her huſband and his brothers, had been tried and condemned for treaſon, their ſentences were reſpited. Yet after ſhe had releaſed the venerable Norfolk, and the other priſoners in the Tower, ſhe wiſhed to celebrate the funeral obſequies of her brother with the ceremonies of the papal church; but Cranmer ſtoutly oppoſed this innovation, and ſheltering himſelf under acts of parliament ſtill in force, he interred the remains of Edward in the chapel of Henry VII. after the rites of the reformed church. If he officiated in perſon, it was probably his laſt act of office; for he was almoſt immediately confined to his houſe, and treated as a criminal. Mary had afterwards a ſervice performed for her deceaſed brother in her own chapel.

But it was not long before the natural bigotry of Mary took its full ſcope. A parliament was formed which would ſecond her in any meaſure, except the reſtoration of the church lands. The proteſtant biſhops were ejected and impriſoned; their ſees filled with zealous catholics, and cardinal Pole was ſent for haſtily to aſſiſt, as the pope's nuncio, in cleanſing the polluted land. But the policy of Gardiner, who ſuſpected that the queen meant Pole for her huſband, or at leaſt for her primate, found means to check the too impetuous zeal of Mary, by the intervention of the emperor. The queen, however, tried to pleaſe the people by remitting the ſubſidy granted to Edward, but not levied; yet the acts of her parliament were not in general popular. Her own illegitimacy was reverſed, but that of Elizabeth was ungenerouſly confirmed; and Mary, by aſſigning to her ſiſter a low rank, even beneath the counteſſes, drove from the court one who had earneſtly forwarded her ſucceſſion. Religion was placed on the papal footing at the laſt part of Henry VIII's reign, and all preaching, except by licence, ſtopped. The proteſtants were now ſeverely treated, their preachers impriſoned, and even the men of Suffolk, to whoſe loyalty Mary owed her crown, were ſeverely threatened, and one of them pilloried for demanding that liberty of conſcience, with the promiſe of which ſhe had engaged their aſſiſtance.

Mary was now for a ſhort time diverted from her perſecutions, by the overtures made by her couſin, Charles V. of Spain, for a match between her and his ſon Philip, a handſome prince, ten years younger than herſelf. The nation, however, ſaw the event in a light ſo different, that a dangerous revolt enſued, headed by ſir Thomas Wyat, a Kentiſh knight; who, although a ſteady Roman catholic, had imbibed, by travelling through Spain, an utter deteſtation of that country's ſevere manners. Followed by a ſtrong party he marched from Rocheſter to London, having been joined on the road by a band of citizens, at the head of whom that venerable warrior, the duke of Norfolk (now relieved from his attainder), meant to have oppoſed him. Wyat, however, finding the bridge of the metropolis well defended, loſt ſo much time in marching round by Kingſton, and in repairing the broken carriages of his artillery, that when he entered London through Hyde-park, a ſtrong force had been collected, by which he was overpowered and taken. He expiated his fault on Tower-hill, where he ſolemnly avowed

avowed the innocence of the princeſs Elizabeth and of Courtney, who both had been charged as favouring his revolt. Much blood was ſhed on this occaſion. Suffolk, with lady Jane Grey, and her huſband, were beheaded; and lord Thomas Gray, a gallant commander, with hundreds of inferior rank, ſuffered death in the ſame cauſe. The unfortunate Jane was highly accompliſhed, and well verſed in the ancient as well as the modern tongues. To her laſt moments ſhe lamented her having accepted the crown; and laid the blame on her own blind filial affection; and told the people from the ſcaffold that ſhe ſuffered deſervedly, ſince her innocence was no excuſe for the trouble which ſhe had occaſioned to the realm. She would not ſee her huſband, leſt the interview ſhould be too affecting; and, with inimitable meekneſs, thanked doctor Fecknam with her laſt words, for the pains he had ineffectually taken in endeavouring to convert her to his faith. She was only ſixteen years of age when ſhe ſuffered. Mary now gave orders, that the church ſhould be purged of all married prieſts, and ſome thouſands of the clergy, in conſequence, loſt their benefices.

In July, 1554, prince Philip of Spain arrived at Southampton. Diſpleaſed, perhaps, at the ſtern commander of his convoy, who had fired at the Spaniſh ſhips to make them ſalute the Engliſh flag, he landed with his ſword drawn, and made no return to the compliments which attended his approach to that polite town. The Engliſh were diſguſted by a continuation of this haughty conduct; but Mary endeavoured to make up by her fondneſs for the indifference of her ſubjects. The articles of the union had been drawn with great caution; and Philip gained little by the wedding, which was celebrated at Weſtminſter, A. D. 1554, except a homely, ill-tempered, jealous, wife. The gold which he brought with him (which filled twenty-ſeven cheſts, beſides ninety-nine horſe-loads and two cart-loads of coin) ſmoothed his way; and he gained ſome credit with the Engliſh by interfering with Mary in behalf of her ſiſter Elizabeth, of Courtney, Dudley, Harrington, and others who were confined, and in great danger.

A conference on religion held at Oxford having ended, as the Roman catholics declared, in favour of the old faith, Mary, who now gave it out that ſhe was pregnant, no longer deferred the ſolemn re-union of England to the holy ſee, and with ſincere tranſport quitted that heretical title "The Supreme Head of the Church;" and was ſo much affected at the ſpeech which cardinal Pole made on this occaſion before both houſes of parliament, that it was declared "ſhe felt the child ſtir in her womb." Inſtantly the Roman catholics affirmed it would be a male; and Bonner, biſhop of London, ordered prayers throughout his dioceſe, "that he might be beautiful, vigorous, and witty." The prieſt of Alderſgate went further, and, by a ſpirit of prophecy, deſcribed the ſex and features of the embryo. Yet this uterine commotion proved to be nothing but a dropſy! Whether it was from this diſappointment, or the levity of the proteſtants, or both, a ſcene of the moſt bloody perſecution now followed. The parliament had revived the moſt ſanguinary laws againſt heretics, and the mild ſyſtem of Pole gave way to the atrocious counſels of Gardiner. Rogers, the moſt popular of proteſtant preachers, led the way to the ſtake; Hooper, late biſhop of Glouceſter, followed; nor were the horrors of bigotry long checked even by the declaration of Alphonſo, almoner to Philip, who, before the council, bitterly reproached the Engliſh biſhops for their impolitic inhumanity, and endeavoured to ſtop the effuſion of innocent blood. After a ſlight pauſe, the perſecution raged with more fury than ever. Ferrars, biſhop of St. David's, was burnt in his own dioceſe; and the venerable Latimer, with Ridley, late biſhop of London, ſuffered the ſame cruel death at Oxford. The fate of Gardiner, who was awfully ſtruck with death while exulting in the tortures of the laſt-mentioned ſufferer, did no ſervice to the cauſe of humanity. Bonner, who ſurpaſſed him in carrying on the infernal perſecution, added ſavage buffoonery to the moſt refined cruelty. Yet, even he, fatigued with the ſacrifice of blood, was ſometimes reprimanded for indolence.

To finiſh at once this diſgraceful and deteſtable ſubject, during the three remaining years of Mary's ſanguinary reign, there periſhed at the ſtake two hundred and ſeventy-ſeven perſons; among whom were reckoned, five biſhops, twenty-one clergymen, eight gentlemen, eighty-four tradeſmen, one hundred huſbandmen, fifty-five women, and four children. The temper of Mary grew more turbid, in proportion as her views and hopes were defeated. That pregnancy on which both ſhe and Philip ſo much depended, cloſing in diſappointment, the ſpouſe, on whom ſhe ſo fondly doated, left her, with cool contemptuous indifference, and haſtily ſailed to Spain; and even her hireling ſenate, when ſhe wanted money to gratify her huſband, reproached her for having given back to the church thoſe domains which ought to have ſupplied her with what ſhe now demanded. Philip certainly wedded Mary with a view to rule in England, and when the queen was ſuppoſed to be pregnant, he applied to parliament that he might be regent during the minority of any child which might appear, offering to give bond to ſurrender the government to ſuch child when of age to rule. The debate grew warm; but lord Paget aſking, "who ſhould ſue the king's bond?" the whole was ſuddenly concluded in the negative.

Diſappointed by her parliament, and deſerted by her huſband, Mary now exerted herſelf in diſcovering and fining ſuch as had ſhared the moveables, books, &c. of monaſteries; and by her orders, towards the cloſe of the year 1555, archbiſhop Cranmer was tried by three commiſſioners for hereſy, and condemned to be degraded, and to be burnt alive. It was at this awful period that the frailty of human nature, and the importunity of Engliſh and foreign divines, perſuaded Cranmer to forſake that religion, of which he had hitherto been the chief ſupport. His apoſtacy was ſhort. Mary, who deteſted him for his ſhare in her mother's divorce, not chooſing to loſe her revenge, privately ordered his execution. But Cranmer had already repented of his weakneſs; and when he was brought to church to abjure proteſtantiſm publicly, he diſappointed the auditors by bemoaning his own folly, and affirming his determination to die in his former opinions. See the particulars of his execution under CRANMER, vol. v. p. 324.

Mean time cardinal Pole ſucceeded Cranmer in the ſee of Canterbury; and the fires at Smithfield blazed fiercely for inferior heretics, while the zealous Mary was only prevented from burning larger numbers of her ſubjects by the remiſſneſs of the county magiſtrates, whom the council were forced perpetually to remind of their duty. The princeſs Elizabeth, during this heat of perſecution, was in no pleaſant ſtate. Since her releaſe from the Tower, ſhe had been in ſuch ill-omened cuſtody, that ſhe had often reaſon to think her life in danger. Once Gardiner had actually procured a warrant for her death, ſigned by ſome of the privy-council; but the queen being told of it, was obliged to forbid the execution. At Woodſtock ſhe was perpetually teazed by Gardiner, to own her enmity towards Mary; but which ſhe ſteadily denied. Philip, as is generally believed, at length, obtained leave for her to live at Hatfield; and even there ſhe had to her knowledge, in her own houſehold, two ſpies upon her conduct. To calm the anxiety which ſuch ſituations muſt occaſion, the princeſs had recourſe to the grateful aid of literature, and ſoothed her fears by peruſing the elegant productions of the ancients in their native tongues.

During this period, A. D. 1556, the weakneſs and bigotry of the government, its want of money, and the unwillingneſs to exaſperate by taxation a people who deteſted its meaſures, rendered the ſtate of England contemptible in the eyes of foreign nations. A war with

Scotland was with difficulty avoided, by the firmneſs of the lords Shrewſbury and Wharton; who, with a ſmall force, ill-paid, kept the borderers in peace with each other. But the extreme diſcontent of the people occaſioned more than one riſing in various parts of England. One of theſe at Dis, in Norfolk, though trifling in itſelf, and headed only by a poor ſchoolmaſter, named Cleber, furniſhed a ſufficient pretence for ſeveral perſons to ſuffer the death of traitors at Bury, in Suffolk.

It was not until 1557, that Philip of Spain deigned to viſit his neglected conſort; but, more actuated by intereſt than love, he made her immediate declaration of war againſt France the price of all future endearments. Mary could hardly have brought this about, ſince the marriage articles, drawn by the cautious Gardiner, expreſsly guarded the nation againſt this contingency, had not an inſurrection in the north, under Stafford, given her a pretence to accuſe the French councils of diſturbing the peace of her realm. This ill-adviſed revolter, with a few French adventurers, who forſook him at the firſt onſet, pompouſly propoſed himſelf as protector of England againſt the Spaniards. He was ſeized in Scarborough by lord Weſtmoreland, brought to London, and with three accomplices executed.

To raiſe money from a turbulent people, to ſupport the meaſures of a weak queen and a timid miniſtry, was no eaſy taſk; and various and humiliating were the expedients to which recourſe was had by Mary. One time ſhe forced ſixty gentlemen to lend her one thouſand pounds a-piece: but theſe impoſitions fell chiefly on proteſtant families; the Roman catholics preſumed much on their favour at court, and were moſtly ſkreened from theſe oppreſſions; but ſometimes they preſumed too far, as in the caſe of lord Stourton, a Roman baron of Wilts, who, on this principle, had bitterly oppreſſed his neighbour, a gentleman, named Hartgill, to whom he owed an old grudge. At length, in 1557, truſting to his intereſt with the council of Mary, he nearly murdered the younger Hartgill, who was on a viſit at his houſe. Being fined and impriſoned for this attempt, he got leave to return to Wilts, that he might pay the fine to the Hartgills. He then decoyed the whole family into Kilmington churchyard, where he made his ſervants bind the father and ſon, and carry them by force to his houſe at Stourhead, after having wounded the wife of the younger Hartgill, who implored for her huſband on her knees. When he had them in his houſe, he cauſed them to be beaten with clubs, and then held the candle while his ſervants cut their throats. No intereſt of power or religion could protect lord Stourton after this execrable act. He was tried, found guilty, and hanged in the market-place of Saliſbury, as were his four ſervants at Stourhead.

With ſums thus acquired by extortions little ſhort of robberies, and by ſeizing the corn and grain for the uſe of her army, without any kind of remuneration to the owners, Mary was enabled to maintain a body of eight thouſand men, whom ſhe ſent under lord Pembroke, to join the army of her huſband Philip in Flanders, where they arrived in time to ſhare in the honour of the battle of St. Quintin. Meanwhile, Mary fought the battles of bigotry at home; and, forming an eccleſiaſtical council of twenty-one, which had as near a reſemblance to the inquiſition as ſhe dared to give it, ſhe placed ſpies on the country juſtices, ſummoned them to appear in London, and haraſſed them into meaſures which afforded new fuel for the Smithfield fires.

A ſevere diſgrace now impended over England. Calais, which had now been appended to the Britiſh dominions two hundred years, and had been eleven months in ſubduing, was loſt in almoſt as many days. Archbiſhop Heathe was chancellor and miniſter; and his royal miſtreſs and himſelf thought more of burning heretics, than of ſecuring the poſſeſſions of the crown. Calais, therefore, and its dependencies, deſtitute of men, money, and ſtores, fell eaſily to a ſpirited attack, commanded by the great duke of Guiſe, and ſeconded by the brother of the equally great admiral Coligny. This fortreſs, of much more conſequence to the honour than to the profit of the Engliſh nation, had been long menaced; and Philip of Spain had given notice of its danger to his improvident wife. She, however, took no attention to the preſervation of ſo intereſting a poſt, but permitted a large part of the garriſon, as had been uſual, from motives of an ill-judged parſimony, to quit the duty during the winter months. Lord Gray, the governor, a man of honour, in vain preſaged the fatal conſequence of this neglect. Mary's eccleſiaſtical miniſters mocked his fears, and ſaid that, during winter, their white ſtaves would be garriſon enough to defend the place. But Mary, unfeeling as ſhe was, felt this diſgrace, and ſaid, "that when ſhe ſhould die, Calais would be found engraven on her heart." The French turned all the inhabitants out of the place after plundering them. A number of Scots, who ſerved on the ſide of France, behaved with great kindneſs to the diſtreſſed Engliſh, even in the midſt of the exultations of the French, which were unreſtrained and unbounded. The caſtle of Guiſnes reſiſted longer than Calais, but ſoon fell, and that of Hammes was abandoned. Thus melted away the faſt hold which England long vaunted that ſhe kept over France. A parliament was now aſſembled; and, though in a very ill humour, it granted to Mary a ſupply, which enabled her to ſend a fleet under lord Clinton, which ravaged part of the French coaſt; but with little advantage or honour. Ten Engliſh ſhips of war were more fortunate. Hearing the noiſe of a battle while cruizing off Gravelines, they ſailed up an arm of the ſea, and by cannonading one wing of the French army, they enabled the Spaniards to give their foes a ſignal overthrow.

And now, after a ſeries of political errors and cruel perſecutions, the termination of Mary's inglorious reign drew on apace. Every reflection had for a long time weighed heavy on her heart, and now tormented her. The conſciouſneſs of being hated by her ſubjects, the proſpect of her ſiſter Elizabeth's ſucceſſion, whom ſhe hated, and, above all, her anxiety for the loſs of her huſband, who had taken a final farewel, all theſe painful ſenſations preyed upon her mind, and heightened a lingering fever, of which ſhe died, on the 17th of November, 1558, after a diſgraceful reign of five years, four months, and eleven days, in the forty-third year of her age. Her relation cardinal Pole, the primate, ſurvived her only ſixteen hours. She was buried in the chapel of her grandfather Henry VII. under the ritual of the church of Rome.

To delineate the character of this inglorious queen, is nearly as unpleaſant a taſk as to write the memoirs of her reign. Her perſon was mean, as her mind was narrow; from her mother ſhe inherited pride; from her father, obſtinacy and cruelty; but neither of her parents contributed to her any ſhare of their abilities. Yet, ſays Blackſtone, "many ſalutary and popular laws, in civil matters, were made under her adminiſtration; perhaps the better to reconcile the people to the bloody meaſures which e was induced to purſue, for the re-eſtabliſhment of religious ſlavery." The mildneſs and humanity of her brother Edward VI. muſt have been ſtrongly contraſted in the minds of the people, as well as in the impartial opinion of poſterity, with the horrible and unmitigated cruelty of Mary's government. That ſuch ſavage and ſanguinary acts ſhould have been endured in a country which had advanced any ſteps towards civilization, is aſtoniſhing! but it nearly exceeds the bounds of belief, that theſe acts ſhould have been practiſed under the pretence of promoting the cauſe of a religion, of which the diſtinguiſhing characteriſtics are peace, forbearance, and good-will towards men. From the contemplation of ſuch enormities, we turn away with horror and diſguſt, to the milder influence of a more benignant reign. Yet, in juſtice to Mary, it muſt be acknowledged that the execrable example was afforded her by the proteſtants, in the

the time of her predeceſſor, in the horrid inſtance which has been noticed in the preceding pages.

Elizabeth, the daughter of Henry VIII. by Anna Boleyn, was ſtill leading a fugitive life at Hatfield, when the news reached her of her ſiſter's death; and haſtening to London, was received by the multitude with univerſal acclamations. Elizabeth had received her education in that beſt ſchool, the ſchool of adverſity; and ſhe had made a proper uſe of her retirement. Being debarred the enjoyment of pleaſures abroad, ſhe ſought for knowledge at home; ſhe cultivated her underſtanding, learned the languages and ſciences; but of all the arts which ſhe acquired, that of concealing her opinions, of checking her inclinations, of diſpleaſing none, and of ſtudying judiciouſly to reign, were the moſt beneficial to her. This *virgin* monarch, as ſome hiſtorians have called her, upon entering the Tower, according to the then cuſtom, A. D. 1558, could not refrain from remarking on the difference of her preſent and her former fortune, when ſhe was ſent there as a priſoner, and from whence ſhe had ſo narrowly eſcaped. She had no ſooner been proclaimed queen, than Philip, who had been married to Mary, but who had ever teſtified a partiality for Elizabeth, ordered his ambaſſador in London, the duke of Feria, to make her propoſals of marriage in his behalf. What political motives Elizabeth might have againſt this connection, are not mentioned; but certain it is, that ſhe neither approved the perſon nor the religion of her admirer. She was willing at once to enjoy the pleaſures of independence, and the vanity of numerous ſolicitations. But, while theſe were her views, ſhe returned him a very obliging, though evaſive, anſwer; and he ſtill retained ſuch hopes of ſucceſs, that he ſent meſſengers to Rome, to ſolicit a diſpenſation for that purpoſe from the pope.

Elizabeth had, from the beginning, reſolved upon reforming the church, even while ſhe was held in the conſtraints of a priſon; and now, upon coming to the crown, ſhe immediately ſet about the ſalutary work. But not to alarm the partiſans of the catholics, ſhe retained eleven of her ſiſter's council; and, in order to balance their authority, added eight more, who were known to be affectionate to the proteſtant cauſe. Her particular adviſer, however, was ſir William Cecil, ſecretary of ſtate, a man more earneſtly employed in the buſineſs than in the ſpeculations of the times; and who was anxious to adopt any religion that he thought would contribute to the welfare of the ſtate. By his advice, therefore, ſhe recalled all exiles, and gave liberty to all priſoners, confined on account of religion. She publiſhed a proclamation, which prohibited preaching without a licenſe, authorized divine ſervice to be read in Engliſh; and forbad in future the elevation of the hoſt. A parliament, A. D. 1559, completed what the prerogative had begun; act after act was paſſed in favour of the reformation; and in a ſingle ſeſſion the form of religion was eſtabliſhed, as we have at preſent the happineſs to enjoy it.

The oppoſition at firſt made by the clergy to theſe religious eſtabliſhments, was very furious; yet of nine thouſand four hundred beneficed clergymen, which was then the number in the kingdom, only fourteen biſhops, twelve archdeacons, fifteen heads of colleges, and about eighty of the parochial clergy, choſe to quit their preferments, rather than give up their religion. Thus England was ſeen to change its religious tenets four times ſince the beginning of the reign of Henry VIII. "Strange" ſays a foreign writer, "that a people ſo reſolute ſhould be guilty of ſo much inconſtancy; that the ſame people who this day aſſiſted at the execution of heretics ſhould, the next, not only think thoſe heretics guiltleſs, but conform to their ſyſtems of thinking."

The queen, thus fixed upon a proteſtant throne, had all the catholic countries of Europe to contend with; and France, Scotland, Italy, and Spain, combined againſt her. Even her ſubjects of Ireland were concealed enemies; and the catholic party in England, though profeſſing obedience, were ready to take advantage of her ſlighteſt misfortunes. In this ſituation ſhe had no other reſources than the affection of her ſubjects, her own perſeverance, and the wiſdom of her adminiſtration. From the commencement of her reign, ſhe aimed at two very difficult attainments; of being loved by her ſubjects, and feared by her courtiers. She reſolved to be frugal of her treaſury, and ſtill more ſparing in her rewards to favourites. This at once kept the people in good humour, and the great in a conſtant ſtate of dependence. In ſhort, ſhe appeared to have ſtudied the people ſhe was born to govern, and thence knew how to flatter their foibles, and ſecure their affections. Her chief miniſter was Robert Dudley, ſon to the late duke of Northumberland, whom ſhe ſeemed to regard from capricious motives; for he poſſeſſed neither abilities nor virtue. But to make amends, the two miniſters next in power were Bacon and Cecil, men of great capacity and infinite application; they regulated the finances, and directed the political meaſures with foreign courts, which were afterwards followed with ſo much ſucceſs.

The affairs of Elizabeth wore every feature of genial ſucceſs; but a ſtate of permanent felicity is not to be expected on earth. Mary Stuart, commonly called Mary queen of Scots, was the firſt perſon that excited the apprehenſions of the magnanimous queen of England. We have already noticed, that Henry VII. married his eldeſt daughter Margaret to James IV. king of Scotland, who dying, left an infant ſon, by Margaret, afterwards James V who marrying, for his ſecond wife, Mary Guiſe, ducheſs dowager of Longueville, had iſſue Mary, afterwards queen of Scots. At a very early age, this princeſs, being poſſeſſed of every accompliſhment of perſon and mind, was married to the dauphin of France, afterwards Francis II. who dying in 1560, left her a widow at the age of nineteen. As Elizabeth had been declared illegitimate by Henry VIII. Francis, in right of his wife, the granddaughter of Margaret, began to aſſume the title of king of England; nor did the queen of Scots, his conſort, ſeem to decline ſharing this empty appellation. But what gave the greateſt offence to Elizabeth, was a report that Francis and Mary had coined money with the arms of France quartered with thoſe of England, and had actually cauſed the ſame to be engraved on their ſervice of plate.

Upon the death of Francis, Mary, the widow, ſtill ſeemed diſpoſed to keep up the title; but finding herſelf expoſed to the perſecution of the dowager queen, the mother of Francis, who now began to take the lead in France, ſhe determined to return home to Scotland, and demanded a ſafe paſſage from her couſin Elizabeth through England. But it was now Elizabeth's turn to refuſe; and ſhe ſent back a very haughty anſwer to Mary's requeſt, upbraiding her with having deſigns on the crown of England. From hence a perſonal enmity began to prevail between theſe rival queens.

The reformation in England having completely taken place, that work was now alſo going on in Scotland; but with circumſtances of great animoſity among the people. The mutual reſentment which either party in that kingdom bore to each other, knew no bounds. It was in this divided ſtate of the country, that Elizabeth, by giving encouragement to the reformers, gained their affections from their native queen, who being a catholic, naturally favoured thoſe of her own communion. The reformers conſidered Elizabeth as their patroneſs and defender, and Mary as their perſecutor and enemy. In this ſituation of things Mary had returned from France to reign in Scotland, entirely attached to the cuſtoms and manners of that airy people, and conſequently averſe to the gloomy auſterity which her reformed ſubjects affected, and which they fancied made an indiſpenſable ingredient in religion. The jealouſy thus excited, began every day to grow ſtronger; the clergy waited only for ſome indiſcretion in the queen, to fly out into open oppoſition;

ſition; and her affairs too ſoon gave them ſufficient opportunity.

After two years ſpent in altercation and reproach between Mary and her ſubjects, it was reſolved by her council, A. D. 1564, that ſhe ſhould look out for ſome alliance, by which ſhe might be protected againſt the inſolence and infatuation of her ſpiritual inſtructors. After ſome deliberation, lord Darnley, ſon to the earl of Lenox, was the perſon in whom their wiſhes centred. He had been born and educated in England; was grandſon to Henry VII. by his daughter Margaret of Scotland, and therefore divided with Mary the claim to the crown of England; he was now in his twentieth year, and was poſſeſſed of a fine manly exterior. When Sir James Melvill was ſent to communicate this treaty of marriage to the court of London, and to have recognized their next right of ſucceſſion to the crown, Elizabeth affected to approve of the nuptials. The Engliſh princeſs, as jealous of Mary's charms as of her title, ſifted the ambaſſador even as to the colour of her hair. At laſt, ſhe aſked him plainly, which of the two he thought the faireſt? To this the cautious Melvill anſwered, that her majeſty was the faireſt perſon in England, and his miſtreſs in Scotland. During their interviews, Elizabeth ſhewed herſelf to him in the dreſſes of various countries, and contrived to let him hear her perform on the virginals, an inſtrument which ſhe underſtood to perfection; all the time endeavouring, with incredible dexterity, to allure the envoy into compariſons diſadvantageous to his miſtreſs.—Yet Elizabeth, when afterwards informed of the actual conſummation of theſe nuptials, pretended to teſtify the utmoſt diſpleaſure; ſeized the earl of Lenox's Engliſh eſtate, and threw the counteſs and her ſecond ſon into the Tower. Duplicity of conduct, was a ſtrong feature in Elizabeth's character; and, on the preſent occaſion, it ſerved as a pretext for publicly denying Mary's title to the future ſucceſſion of England, which that princeſs urged. In this ſame year 1564, under the perſecuting hand of Elizabeth towards all her relations of the blood royal, Frances ducheſs of Suffolk, daughter to Mary of France, youngeſt ſiſter to Henry VIII. ended in priſon a life, which, for variety of wretchedneſs, had but few parallels ſince that of the Trojan Hecuba. She had ſeen her daughter, lady Jane Grey, beheaded. Her own and her daughter's huſbands had ſhared the ſame fate. Her daughter Catharine, after having been repudiated by the earl of Pembroke, was now confined in the Tower; and her youngeſt daughter, Mary, moſt unequally matched to an inferior officer of the houſehold.

The queen of Scots, in the mean time, had been too much dazzled by the pleaſing exterior of her new huſband, to allow herſelf to look to the accompliſhments of his mind. Darnley was but a weak and ignorant man; violent, yet variable in his gratifications; inſolent, yet credulous, and eaſily governed by flatterers; devoid of all gratitude, becauſe he thought no favours equal to his merit; and being addicted to low pleaſures, he was equally incapable of the delicate ſenſations of love and tenderneſs. Mary, at firſt had taken a pleaſure in exalting him beyond meaſure; but having leiſure to remark his follies and his vices, ſhe converted her regard into diſguſt; and Darnley, enraged at her coldneſs, directed his vengeance againſt every perſon he ſuſpected to be the cauſe of this change in her behaviour.

There was then in her court one David Rizzio, the ſon of a muſician at Turin, himſelf a muſician, who, finding it difficult to ſubſiſt by his art in his own country, had followed the ambaſſador from that court into Scotland. As he underſtood muſic to perfection, he was introduced into the queen's concert, who was ſo taken with him, that ſhe deſired the ambaſſador, upon his departure, to leave Rizzio behind. The queen ſeemed to place peculiar confidence in him; and her ſecretary for French affairs having fallen under her diſpleaſure, ſhe promoted Rizzio to that office. It was eaſy to prevail upon a man of Darnley's jealous temper, that Rizzio was the perſon who had eſtranged the queen's affections; and a ſurmiſe once conceived, became to him a certainty. He therefore conſulted with ſome lords of his party, ſtung as he was with envy, rage, and reſentment; and they not only fanned the conflagration, but offered their aſſiſtance to diſpatch Rizzio. The earl of Murray, brother to the queen, the earl of Morton, lord Douglas, natural brother to the counteſs of Lennox, the lords Ruthven and Lindſey, are ſaid to have ſettled the circumſtances of this poor creature's aſſaſſination; and determined that, as a puniſhment for the queen's indiſcretions, the murder ſhould be committed in her preſence. Mary was at this time in the ſixth month of her pregnancy, and was then ſupping in private, attended by the counteſs of Argyle, her natural ſiſter, ſome other ſervants, and her ſecretary Rizzio. Lord Darnley led the way into the apartment by a private ſtaircaſe, and ſtood for ſome time leaning on the back of Mary's chair. His angry looks and unexpected intruſion, greatly alarmed the queen, who neverthelcſs remained ſilent. A little after, Ruthven, Douglas, and the other conſpirators, ruſhed in, all armed, and ſhowing in their looks ſome brutal intentions. The queen could no longer reſtrain her fears, but demanded the reaſon of this bold intruſion. Ruthven made her no anſwer; but ordered Rizzio to quit a place of which he was unworthy. Rizzio now ſaw that he was the object of their vengeance; and, trembling with apprehenſion, put himſelf under the queen's protection, who, on her part, ſtrove to interpoſe in his behalf. Douglas, in the mean time, had reached the unfortunate Rizzio; and ſnatching a dagger from the king's ſide, plunged it into Rizzio's boſom, who, ſcreaming with fear and agony, was dragged into the ante-chamber, where he was inhumanly butchered with fifty-ſix wounds. The affrighted princeſs, being informed of his fate, inſtantly diſcontinued her lamentations, and menaced revenge. The inſult indeed upon her perſon and honour, and the danger to which her life was expoſed on account of her pregnancy, were injuries ſo atrocious and ſo complicated, that they left but little room for pardon. Yet this act of violence ſeemed only to be puniſhed by temporiſing; ſhe pretended to forgive ſo great a crime; and exerted the force of her natural allurements ſo powerfully, that her huſband ſubmitted implicitly to her will. He gave up his accomplices to her reſentment, and retired with her to Dunbar, while ſhe, having collected an army which the conſpirators had no power to reſiſt, advanced to Edinburgh, and obliged them to fly into England, where they led a fugitive life, in poverty and diſtreſs. They made application, however, to the earl of Bothwell; and that nobleman, deſirous to ſtrengthen his party by the acceſſion of their intereſt, found means to pacify her reſentment, and he at length procured them liberty to return home.

The earl of Bothwell was of a conſiderable family in Scotland; and though not diſtinguiſhed by any talents, civil or military, yet he made ſome noiſe in the diſſenſions of the ſtate, and was an oppoſer of the reformation. He was a man of profligate manners, had involved his fortune in great debts, and reduced his income by his profuſions. This nobleman, however, is ſaid to have ingratiated himſelf ſo far with the queen, that all her meaſures were eventually directed by his advice and authority. Reports were even ſpread of more unpardonable intimacies; and theſe gave ſuch uneaſineſs to Darnley, that he left the court, and retired to Glaſgow, where he was ſuddenly taken ill. Thoſe who wiſhed well to Mary's character, were extremely pleaſed to hear that her tenderneſs for her huſband was revived, and that ſhe had taken a journey to Glaſgow to viſit him in his ſickneſs. Darnley was ſo delighted with her affectionate behaviour, that he reſolved to part with her no more; he put himſelf under her direction, and returned with her to Edinburgh. She lived in the palace of Holyrood-houſe; but as the ſituation of that manſion was low, and the concourſe of

perſons

perſons about the court attended with noiſe, which might diſturb him in his infirm ſtate of health, ſhe fitted up an apartment for him in a ſolitary houſe at ſome diſtance, called the Kirk of Field. Mary even there gave him every mark of kindneſs and attachment; ſhe converſed cordially and kindly with him, and ſlept in a room under him. But on the ninth of February, 1567, ſhe told him ſhe would paſs that night in the palace, becauſe the marriage of one of her houſehold was to be there celebrated in her preſence. But dreadful was the conſequence which enſued. About two o'clock in the morning the whole city was alarmed at an uncommon exploſion: the houſe in which Darnley lay was blown up with gunpowder! His dead body was found at ſome diſtance in a neighbouring field, but without any marks of violence or contuſion. No doubt could be entertained but that Darnley was murdered; and the general ſuſpicion fell upon the earl of Bothwell. All orders of the ſtate, and the whole body of the people, began moſt commendably to demand juſtice, and a ſtrict enquiry to be ſet on foot, in order to detect, and to puniſh, the perpetrators; amongſt whom even the queen herſelf was ſuſpected to be implicated. On this ſubject the pens of the moſt able hiſtorians have been employed; and various have been their conjectures as to the fact. The enquiry, indeed, rather belongs to the article SCOTLAND; but as the ſubject is ſo very intereſting, and ſo intimately connected with queen Elizabeth's reign; and more particularly as Mary queen of Scots was brought to the ſcaffold in England, it may not be conſidered as much out of its place, if we ſtate the principal facts under the records of this country. The party zeal of our more early hiſtorians induced them to labour hard to ſtain the memory of the unfortunate Mary with the blood of her huſband; while later and more diſpaſſionate writers, have been inclined wholly to acquit her. Dr. Coote, in his very able and impartial hiſtory, ſeems judiciouſly to have ſteered between the two extremes, which has prompted us to follow him.

It was the partizans of the earl of Murray who firſt propagated reports to the prejudice of the queen's character, inſinuating that ſhe had been concerned in the murder of a huſband whom ſhe hated. But more ſatisfactory evidence than has yet been produced, ſeems neceſſary, to an impartial mind, to juſtify thoſe who have imputed to her ſo horrible a crime. However great might be the averſion which ſhe had conceived for Darnley, the humanity of her diſpoſition was too ſtrong to ſuffer her to concur in his deſtruction. Had ſhe been deſirous of his death, ſhe might have procured the judicial condemnation of one who was ſo generally deſpiſed, that the nobles would not have interpoſed to reſcue him from juſtice. She might have brought him to trial for the united crimes of murder and treaſon; of murder, in having abetted the aſſaſſination of her ſecretary; of treaſon, in having directed his agents to commit that deed in the queen's apartment, to the manifeſt hazard of her life. She might, with equal facility, have procured a *legal* ſeparation from him, without injuring her ſon's legitimacy, which could not have been affected by a divorce grounded on his adulterous commerce with other women; or, even if there had been a riſk of deſtroying the ſon's right of inheritance, an act which expoſed that right to diſpute would have been far leſs criminal than the murder of the father.

From the character, alſo, of the chief accuſers of Mary, a diſpaſſionate enquirer would be led to form a ſtrong preſumption of her innocence. Theſe were the earls of Murray and Morton, who were men of ſuch depraved hearts, and ſuch unprincipled minds, that no crime which might gratify their irregular paſſions, would appear too enormous for them to perpetrate. The former was confident that, by his hypocritical pretences to piety, and by his artful mode of throwing off his own guilt on the heads of others, he could retain the good opinion of the whole preſbyterian party, whoſe plan of reformation he had warmly patroniſed. An eminent hiſtorian obſerves, that Murray could have no motive for the commiſſion of the murder; but, without judging from the event, we may infer, from his conduct preceding the king's death, that he aimed at the poſſeſſion of the government; and, as he retained a ſtrong reſentment againſt his ſiſter for her final reſolution of puniſhing him, which nothing but the ſituation of her affairs, on the aſſaſſination of Rizzio, had induced her to relinquiſh, he was ready to contrive any ſcheme which might at once be ſubſervient to his animoſity and his ambition. We alſo find that he had been apprehenſive of the execution of Darnley's menaces againſt his life; a fact recorded by Camden, which, according to the frequent practice of that age, would prompt him to anticipate the blow. Under theſe circumſtances, can it be juſtly ſaid that he had no motive for the crime? On the contrary, he ſeems to have had every motive which, however repugnant to humanity and juſtice, could urge a vindictive and aſpiring nobleman, who foreſaw, in the event of the conſpiracy, the indulgence not only of his revenge againſt Darnley, but likewiſe againſt the queen, whom, by calumnies conſequent on the murder, and by ſuch advice as might contribute to increaſe the effect of his malicious fabrications, he might render ſo unpopular that her depoſition might eaſily be procured by his influence over a people who had long been impatient of the government of a catholic princeſs. The earl of Morton, the friend and confederate of Murray, was influenced by ſimilar views. He was exaſperated againſt Darnley for having deſerted him after the murder of Rizzio, in violation of his ſolemn engagements for the protection of the authors of that horrid deed. Beſides, the deſire of vengeance, the hopes of recovering his influence in the government, and the dignified office of chancellor, inclined him to promote, with great eagerneſs, the iniquitous ſchemes of the queen's brother.

When Mary had received intelligence of her huſband's ſudden diſſolution, ſhe iſſued a proclamation, offering rewards for the diſcovery of the murderers. Bothwell being accuſed of the crime by the public voice, the earl of Lenox adviſed the queen to bring him to trial, as well as all other perſons who were ſuſpected of a concern in it. Mary, without heſitation, gave directions for that purpoſe; and Lenox was deſired to repair to Edinburgh, that he might be preſent at the judicial proceedings. He propoſed that Bothwell ſhould be taken into cuſtody; but the queen at firſt declined it, becauſe the accuſation againſt him reſted only on the evidence of anonymous bills fixed up in different parts of the city. When the day of trial arrived, the arts of Bothwell, and the influence of Morton and the other partizans of Murray (for this nobleman himſelf, to avoid ſuſpicion, had retired into France), deterred the earl of Lenox from appearing as an accuſer; and no evidence being adduced againſt Bothwell, the jury thought proper to acquit him. This verdict received the ſanction of a parliament which met two days afterwards; and the diſſolution of this aſſembly was followed by a remarkable aſſociation of many of the nobles for promoting the marriage of Bothwell with the queen. They ſigned a bond, expreſſing their conviction of his innocence of the king's murder, and promiſing to hazard their lives and fortunes in defending him againſt all who ſhould preſume to charge him with that crime. He had lately been extremely aſſiduous in his endeavours to obtain favour with Mary; but, when he made propoſals of marriage to her, ſhe ſignified her diſſent. Unwilling to ſubmit to a refuſal, he reſolved to make uſe of compulſive meaſures; and, by a daring violation of her chaſtity, to render a marriage with him neceſſary for the reparation of her wounded honour. He aſſembled a party of eight hundred horſe, under pretence of making an excurſion againſt banditti; and meeting the queen in her return from a viſit to her infant ſon, he diſperſed her ſmall guard, and ſeizing her horſe by the bridle, conveyed her to the caſtle of Dunbar. He there conjured her, in the moſt

perſuaſive

perſuaſive terms, to forgive that vehemence of paſſion which had hurried him into this outrageous behaviour; called to her mind the loyal ſervices which he had performed; repreſented in ſtrong terms the inveterate malignity of his enemies; and declared that nothing but the queen's favour, exemplified in her acceptance of his hand, could ſecure him from the effects of their hatred. Her reluctance not being overcome by his artful inſinuations, he produced the bond which the aſſociated nobility had ſigned. Finding his addreſſes ſo ſtrongly ſanctioned, and not being aware of the perfidious views of the chief ſubſcribers of the bond, ſhe began to relax in her oppoſition to his propoſals, and promiſed to gratify him with the matrimonial union. A mere promiſe not being ſo valid a ſecurity as he wiſhed, he had recourſe to "extraordinary and unlawful means (ſays Melvil in his Memoirs) for the completion of his wiſhes. Partly by artifice, and partly by force, he triumphed over her chaſtity. He ſoon after procured a divorce from his wife; and Mary having promoted him to the dukedom of Orkney, the nuptials between him and his ſovereign were ſolemnized at Edinburgh.

Bothwell, in the mean time, though an undoubted agent in the murder, was ſuffered by the rebellious nobles to remain at Dunbar, unmoleſted, near a fortnight; a circumſtance which may be conſidered as corroborative of the opinion of thoſe who have attributed the contrivance of that deed to Murray and Morton. The latter, who, in the abſence of the former, directed the motions of the inſurgents, dreaded the regular condemnation of Bothwell, leſt he ſhould diſcloſe ſuch particulars as might injure the reputation of his ſecret accomplices. He therefore connived at the retreat of this obnoxious nobleman, who, apprehenſive of the ſtroke of aſſaſſination, put to ſea with a few veſſels, and commenced the practice of naval depredation. Being purſued by Kirkaldy of Grange, he eſcaped to Norway, where he was thrown into priſon for an act of piracy. He died in confinement ſome years afterwards; and, on his death-bed, made a ſolemn declaration of queen Mary's innocence of the murder of Darnley, in which, ſays Keith, in the Appendix to his Hiſtory, "he affirmed, the earls of Murray and Morton, ſecretary Maitland, and other perſons of diſtinction, were concerned with him."

This fatal alliance, however, was the deſtruction of Mary. The principal nobility met at Stirling; and an aſſociation was formed for protecting the young prince her ſon, and puniſhing the king's murderers. Lord Hume was the firſt in arms; and, leading a body of eight hundred horſe, ſuddenly environed the queen in the caſtle of Borthwick, and conducted her to Edinburgh, amidſt the inſults of the populace. From thence ſhe was ſent a priſoner to the caſtle of Lochlevin, ſituated on a lake of that name. Here Mary, by her charms and promiſes, engaged a young gentleman of the name of Douglas to aſſiſt in making her eſcape; and this he effected by conveying her in diſguiſe in a ſmall boat, rowed by himſelf. The news of her enlargement being ſoon ſpread abroad, the loyalty and love of her people ſeemed to revive once more. As Bothwell was no longer aſſociated in her cauſe, many of the nobility ſigned a bond of aſſociation for her defence; and in a few days ſhe ſaw herſelf at the head of ſix thouſand men.

The earl of Murray, her brother, who had been declared regent, was not ſlow in aſſembling forces againſt her; and, although his army was inferior to that of the queen, he boldly took the field. A battle was fought at Langſide, near Glaſgow, A. D. 1568, which proved deciſive in his favour. Mary, now totally ruined, fled from the field of battle with great precipitation; and came with a few attendants to the borders of England, vainly hoping for protection from Elizabeth. With theſe hopes ſhe embarked on board a fiſhing boat in Galloway, and landed the ſame day at Workington in Cumberland, about thirty miles diſtant from Carliſle, whence ſhe immediately diſpatched a meſſenger to London, craving protection, and deſiring liberty to viſit the queen. Elizabeth, previouſly informed of her misfortunes, deliberated upon the proper methods of proceeding, and reſolved, at laſt, to act in a friendly yet cautious manner. She ſent orders to lady Scrope, ſiſter to the duke of Norfolk, to attend on the queen of Scots; and ſoon after diſpatched lord Scrope and ſir Francis Knolles, to pay her all poſſible reſpect. Notwithſtanding theſe marks of kindneſs, the queen refuſed to admit Mary into her preſence, until ſhe had cleared her character from the foul aſperſions with which it was ſtained.

Mary was now to undergo an examination before commiſſioners; her rival Elizabeth was to be the umpire; and the accuſation was to be undertaken by her brother Murray, the Scottiſh regent. This extraordinary conference, which was to deliberate on the conduct of a foreign queen, was managed at York; three commiſſioners being appointed by Elizabeth, nine by the queen of Scots, and five by the regent, in which he himſelf was included.

The prejudices entertained by Elizabeth againſt her unhappy kinſwoman, were now evident in her conduct in the appointment of commiſſioners, and in the teſtimony which ſhe admitted or rejected on thoſe occaſions. When the different commiſſions had been read, Mary's repreſentatives entered a proteſt, importing, that, though ſhe had conſented to refer the diſputes between herſelf and her rebellious ſubjects to the arbitration of the queen of England, ſhe had no idea of acknowledging any ſuperiority in that princeſs, but was herſelf an independent ſovereign. The Engliſh commiſſioners, on the other hand, declared, that, though they received this proteſt, they would not ſuffer it to prejudice that right of feudal ſuperiority which the ſovereigns of England had always claimed over Scotland. A paper was afterwards preſented to the court by Mary's deputies, containing a ſtatement of the acts of treaſon and rebellion committed againſt her by her brother's faction, and of the ſucceſſive injuries which had been heaped upon her. The regent, in his turn, accuſed Mary of having countenanced the iniquitous ſchemes of the earl of Bothwell, ſo as to render it neceſſary for her nobles to inſiſt on his diſmiſſion from her ſociety; mentioned the ſteps which had been taken againſt the earl, as well as againſt the queen, whoſe partiality for him juſtified them in depriving her of her liberty; and affirmed that ſhe had voluntarily reſigned her crown to her ſon, from the diſguſt which the fatigues and inquietudes of royalty had excited in her mind; that the parliament had ſanctioned her reſignation; and that the national affairs had been conducted with order and tranquillity, till ſome turbulent individuals had releaſed her from her confinement, and taken arms againſt the young king.

The omiſſion of the charge of murder againſt the Scottiſh queen, which the regent had before induſtriouſly propagated, gave great ſurpriſe to many. But, excluſive of the ſuppoſition that he was ſcrupulous of advancing an accuſation which he knew to be incapable of proof, he had lately had ſecret conferences with the duke of Norfolk, which may account for his ſilence on this head. The duke, commiſerating the fate of Mary, of whoſe reſtoration he was ſincerely deſirous, and whoſe perſon he wiſhed to poſſeſs, remonſtrated with the regent on the infamy to which he would ſubject himſelf by a public accuſation of his ſiſter and his ſovereign; aſſured him that Elizabeth had reſolved not to give a definitive ſentence in the cauſe, whatever evidence might be adduced on either ſide; and hinted the danger not only of being deſerted by that queen, but of being expoſed to the ſevereſt vengeance of Mary, if ſhe ſhould ever regain her crown. The earl liſtened to theſe obſervations, ſays Melvil, and gave the duke a promiſe that he would not produce thoſe documents which, he pretended, would convict Mary of adultery and murder. The documents here alluded to conſiſted of letters and ſonnets, ſuppoſed to have been

written by Mary to Bothwell. If theſe were genuine, little doubt would remain of the guilt of that princeſs. A controverſy has long ſubſiſted on this ſubject; and authors of eminence have appeared on both ſides of the queſtion. Some have maintained, that the letters and poems are the real compoſitions of Mary; while others, after a very accurate examination, have proved to the general ſatisfaction, that they were forged under the auſpices of the earls of Murray and Morton, whom, not only the moſt reſpectable friends of the injured queen, but many of the criminals who ſuffered death for their agency in the murder of Darnley, accuſed of having planned that nefarious deed.

Theſe pretended productions of Mary were ſhewn by the regent to Elizabeth's commiſſioners, in a private interview; a circumſtance which does not reflect a very high character of the candour of the earl and his colleagues, who thus clandeſtinely tampered with the Engliſh delegates in the conſideration of that important evidence, which ought to have been firſt produced in open court. They had before expreſſed an unwillingneſs to exhibit in form this grand head of accuſation, till they had received an explicit anſwer on the following points: Whether the commiſſioners were authoriſed to give a final decree in the cauſe; and whether Elizabeth would protect the accuſers of Mary from that reſentment which the latter princeſs would naturally feel againſt her adverſaries. To theſe interrogatories an evaſive reply was given by the Engliſh deputies, who, at the deſire of the regent, ſent to Elizabeth for further inſtructions. It was in this interval of delay, that Murray had privately opened to them his budget of evidence, that they might communicate their opinion of it to their ſovereign, who would then ſee how far they were diſpoſed to concur in the plan which ſhe and the earl appear to have concerted for obſtructing the vindication of Mary's character. From the account which they gave Elizabeth of the papers, ſhe was inclined to think that they conſidered them as forgeries; a circumſtance which did not coincide with her views. Hence ſhe was induced to recal the commiſſion which ſhe had granted, and to evoke the cauſe to Weſtminſter, where the proceedings would be more immediately under her eye. A new commiſſion was then iſſued, in which, though the duke of Norfolk and his two colleagues were re-appointed, five other delegates were named, in whoſe ſubſerviency Elizabeth placed greater confidence. Theſe were, the lord-keeper Bacon, the earls of Arundel and Leiceſter, Clinton the high-admiral, and ſecretary Cecil.

Mary being now called upon by the Engliſh commiſſioners to ſtate her anſwer to the various charges ſet forth by Murray, declined entering into any ſuch defence or explanation, unleſs in the preſence of Elizabeth, who alone could be conſidered as her equal, and conſequently of propoſing to her any kind of interrogatory. This privilege being refuſed, Mary perſiſted in demanding Elizabeth's protection as an injured queen; and ſhe deſired either to be aſſiſted in her endeavours to recover her crown, or that liberty ſhould be given her for retiring into France, there to make trial of the friendſhip of other princes. But Elizabeth, aware of the danger which attended both theſe propoſals, was ſecretly reſolved to detain her in captivity; and the queen of Scots was ſent to Tutbury caſtle, in the county of Stafford, and put under the cuſtody of the earl of Shrewſbury; there ſhe beguiled her royal priſoner with the hopes of one day coming into favour; and that, unleſs her own obſtinacy prevented, an accommodation might at laſt take place. But the deſigns and arts of Elizabeth had no ſuch pacific views: while ſhe kept up the moſt friendly correſpondence with Mary, and expreſſed the warmeſt proteſtations of ſincerity, ſhe was far from aſſiſting her cauſe, or rendering her the ſmalleſt ſervice. It was her intereſt to keep the factions in Scotland alive, and to weaken the power of that reſtleſs and turbulent nation: for this purpoſe ſhe depreſſed the party of the queen, which had now power to prevail; and in the mean time procured her adverſary, the earl of Lenox, to be appointed regent in the room of Murray, who had ſuffered a merited fate.

Thus every event which promiſed to be favourable to Mary, was prematurely cut off by the inſidious vigilance of Elizabeth. The duke of Norfolk, who enjoyed the higheſt title of nobility in England, was at this time a widower; and, being of a ſuitable age to eſpouſe the queen of Scots, made him deſirous of the match. But the obtaining Elizabeth's conſent, previous to their nuptials, was a circumſtance eſſential to his aims: yet, while this nobleman made almoſt all the nobility of England confidants to his paſſion, he never had reſolution to open his intentions to the queen. On the contrary, in order to ſuppreſs the ſurmiſes that were currently reported, he ſpoke contemptuouſly of Mary to Elizabeth. This duplicity only ſerved to inflame the queen's ſuſpicions; who, on enquiry, finding this intercourſe ſtill going on, ſhe had him committed to the Tower.

But the duke of Norfolk had too many partiſans in the north, to be confined without an effort for his releaſe. The earls of Weſtmoreland and Northumberland had prepared meaſures for a rebellion; had communicated their deſign to Mary; had entered into a correſpondence with the duke of Alva, governor of the Low Countries, and had obtained his promiſe of men and ammunition. But the vigilance of Elizabeth was not to be eluded: orders were immediately ſent for their appearance at court; and now the inſurgent lords, perceiving their plan diſcovered, were obliged to begin their revolt before matters were ripe for its execution. They accordingly publiſhed a manifeſto, in which they alleged that no injury was intended againſt the queen, to whom they vowed unſhaken loyalty; but that their ſole aim was to re-eſtabliſh the religion of their anceſtors, to remove all evil counſellors from about the queen's perſon, and to reſtore the duke of Norfolk to his liberty, and to the queen's favour. Their number amounted to four thouſand foot, and ſixteen hundred horſe; and they expected to be joined by all the catholics in England. But they ſoon found themſelves miſtaken: the queen's conduct had gained the general good-will of the people, and ſhe began to perceive that her ſureſt truſt was in the juſtice of her actions. The duke of Norfolk himſelf, for whoſe ſake they had revolted, uſed every method that his circumſtances would permit, to aſſiſt the queen; the inſurgents were obliged to retire to Hexham; and, hearing that reinforcements were upon their march to join the royal army, they had no other expedient but to diſperſe. The earl of Northumberland fled into Scotland, and was confined by the regent to the caſtle of Lochlevin; Weſtmoreland, after attempting to excite the Scots to revolt, was obliged to eſcape into Flanders. This rebellion was followed by another, fomented by lord Dacres, but with as little ſucceſs. Some ſeverities were uſed againſt theſe revolters; and, it is ſaid, that no leſs than eighty ſuffered by the hands of the executioner. The queen was ſo well ſatisfied with the duke of Norfolk's behaviour, that ſhe releaſed him from the Tower, A. D. 1569, and allowed him to return home, after exacting a promiſe that he would not proceed any further in his pretenſions to the queen of Scots. But this fatal promiſe involved his life. He had not been releaſed above a year, when new projects were ſet on foot by the enemies of the reformed religion, ſecretly fomented by Rodolphi, an inſtrument of the pope, in concert with the biſhop of Roſs. It was propoſed that Norfolk ſhould renew his addreſſes to Mary, to which it is probable he was prompted by paſſion; while the duke of Alva engaged to ſend over a body of ſix thouſand foot, and four thouſand horſe, to enable Norfolk to recover Mary's liberty. This ſcheme was ſo ſecretly conducted, that it had entirely eſcaped both the vigilance of Elizabeth, and of Cecil, who now bore the title of lord Burleigh. It was diſcovered merely by ac-

cident; for the duke having ſent a ſum of money to lord Herries, one of Mary's partiſans in Scotland, omitted truſting the ſervant with the contents of his meſſage; and he finding, by the weight of the bag, that it contained a larger ſum than the duke mentioned to him, began to miſtruſt ſome plot, and brought the money, with the duke's letter, to the ſecretary of ſtate. By the artifices of Burleigh, the duke's ſervants were brought to make a full diſcovery of their maſter's guilt; and the biſhop of Roſs, finding the plot diſcovered, to ſave his own life, confirmed their teſtimony. The duke was re-committed to the Tower, and ordered to prepare for his trial. A jury of twenty-five peers found him guilty, and the queen, four months after, ſigned the warrant for his execution. The earl of Northumberland being delivered up by the regent, underwent a ſimilar trial, and was alſo brought to the ſcaffold for rebellion. All theſe ineffectual ſtruggles in favour of the unfortunate queen of Scots, only ſerved to rivet her chains, and harden the obdurate and ſuſpicious heart of Elizabeth.

While theſe cruel and vindictive meaſures were purſuing in England, the Hugonots, or Chriſtian reformers, in France, had been greatly perſecuted by the catholic party of the houſe of Guiſe, and were obliged to ſolicit the aid and protection of the Engliſh. With a view to ſecure the confidence of Elizabeth, being then in poſſeſſion of the greateſt part of Normandy, they offered to put Havre de Grace into the queen's hands; a proffer which ſhe heſitated not to accept. She wiſely reflected, that, as Havre commanded the mouth of the Seine, it might in ſome meaſure compenſate the loſs of Calais; and, by this acquiſition, ſhe could ſtill have a check upon the French on the continent. Accordingly, three thouſand Engliſh troops took poſſeſſion of Havre and Dieppe, under the command of the earl of Warwick; but the latter place was ſo little capable of being defended, that it was immediately abandoned; and Havre itſelf, being ſoon after cloſely inveſted, was obliged to capitulate. But the French could not have accompliſhed this, had not a dreadful peſtilence reduced the gallant Engliſh band to a handful. The capitulation had hardly been ſigned, before lord Clinton appeared at the mouth of the harbour with a fleet and three thouſand ſoldiers. They were too late; and, to add to this diſaſtrous campaign, the diſeaſe which had thinned the garriſon, accompanied the poor remains of the army to London, where, in 1563, it ſwept away near thirty thouſand ſouls; while the perſecuting ſpirit of the bloody-minded French proceeded to the maſſacre of St. BARTHOLOMEW'S DAY; for which ſee vol. ii. p. 764.

The death of Charles IX. of France, which followed in 1574, eaſed the mind of Elizabeth from half its anxiety. Henry III. who then ſucceeded to the throne, both hated and dreaded the houſe of Guiſe, and conſequently depreſſed the intereſt of the unfortunate Mary of Scotland. That kingdom enjoyed at this period a kind of tranquillity under the government of Morton, whoſe entire dependence on the Engliſh queen, at the ſame time that it confirmed his power, prevented his gratifying his natural and wicked propenſities to the extent of his wiſhes.

Ireland had been ſtrangely convulſed; but the care of Walter Devereux earl of Eſſex had reſtored at leaſt the appearance of ſubmiſſion among the revolted chiefs. The whole annual revenue of Ireland was then barely ſix thouſand pounds. To this Elizabeth moſt unwillingly added twenty thouſand more. One thouſand ſoldiers, or in great need, two thouſand, compoſed the whole military power. A force perfectly incapable of ſubduing a numerous and warlike race; but rather ſerving to provoke the natives, and to excite thoſe frequent inſurrections which kept up and inflamed the animoſity between the two nations. That Elizabeth ſhould never have exerted the ſtrength of England to end theſe troubles, appears ſo ſtrange to a learned prelate, biſhop Hurd, that he thinks "the weak meaſure muſt have proceeded from the dictates of a crooked policy."

Although Elizabeth privately ſupported the proteſtant intereſt in France, and ſupplied the Hugonots with large ſums to levy German troops, ſhe nevertheleſs ſent, in 1575, to congratulate the new French monarch, the enemy of the Guiſes, and to inveſt him with the order of the garter. Her embaſſy was received with great reſpect. Elizabeth had at this epoch, indeed, attained to that high importance in the political balance of the continent, which her father had miſſed through his own intemperate levity; her brother, through his youth and inexperience; and her ſiſter, through violence and bigotry.

In 1576, the Hollanders, diſtreſſed beyond meaſure by the power of Spain, which they had long and gallantly reſiſted, entreated Elizabeth, as heireſs of Philippa, queen of our Edward III. to accept their ſovereignty, and undertake their protection. Tempting as was this offer, the Engliſh queen declined it; ſhe interpoſed, however, her good offices with Philip, although in vain; and afterwards advanced twenty thouſand pounds to the diſtreſſed revolters. But the appearance of Don John of Auſtria in the Netherlands, as governor, in 1577, greatly diſconcerted Elizabeth. She dreaded that prince; ſhe knew that it was his avowed wiſh to wed Mary of Scotland, and to aſſert her pretenſions to the crown of England. She therefore determined to ſupport the revolters with vigour; ſhe advanced to them one hundred thouſand pounds by way of loan; and conſented by treaty to ſupply them with five thouſand foot, and one thouſand horſe. At the ſame time ſhe wrote to the king of Spain a moſt artful apology for her conduct, profeſſing that ſhe had only undertaken the protection of the Netherlanders, to prevent their throwing themſelves into the hands of France; and offering to withdraw her aid, if Don John and the Spaniſh troops ſhould be recalled. Philip imitated the deep policy of Elizabeth; and, while he profeſſed a continuation of amity, attempted to excite the Iriſh to revolt. But the wiſe precautions of the Engliſh queen had guarded againſt his machinations.

In 1578, Elizabeth received an embaſſy from France, propoſing a treaty of marriage between her and the duke of Anjou, late Alençon. This embaſſy was kindly received; but the eyes of Europe were not yet opened to a ſpecies of political coquetry, which ever aſſiſted that princeſs in her negociations. Even the ſubtle Catharine de Medicis was deceived, and thought her youngeſt ſon already king of England; at the ſame time that Philip of Spain was ſo far led to ſuſpect the deſigns of his brother Don John of Auſtria towards an union with Elizabeth, that he put to death privately one of that prince's ſecretaries, whom he thought the confidant of a matrimonial treaty between him and that moſt inſcrutable of ſovereigns.

The negociations for the queen's marriage were quickened in 1579, by the arrival of Simier, an artful agent ſent by Catharine de Medicis; who gained ſuch an aſcendant over the counſels of Elizabeth, that even her favourite Leiceſter was alarmed, and intimated to the credulous, his apprehenſion of philtres, ſpells, &c. while Simier, irritated at the charge, informed the queen of Leiceſter's private marriage with the widow of Eſſex, a diſcovery which would have conducted the imprudent favourite to the Tower, had not lord Suſſex interpoſed, and repreſented to Elizabeth the extreme illegality of puniſhing any man for a legal act like matrimony. The fatal end of Morton, regent of Scotland, a man devoted to her commands, as he held his authority ſolely under her protection, being now tried, convicted, and executed, for treaſon againſt the young king James VI. made Elizabeth ſpend the cloſe of 1580 in ſome degree of anxiety.

It was now time alſo that the wire-drawn farce of the French marriage ſhould come to a concluſion. The duke of Anjou had every reaſon to fancy himſelf ſure of

his royal bride; ſhe had ſent to him in Flanders a preſent of 100,000 crowns, the matrimonial articles were ſettled to her mind, and a ſumptuous embaſſy was ſent from France to aſſiſt at the wedding: Anjou himſelf arrived now in England, and was received by the queen with viſible pleaſure. She placed on his finger a valuable ring as a pledge of her love, and took up the pen to ſign the marriage deeds, but ſhe proceeded no further. The duke daſhed the ring on the floor; and loudly curſing the caprice of Elizabeth and the ruggedneſs of her people, he took his way ſoon afterwards to Flanders, where his ill-concerted plans of deſpotiſm rendered him odious to the people who had invited his coming. It is ſtill a myſtery why the Engliſh queen ſhould have worn the uſeleſs maſk of affection ſo long, and have put this wanton inſult on a ſuitor ſo reſpectable in his connections. Many are of opinion, that an uncontroulable paſſion for Anjou carried her to ſuch abſurd lengths, in ſpite of that policy which would have made her break off the negociation by degrees. Had France been freed from civil broils, the queen might have drawn a cruel war on her ſubjects by this worſe than fantaſtical conduct. Her moſt favoured courtiers had, it is true, wearied her with arguments againſt the union, and ſhe herſelf, when ſhe dropt the pen, aſked her council harſhly, 'If they were not conſcious that this marriage would be her death?' An odd queſtion, which has given riſe to as odd conjectures.

In 1584, Elizabeth, alarmed at the general cry againſt her ſeverity, openly queſtioned her judges as to their treatment of Roman catholics and others, charged with treaſonable proceedings, and they anſwered very ingenuouſly, "Campion had indeed been ſtretched (the term uſed for racking) but with ſuch moderation, that he could walk immediately afterwards. Another criminal, Bryan, had been kept without nouriſhment until he gave a ſample of his writing, which had been in vain demanded." Elizabeth abſolved the judges, but ordered the rack to be uſed no more in England, and releaſed ſeventy prieſts who had been impriſoned on ſuſpicion.

The ſituation of Elizabeth was now extremely critical; many of her own ſubjects, led by miſtaken motives of religion, and excited by the artful miſſionaries of the Flemiſh univerſities, were exciting conſpiracies againſt her; unaided by any ally, ſhe was on the point of engaging in a conteſt with the moſt potent and ſubtle prince which Europe had ever known. Philip could at this period command the aſſiſtance of the German empire; he poſſeſſed (beſides Spain and the Indies) Portugal and her important colonies: his naval ſtrength was ſuperior to that of all the reſt of Europe; the Netherlands (whoſe gallant defender the prince of Orange had been juſt then aſſaſſinated) ſeemed to be proſtrate at his feet; and France, his old and dreaded enemy, from the impolitic ſuggeſtions of narrow bigotry, rather favoured than oppoſed the ambitious plans of the Spaniſh tyrant. In that country the Guiſes, whoſe power, grounded on popular fanaticiſm, was unbounded, had formed, or rather renewed, a formal covenant, ſtyled 'The League;' by which Henry of Navarre, the next heir, on failure of the houſe of Valois, was excluded from the throne, if he ſhould continue to profeſs the reformed religion.

It was at this awful criſis that Elizabeth, convinced of the king of Spain's inveterate enmity, and determined to ſhew herſelf as vigorous in purſuing, as ſhe had been cautious in adopting meaſures of hoſtility, began inſtantly to attack Philip in his moſt vulnerable ports. The enterprizing ſpirit of Drake was now called into action. With twenty ſtout veſſels he ſailed to the Weſt Indies, reduced St. Jago, the capital of the Cape Verd Iſlands; on his paſſage took the town of St. Domingo in Hiſpaniola, and Cathagena on the continent of South America; then, after ravaging the coaſt of Florida, returned to England with the loſs of 700 men by diſeaſe, but enriched by vaſt treaſures, and accompanied by the poor remains of a colony which ſir W. Raleigh had endeavoured to ſettle in Virginia. See the article DRAKE, p. 64 of this volume.

The Hugonots, hard preſſed in France, were not neglected by Elizabeth. She ſupplied the prince de Condé with a large ſum of money, and lent him ten ſhips of war, with which he effected the relief of Rochelle, the ſtrong hold of the French proteſtants. In the mean while Wootton, a man of the moſt inſinuating turn, entertaining in converſation, and ſkilled in dreſs and falconry, was ſent by the Engliſh queen to reſide at the court of James VI. of Scotland, to gain his favour, and inſpect his conduct. It is even ſaid, that he was to endeavour at ſeizing the perſon of the Scottiſh monarch, with a view to convey him to England; if ſo, James ſhewed great ſenſe in forgiving the unjuſt machination, and in entering very ſoon afterwards (in ſpite of the remonſtrances of France) into the moſt rational and political treaty ever made between the ſiſter nations. It was an alliance offenſive and defenſive, and may be ſaid to have ſecured to the king of Scots the affections of the Engliſh, and the ſucceſſion to their ſovereignty. The regard of James was aſſuredly much conciliated by an annual penſion of 5000l. equivalent to the Lenox eſtate, and granted at this period.

The extenſive enterprizes of Elizabeth in foreign lands, ſhould ſeem to imply that all was peace at home. It was not ſo. Parry, a member of the commons, being convicted of an intention to aſſaſſinate the queen, ſuffered the death of a traitor; Arundel, ſon to the unfortunate duke of Norfolk, ſeeking to fly the realm, was ſent to the Tower, where Henry Percy earl of Northumberland had juſt ſhot himſelf, either conſcious of guilt, or dreading the prejudices of his judges. Other circumſtances of a melancholy nature now alſo took place. Anthony Babington, a young gentleman of Derbyſhire, inſpired with fanatical zeal to effect a change in the religion and government of his country, had joined with ſeveral men of family and fortune in a plot to aſſaſſinate Elizabeth. They had been excited to this conſpiracy by the exhortations of Dr. Gifford, and others of the Rhemiſh ſeminary. An eccentric ſpecies of ambition tempted ſeven of the chief plotters to have their portraits taken in one picture, with a myſterious motto, *Quorſum alio properantibus?* This picture was ſhewn to Elizabeth, who knew Barnwell, one of the group, as he had been with her in buſineſs from lord Kildare. Soon after this view of his portrait, ſhe met him, and ſtedfaſtly viewing him, ſaid ſternly to the captain of her guard, "Am I not well taken care of, that have not a man in my company who wears a ſword?"

The vigilant ſubtlety of Walſingham, ſecretary of ſtate, detected the whole contrivance; in conſequence, Babington, with thirteen of his aſſociates, ſuffered as traitors. This led to the final cataſtrophe of Mary queen of Scots. Though all England was acquainted with the event of Babington's conſpiracy, every avenue to the unfortunate Mary was ſo ſtrictly guarded, that ſhe remained in utter ignorance of the matter. But her aſtoniſhment could only be equalled by her anguiſh, when ſir Thomas Gorges, by Elizabeth's order, informed her of the fate of thoſe who were called her confederates. She was at that moment mounted on horſeback, going a-hunting; and was not even permitted to return to her former place of abode, but conducted from one nobleman's houſe to another, till ſhe was lodged in Fotheringay-caſtle, in Northamptonſhire, where the laſt ſcene of her deep tragedy was to conclude.

The council of England was divided in opinion about the meaſures to be taken againſt this illuſtrious ſtate priſoner. Some members propoſed, that as her health was infirm, her life might be ſhortened by cloſe confinement; therefore to avoid any imputation of violence or cruelty, Elizabeth's favourite, Leiceſter, propoſed that ſhe ſhould be diſpatched by poiſon; but the majority inſiſted on her being put to death by what was termed legal proceſs.

Accordingly

Accordingly a commiſſion was iſſued for forty peers, with five judges, or the major part of them, "to try and paſs ſentence upon Mary, daughter and heir of James V. king of Scotland, commonly called queen of Scots, and dowager of France." Thirty-ſix of theſe commiſſioners arriving at the caſtle of Fotheringay, Nov. 11, 1586, preſented her with a mandate from Elizabeth, commanding her to ſubmit to a trial for her late conſpiracy. Mary peruſed the warrant with great compoſure; but wondered the queen of England ſhould command her as a ſubject, who was an independent ſovereign like herſelf. She would never, ſhe ſaid, ſtoop to any condeſcenſion which would leſſen her dignity, or prejudice the claims of her poſterity. The laws of England, ſhe obſerved, were unknown to her; ſhe was deſtitute of counſel; nor could ſhe conceive who were to be her peers, as ſhe had but one equal in the kingdom. She added, that, inſtead of enjoying the protection of the laws of England, as ſhe had hoped to obtain, ſhe had been confined in priſon ever ſince her arrival in the kingdom; ſo that ſhe derived neither benefit nor ſecurity from them. When the commiſſioners preſſed her to ſubmit to the queen's pleaſure, otherwiſe they would proceed againſt her as contumacious, ſhe declared ſhe would rather ſuffer a thouſand deaths than own herſelf a ſubject to any prince on earth: that, however, ſhe was ready to vindicate herſelf in a full and free parliament; as, for aught ſhe knew, this meeting of commiſſioners was deviſed againſt her life, on purpoſe to take it away with a pretext of juſtice. She exhorted them to conſult their own conſciences, and to remember that the theatre of the world was much more extenſive than that of the kingdom of England. At length the vice-chamberlain Hatton vanquiſhed her objections, by repreſenting that ſhe injured her reputation by avoiding a trial, in which her innocence might be proved to the ſatisfaction of all mankind. This obſervation made ſuch an impreſſion upon her mind, that ſhe agreed to plead, if they would admit her proteſt, of diſallowing all ſubjection.

The principal charge againſt her was urged by ſerjeant Gaudy, who accuſed her with knowing, approving, and conſenting, to Babington's conſpiracy. This charge had been ſupported by Babington's confeſſion, by the copies which were taken of their ſuppoſed correſpondence, in which her approbation of the queen's murder was expreſsly declared, by the evidence of her two ſecretaries, Nairne and Curle, who ſwore that ſhe received Babington's letters, and that they had anſwered them by her orders. To theſe charges Mary made a moſt ſenſible defence; ſhe ſaid Babington's confeſſion was extorted from his fears of the torture; which was really the caſe: ſhe alleged that the letters were forgeries; and ſhe defied her ſecretaries to perſiſt in their evidence, if brought into her preſence, which was refuſed. She owned that ſhe had uſed her endeavours to recover her liberty, which was only purſuing the dictates of nature; but as for conceiving a thought againſt the life of the queen, ſhe treated the idea with horror. Whatever might have been this queen's offences, it is certain that her treatment was ſhamefully ſevere. She deſired to be put in poſſeſſion of ſuch notes as ſhe had taken preparative to her trial; but this was refuſed. She demanded a copy of her proteſt; but her requeſt was not complied with: ſhe wiſhed an advocate to plead her cauſe againſt ſo many learned lawyers as had undertaken her accuſation; but even this was rejected; and after an adjournment of ſome days, ſentence of death was pronounced againſt her in the Star-chamber in Weſtminſter, all the commiſſioners, except two, being preſent. At the ſame time a declaration was publiſhed by the commiſſioners, implying, that the ſentence againſt her did in no wiſe derogate from the title and honour of James, king of Scotland, ſon to the attainted queen.

During the interval between this ſentence of the Scottiſh queen and its execution, Elizabeth acted a part remarkable for diſſimulation and hypocriſy. When ſhe found that the tide of public prejudice ran ſtrongly againſt Mary, and that the people were as eager as herſelf for the execution of that princeſs, ſhe commanded ſecretary Daviſon to prepare the warrant for her ſignature. As ſoon as it was produced before her, ſhe ſigned it with as much cheerfulneſs and ſelf-complacency as if it had contained the grant of a pardon. She even inſulted the misfortunes of the injured queen by unſeaſonable jocularity. Having deſired the ſecretary to inform his colleague Walſingham (then indiſpoſed) of what ſhe had done, ſhe added, with an air of levity, that ſhe was apprehenſive of his dying of grief at the intelligence. But, after ſhe had thus given her ſanction to the public execution of Mary, her fear of the cenſures of mankind ſuggeſted to her an expedient by which ſhe hoped to remove the odium of her death on her keepers. She wiſhed them to murder her in private, on pretence of the aſſociation by which they had bound themſelves to revenge any attempt againſt the life of their own ſovereign. This contrivance, ſhe flattered herſelf, would tend to the propagation of an opinion that ſhe had not conſented to Mary's death, and that the officious zeal of private individuals had perpetrated the deed without her knowledge. Pleaſed with the ſuggeſtion, ſhe ordered the two ſecretaries of ſtate to write a letter to Paulet and Drury, who had the charge of the condemned queen, reproaching them with their want of loyalty and public ſpirit, in not having relieved her, by ſome deciſive means, from the danger to which ſhe was hourly expoſed by the life of Mary; urging the bond of aſſociation as a ſufficient juſtification of ſuch a meaſure to their own conſciences as well as to the world; and reprobating their unkindneſs in wiſhing to throw the odium upon her, acquainted as they were with the humanity of her diſpoſition, which rendered it ſo unpleaſing to her to order the execution even of the loweſt criminal, that they might eaſily ſuppoſe her to be peculiarly averſe to the idea of iſſuing an order for the delivery of a princeſs of her own family into the hands of the executioner. Paulet and his aſſociate, though not remarkable for their tenderneſs to Mary, had too much honour to perpetrate the infamous deed in which their unprincipled ſovereign was deſirous of employing them. She might command, they ſaid, their honourable ſervices; but they ſcorned to act the part of aſſaſſins. Mortified at their refuſal, which ſhe ridiculed as the offspring of idle ſcrupuloſity, Elizabeth reſolved to inſtigate ſome leſs conſcientious perſons to the ſecret murder of the Scottiſh queen. But, being diſſuaded from that reſolution by the remonſtrances of Daviſon, ſhe thought proper to have recourſe to the regular execution of the ſentence. That miniſter having communicated the warrant to the chancellor for the application of the great ſeal to it, Elizabeth ſent a meſſenger to countermand that operation; and finding that it was already performed, ſhe reprimanded Daviſon for his precipitation. Wiſhing to draw him into a ſnare, that ſhe might have a pretence for imputing Mary's execution to him, ſhe neither ordered him to iſſue the warrant, nor to with-hold it. Conceiving it to be his duty to expedite a writ which had paſſed through the neceſſary forms, and which he knew the queen to be extremely deſirous of executing, he produced it before the privy council; and, as Cecil lord Burghley, Hatton, and other experienced courtiers, penetrated her ſchemes againſt Daviſon, of which indeed he himſelf had ſome ſuſpicion, they reſolved to gratify her wiſh, and eaſily perſuaded the whole aſſembly to concur in ſending off the warrant, without further communication with their miſtreſs. To allay the apprehenſions of Daviſon, all the counſellors engaged to bear an equal ſhare of the blame that might attend this meaſure.

In the mean time, accounts of this extraordinary ſentence being ſpread into all parts of Europe, the king of France was among the foremoſt who attempted to ſoften the

the heart of Elizabeth. He ſent over an extraordinary ambaſſador to intercede for the life of Mary. James of Scotland, her ſon, was, as in duty obliged, ſtill more preſſing in her behalf. He diſpatched lord Keith, with a letter to Elizabeth, conjuring her to ſpare the life of his parent. Elizabeth treated his interceſſions with the utmoſt indignity; and when the Scots ambaſſador begged that the execution might be delayed for a week, the queen anſwered, with great emotion, "No, not for an "hour!"

On the 7th of February, 1587, the unfortunate Mary queen of Scots was brought to the block, at eight o'clock in the morning. In that awful conjuncture, ſhe diſplayed a fortitude and a decency which would have honoured a matron of Rome; and, to the moment of her death, united the majeſty of a queen with the meekneſs of a martyr. The earls of Shrewſbury and Kent carried to the hapleſs lady the warrant for her death. Worn with ſickneſs, confinement, and diſtreſs, ſhe ſeems to have looked on this ſummons rather as a relief, than as an addition to her woes. She divided her wardrobe among her ſervants, and even deigned to excuſe herſelf to them for not adding to her preſent the magnificent habit in which ſhe went to her death; "but I muſt, (ſaid ſhe,) appear in a dreſs becoming ſuch a ſolemnity." It was not without many intreaties, that ſhe could get permiſſion for ſix of her ſervants to attend at her death. She was even forced to remind the earls that ſhe was "couſin to Elizabeth, deſcended from Henry VII. a married queen of France, and an anointed ſovereign of Scotland." The unutterable agonies of her ſervants ſhe tenderly repreſſed, telling them that ſhe had undertaken for the firmneſs of their behaviour. To her ſon ſhe ſent a tender and conciliatory meſſage by the weeping Melville. It was her hard lot to have her devotion ſhamefully diſturbed by the fanaticiſm of the buſy dean of Peterborough. Having prayed for the church, for her ſon, and for the proſperity and long life of Elizabeth, the intrepid Mary uncovered her neck, and ſmiled at her own dilatorineſs: "She was not (ſhe cheerfully ſaid) accuſtomed to undreſs before ſo much company." An involuntary burſt of tears proclaimed the feelings of thoſe who ſtood around; ſhe comforted and bleſſed them; then ſerenely laid her head on the fatal block, and two ſtrokes ſevered it from her body. Her remains were not at firſt treated with due reſpect; but they were afterwards interred ſplendidly at Peterborough, from whence James, her ſon, in 1612, removed them to Weſtminſter-abbey. Of the long epitaph inſcribed on her tomb, one line is ſtrikingly comprehenſive:

Jure Scotos, thalamo Francos, ſpe poſſidet Anglos.

Scotland ſhe claims, eſpouſes France, and hopes for England's crown.

She ſuffered in the forty-fifth year of her age, and the nineteenth of her captivity. Thus fell, by an illegal ſtretch of power in England, Mary Stuart, queen of Scotland in her own right, dowager of France, and heireſs of the crowns of England and Ireland; a victim to the malignity of female jealouſy, and to the rage of puritanical bigotry. Having ſufficiently ſpoken of the controverted parts of her conduct, we ſhall diſmiſs this illuſtrious female with a ſketch of her general character. Her perſonal accompliſhments were brilliant and captivating. By beauty of countenance, ſymmetry of form, and dignity of ſtature, ſhe was eminently diſtinguiſhed. The natural elegance of her addreſs, improved by the poliſh of Gallic education, heightened the attractions of her perſon; and her engaging affability, vivacity, and eaſe, delighted all who had the honour of converſing with her. She poſſeſſed very reſpectable talents; and her mind was cultivated by literature and erudition. In the profound knowledge of policy and government, ſhe was inferior to Elizabeth; but, in generoſity, magnanimity, and other royal virtues, ſhe excelled her celebrated rival. Of the crimes of murder and adultery, of which ſhe has been ſo peremptorily accuſed, later writers have endeavoured to acquit her, not only on the ground of inſufficiency of evidence, but on the conſideration of the flagitious characters of her chief accuſers. Into various acts of indiſcretion, however, ſhe was certainly carried, by the warmth of her feelings, and the ſuddenneſs of her reſolutions. Her attachment to her religion was ſo ſtrong as to expoſe her to the imputation of bigotry; and though ſhe made no open attempts to overturn that theological ſyſtem which her ſubjects had eſtabliſhed during her abſence on the continent, her forbearance was leſs the reſult of inclination than of the weakneſs of female authority over a bold and turbulent people. Being naturally frank and open (though ſhe was not unſkilled in diſſimulation), ſhe was inclined to entertain too favourable an opinion of thoſe who concealed their vices; and her occaſional credulity, and unſeaſonable clemency, afforded the ambitious hypocrites of her court an opportunity of effecting her ruin. Her deportment had too great an appearance of levity, to pleaſe thoſe fanatics who, under the auſpices of the earl of Murray, and the inſtructions of Knox, endeavoured to throw a gloom over the innocent cheerfulneſs of human life. She did not perhaps take the moſt proper ſteps for repreſſing the factious ſpirit of her nobles, or the ſeditious exceſſes of her clergy; and, by deviating, in ſome inſtances, from the paths of prudence and judgment, ſhe was leſs able to avert the ſtorm which drove her from her throne. Her weakneſs in truſting to the profeſſions of Elizabeth cannot be mentioned without cenſure; but her behaviour in that long ſeries of adverſity, which ſhe ſuſtained after ſhe had put herſelf into the power of the Engliſh queen, demands our admiration of her patience, fortitude, and conſtancy. In her priſon, and on the ſcaffold, ſhe appears a greater woman than Elizabeth on her throne, while trembling, like a jealous tyrant, with mean ſuſpicions and degrading fears.

As ſoon as her execution was notified to Elizabeth, another ſcene of hypocriſy was played off. She affected the utmoſt grief and aſtoniſhment, and threatened her miniſters with her ſevereſt diſpleaſure, for having put her dear couſin to death, not only without her knowledge or conſent, but even in oppoſition to her declared will. She now wrote a letter to the king of Scotland, aſſerting her innocence of his mother's death, and profeſſing an inviolable attachment to his intereſts. James was ſo incenſed, that he reſolved not only to renounce his alliance with Elizabeth, but to avenge, by hoſtilities, the cauſe of the murdered princeſs, his mother. His nobles applauded the juſtneſs of his reſentment, and promiſed to act with vigour againſt a queen who had inſulted and degraded their nation. He refuſed to admit ſir Robert Cary, the bearer of Elizabeth's letter, within his frontiers; though he afterwards conſented that the epiſtle ſhould be received, as well as a memorial written by Cary, in which the blame of Mary's execution was imputed to ſecretary Daviſon, whom the queen intended to puniſh ſeverely for his preſumption. Theſe diſpatches did not tend to allay the wrath of James, who eaſily diſcerned the falſehoods which they contained. He continued to think of revenge; and, as his own kingdom was too weak to give him hopes of ſucceſs in a war with England, he looked out for a powerful ally, by whoſe aid he might puniſh the injuſtice. In the mean time, Daviſon was proſecuted in the Star-chamber for a miſdemeanor, in having produced the warrant before the privy council without the orders of the queen, who affirmed that ſhe had ſtrictly enjoined him not to communicate it to any one till he had received further directions from her. Though Daviſon denied that ſhe had given him ſuch a charge, he was condemned by an arbitrary court to pay a fine of 10,000l. and to ſuffer impriſonment during the queen's pleaſure. This iniquitous ſentence reduced the ſecretary to indigence and miſery. He lingered ſome years in confinement; during which the queen, by whoſe tyranny he had been ruined, occaſionally relieved his neceſſities.

And now, whatever may be ſaid to excuſe Elizabeth for the impriſonment and death of her hapleſs competitor on the ſcore of ſtate-neceſſity, and ſtill more on that of ſaving her ſubjects from ſeeing the fires of Smithfield renewed by the bigotry of a ſecond Mary, no apology can be made for the wretched farce which ſhe acted after that event; for her loud laments; for her appeals to Heaven that ſhe meant not the death of Mary; nor, laſtly, for her unjuſt and inhuman treatment of the worthy Daviſon. All this made up a tiſſue of wicked diſſimulation, which diſgraced her even in her nobleſt actions. That attachment to a worthleſs favourite alſo, which had all along thrown a cloud over the reign of Elizabeth, began now to unveil itſelf. The conduct of the earl of Leiceſter in Holland, where he commanded the army, had been uniformly treacherous, daſtardly, and treaſonable. Governors appointed by him, York and Stanley in particular, had ſold to the Spaniards the forts entruſted to their care; each town in Holland had become a ſcene of intrigue; and a ſpirit of diſcontent, fomented by this ambitious minion, had almoſt diſunited thoſe provinces, whoſe union alone could preſerve their exiſtence as a nation. The Dutch told their wrongs aloud, and lord Buckhurſt was ſent to examine and report the truth. He returned to the queen with ample evidence of Leiceſter's bad conduct and worſe deſigns. He found the favourite in poſſeſſion of Elizabeth's ear, and both he and ſir John Norreys were diſgraced for expoſing Leiceſter's enormities; while that odious favourite was ſent back to Holland in triumph, and again began his career of turbulence and treaſon. However, it was not long before evidence of his having plotted to ſeize and impriſon Barneveldt, and thirteen more of the firſt perſons in the country, was brought forward; and this charge, which was too well grounded even for the partial ear of Elizabeth to reſiſt, obliged her to recal that worthleſs minion from the Netherlands, and to ſend lord Willoughby to take the command of his turbulent and ill-diſciplined army.

An awful period in the annals of England now approached. Philip II. elate with the dominions of Spain, of Portugal, and both the Indies, had determined to exert his vaſt naval power, and cruſh, with one huge effort, the inſolent iſlanders of Britain, who preſumed to ſmile at his vengeance. He had juſt received a new provocation; Drake, the ſcourge of Spain, had deſtroyed a whole fleet of tranſports at Cadiz, laden with ſtores and ammunition; had ravaged his weſtern coaſt; inſulted Liſbon; and taken a veſſel laden with treaſure, and papers of high importance.

The preparations of Spain for the invaſion and conqueſt of England, now filled every breaſt with anxious expectation. One hundred and thirty veſſels, moſt of which were larger than had been uſually known in the European ſeas, manned by 8350 ſeamen, 19,290 ſoldiers, and 2080 galley-ſlaves, and mounting 2360 large pieces of ordnance, compoſed a power which, in the eyes of Europe, ſeemed irreſiſtible; and which the Spaniards haughtily chriſtened The Invincible Armada. Nor was this the whole force deſtined to act againſt this devoted country; the prince of Parma had 25,000 veteran troops quartered along the coaſt of Flanders, ready to embark in tranſports and flat-bottomed veſſels, the moment the Armada ſhould appear to protect their paſſage towards the banks of the Thames; and ſome hundreds of deſperate Engliſh renegadoes prefented the moſt odious, but not the leaſt formidable, ſhow of this armament; the treacherous band was led by Stanley, already proſcribed for ſelling a Dutch fortreſs to Spain. Beſides theſe, 12,000 Frenchmen devoted to the intereſt of the Guiſes, in habitual hatred of proteſtants, were encamped on the Norman coaſt, ready to embrace the firſt opportunity of croſſing the channel, and of renewing in the weſt of England thoſe horrors which the Hugonots had felt in France.

Proviſions abounded in the Armada; bread and wine for 40,000 men, during a whole year, ſtored the holds; while the decks ſwarmed with volunteers of the higheſt ranks. Superſtition, too, added her fanatic but powerful aid; bulls, denouncing fire and ſword to England, accompanied the ſquadron; and a conſecrated banner from Rome waved over the heads of theſe formidable cruſaders. To oppoſe this tremendous armament the ſtrength of England appeared quite inadequate. The whole realm could not ſupply 15,000 able ſeamen; and the royal navy conſiſted only of twenty-eight veſſels, moſt of them ſmall, and ill calculated to lie along ſide the huge galleons of Spain and Portugal. But Elizabeth reigned in the hearts of her people, and the exertions which they unanimouſly made for their country were proportioned to their loyalty. London alone ſent her 10,000 men and thirty ſhips; not large, indeed, but well-equipped. Other ports followed this noble example; and the nobility and gentry bought or hired veſſels, and equipped them to ſerve in this glorious cauſe. The queen had hardly an ally but James of Scotland, whoſe intereſt bound him to her, in ſpite of her paſt conduct, and whoſe fidelity to his engagements was of infinite conſequence to England and the proteſtant cauſe. Great were the offers by which the ſubtle Spaniard tempted him to join in an enterprize, which he wiſhed to repreſent as chiefly meant to revenge the death of his injured mother. But the young prince had diſcernment enough to penetrate the ſlight veil with which the Spaniard wiſhed to conceal his real deſigns, and wit enough to remark to an ambaſſador, that "he found himſelf treated as Polyphemus treated Ulyſſes, and reſerved for Philip's laſt meal." Some ſmall aid England might be ſaid to have derived from the king of Denmark and the Hanſe-towns. Theſe, though not on good terms with Elizabeth, yet, moved by the common intereſt of nations, found means to delay and even ſtop the ſailing of thoſe Spaniſh ſhips which had put into their harbours, and were laden with ſtores for the Armada.

The martial and maſculine ſpirit of Elizabeth now ſhewed itſelf. She aſſembled her beſt officers. Her fleet ſhe entruſted to lord Howard of Effingham, and to Drake, Cavendiſh, and Forbiſher, the firſt ſeamen of the age. She raiſed three armies; one of 20,000 was cantoned along the coaſt; while one of 34,000, under lord Hunſdon, guarded her perſon, and was to act as occaſion might require. It pains the hiſtorian to add, that ſhe entruſted the third and moſt important corps of 22,000 men, encamped at Tilbury, and deſtined to defend the metropolis, to the worthleſs, the daſtardly, Leiceſter, whom ſhe unwiſely appointed general in chief of all her forces. Had the Spaniards really landed their troops, this partiality might have been fatal to England.

Leiceſter's army the queen viſited in perſon; and, riding through the ranks with a cheerful countenance, ſhe elevated the loyalty of the ſoldiers almoſt to the pitch of phrenzy, by one of the moſt ſpirited orations which any hiſtory can produce. She told them, that ſhe had been warned not to truſt herſelf among armed multitudes for fear of treachery; but that ſhe did not wiſh for life, if ſhe muſt diſtruſt her people: "Let tyrants fear, (ſaid the eloquent heroine;) I have always ſo behaved myſelf, that, under God, I have placed my chiefeſt ſtrength and ſafeguard in the loyal hearts and good-will of my ſubjects. I am therefore come among you, not as for my recreation and ſport, but as being reſolved, in the middle and heat of the battle, to live or die amongſt you all; to lay down, for my God and my people, my honour and my blood, even in the duſt. I know (added ſhe) that I have but the body of a weak and feeble woman; but I have the heart of a king, and of a king of England too; and think foul ſcorn that Parma or Spain, or any prince in Europe, ſhould dare to invade the borders of my realm. To which, rather than any diſhonour ſhall grow by me, I myſelf will take up arms; I myſelf will be your general, judge, and the rewarder of every one of your virtues in the field," &c.

Negociations,

Negociations, deluſive on both ſides, had employed the commencement of 1588, until the end of May, when the Armada ſailed under the duke de Medina Sidonia, who, on the deceaſe of the marquis di Santa Cruz, had been appointed to command. A ſtorm, which damaged the ſhips and drove them back to Liſbon, had nearly occaſioned the diſarming of the Engliſh fleet; which the economical Elizabeth judged no longer neceſſary. Lord Howard, however, dared to diſobey her orders; happily for England, for on the 19th of July a Scots privateer ran into Plymouth, and informed him that the Armada was in the channel. Howard inſtantly diſpatched expreſſes for aſſiſtance; and, eager for action, towed his little fleet (about fifty veſſels) in ſpite of wind and tide, out of the harbour; undiſmayed at the floating caſtles which covered the ſea, and which, as an elegant Italian, Bentivoglio, paints, "advanced ſlowly, as if the ocean were tired of ſupporting, and the winds of impelling, ſo enormous a weight." He hung upon their rear; and, ſupplying the want of force by valour and activity, he delayed their progreſs until he had received reinforcements from every ſouthern port, fitted out and commanded by the flower of the Engliſh nation. The fleet of Howard now amounted to 140 ſhips, or rather barks; with theſe, unequal as they were, he ſkirmiſhed with the Invincible Armada ſix days. During this time the Engliſh veſſels could not lie alongſide of the Spaniards, ſo great was the ſuperiority of their metal; nor could they board them, ſo lofty were their ſides; nevertheleſs, by their perſevering agility they had gained ſuch advantages, that diſmay had taken place of that inſolence which had hitherto animated the invaders.

The Armada now lay confuſedly moored off Calais; it had loſt ſeveral of its largeſt veſſels, and the prince of Parma had refuſed to leave the ports of Flanders until he could be certain that the Spaniards were maſters at ſea. On the ninth night, eight fire-ſhips, commanded by the captains Young and Prowſe, daſhing among the thickeſt of the fleet, ſcattered terror and deſtruction around them; and twelve of the beſt ſhips which Medina Sidonia could boaſt of, were conſumed or loſt. While England had only to lament one brave officer, named Cocke; who, with his crew, overwhelmed by ſuperior force, periſhed in that glorious fight. The next day it was determined to abandon all ideas of an invaſion, and to conduct, if poſſible, the remains of the fleet back to Spain; and rather than venture to repaſs the channel, expoſed to the now dreaded veſſels of England, it was thought better to encounter the rocks, ſands, and billows, of that ſtormy ſea which waſhed the iſles of Shetland. Every ſpecies of wretchedneſs now hovered around them. Had not the Engliſh wanted ammunition, the Spaniards had all been their priſoners; as it was, tempeſts unceaſingly accompanied their courſe; ſome of the galleons ran on the Scottiſh ſhore, where the few that eſcaped were treated with decent kindneſs; others more unfortunate were daſhed to pieces on the coaſts of Ireland, where thoſe who gained the ſhore were without pity maſſacred. In fine, the Invincible Armada, reduced to leſs than a third of its original number, returned to Spain full of famine and diſeaſe, to become the theme of Philip's affected philoſophy.

Beſides her deliverance from the Spaniſh invaſion, England had another ſtill more important event in 1588; the deceaſe of Dudley earl of Leiceſter, the moſt unprincipled of court minions. He was on the point of being conſtituted lieutenant-general of England. His royal miſtreſs lamented his loſs with many tears; but, with characteriſtic economy, diſtrained his goods to reimburſe herſelf for what ſhe had lent him!

The Engliſh queen had hitherto, by a ſeries of deep machinations, prevented James VI. of Scotland from marrying. She loved not wedlock in any of her family; and was particularly apprehenſive, that a wife of diſcernment might encourage him to a ſeceſſion from that dependence on her will which ſhe now kept up. Towards the end of 1589, however, he exerted a ſpirit of which ſhe ſuppoſed him not to be capable, and, in ſpite of her machinations, wedded Anne of Denmark, after having encountered the ſtorms and waves of the Norwegian ocean.

That flame of enterprize which had been kindled among the Engliſh by the firſt ſucceſſes of Drake, now blazed higher and higher. Lord Thomas Howard with ſeven ſhips ſailed to the Azores in 1591, to intercept a fleet laden with the treaſure of India. Philip had ſent a large ſquadron to protect them. The Engliſh were bore down upon by a vaſt ſuperiority of ſhips; and Howard, with five of his veſſels, ran out to ſea and eſcaped; but the vice-admiral, ſir Richard Greenville, thinking it beneath the Engliſh character to ſhew the ſtern of his ſhip, the Revenge, to a Spaniard, reſolved ſooner to engage the vaſt force which beſet him, amounting to fifty-three men of war, manned with 10,000 ſeamen. During fifteen hours, he fought with as many of the enemy as could find room to attack him; at length, covered with wounds, his men almoſt all ſlain or wounded, his powder nearly ſpent, his maſts gone, and his veſſel, pierced by 800 bullets, almoſt ſinking under him, he earneſtly recommended it to the few ſurvivors of his crew to truſt in God, rather than in Spain, and to blow up the ſhip. The gunner and ſome others approved the idea; but, a contrary ſentiment prevailing with the majority, the Revenge was ſurrendered on honourable terms to Don Alphonſo Baſſano, the admiral of Philip. The gallant Engliſhman died of his wounds in three days; and his ſhip, the firſt Engliſhman of war Spain had ever taken, ſunk at ſea with 200 Spaniards on-board; a dear-bought prize; as the capture of her had coſt the enemy 2000 of their braveſt ſailors, and two of their ſtouteſt ſhips, which were ſunk, beſides two diſabled. In the mean time, the Indian fleet, which the dread of lord Howard had detained at the Havannah beyond its due ſeaſon, endeavouring to reach Spain, was diſperſed by a ſtorm; many of them fell into the hands of the Engliſh.

In France, ſir John Norreys and ſir Roger Williams commanded with great honour two ſeparate bodies of auxiliaries, ſent by Elizabeth to the help of Henry IV. It was, indeed, the intereſt of theſe two ſovereigns to unite againſt the overgrown power of Spain. In 1594, the Engliſh army, led by the gallant Norreys, encountered and defeated the Spaniſh forces in Bretagne, and with great gallantry aſſiſted at the taking Morlaix, Quimpercorentin, and Breſt; before which laſt place ſir Martin Forbiſher, who attacked it by ſea, found, with many other Engliſhmen, an honourable death. Early in 1596, Elizabeth had intelligence of a new and vaſt armament which Philip had prepared at Cadiz, under Don Martin di Padilla, an able officer, with a determination to ſubdue Ireland. She waited not to be attacked. A numerous fleet, under lord Effinghani, accompanied by a gallant army, ſailed inſtantly for the coaſt of Spain. The fleet was reinforced by the experienced valour of ſir Walter Raleigh, who had juſt returned from a ſucceſsleſs expedition in South America. Cadiz was boldly attacked and taken, in ſpite of a moſt obſtinate reſiſtance; and all the fleet and ſhips in the harbour were made prizes. Philip loſt on this occaſion fifteen large ſhips of war, and twenty-two veſſels laden with merchandize for the eaſt. But, during the abſence of the fleet on this expedition, the Spaniſh admiral had ſailed with another fleet, and 8000 ſoldiers, with a deſign to ſeize the unguarded harbour of Falmouth, and wait at the mouth of the channel to intercept the fleet of lord Effingham on its return from Cadiz. What the conſequence might have been, it is not eaſy to ſay; but Providence deigned to interpoſe; and no ſooner had the Spaniards gained ſight of Scilly, than, at the inſtant a council of war was ſitting on-board the admiral's ſhip, a ſtorm aroſe with ſuch violence that it prevented the captains from returning to their ſhips. Forty of their fleet were loſt or forced into hoſtile ports,

and

and the reſt utterly diſabled. The ſame tempeſt met the victorious fleet of England on its return; but the ſhips being lighter eſcaped with little damage. It would be tedious to relate all the advantages obtained by the Engliſh over the enemy at ſea, where the capture of every ſhip muſt have been made a ſeparate narrative; or their various deſcents upon different parts of the Spaniſh main, which were attended with effects too tranſient for the page of hiſtory. It is ſufficient to obſerve, that the naval commanders of that reign were conſidered as the boldeſt men the world had produced; among whom were Raleigh, Howard, Drake, Cavendiſh, Hawkins, &c. The Engliſh navy then firſt began to take the lead, and has ſince continued irreſiſtible in all parts of the ocean.

Among thoſe who made the moſt ſignal figure in the army, was the young earl of Eſſex, a nobleman of great bravery, generoſity, and genius; and fitted, not only for the foremoſt ranks in war by his valour, but to conduct the intrigues of a court, by his eloquence and addreſs. But with all theſe endowments, he wanted prudence; being impetuous, haughty, and totally incapable of advice or controul. The earl of Leiceſter, who died ſome time before, left room in the queen's affections for a new favourite, which ſhe was not long in chooſing. The bravery, the popularity, and the meridian of manhood, which now diſtinguiſhed Eſſex, were recommendations too important not to engage her attention. Elizabeth, though ſhe refuſed a huſband, yet appeared always deſirous of a lover; and flattery had rendered her ſo inſenſible to her want of beauty, and to the depredations of age, that ſhe ſtill thought herſelf as captivating by her perſonal accompliſhments, as by her authority. The new favourite was active, ambitious, witty, and handſome; in the field, and at court, he always appeared with ſuperior luſtre. In all the maſks, which were then in faſhion, the earl and Elizabeth were coupled as partners; and although ſhe was near ſixty, and he not half ſo old, yet her vanity overlooked the diſparity; the world told her ſhe was young, and ſhe wiſhed to think ſo. The earl's advancement in the queen's affections, as may naturally be imagined, promoted his intereſts in the ſtate; and he at length conducted public meaſures at his own diſcretion. Inexperienced as he was, he began to fancy that the popularity he poſſeſſed, and the flatteries he received, were acquired by his merits, and not by court favour. His jealouſy alſo of lord Burleigh, his only rival in power, began to make him vindictive; and the ſucceſſes he had obtained againſt the Spaniards, increaſed his confidence. In a debate before the queen, between him and Burleigh, about the choice of a governor for Ireland, he was ſo heated, that he entirely forgot the rules both of duty and decorum. He turned his poſteriors to the queen in a contemptuous manner; which ſo provoked her reſentment, that ſhe gave him a box on the ear. Inſtead of making the apology of a gentleman, or recollecting the ſubmiſſion due to the ſex and dignity of a queen, he clapped his hand to his ſword, and ſwore he would not have borne ſuch uſage from her father. This inſult, though unprecedented, was overlooked by Elizabeth; ſhe reinſtated him in her favour, and love ſeemed to have acquired new force from anger and reſentment. The death alſo of his rival, lord Burleigh, which happened ſhortly after, ſerved to confirm his power.

At that time the earl of Tyrone headed an inſurrection in Ireland; to ſubdue which, was an employment that Eſſex thought worthy of his ambition; nor were the courtiers diſpleaſed at the removal of a man who obſtructed their private aims of preferment. The earl of Eſſex, upon taking the command, employed the earl of Southampton, who had been long obnoxious to the queen, as general of horſe; nor was it till after repeated orders from Elizabeth, that he could be prevailed on to diſplace him. This indiſcretion was followed by another: inſtead of attacking the enemy in their grand retreat in Ulſter, he led his forces into the province of Munſter, where he exhauſted his ſtrength, and loſt the favourable opportunity of a deciſive victory; and thus, inſtead of forcing the rebels to a ſubmiſſion, he had concluded an inglorious ceſſation of hoſtilities. But his conduct was ſtill more abſurd and incomprehenſible, when quitting his command, and leaving the army inactive, he returned from Ireland on a viſit to the queen. Elizabeth, at firſt, was pleaſed with the interview; but the momentary ſatisfaction of his unexpected appearance being over, ſhe reflected on the impropriety of the affair, and ordered an inveſtigation of his conduct before the council, ſecure in their diſpoſition to do him no injury. In conſequence of this he was only ſentenced to reſign his employments, and remain a priſoner in his own houſe during her majeſty's pleaſure.

The cloud which had obſcured the fortune of this heedleſs nobleman was now inclined to diſperſe. A ſlight illneſs had ſoftened the heart of the queen, and by enquiry ſhe found that he had ſpent his hours in exerciſes of devotion, an enthuſiaſm which always ſeized his mind when fortune was adverſe: but one unlucky expreſſion of ſeverity occaſioned his deſtruction. The date of a lucrative patent enjoyed by Eſſex had juſt expired, and he petitioned for its renewal. Elizabeth refuſed it with this ſarcaſm, "an ungovernable beaſt ſhould be ſtinted of its provender." After this, he gave up all hopes of being reinſtated in the favour of his ſovereign; and, hurried away by the impetuoſity of his temper, he ruſhed headlong into violence, treaſon, and ruin. He excited James of Scotland to take meaſures to ſecure his ſucceſſion, which he ſaid was in danger from the machinations of a miniſter who had placed Raleigh to command in Jerſey, Carew in Ireland, and lord Cobham at the Cinque Ports, merely to facilitate the acceſſion of a Spaniſh princeſs. But James was too cautious to riſk ſo rich a prize by too much hurry. Eſſex alſo wrote to lord Mountjoy in Ireland, and almoſt perſuaded him to invade England. He ſilently caballed with the catholics, and openly with the puritans; and he ſtrove to form an aſſociation againſt Elizabeth among the magiſtrates and citizens of London. He even proceeded to ſettle the plan of an inſurrection; and it was determined that his friends ſhould overpower the guards and ſeize the palace; and that himſelf ſhould demand of the queen a new parliament, a new miniſtry, and a ſettlement of the ſucceſſion.

The fall of the miſguided Eſſex opened the year 1601. Driven to deſpair by the apprehenſion of ruin, he madly attempted to arm the populace againſt the throne of Elizabeth. Having garriſoned his houſe in the Strand, and impriſoned therein three of the privy-counſellors who had been ſent to enquire into his proceedings, he traverſed the city of London at the head of two hundred armed men, crying, "For the queen! for the queen! my life is in danger." But the lord mayor had ordered the citizens to keep within doors; and Eſſex, having been proclaimed a traitor by the earl of Cumberland, ſaw his followers ſhrink from his banner; and it was not without the loſs of ſome of his remaining friends, that he could ſecure a paſſage back to Eſſex-houſe. There he was aſſailed by the lord-admiral Nottingham with a corps of regular troops, and obliged to ſurrender at diſcretion. The privy-counſellors had been before releaſed by ſir Ferdinand Gorges, who is ſuppoſed to have acted as a ſpy on the motions of Eſſex.

The trial and condemnation of this ill-fated nobleman quickly followed. It was then that the enthuſiaſm of piety again poſſeſſed the ſoul of Eſſex. He wept over his faults, confeſſed his machinations, and even diſcloſed the intention of his friends in his favour; an avowal which, in his cooler moments, he would have abhorred. The queen ſigned the warrant for his death with an almoſt convulſive pang, and ſoon countermanded it, apparently waiting for ſome ſuppliant application, which might give her an occaſion for ſhewing mercy. No ſupplication, however, came, and reſentment at finding her compaſſion

(as ſhe believed) ſet at nought, gave her ſufficient reſolution to order the execution of the hapleſs Eſſex. He fell with dignity; pious, but not dejected; he deſired to be beheaded privately within the Tower, leſt the ſight of the people, who he knew would lament his fate, might turn his thoughts from Heaven. The unfortunate earl had run a long career of glory and favour in a few years: he died at only thirty-four. Several of his aſſociates were alſo tried and executed. Cuffe, whoſe counſels had precipitated him; Davers, Blount, and Meyric. Southampton (for whom Eſſex had felt much more than for himſelf) was ſpared, but remained a priſoner in the Tower while the queen lived. In ſpite of malice, and of his own egregious faults, ſcarcely does any character intereſt the reader of Engliſh hiſtory ſo much as that of Robert Devereux earl of Eſſex. His exterior was noble and beautiful, and his ſpirit gallant and enterpriſing; at eighteen, he diſtinguiſhed himſelf near Zutphen, where ſir Philip Sidney fell, whoſe widow he married; at twenty-two he joined as a volunteer in the enterprize to place Don Antonio on the throne of Portugal, and challenged the governor of Corunna to ſingle combat. At the ſiege of Rouen, in France, he defied Villars, the commandant, to fight him on foot or on horſeback; "I will make you (ſaid he) own that I am better than you, and that my miſtreſs is fairer than yours." From the moment of the fatal execution of this accompliſhed nobleman, a melancholy of the moſt black and immoveable kind overpowered the faculties of Elizabeth, and rendered her inſenſible to every comfort, and indifferent to all the affairs of the ſtate. Some have imputed this affliction of mind to the anxious jealouſy which ſhe felt at that attention which her penetrating eye had diſcerned among her courtiers towards James of Scotland. There is, however, a much more probable cauſe to be alleged: the tale till lately has been thought a fiction; but authentic papers, which have been within a few years paſt laid before the public, give ſtrong authority to believe it true.

When the earl of Eſſex was in the higheſt favour with his royal miſtreſs, he ventured to tell her of the perpetual anxiety which beſet him when duty demanded his abſence, leſt his rivals, who he knew ſurrounded her, ſhould deprive him of her good opinion; and he ſhould be condemned, unheard, to loſe her ſmiles, which he valued more than his life. The queen, moved with this earneſt and ingenuous diſcloſure of his fears and affections, gave him from her finger a ring, as a pledge of her eſteem; promiſing at the ſame time that, let his ſituation be ever ſo deſperate, at the ſight of that token ſhe would give him audience, and reſtore him to her friendſhip. Eſſex preſerved this precious gift through all his perils, until after he was ſentenced to death, and then he thought the time was come to prove its value. Unhappily it was the counteſs of Nottingham to whom he entruſted this invaluable jewel; a more unfit meſſenger he could not have found; ſince, beſides the animoſity borne to him by the lord-admiral, her huſband, the lady herſelf is believed to have loved Eſſex, and to have bitterly felt the pangs of diſappointment when he married another woman. In ſhort, ſhe carried not the ring; and Elizabeth, after contriving many delays, diſguſted at the obſtinacy of her favourite, (who, ſhe believed, deſpiſed her mercy,) in a fit of diſappointed rage, ſigned the warrant for his execution.

The counteſs of Nottingham, in 1603, drawing near her end, ſent a preſſing meſſage to the queen to entreat a ſight of her majeſty before her death. Elizabeth, who had dearly loved her, ſpeedily obeyed the ſummons; but, when ſhe heard the ſoul-harrowing confeſſion, ſhe caught faſt hold of the expiring criminal, ſhook her, and almoſt tore her from her bed: "God (ſaid ſhe) may forgive you, but I never can." From that moment ſhe rejected all conſolation, and not only refuſed medicines, but even food. Ten days and nights ſhe lay on a carpet, leaning her head on a cuſhion, and not permitting herſelf to be put into bed. Nature now appeared almoſt exhauſted; and her great officers of ſtate, deſpairing of her life, ventured to aſk, whom ſhe would have for her ſucceſſor? To this ſhe faintly anſwered, that her throne was a throne of kings; and, by ſigns, agreed to the appointment of James, the ſon of Mary. She expired on the 24th of March, 1603, aged ſixty-nine years, ſix months, and ſeven days, after having reigned forty-five years.

The perſon of Elizabeth was ſtout, tall, and majeſtic, her complexion fair, and her hair yellow. Her maſculine turn of mind, her firmneſs, her penetration, and her judgment, qualified her for the government of a great empire. Learned, intelligent, and enlightened; active, vigilant, and circumſpect; ſtudious of the honour of her country, and of the general welfare of her ſubjects; ſhe acquired a reputation and a popularity which greatly contributed to the ſucceſs of her enterpriſes, and the proſperity of her ſway. Though menaced with ruin by the catholic powers of the continent, ſhe baffled all their ſchemes by her conſummate prudence and diſtinguiſhed addreſs; ſhe deſpiſed alike the thunders of the Vatican, and the more formidable artillery of Philip; and, by the efforts of a brave people, who cheerfully riſqued their lives in the ſervice of their princeſs, ſhe was enabled to triumph over the perſevering malignity and the tremendous preparations of her foreign enemies. Her domeſtic foes ſhe ſometimes overawed by ſeverity, and ſometimes conciliated by lenity; but her diſpoſition ſeemed more to incline her to the former conduct. She was of an imperious ſpirit, and impatient of the leaſt oppoſition to her will; and the ſtorms of paſſion into which ſhe was betrayed were frequent and violent. Her frugality was carried to ſuch an extremity as ſometimes to obſtruct the complete ſucceſs of her ſchemes; and her deſire of treaſure impelled her into extortion and rapacity. Her courage and fortitude were great and exemplary; but ſtill, in ſome inſtances of her conduct, we diſcover ſtrong marks of a reſemblance to the arbitrary, unrelenting, and cruel, diſpoſitions of her father and her ſiſter. The whole courſe of her behaviour to the lovely and unfortunate queen of Scotland, is marked by female jealouſy, diſſimulation, perfidy, and the moſt unfeminine ſeverity. Whatever might have been the errors of Mary's government, and of her private and perſonal conduct, they were not ſubject to the juriſdiction of her rival. Elizabeth, in depriving the queen of Scots of her life, acted in as open a violation of the law of nations, as of every principle of juſtice, and every ſuggeſtion of humanity.

The Engliſh people, however, were certainly happier during her reign, than they had ever been before; and to this day they retain a grateful regard for her memory. Yet ſhe was no friend to liberty, but watchfully checked thoſe faint dawnings of its ſplendour, which now and then pervaded the gloom of deſpotiſm; nor was the adminiſtration of juſtice in her time well calculated to ſecure either life or property. Had ſhe lived in a private ſtation, Elizabeth would, perhaps, have been hated and ridiculed; on a throne, ſhe was enabled to hide her leſs commendable qualities under the blaze of a vaſt and magnanimous heroiſm. The ſagacity of her miniſters, and the bravery of her commanders by ſea and land, were ſtrong proofs of the ſtrength of her diſcernment, which could diſtinguiſh and employ ſuch talents in their properly adapted ſervices. In ſhort, when the weak and ſpiritleſs ſtate of England, at the criſis of the deceaſe of Mary, is conſidered; and when we find the condition of the realm ſo altered in the ſpace of a few years by the ſuperiority of Elizabeth's abilities, which enabled her to hold the balance of Europe; when we find the proteſtant religion firſt firmly ſettled in England, the commerce of the iſland increaſed, her fleets triumphant, and her friendſhip ſought for by all nations of Europe; we cannot, without injuſtice, withhold the tribute of praiſe from this glorious, though not faultleſs, ſovereign. In her

terminated the laſt of the Engliſh ſovereigns of the houſe of Tudor. For the writings and literary character of this princeſs, ſee p. 476, of this volume.

From the ACCESSION of the HOUSE of STUART, to the ABDICATION of the THRONE by JAMES II.

The crown of England paſſed, with the utmoſt tranquillity, from the family of Tudor to that of Stuart, in the perſon of James I. of England, and Sixth of Scotland. This monarch, the only iſſue of the unfortunate Mary queen of Scots, came to the throne with the univerſal approbation of all orders of the ſtate; as in his perſon were united every claim that either deſcent, bequeſt, or parliamentary ſanction, could confer. He had every reaſon, therefore, to anticipate a happy reign; and he was taught, from his infancy, that his prerogative was uncontroulable, and his right tranſmitted from Heaven. Theſe ſentiments he took no care to conceal; and even publiſhed them in many parts of thoſe works which he had written before he left Scotland. But he was rather miſtaken in the ſpirit of the times. New ſyſtems of government, and new ideas of liberty, had been rapidly ſtealing in with the reformation. In conſequence of the progreſs of knowledge, and a familiar acquaintance with the governments of antiquity, the old Gothic forms began to melt away, and an emulation took place to imitate the freedom of Greece and Rome. The ſevere though popular government of Elizabeth had confined this riſing ſpirit within narrow bounds; but when a new ſovereign and a new family appeared, leſs dreaded and leſs reſpected by the people, ſymptoms of a more free and independent genius began to diſtinguiſh the character of the nation.

James, on his acceſſion to the throne of England, with a miſtaken idea of making himſelf popular, conferred the honour of knighthood on no fewer than two hundred and thirty-ſeven perſons; among whom his Scottiſh courtiers were thought by the envious to have been too liberally noticed. But though his countrymen ſhared a part of theſe honours, yet juſtice ſhould be done the king, by acknowledging that he left almoſt all the great offices of the ſtate in the hands he found them. Among theſe, Cecil, created earl of Saliſbury, who had been ſo active in the laſt reign, was continued prime-miniſter and chief counſellor. But it was not ſo with lord Grey, lord Cobham, and ſir Walter Raleigh, who had been Cecil's aſſociates. They, on the contrary, felt the weight of the king's diſpleaſure, and were diſmiſſed their employments. Theſe three illuſtrious perſonages ſeemed to be marked out for peculiar indignation; for ſhortly after they were accuſed of entering into a conſpiracy againſt the king; neither the proofs of which, nor its aims, have ever reached poſterity. They were all condemned to the ſcaffold; but had their ſentence mitigated by the king. Cobham and Grey were pardoned, after they had laid their heads on the block. Raleigh was reprieved, and at large for many years, but at laſt ſuffered for this offence, which was never proved.

Though James and his parliament were conſtantly at variance in their endeavours to ſettle the rights of the people, and the prerogatives of the crown, yet his juſtice and clemency were very apparent in the toleration which he gave to the teachers of different religions throughout the kingdom. The minds of the people had long been irritated againſt one another, and each party perſecuted the other, as it happened to prevail; it was expected, therefore, that James would ſtrengthen the hands of the proteſtants, and that the catholics and ſectaries ſhould find no protection. But this monarch wiſely obſerved, that men ſhould be puniſhed for actions, and not for opinions; a philanthropic and noble deciſion, though it gave general diſſatisfaction; but the univerſal complaint of every ſect was the beſt argument of his moderation towards all. Yet mild as was this monarch's diſpoſition towards religious ſects, there was a project contrived in the very beginning of his reign for the re-eſtabliſhment of popery, which, were it not a fact well known to all the world, could ſcarcely be credited by poſterity. This was the gun-powder plot; than which a more horrid or terrible ſcheme never entered into the human heart to conceive, and which ſhews at once that the moſt determined courage may be united with the moſt execrable intentions.

The Roman catholics, on the acceſſion of James, expected a renewal of the papal ſupremacy, inaſmuch as he was the only deſcendant from Mary, a rigid catholic, and had ſhewn great partiality to that religion in his youth. But they ſoon diſcovered their miſtake, and were ſo enraged and diſappointed, that with the genuine ſpirit of malicious bigotry, they formed a reſolution of deſtroying the king and both houſes of parliament at once. The ſcheme was laid by Robert Cateſby, a gentleman of a good family, who conceived that gun-powder might be ſo placed under the parliament houſe, as to blow up the king and all the members at their firſt meeting. He opened his intention to Thomas Percy, of the illuſtrious houſe of Northumberland, who readily came into it. Thomas Winter was next let into the ſecret; and he went over to Flanders in queſt of Guy Fawkes, an engineer in the Spaniſh ſervice, with whoſe zeal and courage the conſpirators were thoroughly acquainted.

Every thing being concerted, and the conſpirators having taken an oath of ſecrecy, which they confirmed by receiving the ſacrament together, a houſe was hired in the name of Percy, adjoining that in which the parliament aſſembled; and, finding that a cellar was to be let under the houſe of lords, they ſeized the opportunity of renting it; and, forming a communication between Percy's houſe and it, depoſited there thirty-ſix barrels of gun-powder, which they covered with faggots and billet-wood. The doors of the vault were then boldly thrown open, to prevent any appearance of ſuſpicion; and nothing remained, but to watch the opportunity of rendering the horrible cataſtrophe complete.

The king, the queen, and prince Henry, were all expected to be preſent at the opening of parliament; but prince Charles, by reaſon of his tender age, would neceſſarily be abſent, and him it was intended to aſſaſſinate. The princeſs Elizabeth alone remained of the royal family whom papiſtical vengeance had not devoted, and it was their intention to place her on the throne. Twenty conſpirators had ſacredly kept this dreadful ſecret nearly a year and a half; but the ſame bigotry which had given riſe to the plot, was directed by the will of Providence to reveal it. A few days before the meeting of parliament, lord Monteagle, who was a catholic, received the following letter from an unknown correſpondent:

"My lord, out of the love I bear to ſome of your friends, I have a care of your preſervation. Therefore I would adviſe you, as you tender your life, to deviſe ſome excuſe to ſhift off your attendance in this parliament. For God and man have concurred to puniſh the wickedneſs of this time. And think not ſlightly of this advertiſement; but retire yourſelf into your country, where you may expect the event in ſafety. For, though there be no appearance of any ſtir, yet, I ſay, they will receive a terrible blow this parliament, and yet they ſhall not ſee who hurts them. This counſel is not to be contemned, becauſe it may do you good, and can do you no harm: for the danger is paſt, as ſoon as you have burnt the letter. And I hope God will give you the grace to make good uſe of it, unto whoſe holy protection I commend you."

This myſterious letter very little diſconcerted the nobleman to whom it was addreſſed; but though he was inclined to think it a ridiculous attempt to frighten him, yet he judged it right to carry it to lord Saliſbury, ſecretary of ſtate. The noble ſecretary gave little attention

to

to it, yet produced it before the king in council, who came to town a few days after. None of the council thought much of it, though it appeared ſerious and alarming. In this mixture of agitation and doubt, the king was the firſt who penetrated the ſecret. He concluded that ſome ſignal miſchief was preparing by gunpowder; and it was thought adviſable to inſpect all the vaults below the houſes of parliament. This care belonged to the earl of Suffolk, lord chamberlain, who judiciouſly poſtponed the ſearch till the day before the meeting of parliament, which was fixed for the memorable 5th of November, 1605. He then ſuſpected the great piles of faggots which lay in the vault under the houſe of peers; and he caſt his eye upon Fawkes, who ſtood in a dark corner, and who paſſed himſelf for Percy's ſervant. Theſe appearances determined lord Suffolk to take his time to make a more exact ſcrutiny. About midnight, therefore, ſir Thomas Knevett, a juſtice of the peace, was ſent with proper attendants; and juſt at the entrance of the vault he ſeized Guy Fawkes, who had diſpoſed every part of the train of gunpowder for taking fire the next morning, the matches and other combuſtibles being found upon him. The whole of this horrible plot was now diſcovered; but the atrocity of the perpetrator was ſuch, that he told the officers of juſtice, with an undaunted air, that had he blown them and himſelf up together, he ſhould have been happy. Before the council he manifeſted the ſame ſavage diſpoſition, refuſing to diſcover his aſſociates, and expreſſing no concern but for the failure of his enterpriſe. Being committed to the Tower, his courage at laſt failed him, and he made a full diſcovery of his accomplices.

Cateſby, Percy, and the conſpirators who were in London, hearing that Fawkes was arreſted, fled into Warwickſhire, where ſir Everard Digby, relying on the ſucceſs of the plot, was already in arms, in order to ſeize the princeſs Elizabeth. But the country ſoon began to take the alarm; and wherever they turned, they found a ſuperior force ready to oppoſe them. In this exigence, they reſolved to make a ſtand at a houſe in Warwickſhire, and ſell their lives as dearly as poſſible. Cateſby, Percy, and Winter, ſtanding back to back, fought long and deſperately; till at laſt the two firſt fell covered with wounds, and Winter was taken alive. Thoſe that ſurvived the ſlaughter fell by the hands of the executioner. Such was the end of a conſpiracy that brought ruin on its contrivers, and utterly ſupplanted that religion it was intended to eſtabliſh. Yet it is remarkable, that, before this diabolical attempt, the conſpirators had always borne a fair reputation; Cateſby was beloved by all who knew him; and Digby was as highly reſpected both for honour and integrity as any man in the nation. However, ſuch are the lengths to which ſuperſtition and prejudice can hurry minds originally well formed, but impreſſed by a wrong bias.

The king's moderation, after the extinction of this conſpiracy, was only equalled by his penetration in the diſcovery of it. The hatred excited by the people againſt the catholics, knew no bounds; and nothing but a total extinction of thoſe who adhered to that perſuaſion, ſeemed capable of ſatisfying the greater part of the nation. James nobly rejected all violent meaſures, and declared that the late conſpiracy, however atrocious, ſhould never alter his plans of government; but as, on the one hand, he was determined to puniſh guilt, ſo, on the other, he would ſtill ſupport and protect innocence. This principle of moderation, however, was very unpleaſing to the people; and the more malignant part of his ſubjects were diſpoſed to aſcribe this lenity to the papiſts, to his being himſelf tinctured with their ſuperſtitions. It is therefore probable, that the oppoſition which James met with from his ſubjects in England, induced him to prefer his own countrymen to places of truſt and confidence about his perſon.

A principal object in the contemplation of James, and on which he beſtowed his earneſt endeavours, was the improvement and amelioration of Ireland. To civilize that country, it was neceſſary to aboliſh many of its ancient inſtitutions. By the Brehen cuſtom, every crime, including thoſe of the deepeſt dye, might be atoned for by a fine. This rate was called *eric*. The Engliſh having formed a deſign of ſending a ſheriff into Fermenagh, Maguire, one of the chiefs of that diſtrict, replied, "Your ſheriff ſhall be welcome to me; but let me know beforehand his eric, or the price of his head, that if my people cut it off, I may levy the money on the county." Small offences were cognizable by no law; and in this rude ſtate of the country, the efforts of James to produce amelioration were highly praiſeworthy. He ſubſtituted as far as he could the Engliſh laws, declared the natives free citizens, eſtabliſhed circuits, and, by means of a ſmall army, kept the country in a ſtate of quiet and order before unknown.

While the king was thus laudably employed, the death of his eldeſt ſon, Henry prince of Wales, in the eighteenth year of his age, A. D. 1612, ſpread a general gloom over the proſpects of the nation. Neither his high birth nor his youth had ſeduced him into any irregularities; buſineſs and ambition were his ſole delight. His inclinations as well as exerciſes were martial. The French ambaſſador taking leave of him, and aſking his commands for France, found him employed in the exerciſe of the pike: "Tell your king (ſaid he) in what occupation you found me engaged." For ſir Walter Raleigh, then in the Tower, he ſeems to have conceived a ſtrong affection and eſteem. "Surely (obſerved he) no king but my father would keep ſuch a bird in a cage." The marriage of his ſiſter the princeſs Elizabeth with Frederic elector palatine, which took place ſoon after, ſerved to diſſipate the grief which aroſe from this melancholy event. But the marriage, though happy to the nation in its remote and ultimate conſequences, was unfortunate both to the king and his ſon-in-law. The elector, truſting to ſo powerful an alliance, entered on enterprizes beyond his ſtrength; and the king, not being able to ſupport his pretenſions, loſt entirely, towards the cloſe of his life, the eſteem and regard of his own ſubjects.

The court of James, now undiſturbed by foreign war, or domeſtic broils, ſoon became the reſort of paraſites and favourites. About the end of 1609, Robert Carr, a youth of about twenty, of a good family in Scotland, became the favourite of the king, and was conſidered as the moſt riſing man at court: he was knighted, created viſcount Rocheſter, honoured with the Garter, made a privy-counſellor, and finally raiſed to the earldom of Somerſet. This was a very haſty advancement, which ſome regarded with envy; but the wiſer part of mankind looked upon it with contempt and ridicule, ſenſible that ungrounded attachments are of no long continuance; and, indeed, the favourite gave early proofs of his being unworthy the confidence of the king. Among the friends whom he conſulted at court, was ſir Thomas Overbury, a man of great abilities and learning; among the miſtreſſes whom he addreſſed was the young counteſs of Eſſex, whoſe huſband had been ſent by the king's command to travel, until the young couple ſhould be arrived at the age of puberty. But the aſſiduities of a man of ſuch accompliſhments as the favourite, were too powerful to be reſiſted; a criminal correſpondence took place; and the unſuſpecting Eſſex, on his return from abroad, found his wife in the arms of another. But this was not all; the adultreſs now reſolved to procure a divorce, and then to marry the favourite, who had beguiled her heart. It was on this occaſion that Overbury, being conſulted by his friend, declared himſelf utterly averſe to the match. He deſcribed the counteſs as an infamous and abandoned woman; and went ſo far as to threaten the earl that he would ſeparate himſelf from him for ever, if he could ſo far forget his honour and his intereſt, as to proſecute ſuch a marriage: but this advice was fatal to the giver. In conſequence of his diſapprobation, the king was perſuaded

ſuaded, by the favourite, to order Overbury on an embaſſy into Ruſſia; Overbury was perſuaded by the ſame adviſer to refuſe going, and the delinquent was ſhut up in the Tower; where he was poiſoned by a tart, prepared and ſent him as a mark of eſteem, by this young but infamous counteſs. In the mean time the divorce took place, and the marriage of the favourite was ſolemnized with degrading ſplendour. But the reflection of the worthy and ineſtimable Overbury having been poiſoned, hung heavy upon the favourite's mind, amidſt all the glare and ſplendour of external happineſs and ſucceſs. The gallantry of his youth gradually diſappeared; the gaiety of his manners degenerated into ſullen ſilence; and the king, whoſe predilection had been acquired by his gay accompliſhments, began to cool towards a man who no longer miniſtered to his pleaſures. But the adoption of another favourite, and the ſurmiſe of Somerſet's guilt, ſoon removed all remains of regard which the king might have harboured for him.

The pupil of an eminent apothecary, who had been employed in making up the poiſon, accidentally divulged the ſecret; and the affair being laid before the king, he commanded ſir Edward Coke, then lord chief juſtice, to ſift the affair to the bottom, with a rigorous ſcrutiny. This injunction was executed with great induſtry, and Somerſet and his counteſs were both found guilty, but reprieved and pardoned, after ſome years confinement. The king's forbearance and injuſtice on this occaſion, are urged as very great ſtains upon his character. Somerſet was in his preſence at the time the officer of juſtice came to apprehend him; when he refuſed to be taken, and ſeverely reprimanded the officer for daring to arreſt a peer of the realm before the king. But James, informed of the cauſe, ſaid with a ſmile, "Nay, nay, you muſt go; for if Coke ſhould ſend for myſelf, I muſt comply." He then embraced him at parting, begged he would return immediately, and aſſured him he could not live without his company; yet he had no ſooner turned his back, than the falſe-hearted king exclaimed, "Go! and the devil go with thee!" He was alſo heard to wiſh, that God's curſe might fall upon him and his family, if he ſhould pardon thoſe whom the law ſhould condemn. However, he at laſt reſtored them both to liberty, and granted them a penſion, with which they retired, and languiſhed out the remainder of their lives in guilt, infamy, and mutual recrimination.

The liberality of James towards his favourites and dependents, often reduced him to pecuniary diſtreſs. In 1614, after every means had been exhauſted for raiſing money by virtue of the prerogative, even to the ſale of peerages, a parliament was convened to aid the king; but that aſſembly, inſtead of granting a ſupply, began with diſputing the king's power to levy new cuſtoms and impoſitions. James was provoked beyond all patience at this freedom, and diſſolved them without obtaining the object of their meeting. The monarchical principles, however, were not abandoned. He publicly at court propoſed the queſtion, whether he might not take his ſubjects' money when he wanted it, without the formality of parliaments? "God forbid, (replied the obſequious Neile biſhop of Durham,) but that you ſhould: for you are the very breath of our noſtrils." Andrews biſhop of Wincheſter, being next applied to for his opinion, prudently waved the queſtion, by declaring that he was not ſkilled in parliamentary caſes, but obſerved, "that his majeſty might lawfully take his brother Neile's money, becauſe he offered it."

Soon after Somerſet's fall, the favour of James was turned towards George Villiers, an accompliſhed young gentleman, of reſpectable family; who made his firſt appearance as cup-bearer to the king. But in the courſe of a few years he created him viſcount Villiers, earl, marquis, and duke, of Buckingham, knight of the garter, maſter of the horſe, chief juſtice in eyre, warden of the cinque ports, maſter of the king's-bench office, ſteward of Weſtminſter, conſtable of Windſor, and lord high-admiral of England. His mother obtained the title of counteſs of Buckingham; his brother was created viſcount Purbeck; and a numerous train of needy relations were all puſhed forward into credit and authority.

When uſeleſs and overbearing favourites are thus advanced, it is not to be wondered that the public concerns of the nation ſhould be neglected, and men of real merit treated with contumely and contempt. And ſuch truly was the caſe at this era; particularly with regard to thoſe connected with the cautionary towns in Holland, and the brave ſir Walter Raleigh at home. In the preceding reign, Elizabeth, when ſhe gave aſſiſtance to the Dutch, was not ſo diſintereſted upon lending them large ſums of money, as not to require a proper ſecurity for being repaid. The Dutch, therefore, put into her hands the three important fortreſſes of Fluſhing, Brille, and Ramekins, which were to be reſtored upon the payment of eight hundred thouſand pounds. But James, in his preſent exigency, having to ſupply a needy favourite, and a craving court, agreed to evacuate thoſe fortreſſes, upon being paid a third part of the money due. The cautionary towns were evacuated, which were calculated to hold the ſtates in ſubjection, and which an ambitious or enterpriſing prince would have regarded as a moſt valuable part of his poſſeſſions.

The general diſſatisfaction which this impolitic meaſure produced, was ſoon after aggravated by an act of unjuſt ſeverity, which ſtill impreſſes every feeling mind with regret. The brave and learned ſir Walter Raleigh, whoſe long ſufferings, and ingenious writings, had turned the tide of popular opinion in his favour, was now doomed to meet his fate. Raleigh had ſpread a report that he knew of a rich gold mine in Guiana. Though the king gave little credit to the tale, he releaſed Raleigh from priſon without pardoning him, and gave him permiſſion to try the adventure. Raleigh declared that the Spaniards had never planted any colonies on the coaſt where his mine lay; but twenty-three years had elapſed ſince he laſt viſited that region, and the Spaniards had formed a ſmall ſettlement on the river Oronooko, and built the town called St. Thomas. Raleigh, however, was no ſooner arrived, than he ſent a detachment under the command of his ſon and captain Kemys, an officer wholly devoted to him; who finding the Spaniards in force, were fired upon at their landing. Irritated by this reception, young Raleigh purſued the enemy into the town, which they ſoon reduced to aſhes; but a ſhot carrying him off in the career of victory, Kemys could not be prevailed on to proceed, though he owned that he was within two hours march of the mine which promiſed ſuch immenſe treaſure. Returning to Raleigh with the melancholy news of his ſon's death, and deſpairing of the event, he retired to his cabin, and put an end to his life. The other adventurers, thinking themſelves duped by Raleigh, or from rank cowardice, haſtened back to England, and carried their leader with them. Raleigh was pronounced by the privy-council to have abuſed the king's confidence, and the court of Spain making loud demands for ſatisfaction, James, adverting to that power which he had purpoſely reſerved in his own hands, ſigned the warrant for his execution.

Raleigh, finding his fate inevitable, collected all the energies of his enlarged mind, and met the ſentence with reſolution. As he felt the edge of the ax with which he was to be beheaded, "'Tis a ſharp remedy (ſaid he) but a ſure one for all ills." His harangue to the people was calm and eloquent; and with the utmoſt indifference he laid his head upon the block, and received the fatal blow.

The execution of Raleigh, which had been ſo long ſuſpended, was rendered ſtill more invidious, by the intimate connections entered into with Spain. Gondomer, the ambaſſador from that country, in order to divert the attention of James from the affairs of Germany, propoſed a match between the ſecond daughter of Philip IV. of Spain,

Spain, and Charles prince of Wales. The bait took; and though the ſtates of Bohemia, inſpired with the love of civil and religious liberty, had taken up arms againſt the emperor Ferdinand, and made Frederic elector palatine a tender of their crown, probably on account of his having married a princeſs of England, James refuſed to lend his ſon-in-law any aſſiſtance, notwithſtanding the urgent ſolicitations of his people; and in conſequence of his neglect, the unhappy prince was not only obliged to reſign his new dignity, but was driven from the palatinate, and, in 1620, was forced to fly with his family into Holland. The murmurs againſt the king's inactive diſpoſition now ran high; but James flattered himſelf that the reſtitution of the palatinate might be recovered from friendſhip, by means of his ſon's propoſed marriage with the infanta, and therefore was averſe to ſtrong meaſures.

At this time the great ſeal was in the hands of Francis Bacon lord Verulam, a man univerſally admired for the ſublimity of his genius, but who had made himſelf obnoxious by the irregular means he had uſed to obtain money, leſs indeed on his own account, than to gratify his dependents, whoſe importunities he could not reſiſt. Being impeached by the commons, the peers ſentenced him to pay a fine of forty thouſand pounds, to be impriſoned in the Tower, and to be for ever incapable of holding any office or employment. Bacon, however, was ſoon releaſed from priſon, his fine was remitted, and, in conſideration of his intrinſic worth, received a penſion of eighteen hundred pounds a-year. The ſhort remainder of his life was ſpent in literary purſuits; and in the greatneſs of his talents poſterity have almoſt forgot that he had the weakneſſes and the failings of a man.

Meanwhile, the commons, indignant at the puſillanimity of James, in ſuffering his ſon-in-law to languiſh in poverty and exile, and averſe to a match with a catholic family, ſtrongly remonſtrated with their ſovereign. The king, jealous of his prerogative, gave a prompt and ſharp reply, in terms very inimical to the privileges of parliament; and this drew from the commons a declaration, "that the liberties, franchiſes, privileges, and juriſdictions, of parliament, are the ancient and undoubted birthright and inheritance of the ſubjects of England." This entry the king himſelf tore from the journals, and after committing ſome of the leading members in oppoſition to the Tower, finally diſſolved the parliament. Prerogative being thus oppoſed to pretenſion, every circumſtance tended to widen the breach between the king and his parliament; and the flame, though ſometimes ſmothered, was not extinguiſhed but with the overthrow of the monarchy under his unfortunate ſon.

James, by reiterated proclamations, had now prohibited the diſcuſſion of ſtate affairs; but, as might naturally be expected, public curioſity was only inflamed the more. With domeſtic politics thoſe of the continent were intermingled. Frederic had made vigorous efforts for the recovery of his dominions, but without any very conſiderable advantage; and James perſuaded him to diſarm, and to truſt to the effects of his negociations. Theſe, however, not being followed up, nor any appearance of appealing to the deciſion of arms, expoſed him to ridicule both at home and abroad. He was depicted with a ſcabbard, but without a ſword; and ſometimes with a ſword which no one could draw, though ſeveral were pulling at it. In ſhort, the pacific diſpoſition of James, inſtead of gaining him reſpect, rendered him the object of contempt. In order to haſten the match between the princeſs of Spain and his heir apparent, he diſpatched the earl of Briſtol to Philip IV. and matters were apparently in a fair train of ſettlement, when every flattering proſpect was ſoon blaſted by the temerity of his minion Buckingham.

Between this favourite and prince Charles, a coolneſs had taken place, which the former being anxious to remove, propoſed a journey of courtſhip to Madrid. The young and ardent mind of the prince eagerly embraced the ſcheme; and the king being prevailed on to give his conſent, though not without ſome reluctance and apprehenſion of the reſult, the prince, attended by Buckingham and ſome others, ſet out on this romantic expedition, A. D. 1622. They took the city of Paris in their way, where, at a grand ball, Charles firſt ſaw the princeſs Henrietta, whom he afterwards eſpouſed; yet ſo much ſpeed did they uſe, that in eleven days after their departure from London, they arrived at Madrid, to the ſurpriſe even of the ſpeed of kings. The Spaniſh monarch treated Charles with the moſt flattering attentions; but, according to the eſtabliſhed etiquette, the infanta was only ſhewn to her lover in public, till a diſpenſation ſhould arrive from Rome. Juſt at this criſis pope Gregory XV. died; and the nuncio refuſing to deliver the inſtrument till it ſhould be ſanctioned by his ſucceſſor Urban VIII. that crafty pontiff interpoſed various delays, in hopes that Charles might be converted to the catholic faith. The king, as well as the prince, became impatient; and the latter, probably feeling no very great inclination to the princeſs, took his leave, and embarking at St. Andero, returned to England. Every thing, however, was conducted at parting with the moſt marked and elaborate reſpect on both ſides; and had it not been for the intrigues of Buckingham, who had rendered himſelf both deſpiſed and hated by the Spaniſh court, and therefore felt reciprocal ill-will and animoſity, it ſeems probable, the negociations might have been brought to a favourable concluſion. James was not pleaſed with the conduct of his ſon and the favourite, as they ran counter to a plan which he had long fondly indulged; but he was over-ruled by his affection for the one, and his partiality for the other; and after the court of Spain had promiſed the reſtoration of the palatinate, and made other conceſſions, without effect, Philip ordered the infanta to lay aſide the title of princeſs of Wales, which ſhe had aſſumed after the arrival of the diſpenſation from Rome, and the long protracted negociation came to an end.

The king, A. D. 1624, having thus involuntarily broken with Spain, was obliged to ſummon a parliament, in order to obtain ſupplies. In that aſſembly, Buckingham threw all the blame on the court of Spain; and the nation, eager to commence hoſtilities with the papiſts, liſtened to his inſidious arguments, and loaded him with applauſe. The ſupply, however, was voted with a parſimonious hand, and to what was granted, ſome conditions were annexed, which trenched on the prerogative, but conducted at laſt to legitimate liberty. James, ſenſible that his favourite meaſures had been defeated by the intrigues and violence of Buckingham, began to eſtrange himſelf from that minion; but his domineering ſpirit ſoon regained an aſcendancy over the monarch; and when the earl of Briſtol, whom he both hated and feared, was recalled from Spain, he had influence enough to procure him to be ſent to the Tower, and afterwards baniſhed to his country ſeat.

Soon after this, a treaty of marriage between the prince of Wales and Henrietta of France being propoſed, James entered into the negociation with ſo much ardour, that it was ſoon brought to a favourable concluſion; but the king was much leſs fortunate in the enterpriſes of war, which his ſoul abhorred. The Engliſh nation, however, were bent on the recovery of the palatinate, and to accompliſh this object, in 1625, twelve thouſand foot and two hundred horſe were embarked under count Mansfeldt; but ſo ill had this expedition been concerted, that before the men were permitted to land, half of them were cut off by a peſtilential diſorder, and the other half were too weak to attempt the object of their deſtination.

James, who had zealouſly cultivated the arts of peace, did not long ſurvive the commencement of hoſtilities. Being ſeized with a tertian ague, and finding himſelf gradually becoming weaker, he ſent for the prince, whom he affectionately exhorted to bear a tender regard for his wife, but to preſerve a conſtancy in his own religion, to protect the church, and to extend his care to the unhappy family of the palatine; and having ſettled his other affairs, timid as he had been through life, he met death

with the fortitude of a Chriſtian hero. So compoſed was he, that he cloſed his own eyes in the laſt ſtruggle, March 27, 1625, in the fifty-ninth year of his age, after a reign over England of twenty-two years and ſome days.

In the annals of nations, it is ſcarcely poſſible to find a reign; more unſpotted and unblemiſhed than that of James; yet it contained nothing that could render it illuſtrious in hiſtory, and therefore it has been mentioned with obloquy and contempt. But if a king is only the father of a large family, and is equally bound with a natural parent, to watch over the welfare and ſafety of thoſe committed to his care, James will deſerve the higheſt panegyric, where unreflecting prejudice has aſſailed him the moſt. Still it muſt be owned, that though James poſſeſſed many virtues, ſcarcely one of them was free from the contagion of ſome neighbouring vice. His generoſity bordered on profuſion, his learning on pedantry, his love of peace on puſillanimity, and his wiſdom on cunning. He ruled over a people who delighted in war, from which they had ſeldom been long exempted before his time, and who valued high blood and treaſure, leſs than the ſplendour of battles and conqueſts.

James, in his ſtature, was of the middle ſize, of a fine complexion, ſmooth ſkin, and ſcanty beard; yet his appearance was mean, and his gait awkward from a weakneſs in the knees, which often gave him the appearance of a cripple. He valued himſelf much upon his polemical writings; and ſo fond was he of theological diſputations, that to keep them alive, he founded, for this expreſs uſe, Chelſea-college; which was converted to a much more benevolent purpoſe by Charles II. His Baſilicon Doron, Commentary on the Revelation, writings againſt Bellarmine, and his Dæmonologia, or doctrine of witchcraft, are ſufficiently known. There is a collection of his writings and ſpeeches in one folio volume. Several pieces of his are extant in the Caballa, others in manuſcript in the Britiſh Muſeum, and others in Howard's collection. He had iſſue, Henry, who died Nov. 6, 1612, in his nineteenth year; Charles, who ſucceeded him; Elizabeth, married, Feb. 14, 1613, to Frederic elector palatine of Germany. James's queen died in March 1618; Ruſhworth ſays in November.

Charles I. aſcended the throne of his father, A. D. 1625, with every apparent advantage; and yet no prince ever encountered more real difficulties. He found himſelf, upon coming to the crown, poſſeſſed of a peaceful and flouriſhing kingdom, his title undiſputed by all the world, his power ſtrengthened by an alliance with one of the moſt potent nations in Europe, his abſolute authority tacitly acknowledged by one part of his ſubjects, and enforced from the pulpit by the reſt. To add to all this, he was loved by his people, whoſe hearts he had gained by his princely virtues, his humility, and his candour. But on the other ſide we are preſented with a very different ſcene. Men had begun to think on the different rights of ſociety, and found that all had an equal claim to the ineſtimable bleſſings of freedom. The ſpirit of liberty was roufed; and it was reſolved to oppoſe the ancient claims of monarchs, who uſurped their power in times of ignorance, and who pleaded, in ſucceeding ages, former depredations as preſcriptive rights. Charles had been taught from his infancy to conſider the royal prerogative as a ſacred pledge, which it was not his duty to abridge. He had been brought up, as he himſelf expreſſed it, "at the feet of Gamaliel,"—and had early imbibed unfortunate prejudices. His father, who had contributed ſo much to ſink the claims of the crown, had, nevertheleſs, boldly defended them in his writings, and taught his ſon to defend by the ſword what he had only inculcated by the preſs. Charles, though a prince of tolerable underſtanding, had not comprehenſion enough to ſee that the genius and diſpoſition of his ſubjects had received a total change; he reſolved therefore to govern by old maxims which the people had diſcovered to have been eſtabliſhed on the foundations of ſlavery.

The king had as yet only eſpouſed the princeſs Henrietta of France by proxy; his marriage and coronation therefore were no ſooner celebrated in England, than he haſtened to call a parliament, whom he addreſſed in language of candour and cordiality. He had been loaded with a treaty for defending the palatinate, and the war for that purpoſe was to be carried on with vigour. But war was more eaſily declared, than ſupplies granted. After ſome reluctance, the commons voted him two ſubſidies, but far from being ſufficient to ſupport him in his intended equipment; and to this was tacked a petition for puniſhing papiſts, and for redreſſing the grievances of the nation. Buckingham, who had been the late king's favourite, and who was careſſed by the preſent monarch, did not eſcape their cenſures; ſo that, inſtead of granting the ſums requiſite, they employed the time in diſputations and complaints, till the ſeaſon for proſecuting the campaign was elapſed. Charles, therefore, wearied with their delays, and offended at the refuſal of his demands, thought proper to diſſolve them.

To ſupply the want of parliamentary aids, Charles had now recourſe to ſome of the ancient methods of extortion, practiſed by ſovereigns in neceſſitous circumſtances. That kind of tax called a *benevolence* was ordered to be exacted, and privy-ſeals were iſſued for that purpoſe. In order to cover the rigour of this ſtep, it was commanded that none ſhould be aſked for money but ſuch as were able to ſpare it; and he directed letters to different perſons, mentioning the ſums he deſired. With this the people were obliged to comply; it had been authorized by many precedents; but it was contended that no precedents whatſoever could give a ſanction to injuſtice. With the money thus raiſed a fleet was equipped againſt Spain, carrying ten thouſand men; the command of which was entruſted to Edward Cecil, created lord Wimbleton, who ſailed directly to Cadiz, and found the bay full of ſhips of great value. But he failed in making himſelf maſter of the harbour, while his undiſciplined army landing, inſtead of attacking the town, could not be reſtrained from indulging themſelves in the wine, which they found in great abundance on ſhore. Further ſtay, therefore, appeared fruitleſs; they were re-embarked; and the plague attacking the fleet, they were obliged to abandon the enterprize, and return to England. Loud murmurs were made againſt the court, for entruſting ſo important a command to a perſon unqualified for the undertaking.

This ineffectual expedition was a great blow to the popularity of Charles; and, to retrieve the glory of the nation, another attempt was to be made. With this view a new parliament was called, A. D. 1626; and though ſome ſteps were taken to exclude the more popular leaders of the laſt houſe of commons, by nominating them as ſheriffs of counties, yet the preſent parliament ſeemed more refractory than the former. When the king laid before the houſe his neceſſities, and aſked for a ſupply, they voted him only three ſubſidies, which amounted to about 160,000l. a ſum no way adequate to the importance of the war, or the neceſſities of the ſtate. But even this was not to be levied until the grievances of the ſtate were redreſſed. Their chief indignation was levelled againſt Buckingham, a miniſter who had no real merit, and who laboured under the great infelicity of being the king's favourite. The commons undertook to impeach him in the lower houſe, while the earl of Briſtol, who had returned from his embaſſy in Spain, accuſed him among his peers. The purport of the charge amounted to little more than that he had engroſſed too much power to himſelf and his relations; that he had neglected to guard the ſeas with a fleet; and that he had applied a plaſter to the late king's ſide, to haſten his end. Theſe frivolous accuſations muſt have ſunk of themſelves, had they not been intemperately oppoſed by the royal authority. The king gave orders to the lord-keeper to command the commons expreſsly in his name not to meddle with his miniſter Buckingham. The more to inflame them,

them, he had him elected chancellor of the university of Cambridge, and wrote that venerable body a letter of thanks for electing him. He assured the commons, that if they would not comply with his demands, he would try new councils. But what enraged them beyond measure was, when two of their members, sir Dudley Digges and sir John Elliot, complained of this partiality in favour of a man odious to the nation, the king ordered both to be committed for seditious behaviour. It was now that the commons violently exclaimed that their privileges were infringed, and all freedom of debate destroyed. They protested in the most solemn manner, that neither of their members had said any thing disrespectful of the king; and they made preparations for publishing their vindication. The king, whose character it was to shew a readiness to undertake harsh measures, but not to support them, released the two members; and this compliance confirmed that obstinacy in the house, which was afterwards his ruin. The earl of Arundel, for being guilty of the same offence in the house of lords, had also been imprisoned, and as tamely dismissed by the king. Thus the two houses having refused the levies without previous conditions, the king, rather than give up his favourite, chose to be without the supply, and therefore once more dissolved the parliament.

The new councils which Charles had hinted to the parliament were now to be tried, in order to supply his necessities. Instead of making peace with Spain, and thus abridging his expences, he resolved to carry on the war, and to keep up a standing army for this purpose. In order, therefore, to gain time and money, a commission was openly granted to compound with the catholics, and agree for a dispensation of the penal laws against them. He borrowed a sum of money from the nobility, whose contributions came in but slowly. But the greatest stretch of his power was in levying *ship-money*. In order to equip a fleet, (at least this was the pretence made,) each of the maritime towns was required, with the assistance of the adjacent counties, to arm as many vessels as were appointed them. The city of London was rated at twenty ships. This was the commencement of a tax, which, being afterwards carried to great lengths, created such violent discontents in the nation. But the extortions of the ministry did not rest here. Persons of birth and rank, who refused the loan, were summoned before the council; and, upon persisting in a refusal, were put under confinement. Five persons alone undertook to defend the cause of the public; and, at the hazard of their lives and fortunes, were resolved to try whether the king had a right to confine their persons, without an infringement of the law. The names of these patriots were, sir Thomas Darnel, sir John Corbet, sir Walter Earl, sir John Haveningham, and sir Edward Hambden. Their cause was brought to a solemn trial before the king's-bench, and the whole kingdom was absorbed in attention to so important a trial.

From the pleadings on this memorable trial it appeared, that personal liberty had been secured by no less than six different statutes, previous to that of the Great Charter itself; but that, in times of turbulence and sedition, the princes had infringed upon those laws: and of this also many examples were produced. The difficulty now lay, to determine when such violent measures were expedient; but of that the court pretended to be the supreme judge. As it was deemed legal, therefore, that these five gentlemen should plead the statute, by which they might demand bail, so it was thought expedient in the court to remand them to prison, without determining on the necessity of taking bail for the present. This was a cruel evasion of justice, and, in fact, satisfied neither the court nor the people. The court insisted that no bail could be taken: the country loudly exclaimed that the prisoners should be set free. Under these embarrassments, it was not without amazement that the country saw their king enter into an unprovoked war with France, with which he had so lately formed the most natural alliance. But Charles, among the foibles of a good disposition, relied too much on the insidious advice of Buckingham. All historians agree that this minister had conceived hopes of gaining the heart of the queen of France, widow of Henry IV. and mother to the queen of England; while, at the same time, cardinal Richelieu aspired to the same honour. The rivalry of these favourites produced an inveterate enmity; and, from a private quarrel, they resolved to involve their respective nations in the dispute. War was declared against France; and Charles was taught to hope, that hostilities with that kingdom would be the surest means of producing unanimity at home.

A fleet was now sent out, under the command of Buckingham, to relieve Rochelle, which had long enjoyed its privileges independent of the crown of France, but had embraced the reformed religion, and was therefore besieged by the catholic party. This expedition proved as unfortunate as that on the coast of Spain. The duke's measures were so ill concerted, that the inhabitants shut their gates against the English, fearful of admitting allies, of whose approach they had received no previous information. Instead of attacking the island of Oleron, which was fertile and defenceless, he bent his course to the isle of Rhé, which was garrisoned, and well fortified. He attempted also to starve out the garrison of St. Martin's castle, which was copiously supplied with provisions. In the mean while the French landed their forces privately at another part of the island; and Buckingham was obliged to retreat with such precipitation, that two-thirds of his army were cut to pieces before they could reach their ships. The failure of this expedition served to render the duke still more obnoxious, and the king more needy. He therefore resolved to call a third parliament, A. D. 1628; and in a conciliating speech, but with dignity and spirit, demanded supplies. The members, however, were still dissatisfied. They boldly inveighed against the late loans, benevolences, taxes without consent of parliament, arbitrary imprisonments, billeting of soldiers, and martial laws: these were the grievances of which they complained, and against these they insisted that an eternal remedy should be provided. An immunity from these vexations they alleged to be the inherent right of the subject; and the schedule of their present demands, was called a petition of right, as implying privileges they had before been possessed of. Nothing could therefore be more just than the enacting this petition into a law. The Great Charter, and the old statutes, were sufficiently clear in favour of liberty; but as all the kings of England had been more or less accustomed to elude them; and as Charles, in many instances had violated them; it was quite requisite to enact a new law, which might prevent these innovations for the future.

Charles was taught to consider this requisition as the most violent encroachment on his prerogative; yet when he found that nothing but his assent would satisfy the house, he gave it; but in such ambiguous terms, as left him still in possession of his former power. At length, however, to screen his favourite Buckingham, he thought proper to give it without reservation. He came therefore to the house, and pronouncing the usual form of words, "*Soit comme il est desiré*, Let it be law as it is desired," he gave the petition of right all the sanction that was necessary to pass it into a law. The acclamations which followed, sufficiently testified the joy of the people; and an immediate grant of five subsidies was the strongest mark of parliamentary approbation. The commons, having thus recognized their estate in the constitution, prepared to repress its future violation. They objected to the commission for raising money for the introduction of a thousand German horse, which, with just reason, they feared might be turned against the liberties of the people. They resumed also their censure of Buckingham, whom they resolved implacably to pursue. They asserted, that

the method of levying money, called tonnage and poundage, without the consent of parliament, was a palpable violation of the liberties of the people. All these grievances were preparing to be drawn up in a remonstrance to his majesty, when the king came suddenly to the house, and ended their deliberations by a prorogation. But the members were not to be diverted from their claims for the liberty of the people. They urged their demands with still more force on their next sitting; and the duty of tonnage and poundage was discussed with greater precision than before. This tax upon merchandize was a duty of very early institution, and had been conferred on Henry V. and all succeeding princes, during life, to enable them to maintain a naval force for the protection of the kingdom. But the parliament had usually granted it as of their special favour, in the beginning of each reign, except to Henry VIII. who had it not conferred till the sixth year of his reign. He had, indeed, received it from the beginning, but he thought it necessary to have the sanction of parliament to insure it to him, which clearly implied that it was not an inherent privilege of the crown. They refused, therefore, to grant it now; and insisted that the king could not levy it without their permission. Charles, however, persisted; and the officers of the custom-house were summoned before the commons, to shew by what authority they seized the goods of the merchants who had refused to pay these duties. The barons of the exchequer were questioned concerning their decrees on that head; the sheriff of London was committed to the Tower for his activity in supporting the custom-house officers. These were strong measures; but the commons now went further, by a resolution to examine into religious grievances; and a new spirit of intolerance began to appear. The king, therefore, resolved to dissolve a parliament which he found himself unable to manage; and sir John Finch, the speaker, just as the question on tonnage and poundage was going to be put, rose up, and informed the house that he had a command from the king to adjourn.

Nothing could exceed the indignation of the commons on this procedure. The house was in an uproar; the speaker was pushed back into his chair, and forcibly held in it by Hollis and Valentine, till a short remonstrance was framed and passed. In this hasty production, papists and Arminians were declared capital enemies to the state; tonnage and poundage was prohibited, as contrary to law; and not only those who raised that duty, but those who paid it, were made alike guilty of capital crimes. In consequence of this violent proceeding, sir Miles Hobart, sir Peter Hayman, Selden, Coriton, Long, and Strode, were, by the king's order, committed for sedition. But the same temerity that impelled Charles to imprison them, induced him to grant a release. Sir John Elliot, Hollis, and Valentine, were summoned before the king's bench; but they refusing to admit the interference of an inferior tribunal, for faults committed in a superior, were condemned to be imprisoned during the king's pleasure, to pay a fine, and to enter into recognizance for their future good behaviour. The members triumphed in their sufferings, while they had the whole kingdom as applauders of their fortitude.

In this conjuncture the king was severely afflicted by the death of his favourite, the duke of Buckingham, who fell a sacrifice to his unpopularity. It had been resolved once more to undertake the raising of the siege of Rochelle; and the earl of Denbigh, brother-in-law to the duke of Buckingham, was sent thither, but returned without effecting any thing. To repair this disgrace, the duke of Buckingham went to Portsmouth, to forward another expedition, and to punish such as had endeavoured to defraud the crown of the legal assessments. At this place was one Felton, an Irishman, who had served under the duke as lieutenant, but had resigned on being refused his rank on the death of his captain, who had been killed at the isle of Rhé. In revenge for what he conceived an insult on his country and himself, he watched a favourable opportunity, and while the duke was speaking to one of his colonels, Felton struck him over that officer's shoulder in the breast with a knife. The duke had only time to say, "The villain has killed me," when he fell at the colonel's feet, and instantly expired, A. D. 1629. No one had seen the blow, nor the person who gave it; but a hat was picked up, on the inside of which was sewed a paper containing a short ejaculation, desiring aid in the attempt. It was concluded that this hat must belong to the assassin; and while they were employed in debating whose it could be, a man without a hat was seen walking very composedly before them, and was heard to cry out, "I am he." When asked at whose instigation he had committed that horrid deed? he answered, that they need not trouble themselves to enquire: that his conscience was his only prompter; and that no man on earth could dispose him to act against its dictates. He suffered for the crime with the same unrelenting courage and constancy, exulting in the event, which he said had delivered England from its greatest enemy.

Although this event sunk deep in the mind of Charles, who was ever awake to the feelings of humanity and friendship, and although he was now left, as it were, without an adviser, his consequent measures were judicious, and founded in wisdom. He made peace with the two crowns against whom he had waged war, which had been entered into without necessity, and conducted without glory. Being thus freed from his embarrassments, he bent his whole attention to the management of the internal policy of the kingdom, and took as his associates in this task, sir Thomas Wentworth, afterwards earl of Strafford, and Laud, afterwards archbishop of Canterbury.

Strafford, by his eminent talents and abilities, merited all the confidence which the king reposed in him. His character was austere; more fitted to procure esteem than love; his fidelity to the king was unshaken: but in serving the interests of the crown, he forgot the rights of the people. As he now employed all his counsels to support the prerogative, which he formerly had endeavoured to diminish, his loyalty was subjected to the imputation of self-interest and ambition; but his good character in private life made up for that seeming duplicity of public conduct.

Laud was in the church somewhat resembling Strafford in the state, rigid, severe, punctual, and industrious. His zeal was unremitted in the cause of religion; and the forms, as established by queen Elizabeth, seemed essentially connected with it.

Since the times of Elizabeth, that religious sect had been gaining ground in England, which, from the pretended greater purity of their manners, were called *puritans*. Of all other sects, this was the most obnoxious to monarchy; and the tenets of it more calculated to support that imagined equality which obtains in a state of nature. The partisans of this religion, being generally men of warm tempers, pushed their sentiments into a total opposition to those of Rome; and in the countries where their opinions had taken place, not only a religious but a political freedom began to be established. All enthusiasts, indulging more or less in extasies, visions, and inspirations, have a natural aversion to ceremonies and ritual forms, which are but external means of supplying devotion. The same unequivocal spirit which accompanied them in their addresses to the divinity, appeared in their political speculations; and the principles of civil liberty, which had hitherto been almost unknown in Europe, began to bud forth in this ungracious soil. It is not to be wondered at, therefore, that kings and bishops were anxious to suppress the growth of opinions so unfavourable to their authority; and that Laud, who, of all men alive, was the most attached to religious ceremony, should treat with rigour all men who contemned or opposed his doctrines. And, indeed, in the histories of

of thoſe times, we find the great cauſe of contention between the king and his people aroſe not from civil but religious motives; not from a deſire on the one hand of extending power, and on the other hand of promoting liberty; but merely from the ardour of the king in ſupporting biſhops and ceremonials of the church, and the fury of the puritans in aboliſhing thoſe diſtinctions, as remnants of popiſh idolatry.

Orders were now given that the communion-table ſhould be removed from the middle of the church to the eaſt end; where it ſhould be railed in, and denominated the altar. The kneeling at the altar, and the uſing of copes or embroidered veſtments, as uſed in popiſh countries, were alſo introduced, to the great diſſatisfaction of the people. Pictures and images were again admitted into the churches, by Laud's command. All ſuch clergy as neglected to obſerve every ceremony, were ſuſpended, and deprived by the high commiſſion court. And to mortify the puritans, orders were iſſued from the council, forbidding any controverſy, either from the pulpit or the preſs, on the points in diſpute between them and their opponents, concerning free-will and predeſtination. The king's divine, hereditary, and indefeaſible, right, was the theme of every ſermon; and thoſe who attempted to queſtion ſuch doctrines, were conſidered as making an attack upon loyalty and religion. The king, who had made a reſolution of calling no more parliaments, and which reſolution he adhered to for the ſpace of eleven years, was highly gratified with theſe doctrines, as they were the means of facilitating his meaſures, and of procuring thoſe pecuniary ſupplies which he had no legal means of obtaining. While Laud, therefore, ruled the church, the king and Strafford undertook to manage the temporal intereſts of the nation. A proclamation was iſſued, in which Charles declared, "That whereas, for ſeveral ill ends, the calling again of a parliament is divulged; yet the late abuſes, having for the preſent unwillingly driven him out of that courſe, he will account it preſumption for any one to preſcribe to him any time for calling that aſſembly." This was conſtrued as a declaration, that, during his reign, no more parliaments would be ſummoned; and every meaſure of the king ſerved to confirm the ſuſpicion.

It was now that the people began to think themſelves at the uncontrouled diſpoſal of an arbitrary monarch, who, though good and gentle in his own nature, might at any time change his conduct, by ill-adviſers. They now ſaw the conſtitution at one blow diſſolved; and the executive power, with that which is hereditary in the nobility, wholly aſſumed by the king. Tonnage and poundage were continued to be levied by royal authority alone: cuſtom-houſe officers received orders from the council to enter any houſe whatever, in ſearch of contraband goods; compoſitions were openly made with papiſts; and the toleration of their religion was become a regular part of the revenue. The high-commiſſion court of Star-chamber exerciſed its power, independent of any law, upon ſeveral bold and reſolute perſons, who had the temerity to oppoſe theſe meaſures; and who gloried in their ſufferings, and contributed to render government odious and contemptible. The rigours, however, which they underwent, gave general offence; and the patience, or rather alacrity, with which they ſuffered, increaſed ſtill further the public indignation.

The puritans, thus perſecuted in England, ſhipped themſelves off for America, where they laid the foundations of a new government, agreeable to their own ſyſtem of political freedom. But the king, unwilling that the nation ſhould be deprived of its members, or dreading the unpopularity of theſe emigrations, was prevailed upon to iſſue a proclamation, debarring theſe devotees acceſs even to thoſe diſtant regions. Eight ſhips, lying in the Thames, and ready to ſail, were detained by order of council; and in theſe were embarked ſir Arthur Hazelrig, John Hampden, and Oliver Cromwell, who had reſolved for ever to abandon their native country. This may ſtand as a proof of the ſincerity theſe men afterwards teſtified in the cauſe for which they fought; and is a clear proof that hypocriſy, with which they were certainly tinctured, was not, at leaſt in the beginning, among the motives of their oppoſition.

The levying of ſhip-money was the next thing complained of as a national grievance. This was a tax which had, in former reigns, been levied without the conſent of parliament; but then the exigency of the ſtate demanded ſuch a ſupply. As the neceſſity at preſent was not ſo apparent, and might excite murmurs among the people, a queſtion was propoſed by the king to the judges, whether, for the defence of the kingdom, he might not impoſe this tax? and whether he was not ſole judge of this neceſſity? To this queſtion the judges concurred in opinion that he might; yet John Hampden, a gentleman of Buckinghamſhire, refuſed to comply with the tax, and reſolved to bring it to a legal inveſtigation. The caſe was argued twelve days in the exchequer chamber, before all the judges of England. The nation regarded, with the utmoſt anxiety, the reſult of a trial that was to fix the limits of the king's power: but after the former opinion of the judges had been given, the event might have been eaſily foreſeen. All the judges, except four, gave ſentence in favour of the crown; while Hampden, who loſt his cauſe, affected to be more than recompenſed by the applauſes of the people. Nothing was heard but murmurs againſt government, and encomiums on him who had withſtood its uſurpations. It was now alleged that tyranny was confirmed into ſyſtem; and that there was no redreſs except in ſullen patience or contented ſlavery. Eccleſiaſtical tyranny was thought to give aid to political injuſtice; and all the rights of the nation, tranſmitted through ſo many ages, ſecured by ſo many laws, and purchaſed by the blood of ſo many heroes, lay proſtrate at the feet of arbitrary authority.

The Scots had, during the reign of James I. ſhewn a ſtrong attachment to puritanical principles; and though they ſtill continued to allow of biſhops, yet they were reduced to poverty, and treated with contempt. James, indeed, had ſeen the low eſtate of epiſcopacy in that kingdom, and had endeavoured once more to exalt and eſtabliſh it; but he died in the midſt of his endeavours. It was the fate of Charles for ever to aim at projects which were at once impracticable and unneceſſary; he reſolved therefore to complete what his father had begun. This ill-judged attempt ſerved to alienate the affections of his Scottiſh ſubjects, as much as his encroachments on liberty had rendered him unpopular in England. The flame of ſedition in Scotland paſſed from one city to another, while the puritans formed a *covenant*, to ſupport and defend their opinions; and reſolved to eſtabliſh their doctrines, or overturn the ſtate. On the other hand, the court was determined to eſtabliſh the liturgy of the church of England; and both ſides being obſtinate in opinion, thoſe ſanguinary meaſures were ſoon begun in Scotland, which had hitherto been only talked of among the Engliſh. Charles, finding them in arms, and that they inſiſted on diſplacing the biſhops, conſidered their demands as an open declaration of war; and accordingly ſummoned ſuch of the nobility of England as held lands of the crown, to furniſh him with a proper number of forces to oppoſe them. He demanded alſo a voluntary contribution from the clergy, as he was, in fact, fighting their cauſe; and, by means of his queen, the catholics were alſo called upon for their aſſiſtance. By theſe methods he ſoon found himſelf at the head of twenty thouſand men; but commanded by generals leſs willing to fight than to negociate. His ſuperiority in numbers, however, gave him a manifeſt advantage over the rebels, who were not ſlow in marching to give him battle. But Charles, who inherited the peaceable diſpoſition of his father, was unwilling to come to extre-

mities, although a blow then ſtruck with vigour might have prevented all his ſubſequent misfortunes. A ſuſpenſion of arms was agreed upon; and a treaty of peace concluded, which neither party intended to obſerve; yet both agreed to diſband their forces. This was a fatal meaſure to Charles, as he could not levy a new army without great expence; while the Scottiſh inſurgents, who were volunteers in the ſervice, could be muſtered at pleaſure. Of this the malcontents were ſenſible; for they lengthened out the negociations with affected difficulties, till they were confident of their own ſuperiority. Then, after much altercation, and many treaties ſigned and broken, both parties again reſorted to arms.

It was now, A. D. 1640, about eleven years ſince the king had called a parliament. The fierce and ungovernable ſpirit of the laſt meeting, had taught him to hate and to fear ſuch an aſſembly; but his treaſury being exhauſted, and great debts contracted, he had no other reſource. Yet ſtill, the many illegal, and the numerous imprudent, ſteps of the crown, contributed to fill this new parliament with nothing but murmurings and complaints. Every method the king had taken to ſupply himſelf with money, was declared an abuſe, and a breach of the conſtitution. Ship-money, the ſale of monopolies, the billeting ſoldiers upon refractory citizens, were all voted as ſtretches of arbitrary power. Charles, finding he had no hopes from the commons, had recourſe to the houſe of peers; but here he was equally foiled; and meeting with nothing but diſguſt and recrimination, he again diſſolved the parliament, to try arbitrary meaſures for ſupplying his neceſſities.

The king now called upon the citizens of London for a loan; which, being refuſed, he ſued ſuch of them in the ſtar-chamber, as had lands in Ireland, and made them pay a conſiderable fine. He continued alſo to exact the taxes againſt which every parliament had remonſtrated. A loan of forty thouſand pounds was extorted from the Spaniſh merchants, who had bullion in the Tower. Coat and conduct money for the ſoldiers was levied on the counties; an ancient practice, but ſuppoſed to have been aboliſhed by the petition of right. All the pepper was bought from the Eaſt India company upon truſt, and ſold at a great diſcount for ready money. A ſcheme was alſo propoſed for coining baſe money; and yet all theſe methods were far from proving effectual. The Scots, therefore, ſenſible of the extremities to which the king was reduced, led on an army of twenty thouſand men as far as Newcaſtle upon Tyne, to lay their grievances before their ſovereign, as they were pleaſed to term their rebellion. Perhaps the moſt diſguſting feature in the puritanical character, was this gentle language, and humble cant, in the midſt of treaſon; and their flattery to the king, while they were attempting to dethrone and deſtroy him. To the Scottiſh troops, inſpired by enthuſiaſm, and flushed with ſome ſlight victories, Charles was able only to oppoſe a ſmaller force, undiſciplined, ſeditious, and ill paid. Being, therefore, in deſpair of ſtemming the torrent, he at length yielded to it. He ſummoned a council of the peers to meet him at York; and, as he foreſaw that they would adviſe him to call a parliament, he told them he had already taken that reſolution. He now called that *long* parliament, which never diſcontinued ſitting till they finally accompliſhed his ruin. This parliament had no ſooner met, than it impeached the earl of Strafford, the king's firſt miniſter, for high treaſon. Pym, who opened the accuſation in the houſe of commons, was ſent up to ſupport it at the bar of the houſe of lords; and moſt of the commons attended their member.

To give the utmoſt ſolemnity to this trial, ſcaffolds were erected in Weſtminſter hall, where both houſes ſat, the one as judges, the other as accuſers. Beſide the chair of ſtate, a cloſe gallery was prepared for the king and queen, who attended the whole time. The articles of impeachment were twenty-eight; the ſubſtance of which was, that he had illegally attempted to extend the royal prerogative, to the manifeſt injury of the king and his ſubjects; and had been guilty of various unjuſt exactions in Ireland. In the midſt of this ſolemn trial, the earl of Strafford, whoſe wiſdom and character had been long reſpectable, ſtood unmoved and undaunted. He defended himſelf with equal preſence of mind, judgment, and ſagacity. But all was in vain: nothing leſs than his life could now appeaſe the vengeance of the people. He was found guilty by both houſes of parliament; and the king was called upon to give his ſanction to the bill of attainder. Charles, who loved and reſpected Strafford, heſitated and tried every expedient to put aſide ſo dreadful an event as that of ſigning the warrant for his execution. While in this agitation of mind, he received a letter from that unfortunate nobleman, deſiring that his life might be made the ſacrifice of a mutual reconciliation between the king and his people; adding that he was prepared to die, and to a willing mind there could be no injury. This noble generoſity was but ill requited by the king, who inſtantly gave orders for ſigning the fatal bill by commiſſion; Strafford was beheaded on Tower-hill; and behaved with all that dignity of mind and Chriſtian fortitude, which has immortalized his character.

But the commons choſe not to ſtop here. Laud alſo, after a deliberation of half an hour, was conſidered ſufficiently culpable to incur the ſame accuſation, and was committed to cuſtody. Finch, the lord-keeper, was likewiſe impeached; but he had the precaution to eſcape into Holland, as did ſir Francis Wyndebank, the ſecretary, into France. The king, thus deprived of his miniſters, began to tremble for the few privileges he ſtill poſſeſſed. The lieutenants and deputy-lieutenants of counties, who had acted under his influence, were voted delinquents. The ſheriffs alſo, who had obeyed the king's mandate in raiſing ſhip-money, were voted delinquents. All the farmers and officers of the cuſtoms, who had been employed during ſo many years in levying tonnage and poundage, were ſubjected to the ſame imputation, and purchaſed their ſafety by paying a hundred and fifty thouſand pounds. Every ſentence of the ſtar-chamber, and high-commiſſion courts, underwent a ſevere ſcrutiny; and all thoſe who had any hand in ſuch ſentences, were voted liable to the penalties of the law. The judges, who had declared againſt Hampden, in the trial of ſhip-money, were accuſed before the peers, and obliged to find ſecurity for their appearance. All thoſe monopolies which had been granted by the king were now annihilated, by order of the commons; and they carried their reſentment ſo far as to expel from their houſe all ſuch members as had been monopoliſts or contractors.

Hitherto we have ſeen the commons acting, in ſome meaſure, as the patrons of liberty. Had they been content to ſtop here, they might have been conſidered as the benefactors of mankind; and would have left the conſtitution on a fair and firm baſis. But from matters of civil and political inveſtigation, they proceeded to the affairs of the church. The pulpits were delivered over to puritanical preachers, whom the commons arbitrarily placed in all the conſiderable churches, which now reſounded with faction and fanaticiſm. The preſs teemed with productions dangerous to the ſtate; and ſedition and calumny pervaded all orders, againſt the king and his friends.

In this univerſal uproar, Prynne, Burton, and Baſtwick, who had been for years committed to remote priſons, were ſet at liberty by order of the commons. Baſtwick had been confined in Scilly, Burton in Jerſey, and Prynne in Guernſey; and, upon landing at their reſpective places, they were received by the acclamations of the people, and attended by crowds to London. Boughs were carried in this tumultuous proceſſion; the roads were ſtrewed with flowers, their ſufferings were aggravated,

gravated, and their perſecutors reviled. Every perſon who had been puniſhed for ſedition during the foregoing adminiſtration, now recovered their liberty, and had damages given againſt thoſe who had decreed their puniſhment.

The torrent of licentious liberty riſing to ſo dreadful a height, deſpair ſeized all thoſe who, from intereſt or habit, were attached to monarchy; while the king himſelf ſaw, with amazement, the whole fabric of the government haſtily overturned. "You have taken (ſaid he to the parliament) the whole machine of government to pieces; a practice frequent with ſkilful artiſts, when they deſire to clear the wheels from any ruſt which may have grown upon them. The engine may be reſtored to its proper uſe and motions, provided it be fitted up entire, ſo as not a pin be wanting." But the commons, in their implacable temper, were reſolved to ſhew that their plan was better adapted to deſtroy, than to fit up. They therefore immediately annihilated the high-commiſſion court, and the court of ſtar-chamber, by a bill which unanimouſly paſſed both houſes of parliament.

In the midſt of theſe domeſtic ferments, the catholics of Ireland thought it a convenient opportunity of throwing off the Engliſh yoke. There was a gentleman named Roger More, deſcended from an ancient Iriſh family, and much celebrated for his valour and capacity. He it was who formed the project of expelling the Engliſh, and aſſerting the independence of his native country. Struck with theſe motives, ſir Phelim O'Neale entered into the conſpiracy; lord Macguire ſeconded his deſigns, and ſoon after all the chiefs of the native Iriſh promiſed their concurrence. Their plan was, that ſir Phelim O'Neale, and the other conſpirators, ſhould begin an inſurrection on one and the ſame day throughout all the provinces, to maſſacre the Engliſh; while lord Macguire and Roger More ſhould ſurpriſe the caſtle of Dublin. They had fixed on the approach of winter for this revolt; and the earl of Leiceſter, who had been appointed lord lieutenant, was then in London. But the day before the intended ſeizure of the caſtle of Dublin, the plot was diſcovered by one O'Conolly, to the juſtices, who fled to the caſtle, and alarmed all the proteſtant inhabitants of the city to provide for their ſafety. Macguire was taken, but More eſcaped; and new informations being every hour added to thoſe already received, the project of a general inſurrection was defeated. But though the proteſtants in Dublin had juſt time enough to ſave themſelves from danger, thoſe diſperſed over different parts of the country, were expoſed to the moſt ſhocking cruelties. O'Neale, and his confederates, had already taken arms in Ulſter. The Iriſh catholics, every where intermingled with the Engliſh proteſtants, needed but a hint from their leaders to maſſacre a people whom they hated for their religion, and envied for their proſperity. Neither age, ſex, nor condition, received any pity: numberleſs were the inſtances of friends murdering their intimates, relations their kinſmen, and ſervants their maſters. Not only death, but ſtudied cruelties, were inflicted on the unhappy ſufferers; the very avarice of the revolters could not reſtrain their thirſt for blood, and they burned the inhabitants in their own houſes, to increaſe their puniſhment. By legendary computations, the Engliſh who periſhed by theſe cruelties, are made to amount to an hundred and fifty or two hundred thouſand ſouls; but, by the moſt moderate computation, they could not have been leſs than forty thouſand. King Charles was in Scotland, when he received the firſt accounts of this dreadful rebellion; and though he exerted his utmoſt perſuaſions to induce his Scottiſh ſubjects to lend aſſiſtance to the proteſtant cauſe, yet he found them totally averſe to ſending any ſuccours into Ireland. Their aim was to act with the parliament of England, and not to obey the injunctions of their ſovereign. They went further, and had the effrontery to impute theſe dreadful maſſacres to the king's own contrivance. In fact, the rebels of Ireland had contrived to ſhow a royal patent, authoriſing their reſort to arms; and it is ſaid that ſir Phelim O'Neale, having found a royal patent in lord Caulfield's houſe, whom he had murdered, he tore off the ſeal, and affixed it to a commiſſion which he had forged for himſelf.

It was now A. D. 1641, that the republican ſpirit began to predominate in the parliament; and by attacking the foibles of the king, laid the plan of ſubverting the monarchy. The projectors of this ſcheme began their operations by attacking epiſcopacy, which was one of the ſtrongeſt bulwarks of the royal cauſe; but they previouſly framed a remonſtrance, in which they ſummed up all their grievances. Theſe they aſcribed to a regular ſyſtem of tyranny in the king, which had virtually deſtroyed the functions of the conſtitution. The commons, having thus endeavoured to prove the king's adminiſtration illegal, began upon the hierarchy. Their firſt meaſure was, to ſuſpend all the laws which had been made for the obſervance of public worſhip. They accuſed thirteen biſhops of high treaſon, for enacting canons without the conſent of parliament; and endeavoured to prevail upon the houſe of peers to exclude all the prelates from their ſeats and votes in that houſe. But, notwithſtanding all their efforts, the lords refuſed their concurrence to a meaſure, which was obviouſly pregnant with injuſtice. The majority of the peers adhered to the king; and began to foreſee that the depreſſion of the crown was only a prelude to the extinction of the nobility. The commons murmured, and at once juſtified their concluſion, by inſinuating that the buſineſs of the ſtate could be carried on without them.

In order to intimidate the lords, the populace was let looſe to inſult and threaten them. Multitudes of people flocked daily to Weſtminſter, and inſulted the prelates and peers who adhered to the crown. The rabble, by way of reproach, were called *Roundheads*, from the manner of wearing their hair: and the gentlemen, *Cavaliers*. Theſe names afterwards ſerved to diſtinguiſh the partiſans of either ſide, and ſerved ſtill more to divide the nation. The biſhops now, foreſeeing the ſtorm was gathering over them, reſolved to attend their duty in parliament no longer; but drew up a proteſt, which was ſigned by twelve of them, in which they declared, that, being hindered by the populace from attending at the houſe of lords, they reſolved to go there no more till all commotions were appeaſed; proteſting, in the mean time, againſt all ſuch laws as ſhould be enacted in their abſence. This ceſſation of the biſhops from parliament was what the commons moſt ardently deſired; and they took advantage of it with avidity. An impeachment of high-treaſon was immediately ſet up againſt them, for ſubverting the fundamental laws, and invalidating the legiſlative authority. In conſequence of this charge, they were excluded from parliament, and committed to cuſtody; no man in either houſe daring to ſpeak a word in their vindication.

This was a fatal blow to the royal intereſt; and naturally called forth every feeling of an inſulted king. Charles had long ſuppreſſed his reſentment, and had ſtrove to ſatisfy the unreaſonable demands of the commons, by the greatneſs of his conceſſions; but finding that his ſubmiſſive compliance had only increaſed the evil, he now determined to interpoſe his prerogative. He gave orders to Herbert, his attorney-general, to enter an accuſation of high-treaſon againſt lord Kimbolton, one of the moſt popular of his party, together with five commoners, ſir Arthur Hazelrig, Hollis, Hampden, Pym, and Strode. The articles were, that they had traiterouſly endeavoured to ſubvert the fundamental laws and government of the ſtate, to deprive the king of his regal power, and to impoſe on his ſubjects an arbitrary and tyrannical government; that they had invited a foreign army to invade the kingdom; had aimed at ſubverting the rights of parliament, and had raiſed and countenanced tumults againſt the king. The commons had ſcarcely time to contemplate this impeachment, when they were aſtoniſhed by another meaſure,

ſtill

ſtill more raſh and precipitate. A ſerjeant at arms, in the king's name, demanded of the houſe the five members, but was ſent back without any deciſive anſwer. The next day the king himſelf entered the houſe of commons, advancing forward, while all the members ſtood up to receive him. The ſpeaker withdrew from his chair, and the king took poſſeſſion of it. Having ſeated himſelf, with a ſtern aſpect, he told the houſe he was ſorry for the occaſion that forced him thither; that he was come in perſon to ſeize the members whom he had accuſed of high-treaſon, ſeeing they choſe not to deliver them up to his ſerjeant at arms. Addreſſing himſelf to the ſpeaker, he deſired to know whether any of the traitors were in the houſe; but the ſpeaker, falling on his knees, replied, that "he had neither eyes to ſee, nor tongue to ſpeak, but as the houſe was pleaſed to direct him:" and he aſked pardon for being able to give no other anſwer. He then directed his eyes every way, to ſee if the accuſed were preſent; but they had eſcaped a few minutes before. Thus diſappointed and perplexed, he next proceeded, amidſt the clamours of the populace, who continued to cry out, "Privilege! privilege!" to the common council of the city, and made his complaint to them. The common council conducted themſelves in a ſimilar manner to the houſe of commons; and the king, chagrined and diſappointed, returning to St. James's, was again inſulted by the mob, who cried out, "To your tents, O Iſrael!"—the menacing words of the Jews, when they were about to abandon their prince.

The commons, the next day, affected the greateſt terror, and paſſed an unanimous vote that the king had violated their privileges, and reſolved not to aſſemble again in the ſame place, till they ſhould have obtained ſatisfaction, with a guard for their ſecurity. They aſcribed the laſt meaſures of the king to the councils of the papiſts; and the city was thus filled with groundleſs conſternation. As the commons artfully kept up their panic to inflame the populace, and as the city was only one ſcene of confuſion, the king, afraid of expoſing himſelf to freſh inſults, retired to Windſor. There, reflecting on the raſhneſs of his proceedings, he wrote to the parliament, informing them that he deſiſted from proſecuting the accuſed members; and aſſured them, that upon all occaſions he would be as careful of their privileges as of his life or his crown. Thus, as his former violence begat hatred, his preſent ſubmiſſion rendered him contemptible.

The commons having nearly ſtripped the king of almoſt all his privileges, now determined to get poſſeſſion of the ſword. The power of appointing governors, generals, and levying armies, was an hereditary prerogative of the crown. Having, therefore, firſt magnified their terrors of popery, they proceeded to petition that the Tower might be put into their hands, and that Hull, Portſmouth, and the fleet, ſhould be intruſted to perſons of their chooſing. Theſe were requeſts, the complying with which would level all that remained of the ancient conſtitution: yet ſuch was the neceſſity of the times, that they were at firſt conteſted, and then granted. At length, the commons deſired to have a militia raiſed, and governed by ſuch officers and commanders as they ſhould nominate, under pretence of ſecuring them from the Iriſh papiſts, of whom they affected to be under great apprehenſions. It was here that Charles firſt ventured to put a ſtop to his conceſſions; and that not by a refuſal, but a delay. He was at that time at Dover, attending the queen, and the princeſs of Orange, who had thought it prudent to leave the kingdom. He replied to the petition of the commons, that he had not leiſure to conſider a matter of ſuch importance, and therefore would defer an anſwer till his return. But the commons ſeemed well aware that delays might be fatal to their views: they alleged that the dangers of the nation were ſuch as could endure no neglect; and unleſs the king ſpeedily complied with their demands, they ſhould be obliged, both for his ſafety and that of the kingdom, to diſpoſe of the militia by the authority of parliament, and were reſolved to do it accordingly. In a remonſtrance to the king, they deſired to be permitted to command the army for a limited time; which ſo exaſperated the monarch, that he exclaimed, "No, not for one hour!" This peremptory refuſal broke off all further treaty; and both ſides now reſolved to have recourſe to arms.

Charles, taking the prince of Wales with him, retired to York, where he found the people more loyal, and leſs infected with the puritanical phrenſy of the times. He found his cauſe there backed by a more numerous party than he had expected among the people. The queen, who was in Holland, was making levies of men and ammunition, by ſelling the crown jewels. Yet, before war was openly declared, the ſhadow of a negociation was carried on, rather to ſerve as a pretence to the people, than with any real deſign of reconciliation. The king offered propoſals to the commons, which he knew they would not accept; and they, in return, ſubmitted nineteen propoſitions to his conſideration, which, if complied with, would indeed have rendered him the maſter puppet of their ſcheme of tyranny. The import was, that the privy-council, the principal officers of ſtate, the governors of the king's children, the commanders of the forts, his fleet and army, ſhould be all appointed by, and put under the controul of, parliament; that papiſts ſhould be puniſhed by their authority; that the church and liturgy ſhould be reformed at their diſcretion; and that ſuch members as had been diſplaced by the king ſhould be reſtored. Theſe propoſals, had they been complied with, would have moulded the government into an ariſtocracy; but, happily for poſterity, they were rejected by the king. "Should I grant theſe demands (ſaid he) I might be waited on bare-headed; I might have my hand kiſſed, the title of majeſty continued, and the king's authority ſignified by both houſes of parliament; I might have ſwords and maces carried before me, and pleaſe myſelf with the toys of a crown and ſceptre; but, as to true and real power, I ſhould remain but the picture, the ſign, the ſymbol, of a king." War at any rate was therefore to be preferred to peace, on ſuch conditions. Thus the king and his parliament mutually reproached each other as the cauſe of a ſcene of ſlaughter, in which both perhaps were equally culpable.

No period, ſince England had a name, could furniſh ſo many inſtances of courage, abilities, and virtue, as the fatal oppoſition called forth into action, A. D. 1642. Both ſides, equally confident of the juſtice of their cauſe, appealed to God to judge of the rectitude of their intentions. The parliament was convinced that it fought for heaven, by aſſerting its regards for a peculiar mode of worſhip; and the king was not leſs convinced that his claims were ſacred, as he had ever been taught to conſider them as of divine original. Thus paſſion and enthuſiaſm on each ſide animated the combatants; and courage, rather than conduct, among theſe undiſciplined troops, decided the fortune of the day. Never was conteſt more unequal than appeared at firſt between the contending parties; the king being entirely deſtitute of almoſt every advantage. His revenue had been ſeized by parliament; all the ſea-port towns were in their hands, except Newcaſtle; the fleet was at their diſpoſal; all magazines of arms and ammunition were ſeized for their uſe; and they had the good wiſhes of the bulk of the people. To oppoſe this, the king had conſtantly that acknowledged reverence due to royalty, to give ſanction to his cauſe. The greater part of the nobility adhered to him, as their diſtinctions muſt riſe or fall with the fountain of honour. Moſt men of education alſo, and the ancient families, ſtill conſidered loyalty as a virtue, and armed their tenants and ſervants in his cauſe. With theſe followers, Charles reſolved to take the field; and he erected the royal ſtandard at Nottingham.

Manifeſtos on both ſides were now diſperſed throughout the kingdom; and the people were inveterately divided

vided between the two factions of *Cavaliers* and *Roundheads*. The king, to bind himself by the most solemn engagements to his subjects, made the following protestation before his whole army. "I do promise, in the presence of Almighty God, and as I hope for his blessing and protection, that I will, to the utmost of my power, defend and maintain the true reformed protestant religion, established in the church of England; and, by the grace of God, in the same will live and die. I desire that the laws may be ever the measure of my government, and that the liberty and property of the subject may be preserved by them with the same care as my own just rights. And if it please God, by his blessing on this army raised for my necessary defence, to preserve me from the present rebellion, I do solemnly and faithfully promise, in the sight of God, to maintain the just privileges and freedom of parliament, and to govern, to the utmost of my power, by the known statutes and customs of the kingdom; and particularly to observe inviolably the laws to which I have given my consent this parliament. Meanwhile, if this emergency, and the great necessity to which I am driven, beget any violation of law, I hope it shall be imputed by God and man to the authors of this war, not to me, who have so earnestly laboured to preserve the peace of the kingdom. When I willingly fail in these particulars, I shall expect no aid or relief from man, nor any protection from above. But in this resolution I hope for the cheerful assistance of all good men, and am confident of the blessing of heaven." The sincerity with which this speech was delivered, and the manifest justice of its contents, served to strengthen the king's cause. He was soon gradually reinforced from all quarters; but not being yet in a condition to face his enemies, he thought it prudent to retire by slow marches to Derby, and thence to Shrewsbury, in order to countenance the levies which his friends were making in those quarters.

In the mean time, the parliament were not remiss in preparations on their side. They had a magazine of arms at Hull, and sir John Hotham was appointed governor of that place by parliament. Charles had some time before presented himself before that town, but was refused admission: and from this they drew their principal resources. The forces also, which had been every where raised on pretence of the service of Ireland, were now more openly enlisted by the parliament for their own purposes; and the command given to the earl of Essex, a bold man, but who rather desired to see monarchy abridged than destroyed. In London, no less than four thousand men were enlisted in one day; and the parliament voted a test, which they compelled every soldier to subscribe, that they would live and die with their general. Orders were also issued out for loans of money and plate, "to defend the king, and both houses of parliament;"—for they still preserved this style. This brought immense quantities of plate to the treasury; and so great was the public ardour in the cause, that there was more than they could find room for. Sixteen thousand men were soon ready to take the field, and the earl of Essex led them towards Northampton against the king.

The army of the royalists was not so numerous as that of Essex; however, it was supposed to be better disciplined and better conducted. The two sons of the unfortunate elector palatine, prince Rupert and prince Maurice, offered their services to the king, which were accepted. A slight advantage gained by prince Rupert over colonel Sandys, in a skirmish, gave great hopes of his future activity, and inspired the army with resolution to hazard a battle. So little were both armies skilled in the policy of war, that they were within six miles of each other before they were acquainted with their mutual approach; and, what is more remarkable, they had been ten days within twenty miles of each other, without knowing it.

Edge-hill was the first place where the two armies faced each other, and the fatal spot first drenched in civil slaughter. It was a shocking sight to see above thirty thousand of the bravest men in the world, instead of employing their courage against their common enemy, turning their arms against each other, while the dearest friends, and the nearest kinsmen, embraced opposite sides, and prepared to bury their private regards in factious hatred. In the beginning of the battle, sir Faithful Fortescue, who had levied a troop for the Irish war, and had been forced to serve in the parliamentary army, deserted to the royalists, and so intimidated the parliamentary forces, that the cavalry fled. The right wing of their army soon followed their example; but, the victors too eagerly pursuing, Essex's reserve wheeled upon the rear of the pursuers, and made great havoc among them. After the royalists had a little recovered, they made a vigorous stand; and both sides, as if petrified at the reflection of this unnatural bloodshed, stood gazing at each other, without courage or ability to renew the attack. All night they lay under arms, and next morning found themselves still gazing at each other. Perhaps this was the favourable season when the king should have struck a decisive blow, or melted down his opponents by a gracious pardon: but he lost the opportunity; and both sides separated with apparent dread and apprehension. Five thousand men are said to have fallen that day.

It would be tedious to recount the marchings and countermarchings of these armies: war was a new trade to the English, as they had not seen an hostile engagement in the island for near a century before. The queen came to reinforce the royal party; she had brought soldiers and ammunition from Holland, and immediately departed to furnish more. But the parliament, who knew its own strength, appeared no way discouraged. Their demands seemed to increase in proportion to their losses; and, as they were repressed in the field, they grew more haughty in the cabinet; even all such governors as gave up their fortresses to the king were attainted of high treason. It was now too late for the king to remain inactive, by tendering proposals to the parliament; for though his desire of stopping the further effusion of blood was laudable as a Christian, yet his long negociations at Oxford were faulty as a warrior. He wasted that time in altercation and treaty, which he should have employed in vigorous exertions in the field.

However, this first campaign, upon the whole, wore a favourable aspect. One victory followed after another; Cornwall was reduced to peace and obedience under the king: a victory was gained over the parliament forces at Stratton Hill, in Devonshire; another at Roundaway Down, two miles from the Devizes; and a third in Chalgrave Field. Bristol was besieged and taken; Gloucester was invested; the battle of Newbury was favourable to the royal cause; and great hopes of success were expected from an army in the north, raised by the marquis of Newcastle. But in this campaign, the two bravest generals on each side were killed; these were John Hampden, and Lucius Cary lord Faulkland.

The king, that he might make more extensive preparations during the winter for the ensuing campaign, and to oppose the designs of the Westminster parliament, called one to meet at Oxford; and this was the first time that England saw two parliaments sitting at the same time. His house of peers was pretty full; but his house of commons consisted of only an hundred and forty, which amounted to not above half of the other house of commons. From this parliament he received some supplies; after which it was prorogued, and never after assembled. In the mean time, the long parliament were equally active on their side. They passed an ordinance, commanding all the inhabitants of London and its neighbourhood to retrench a meal a weak, and to pay the value of it for the support of the public cause. But what was much more effectual, the Scots, who considered their grievances as similar, led a strong army to their assistance.

They alſo levied fourteen thouſand men in the eaſt, under the earl of Mancheſter; they had an army of ten thouſand men under Eſſex, and another of nearly the ſame number under ſir William Waller. Theſe were ſuperior to any force the king could bring into the field, and were well appointed, and amply ſupplied with ammunition, proviſions, and pay.

Hoſtilities, which, even during the winter ſeaſon, had never been wholly diſcontinued, were renewed in the ſpring of 1644, with redoubled fury, and ſerved to deſolate the kingdom, without deciding the victory. Each county joined that ſide to which it was addicted from motives of conviction, intereſt, or fear, though ſome obſerved a perfect neutrality. There were ſeveral petitions for peace; and all the wife and good united in the cry. What particularly deſerves remark, was an attempt of the women of London, who, to the number of two or three thouſand, went in a body to the houſe of commons, earneſtly demanding a peace. "Give us thoſe traitors (ſaid they) that are againſt a peace; give them, that we may tear them in pieces." The guards found ſome difficulty in quelling this inſurrection; and one or two women loſt their lives in the fray.

The battle of Marſton-moor wore the firſt feature of the king's diſgrace. The Scotch and parliament armies had joined, and were beſieging York, when prince Rupert, joined by the marquis of Newcaſtle, determined to raiſe the ſiege. Both armies drew up on Marſton-moor, to the number of fifty thouſand, and the victory ſeemed long wavering between them. Rupert, who commanded the right wing of the royaliſts, was oppoſed by Oliver Cromwell, who now firſt came into notice, at the head of a body of troops whom he had himſelf taken care to levy and diſcipline. Cromwell was victorious: he puſhed his opponents off the field, followed the vanquiſhed, returned to a ſecond engagement, and a ſecond victory; the prince's whole train of artillery was taken; and the royaliſts never after recovered the blow.

While the king was thus beaten in the field, he was not more ſucceſsful in negociation. A treaty was begun at Uxbridge; but which, like all others, came to nothing. The puritans demanded a total abolition of the epiſcopacy, and all church ceremonies; and this Charles would not permit. He had all along adhered to the epiſcopal juriſdiction, not only becauſe it was favourable to monarchy, but becauſe all his adherents were devoted to it. He eſteemed biſhops as eſſential to the Chriſtian church; and thought himſelf bound, not only by temporal but ſacred, ties to defend them. The parliament was as obſtinately bent upon removing this order; and, to ſhew their reſolution, began with the foremoſt of the number. William Laud, archbiſhop of Canterbury, as we have ſeen, had been impriſoned in the Tower at the ſame time with Strafford; and he had patiently endured this long confinement, without being brought to trial. He was now, therefore, accuſed of high treaſon, in endeavouring to ſubvert the fundamental laws, and of other high crimes and miſdemeanors. The groundleſs charge of popery, which his life and afterwards his death belied, was urged againſt him. In his defence, he ſpoke ſeveral hours, with that courage which is ever the reſult of innocence and integrity. The lords, who were his judges, appeared willing to acquit him; but the commons, his accuſers, finding how his trial was likely to go, paſſed an ordinance for his execution, and terrified the lords into a conſent. Seven peers alone voted in this important queſtion; all the reſt, either from ſhame or fear, ſeceded from their duty. When brought to the ſcaffold, this venerable prelate, without any terror, but in the uſual tone of his exhortations from the pulpit, made a long ſpeech. He told them that he had examined his heart; and thanked God that he found no ſins there which deſerved the death he was going to ſuffer. The king, he ſaid, had been traduced by ſome, as labouring to introduce popery; but he believed him as ſound a proteſtant as any man in the kingdom; and as for parliaments, though he diſliked the conduct of one or two, yet he never deſigned to change the laws of his country, or the proteſtant religion. After he had prayed for a few minutes, the executioner ſevered his head at a blow, A. D. 1644.

The death of Laud was followed by a total alteration of the ceremonies of the church. The liturgy was, by a public act, aboliſhed the day he died, as if he had been the only obſtacle to its formal removal. The church of England was in all reſpects brought to a conformity with the puritanical eſtabliſhment; while the citizens of London, and the Scotch army, gave public thanks for ſo happy an alteration. Yet from the moment the puritans began to be apparently united, and ranked under one common denomination of Preſbyterians, they began again to divide into freſh ſects, each profeſſing different views and intereſts. One part of the houſe was compoſed of Preſbyterians, ſtrictly ſo called; the other, though a minority, of Independents, a new ſect that had lately been introduced, and rapidly gained ground among the vulgar.

The difference between theſe two ſects would be hardly worth mentioning, had not their religious opinions influenced their political conduct. The church of England, as we have ſeen, had appointed biſhops of clerical ordination, and a book of common prayer. The preſbyterians exclaimed againſt both; they were for having the church governed by clergymen elected by the people, and prayers made without premeditation. The independents went farther; they excluded all the clergy; they maintained that every man might pray in public, exhort his audience, and explain the ſcriptures. Their political ſyſtem kept pace with their religious. Not content with reducing the king to a firſt magiſtrate, which was the aim of the preſbyterians, this ſect aſpired at the abolition not only of all monarchy, but of all ſubordination. They maintained, and they perhaps maintained right, that all men were born equal; but they alleged alſo, that no accidental or artificial inſtitutions could deſtroy this equality; and there they were deceived. Could ſuch a plan of government as theirs be practicable, it would, no doubt, remove all the cauſes of envy and jealouſy among men; but this were impoſſible: the wiſe and induſtrious muſt in every country prevail over the weak and idle; and the bad ſucceſs of the independent ſcheme ſoon ſhewed how ill adapted ſuch ſpeculative ideas were to human infirmity. Poſſeſſed, however, with a high notion of their own rectitude both in religion and politics, they gave way to a ſurly pride, which is ever the reſult of narrow manners and an obſtinate diſpoſition.

The royaliſts endeavoured to throw a ridicule on this fanaticiſm, without being ſenſible how much they had to apprehend from its conſequences. The forces of the king were united by much feebler ties; and licence among them, which had been introduced by the want of pay, had riſen to a dangerous height, rendering them as formidable to their friends as their enemies. To increaſe this unpopularity, the king, finding the parliament of Scotland as well as that of England, declaring againſt him, he thought proper to make a truce with the papiſts of Ireland, in order to bring over the Engliſh forces who ſerved in that kingdom. With theſe troops he alſo received ſome of the native Iriſh into his ſervice, who ſtill retained their fierceneſs and their barbarity. This gave the parliament a plauſible opportunity of upbraiding him with taking papiſts into his ſervice, and gave a colour to the ancient calumny of his having excited them to rebel. Unfortunately, too, they rather increaſed the hatred of his ſubjects, than added to the ſtrength of his army. They were routed in the firſt battle by Fairfax; and though they threw down their arms, they were ſlaughtered in cool blood without mercy.

Theſe misfortunes were ſoon ſucceeded by a greater. Charles, who had retired to Oxford, began to find himſelf at the head of a turbulent army, who, from wanting pay,

pay, were ſcarcely ſubject to controul; while, on the other hand, the parliament army continued to be well ſupplied and paid, and held together from principle. The parliament, to ſet them an example of diſintereſtedneſs in their own conduct, paſſed an act, called the *ſelf-denying ordinance*. They reſolved, leſt it ſhould be ſuggeſted that their intent was to make themſelves maſters, that no member of their houſe ſhould have a command in the army. The former generals were therefore changed; the earls of Eſſex, Denbigh, and Mancheſter, gave up their commiſſions; while Fairfax was appointed general with Cromwell, who found means to keep at once his ſeat and his commiſſion.

Never was a more ſingular army aſſembled than that which now drew the ſword in the parliamentary cauſe. The officers exerciſed the function of chaplains; and, during the intervals of action, inſtructed their troops by ſermons, prayers, and exhortations. Rapturous extaſies ſupplied the place of cool reflection; and, while they kindled a freſh flame as they ſpoke, they aſcribed their zeal to a deſcent of the holy ſpirit from heaven. The private ſoldiers, ſeized with the ſame fanaticiſm, employed their vacant hours in prayer, in peruſing the holy ſcriptures, in ghoſtly conferences, &c. When marching to the field of battle, the hymn and the ejaculation mixed their notes with thoſe of the trumpet. An army, thus actuated, became invincible.

The well-diſputed battle, which decided the fate of Charles, was fought at Naſeby, a village in Yorkſhire, June 4, 1645. The main body of the royal army was commanded by lord Aſtley; prince Rupert led the right wing, ſir Marmaduke Langdale the left; and the king himſelf headed the body of reſerve. On the oppoſite ſide, Fairfax and Skippon commanded the main body; Cromwell led on the right wing, and Ireton, his ſon-in-law, the left. Prince Rupert attacked the left wing with his uſual impetuoſity and ſucceſs: they were broken and purſued as far as the village; but he loſt time in attempting to make himſelf maſter of their artillery. Cromwell, in the mean time, was equally ſucceſsful on his ſide, and broke through the enemies' horſe, after a very obſtinate reſiſtance. While theſe intrepid movements were made on the wings, the main body on both ſides ſupported the conflict with equal ardour; and, in ſpite of the efforts of Fairfax and Skippon, their battalions began to give way. But it was now that Cromwell returned with his victorious forces, and charged the king's infantry in flank with ſuch vigour, that a total rout began to enſue. By this time prince Rupert had rejoined the king and the ſmall body of reſerve; but his troops, though victorious, could not be brought to a ſecond charge. They were at all times licentious and ungovernable; but they were now intimidated; for the parliament forces, having recovered from the firſt ſhock, ſtood collected in order of battle to receive them. The king was deſirous of making a charge in perſon at the head of his reſerve, which would have given new courage to his troops, and perhaps won the day; but the earl of Carnwarth, who rode by his majeſty's ſide, ſeizing the bridle of his horſe, turned him round, ſaying, with a loud oath, "Will you go upon your death in an inſtant?" The troops, ſeeing this motion, wheeled to the right, and rode off in ſuch confuſion, that they could not be rallied again during the reſt of the day. The king, thus perceiving the battle loſt, was obliged to abandon the field to his enemies, who took all his cannon, baggage, and above five thouſand priſoners.

This fatal blow the king never recovered; his army was diſperſed, and the conquerors made as many captives as they thought proper. Among the other ſpoils taken on this occaſion, the king's cabinet of letters was ſeized, in which was contained all his private correſpondence with the queen. Theſe were ſhortly after publiſhed by command of the parliament, who took a brutal pleaſure in ridiculing thoſe tender effuſions of confidential regard which were unfitted to meet the public eye.

The battle of Naſeby put the parliament in poſſeſſion of almoſt all the ſtrong cities of the kingdom, Briſtol, Bridgewater, Cheſter, Sherborn, and Bath. Exeter was beſieged; and all the king's troops in the weſtern counties being entirely diſperſed, Fairfax preſſed the place, and it ſurrendered at diſcretion. The king's intereſts now went to ruin on every quarter. The Scottiſh army, having made themſelves maſters of Carliſle, marched ſouth, and laid ſiege to Hereford. Another engagement followed between the king's troops and the parliament army, in which his forces were put to the rout by Colonel Jones, a thouſand of his men made priſoners, and five hundred ſlain. Thus haraſſed on every ſide, the oppreſſed king retreated to Oxford, which in all conditions of his fortune held ſteady to his cauſe; and there he reſolved to offer new terms to his relentleſs purſuers. Nothing could be more affecting than the king's diſtreſſed ſituation in that city. Saddened by his late melancholy diſaſters; impreſſed with the apprehenſions of the fate which hung over him; haraſſed by the murmurs of thoſe who had followed his cauſe, and ſtung with his incapacity to relieve them; he was now willing to grant the parliament their own terms, and at any rate to procure a reconciliation. He therefore ſent repeated meſſages to this purpoſe; but they never deigned to make him the leaſt reply. At laſt, after reproaching him with the blood ſpilt during the war, they told him that they were preparing ſome bills, to which if he would conſent, they ſhould be able to judge of his pacific inclinations.

In the mean time Fairfax, with a powerful army, was marching to lay ſiege to Oxford. To be taken captive, and led in triumph by his inſolent ſubjects, was what Charles dreaded and abhorred. In this deſperate extremity, he embraced a meaſure which, in any other ſituation, might juſtly lie under the imputation of the higheſt imprudence and indiſcretion. He reſolved to give himſelf up to the Scots' army, and truſt to their loyalty for protection. That he might the better conceal his deſign from the people of Oxford, orders were given at every gate of the city for allowing three perſons to paſs. In the night, the king, accompanied by doctor Hudſon and Mr. Aſhburnham, took the road towards London, travelling as Aſhburnham's ſervant. He, in fact, came ſo near London, that he once entertained thoughts of entering that city, and of throwing himſelf on the mercy of the parliament. At laſt, after paſſing through many croſs-roads and by-ways, he arrived at the Scots' camp before Newark, Jan. 30, 1646, and diſcovered himſelf to lord Leven, the Scottiſh general.

The Scots, though ſaid to have given the king ſome general aſſurances of fidelity and protection, ſeemed greatly ſurpriſed at his arrival. Inſtead of beſtowing a thought on his intereſts, they inſtantly entered into a conſultation upon their own. The commiſſioners of their army ſent to the parliament an immediate account of the king's ſurrender; and declared that his coming among them was altogether uninvited and unexpected. In the mean time, they prevailed upon the king to give directions for ſurrendering all his garriſons to the parliament, with which he complied. In return for this condeſcenſion, they treated him in a manner very different from reſpect. The Scots had, from their firſt entrance into England, been allowed pay by the parliament, in order to prevent their plundering the country; much of this, however, remained unpaid, from the unavoidable neceſſities of the times; and much more was claimed by the Scots than was really due. They therefore conſidered this as a favourable opportunity for inſiſting on their arrears; and they reſolved to make the king the inſtrument by which this money was to be obtained. After various debates between them and the parliament, it was ſtipulated, that upon payment of four hundred thouſand

pounds,

pounds, they would deliver up the king to his enemies. This ſpecies of barter may be palliated, but can never be defended upon any principle of rectitude, honour, or humanity. Like free-booters they divided the ſpoil; and the Scots returned home, laden with plunder, and the reproaches of all good men.

The king, being thus delivered over by the Scots to the parliamentary commiſſioners, was conducted to Holmby caſtle, in Northamptonſhire. They treated him in confinement with the moſt rigorous ſeverity, diſmiſſing all his ancient ſervants, debarring him from all viſits, and cutting off all communication with his friends and his family. The civil war was now over; the king had abſolved his followers from their allegiance, and the parliament had no enemy to fear, except thoſe very troops by which they had extended their overgrown authority. But in proportion as the terror of the king's power diminiſhed, the diviſion between the independents and the preſbyterians became more manifeſt. The majority in the houſe were of the preſbyterian ſect; but the majority of the army were independents. At the head of this ſect was Cromwell, who ſecretly directed its operations, and invigorated all its meaſures.

After the retreat of the Scots, the preſbyterian party, ſeeing things reduced to obedience, propoſed to diſmiſs a conſiderable part of the army, and ſend the reſt to Ireland. But the army were as unwilling to diſband, as to be led over into a country as yet uncivilized and barbarous. Cromwell alſo took care to inſpire them againſt both: they regarded him for his bravery and religious zeal, and ſtill more for his pretended affection towards them. Inſtead, therefore, of preparing to diſband, they reſolved to petition; and they began by deſiring an indemnity, ratified by the king's ſignature, for any illegal action which they might have committed during the war. This the commons treated with great ſeverity; they voted, that this petition tended to introduce mutiny, to put conditions upon the parliament, to obſtruct the relief of the kingdom of Ireland; and they threatened to proceed againſt the promoters of it as enemies to the ſtate, and diſturbers of the public peace.

The army now began to conſider themſelves as a body diſtinct from the parliament, and complained, that they had ſecured the general tranquillity, while they were to be deprived of the privileges of Engliſhmen. In oppoſition, therefore, to the parliament at Weſtminſter, a military parliament was formed, compoſed of the officers and common ſoldiers of each regiment. The principal officers formed a council to repreſent the body of peers; the ſoldiers elected two men out of each company to repreſent the houſe of commons; and theſe were called the *Agitators* of the army. Cromwell took care to be one of the number, and thus contrived an eaſy method of conducting and promoting the ſedition of the army. This fierce aſſembly, having debated for a ſhort time, declared that they had many grievances to be redreſſed; and began by ſpecifying ſuch as they wiſhed to be moſt ſpeedily removed. The ſame conduct which had formerly been uſed by the parliament againſt their ſovereign, was now put in practice by the army againſt the parliament. In proportion as the commons granted their requeſts, the agitators roſe in their demands; theſe accuſed the army of mutiny and ſedition; the army retorted the charge, and alleged, that the king had been depoſed only to make way for their uſurpations.

The wretched Charles, in the mean time, continued a priſoner at Holmby caſtle; and as his countenance might add ſome authority to that ſide which ſhould obtain it, Cromwell, who ſecretly conducted all the meaſures of the army, reſolved to ſeize the king's perſon. Accordingly a party of five hundred horſe appeared at Holmby caſtle, under the command of Joyce, who had been originally a tailor, but who, in the preſent confuſion of affairs, was advanced to the rank of cornet. Without any oppoſition, he entered the king's apartment, armed with piſtols, and told him he muſt prepare and go with him. "Whither?" ſaid the king. "To the army," replied Joice. "By what warrant?" aſked the king. Joice pointed to his followers. "Your warrant," replied Charles, "is wrote in fair characters." And without further delay, he went into his coach, and was ſafely conducted to the army, who were haſtening to their rendezvous at Triplo-heath, near Cambridge. The next day Cromwell arrived among them, where he was received with acclamations of joy, and inveſted with the ſupreme command.

It was now that the commons perceived a ſettled deſign in the army to preſcribe laws to the parliament; and they did not fail to ſpread the alarm through the city of London. But it was too late to reſiſt; the army, with Cromwell at their head, advanced with precipitation, and arrived in a few days at St. Alban's; ſo that the commons now began to think of temporiſing. The declaration, by which they had voted the military petitioners enemies to the ſtate, was recalled, and eraſed from their journals. But all ſubmiſſion was vain; the army now claimed a right of modelling the whole government, and of ſettling the nation. But as too precipitate an aſſumption of authority might appear invidious, Cromwell began by accuſing eleven members of the houſe as guilty of high treaſon, and enemies to the army. The members accuſed were the leaders of the preſbyterian party, the very men who had preſcribed ſuch rigorous meaſures to the king, and who now, in turn, were threatened with ſimilar ſeverity. As they were the leading men in the houſe, the commons were reſolved to protect them; but the army inſiſting on their diſmiſſion, they voluntarily left the houſe, rather than breed contention.

At laſt the citizens of London began to open their eyes, and to perceive that the conſtitution was totally overturned. They ſaw an oppreſſive parliament now ſubjected to a more oppreſſive army; they found their religion aboliſhed, their king a captive, and no hopes of redreſs but from another ſcene of ſlaughter. In this exigency, therefore, the common-council aſſembled the militia of the city; the works were manned, and a manifeſto publiſhed, aggravating the hoſtile conduct of the army. Finding that the houſe of commons, in compliance with the requeſt of the army, had voted that the city militia ſhould be diſbanded, the multitude roſe, beſieged the door of the houſe, and obliged them to reverſe that vote which they had ſo lately paſſed. In this dilemma the houſe was rent into two parties; the one ſiding with the ſeditious citizens, while the other, with the two ſpeakers at their head, were for encouraging the army. In this confuſion a ſeparation of the parties took place: the two ſpeakers, with ſixty-two members, ſecretly retired from the houſe, and threw themſelves on the protection of the army, then encamped on Hounſlow-heath. They were received with ſhouts and acclamations; their integrity was extolled; and the whole body of the ſoldiery, a formidable force of twenty thouſand men, now moved forward, to re-inſtate them in their former ſeats and ſtations.

In the mean time, that part of the houſe that was left ſitting, reſolved to act with vigour, and reſiſt the encroachments of the army. They choſe new ſpeakers; they gave orders for enliſting troops; they ordered the train-bands to man the lines; and the whole city boldly reſolved to reſiſt the invaſion. But this reſolution only held while the enemy was thought at a diſtance; for when the formidable force of Cromwell came in ſight, all was obedience and ſubmiſſion; the gates were opened to the general, who attended the two ſpeakers, and the reſt of the members, peaceably to their habitations. The eleven impeached members being expelled, retired to the continent. The mayor, ſheriff, and three aldermen, were ſent to the Tower; ſeveral citizens, and officers of militia,

litia, were committed to priſon, and the lines about the city were razed to the ground.

It now only remained to diſpoſe of the king, who had been ſent by the army a priſoner to Hampton-court. The independent army, at the head of whom was Cromwell, and the preſbyterians, in the name of the parliament, began ſeparate treaties with him in private. He had at one time well-founded hopes, that, in theſe ſtruggles for power, he might have been choſen mediator in the diſpute; and he expected that the kingdom, at laſt ſenſible of the miſeries of anarchy, would, like a froward child, ſettle into its former tranquil conſtitution. But theſe flattering expectations too ſoon ſubſided. As the army had gained a complete victory over the houſe of commons, the independents began to abate of their expreſſions of duty and reſpect. The king, therefore, was now more ſtrictly guarded, and ſpies were placed about his perſon, to mark all his words and actions. Charles, alarmed for his ſafety, determined to make his eſcape. Early in the evening he retired to his chamber, on pretence of being indiſpoſed; and about an hour after midnight, he went down the back-ſtairs, attended by Aſhburnham and Legge, both gentlemen of his bed-chamber. Sir John Berkeley waited for him at the garden-gate with horſes, which they inſtantly mounted, and, travelling all night, arrived at Tichfield, in Hampſhire, the ſeat of the earl of Southampton. Here he deliberated with his friends, upon his next excurſion, and they adviſed him to croſs over to the Iſle of Wight, where Hammond was governor; who, though a creature of Cromwell's, was yet a nephew of Dr. Hammond, the king's chaplain. To this inauſpicious protector it was reſolved to have recourſe; Aſhburnham and Berkeley were ſent before to exact a promiſe from the governor, that if he would not protect the king, he would not detain him. Hammond ſeemed ſurpriſed at their demand; expreſſed his inclination to ſerve his majeſty, but at the ſame time alleged his duty to his employers. He therefore attended the king's gentlemen to Tichfield, with a guard of ſoldiers, and ſtaid in a lower apartment, while Aſhburnham went up to the king's chamber. Charles no ſooner underſtood that Hammond was in the houſe with a body of troops, than he exclaimed, "O Jack! thou haſt undone me!" Aſhburnham ſhed a flood of tears, and offered to go down and diſpatch the governor, but the king repreſſed his ardour. When Hammond came into his preſence, he repeated his profeſſions of cool regard. The king ſubmitted to his fate; and, without further delay, attended him to Cariſbrook caſtle, in the Iſle of Wight, where for ſome time he found himſelf treated with marks of duty and reſpect.

While the king continued in this inſulated ſituation, the parliament, new modelled as it was by the army, was every day growing more feeble and factious. Cromwell, on the other hand, was ſtrengthening the army, and taking every precaution to mould it to his views, and to have it in momentary readineſs to ſupport his meaſures.

Among the independents, who were for having no eccleſiaſtical ſubordination, a ſet of men ſprung up, called *Levellers*, who diſallowed all ſubordination whatſoever, and declared that they would have no other chaplain, king, or general, but Chriſt himſelf. They declared that all men were equal; that all degrees and ranks ſhould be levelled, and an exact partition of property eſtabliſhed through the nation. This ferment even reached the army; and as it was a doctrine well ſuited to the poverty of the ſoldiers, it promiſed every day to become more dangerous and fatal.

Cromwell now ſaw that he was upon the point of loſing the fruits of all his former ſchemes and dangers, and began to dread this new faction the more, as they turned his puritanical principles againſt himſelf. Thus finding all at ſtake, he determined, by one reſolute blow, either to diſperſe the faction, or periſh in the attempt. Having intimation that the levellers were to meet at a certain place, he unexpectedly appeared in the aſſembly, at the head of his red regiment, which had been hitherto called invincible. He demanded, in the name of God, what theſe meetings and murmurings meant; he expoſtulated with them upon the dangerous conſequences of their precipitate ſchemes, and deſired them peaceably to depart. But inſtead of obeying, they returned an inſolent anſwer; wherefore, ruſhing on them in a violent fury, he laid, with his own hands, two of them dead at his feet. His guards, ſeizing and diſperſing the reſt, he cauſed ſeveral of them to be hanged upon the ſpot; and thus diſſipated a faction, no otherwiſe criminal, than having, in part, followed his own example.

This event ſerved ſtill more to increaſe the power of Cromwell in the camp and in the parliament; and while Fairfax was nominally general of the troops, he was inveſted with all the power. But his authority ſoon became irreſiſtible, in conſequence of a new and unexpected addition to his ſucceſſes. The Scots, perhaps, aſhamed of the reproach of having, like Judas, ſold their king, and ſtimulated further by the independents, who took occaſion to mortify them, raiſed an army in his favour, and the chief command was given to the duke of Hamilton; while Langdale, who profeſſed himſelf at the head of the more bigoted party, and had taken the covenant, marched at the head of his ſeparate body, to invade the north of England. Their two armies amounted to about twenty thouſand men. But Cromwell, at the head of only eight thouſand of his well-trained veterans, feared not to give them battle; he attacked the Scottiſh armies one after the other, routed and diſperſed them, took Hamilton priſoner, and, following his blow, entered Scotland, where he ſettled the government entirely to his ſatisfaction. Meanwhile an inſurrection in Kent was quelled by Fairfax with the ſame eaſe; and ſucceſs every where attended this uſurper's arms.

During theſe ſanguinary contentions, the king, who was kept a priſoner in Cariſbrook caſtle, continued to negociate with the parliament for ſettling the unſpeakable calamities of the nation. The parliament ſaw no other method of deſtroying military power, but to depreſs it by the reſtoration of the king. Frequent propoſals for an accommodation paſſed between the captive king and the commons; but the great obſtacle which had all along ſtood in the way, ſtill kept them apart. This was the king's refuſing to aboliſh epiſcopacy, though he conſented to deſtroy the liturgy of the church. However, the treaty went on with vigour, as the parliament had more to apprehend from the deſigns of their generals, than from the attempts of the king; and, for the firſt time, they were now in earneſt to conclude their negociations. But it was too late; the implacable army was returned from the deſtruction of their enemies in the north; and, with intemperate zeal, demanded vengeance on the king. They advanced to Windſor; and ſending an officer to ſeize the king's perſon, they conveyed him to Hurſt caſtle, near Lymington, in Hampſhire. It was in vain that the parliament complained of this harſh proceeding; it was in vain that they began to iſſue ordinances to reſtrain the army; they received a peremptory meſſage from Cromwell, that he intended paying them a viſit the next day, and, in the mean time, ordered them to raiſe him forty thouſand pounds, by a tax upon the city of London.

The commons, however, though deſtitute of power, had ſtill courage to reſiſt, and attempted, in the face of the whole army, to cloſe their treaty with the king. They had taken into conſideration the whole of the royal conceſſions; and though they had formerly voted them unſatisfactory, they now regarded them in a different point of view. After a debate, which had laſted three days, it was carried in the king's favour by a majority of a hundred and twenty-nine againſt eighty-three, that his majeſty's conceſſions were a foundation for parliament to proceed upon, in the ſettlement of the king's affairs. This was the laſt ſtruggle for the preſervation of the king; for the next day colonel Pride, at the head of two regi-

regiments, blockaded the houſe, and ſeized forty-one members of the preſbyterian party. Above a hundred and ſixty members more were excluded; and none were allowed to enter but the moſt furious and determined of the independents, in all not exceeding ſixty. This atrocious invaſion of the parliamentry rights, commonly paſſed by the name of Pride's purge, and the remaining members were called the Rump. Theſe ſoon voted, that the tranſactions of the houſe a few days before were entirely illegal, and that the conduct of the army was juſt and neceſſary.

Nothing now remained, after the conſtitution had been deſtroyed, after the parliament had been ejected, after the religion of the country had been aboliſhed, after the braveſt and the beſt of its ſubjects had been ſlain, but to murder the king! This vile parliament, if it could deſerve the name, was compoſed of a medley of the moſt obſcure citizens, mixed with the officers of the army. In this aſſembly, a committee was appointed to prepare a charge againſt the king; and, on their report, a vote paſſed, declaring it treaſon in a king to levy war againſt his parliament. It was therefore reſolved that an high court of juſtice ſhould be appointed to try his majeſty for this new-fangled treaſon. For form ſake, they deſired the concurrence of the few remaining lords in the other houſe; but they had virtue enough to reject the propoſal. This, however, was no obſtacle; the commons voted that the concurrence of the lords was unneceſſary, as the people were the origin of all juſt power.

Colonel Harriſon, the ſon of a butcher, was commanded to conduct the king from Hurſt-caſtle to Windſor, and from thence to London. From the ſixth to the twentieth of January, A. D. 1649, was ſpent in making preparations for this extraordinary trial. The court, which ſat in Weſtminſter-hall, conſiſted of a hundred and thirty-three perſons named by the commons; but of theſe never more than ſeventy attended. They were chiefly compoſed of officers of the army, ſome members of the lower houſe, and a few citizens of London. Bradſhaw, a lawyer, was choſen preſident; Coke was appointed ſolicitor for the people of England; Doriſlaus, Steele, and Aſke, were named aſſiſtants. The king was now removed from Windſor to St. James's, and the next day was brought before this ſelf-created court. He was conducted by the mace-bearer to a chair placed within the bar. Though long haraſſed as a priſoner, and now produced as a criminal, Charles ſtill maintained the dignity of a king; he ſurveyed the members of the court with an intrepid air; and, without moving his hat, ſat down, while the members alſo were covered. His charge was then read by the ſolicitor, accuſing him of having been the cauſe of all the bloodſhed which followed ſince the commencement of the war; at that part of the charge he could not ſuppreſs a ſmile of contempt and indignation. After the charge was finiſhed, Bradſhaw directed his diſcourſe to the king, and told him that the court expected to hear his defence.

The king, with great propriety, pointed out the illegality of the court, as unfounded, and unknown to the juriſprudence of England, or to any ſyſtem of laws, human or divine. He repreſented, that having been engaged in a treaty with his two houſes of parliament, and having finiſhed almoſt every article, he expected a very different treatment from that which he now experienced. He perceived, he ſaid, no appearance of an upper houſe, which was neceſſary to conſtitute a juſt tribunal, even for inferior objects. That he was himſelf the king, and the fountain of the law, and conſequently could not be tried by any formula to which he had never given his aſſent; that having been intruſted with the liberties of the people, he would not now betray them, by recogniſing a power founded in uſurpation; that he was willing before a proper tribunal to enter into the particulars of his defence; but that before them he muſt decline any apology for his innocence, leſt he ſhould be conſidered as a betrayer of, and not a martyr for, the conſtitution.

Bradſhaw, to give ſome colour to the authority of their juriſdiction, inſiſted that their power was derived from the people, the ſource of all right. He therefore conjured the king not to call in queſtion the legality of the court, leſt it ſhould conſtitute an additional charge againſt him. In this manner was the king three times produced before the court, and as often perſiſted in denying its authority. The fourth and laſt time of his being conducted to this ſelf-created tribunal, he was inſulted by the ſoldiers and the mob, who were inſtructed to exclaim, "Juſtice! juſtice! execution! execution!" but the king continued undaunted. His judges having now examined ſome witneſſes, by whom it was proved that the king had appeared in arms againſt the forces commiſſioned by parliament, they pronounced ſentence of death againſt him. He ſeemed very anxious at this time to be admitted to a conference with the two houſes; and it was ſuppoſed that he intended to reſign the crown to his ſon; but the court refuſed compliance, and called his requeſt an artifice to ſubvert the operation of juſtice.

The conduct of the king under all theſe bitter perſecutions, was truly magnanimous and collected. On his return to Whitehall, he deſired the permiſſion of the houſe to ſee his children, and to be attended in his private devotions by Dr. Juxon, late biſhop of London. Theſe requeſts were granted, and alſo three days to prepare for his decapitation. All that remained of his family now in England, were the princeſs Elizabeth, and the duke of Glouceſter, a child about three years old; between whom and the condemned king a moſt tender and affecting ſcene took place. Every night, during the ſhort interval between his ſentence and execution, the noiſe of the workmen employed in framing the ſcaffold, continually reſounded in his ears. The fatal morning being arrived, he roſe early, and calling his attendants, he bade them employ more than uſual care in dreſſing him for ſo great a ſolemnity. The ſpot facing Whitehall was the place deſtined for his execution, with a view to increaſe the poignancy of his ſufferings. He was led through the banqueting-houſe to the ſcaffold adjoining to that edifice, attended by biſhop Juxon, a man endowed with the ſame mild and ſteady virtues with his royal maſter. The ſcaffold, which was covered with black, was guarded by ſoldiers, under the command of colonel Tomlinſon, and on it ſtood two executioners in maſks. The concourſe of people was immenſe. The king ſurveyed the ſolemn preparations with calm compoſure; and, as he could not expect to be heard by ſo numerous an audience, who were alſo kept at a diſtance, he addreſſed himſelf to the few perſons who ſtood round him. He there juſtified his innocence with reſpect to the late ſanguinary wars; and obſerved, that he had not taken arms till after the parliament had ſet the example; that he had no other object in his warlike preparations, than to preſerve that authority entire, which had been tranſmitted to him by his anceſtors, and firſt violated by his perſecutors; but, though innocent of any crime towards his people, he acknowledged the equity of his execution in the eyes of his Maker. He owned that he was juſtly puniſhed for having conſented to the execution of the innocent earl of Strafford. He forgave all his enemies, exhorted the parliament to return to their obedience, and acknowledge his ſon as his ſucceſſor; and ſignified his attachment to the proteſtant religion, as profeſſed in the church of England. So ſtrong was the impreſſion his dying words made upon the few who heard him, that colonel Tomlinſon himſelf, to whoſe care he had been committed, acknowledged himſelf ſatisfied of his innocence.

Charles, having taken off his cloak, delivered his George to biſhop Juxon, pronouncing the word, *Remember*. Then he laid his neck on the block, and ſtretching out his hand as a ſignal, one of the executioners ſevered his head from his body at a blow, while the other, holding it up, exclaimed, "This is the head of a traitor!" The ſpectators teſtified their horror and indignation in ſighs, tears, and execrations; the tide of duty and affection began

gan to return, and each accuſed himſelf of ſhameful diſloyalty to his king, or a paſſive compliance with the malice of his deſtroyers. The very pulpits, that before reſounded with inſolence and ſedition, were now bedewed with tears of repentance; and all united in their deteſtation of thoſe diabolical hypocrites, who, to gratify their ambition and malevolence, had involved the parliament in the guilt of treaſon.

As the ſpirit of party ran ſo high during this reign, it is difficult to arrive at a preciſe knowledge of all the occurrences which led to ſo important a cataſtrophe as the overthrow and execution of the ſovereign; almoſt every narrative receives a colour from the prejudices of the writer; and the judicious reader muſt be careful not to give implicit credit either to the ſtudied and excluſive panegyric of Hume, or to the violent repreſentations of Macauley. In whatever point of view we contemplate the fate of Charles, his delinquency was far from being of that magnitude which could juſtify the ſeverity exerciſed againſt him; and, if he had been guilty of the moſt nefarious acts of oppreſſion and cruelty, no authority leſs than the ſupreme will of the nation, ſignified by a free and full convention, could juſtly have proceeded to his trial. That rule, however, was not adopted in the proceedings againſt this injured prince; and, if his fate had been committed to the deciſion of ſuch a council, he would have been reſtored to the throne on certain limitations, not have been brought to the block. Even of that imperfect parliamentary aſſembly which, after his adherents had been driven from the legiſlature, proſecuted the war againſt him with ſuch acrimony, a majority voted his conceſſions to be ſufficient grounds for a reconciliation with him: how great, then, would have been the appearance in favour of his reſtoration, had the two houſes remained on a conſtitutional baſis! But the leaders of the independents, finding it impracticable to obtain the national concurrence in their bloody ſchemes, reſolved to content themſelves with the ſanction of their own partiſans, and of a mercenary army, a ſmall and contemptible part of the nation. They therefore reduced the lower houſe, by the terrors of the ſword, to a very diminutive proportion; treated the peers as mere ciphers, who had no right to interfere in the government; and thus, by the moſt iniquitous uſurpation, aſſumed the whole power of the ſtate. A court of judicature, erected by thoſe who had no ſhadow of right by which they could juſtify their proceedings, would have acted in defiance of all law and juſtice, by preſuming to arraign and condemn the meaneſt individual; and ſuch unwarrantable judgment cannot fairly be deemed, even by the moſt zealous enemies of the monarchy, leſs criminal, when applied to a ſovereign. Hence it muſt be allowed, even by ſuch as are of opinion that Charles deſerved exemplary puniſhment, that his death was, in fact, a murder; being decreed and enforced by thoſe who had no authority for the act, and who, in the whole proceeding, groſsly ſhocked the public feelings, and teſtified a contemptuous diſregard of the general ſentiments of the people, in each of thoſe three kingdoms which had an equal intereſt in the fate of this oppreſſed monarch. His death, therefore, was not, as ſome have termed it, a national crime; for the turpitude and diſgrace of it reſt only on the memories of thoſe ambitious traitors and crafty incendiaries, who compoſed the majority of the independent faction. On a temperate view of all the moſt prominent tranſactions leading to this fatal event, the preceding concluſions appear to be founded in truth and reaſon: and we flatter ourſelves that every penetrating and candid reader will be diſpoſed to chuſe the middle courſe, avoiding, on either hand, the ſhoals of exceſſive partiality, and of panygeric, the common infirmity of our nature.

Charles was executed, January 30, 1649, in the forty-ninth year of his age, and the twenty-fourth of his reign; and his remains were interred at Windſor. He was of middling ſtature, robuſt, and well-proportioned. His viſage was pleaſing, but inclined to melancholy; and it is probable that the unceaſing troubles in which he was involved, might have given that turn to his countenance. The accompliſhments which this monarch poſſeſſed were numerous and reſpectable. He had a competent acquaintance with the belles lettres; was converſant in many of the ſciences; was a good judge of the polite arts; was far from being deficient in the knowledge of the principal mechanic arts; excelled in argument and diſputation; had a talent for literary compoſition; and, in ſhort, was qualified, by his abilities and attainments, to adorn and ennoble ſociety. His taſte for poetry has been noticed by ſome of his biographers; and if the *Icon Baſilike* was his own production, his talent for proſe-writing was far beyond mediocrity. His private virtues, likewiſe, were eminently conſpicuous. He was chaſte, temperate, economical, devout, mild, friendly, modeſt, and humane. With reſpect to his ſincerity and honour, ſtrong doubts have ariſen. His enemies have repreſented him as one in whoſe moſt ſolemn engagements no confidence could be placed: but this cenſure is palpably overcharged, though we have ſufficient grounds for affirming that he did not always ſcrupulouſly adhere to the dictates of good faith. Had he moved in a private ſphere, he would probably, from his general regularity and ſtrictneſs of deportment, have been diſtinguiſhed by an adherence to his promiſes and declarations; but his monarchial prejudices ſometimes perverted the integrity of his nature; and he ſeemed to think that the rules of policy, and the oppoſition which he met with from his parliamentary ſubjects, furniſhed ſome excuſe for his occaſional violation of his profeſſions and agreements. Theſe, however, are not the ſentiments of a man of unblemiſhed honour; and, as his repeated infractions of the petition of right, which he had ſo ſolemnly confirmed, are ſufficient proofs of the aſſertion, without the mention of other caſes which might be adduced, an eaſy refutation may be given to a remark of one of the panegyriſts of Charles, importing, that, for reproaching this prince with a diſregard of good faith, "the moſt malignant ſcrutiny of his conduct affords not any reaſonable foundation."

His political maxims were too favourable to the ideas of thoſe romantic and ſuperſtitious notions of the royal prerogative, which his father was ſo fond of inculcating, and which were not only abſurd in themſelves, but were particularly diſguſting to that bold and liberal ſpirit which animated a great part of the nation at the time of his acceſſion. Finding that the principles of liberty were ſo ſtrongly prevalent, he would, if his ſagacity and prudence had been unallayed by prejudice, have ſtudiouſly avoided all encroachments on the privileges of his ſubjects; and, by thus entrenching himſelf within the boundaries of lawful prerogative, he would have had a better opportunity of repreſſing the licentiouſneſs of the advocates of freedom, than by indulging himſelf in thoſe exertions of power which inflamed the indignation of the public, and ſtimulated the demagogues to a wider range of deſign, and a greater boldneſs of enterprize. But, being confirmed in his high monarchial notions, by the inſinuations of ambitious ſtateſmen and eccleſiaſtic adulators, and, perhaps, by the ſuggeſtions of a catholic queen, to whoſe counſels he was too obſequious, he neglected the rules of diſcretion; and, by incautious meaſures, opened the way to thoſe popular commotions which produced an inteſtine war, and terminated in the deſtruction of his own perſon, and the ſubverſion of the monarchy. In the adoption of political meaſures, he was, ſometimes, timid and indeciſive; at other times, by the prevalence of importunate advice, he was eager and precipitate. When he had given way to a raſh ſtep, he was quickly deſirous of retracting it; and, even where he had not deviated into a haſty imprudence, but had reſolved on meaſures in which ſpirit was requiſite, he had not a ſufficient degree

of firmneſs and vigour to prevent him from yielding to the pertinacity of faction, or the clamours of the multitude. He was alſo deficient in that inſinuating addreſs and conciliating deportment which might have been uſefully employed in ſoothing the rage of party, and in allaying the ardour of popular zeal.

King Charles had by his queen Henrietta ſix children: Charles, born the 29th of May, 1630, who ſucceeded him on the throne; James, born Oct. 13, 1633, who ſucceeded his brother; Henry duke of Glouceſter, who died in 1660; Mary, married to William II. prince of Orange, died in 1660; (her ſon became William III. king of England); Elizabeth died, in 1650; and Henrietta, married to Philip duke of Orleans, died in 1670.

That interregnum, in the Engliſh hiſtory called the COMMONWEALTH, now followed, A. D. 1649.—Cromwell, who had ſecretly ſolicited and undoubtedly contrived the king's death, began to feel ſenſations to which he had been hitherto a ſtranger. His proſpects widening as he roſe, his firſt principles of liberty were loſt in the unbounded expanſe of power that lay before him. When the peers met on the day appointed in their adjournment, they entered cautiouſly upon buſineſs, and ſent down ſome votes to the commons, but of which they deigned not to take the ſmalleſt notice. In a few days after, the commons, determined to be ſupreme, voted that the houſe of lords was uſeleſs and dangerous, and therefore was, from that time, aboliſhed. They voted it high treaſon to acknowledge Charles Stewart, ſon of the late king, as ſucceſſor to the throne. A great ſeal was made, on one ſide of which were engraven the arms of England and Ireland, with this inſcription: "The great ſeal of England." On the reverſe was repreſented the houſe of commons ſitting, with this motto: "On the firſt year of freedom, by God's bleſſing reſtored, 1648." The forms of all public documents were changed from the king's name to that of the keepers of the liberties of England. The next day they alſo proceeded to try thoſe gallant men, whoſe attachment to their ſovereign had been unſhaken. The duke of Hamilton and lord Capel were condemned and executed; the earl of Holland loſt his life by a like ſentence; the earl of Norwich and ſir John Owen were condemned, but afterwards pardoned by the commons.

The Scots, who in the beginning had ſhewn themſelves ſo inimical to the royal family, now determined to acknowledge prince Charles for their king. But at the ſame time that they reſolved upon raiſing him to the throne, they abridged his power, and propoſed a teſt, which his father had refuſed. Charles, however, finding no proſpect of aſſiſtance from any other quarter, was glad to accept of theſe conditions. It is remarkable, that while the Scots were thus inviting the young king over, they were cruelly puniſhing thoſe who had adhered to his father. Among others, the earl of Montroſe, one of the braveſt, and moſt benevolent characters of that age, was tried as an adherent to the royal cauſe, and hanged on a gibbet thirty feet high, then quartered, and expoſed in the principal towns. Yet prince Charles ventured into Scotland, and had the mortification to enter the gate of Edinburgh, while the limbs of that faithful adherent to his family hung over his head. Being now entirely at the mercy of theſe auſtere zealots, he ſoon found out that he had exchanged exile for impriſonment. He was ſurrounded and inceſſantly importuned by the fanatical clergy, who having brought loyalty under their feet, were reſolved to make it ſtill ſubſervient to their future proſpects. Charles for a while pretended to be highly edified by their inſtructions; but anxiouſly watched an opportunity of making his eſcape.

In the mean time Cromwell, who had got himſelf appointed to the chief command in Ireland, proſecuted the war with his uſual ſucceſs. He had to combat the royaliſts, commanded by the duke of Ormond, and the native Iriſh, led on by O'Neal. On his arrival at Dublin, he haſtened to Drogheda, where Ormond had planted a ſtrong garriſon; but inſtead of forming a languid ſiege, and knowing the importance of diſpatch, he aſſaulted and took the town ſword in hand, and made a cruel ſlaughter of the garriſon. Cromwell, by this ſeverity, pretended to retaliate the inhumanity of the Iriſh maſſacre; and certainly his barbarous policy had the deſired effect. Every town before which he preſented himſelf, now opened its gates; and the Engliſh had nothing to fear, except from fatigue, and the advanced ſeaſon. Fluxes and contagious diſorders carried off numbers of them; and had not the Engliſh garriſons of Cork, Kinſale, and other important places, deſerted to him, he would have found it difficult to maintain his ground. The ſucceſs of Cromwell, however, put an end to Ormond's authority: he left the iſland, and delegated his power to earl Clanricarde, who found affairs too deſperate to admit of any remedy. Above forty thouſand Iriſh paſſed into foreign ſervice, and left the Engliſh general at liberty to complete his conqueſt.

Meanwhile Charles, being informed that the Scottiſh parliament had, A. D. 1650, reſolved to proclaim him king, was prevailed on, though reluctantly, to ſubmit to the hard conditions on which he was to receive the crown. He ſoon found himſelf conſidered as a pageant of ſtate; and as his facility in yielding to their demands gave ſome doubts of his ſincerity, it was propoſed that he ſhould paſs through a public humiliation, inſtead of being crowned as he expected. From this diſgrace, Charles was now ſaved by the advance of the Engliſh army under Cromwell, who having left Ireton in Ireland, had been inveſted with the principal command in Scotland, which Fairfax had declined from motives of religious feeling.

The Scots, in the mean time, had given the command of their army to general Leſlie, who had formed a proper plan for its defence. This prudent commander knew, that though ſuperior in numbers, his army was much inferior in diſcipline to the Engliſh; and he therefore kept cloſe within his entrenchments. After ſome uſeleſs movements, Cromwell began to ſee the deep generalſhip of Leſlie; and while he had choſen a diſadvantageous poſt near Dunbar, his antagoniſt was waiting deliberately to take advantage of his ſituation. But the zeal and fanaticiſm of the Scottiſh clergy, who conſtantly attended their army, urged Leſlie to march from his entrenchments to give the Engliſh battle, when the intrepid Cromwell obtained a deciſive victory. Prince Charles now put himſelf at the head of the remnant of the Scottiſh army, which he ſtrengthened by the royaliſts, who had determined to ſupport his cauſe. Cromwell, however, ſtill followed his blow, puſhed the royaliſts towards Perth, and, cutting off the proviſion of the Scottiſh army, made it impoſſible for Charles to maintain his ground in that country any longer.

In this exigency Charles embraced a reſolution worthy a prince who was willing to hazard all on the point of the ſword. Obſerving that the way was open to England, he reſolved immediately to march into that country, where he expected to be reinforced by all the royaliſts on that ſide of the kingdom. His generals were perſuaded to enter into the ſame views; and with one conſent the Scottiſh army, to the number of fourteen thouſand men, entered the frontiers, and made their way to the city of Worceſter. Here Cromwell overtook them with haſty ſtrides, ſupported by an army of forty thouſand men. He aſſailed the town in every direction, the ſtreets were filled with ſlaughter, the whole Scottiſh army were either killed or taken priſoners, and Charles himſelf, having given many proofs of perſonal valour, with difficulty made his eſcape.

Imagination can ſcarcely conceive adventures more romantic, or diſtreſſes more ſevere, than thoſe which followed the young prince's fortunes after the ſcene of ſlaughter. His hair was cut off, the better to diſguiſe his perſon; and he worked for ſome days in the habit of a peaſant, cutting faggots in a wood. He next made an attempt to retire into Wales, under the conduct of Pendrel,

drel, a poor farmer, who was ſincerely attached to his cauſe. In this attempt, however, he was diſappointed, every paſs being vigilantly guarded to prevent his eſcape. Being obliged to return, he accidentally met with colonel Careleſs, who, like himſelf, had eſcaped the carnage at Worceſter; and in his company he climbed the ſpreading oak at Boſcobel in Shropſhire, among the thick branches of which they paſſed the day together, while they perceived the ſoldiers of the enemy in purſuit of them below. From thence he paſſed, with imminent danger, under all the extremities of famine, fatigue, and pain, till he arrived at the houſe of colonel Lane, a zealous royaliſt in Staffordſhire. There he deliberated about the means of eſcaping into France; and Briſtol being ſuppoſed the propereſt port, it was agreed that he ſhould ride thither, before this gentleman's ſiſter, on a viſit to Mrs. Norton, who lived in the neighbourhood of that city. During this journey he every day met with faces he knew; and at one time paſſed through a whole regiment of Cromwell's army.

When they arrived at Briſtol, no ſhip being found that would for a month ſet ſail, either for France or Spain, the king was obliged to ſeek elſewhere for a paſſage. He therefore repaired to the houſe of colonel Wyndham, in Dorſetſhire, where he was cordially received. Purſuing from thence his journey to the ſea-ſide, he once more had a very providential eſcape from a little inn, where he had meant to ſtay the night. At length he reached Shoreham in Suſſex, where a veſſel was at laſt found, in which he embarked. He was known to ſo many perſons, that if he had not ſet ſail in that critical moment, it had been impoſſible for him to eſcape. After one and forty days' concealment, he arrived ſafely at Feſchamp in Normandy. No leſs than forty men and women had, at different times, been aſſiſtants to his eſcape.

In the mean time, Cromwell returned in triumph to London, where he was met by the ſpeaker of the houſe, accompanied by the lord mayor of London, and the magiſtrates, in all their formalities. An act was now paſſed for aboliſhing royalty in Scotland, and annexing that kingdom, as a conquered province, to the Engliſh commonwealth. It was impowered, however, to ſend ſome members to the Engliſh parliament. Judges were appointed over the different diſtricts; and the people of that country, now freed from the tyranny of the eccleſiaſtics, were not much diſſatisfied with their new government. The prudent conduct of general Monk, who was left by Cromwell to complete their ſubjugation, ſerved much to reconcile the minds of the people, haraſſed with diſſenſions, of which they never well underſtood the cauſe.

In this manner Cromwell eventually ſpread uncontrouled authority over all the Britiſh dominions. Ireland was ſubdued by Ireton and Ludlow. All the ſettlements in America, that had declared for the royal cauſe, were obliged to ſubmit; Jerſey, Guernſey, Scilly, and the iſle of Man, were brought under ſubjection. Thus mankind ſaw, with aſtoniſhment, a parliament, compoſed of ſixty or ſeventy obſcure and illiterate members, with Cromwell at their head, governing a powerful empire, with unanimity and ſucceſs.

The parliament, having thus reduced the Britiſh dominions to obedience, A. D. 1652, reſolved to chaſtiſe the Dutch, who had given them but a ſlight offence. It happened that doctor Doriſlaus, who was of the number of the late king's judges, being ſent by the parliament as their envoy to Holland, was aſſaſſinated by one of the royal party who had taken refuge there; and Mr. St. John, another ambaſſador to that court, was inſulted by the friends of the prince of Orange. Theſe were cauſes ſufficient to induce the commonwealth of England to declare war. The parliament's chief dependance lay in the activity and courage of admiral Blake, who ſurpaſſed all that went before him in courage and dexterity. The Dutch oppoſed to him their famous admiral, Van Tromp, to whom they have never ſince produced an equal. Many were the deſperate engagements between theſe celebrated admirals, and various were their ſucceſſes; the principal of which are recorded under BLAKE, vol. iii. p. 85. The Dutch, who felt great diſadvantages by the loſs of their trade, and by the total ſuſpenſion of their fiſheries, were ſoon anxious to treat for a peace.

In the mean time, the diſputes between the parliament and the army had ariſen to an alarming height. The army preſented a petition for the payment of arrears, and a redreſs of grievances; in which the officers admoniſhed the parliament to conſider how many years they had ſat, and what profeſſions they had formerly made of their intentions to new-model the houſe, and eſtabliſh freedom on a broader baſis. They alleged that it was now full time to give place to others; and, however meritorious their labours might have been, yet the reſt of the nation had ſome right in turn to ſhew their patriotiſm in the ſervice of their country. The houſe was highly offended at this preſumption of the army. They appointed a committee to prepare an act, declaring all perſons who ſhould preſent ſuch petitions in future, guilty of high treaſon. To this the officers made a ſpirited remonſtrance; and the parliament an angry reply; while the breach between them every moment grew wider. This was all under the deep management of Cromwell. He was ſitting in council with his officers, when informed of the violent debates in parliament concerning the army; upon which he roſe up in a ſeeming fury, and turning to major Vernon, cried out, "That he was compelled to do a thing which made the very hair of his head ſtand on end." Then haſtening to the houſe with three hundred ſoldiers, with the moſt indignant countenance he took his place; and, when the queſtion was about to be put, he ſuddenly ſtarted up, and branded the parliament with the vileſt reproaches for their tyranny, ambition, and oppreſſion of the public. Upon which, ſtamping with his foot, the ſignal for the ſoldiers to enter, the houſe was immediately filled with armed men. Then addreſſing himſelf to the members, "It is you (continued he) that have forced me upon this." Then pointing to the mace, "Take away (cried he) that bauble." After which, turning out all the members, and clearing the hall, he ordered the doors to be locked; and, putting the keys in his pocket, returned to Whitehall.

Thus, by one bold exertion, the new republic was aboliſhed, and the whole government, civil and military, centered in Cromwell only. The people, who were ſpectators in ſilent wonder of all theſe precipitate tranſactions, expreſſed no diſapprobation at the diſſolution of a parliament that had overturned the conſtitution, and deſtroyed the king. On the contrary, the uſurper received congratulatory addreſſes from the fleet, the corporations, and the army, for having diſmiſſed a parliament that had ſubjected the nation to the moſt cruel impoſitions. But Cromwell was too cautious to be ſeduced by their praiſe, or driven on by their exhortations. Unwilling to put forth all his power at once, he reſolved ſtill to amuſe the people with the form of a commonwealth, which it was the deluſion of the times to admire, and to give them a parliament that would be entirely ſubſervient to his own commands. For this purpoſe, conſulting with ſome of his principal officers, it was decreed, that the ſovereign power ſhould be veſted in one hundred and forty-four perſons, under the denomination of a parliament; and he undertook himſelf to make the choice.

The perſons choſen for exerciſing this important truſt, were the loweſt, meaneſt, and moſt ignorant, among the citizens, and the very dregs of the fanatics. He was well appriſed, that during the adminiſtration of ſuch a group, he alone muſt govern; or, that they muſt ſoon throw up the reins of a government, which they were unqualified to guide. Accordingly, their practice juſtified his expectations. To go further than others into the abſurdities of fanaticiſm was the chief qualification which each of theſe legiſlators valued himſelf upon. One of them

particularly, who was called "Praiſe God Barebone," a canting leather-ſeller, gave his name to this odd aſſembly, and it was called Barebone's parliament. To this hopeful aſſembly was committed the treaty of peace with the Dutch; but the ambaſſadors from that nation, though themſelves preſbyterians, were quite carnal minded to theſe. They were regarded by the new parliament as worldly men, intent on commerce and worldly gain, and therefore not to be treated with. They inſiſted that the man of ſin ſhould be put away, and a new birth obtained by prayer and meditation. The ambaſſadors, finding themſelves unable to converſe with them, gave up the treaty as hopeleſs. The moſt vulgar of the populace now began to exclaim againſt this mock legiſlature, and it was diſſolved.

The officers of the army now came forward, and declared Cromwell "*Protector of the Commonwealth of England.*" The lord mayor and aldermen of London were ſent for to give ſolemnity to his appointment; and he was inſtituted into this high office at Weſtminſter, in the fifty-third year of his age, Dec. 16, 1653; and was immediately put in poſſeſſion of Whitehall, the palace of the kings of England. A council was appointed, which was not to exceed twenty-one, nor to be under thirteen perſons. Theſe were to enjoy their offices for life, or during good behaviour; and, in caſe of a vacancy, the remaining members named three, of whom the protector choſe one. The protector was appointed the ſupreme magiſtrate of the commonwealth, with ſuch privileges as the kings formerly poſſeſſed. The power of the ſword was veſted in him jointly with the parliament when ſitting, or with the council during its receſs. He was obliged to ſummon a parliament every three years, and to allow them to ſit five months without adjournment. A ſtanding army was eſtabliſhed of twenty thouſand foot, and ten thouſand horſe, and funds were aſſigned for their ſupport. The protector enjoyed his office during life; and on his death the place was immediately to be ſupplied by the council. Of all theſe proviſions the ſtanding army was alone ſufficient for Cromwell's purpoſe; for while poſſeſſed of that inſtrument, he could mould the conſtitution at all times to his will and pleaſure.

His management of foreign affairs generally correſponded with his determined character, and were attended with ſucceſs. The Dutch having been humbled by repeated defeats, and totally abridged in their commercial concerns, were made to ſue for peace, which he gave them upon his own terms. He inſiſted upon their paying obedience to the Britiſh flag. He compelled them to abandon the intereſts of the king, and to pay eighty-five thouſand pounds as an indemnification for former expences; and to reſtore the Engliſh Eaſt-India company a part of thoſe dominions of which they had been diſpoſſeſſed by the Dutch during the former reign. He was not leſs ſucceſsful in his negociations with France. Cardinal Mazarine, by whom the affairs of that kingdom were conducted, deemed it neceſſary to pay deference to the protector; and deſirous rather to prevail by dexterity than violence, ſubmitted to Cromwell's imperious character, and thus procured ends equally beneficial to both. The court of Spain was not leſs aſſiduous in its endeavours to gain his friendſhip, but was not ſo ſucceſsful. This haughty monarchy, which but a few years before had threatened the liberties of Europe, was now hardly able to defend itſelf. Cromwell, however, who knew nothing of foreign politics, ſtill continued to regard its power with a jealous eye, and came into confederacy with France to depreſs it more. He lent that court a body of ſix thouſand men to attack the Spaniſh dominions in the Netherlands; and, upon their obtaining a ſignal victory by his aſſiſtance at Dunes, the French put Dunkirk, which they had juſt taken from the Spaniards; into his hands, as a reward for his attachment. But it was by ſea that he humbled the power of Spain with the moſt effectual ſucceſs; as ſtated under the article BLAKE, above referred to.

At the ſame time that Blake's expeditions were going forward, there was another carried on under the command of Penn and Venables, with about four thouſand land forces, deſtined to attack the iſland of Hiſpaniola. Failing, however, in this enterpriſe, and being driven off the place by the Spaniards, they ſteered to Jamaica, which was ſurrendered to them at diſcretion, May 11, 1654; ever ſince which time it has continued under the dominion of England. But ſo little was the importance of this conqueſt then conſidered, that, upon the return of the expedition, Penn and Venables were ſent to the Tower, for their failure in the principal object of their expedition againſt St. Domingo.

All theſe ſucceſſes might rather be aſcribed to the ſpirit of the times, than to the ſuperior policy of Cromwell. He was poſſeſſed of but two arts in perfection, that of managing the army, by which he ruled; and diſcovering the ſecrets of his enemies, by which he defeated all their ſchemes againſt him. For the firſt, his valour and diſſimulation were ſufficient; for the latter, it is ſaid, he paid ſixty thouſand pounds a-year to his ſpies. But he took care to make the nation refund thoſe extraordinary expences. Theſe conſpiracies, entered into by the royaliſts, ſerved him as a pretext to lay a heavy tax upon that party, of a tenth penny on all their poſſeſſions. In order to ſecure the payment, ten major-generals were inſtituted, who divided the kingdom into ſo many military juriſdictions. Theſe men had power to ſubject whom they pleaſed to a payment of this tax, and to impriſon thoſe who refuſed. Under colour of theſe powers, they exerciſed the moſt arbitrary authority; the people had no protection againſt their exactions; the very maſk of liberty was thrown off, and all property was at the diſpoſal of a military tribunal. It was in vain that the nation cried out for a free parliament; Cromwell aſſembled one, in conſequence of their clamours; but as ſpeedily diſſolved it, when he found it refractory to his commands.

The whole nation now began ſilently to deteſt his adminiſtration; and all domeſtic conſolations forſook him. Fleetwood, his ſon-in-law, deteſted a character which could barter religious zeal for the purpoſes of temporal advancement. His eldeſt daughter, who married Fleetwood, had adopted republican principles ſo vehemently, that ſhe could not bear to ſee even her own father inveſted with uncontroulable power. His other daughters were ſanguine in favour of the royal cauſe; but, above all, Mrs. Claypole, his favourite daughter, who, upon her death-bed, upbraided him with all thoſe wicked and abominable projects which had led him to trample on the crown. Every hour added ſome new diſquietude to his mind. Lord Fairfax, ſir William Waller, and many leaders of the preſbyterians, had ſecretly entered into an engagement to deſtroy him. His adminiſtration, ſo expenſive both at home and abroad, had exhauſted his revenue, and he was left conſiderably in debt. One conſpiracy followed upon the ruins of another; and, to increaſe his calamity, he was now taught, upon reaſoning principles, that his death was not only deſirable, but his aſſaſſination would be meritorious. A book was publiſhed by colonel Titus, a man who had formerly been attached to his cauſe, entitled, Killing no Murder. Of all the pamphlets that came forth at that time, or perhaps of thoſe that have ſince appeared, this was the moſt eloquent and maſterly. "Shall we (ſaid this popular declaimer) who would not ſuffer the lion to invade us, tamely ſtand to be devoured by the wolf?" Cromwell read this ſpirited performance, and was never ſeen to ſmile more.

All conſolation appeared now baniſhed from his mind. He found that the grandeur to which he had aſpired was only an inlet to dangers and inquietudes. The fears of aſſaſſination haunted him in all his walks, and was ever preſent to his imagination. His aſpect was clouded by a

ſettled

ſettled gloom; and he regarded every ſtranger with ſuſpicion. A tertian ague kindly intervened, to deliver him from this life of horror and anxiety. For the ſpace of a week no dangerous ſymptoms appeared; and, in the intervals of the fits, he was able to walk abroad. But notwithſtanding theſe favourable aſſurances, the fatal ſymptoms increaſed; and the phyſicians were at laſt obliged to declare that he could not ſurvive the next fit. The council came to know his laſt commands concerning the ſucceſſion; but his ſenſes were confuſed: his departing ſoul was on the wing, and he had but juſt time to anſwer *yes* to their demand, whether his ſon Richard ſhould be appointed to ſucceed him. He died on the third of September, 1658, the very day which he had always conſidered as the moſt fortunate of his life; he was then fifty-nine years old, and had uſurped the government nine years.—For the moſt intereſting particulars of his private life, perſonal acquirements, family, and character, ſee the article CROMWELL, vol. v. p. 378, &c.

After the death of the uſurper, the influence of his name was ſtill ſufficient to get Richard, his ſon, proclaimed "Protector of England;" but it was probably owing to the numerous parties that were formed in the kingdom, and their mutual hatred of each other, that Richard owed his peaceable advancement to this high ſtation. It was found neceſſary, upon his firſt advancement, to call a parliament to furniſh the ſupplies to carry on the ordinary operations of government. But it was not on the parliament that the army choſe to rely. A great number of the principal malcontents of the army eſtabliſhed a meeting at general Fleetwood's, which, as he dwelt in Wallingford-houſe, was called the Cabal of Wallingford. The reſult of their deliberations was a remonſtrance, that the command of the army ſhould be intruſted to ſome perſon in whom they might all confide; and it was plainly given to underſtand that the young protector was not the perſon they meant.

A propoſal ſo daring and dangerous did not fail to alarm Richard; he applied to his council, and they referred it to the parliament. Both agreed to conſider it as an audacious attempt, and a vote was paſſed that there ſhould be no meeting, or general council of officers, without the protector's permiſſion. This brought affairs to an open rupture. The palace of the protector was the next day ſurrounded by a body of officers; and one Deſborow, a man of a brutal diſpoſition, penetrating into his apartment with an armed retinue, threatened his life if he refuſed to ſubmit to the army. Richard wanted reſolution to defend what had been conferred upon him; he diſſolved the parliament, and ſoon after ſigned his own abdication. Henry Cromwell, his younger brother, who was appointed to the command in Ireland, followed the protector's example, and reſigned his commiſſion, without ſtriking a blow. Richard lived ſeveral years after his reſignation, at firſt on the continent, and afterwards upon his paternal eſtate at Hurſley in Hampſhire. He was thought by the ignorant to be unworthy of his exaltation to the dignity of protector; but he knew by his tranquillity in private life, that he had made a moſt deſirable exchange.—See a biographical account of him, vol. v. p. 385.

The officers, being thus left to themſelves, determined to replace the remnant of the old parliament, which had beheaded the king, and which Cromwell had ſo diſgracefully turned out of the houſe. This was called *the good old cauſe*, from their attachment to republican principles; and to the members of this the cabal of officers for a while delivered up their own authority. The members, who had been ſecluded by colonel Pride's purge, as it was called, attempted, in vain, to reſume their ſeats among them. This was called the *Rump Parliament*; and, although reinſtated by the army, was yet very vigorous in its attempts to leſſen the power by which it was replaced. They began their deſign of humbling the army, by new-modelling part of the forces, caſhiering ſuch of the officers as were moſt obnoxious, and appointing others on whom they could more implicitly rely.

In this exigency, the officers held ſeveral conferences, with a deſign to oppoſe the parliament; and they came to a reſolution to diſſolve that aſſembly. Accordingly, Lambert, one of the generals, drew up a choſen body of troops; and placing them in the ſtreets which led to Weſtminſter-hall, when the ſpeaker, Lenthal, proceeded in his carriage to the houſe, he ordered the horſes to be turned, and ſent him home, under a military eſcort. The other members were likewiſe intercepted, and driven back; and the army returned to their quarters to obſerve a ſolemn faſt, which generally either preceded, or followed, their outrages. The officers, having thus reſumed the power they had delegated to the rump parliament, reſolved to part with it no more; but, in order to keep up the appearance of a government, they elected a council of twenty-three perſons, called *a Committee of Safety*, which they inveſted with a nominal ſupremacy. Throughout the three kingdoms there now prevailed nothing but melancholy fears of the bloody maſſacre of the nobility and gentry, and of perpetual ſervitude to the reſt of the people.

But amidſt theſe moſt gloomy proſpects, Providence was preparing a way for the legitimate ſovereign to mount in peace the throne of his anceſtors. General George Monk, to whoſe prudence and loyalty the reſtoration of the monarchy is chiefly to be aſcribed, had fought in Scotland; and, on the reduction of that kingdom, was left with the ſupreme command. In this capacity, he conducted himſelf equally to the ſatisfaction of the nation and the ſoldiery; and, foreſeeing that the goodwill of the army might eventually be of ſervice to him, he cultivated their friendſhip with aſſiduity and ſucceſs. Hearing that Lambert was advancing northward, Monk affected to treat with the committee of ſafety; but his object ſeems to have been to gain time. In fact, the nation was falling into anarchy. While Lambert's forces were aſſembling at Newcaſtle, Hazelrig and Morley took poſſeſſion of Portſmouth for the parliament, and admiral Lawſon entering the river, declared on the ſame ſide. The city of London had eſtabliſhed a kind of ſeparate government within itſelf; and thus every thing ſeemed running into croſs purpoſes. The parliament now aſſembled, and took courage to revoke Lambert's commiſſion; who, finding himſelf menaced by Monk in front, and in danger of being deſerted by his own ſoldiers, ſuffered himſelf to be arreſted, and committed to the Tower.

Monk, who had now paſſed the Tweed, though informed of the reſtoration of parliament, continued to advance at the head of about ſix thouſand men. During his march, he received various addreſſes, requeſting he would aſſiſt in ſettling the nation; but he affected to pay little regard to them. At length, having taken up his quarters in Weſtminſter, without oppoſition, he was introduced into the houſe, and thanked for his ſervices. His anſwer was couched in terms of great reſerve. He ſaid, he had only performed his duty; and that it remained with them to render ſtill more important ſervices to the nation, by ſummoning a full and free parliament, in order to effect a ſettlement, which all men ſeemed anxious to procure, after ſo many convulſions. He hinted, that application had been made to him for that purpoſe; but that he had referred the petitioners to parliament, who were the beſt judges of theſe meaſures.

In a ſhort time, however, the common council of London having declared that they would pay no more taxes, till a free parliament was called, the rump parliament gave orders to Monk to march into the city, and ſeize ſome of thoſe who were moſt inimical to its ſway. This order he heſitated not to execute; but, reflecting that by this meaſure he had broke through the general benevolence of his character, and made himſelf the tool of a parliament which he deteſted, he wrote a letter to the houſe, requiring them, in the name of the citizens, ſol-

diers, and the whole commonwealth, to iſſue writs within a week for the filling of their aſſembly, and to fix the time for their own diſſolution. He then marched with his army into the city, and having requeſted the mayor to ſummon a common council, he apologiſed for his late meaſures, and deſired that the city and army might mutually plight their faith for a ſtrict union, in every thing that might conduce to the ſettlement of the national affairs. He then excited the ſecluded members to enter the houſe, by which means a majority was formed favourable to his views, and writs were iſſued for the immediate aſſembling of a new parliament.

Monk now diſpatched ſir John Granville to deliver a verbal meſſage to the king, who had been ſome time in Spain, but had lately retired into Holland, informing him of their plan for his reſtoration. The elections for the new parliament, by the union of the preſbyterians and the royaliſts, went on every where in favour of the king; and the ſame diſpoſition prevailed in Ireland. When the parliament met, ſir Harbottle Grimſtone was choſen ſpeaker; and the general, having ſounded the inclinations of the aſſembly, informed them that ſir John Granville was now at the door with a letter for the commons, from their too long perſecuted ſovereign. He was inſtantly ordered to be admitted; and, without one diſſenting voice, a committee was appointed to prepare an anſwer.

The king's declaration, which was publiſhed and diſperſed, by order of parliament, was well calculated to augment the ſatisfaction, which the conduct of Monk had inſpired. It offered a general amneſty, with ſuch exceptions only as ſhould be made by the parliament; it promiſed liberty of conſcience; and aſſured the ſoldiers of all their arrears, with a continuance of the ſame pay. The lords, perceiving the ſpirit with which the kingdom, as well as the commons, were actuated, haſtened to reinſtate themſelves in their ancient authority; and, both houſes attending, the king was proclaimed with great ſolemnity in Palace-yard, at Whitehall, and at Temple-bar. The commons voted a handſome gratuity to Granville, and a preſent of fifty thouſand pounds to his majeſty, with inferior ſums for the dukes of York and Glouceſter. A committee of lords and commons was diſpatched, to invite the king to return, and aſſume his crown. His majeſty, accordingly embarking at Scheveling, landed at Dover, and, on the memorable 29th of May, 1660, which was alſo his birth-day, he entered London, amidſt the joyful congratulations of his people.

When Charles II. aſcended the throne, he was thirty years of age; and no prince ever received a crown with the more cordial approbation of his people. In the choice of his miniſters, he gave great ſatisfaction to the nation. Sir Edward Hyde, created earl of Clarendon, was chancellor and prime miniſter; the duke of Ormond, was ſteward of the houſhold; the earl of Southampton, high treaſurer; and ſir Edward Nicholas, ſecretary of ſtate. Admiral Montagu, who had carried a fleet to receive his majeſty, without waiting for the ſanction of parliament, was created earl of Sandwich; and general Monk, duke of Albemarle. No reward, indeed, could be too great for the ſervices of the latter, who, without bloodſhed and without confuſion, had, by prudence and caution alone, effected ſo deſirable a revolution. Into the king's council, were admitted the moſt eminent men of the nation, without regard to their former diſtinctions; the preſbyterians equally with the royaliſts. All judicial proceedings during the interregnum were ratified by a new law; and the act of indemnity, paſſing with little oppoſition, received the royal aſſent. The next buſineſs was to ſettle the king's revenue. They granted him one hundred thouſand pounds a year, in lieu of the tenures of wards and liveries, and voted, that the revenue of the crown for all charges, ſhould amount to the annual ſum of one million two hundred thouſand pounds; but, ſtill jealous of liberty, they ſcarcely aſſigned ſufficient funds for two-thirds of that ſum; and thus left the care of fulfilling their engagements to the future conſideration of parliament.

The trial and condemnation of the regicides, who had been moſt active in the death of his father, now came on. Harriſon, Scot, Carew, Clement, Jones, Scrope, Axtel, Hacker, Coke, and Hugh Peters, ſuffered with the confidence of martyrs: Lenthal, the ſpeaker of the rump parliament, and the reſt of the king's judges, were, with unexampled lenity, reprieved, or eſcaped arraignment. The king then diſſolved the parliament, with a ſpeech full of the moſt gracious expreſſions; and, by the urgent advice of Clarendon, conſented to diſband the army, except about one thouſand horſe, and four thouſand foot. This was the firſt appearance of a regular ſtanding army, under the monarchy, in this iſland.

Clarendon, now nearly allied to the royal family by the marriage of his eldeſt daughter, Anne Hyde, to the duke of York, by his wiſdom, his juſtice, and his prudence, equally promoted the intereſts of the prince and the people; but, in his attachment to the religion of the eſtabliſhment, he ſeems, in ſome meaſure, to have forgot the compact by which his maſter had been recalled. Charles having ſaid that preſbyterianiſm was not a religion for a gentleman, it was reſolved to reſtore prelacy in Scotland; and Sharp, who had been commiſſioned by the preſbyterians in Scotland, to manage their intereſts with the king, was perſuaded to abandon his party; and, as a reward for his tergiverſation, was created archbiſhop of St. Andrew's. This excited much diſcontent in Scotland; and the humiliation of that ſect in the north, was ſoon followed by the perſecution of their brethren in the ſouth. An ineffectual conference had been held at the Savoy, A. D. 1662, in order to bring about an accommodation between thoſe of the eſtabliſhed church and the followers of preſbytery; and the new parliament, which met about this time, laying hold of the prejudices which prevailed among the preſbyterian ſect, to eject them from their livings, required, that every clergyman who had not received epiſcopal ordination, ſhould be reordained; ſhould declare his aſſent to every thing contained in the book of common prayer; ſhould abjure the ſolemn league and covenant; and ſhould renounce the principle of taking arms againſt the king, on any pretence whatſoever. This act, and others which paſſed about the ſame time, have been the beſt ſupports of the ſtate, by cloſely linking it with the church, and ſecuring eccleſiaſtical ſubordination.

But, by theſe regulations, the king's promiſes of toleration and indulgence to tender conſciences, were broken or eluded; though it is probable that the catholics, rather than the preſbyterians, were the perſons principally aimed at by Clarendon and the church party among the commons. About two thouſand ſectaries, however, in one day, relinquiſhed their cures, and ſacrificed their intereſts to their principles. Soon after, the king was married to the princeſs Catharine of Portugal, with whom he received five hundred thouſand pounds, and the two fortreſſes of Tangier in Africa, and Bombay in the Eaſt Indies, by way of dowry. This match was far from proving auſpicious; for the queen never poſſeſſed the affections of her huſband. Amidſt theſe tranſactions, the pecuniary wants of the king daily increaſed; and, in order to raiſe money, as well as to ſave expences, Dunkirk was ſold to France for four hundred thouſand pounds. In this ſcheme Clarendon concurred; and ſo little aware was the French king of the value of his acquiſition, that he thought he had made a hard bargain.

About this time, A. D. 1663, Charles iſſued a declaration, under pretence of mitigating the rigours contained in the act of uniformity, to which he ſeemed to be induced by his prejudices in favour of popery. Parliament, however, had wiſdom enough to oppoſe all new ſources of religious diſſenſion; and, in order to deprive the catholics of any ſuch views, the two houſes concurred in a remonſtrance againſt them. Charles, on this, not only

only dropped his project of indulgence, but iſſued a proclamation againſt prieſts and jeſuits; and, in return for this compliance, he preſſed the commons for a ſupply, who voted him four ſubſidies—the laſt time that taxes were levied in that manner.

Though the nation had gone from the extreme of fanaticiſm into a culpable degree of neglect to religion, it could not regard with indifference the king's irregular pleaſures, and the little reſpect he paid to decency in his public miſtreſſes. But what was moſt injurious to the king's reputation, was his ſuffering his own adherents, and thoſe of his father and family, to remain in poverty and diſtreſs, aggravated by the cruel diſappointment of their ſanguine hopes; and by ſeeing favour and preferment beſtowed on their moſt inveterate foes. The act of indemnity and oblivion was conſtrued, and, in many caſes, too juſtly, as an act of indemnity to the king's enemies, and of oblivion to his friends.

The loyalty of the parliament now induced them to repeal the triennial act, and to content themſelves with a clauſe, that parliaments ſhould not be diſcontinued above three years at moſt. The commons likewiſe paſſed a vote, that the indignities offered to the Engliſh, by the ſubjects of the United States of Holland, were the greateſt obſtructions to our foreign trade. This, in 1664, paved the way to a Dutch war. Sir Robert Holmes was ſecretly diſpatched with a ſquadron of twenty-two ſhips to the coaſt of Africa, where he expelled the Dutch from cape Corſe, and ſeized their ſettlements at cape Verde and Goree. Then ſailing to America, he poſſeſſed himſelf of Nova Belgia, ſince called New York, which had been granted by patent to the earl of Stirling, in the reign of James I. but had never been planted, except by the Hollanders. When the Dutch complained of theſe hoſtile meaſures, the king pretended to deny that Holmes had any authority for his proceedings; but this evaſion not ſatisfying the ſtates, they diſpatched De Ruyter with a fleet, to retaliate on the Engliſh. This admiral, in 1665, not only recovered what had been loſt, but took ſome of the old ſettlements belonging to the Engliſh.

After this, the Dutch in vain attempted to avert the horrors of war by negociation. John de Witt, who then directed their meaſures by his conduct and capacity, cauſed a fleet to be equipped, ſurpaſſing any that had ever ſailed from the ports of Holland. The Engliſh fleet conſiſted of one hundred and fourteen ſail, and was commanded by the duke of York, and under him by prince Rupert, and the earl of Sandwich. Obdam, the Dutch admiral, had nearly an equal force; and, on meeting, he declined not the combat. In the heat of action, when engaged in cloſe fight with the duke of York, Obdam's ſhip blew up. This accident diſconcerted the Dutch, and they fled towards their own coaſt, the ſon of the famous admiral Tromp gallantly protecting the rear of the flying ſquadron. The vanquiſhed had nineteen ſhips ſunk or taken; the victors loſt only one. In this action, the duke of York behaved with great bravery; the earl of Falmouth, lord Muſkerry, and Mr. Boyle, were killed at his ſide. The declining courage of the Dutch was again revived by De Witt, who ſoon remedied all the diſorders occaſioned by the late misfortune; but his chief reliance was on the king of France, who, in conformity to treaty, was reſolved to ſupport the ſtates in this unequal conteſt. The Engliſh, however, had now a more dreadful calamity than war to contend with. The plague had carried off ninety thouſand perſons in London; and the king, to eſcape this awful viſitation, was obliged to call a parliament at Oxford, A. D. 1666.

The king of France having ordered his admiral, the duke of Beaufort, to proceed with forty ſail to the ſupport of his allies, that ſquadron was now ſuppoſed to be entering the channel. The Dutch fleet, under the command of De Ruyter, to the number of ſeventy-ſix ſail, was at ſea, in order to join the French. The duke of Albemarle and prince Rupert commanded the Engliſh fleet, which did not exceed ſeventy-four ſail. Albemarle, conſulting only his courage, diſpatched prince Rupert with twenty ſhips, to oppoſe the duke of Beaufort; and with the remainder he ſet ſail to give battle to the Dutch. Never did a more memorable engagement take place; whether we conſider its long duration, or the deſperate courage with which it was fought. On the firſt day the loſs was nearly equal, and night parted the combatants; vice admiral ſir William Berkeley fell on the ſide of the Engliſh, and admiral Evertz on that of the Dutch. On the ſecond day, during the action, the Dutch were joined by ſixteen freſh ſhips, while the Engliſh had not more than twenty-eight in a ſituation for fighting. This induced Albemarle to draw towards the Engliſh coaſt, which he did with an undaunted countenance, proteſting to the earl of Oſſory, ſon of the duke of Ormond, that he would ſooner blow up his ſhip than ſtrike. Juſt as the Dutch had come up with the Engliſh, and were about to renew the engagement, the ſquadron of prince Rupert hove in ſight, ſteering to the aſſiſtance of Albemarle. The battle now began afreſh, and continued with great violence till ſuſpended by a miſt; when the Engliſh retired firſt, into their own harbours. De Ruyter now poſted himſelf at the mouth of the Thames; but it was not long before Rupert and Albemarle approached to attack him. The engagement was again fierce and obſtinate, and three Dutch admirals fell; but De Ruyter, though preſſed on all ſides, retained his ſtation, till night ended the engagement.

After this ſignal defeat, De Ruyter, finding the Dutch fleet ſcattered, was obliged to retreat, which yet he conducted with ſo much ſkill, as to render it truly honourable. "My God! (exclaimed he) what a wretch I am! among ſo many thouſand bullets, is there not one to put an end to my miſerable life?" The Dutch, by the greateſt exertions, were ſaved in their harbours; and the Engliſh triumphantly ſcoured the ſeas, without controul. But the joy ariſing from this great victory was of ſhort duration. The plague had no ſooner ſubſided, than a moſt dreadful fire broke out in London, which ſpreading, in ſpite of every endeavour to check its deſtructive progreſs, conſumed four hundred ſtreets, and thirteen thouſand houſes. The popular prejudice aſcribed this calamity to the catholics; but no proof appeared to ſupport ſuch a calumny, though it is ſanctioned by the inſcription ſtill remaining on the monument that records the conflagration.

The Dutch, ſtill continuing to make the moſt vigorous reſiſtance, Charles began to be ſenſible that all the ends for which the war had been undertaken, were likely to prove abortive. This induced him to make overtures of accommodation, which were readily liſtened to; and ſo nearly was the treaty concluded, that he imprudently diſcontinued his preparations. The penetrating mind of De Witt now ſaw the opportunity for retrieving the honour of his country, and he embraced it. The Dutch fleet under De Ruyter appeared in the Thames, and burſting the chain which had been drawn acroſs the Medway, advanced as far as Upnore caſtle. Sheerneſs was taken, and ſeveral ſhips burnt. They next attempted Portſmouth, inſulted Harwich; and, had they been ſupported by the French, as they ought, the moſt ſerious conſequences might have enſued. The ſigning of the treaty of Breda, however, ſaved England from this danger; and the acquiſition of New York was the principal advantage which this country reaped from the war.

Some ſacrifice ſeemed neceſſary to appeaſe the people for their diſappointments; and the chancellor became the victim. His ſale of Dunkirk roſe up in judgment againſt him; and, as he had engaged in building beyond what his oſtenſible finances would allow, he was expoſed to public reproach, as if he had acquired riches by corruption, though nothing of the kind was ever proved againſt him. The king, indeed, who had always revered rather than loved him, was glad to be freed from a mi-

niſter who would not permit his maſter's licentious pleaſures to paſs without reprehenſion. The great ſeal was given to ſir Orlando Bridgman. The duke of York in vain exerted his intereſt in behalf of his father-in-law. An impeachment was voted againſt him by the commons, and Clarendon, finding that neither his innocence nor his paſt ſervices were ſufficient to protect him, withdrew to the continent, where he lived ſix years after his baniſhment was decreed; and there employed his leiſure in reducing to order the hiſtory of the civil war, for which he had before collected materials. This performance will for ever do honour to his memory.

A confederacy of great importance, which goes by the name of the *Triple Alliance*, was formed by Charles, ſoon after the fall of this great ſtateſman, as if to ſhow that he could ſtill ſupply his place. It was conducted by ſir William Temple, one of the great ornaments of Engliſh literature, who united the philoſopher and the ſtateſman, and was equally great in both. This alliance was formed between England, Holland, and Sweden, to prevent the French king, Louis XIV. from completing his conqueſts in the Netherlands. That monarch had already ſubdued the greater part of that delightful country; when he was unexpectedly checked in the midſt of his career by this league, in which it was agreed by the contracting powers, that they would conſtitute themſelves arbiters of the differences between France and Spain, and put an end to a conteſt founded in ambition and injuſtice, and which had deluged the continent with human blood.

To this foreign confederacy ſucceeded one of a domeſtic nature, but which did not promiſe ſuch beneficial effects. The king had long been fluctuating between his pride and his pleaſures; the one urged him to extend his prerogative, the other to enjoy quietly the good things that fortune threw in his way. He was excited, by the active ſpirit of his brother, to riſe above humble ſolicitations to his parliament; but he was beſet by ſome evil counſellors, who adviſed him to aſſert his own independence. The principal of theſe were Clifford, Aſhley, Buckingham, Arlington, and Lauderdale, a junto diſtinguiſhed by the appellation of the CABAL, a word containing the initial letters of their names. Never was there a more dangerous miniſtry in England, nor one more fitted to deſtroy the fabric which liberty had been eſtabliſhing for ages. Sir Thomas Clifford was a man of a daring and impetuous ſpirit, rendered more dangerous by eloquence and intrigue. Lord Aſhley, ſoon after made earl of Shafteſbury, was the moſt extraordinary man of his age; he had been a member of the long parliament, and had great influence among the preſbyterians; he was a favourite of Cromwell, and always changed his party as it ſuited his convenience. The duke of Buckingham was gay, capricious, of ſome wit, and great vivacity. Arlington was a man of ſubtle temper, but mean abilities. The duke of Lauderdale, who was not defective either in natural or acquired talents, was ambitious, obſtinate, inſolent, and ſullen. Theſe were the men to whom Charles gave up the conduct of his affairs, and who plunged the remaining part of his reign into difficulties, which produced many dangerous ſymptoms.

An unnatural alliance with France, and a rupture with Holland, were the firſt conſequences of their advice. The Engliſh and French combined fleets, commanded by the duke of York, and the mareſchal d'Etrées, ſoon after met the Dutch fleet, to the number of ninety ſail, commanded by admiral De Ruyter; and a furious battle enſued. In this engagement, the gallant lord Sandwich, who commanded the Engliſh van, drove his ſhip into the midſt of the enemy, beat off the admiral that ventured to attack him, ſunk another ſhip that attempted to board him, and ſunk three fire-ſhips that endeavoured to grapple with him. Though his veſſel was torn with ſhot, and out of a thouſand men there only remained four hundred, he ſtill continued to thunder in the midſt of the engagement. At laſt a fire-ſhip, more fatal than the former, having laid hold of his veſſel, her deſtruction was inevitable. Sandwich, however, refuſed to quit his ſhip, though warned by ſir Edward Haddock his captain; he periſhed in the flames, while the engagement continued to rage all around him. Night parted the combatants; the Dutch retired, and were not followed by the Engliſh. The loſs ſuſtained by the two maritime powers was nearly equal; but the French ſuffered very little, having kept aloof during the greater part of the engagement. It was even ſuppoſed that they had private orders to ſpare their own ſhips, while the Dutch and Engliſh weakened themſelves by their obſtinate fighting.

The combined powers were completely ſucceſsful againſt the Dutch by land. Louis conquered all before him, croſſed the Rhine, took all their frontier towns, and threatened the new republic with a final diſſolution. But the murmurs of the Engliſh, at ſeeing this brave and induſtrious people, the great ſupporters of the proteſtant cauſe, totally ſunk, and on the brink of deſtruction, were too loud not to impreſs the king. He was obliged to call a parliament, A. D. 1673, to take the ſenſe of the nation upon this event, as well as to obtain ſupplies for carrying on the war.

The king's late declaration of indulgence to all ſectaries was firſt taken into conſideration, and a remonſtrance drawn up againſt the exerciſe of the prerogative. The commons perſiſted in their oppoſition to it; and repreſented that ſuch a practice, if admitted, might tend to interrupt the free courſe of the laws, and alter the legiſlative power, which had always been acknowledged to reſide in the king and the two houſes. Charles, therefore, found himſelf obliged to retract his declaration; but, that he might do it with a better grace, he referred to the houſe of peers, who adviſed him to comply. The commons expreſſed the utmoſt ſatisfaction with this meaſure, and the moſt entire duty to the king. He, on his part, aſſured them, that he would willingly paſs any law which might tend to give them ſatisfaction in all their juſt grievances. A law now paſſed, entitled the Teſt Act, impoſing an oath on all who ſhould enjoy any public office. Beſides the taking the oaths of allegiance, and the king's ſupremacy, they were obliged to receive the ſacrament once a year in the eſtabliſhed church, and to abjure all belief in the doctrine of tranſubſtantiation. As the diſſenters had alſo ſeconded the efforts of the commons againſt the king's declaration for indulgence, a bill was paſſed for their eaſe and relief, which, however, went with ſome difficulty through the houſe of peers.

But ſtill the great object of their meeting remained to be inquired into; for the war againſt the Dutch went on with great animoſity. Several ſea-engagements had ſucceeded each other, without any deciſive action; both parties claiming the victory after every battle. The commons, therefore, weary of the war, and diſtruſtful even of ſucceſs, reſolved that the ſtanding army was a grievance. They next declared, that they would grant no more ſupplies to carry on the Dutch war, unleſs it appeared that the enemy refuſed reaſonable terms of peace. To cut ſhort theſe altercations, the king reſolved to prorogue the parliament; and, with that intention went unexpectedly to the houſe of peers, and ſent the uſher of the black rod to ſummon the houſe of commons to attend. It happened that the ſpeaker and the uſher met at the door of the houſe; but the ſpeaker being within, ſome of the members ſuddenly ſhut the door againſt the uſher, and cried, "To the chair!" Upon which the following motions were inſtantly made in a tumultuous manner: That the alliance with France was a grievance; that the evil counſellors of the king were a grievance; that the duke of Lauderdale was a grievance: and then the houſe roſe in great confuſion. The king now ſaw that he could expect no ſupply from the commons for carrying on the war; he reſolved, therefore, to make a ſeparate peace with the Dutch, on terms which

which they had propoſed through the channel of the Spaniſh ambaſſador. For form ſake, he aſked the advice of his parliament, who concurring heartily in the meaſure, a peace was ſoon concluded.

In the mean time, A. D. 1674, the war between the Dutch and the French went on with vigour. The Dutch forces were commanded by the prince of Orange, who was poſſeſſed of courage, activity, vigilance, and patience; but he was inferior in genius to thoſe conſummate generals, Condé, Turenne, &c. oppoſed to him. He was, therefore, always unſucceſsful; but ſtill found means to keep the field againſt his victorious enemies. Theſe ſtruggles for the preſervation of freedom intereſted the Engliſh ſtrongly in his favour; ſo that, from being his oppoſers, they now wiſhed to lend him aſſiſtance. They conſidered their alliance with France as tending to the ſubverſion of the proteſtant religion, and therefore ought to be abandoned. The commons therefore addreſſed the king, repreſenting the danger to which the kingdom was expoſed from the increaſing power of France; and they aſſured him, in caſe of a war, that they would not be backward in ſupplies. Charles was not diſpleaſed with the latter part of their addreſs, ſince money was ſo neceſſary to his voluptuous pleaſures. He therefore told them, that unleſs they granted him ſix hundred thouſand pounds, it would be impoſſible for him to equip an army fit to look the French in the face. The commons refuſed to furniſh the ſum; and the king reproved them for their diffidence, and immediately ordered them to adjourn. The marriage of the duke of York's eldeſt daughter, the princeſs Mary, heir-apparent to the crown, with the prince of Orange A. D. 1677, was a meaſure that gave great ſatisfaction to the proteſtant intereſt in England. The negociation was brought about by the king's own deſire; and the proteſtants now ſaw a happy proſpect before them of a ſucceſſion that would be favourable to the reformation. A negociation for peace between the French and the Dutch was ſet on foot; but the mutual animoſities of theſe ſtates not being ſufficiently quelled, the war was continued for ſome time longer. The king, therefore, to ſatisfy his parliament, who declared loudly againſt the French, ſent over an army of three thouſand men, under the command of the duke of Monmouth, to ſecure Oſtend. A fleet alſo was fitted out, and a quadruple alliance was now projected between England, Holland, Spain, and the emperor. Theſe vigorous meaſures brought about the famous treaty of Nimeguen, A. D. 1678, which gave a general peace to Europe.

The bleſſings of peace, however, were tranſitory in this kingdom, by giving place to anarchy and religious perſecution. One Kirby, a chemiſt, informed the king, as he was walking in the park, that there was a deſign againſt his life; that two men, called Grove and Pickering, had engaged to ſhoot him; and ſir George Wakeman, the queen's phyſician, had undertook to poiſon him. This intelligence, he ſaid, came from Dr. Tongue, a divine, who, being examined, declared to the treaſurer, lord Danby, that the papers expoſing the conſpiracy, had been thruſt under his door. This wild and incoherent ſtory would probably have been conſigned to oblivion, had not the duke of York inſiſted on a regular enquiry being inſtituted. It was now found that Kirby and Tongue lived in ſtrict intimacy with a perſon named Titus Oates, who pretended to know more of the matter, and who judged it proper to give evidence before ſir Edmundſbury Godfrey, an active magiſtrate, in hopes that his declaration would obtain more notoriety, and entitle him to a greater reward. The intelligence of Oates tended to ſhew, that the pope, having aſſumed the ſovereignty of England and Ireland, on account of the hereſy of the prince and people, had delegated his authority to the jeſuits, whoſe general had ſupplied by commiſſions all the chief offices, both civil and military, appertaining to both kingdoms.

It would be abſurd to enter into all the details of this pretended plot; ſuffice it to ſay, that Oates the informer was one of the moſt infamous of mankind; and that, before the council, he betrayed his impoſtures in ſuch a manner, as would have diſcredited the moſt conſiſtent ſtory, and the moſt reputable evidence. Yet, notwithſtanding this, the plot very ſoon became the ſource of terror to the people; and Danby, out of oppoſition to the French intereſt, rather encouraged the impoſture; and by his ſuggeſtions one Coleman, who had been ſecretary to the late ducheſs of York, was implicated in this affair, and ordered to be arreſted. Among his papers were found ſome very free remarks relative to the ſentiments and principles of the king; and people taking this for a confirmation of the truth of Oates's ſtory, confounded a buſineſs, which had no relation to it, with a freſh idea of the conſpiracy. The murder of ſir Edmundſbury Godfrey, which never had been accounted for, completed the general deluſion, and rendered the prejudices of the nation abſolutely incurable. The funeral of this magiſtrate, who was found lying in a ditch near Primroſe-hill, with his ſword ſticking in his body, like the exhibition of Cæſar's wounds, ſerved to inflame the people againſt the catholics, who were ſuſpected to have been guilty of this atrocity in order to ſtifle evidence, to a degree of dangerous fury.

While the nation was in this ferment, the parliament was aſſembled. The king, in his ſpeech, ſcarcely adverted to the plot about which ſo much had been ſaid; but Danby, who courted popularity, laid open the matter to the houſe of peers. Charles, incenſed at his folly, obſerved, "Though you do not believe it, you will find that you have given the parliament a handle to ruin yourſelf, and to diſturb all my affairs: you will ſurely live to repent it." Danby had afterwards ſufficient reaſon to applaud the ſagacity of his maſter. The cry of the plot was echoed from one houſe to the other; a ſolemn faſt was voted; and addreſſes paſſed for the removal of the popiſh recuſants from London. Lords Powis, Straſford, Arundel, Peters, and Bellaſis, were impeached for high treaſon; and both houſes, after hearing the evidence of Oates, voted, "That the lords and commons are of opinion, that there hath been, and ſtill is, a damnable plot contrived and carried on by the popiſh recuſants, for aſſaſſinating the king, for ſubverting the conſtitution, and for rooting out and deſtroying the proteſtant religion."

Oates was applauded and careſſed, and encouraged by a penſion of twelve hundred pounds a-year. Such bounty called forth new witneſſes. William Bedloe, a man, if poſſible, more infamous than Oates, appeared next on the ſtage. At firſt he confined his intelligence to Godfrey's murder, which, he ſaid, had been perpetrated in Somerſet-houſe, where the queen lived, by the papiſts. He ſoon after enlarged his information, by accuſing ſeveral perſons of conſequence, of having joined in a popiſh plot; and, though he groſsly contradicted himſelf, the nation was determined to believe every thing he advanced. Charles ſaw the torrent was too ſtrong to be reſiſted. A bill had been brought into parliament for a new teſt, in which popery was denominated idolatry; and all the members of both houſes, who refuſed this teſt, were to be excluded. The duke of York, in the moſt pathetic manner, moved, that an exception might be admitted in his favour; proteſting, that whatever his religion might be, it ſhould only be a private thing between God and his own ſoul, and never ſhould appear in his public conduct. Notwithſtanding this appeal, he prevailed only by two voices. The ferment both in and out of parliament was ſoon increaſed by the treachery of Montague, who had been ambaſſador at Paris. He preſented to the houſe of commons, of which he was a member, a letter from the treaſurer Danby, counter-ſigned by the king, in which the moſt palpable proofs of Charles's diſgraceful intrigues with the French court were laid open. Danby was immediately impeached by the commons; but the peers refuſed to commit him; and the quarrel roſe to ſuch a height

height between the two houſes, that the king thought it adviſeable to diſſolve them.

The want of money compelled Charles to ſummon a new parliament, A. D. 1679; but being ſoon alarmed at their refractory diſpoſition, in order to appeaſe his people, he deſired the duke of York to withdraw beyond ſea, that no further ſuſpicion of popiſh counſels might remain. The duke readily complied, on obtaining an order for this purpoſe from the king, leſt it ſhould be ſuppoſed he fled from fear, and a promiſe that he would ſatisfy him, as well as the public, in regard to the illegitimacy of the duke of Monmouth, a natural ſon of the king's by Lucy Walters, and born about ten years before the reſtoration. This nobleman poſſeſſed all the qualities that could engage the affections of the people; and in proportion as the duke of York was the object of hatred on account of his religion, his nephew became more and more beloved; nor were there wanting officious friends, who encouraged him to hope that a contract of marriage had paſſed between the king and his mother, and that, in conſequence, he had ſtrong pretenſions to the crown. Charles, however, to put an end to all intrigues of this kind, as well as to remove the duke of York's apprehenſions, in full council made a declaration of Monmouth's illegitimacy, on which the duke of York cheerfully complied with the king's deſire, and retired to Bruſſels.

Parliament, however, ſtill choſe to be jealous and diſſatisfied. The impeachment of Danby was revived, and the king, in order to ſcreen his miniſter, granted him a full pardon; but it was pretended that no pardon of the crown could be pleaded in bar of an impeachment, and ſo reſolute was the parliament in ſupport of its pretenſions, that Danby was committed a cloſe priſoner to the Tower. To prevent a bill of excluſion againſt the duke his brother, which was projected, Charles concerted ſome limitations, which deprived the ſucceſſor, if a papiſt, of the chief branches of royalty; but theſe conceſſions were rejected by the influence of Shafteſbury, who had united himſelf to the popular party; and a bill was brought in, declaring that the ſovereignty of theſe kingdoms, upon the king's death or reſignation, ſhould devolve to the perſon next in ſucceſſion after the duke; and that all who ſupported his title ſhould be deemed rebels and traitors. This important bill paſſed the lower houſe by a majority of ſeventy-nine votes. At the ſame time the ſtanding army, and the king's guards, were voted by the commons to be illegal; and that bulwark of perſonal and national liberty, the habeas corpus act, which provided againſt arbitrary impriſonment, paſſed into a law the ſame ſeſſion.

Meanwhile the impeachment of the five catholic lords, and the earl of Danby, was carried on with vigour; but a diſpute ariſing between the two houſes about allowing the biſhops to vote on the trial of Danby, furniſhed the king with a pretext of diſſolving the parliament. This vigorous meaſure diſappointed all the projects of the malcontents; but even the receſs of parliament afforded no interruption to the proſecution of the catholics accuſed of the plot. On the moſt incoherent and doubtful evidence, Whitebread, provincial of the jeſuits, Fenwic, Gavan, Turner, and Harcourt, were condemned and executed; and it was not till the trial of ſir George Wakeman, the queen's phyſician, that the informers received a check. This gentleman was acquitted; and an indelible ſtain was fixed on Oates, Bedloe, and their abettors.

The diſcontents in England were communicated to Scotland; and an incident there rouſed the Scottiſh covenanters from their inactivity. A company of the latter had waylaid, with an intention to kill, one Carmichael, an officer of the archbiſhop of St. Andrew's, who had rendered himſelf obnoxious by his ſeverity. At the inſtant they were looking for their prey, the archbiſhop himſelf paſſed by in his coach; and, interpreting this incident as a declaration of the ſecret purpoſe of Providence againſt him, without further deliberation they dragged him from his coach, and piercing him with many wounds, left him dead on the ſpot, and diſperſed. This atrocious action gave riſe to a violent perſecution againſt the covenanters; who now, inflamed by oppreſſion, met to celebrate their worſhip with arms in their hands; and having gained ſome partial ſucceſſes, they made themſelves maſters of Glaſgow, diſpoſſeſſed the eſtabliſhed clergy, and iſſued proclamations, declaring that they fought againſt the king's ſupremacy, againſt popery and prelacy, and againſt a popiſh ſucceſſor. The king, apprehenſive of the conſequences of this inſurrection, diſpatched Monmouth into Scotland, with a ſmall body of Engliſh cavalry. That nobleman being joined by ſome native troops, marched with celerity againſt the enemy, who had taken poſt near Bothwell-caſtle. Their numbers never exceeded eight thouſand, and being without officers and experience, they were ſpeedily routed, with the loſs of ſeven hundred killed, and twelve hundred taken priſoners. Monmouth treated theſe with great humanity, and an act of indemnity was ſoon after paſſed.

When theſe popular diſcontents had ſpent themſelves, Charles, by his amiable manners and addreſs, found means to ſtrengthen his party; and happening to fall ill at Windſor, ſuch an affectionate regard was ſhewn him, that, to uſe an expreſſion of ſir William Temple, "the king's death was regarded as the end of the world." The duke of York had been privately ſent for; but when he arrived, the king was out of danger. The journey, however, was attended with important conſequences. He prevailed on the king to diſgrace Monmouth, whoſe machinations were now known and avowed; and he obtained leave himſelf to retire into Scotland, on pretence of quieting the apprehenſions of the Engliſh, but in reality with a view of ſecuring his intereſt in that kingdom. About this time, alſo, ſeveral new changes took place in the cabinet; for the king was equally unſteady with regard to men and meaſures. Hyde, Sunderland, and Godolphin, ſeemed at preſent to poſſeſs his chief confidence.

From the encouragement which had been given to informers, the nation had got into a vein of credulity; and one Dangerfield, a fellow of infamous character, was the author of a new plot, called the *meal-tub plot*, from the place in which ſome papers relative to it were found. This affair is equally as myſterious as thoſe which preceded it. It only appears, that Dangerfield, under pretence of betraying the conſpiracies of the preſbyterians, had been countenanced by ſome catholics of condition, and had even gained admiſſion to the duke of York. Which ſide he originally intended to cheat is uncertain; but, finding the nation more inclined to believe in a popiſh than a preſbyterian plot, he fell in with the prevailing humour. The duke of Monmouth, juſt then returning without leave, ſerved to renew the fermentation. The crown was now, A.D. 1680, attacked by tumultuous petitions: thoſe who ſupported the throne were called *abhorrers*, from expreſſing their deepeſt *abhorrence* of popular encroachments; and the oppoſite party was denominated *petitioners*. This is the epoch too of the epithets, *whig* and *tory*. The court party reproached their antagoniſts with reſembling the fanatical conventiclers in Scotland, who had obtained the appellation of *whigs*; and the country party, on the other hand, found a reſemblance between the courtiers and the popiſh banditti in Ireland, to whom the term of *tory* was affixed. Hence the origin of thoſe two proſtituted words.

Charles finding the nation inveterate againſt popery, affected great zeal the ſame way; but his artifice did not wholly ſucceed. The city of London took the lead, in oppoſition to the court; and Shafteſbury, who by turns was a whig and a tory, as it beſt ſuited his views, appearing in Weſtminſter hall, attended by ſeveral perſons of diſtinction, preſented to the grand jury of Middleſex reaſons for indicting the duke of York as a popiſh recuſant. This buſineſs, however, was quaſhed; but Shafteſbury obtained the end for which he had undertaken this bold meaſure: he proved to his followers that there

could be no future accommodation or compoſition with the duke, after ſuch a ſtep. Theſe proceedings determined the king to aſſemble the parliament. In his ſpeech he ſtrongly urged the advantages of unanimity; and concluded with an aſſurance, that if any diſputes aroſe, the world ſhould have no reaſon to ſay that the fault was with him. All theſe mollifying expreſſions had no effect on the commons, who proceeded in their former career, and ſeemed bent on renewing the bill for excluding the duke of York from the ſucceſſion; while a party hoped by this ſtep to advance the intereſt of the duke of Monmouth. But Charles was determined to preſerve the right of ſucceſſion inviolable; and though the bill had paſſed the commons by a great majority, the influence of the court being exerted in the houſe of peers againſt it, the courtiers prevailed, after a long and violent debate; and it was thrown out.

Fruſtrated in their object, the commons vented their ſpleen, by reſuming the proſecution againſt the catholics. The impeachments began with that of viſcount Staffordſ, who, from age and infirmities, being leaſt able to defend himſelf, became the firſt victim. In his laſt moments he proteſted, that the only treaſon of which he had ever been guilty, had been entering into ſchemes for procuring a mitigation of the penal laws againſt his religion. The populace, who had exulted at his trial and condemnation, were melted into tears at the fortitude he diſplayed on the ſcaffold. This was the laſt blood they ſhamefully ſpilt on account of religion; but the commons ſtill found new occaſions to exerciſe their talents againſt the court. The king, ſeeing that no conceſſions, ſhort of giving his aſſent to the excluſion bill, would ſatisfy them, came to a reſolution of proroguing the parliament; but the houſe, having got intelligence of his deſign a few minutes before it was put in execution, in the moſt tumultuous manner paſſed a ſtring of votes, which vitally attacked the legal and undoubted prerogatives of a king of England.

Soon after this ſeſſion was cloſed, Charles ſummoned a new parliament; and in order to avoid thoſe tumults which attended their aſſembling at Weſtminſter, he directed them to meet at Oxford. Againſt this, Monmouth and fifteen peers proteſted, on the pretence that the perſons of the members would be in danger there, from the papiſts and their adherents. Theſe inſinuations inflamed the people ſtill more; and the aſſembly at Oxford, from the number of ſervants and retainers which each of the popular leaders brought with him, reſembled more a military congreſs than an Engliſh parliament. The commons, conſiſting nearly of the ſame individuals as before, fell inſtantly into the ſame meaſures. The impeachment of Danby, the perſecution of the catholics, and the bill of excluſion, were renewed with greater acrimony than ever. So violent were they on this laſt article, that no expedient, however plauſible, would ſatisfy them. One of the king's miniſters had even propoſed that the duke ſhould be baniſhed five hundred miles from England, and, on the king's demiſe, the next heir ſhould be conſtituted regent with regal power; but, though this would have left the duke of York the bare title of a king, it failed to ſatisfy the oppoſition. Charles, ſeeing it impoſſible to manage the parliament without ſacrificing his brother, now reſolved to depend on economy and retrenchments, inſtead of aſking for freſh ſupplies.

The wiſdom and moderation of the duke of Ormond had for ſome years kept Ireland in tranquillity; but England and Scotland were ſtill agitated to the centre. The tools that had been employed by Shafteſbury, now turned againſt him; and he was accuſed by Tuberville and others of high treaſon. The draught of an aſſociation againſt popery and the duke was found in his cabinet; and dangerous inferences might be drawn from many clauſes of that paper; but it did not appear that Shafteſbury either framed it, or approved of it. The grand jury, therefore, weighing all circumſtances, rejected the indictment; and the populace were loud in their expreſſions of joy at his deliverance. In Scotland, however, a nobleman, far leſs obnoxious, became the victim of oppreſſion. The earl of Argyle, who, from his youth, had been diſtinguiſhed for his loyalty, and had met with ſeveral marks of the king's favour, being called upon to take the teſt which aſſerted the king's ſupremacy, added, "as far as it is conſiſtent with itſelf, and the proteſtant religion." For this ſalvo, a warrant was iſſued for committing him to priſon; and, innocent as the words were, for them he was condemned for high treaſon, leaſing-making, and perjury. The execution of the ſentence, however, was ſuſpended; but all his eſtates were confiſcated, and with difficulty he eſcaped to the continent with his life.

As Charles, A. D. 1682, was determined to do without a parliament, he no longer dreaded the clamours of the country party; and permitted his brother to pay him a viſit in England. The ſhip in which the duke embarked with his family and attendants from Scotland, having ſtruck on a ſand bank, was loſt; but he eſcaped, with a few of his party, in the barge. The king now began to manifeſt his love of arbitrary authority. By an unwarrantable ſtretch of power, two ſheriffs were choſen in the city of London, on account of their devotion to the court; but, as the conteſt might be renewed annually, Charles determined to make himſelf maſter at once, not only of the city, but of all the corporations in England. A writ of *quo warranto* was iſſued, and the charter of London revoked, on account of ſome irregularities in its proceedings ſeveral years before; and ſentence of forfeiture of all their immunities was pronounced againſt the citizens. The king, on petition, however, agreed to reſtore the charter; but, in return, they were obliged to ſubmit to the ſubſequent regulations: That no mayor, ſheriff, recorder, common ſergeant, town clerk, or coroner, ſhould be admitted to the exerciſe of his office, without his majeſty's approbation: that if the king diſapprove twice of the mayor or ſheriffs elected, he may, by commiſſion, appoint thoſe magiſtrates himſelf: that the mayor and court of aldermen may, with his majeſty's leave, diſplace any magiſtrate: and that an alderman, in caſe of a vacancy, ſhall be elected without the conſent of the court of aldermen, who, if they diſapprove twice of the choice, may fill the vacancy. All the corporations in England, from this precedent, ſaw how ineffectual it would be to contend; and therefore moſt of them were induced to ſurrender their charters into the king's hands, A. D. 1683. Conſiderable ſums were exacted for reſtoring the charters; and all offices of power or profit, by the reſtrictions introduced, were now left at the diſpoſal of the crown. This was one of the moſt violent infractions of liberty that had ever taken place; and will remain an everlaſting monument of the arbitrary principles of Charles II. Moſt of the charters then re-granted ſtill remain in force.

At this juncture, however, a plan of reſiſtance was ſeriouſly ſet on foot. The duke of Monmouth, lord Ruſſel, and lord Gray, ſolicited not only the capital, but the nobility and gentry of ſeveral counties, to riſe in arms, and oppoſe the ſucceſſion of the duke of York. The whole train was ready to take fire; but was prevented by the caution of lord Ruſſel, who, in oppoſition to Shafteſbury, the prime mover, induced Monmouth to delay the enterpriſe. Shafteſbury could ill brook timid counſels; and, deſpairing of ſucceſs, withdrew to Holland, where he ſoon after paid the debt of nature, little regretted by his friends, or noticed by his enemies. At laſt, a regular project of inſurrection was formed. The council conſiſted of Monmouth, Ruſſel, Eſſex, Howard, Algernon Sidney, and John Hampden, grandſon to the great parliamentary leader. Theſe men had entered into a negociation with Argyle and the Scottiſh malcontents, who engaged to bring the covenanters into the field. The conſpirators, however, differed widely in their views. Sid-

ney and Eſſex were for a republic; Monmouth had a deſign on the crown for himſelf; and Ruſſel and Hampden, attached to the ancient conſtitution, wiſhed only a redreſs of grievances, and the excluſion of the catholic duke of York from the ſucceſſion. Howard was a man ready to embrace any principle; but, diſcordant as they ſeemed in their aims, all united in a common hatred againſt the heir apparent.

While theſe ſchemes were concerting among the leaders, an inferior plot was carried on by a number of conſpirators, none of whom had any acceſs to Monmouth and the cabal of ſix, except colonel Rumſey, an old republican officer, and a perſon of the name of Ferguſon. Theſe perſons indulged in the moſt criminal diſcourſe; and, among other plans, propoſed to aſſaſſinate Charles in his way from Newmarket; but the houſe in which the king lived there, happening to take fire, obliged him to leave that place earlier than he intended; and thus the execution of the deſign was prevented. At length, Keiling, one of the conſpirators, being under a criminal proſecution, in hopes of ſaving his life betrayed his aſſociates to ſecretary Jenkins. Search being made after the conſpirators, colonel Rumſey, and Weſt, a lawyer, finding the dangers to which they were expoſed, ſurrendered themſelves, and turned evidence. The links of the conſpiracy were now traced to the nobles, who had engaged in a different ſcheme: Monmouth abſconded; Ruſſel was ſent to the Tower; Gray was arreſted, but eſcaped; and Howard, a profligate man, being taken, in hopes of pardon and reward revealed the whole plot. Eſſex, Sidney, and Hampden, were immediately apprehended; and ſome of the inferior conſpirators, being convicted, paid the forfeit of their lives.

The trial of lord Ruſſel, a nobleman illuſtrious for his virtues, and highly popular, now commenced, againſt whom Rumſey, Sheppard, and lord Howard, appeared. It was proved that an inſurrection had been reſolved on, and the ſurpriſal of the king's guards taken into conſideration by the priſoner: but ſtill with regard to law, there remained an important difficulty. By an act paſſed after the reſtoration, it was indeed declared treaſon to conſult on a rebellion during Charles's life-time; but then it was required, that proſecution ſhould be commenced within ſix months of the commiſſion of the crime. The facts ſworn to by Rumſey and Sheppard were beyond that period; and to the other circumſtances, Howard was the only witneſs, though the law of Edward III. provided, that there ſhould be two in trials for treaſon. Ruſſel perceived this irregularity, and deſired to have the point argued by counſel; but the artificial confounding of two ſpecies of treaſon prevented him from gaining any thing by this plea. His veracity would not allow him to deny the conſpiracy for an inſurrection; but he ſolemnly proteſted that he had never entertained any deſign againſt the life of the king. The jury, however, brought him in guilty. The ſtrongeſt applications, with the moſt liberal offers of money to court favourites, were made by his father, the earl of Bedford, to ſave his life; but the king was inexorable.

Lady Ruſſel, daughter and heir of the earl of Southampton, a woman of the moſt exalted character, threw herſelf at the king's feet, and pleaded the ſervices of her father as an atonement for the error of her huſband. Her tears and entreaties too being neglected, ſhe ſummoned up all the fortitude of her ſoul, and even endeavoured by her example to ſtrengthen the reſolution of her unfortunate lord. With a tender and decent compoſure, they took leave of each other on the day of his execution. "The bitterneſs of death is now paſt," ſaid he, as he turned from her. Lord Cavendiſh, who was ſtrongly attached to Ruſſel, deſerted not his friend on this trying occaſion; he even offered to manage his eſcape by changing clothes with him, and running all hazards in his place. Monmouth too, by a meſſage, declared his readineſs to ſurrender himſelf, if that was likely to avail his unfortunate aſſociate. "It will be no advantage to me (ſaid Ruſſel) to have my friends die with me." To the laſt, he maintained the ſame dignified deportment—the ſame equanimity and mild compoſure which had diſtinguiſhed him through life; and, as he was the moſt popular among his own party, and moſt admired for his virtues even by the oppoſite faction, his melancholy fate united every heart ſenſible of humanity, in a tear of tender compaſſion for him.

Sir Algernon Sidney was next brought to trial. He had been deeply implicated in the civil wars; but a republic was his idol, and a king or a protector was equally the object of his averſion. Charles, however, had pardoned him for the part he took againſt his father; but now, having engaged in a new conſpiracy, he was condemned to die, perhaps not unjuſtly, but certainly illegally. Howard was again the only witneſs againſt him; but, as the law required two, a ſingular expedient was found to ſupply the deficiency. Among the priſoner's papers were found ſome diſcourſes on government, in which he maintained principles favourable indeed to liberty, but ſuch as could not have infringed any poſitive law, even had they been publiſhed. Theſe papers, however, were ſaid to be equivalent to a ſecond witneſs; and the violent and inhuman judge Jefferies eaſily prevailed on a prejudiced jury to give a verdict againſt Sidney. He died glorying in the "good old cauſe," in which, from his youth, he ſaid, he had enliſted himſelf.

As not even the ſhadow of a ſecond witneſs could be found againſt Hampden, he was only indicted for a miſdemeanour, and the exorbitant fine of forty thouſand pounds impoſed on him. On the day that lord Ruſſel was tried, Eſſex, a man eminent for virtue and abilities, was found in the Tower with his throat cut. Whether he fell by his own hands, or otherwiſe, has never been clearly aſcertained.

On the detection of this conſpiracy, A. D. 1684, loyal addreſſes arrived from all parts of the kingdom; and, in order to increaſe his preſent popularity, Charles judged it proper to give his niece, the lady Anne, in marriage to prince George of Denmark. But though Charles had thus recovered his former popularity, and was enabled to govern without a parliament, it is certain he was neither happy nor ſatisfied. The violent temper of the duke gave him conſtant apprehenſion and uneaſineſs. In oppoſing ſome of the duke's raſh counſels, he was heard one day to ſay, "Brother, I am too old to go again on my travels: you may, if you chooſe it."

It was evident the king had ſome important changes in contemplation; and it was ſtrongly believed that he intended to ſend the duke of York back to Scotland, to recal Monmouth, to aſſemble his parliament, and to diſmiſs his obnoxious miniſters; but amidſt theſe wiſe and virtuous deſigns, he was ſeized with an apoplectic fit, and after languiſhing a few days, he expired, in the fifty-fifth year of his age, and the twenty-fifth of his reign. Having always enjoyed a good conſtitution, his death begat the ſuſpicion of poiſon; but there does not appear to be any juſt grounds for ſuch a charge. On his death-bed, he ſhewed a total indifference to the devotions and exhortations of the clergy of the eſtabliſhed church, but readily received the ſacrament from the hands of catholic prieſts, and certainly died in the communion of Rome, though he appears to have ſupported the moſt voluptuous court in Europe, with little ſenſe of any religion whatever.

The character of Charles II. like the tranſactions of his reign, has aſſumed various appearances, in proportion to the paſſions and prejudices of different writers. To affirm that he was a great and good king, would be as unjuſt as to allege that he was deſtitute of all virtue, and a bloody and inhuman tyrant. The indolence of his diſpoſition, and the diſſipation occaſioned by his pleaſures, as they were at firſt the ſource of his misfortunes, became afterwards the ſafety of the nation. Had he joined the ambition

ambition of power, and the perſeverance and attention of his brother, to his own inſinuating and engaging addreſs, he might have ſecured his reputation with writers, by enſlaving them with the nation. In his perſon he was tall, and well made. His complexion was dark, the lines of his face ſtrong and harſh, when ſingly traced: but when his features were comprehended in one view, they appeared dignified and even pleaſing. In the motions of his perſon he was eaſy, graceful, and firm. His conſtitution was ſtrong, and communicated an active vigour to all his limbs. Though a lover of eaſe of mind, he was fond of bodily exercife. He roſe early, he walked much, he mixed with the meaneſt of his ſubjects, and joined in their converſation, without diminiſhing his own dignity, or raiſing their preſumption. He was acquainted with many perſons in the lower ſtations of life. He captivated them with ſprightly terms of humour, and with a kind of good-natured wit, which rendered them pleaſed with themſelves. His guards only attended him on public occaſions. He took the air frequently in company with a ſingle friend; and though crowds followed him, it was more from a wiſh to attract his notice, than from an idle curioſity. When evident deſigns againſt his life were daily exhibited before the courts of juſtice, he changed not his manner of appearing in public. It was ſoon after the Rye-houſe plot was diſcovered, he is ſaid to have been ſevere on his brother's character, when he exhibited a ſtriking feature of his own. The duke returning from hunting with his guards, found the king one day in Hyde Park. He expreſſed his ſurpriſe how his majeſty could venture his perſon alone at ſuch a perilous time. "James, (replied the king,) take you care of yourſelf, and I am ſafe. No man in England will kill me, to make you king."

When he was oppoſed with moſt violence in parliament, he continued the moſt popular man in the kingdom. His good-breeding, as a gentleman, overcame the opinion conceived of his faults as a king. His affability, his eaſy addreſs, his attention to the very prejudices of his people, rendered him independent of all the arts of his enemies to inflame the vulgar. He is ſaid, with reaſon, to have died opportunely for his country. Had his life extended to the number of years which the ſtrength of his conſtitution ſeemed to promiſe, the nation would have loſt all memory of their liberties; for the reſolution he finally made of conducting the government without the aid of parliament, was nothing leſs than to ſap the foundation of the conſtitution, which he had ſo ſacredly bound himſelf to maintain.

Charles II. had no iſſue by his queen; but his illegitimate offſpring was numerous. At the head of theſe was the duke of Monmouth, who made an unſucceſsful effort for the crown.

The duke of York, notwithſtanding all the ſtruggles of the whig party to prevent his ſucceſſion, aſcended the throne of his brother, A. D. 1685, by the title of king James II. His reign began with acts of imprudence. All the cuſtoms, and the greater part of the exciſe, that had been voted to the late king for his life only, were levied by James, without a new act for that purpoſe. He likewiſe went openly to maſs with all the enſigns of his dignity, and diſpatched Caryl to Rome, to make ſubmiſſions to the pope, and to pave the way for the re-admiſſion of England into the boſom of the catholic church. He had, long before the beginning of his reign, had an intrigue with Mrs. Sedley, whom he afterwards created counteſs of Dorcheſter; but being now told that, as he was to convert his people, the ſanctity of his manners ought to correſpond with his profeſſions, Mrs. Sedley was diſcarded, and he reſigned himſelf to the advice of the queen, who was as much governed by prieſts as himſelf. One day, when the Spaniſh ambaſſador ventured to adviſe his majeſty againſt placing too much confidence in ſuch kind of people,—"Is it not the cuſtom in Spain (ſaid James) for the king to conſult with his confeſſor?" "Yes (anſwered the ambaſſador), and that is the reaſon our affairs ſucceed ſo very ill." His firſt parliament, which was moſtly compoſed of zealous tories, were ſtrongly biaſſed to comply with the meaſures of the crown. They voted unanimouſly that they would ſettle on the preſent king, all the revenue enjoyed by his father. For this favour, James aſſured them of his reſolution to ſecure them in the full enjoyment of their laws; but no anſwer could be extorted from him with regard to the eſtabliſhed religion, he having always declared himſelf a catholic.

To pave the way for his intended converſion of the kingdom, it was neceſſary to undeceive the people with regard to the late rumour of a popiſh plot; and Oates, the contriver, was the firſt object of royal indignation. He was tried and convicted of perjury on two indictments. His ſentence was to pay a fine of two thouſand marks; to be whipped, on two different days, from Aldgate to Newgate, and from Newgate to Tyburn; to be impriſoned during life, and to be pillored five times every year. Oates, long accuſtomed to a life of infamy and ſtruggle, ſupported himſelf under every puniſhment that juſtice could inflict. Though the whipping was ſo cruel, that it appeared evidently the intention of the court to put him to death by that dreadful puniſhment, yet he ſurvived it all, and lived to king William's reign, when he had a ſettled penſion of four hundred pounds a year. Thus the memory of Oates caſts a ſtain upon the times in every part of his conduct. It is a ſtain that he was firſt believed—it is a ſtain that he was careſſed—that he was tyrannically puniſhed—and that he was afterwards rewarded for his infamy.

The duke of Monmouth, after the late conſpiracy, had retired to Holland. Being diſmiſſed from thence by the prince of Orange upon James's acceſſion, he went to Bruſſels, where, finding himſelf ſtill purſued by the king's ſeverity, he reſolved to retaliate, and make an attempt upon the kingdom. He had ever been regarded by the people; and ſome averred that Charles had married his mother, and owned Monmouth's legitimacy at his death. The duke of Argyle ſeconded his views in Scotland, and they formed the ſcheme of a double inſurrection; ſo that, while Monmouth ſhould attempt to make a ſtand in the weſt, Argyle was to try his ſtrength in the north. Argyle was the firſt who publiſhed his manifeſtoes, put himſelf at the head of two thouſand five hundred men, and ſtrove to influence the Scottiſh people in his cauſe. But a formidable body of the king's forces coming againſt him, his army fell away, and he himſelf, after being wounded in attempting to eſcape, was taken priſoner by a peaſant, who found him ſtanding up to his neck in a pool of water. He was from thence carried to Edinburgh, where, after enduring many indignities with a noble ſpirit, he was publicly executed. The fate of Argyle was but poor encouragement to the unfortunate Monmouth, who was by this time landed in Dorſetſhire, with ſcarcely a hundred followers. His name, however, was ſo popular, and ſo great was the hatred of the people both for the perſon and religion of James, that in four days he aſſembled a body of above two thouſand men. They were indeed all of them the loweſt of the people; and his declarations were ſuited entirely to their prejudices. He called the king the duke of York, and denominated him a traitor, a tyrant, a murderer, and a popiſh uſurper. He imputed to him the fire of London, the murder of Godfrey and Eſſex, and even the poiſoning the late king.

The parliament was no ſooner informed of Monmouth's landing, than they preſented an addreſs to the king, aſſuring him of their loyalty, zeal, and aſſiſtance. The duke of Albemarle, raiſing a body of four thouſand militia, advanced to block him up in Lyme; but finding his ſoldiers diſaffected to the king, he retreated with precipitation. In the mean time, the duke of Monmouth advanced to Taunton, where he was reinforced by conſiderable numbers. Twenty young maids of ſome rank preſented

preſented him with a pair of colours, accompanied with a copy of the Bible. There he aſſumed the title of king, and was proclaimed with great ſolemnity. His numbers had now increaſed to ſix thouſand men; and he was obliged every day, for want of arms, to diſmiſs many of thoſe who crowded to his ſtandard. He entered Bridgewater, Wells, and Frome, and was proclaimed in all thoſe places; but he loſt the ſeaſon of action, by receiving and claiming theſe empty honours.

The king was not a little alarmed at his invaſion; but ſtill more at the ſucceſs which appeared to attend him. Six regiments of Britiſh troops were called over from Holland, and a body of regulars, to the number of three thouſand men, were ſent, under the command of the earl of Feverſham, to check the progreſs of the rebels. They took poſt at Sedgemore, a village in the neighbourhood of Bridgewater, and were joined by the militia of the country in conſiderable numbers. It was there that Monmouth reſolved, by a deſperate effort, to loſe his life, or gain the kingdom. The negligent diſpoſition made by Feverſham invited him to the attack; and his faithful followers ſhewed what courage and principle could do againſt diſcipline and ſuperior numbers. They drove the royal infantry from their ground, and were upon the point of gaining the victory, when the miſconduct of Monmouth, and the cowardice of lord Gray, who commanded the horſe, brought all to ruin. This nobleman fled ſoon after the firſt onſet; and the rebels, being charged in flank by the king's army, gave way, after three hours' conteſt. About three hundred were killed in the engagement, and a thouſand in the purſuit; and thus ended an enterpriſe raſhly begun, and indolently conducted.

Monmouth rode from the field of battle till his horſe ſunk under him; he then exchanged clothes with a ſhepherd, fled on foot, attended by a German count, who had accompanied him from Holland. Being quite exhauſted with hunger and fatigue, they both lay down in a field, and covered themſelves with fern. The ſhepherd being found in Monmouth's clothes by the purſuers, increaſed the diligence of the ſearch: and, by the means of blood-hounds, he was traced to his miſerable ſituation, with raw peaſe in his pocket, which he had gathered in the fields to ſuſtain life. He burſt into tears when ſeized by his enemies, and petitioned, with abject ſubmiſſion, for life. He wrote the moſt ſubmiſſive letters to the king; and that monarch, willing to feaſt his eyes with the miſeries of a fallen enemy, gave him audience. At this interview the duke fell upon his knees, and begged his life in the moſt pathetic terms. He even ſigned a paper, offered him by the king, declaring his own illegitimacy; and then the ſtern tyrant aſſured him, that his crime was of ſuch a nature as could not be pardoned. The duke, perceiving that he had nothing to hope from the clemency of his uncle, recollected his ſpirits, roſe up, and retired with an air of diſdain. He was followed to the ſcaffold with great compaſſion from the populace. He warned the executioner not to fall into the ſame error which he had committed in beheading lord Ruſſel, where it had been neceſſary to redouble the blow. But this only increaſed the ſeverity of his puniſhment; the man was ſeized with an univerſal trepidation, and he ſtruck a feeble blow; upon which the duke raiſed his head from the block, as if to reproach him: he gently laid down his head a ſecond time, and the executioner ſtruck again and again to no purpoſe. He at laſt threw down the axe; but the ſheriff compelled him to reſume the attempt, and at two blows more the head was ſevered from the body. Such was the unfortunate end of James duke of Monmouth. He was brave, ſincere, and good-natured, open to flattery, and conſequently ſeduced into an enterpriſe which exceeded his capacity.

But it had been well for the cauſe of humanity, if the blood thus ſhed had been thought a ſufficient expiation for the late offence. The victorious army behaved with the moſt ſavage cruelty to the priſoners taken after the battle. Feverſham immediately hung up above twenty priſoners; and was proceeding in his executions, when the biſhop of Bath and Wells warned him that theſe unhappy men were by law entitled to a trial, and that their execution would be deemed a real murder. Nineteen were put to death in the ſame manner at Bridgewater, by colonel Kirke, a man of a ſavage and bloody diſpoſition. This vile fellow, practiſed in the arts of ſlaughter at Tangier, where he ſerved in garriſon, took a pleaſure in committing every kind of wanton barbarity. He ordered a certain number of the priſoners to be put to death, while he and his company were drinking the king's health. Obſerving their feet to ſhake in the agonies of death, he cried that they ſhould have muſic to their dancing, and ordered the trumpets to ſound. He ravaged the whole country, without making any diſtinction between friend or foe. His own regiment, for their peculiar barbarity, went by the name of Kirke's Lambs. A ſtory is told of his offering a young woman the life of her brother, in caſe ſhe conſented to his deſires, which, when ſhe had done, he took her to the window, and ſhewed her her brother hanging!

Yet theſe infamous ſeverities of the military were trivial, when compared with the ſlaughters committed by judge Jefferies, who was ſent down to try the delinquents. The natural brutality of this man's temper was inflamed by continual intoxication. He told the priſoners, that if they would ſave him the trouble of trying them, they might expect ſome favour, otherwiſe he would execute the law upon them with the utmoſt ſeverity. Many poor wretches were thus allured into a confeſſion, and found that it only haſtened their deſtruction. No leſs than eighty were executed at Dorcheſter; and, on the whole, at Exeter, Taunton, and Wells, two hundred and fifty-one are computed to have fallen by the hand of this inhuman judge. Women were not exempted from the general ſeverity, but ſuffered for harbouring their neareſt kindred. Lady Liſle, though the widow of a regicide, was herſelf a loyaliſt. She was apprehended for having ſheltered in her houſe two fugitives from the battle of Sedgemore. She proved that ſhe was ignorant of their crime when ſhe had given them protection, and the jury ſeemed inclined to compaſſion: they twice brought in a favourable verdict; but they were as often ſent back by Jefferies, with menaces and reproaches, and at laſt were conſtrained to give a verdict againſt the priſoner. But the fate of Mrs. Gaunt was ſtill more terrible. Mrs. Gaunt was noted for her beneficence, which ſhe had extended to perſons of all profeſſions and perſuaſions. One of the rebels, knowing her humane character, had recourſe to her in his diſtreſs, and was concealed by her. The abandoned villain, hearing that a reward and indemnity was offered to ſuch as informed againſt criminals, came in, and betrayed his protectreſs. His evidence was inconteſtable; the proofs were ſtrong againſt her; he was pardoned for his treachery, and ſhe burned alive for her benevolence! Jefferies, on his return from this bloody inquiſition, was created a peer, and inveſted with the dignity of chancellor.

The next ſtep, A. D. 1686, was to ſecure a catholic intereſt in the privy council. Accordingly, four catholic lords were admitted; Powis, Arundel, Bellaſis, and Dover. The king made no ſecret of his deſires to have his courtiers converted to his own religion. In theſe ſchemes, James was entirely governed by the counſels of the queen and of his confeſſor, father Peters, a jeſuit, whom he created a privy-counſeller. Even in Ireland, where the duke of Ormond had long ſupported the royal cauſe, this nobleman was diſplaced, as being a proteſtant; and lord Tyrconnel, a violent Roman-catholic, was appointed in his ſtead. The king, in his zeal to convert his ſubjects, ſtooped ſo low as to aſk colonel Kirke; but this daring ſoldier told him that he was pre-engaged; for he had promiſed the king of Morocco, when he was quartered at Tangiers, that, if he ever changed his religion, he would turn Mahometan.

It

It could not be expected that the favour thus ſhewn by James to the catholics, would be tamely borne by the members of the Engliſh church. Among thoſe who firſt came forward on this occaſion, was Dr. Sharpe, a clergyman of London, who declaimed with great ſeverity againſt thoſe who had changed their religion for the ſake of earthly preferment. This, being ſuppoſed to reflect upon the king, gave great offence at court; and poſitive orders were given to the biſhop of London to ſuſpend Sharpe, till his majeſty's pleaſure ſhould be further known. The biſhop refuſed to comply; and the king reſolved to puniſh him for diſobedience. To effect his purpoſe, he determined to revive the high-commiſſion court, which had given the nation ſo much diſguſt in the times of his father, and which had been for ever aboliſhed by act of parliament. But this was no obſtacle to James. An eccleſiaſtical commiſſion was iſſued, by which ſeven commiſſioners were inveſted with an unlimited authority over the whole church of England. Before this tribunal, the biſhop and Sharpe being ſummoned, they were both ſuſpended.

Theſe ſevere meaſures had ſufficiently diſguſted every part of the Britiſh empire; but to complete the work, James now ſent the earl of Caſtlemain ambaſſador-extraordinary to Rome, to expreſs his obedience to the pope, and to reconcile his kingdoms to the catholic communion. This failed not to add to the general diſcontent; and the people ſuppoſed that he could never be ſo raſh as, contrary to expreſs act of parliament, to admit of a communication with the pope. But what was their ſurpriſe, when they ſaw the nuncio make his public and ſolemn entry into Windſor: and becauſe the duke of Somerſet refuſed to attend the ceremony, he was diſmiſſed from his employment of one of the lords of the bedchamber. The jeſuits were now permitted to erect colleges in different parts of the kingdom; they exerciſed the catholic worſhip in the moſt public manner; and four catholic biſhops, conſecrated in the king's chapel, were ſent through the kingdom to exerciſe their epiſcopal functions, under the title of apoſtolic vicars. The monks appeared at court in the habits of their orders, and a great number of prieſts and friars arrived in England. Every great office the crown had to beſtow was gradually transferred from the proteſtants; Rocheſter and Clarendon, the king's brothers in law, though they had been for ever faithful to his intereſts, were, becauſe proteſtants, diſmiſſed from their employments. Nothing now remained but to open the doors of the church and the univerſities to the intruſion of the catholics, and this effort was ſoon after begun.

Father Francis, a Benedictine monk, was recommended by the king to the univerſity of Cambridge, for the degree of maſter of arts. But his religion was a ſtumbling-block which the univerſity could not get over; and they preſented a petition, beſeeching the king to recal his mandate. Their petition was diſregarded, their deputies denied a hearing: the vice-chancellor himſelf was ſummoned to appear before the high-commiſſion court, and deprived of his office; yet the univerſity perſiſted, and father Francis was refuſed. The king, thus foiled, thought proper at that time to drop his pretenſions; but he carried on his attempts upon the univerſity of Oxford with ſtill greater vigour. The place of preſident of Magdalen-college, one of the richeſt foundations in Europe, being vacant, the king ſent a mandate in favour of one Farmer, a new convert, and a man of a bad character in other reſpects. The fellows of the college made very ſubmiſſive applications to the king for recalling his mandate; but before they received an anſwer, the day came on which, by their ſtatutes, they were required to proceed to an election. They therefore choſe doctor Hough, a man of learning, integrity, and reſolution. The king was incenſed at their preſumption; and, in order to puniſh them, an inferior eccleſiaſtical court was ſent down, who, finding Farmer a man of ſcandalous character, iſſued a mandate for a new election. The perſon now recommended by the king was doctor Parker, lately created biſhop of Oxford, for his willingneſs to embrace the catholic religion. The fellows refuſed to comply with this injunction; which ſo incenſed the king, that he went in perſon to Oxford, and ordered the fellows to be brought before him. He reproached them with their inſolence and diſobedience in the moſt imperious terms; and commanded them to chooſe Parker without delay. Another refuſal on their ſide ſerved ſtill more to exaſperate him; and finding them reſolute in the defence of their privileges, he ejected them all, except two, from their benefices, and Parker was put in poſſeſſion of the place. Upon this the college was filled with catholics; and Charnock, who was one of the two that remained, was made vice-preſident.

Every invaſion of the eccleſiaſtical and civil privileges of the nation only ſeemed to increaſe the king's ardour for more. A freſh declaration for liberty of conſcience was publiſhed, A. D. 1688; and it was required that all divines ſhould read it after ſervice in their churches. As he thus put it in the power of thouſands to refuſe, he armed againſt himſelf the whole body of the nation. The clergy were known univerſally to diſapprove of the ſuſpending power; and they were now reſolved to diſobey an order dictated by the moſt bigoted motives. They were determined to truſt their cauſe to the favour of the people, and that univerſal jealouſy which prevailed againſt the encroachments of the crown. The firſt champions in this ſervice were, Lloyde biſhop of St. Aſaph, Ken of Bath and Wells, Turner of Ely, Lake of Chicheſter, White of Peterborough, and Trelawney of Briſtol; theſe, together with Sancroft the primate, concerted an addreſs, in the form of a petition, to the king; which, with the warmeſt expreſſions of zeal and ſubmiſſion, remonſtrated that they could not read his declaration conſiſtently with their conſciences, or the reſpect they owed the proteſtant religion. This modeſt addreſs, however, ſerved to inflame the king's reſentment. He received their petition with marks of ſurpriſe and diſpleaſure. He ſaid he did not expect ſuch an addreſs from the Engliſh church, particularly from ſome among them, and perſiſted in their obeying his mandate. The biſhops left his preſence under ſome apprehenſions from his fury, but ſecure in the favour of the people, and the rectitude of their intentions.

As the petition was delivered in private, the king ſummoned the biſhops before the council, and there queſtioned them whether they would acknowledge it? They for ſome time declined giving an anſwer; but being urged by the chancellor, they at laſt owned the petition. On their refuſing to give bail, an order was immediately drawn for their commitment to the Tower; and the crown-lawyers received directions to proſecute them for a ſeditious libel. The twenty-ninth of June was the day fixed for their trial. Twenty-nine peers, a great number of gentlemen, and an immenſe crowd of people, waited upon them to Weſtminſter hall. The cauſe was looked upon as involving the fate of the nation; and future freedom, or future ſlavery, awaited the deciſion. The diſpute was learnedly managed by the lawyers on both ſides. Holloway and Powel, two of the judges, declared themſelves in favour of the biſhops. The jury withdrew into a chamber, where they paſſed the whole night, but next morning they returned into court, and pronounced the biſhops "Not guilty." Weſtminſter hall inſtantly rang with loud acclamations, which were communicated to the whole extent of the city. They even reached the camp at Hounſlow, where the king was at dinner in lord Feverſham's tent. His majeſty demanding the cauſe of thoſe rejoicings, and being informed that it was nothing but the ſoldiers ſhouting at the delivery of the biſhops; "Call you that nothing? (cried he;) but ſo much the worſe for them."

James now ſtruck off the judges Powel and Holloway

from the liſt, becauſe they had favoured the biſhops. He iſſued orders to proſecute all thoſe clergymen who had not read his declaration; and all had refuſed it except two hundred. He ſent a mandate to the new fellows, whom he had obtruded on Magdalen college, to elect for preſident, in the room of Parker, lately deceaſed, one Gifford, a doctor of the Sorbonne, and titular biſhop of Madura. A circumſtance of rejoicing now alſo happened in his family: the queen was brought to bed of a ſon, who was baptiſed by the name of James. But ſo great was the public animoſity againſt the king, that a ſtory was propagated that the child was ſuppoſititious, and brought to the queen's apartment in a warming-pan; a calumny which James never thought worthy of a ſerious refutation.

William, prince of Orange, had married Mary, the eldeſt daughter of the preſent king. This princeſs had been bred a proteſtant; and, as ſhe was for a long time heir-apparent to the crown of England, the people tamely bore the encroachments of the king, in hopes that his proteſtant ſucceſſor would rectify thoſe meaſures he had taken towards the eſtabliſhment of popery, and his extenſion of the prerogatives of the crown. For this reaſon, the prince had been accuſtomed to give the king not only advice, but aſſiſtance in all emergencies, and had actually ſupplied him with ſix thouſand troops upon Monmouth's invaſion. But now, when a prince was born, that entirely excluded his hopes by ſucceſſion, he lent more attention to the complaints of the nation, and began to foment thoſe diſcontents which before he had endeavoured to ſuppreſs. This politic prince, finding that James had really incurred the moſt violent hatred of his ſubjects, diſpatched Dykevelt, his envoy, to England, A. D. 1688, with inſtructions to apply ſecretly in his name to every ſect and denomination in the kingdom. Dykevelt executed his commiſſion with ſuch dexterity, that all orders of men caſt their eyes towards Holland, and expected from thence a deliverance from thoſe dangers with which they were threatened at home. The prince thus found that every rank was ripe for defection, and received invitations from ſome of the moſt conſiderable perſons in the kingdom. Admirals Herbert and Ruſſel aſſured him in perſon of their own and the national attachment. Henry Sidney, brother to Algernon, and uncle to the earl of Sunderland, came over to him with aſſurances of an univerſal combination againſt the king. Lord Dumblaine, ſon of the earl of Danby, being maſter of a frigate, made ſeveral voyages to Holland, and carried from many of the nobility tenders of duty, and of conſiderable ſums of money. The biſhop of London, the earls of Danby, Nottingham, Devonſhire, Dorſet, with ſeveral other lords, gentlemen, and prineipal citizens, united in their addreſſes to him, and entreated his ſpeedy deſcent. The people of England, though long divided between whig and tory, were unanimous in their meaſures againſt the king. The whigs hated him upon principles of liberty, the tories upon principles of religion. The former had ever ſhewn themſelves tenacious of their political rights; the latter were equally obſtinate in defence of their religious tenets. James had invaded both; ſo that for a time all factions were laid aſleep, except the general one of driving the tyrant from a throne, which upon every account he was ſo ill qualified to fill. William determined to accept the invitations of the kingdom; and ſtill more readily embarked in the cauſe, as he ſaw that the malcontents had conducted their meaſures with prudence and ſecrecy.

The time when the prince entered upon his enterpriſe was juſt when the people were in a flame from the recent inſult offered to their biſhops. He had before this made conſiderable augmentations to the Dutch fleet, and the ſhips were then ready in the harbour. Some additional troops were alſo levied, and monies raiſed for other purpoſes were converted to the advancement of this expedition. The Dutch had always repoſed an entire confidence in him; and many of the neighbouring princes regarded him as their guardian and protector. He was ſure of the aſſiſtance of his native government; and the troops of ſome of the German powers were actually marched down to Holland to join him. Every place was in motion; all Europe ſaw and expected the deſcent, except the unfortunate James himſelf, who, ſecure in the piety of his intentions, thought nothing could obſtruct his ſchemes, calculated to promote the cauſe of heaven.

The king of France was the firſt who appriſed him of his danger, and offered to aſſiſt him in repelling it. He was willing to join a ſquadron of French ſhips to the Engliſh fleet, and to ſend over any number of troops which he ſhould deem requiſite for his ſecurity. James, however, could not be convinced that his ſon-in-law intended an invaſion; he therefore rejected the French king's propoſal, unwilling perhaps to call in foreign aid, when he had an army which he thought ſufficient at home. Still Louis was unwilling to abandon a friend and ally, whoſe intereſt he regarded as cloſely connected with his own. He ventured to remonſtrate with the Dutch againſt the preparations they were making to invade England. The Dutch conſidered his remonſtrance as an officious impertinence, and James himſelf declined his mediation.

James, having thus rejected the aſſiſtance of his friends, and being left to face the danger alone, was aſtoniſhed with advice from his miniſter in Holland, that an invaſion of England was not only projected, but really carrying into execution. When he firſt read the information, he grew pale, and the letter dropt from his hand. He ſaw the gulf into which he was fallen, and he knew not where to ſeek for protection. His only reſource was in retreating from thoſe various precipitate meaſures into which he had plunged himſelf. He replaced in all the counties the deputy-lieutenants and juſtices, who had been deprived of their commiſſions for their adherence to the teſt and penal laws. He reſtored the charters of ſuch corporations as he had violently taken away; he annulled the high commiſſion court; he reinſtated the expelled preſident and fellows of Magdalen-college; and he was even reduced to careſs thoſe biſhops whom he had ſo lately perſecuted and inſulted. But it was now too late. Theſe conceſſions were regarded as the ſymptoms of fear, and not of repentance; as the cowardice of guilt, and not the conviction of error. Indeed, he ſoon proved to the people the inſincerity of his engagements; for, hearing that the Dutch fleet was diſperſed, he recalled thoſe conceſſions which he had made in favour of Magdalen-college; and to ſhew his attachment to the Romiſh church, at the baptiſm of his new-born ſon, he appointed the pope one of the ſponſors.

In the mean time the declaration of the prince of Orange was induſtriouſly diſperſed throughout England. In this he enumerated all the grievances of which the nation complained; he promiſed his aſſiſtance in redreſſing them; he aſſured the nation that his only aim was to procure the laſting eſtabliſhment of their liberty and their religion; and that the only motive of his coming over was to learn the ſenſe of the people in a full and free parliament. This declaration was quickly followed by preparations for a vigorous invaſion. So well concerted were his meaſures, that in three days above four hundred tranſports were hired, the army tell down the rivers and canals from Nimeguen, with all neceſſary ſtores; and the prince ſet ſail from Helvoetſluys with a fleet of near five hundred veſſels, and an army of above fourteen thouſand men. Fortune ſeemed at firſt every way unfavourable to his views. He encountered a dreadful ſtorm, which put him back; but he ſoon refitted his fleet, and once more ventured to the Engliſh ſhore. It was given out that this invaſion was intended for the coaſts of France; and many of the Engliſh who ſaw the fleet paſs along their coaſts, little expected to ſee it land. It happened that the ſame wind which ſent them to their deſtined port, detained

detained the Engliſh fleet in the river; ſo that the Dutch paſſed the ſtreights of Dover without moleſtation. Thus, after a voyage of two days, the prince landed his army at Torbay, on the fifth of November, 1688, the anniverſary of the gunpowder-plot.

But though the invitation from the Engliſh was very general, the prince for ſome time had the mortification to find himſelf joined by very few. He marched firſt to Exeter, where the country people had been ſo lately terrified with the executions which had enſued on Monmouth's rebellion, that they continued to obſerve a ſtrict neutrality. But ſlight repulſes were not able to intimidate a general who had, from his early youth, been taught to encounter difficulties. The firſt perſon who joined the prince was major Burrington, and he was quickly followed by the principal people of the counties of Devon and Somerſet. Sir Edward Seymour made propoſals for an aſſociation, which every one ſigned. By degrees the earl of Abingdon, Mr. Ruſſel, ſon to the earl of Bedford, Mr. Wharton, Godfrey, Howe, all came to Exeter. England was in commotion. Lord Delamere took up arms in Cheſhire; the earl of Danby ſeized York; the earl of Bath, governor of Plymouth, declared for the prince; the earl of Devonſhire made a like declaration in Derby; the nobility of Nottingham embraced the ſame cauſe; and every day gave new ſtrength to that univerſal combination into which the nation had entered againſt the meaſures of the king.

But the moſt dangerous ſyſtem was the diſaffection of the army, which ſeemed univerſally tinctured with the ſpirit of the times. Lord Colcheſter, ſon of the earl of Rivers, was the firſt officer who deſerted to the prince. Lord Lovelace was taken in the like attempt by the militia, under the duke of Beaufort. Lord Cornbury, ſon to the earl of Clarendon, carried off the greateſt part of three regiments of cavalry to the prince. Several officers of diſtinction informed Feverſham, the general, that they could not in conſcience fight againſt the prince of Orange. The defection of the officers was followed by that of the king's own ſervants and creatures. Lord Churchill had been raiſed from the rank of a page, and had been inveſted with a high command in the army; had been created a peer, and owed his whole fortune to the king's bounty; even he deſerted among the reſt, and carried with him the duke of Grafton, natural ſon to the late king, colonel Berkeley, and ſome others.

In this general defection the unfortunate James, not knowing where to turn, nor on whom to rely, began to think of requeſting aſſiſtance from France, when it was too late. He wrote to Leopold, emperor of Germany, but in vain. That monarch only returned for anſwer, that what he had foreſeen, had happened. James had ſome dependence on his fleet; but they were entirely diſaffected. In a word, his intereſts were deſerted by all; for he had long deſerted them himſelf. James, however, marched to Saliſbury, at the head of twenty thouſand men. It is poſſible that, had he led theſe to the combat, without granting them time for deliberation, they might have fought in his favour, and ſecured him on the throne. But he was involved in a maze of fears and ſuſpicions; the defection of thoſe he moſt confided in took away his confidence in all, and deprived him even of the power of fortitude or courage. It was no ſmall addition to his preſent diſtreſs, that the prince of Denmark, and Anne, his favourite daughter, perceiving the deſperation of his circumſtances, reſolved to leave him, and take part with the prevailing ſide. When he was told that the prince and princeſs had followed the reſt of his favourites, he was ſtung with the moſt bitter anguiſh: "God help me, (cried he, in the extremity of his feelings;) my own children have forſaken me!" In this perplexity he embraced a ſudden reſolution of drawing off his army, and retiring to London; a meaſure which could only ſerve to betray his fears, and encourage further defection. He now aſſembled the few noblemen who adhered to his intereſt, formed a council, and demanded the advice of thoſe he moſt confided in. Addreſſing himſelf to the earl of Bedford, father to lord Ruſſel, who had been executed in the former reign by the intrigues of James, "My lord, (ſaid the king,) you are an honeſt man, and can do me ſignal ſervice."—"Ah, ſir! (replied the earl,) I am old and feeble; I can do you but little ſervice. I had indeed a ſon!" James was ſo ſtruck with this reply, that he could not ſpeak for ſome minutes. The king's fortune now expoſed him to the contempt of his enemies; and his behaviour was ſuch as could not procure him the eſteem of his adherents. He was naturally timid: and ſome counſellors about him, either ſharing his fears, or ſecretly attached to the prince, contributed to increaſe his apprehenſions. They reminded him of the fate of his father, and aggravated the turbulence and inconſtancy of the people. They at length perſuaded him to fly from a nation he could no longer govern, and ſeek for refuge at the court of France, where he was ſure of aſſiſtance and protection.

The prince of Orange was no leſs deſirous of the king's retiring to France than his moſt zealous counſellors could be. He was therefore determined to uſe every expedient to intimidate James, and drive him out of the kingdom. He declined a perſonal conference with the king's commiſſioners, but ſent the earls of Clarendon and Oxford to treat with them. The terms which he propoſed implied almoſt a preſent participation of the ſovereignty; and to urge his meaſures, he ſtopped not a moment in his march towards London. The king, alarmed every day more and more with the proſpect of a general diſaffection, was reſolved to hearken to thoſe who adviſed his quitting the kingdom. To prepare for this he firſt ſent away the queen, who arrived ſafely at Calais, under the conduct of count Lauzun. He himſelf diſappeared in the night, attended only by ſir Edward Hales; and, diſguiſing himſelf in a plain dreſs, went down to Feverſham, where he embarked on-board a ſmall veſſel for France. But his misfortunes ſeemed to purſue him. The veſſel in which he had embarked was detained by the populace, who not knowing the perſon of the king, robbed, inſulted, and abuſed him. He was now perſuaded by the earl of Winchelſea to return to London; where the mob, moved by his diſtreſſes, and guided by their natural levity, received him, contrary to his expectations, with ſhouts and acclamations.

Nothing could more completely diſconcert the prince of Orange, than to hear that James was brought back triumphantly to his capital. He had before taken meaſures to ſeize upon that authority which the king's dereliction had put into his hands. The biſhops and peers, who were now the only authoriſed magiſtrates in the ſtate, gave directions, in the preſent diſſolution of government, for keeping the peace of the city. They iſſued orders, which were readily obeyed, to the fleet, the garriſons, and the army. They made applications to the prince, whoſe enterpriſe they highly applauded, and whoſe ſucceſs they joyfully congratulated. It was not, therefore, without extreme mortification, that he found the king returned to embarraſs his proſpects. The prince of Orange, however, determined to diſſemble, and received the news of his return with a haughty air. His aim from the beginning was to puſh him by threats and ſeverities to relinquiſh the throne; and his proceedings manifeſted the refined politician. The king having ſent lord Feverſham on a civil meſſage to the prince, deſiring a conference previous to the ſettlement of the throne, that nobleman was put under an arreſt, on pretence of his wanting a paſſport. The Dutch guards were ordered to take poſſeſſion of Whitehall, where the king then lodged, and to diſplace the Engliſh. The king was ſoon after commanded by a meſſage, which he received in bed at midnight, to leave his palace next morning, and to depart for Ham, a ſeat of the ducheſs of Lauderdale's. He deſired permiſſion to retire to Rocheſter, a town not far from the ſea-coaſt,

and oppofite France. This was readily granted him; and it was now perceived that the harfh meafures of the prince had taken effect, and that James was meditating an efcape from the kingdom.

The king, while he continued at Rocheſter, ſtill hoped to receive invitations to reſume the crown; but at length finding himſelf entirely neglected by his ſubjects, and oppreſſed by his ſon-in-law, he reſolved to ſeek ſafety from the king of France, the only friend he had remaining. He ſet off, attended by his natural ſon, the duke of Berwick, to Dover, where he embarked for the continent. He arrived in ſafety at Ambleteuſe in Picardy, from whence he haſtened to the court of Francc, where he ſtill enjoyed the empty title of a king, and the appellation of a ſaint, which flattered him more.

Thus ended the reign of James II. a prince who in his early years poſſeſſed courage and activity, and who, had he not been the ſlave of ſuperſtition, might have ſhone with glory in the annals of this country. In domeſtic life he was reſpectable, if not irreproachable; and even while he was ſacrificing every thing to the advancement of popery, his frugality of the public money, and his attention to the national honour, were highly commendable. But he wanted qualities for which no compenſation could be made: he diſregarded the eſtabliſhed religion and the conſtitution of his country; in principle he was a deſpot and a bigot, and his abdication of the throne, and conſequent excluſion, have proved the happineſs of Great Britain.

Thus, with very little effuſion of blood, the prince of Orange was left without a rival; but a difficult taſk ſtill remained, to obtain for himſelf the crown which had fallen from the head of his father-in-law. It would have been deſtructive to the principles of liberty which he profeſſed to eſtabliſh, had he claimed it by right of conqueſt. His good ſenſe, therefore, determined him to leave the ſettlement of this important affair to the guidance and direction of the nation. All the members who had ſitten in the houſe of commons during any part of the reign of Charles II. were invited to meet, and to them were added the mayor, aldermen, and fifty of the common-council of London. Theſe unanimouſly concurred with the lords in ſummoning a convention, and the prince, thus ſupported, iſſued a proclamation to the counties and corporations of England. In regard to Scotland, he adopted the ſame wiſe and prudent maxims; and the convention aſſembled in that kingdom, by a bold and deciſive vote, declared that James had forfeited all title to the crown, and made a tender of the royal dignity to the prince and princeſs of Orange.

In the Engliſh convention, which aſſembled A.D. 1689, it was evident that the whig party prevailed, and the commons ſent up a vote to the peers couched in theſe words, "That king James II. having endeavoured to ſubvert the conſtitution of the kingdom, by breaking the original contract between the king and the people; and having, by the advice of jeſuits and other wicked perſons, violated the fundamental laws, and withdrawn himſelf out of the kingdom, has ABDICATED the government, and that the throne is thereby vacant."

This vote, however, met with conſiderable oppoſition in the upper houſe, and the whigs and tories canvaſſed every expreſſion with that logical acumen which ſuch a weighty ſubject demanded. At laſt the tories prevailed ſo far as to carry the omiſſion of the laſt clauſe, which declared the throne vacant; but the commons ſtill inſiſted on their original vote, and ſome peers deſerting to the whig intereſt, it was ultimately eſtabliſhed by both houſes. During theſe debates the prince had maintained a reſpectful ſilence; but at laſt, finding that ſome were for appointing a regent, and that others propoſed to place the crown on the head of Mary alone, he took an opportunity of declaring, that though he would not interfere in their deliberations, it was neceſſary to appriſe them that he was determined not to be regent, nor would he accept a crown which muſt depend on the life or will of another; and therefore, if they were inclined to either of theſe two plans, it would be wholly out of his power to give them any further aſſiſtance.

The moderation of the princeſs ſeconded the views of her huſband, and the princeſs Anne agreeing to be poſtponed in the ſucceſſion till after the death of both, facilitated the public ſettlement. The principal parties concerned being thus agreed, the convention paſſed a bill, ſettling the crown on the prince and princeſs of Orange, the ſole adminiſtration to remain in the former, and that the princeſs Anne and her iſſue, in caſe they ſhould have none, ſhould ſucceed in order, after the demiſe of both. To this ſettlement the convention annexed a declaration of rights, in which the powers of royal prerogative were more narrowly circumſcribed, and more exactly defined, than at any former period, and which may be juſtly regarded as the charter of Engliſh liberty, and forms a remarkable epoch in its political hiſtory.

James II. died in France in 1710, aged ſixty-eight. He wrote Memoirs of his own life and campaigns to the reſtoration; the original of which was preſerved in the Scotch college at Paris. This piece is printed at the end of Ramſay's life of Marſhal Turenne. 2. Memoirs of the Engliſh Affairs, chiefly naval, from the year 1660 to 1673. 3. The Royal Sufferer, King James II. conſiſting of meditations, ſoliloquies, vows, &c. ſaid to be compoſed by his majeſty at St. Germain's. 4. Three Letters; publiſhed by Fuller, in 1702, with other papers relating to the court of St. Germain's, and are ſaid in the title page to be printed by command. James II. left iſſue by Anne Hyde, daughter of the earl of Clarendon, eight children, of whom only two ſurvived: Mary, who with William III. ſucceeded him on the throne; Anne, who ſucceeded as queen of England on the death of William. Anne Hyde died March 31, 1671; and James, in 1673, married Mary of Modena, by whom he had a daughter, Louiſa, born in France in 1692, who died in 1712. He had four natural children: James Fitz-James, commonly called the duke of Berwick; he became a grandee of Spain and marſhal of France; Henry Fitz-James, commonly called the grand prior, born in 1673, became lieutenant-general and admiral of the French galleys, and died in France, Dec. 7, 1702; Henrietta, who married lord Waldegrave: and Catharine Darnley, who became ducheſs of Buckingham.

FROM THE ACCESSION OF THE HOUSE OF NASSAU TO THE DEATH OF QUEEN ANNE.

William III. ſon of William, prince of Orange, of the illuſtrious houſe of Naſſau, mentioned by Cæſar in his Commentaries, aſcended the throne of England, February 13, 1689. As his ſucceſſion to the crown originated from the choice of the people, they of courſe made whatever ſtipulations they thought requiſite for their ſecurity. His power was limited on every ſide; and the jealouſy which his new ſubjects entertained of foreigners, further obſtructed the full exerciſe of his authority. The repreſentatives of the nation made a formal claim of rights in behalf of their conſtituents, which, previous to his coronation, William was obliged to confirm. This declaration of rights maintained that the ſuſpending and diſpenſing powers, as exerciſed by king James, were unconſtitutional; that all courts of eccleſiaſtical commiſſion, the levying money, or maintaining a ſtanding army in times of peace, without conſent of parliament; that grants of fines and forfeitures before conviction, and juries of perſons not qualified, or not fairly choſen, and in trials for treaſon, who were not freeholders, were all unlawful. It aſſerted the freedom of election to parliament, the freedom of ſpeech in parliament, and the right of the ſubject to bear arms, and to petition his ſovereign. It provided, that exceſſive bails ſhould not be required, nor exceſſive fines be impoſed, nor cruel and unuſual puniſhments be inflicted; and it concluded with an injunction

that

that parliaments ſhould be frequently aſſembled. Such was the bill of rights, calculated to ſecure the liberties of the people; but having been drawn up in a ferment, it bears all the marks of haſte, inſufficiency, and inattention.

William was no ſooner elected to the throne, than he began to experience the difficulty of governing a people who were more ready to examine the commands of their ſuperiors than to obey them. His reign commenced with an attempt ſimilar to that which had been the principal cauſe of all the late diſturbances, and which had excluded James from the throne. William was a Calviniſt, and conſequently averſe to perſecution; he, therefore, began by attempting to repeal thoſe laws that enjoined uniformity of worſhip; and though he could not entirely ſucceed in his deſign, a toleration was granted to ſuch diſſenters as ſhould take the oaths of allegiance, and hold no private conventicles. The papiſts themſelves, who had every thing to fear, experienced the lenity of his government; and though the laws againſt them were unrepealed, yet they were ſeldom put into rigorous execution. Thus, what was criminal in James became virtuous in his ſucceſſor; and while James wanted to introduce perſecution, by pretending to diſown it, William had no other deſign but to make religious freedom the teſt of civil ſecurity.

While William was acknowledged king in England, Scotland and Ireland remained ſtill undecided. The revolution in England had been brought about by a coalition of whigs and tories; but in Scotland it was effected by the whigs alone. They ſoon came to a reſolution, that king James had, to uſe their own expreſſion, *forfaulted* his right to the crown, a term which, in the law-language of that country, excluded not only him, but all his poſterity. They, therefore, recogniſed the authority of king William, A.D. 1689, and took that opportunity to aboliſh epiſcopacy, which had long been offenſive to that nation. Nothing now remained to the depoſed king, of all his former poſſeſſions, but Ireland; and he had ſome hopes of maintaining his ground there, by the aſſiſtance of France. Louis XIV. had long been at variance with William, and took every opportunity to form confederacies againſt him, and to obſtruct his government. On the preſent occaſion he granted the depoſed monarch a fleet and ſome troops, to aſſert his pretenſions in Ireland. In the mean time William was not backward in warding off the blow. The parliament, though divided in all things elſe, was unanimous in conſpiring with him in this; and war was forthwith declared againſt France.

On the ſeventh of May, 1689, James embarked at Breſt, and on the twenty-ſecond arrived at Kinſale; and ſoon after made his public entry into Dublin, amidſt the acclamations of the Iriſh. He found the appearances of things in that country equal to his moſt ſanguine expectations. Tyrconnel, the lord-lieutenant, was devoted to his intereſts; and his whole army amounted to near forty thouſand men. The proteſtants over the greateſt part of Ireland were diſarmed; the province of Ulſter alone denied his authority; while the papiſts, confident of ſucceſs, received him with ſhouts of joy and ſuperſtitious gratulation.

James, however, continued for ſome time irreſolute; but as ſoon as the ſpring opened, he went to lay ſiege to Londonderry, a place of ſmall importance in itſelf, but rendered famous by the ſtand which it made on this occaſion. Colonel Lundie had been appointed governor of the town by king William, but was ſecretly attached to James; and at a council of war, he prevailed upon the officers and townſmen to ſend meſſengers to the beſiegers, with an offer of capitulation. But the inhabitants, appriſed of his apoſtacy, and crying out that they were betrayed, roſe tumultuouſly againſt the governor and council, ſhot one of the officers whom they ſuſpected, and boldly reſolved to defend the town, though deſtitute of leaders. The works of the beſiegers were ſoon brought to play upon the town with great fury; and ſeveral aſſaults were made, but always repulſed with reſolution. They were ſo cloſely inveſted, however, and ſo deſtitute of proviſions, that they ſupported life by eating horſes, dogs, and all kinds of vermin, until even this loathſome food began to fail them. At length, a ſmall ſquadron from England with proviſions and ſupplies, arriving juſt in time to afford them relief, the army of James were ſo diſpirited by the unconquerable obſtinacy of the garriſon, that they abandoned the ſiege in the night, and retired with precipitation, after having loſt above nine thouſand men before the place.

The inhabitants of Inniſkilling were no leſs remarkable for the valour and perſeverance with which they eſpouſed the cauſe of William; but indeed the cruelty of the papiſts were ſufficient to excite the moſt determined oppoſition. The proteſtants, by an act of the Iriſh parliament under James, were diveſted of thoſe lands which they had been poſſeſſed of ſince the Iriſh rebellion. Three thouſand of thoſe unfortunate men were found guilty of treaſon, and attainted. Soldiers were permitted to live upon free quarters; the people were plundered; the ſhops and the kitchens of all people were pillaged, to ſupply a quantity of braſs, which was coined, and ordered to paſs, by royal mandate, for above forty times its value. Brigadier Sarsfield commanded all proteſtants of certain diſtricts to retire to the diſtance of ten miles from their habitations, on pain of death; and many periſhed with hunger, or from being forced from their homes during the ſevereſt inclemencies of the ſeaſon.

But their ſufferings were ſhortly to have an end. William at length perceived that his neglect of Ireland had been an error that required more than unuſual diligence to redreſs. He was afraid to ſend the old army to fight againſt James; and therefore ordered twenty-three new regiments to be raiſed for that purpoſe. Theſe, with two Dutch battalions, and four of French refugees, together with the Inniſkilling invincible regiment, were appointed for the reduction of Ireland; and next to king William himſelf, the celebrated Schomberg was appointed to command. King William landed at Carrickfergus, A.D. 1690, where he found himſelf at the head of an army of ſix and thirty thouſand effective men, which was more than a match for the forces of James, although they were ſaid to amount to near fifty thouſand. William having juſt received the alarming news, that a French fleet had ſailed for the coaſt of England, reſolved, by meaſures of ſpeed and vigour, to prevent the impreſſion which that circumſtance might make upon the minds of his ſoldiers; and therefore haſtened to advance againſt James, who had quitted Dublin, and ſtationed his army at Ardee and Dundalk.

All the meaſures taken by king William appeared to be dictated by prudence and valour; while thoſe purſued by his opponents ſeemed the reſult of obſtinacy and infatuation. They neglected the advantageous opportunity of haraſſing their enemy in his difficult march from the north; they neglected to oppoſe him at the ſtrong paſs at Newry. As he advanced, they fell back, firſt from Dundalk, and then from Ardee; and, at laſt, upon the 29th of June, they fixed their camp in a ſtrong ſtation, on the banks of the Boyne. It was on the oppoſite ſide of this river, that both armies came in ſight of each other, inflamed with all the animoſities ariſing from religion, oppoſite intereſt, and revenge. The river Boyne at this place was not ſo deep but that men might wade over on foot; however, the banks were rugged, and rendered dangerous by old houſes and ditches, which ſerved as ambuſcades for the enemy. William had no ſooner arrived, than he rode along the ſide of the river, in ſight of both armies, to reconnoitre the face of the country; but, being perceived by the enemy, a cannon was pointed againſt him with wonderful dexterity. The ſhot killed ſeveral of his followers, and he himſelf was wounded in

the ſhoulder. A report of his being ſlain was inſtantly propagated through the Iriſh camp, and was even ſent off expreſs to Paris; but William, as ſoon as his wound was dreſſed, rode through the camp, and encouraged his army.

Upon retiring to his tent, he continued in meditation till nine at night, when he ſummoned a council of war, in which he declared his reſolution to force a paſſage over the river the next morning. The duke of Schomberg attempted at firſt to expoſtulate with him upon the danger of the enterpriſe; but finding the king inflexible, he retired to his tent with a diſconſolate aſpect, as if he had a preſcience of his own fate. In the morning, at ſix o'clock, king William gave orders to paſs the river. This the army undertook in three different places; and, after a furious cannonading, the battle began with uncommon vigour. The Iriſh, after an obſtinate reſiſtance, fled with precipitation, leaving the French and Swiſs regiments to make the beſt retreat they could. William led on his cavalry in perſon, and contributed, by his activity and vigilance, to ſecure the victory. James was not in the battle, but ſtood aloof, during the action, on the hill of Dunmore, ſurrounded with ſome ſquadrons of horſe; and at intervals was heard moſt generouſly to exclaim, when he ſaw his own troops repulſing thoſe of the enemy, "O ſpare my Engliſh ſubjects!" The Iriſh loſt about fifteen hundred men, and the proteſtants about one-third of that number. The victory was deciſive; but the death of the duke of Schomberg, who fell in the action, ſeemed to outweigh the whole loſs ſuſtained by the enemy. This veteran ſoldier had fought under almoſt every power in Europe. His ſkill in war was unparalleled, and his fidelity equal to his courage. See his hiſtory under SCHOMBERG.

This defeat totally depreſſed the hopes of James. He fled to Dublin, adviſed the magiſtrates to obtain the beſt terms they could for themſelves, and then ſet out for Waterford, where he embarked for France. His friends, however, were ſtill determined to follow up thoſe intereſts which he himſelf had abandoned. Limerick, a ſtrong city in the province of Munſter, ſtill held out, and braved all the attempts of William's army to reduce it. Sarsfield, an experienced general, put himſelf at the head of the army that had been routed at the Boyne, and haſtened to the banks of the Shannon, where he reſolved to diſpute the further progreſs of the enemy. But James appointed St. Ruth, a French general, to command over Sarsfield, which gave the Iriſh great diſcontent, as it ſeemed to imply that the king could neither rely on their ſkill nor their fidelity. General Ginckle, who was appointed to command the Engliſh army in the abſence of William, who had returned to England, advanced with his forces towards the Shannon, and inveſted the town of Athlone, built on both ſides the river. That part of the town on the hither ſide was quickly taken ſword in hand by the Engliſh; but the part on the oppoſite bank being defended with ſtrong ramparts, was thought impregnable. At length it was reſolved that a choſen troop ſhould ford the river in the face of the enemy; which deſperate attempt was performed with great reſolution; the enemy were driven from their works, and the town furrendered at diſcretion. St. Ruth now marched his army to give Sarsfield relief, but too late; for when he approached the walls, their own guns were turned againſt him. He then took poſt at Aughrim, ten miles off, where he determined to wait for the Engliſh army, and decide the fate of Ireland by one reſiſtleſs blow.

Ginckle, having put Athlone in a poſture of defence, paſſed the Shannon, and marched towards the enemy, determined to give them battle, though his force did not exceed eighteen thouſand men, while that of St. Ruth was above twenty-five thouſand. The Iriſh were poſted in an advantageous ſituation, upon a riſing ground, before which lay a deep bog, that to appearance was paſſable only in two places. Their right was fortified by entrenchments, and their left fecured by the caſtle of Aughrim. Ginckle, having reconnoitred their ſituation, gave the neceſſary orders for the attack; and, after a furious cannonading, the Engliſh army, about twelve o'clock, began to force the two paſſages of the bog, in order to poſſeſs the ground on the other ſide. The enemy fought with ſurpriſing fury, and the horſe were ſeveral times repulſed; but at length the troops on the right, by the help of ſome field-pieces, carried their point. At ſix o'clock in the evening the left wing of the Engliſh was advanced to the right of the Iriſh, and obliged it to give ground. In the mean time, a more general attack was made upon the centre; the Engliſh wading through the middle of the bog up to the waiſt in mud, and forming with ſome difficulty on the firm ground on the other ſide, renewed the combat with great fury. St. Ruth being at this critical moment killed by a cannon-ball, ſo diſpirited his troops, that they gave way on all ſides, and retreated to Limerick, after having loſt above five thouſand of the flower of their army. Limerick was the laſt retreat of the Iriſh forces. Ginckle advanced with his victorious troops to the bridge foot, and prepared for a general aſſault, when the Iriſh offered to capitulate; a negotiation was immediately begun, and hoſtilities ceaſed on both ſides, A.D. 1691. The Roman catholics by this capitulation were reſtored to the free exerciſe of their religion, and all perſons were indulged with leave to remove with their families and effects to any other country, except England and Scotland. In conſequence of this regulation, about fourteen thouſand of thoſe who had fought for James went over to France, where they entered into the ſervice of Louis XIV.

The chief hopes of King James now lay in a conſpiracy among his Engliſh adherents, and in the ſuccours which were promiſed him by the French king. The ſucceſs of the conſpiracy was thought unqueſtionable, having been ſet on foot by ſome diſcontented whigs, united with the tory intereſt. They aſſembled together; and the reſult of their deliberations was, that the reſtoration of James ſhould be entirely effected by foreign forces; that he ſhould ſail for Scotland, and be there joined by five thouſand Swedes, who, becauſe they were of the proteſtant religion, it was thought would remove a part of the odium which attended an invaſion by foreigners; that aſſiſtance ſhould at the ſame time be ſent from France, and that full liberty of conſcience ſhould be proclaimed throughout the kingdom. It was reſolved to ſend over two truſty perſons to France to conſult with the baniſhed monarch; and lord Preſton and Mr. Aſhton were the perſons appointed for this embaſſy. Information, however, had been given of their intentions; and lord Carmarthen had them ſeized and brought to trial. They were both condemned; Aſhton was executed, without making any confeſſion; but lord Preſton had not the ſame reſolution. Upon an offer of pardon, he diſcovered a great number of aſſociates; among whom the duke of Ormond, lord Dartmouth, and lord Clarendon, were foremoſt.

A formidable deſcent upon the coaſt of England was now decided upon by the conſpirators. In purſuance of this ſcheme, the French king ſupplied James with an army conſiſting of a large body of French troops, ſome Engliſh and Scots refugees, and the Iriſh regiments which had been tranſported from Limerick. This army was aſſembled between Cherbourg and La Hogue, and was commanded by king James in perſon. More than three hundred tranſports were provided for landing it on the Engliſh coaſt; and Tourville, the French admiral, at the head of ſixty-three ſhips of the line, was appointed to cover the deſcent. His orders were, at all events, to attack the Engliſh fleet, in caſe they dared to oppoſe him; that the tranſports, during the action, might land the troops without oppoſition. Theſe plans and preparations were ſoon known at the Engliſh court, and every precaution taken for a vigorous defence. All the ſecret machinations of the baniſhed king's adherents were diſcovered to the Engliſh miniſtry by ſpies; and by theſe they found,

with

with ſome mortification, that the tories were more faithful than many of the whigs, who had placed king William on the throne. The duke of Marlborough, lord Godolphin, and even the princeſs Anne herſelf, were violently ſuſpected of diſaffection. However, preparations were made to reſiſt the impending ſtorm with great tranquillity and reſolution. Admiral Ruſſel was ordered to put to ſea with all poſſible expedition; and he ſoon appeared with ninety-nine ſhips of the line, beſides frigates and fire-ſhips; an immenſe force, ſuch as Europe had never ſeen till that time. At the head of this formidable ſquadron he ſet ſail for the coaſt of France, and at laſt near La Hogue, he came up with the enemy, under admiral Tourville, who inſtantly prepared to give him battle. This memorable engagement, which began early in the morning of May 19, 1692, laſted ten hours, and all James's hopes were fruſtrated by the event. After a moſt dreadful conflict, victory declared on the ſide of the Engliſh; the French fled for Conquet Road, having loſt four ſhips in the firſt day's action. The purſuit continued for two days following; three French ſhips of the line were deſtroyed the next day, and eighteen more burnt by ſir George Rooke, which had taken refuge in the bay of La Hogue. From that time forward France ſeemed to relinquiſh all claims to the ſovereignty of the ocean.

James was now reduced to the loweſt ebb of deſpondence; his deſigns upon England were fruſtrated; and no other conſolation could be offered, but that of aſſaſſinating the monarch on the throne. Theſe baſe attempts were not entirely diſagreeable to the temper of James. It is ſaid he promoted and encouraged them; but they all ended in the deſtruction of the undertakers. From that time till his death, about ſeven years after, he continued to reſide at St. Germain's, a penſioner on the bounty of the French king.

The defeat at La Hogue confirmed king William on the throne of England. The jacobites were ever feeble, but they were now a diſunited faction; new parties ſprung up among thoſe who had been friends to the revolution; and the want of a common enemy produced diſſenſions among themſelves. William now began to find as much oppoſition and uneaſineſs from his parliament at home, as from the enemy in the field. His chief motive for accepting the crown was to engage England more deeply in the concerns of Europe. It had ever been the object of his wiſh, and the ſcope of his ambition, to humble the French, whom he conſidered as the moſt formidable enemy of the liberties of mankind; and all his politics conſiſted in forming alliances againſt them. Many of the Engliſh, on the other hand, had neither the ſame animoſity againſt the French, nor the ſame dread of their increaſing power. Theſe, therefore, conſidered the intereſt of the nation as ſacrificed to foreign connections; and complained that the war on the continent fell moſt heavily on them, though they had the leaſt intereſt in its ſucceſs. To theſe motives of diſcontent were added the king's partiality to his own countrymen, in prejudice of his Engliſh ſubjects, together with his great reſerve and ſullen ſilence, ſo unlike the behaviour of their former kings. William little regarded theſe diſcontents, which he knew muſt be conſequent on all government; accuſtomed to oppoſition, he heard them with the moſt phlegmatic indifference, and employed all his attention only on the balance of power, and the intereſts of Europe. Thus, while he watched over the ambitious ſtrides of contending kings and nations, he was unmindful of the cultivation of internal policy; and as he formed alliances abroad, increaſed the influence of party at home. Patriotiſm began to be ridiculed as an ideal virtue; the practice of bribing a majority in parliament became univerſal; the bad example of the great was eagerly caught by the vulgar; principle, and even decency, was gradually baniſhed; talents lay uncultivated, and the ignorant and profligate were received into favour.

Upon accepting of the Britiſh crown, William was reſolved to preſerve, as much as poſſible, that ſhare of prerogative which was ſtill left him. He was as yet unacquainted with the nature of a limited monarchy, which was not at that time thoroughly underſtood in any part of Europe, except England. He therefore often controverted the views of his parliament, and ſuffered himſelf to be directed by weak and arbitrary counſels. One of the firſt inſtances of this error was in the oppoſition he gave to a bill for limiting the duration of parliaments to the ſpace of three years. This bill had paſſed the two houſes, and was ſent up to receive the royal aſſent; but the nation was ſurpriſed to find the king refuſe his aſſent to an act, which was then conſidered as beneficial to the government. Both houſes took the alarm; the commons came to a reſolution, that whoever adviſed the king to this meaſure, was an enemy to his country; and the people were taught to echo their reſentment. The bill thus rejected, lay dormant for another ſeaſon; but, being again brought in, the king found himſelf obliged to comply. A ſimilar oppoſition, and a ſimilar conſequence, tended a bill for regulating trials in caſes of high-treaſon, by which the accuſed was allowed a copy of his indictment, and a liſt of the names of his jury, two days before his trial, together with council to plead in his defence. It was ſtill further enacted, that no perſon ſhould be indicted but upon the oaths of two credible witneſſes; a law that gave the ſubject a perfect ſecurity from the terrors of the throne.

It was in the midſt of theſe contentions that the jacobites ſtill conceived hopes of reſtoring their fallen monarch; and, being uneaſy themſelves, ſuppoſed the whole kingdom ſhared their diſquietudes. While one party proceeded againſt William, by attempting to excite an inſurrection, another formed a ſcheme of aſſaſſination. Sir George Barclay, a native of Scotland, who had ſerved as an officer in James's army, a man of undaunted courage, undertook the bold taſk of aſſaſſinating the king. This deſign he imparted to Harriſon, Charnock, Porter, and ſir William Perkins, by whom it was approved; and, after various conſultations, it was reſolved to attack the king on his return from Richmond, where he commonly took the diverſion of hunting on Saturdays; and the ſcene of their ambuſcade was a narrow lane between Brentford and Turnham Green. To ſecure ſucceſs, it was agreed that their number ſhould be increaſed to forty horſemen, with a relay of retainers to aſſiſt in this ſanguinary enterpriſe. When their number was complete, they waited with impatience for the hour of action; but ſome of the retainers, ſeized with remorſe, reſolved to prevent the murder by a timely diſcovery. One Pendergaſt, an Iriſh officer, gave the firſt information; but it was diſregarded, until La Rue a Frenchman, and the haſty flight of ſir George Barclay, confirmed the fact. A great number of the conſpirators were now apprehended, and the whole diſcovery was communicated to the privy council. Pendergaſt became an evidence for the crown, and the conſpirators were brought to trial. Robert Charnock, one of the two fellows of Magdalen-college, who, in the reign of James, had renounced the proteſtant religion, lieutenant King, and Thomas Keys, were found guilty of high-treaſon, and ſuffered at Tyburn. Sir John Friend and ſir William Perkins, were next arraigned; and although they made a very able defence, before lord chief-juſtice Holt, yet they were alſo found guilty, and ſuffered at Tyburn; denying the charge to the laſt, and teſtifying their abhorrence of the aſſaſſination. Rookwood, Cranbourne, and Lowic, were next apprehended, and tried by a ſpecial commiſſion as conſpirators; and, being found guilty, ſhared the fate of the former. But the caſe of ſir John Fenwick excited the greateſt animadverſion. He was apprehended in his way to France, and attainted of high-treaſon in the houſe of commons. There were two witneſſes againſt him; but of theſe lady Fenwick contrived to ſecrete one, ſo that, contrary to the late act, the commons proceeded to

trial

trial upon the evidence of a ſingle witneſs only. He was, however, furniſhed with a copy of the indictment, allowed counſel at the bar of the houſe, and the counſel for the crown was called upon to open the evidence. After much diſputation the bill was committed, and ſent up to the houſe of lords, where ſir John Fenwick was found guilty, by a majority only of ſeven voices. The priſoner ſolicited the mediation of the lords, while his friends implored the royal mercy. The lords gave him to underſtand, that his pardon would depend on the fullneſs of his diſcoveries. He heſitated ſome time between the fears of infamy and the terrors of death. At laſt he choſe death as the moſt preferable, and was beheaded on Tower-hill. His death certainly proved the inſufficiency of the ſtatutes to protect the ſubject, when a majority of the powerful ſhall think proper to diſpenſe with them.

William, at length tired of oppoſing the laws, gave up the conteſt. He admitted every reſtraint upon his prerogative in England, upon condition of being ſupplied with the means of humbling the power of France. War, and the balance of power in Europe, were ſtill the objects which lay neareſt his heart. Provided the parliament would furniſh him with ſupplies for theſe purpoſes, he permitted them to rule the internal policy at their pleaſure. For the proſecution of the French war, the ſums of money granted him were incredible. The nation, not content with furniſhing ſuch ſums as they were capable of raiſing by the taxes of the current year, mortgaged thoſe taxes, and involved themſelves in debts which they have never ſince been able to diſcharge, and thus laid the foundation of an irredeemable national debt.

The Engliſh, however, with the allies, under king William, had gained immortal honour in the wars of the Netherlands; and it was in a great meaſure owing to their invincible courage in leading up to, and mounting the breach, in order to ſtorm the caſtle, that Namur was taken, in 1695. This was a noble achievement of king William, to compel the ſurrender of Namur, where the gallant Boufflers commanded, and in the face of a French army under Villeroy, conſiſting of 100,000 men, which Louis had ſent to raiſe the ſiege. The town capitulated, and marched out with the honours of war, on the 5th of September. About ten o'clock in the morning, the garriſon, which from fourteen thouſand was reduced to five thouſand five hundred and thirty-eight men, began their march. The marſhal de Boufflers's guard du corps went out firſt; then his domeſtics, and next himſelf, with Guiſcard, the governor, at the head of the dragoons. King William was in a coach, attended by the elector of Bavaria, the landgrave of Heſſe, and the chief officers of the army, on horſeback, to ſee them paſs within two hundred paces of the breach, and were ſaluted by the French marſhal and count with their ſwords. This civility was hardly over, when general Dyckvelt accoſted Boufflers, with a meſſage from the king, which diſcompoſed his countenance; and, as they were riding up to the top of the hill, de l'Etang, brigadier-general of the brigade, made up boldly to the marſhal, with about twelve of the gentlemen of the life-guard, and arreſted him in king William's name, by way of repriſal for the garriſons of Dixmuyde and Deynſe, which were detained and ill treated by the French, contrary to the cartel. His confinement was not long: for upon the return of the captain of his guard, whom he ſent to give the king of France an account of what had happened, and the marſhal engaging his word of honour that the garriſons of Dixmuyde and Deynſe ſhould be ſent back as ſoon as he himſelf ſhould be ſet at liberty, the king ordered the governor of Maeſtricht to releaſe him, and give him a guard to conduct him ſafe to Dinant.

The French war had continued during the greateſt part of this king's reign; but at length the treaty of Ryſwick, A.D. 1697, put an end to thoſe contentions, in which England had engaged without policy, and came off without advantage. In the general pacification, her intereſts ſeemed entirely abandoned; and for all the treaſures ſhe had laviſhed on the continent, and for all the blood ſhe had ſpilt, the only equivalent was an acknowledgment of king William's title, from the king of France. Yet William, from having ſo early and ſo ſtrongly imbibed continental politics, was weak enough to inſiſt on keeping up a large ſtanding army, even during the continuance of a profound peace. But what was his mortification to find the commons paſs a vote, that all the forces in Engliſh pay, excepting ſeven thouſand men, ſhould be forthwith diſbanded, and that thoſe retained ſhould be the natural-born ſubjects of England. A monarch bred up in camps, and who knew no other pleaſure but that of reviewing troops and dictating to generals, could not think of laying down at once all his power and all his amuſements. He profeſſed himſelf, therefore, highly diſpleaſed with the vote of the commons; and his indignation was kindled to ſuch a pitch, that he actually conceived a deſign of abandoning the government. His miniſters, however, diverted him from this reſolution, and perſuaded him, at length, to paſs the bill. But theſe altercations continued more or leſs during the remainder of his reign. William conſidered the commons as a claſs of men deſirous of power themſelves, and conſequently bent upon obſtructing all his projects to ſecure the liberties of Europe. He ſeemed but little attached to any particular party in the houſe, all of whom he found at times either oppoſed or deſerted him. He therefore veered about to whigs and tories indiſcriminately, as intereſt or the immediate exigence urged him. He was taught to conſider England as a nation of labour, anxiety, and altercation. If he had any time for amuſement or relaxation, he retired to Loo in Holland, where, among a few friends, he gave a looſe to thoſe martial feſtivities, which alone he was capable of reliſhing. It was there he planned the different ſucceſſion of the princes of Europe, and laboured to undermine the ſchemes and the power of Louis XIV. his rival in politics and in fame.

The opening of a new parliament, A.D. 1700, promiſed more cordiality between the three branches of the conſtituted government. The commons aſſured the king that they would co-operate with him in whatever might beſt conduce to the intereſt and ſafety of England, the preſervation of the proteſtant religion, and the general peace of Europe. They likewiſe ſettled ſucceſſion, in caſe the princeſs Anne ſhould die without iſſue, on Sophia of Hanover, grand-daughter of James I. and, having thus provided againſt the reſtoration of the exiled family, they turned their thoughts to foreign tranſactions, demanding, that all treaties concluded or renewed within the laſt three years ſhould be laid before parliament.

On the concluſion of the peace of Ryſwick, William had entered into a ſecret treaty with the court of France, for the diviſion of the Spaniſh dominions, on the death of the reigning ſovereign. Among the competitors for that crown, the dauphin, who had married the king of Spain's daughter, was to be allowed to poſſeſs the greateſt part of Italy; and other allotments were made, which tended to leſſen the danger of one prince ſucceeding to a too powerful and extenſive dominion. Though few were privy to this agreement, which was called *the partition treaty*, it reached the ears of the king of Spain, who made the ſtrongeſt remonſtrances againſt it by his ambaſſador, and pledged himſelf to expoſe the indignity that was offered him, to the parliament of England. William, who was then at Loo, in Holland, felt this appeal ſo forcibly, that he ordered the Spaniſh ambaſſador to quit the kingdom, which the court of Madrid retaliated.

Meanwhile, the king of Spain, in order to fruſtrate the objects of the confederacy, by will nominated the duke of Anjou, ſecond ſon of the dauphin, heir to all his dominions; by which means he detached the French monarch from the union that had been formed; and dying ſoon after, William, whoſe grand concern was to preſerve the barrier of Flanders in the hands of the Dutch,

Dutch, now determined to ſeek occaſion to quarrel with France. To effect his purpoſes, he filled the vacant offices of the ſtate with ſeveral of the high-church party, and affecting openneſs and condeſcenſion to the parliament, informed them that his foreign negociations for the preſervation of peace and ſecurity, were likely to prove ineffectual.

Parliament, however, obſerving that the protection of the ſeven united provinces was the principal object William had in view, requeſted his majeſty to continue his negociations; and, to evince their reſentment at the clandeſtine partition treaty he had entered into, ordered an impeachment againſt the marquis of Halifax, the earl of Portland, and lord Somers, for the part they had taken in this meaſure. Meanwhile, a petition favourable to the king's views was preſented by the freeholders of Kent; and the clamours of the people, reinforced by a powerful party William had formed in the houſe of lords, ſoon taught him that he had nothing to fear from the averſion of the commons, to enter into any treaties he might judge expedient. Accordingly, after proroguing parliament, he again retired to Loo, and there entered into a league with the emperor and the ſtates-general, the principal objects of which were the recovery of Flanders as a barrier for Holland, and of Milan as a ſecurity for the emperor.

Moſt fortunately and opportunely for William, about this time died the royal exile James II. to whom, on his death-bed, Louis had promiſed that his ſon ſhould be acknowledged heir to all the Britiſh dominions. In his laſt agonies, James lifted himſelf up in his bed to thank his benefactor, and died, it is ſaid, in a tranſport of joy for ſuch an unexpected aſſurance. The young prince James accordingly was proclaimed, by order of Louis, king of Great Britain and Ireland; but, inſtead of forwarding his cauſe, it only united the nation in oppoſition to his claims, and in indignation againſt France. In the new parliament the whig intereſt was found to preponderate; and William, availing himſelf of all theſe favourable circumſtances, eaſily obtained a large ſupply, which was followed by a vote, that no peace ſhould be concluded with France, till reparation ſhould be made to the king and nation for owning and declaring the pretended prince of Wales king of England; and it was reſolved, that the proportion of land forces, to act in conjunction with the allies, ſhould be forty thouſand effective men; and forty thouſand ſeamen were voted for the ſervice of the enſuing year.

Thus every thing went on according to the king's utmoſt wiſhes; and he now ſeemed to have obtained a complete triumph over the weakneſs of faction, when he was ſnatched away by the unrelenting arm of death. His health had been declining for above a year, which, inſtead of abating his reſolution, urged him on to redouble his efforts to engage England in the ſchemes he had projected. This object made him conceal the inroads which he felt were making in his conſtitution; and, though in a weak and languiſhing ſtate, he ſtill continued the exerciſe of hunting. But while engaged in the ſport, his collar bone was broken by a fall from his horſe, and this haſtened his diſſolution. He died at Kenſington, without iſſue, on Sunday the 8th of March, 1702, of an aſthma and fever, in the thirteenth year of his reign. His amiable conſort, Mary, had fallen a victim to the ſmall pox a few years before.

The character of William III. having been either diſtorted by prejudice, or too highly exalted by partiality, becomes the more difficult to appreciate. He was in his perſon of middle ſize, ill ſhaped in his limbs, ſomewhat round in his ſhoulders, light-brown in the colour of his hair, and in his complexion. The lines of his face were hard, and his noſe aquiline; but a fine penetrating eye threw a glow on his countenance, which tempered its ſeverity, and rendered his features in ſome meaſure agreeable. Though his conſtitution was weak, delicate, and infirm, he loved the manly exerciſes, and often indulged himſelf in the pleaſures, and even ſometimes in the exceſſes, of the table. In his private character he was frequently ſevere with regard to trifles; but when the ſubject roſe equal to his mind, and in the tumult of battle, he was dignified, cool, and collected. Though he was apt to form bad impreſſions, which were not eaſily removed, he was neither vindictive in his diſpoſition, nor obſtinate in his reſentment. Neglected in his education, and perhaps deſtitute by nature of an elegance of mind, he had no taſte for literature, none for the ſciences, none for the beautiful arts. He paid no attention to muſic, he underſtood no poetry; he diſregarded learning; he encouraged no men of letters, no artiſts of any kind. In fortification and the mathematics he had a conſiderable degree of knowledge. He thoroughly underſtood military operations by land; but he neither poſſeſſed nor pretended to any ſkill in maritime affairs. In the diſtribution of favours he was cold and injudicious. In the puniſhment of crimes, often too eaſy, and ſometimes too ſevere. He was parſimonious where he ſhould have been liberal; where he ought to be ſparing, frequently profuſe. In his temper he was ſilent and reſerved, in his addreſs ungraceful; and though not deſtitute of diſſimulation, and qualified for intrigue, leſs apt to conceal his paſſions than his deſigns: theſe defects, rather than vices, of the mind, combining with an indifference about humouring mankind through their ruling paſſions, rendered him extremely unfit for gaining the affections of the Engliſh nation. His reign, therefore, was crowded with mortifications of various kinds; the diſcontented parties among his ſubjects found no difficulty in eſtranging the minds of the people from a prince poſſeſſed of ſo few talents to make him popular. He was truſted, perhaps, leſs than he deſerved, by the moſt obſequious of his parliaments; but it ſeems upon the whole apparent, that the nation adhered to his government, more from a fear of the return of his predeceſſor, than from any attachment to his own perſon, or reſpect for his right to the throne.

Mary, his conſort, was in her perſon tall and well proportioned, with an oval viſage, lively eyes, agreeable features, a mild aſpect, and an air of dignity. Her apprehenſion was clear, her memory tenacious, and her judgment ſolid. She was a zealous proteſtant, ſcrupulouſly exact in all the duties of devotion, of an even temper, of a calm and mild converſation; ſhe was ruffled by no paſſion, and ſeems to have been a ſtranger to the emotions of natural affection; for ſhe aſcended the throne from which her father had been depoſed, and treated her ſiſter as an alien to her blood. In a word, Mary ſeems to have imbibed the cold diſpoſition of her huſband, and to have centered all her ambition in deſerving the epithet of an humble and obedient wife. She died on the 28th of December, 1694, aged 33.

Anne, princeſs of Denmark, ſiſter to queen Mary, and daughter of James II. aſcended the throne on the death of William III. A. D. 1702, with the general approbation of all parties. She was now in the thirty-eighth year of her age, and by her huſband, George prince of Denmark, had brought a numerous offſpring; but they all died in infancy, except the duke of Glouceſter, who reached the age of eleven, and was juſt beginning to give high promiſes of future worth, when he alſo died a premature death.

The late king, whoſe whole life had been ſpent in one continued oppoſition to the king of France, and to all whoſe politics conſiſted in forming alliances againſt him, died at the eve of a war with that monarch. The preſent queen, who generally took the advice of her miniſtry in every important tranſaction, was upon this occaſion urged by oppoſing counſels; a part of her miniſtry were for war, while another part as earneſtly declared for peace. The counſel and opinion of the former, however, preponderated; the queen reſolved to follow their advice, and communicated her intention to the houſe of

commons, by whom it was alſo approved, and war was declared accordingly.

In the queen's declaration of war, Louis XIV. was charged with having taken poſſeſſion of a great part of the Spaniſh dominions, in order to ſubvert the liberties of Europe, and obſtruct the freedom of navigation and commerce; beſides having offered an unpardonable inſult to the Engliſh nation, by acknowledging the title of the pretender. He was alſo accuſed of attempting to unite the crown of Spain to his own dominions, by placing his grandſon upon the throne of that kingdom, and thus endeavouring to deſtroy the equanimity of power which cemented the ſtates of Europe. This declaration on the part of the Engliſh, was ſeconded by ſimilar declarations of war on the ſame day, by the Dutch and Germans. The French monarch could not ſuppreſs his anger at ſuch a combination; but his chief reſentment fell upon the Dutch. He declared, with great emotion, "that as for thoſe gentlemen pedlars, they ſhould one day repent their inſolence and preſumption, in declaring war againſt one whoſe power they had formerly felt and dreaded." However, the affairs of the allies were no way impeded by his threats. The earl of Marlborough was appointed general of the Engliſh forces; and he was ſtill further flattered by the Dutch, who, though the earl of Athlone had a right to ſhare the command, appointed Marlborough generaliſſimo of the allied army. And it muſt be confeſſed, that few men ſhone more, either in debate or action, than he; ſerene in the midſt of danger, and indefatigable in the cabinet: ſo that he became the moſt formidable enemy to France that England had ever produced ſince the battles of Creſſy and of Agincourt.

The earl of Marlborough had learned the firſt rudiments of the art of war under the famous marſhal Turenne, having been a volunteer in his army. He was, at firſt, rather more remarkable for the beauty of his perſon than the greatneſs of his talents; and he went in the French camp by the name of the handſome Engliſhman; but Turenne, who ſaw deeper into mankind, perceived the ſuperiority of his talents, and prognoſticated his future greatneſs. See a biographical ſketch of his life under CHURCHILL, vol. iv. p. 580—585. The firſt attempt that Marlborough made to deviate from the general practices of the army, which were founded in error, was to advance the ſubaltern officers, whoſe merit had hitherto been neglected. Regardleſs of ſeniority, wherever he found abilities, he was ſure to promote them; and thus he had all the upper ranks of commanders rather remarkable for their ſkill and talents, than for their age and experience. In his firſt campaign, the beginning of July, 1702, he repaired to the camp at Nimeguen, where he took the command at the head of an army of ſixty thouſand men. He was oppoſed, on the ſide of France, by the duke of Burgundy, grandſon to the king, a youth more qualified to grace a court than to conduct an army; but the real acting general was the marſhal Boufflers, who commanded under him, an officer of great courage and activity. But wherever Marlborough advanced, the French were obliged to retire before him, leaving all Spaniſh Guelderland at his diſcretion. The duke of Burgundy, finding himſelf obliged to retreat before the allied army, rather than expoſe himſelf longer to ſuch a mortifying indignity, returned to Verſailles, leaving the duke de Boufflers to command alone. Boufflers, confounded at the rapidity of the enemy's progreſs, retired towards Brabant, where Marlborough had no deſign to purſue; contented with ending the campaign by taking the city of Liege, in which was found an immenſe ſum of money, and a great number of priſoners. By the ſucceſs of this campaign, Marlborough eſtabliſhed his military character, acquired the admiration and eſteem of the army, and confirmed himſelf in the confidence of the allies.

Upon his return to London, he was received with the moſt flattering teſtimonies of public approbation. He was honoured with the public thanks of the houſe of commons, and was created a duke by the queen. His ſuperior ſucceſs ſeemed to conſole the nation for ſome unſucceſsful expeditions at ſea. Sir John Munden had permitted a French ſquadron of fourteen ſhips to eſcape him, by taking ſhelter in the harbour of Corunna, for which he was diſmiſſed the ſervice by prince George. An attempt was alſo made upon Cadiz by ſea and land, ſir George Rooke commanding the navy, and the duke of Ormond the land forces; but this alſo miſcarried. But the Engliſh arms were crowned with ſucceſs at Vigo, where the duke of Ormond landed his army at the diſtance of ſix miles from the city; while the fleet forcing their way into the harbour, the French ſhips that had taken refuge there were burnt by the enemy, to prevent their falling into the hands of the Engliſh. Nevertheleſs ten ſhips of war were taken, together with eleven galleons, and above a million of money in ſilver. The advantage acquired by this expedition, was damped by the baſe conduct of ſome officers in the Weſt Indies. Admiral Benbow, a bold and ſpirited ſeaman, had been ſtationed in that part of the world with ten ſhips, to diſtreſs the enemy's trade. Being informed that Du Caſſe, the French admiral, was in thoſe ſeas with a force equal to his own, he reſolved to attack him; and ſoon after diſcovered the enemy's ſquadron near St. Martha, ſteering under ſhore. He quickly threw out the ſignal for action, formed the line, and the engagement began. He found, however, that ſome officers of the fleet had taken diſguſt at his conduct; and that they permitted him, almoſt alone, to ſuſtain the whole fire of the enemy. Nevertheleſs the engagement continued till night, and he determined to renew it the next morning, but had the mortification to perceive that all the reſt of the ſhips had fallen aſtern, except one, who joined with him in urging the purſuit of the enemy. For four days did this intrepid ſeaman, aſſiſted only by one ſhip, purſue and engage the enemy, while his daſtardly officers remained in the back ground, ſpectators of his gallantry. His laſt day's battle was more furious than all the former; alone, and unſuſtained by the reſt, he engaged the whole French ſquadron, when his leg was ſhattered by a cannon ball. He then ordered that they ſhould place him in a cradle upon the quarter-deck; and there he continued to give orders as before, till at laſt his ſhip became quite diſabled, and could continue the chaſe no longer. He ſoon after died of his wounds; and his cowardly officers, Kirby and Wade, were tried by a court martial, and ſhot at Plymouth. Hudſon died before his trial. Conſtable, Vincent, and Fog, came off with ſlighter puniſhment. The parliament was highly pleaſed with the brilliant ſucceſs which had attended the Engliſh arms on the continent. They voted forty thouſand ſeamen, and fifty thouſand land forces, to act in conjunction with thoſe of the allies, in the enſuing campaign.

The duke of Marlborough croſſed the channel in the beginning of April, 1706; and, aſſembling the allied army, reſolved to ſhew that his former ſucceſſes were only the prelude to greater triumphs. He opened the campaign with the ſiege of Bonne, the reſidence of the elector of Cologne. This held out but a ſhort time againſt the ſucceſſive attacks of the prince of Heſſe-Caſſel, the celebrated Coehorn, and general Fagel. He next re-took Huy, the garriſon of which, after a vigorous defence, ſurrendered priſoners of war. The ſiege of Limburg being then undertaken, the place ſurrendered in two days; and, by the conqueſt of this garriſon, the allies ſecured the country of Liege, and the electorate of Cologne, from the further deſigns of the enemy. Such was the ſucceſs of the campaign in the Netherlands; and which, in all probability, would have produced events of greater importance, had not the duke of Marlborough been reſtrained by the Dutch, who began to be influenced by the Loveſtein faction, ever averſe to a war with France.

The

The duke, in his next campaign, was, for this reaſon, determined to act more offenſively; and, furniſhed with proper authority from queen Anne, he informed the Dutch that it was his intention to march to the relief of the empire that had been for ſome time oppreſſed by the French forces. The ſtates-general, either willing to ſecond his efforts, or fearing to weaken the alliance by diſtruſt, gave him full power to march wherever he thought proper, with aſſurances of their aſſiſtance in all his endeavours. The French king now appointed marſhal Villeroy to lead his army; the brave and gallant Boufflers being no longer thought an equal match for the enterpriſing duke of Marlborough. See the enterpriſing character of BOUFFLERS, vol. iii. p. 307.

Villeroy was brave, generous, and polite, but unequal to the great taſk of commanding an army; and ſtill more ſo, when oppoſed to ſuch a rival. Marlborough, therefore, who was famous for ſtudying the diſpoſition and abilities of the general he was to oppoſe, having no apprehenſions from his preſent antagoniſt, inſtead of going forward to meet him, he haſtened to the ſuccour of the emperor, as had been agreed at the commencement of the campaign. The Engliſh general, who was reſolved to ſtrike a vigorous blow for his relief, took with him about thirteen thouſand Engliſh troops, traverſed extenſive countries by forced marches, arrived unexpectedly on the banks of the Danube, defeated a body of French and Bavarians ſtationed at Donavert, then paſſed the Danube with his triumphant army, and laid the dukedom of Bavaria, which had ſided with the enemy, under contribution. Villeroy, who affected to hang upon his rear, ſeemed all at once to have loſt ſight of his enemy; nor was he ſure of his route, till informed of his ſucceſſes. Marſhal Tallard, in his turn, prepared to obſtruct the duke of Marlborough's retreat; and being joined by the duke of Bavaria's forces, the French army in that part of the continent amounted to ſixty thouſand men, commanded by two of the beſt generals in the French ſervice. Tallard had eſtabliſhed his reputation by many former victories; he was active and penetrating, and had riſen by his merits alone to the firſt ſtation in the army. The duke of Bavaria was equally experienced in the field, and had ſtill ſtronger motives for his activity. His country was ravaged and pillaged before his eyes; and nothing remained of his poſſeſſions but the army he commanded. To oppoſe theſe powerful generals, Marlborough was joined by a body of thirty thouſand men, under prince Eugene, whoſe troops were well diſciplined, but ſtill more formidable by the conduct and fame of their general. Prince Eugene had been bred from his infancy in camps; he was almoſt equal to Marlborough in diſcernment, and his ſuperior in the art of war. Their talents were of a ſimilar kind; and, inſtead of any mean rivalſhip or jealouſy, they concurred in the ſame deſigns; and the ſame good ſenſe determined them always to the ſame object.

This allied army, at the head of which Eugene and Marlborough commanded, amounted to about fifty-two thouſand men, troops which had been accuſtomed to conquer, and that had ſeen the French, the Turks, and the Ruſſians, fly before them. The French, as already obſerved, amounted to ſixty thouſand, who had ſhared in the conqueſts of their great monarch, Louis XIV. and had been familiar with victory. Both armies, after many marchings and countermarchings, approached each other. The French were poſted on a hill near the town of Hochſtet; their right covered by the Danube and the village of Blenheim, their left by the village of Lutzengen, and their front by a rivulet, the banks of which were ſteep, and the bottom marſhy. In this advantageous poſition, the French awaited the aſſault of the enemy; and the allied army heſitated not to attack them. The right wing of the French was commanded by marſhal Tallard; their left by the duke of Bavaria, and under him general Marſin, an experienced Frenchman. Marlborough and Eugene were ſtimulated haſtily to engage, from an intercepted letter from Villeroy, intimating that he was preparing to cut off all communication between the Rhine and the allied army. The diſpoſitions being therefore made for the attack, the allied forces advanced into the plain, and were ranged in order of battle. The cannonading began about nine in the morning, and continued to about half after twelve. Then the troops advanced forward; the right under the direction of prince Eugene, the left headed by Marlborough, and oppoſed to marſhal Tallard. The duke of Marlborough, at the head of the Engliſh, having paſſed the rivulet, attacked the cavalry of Tallard with great bravery. Prince Eugene, on the left, had not yet engaged the forces of the elector; and it was near an hour before he could bring up his troops to their line. Tallard ſupported the action with wonderful intrepidity: his cavalry were thrice driven back, and rallied as often. He had poſted a large body of forces in the village of Blenheim; and he now made an attempt to bring them to the charge; but they were attacked by a detachment of Marlborough's forces ſo vigorouſly, that, inſtead of aſſiſting Tallard, they could hardly maintain their ground. The French cavalry being now attacked in flank, were ſoon defeated. The Engliſh army, thus half victorious, penetrated between the two bodies of the French commanded by the marſhal and the elector, while at the ſame time the forces in the village of Blenheim were ſeparated by another detachment. In this awkward ſituation, Tallard endeavoured to rally ſome flying ſquadrons; but, from his ſhort-ſightedneſs, miſtaking a detachment of the enemy for his own, he was taken priſoner by the Heſſian troops. In the mean time prince Eugene, after having been thrice driven back, at laſt put the enemy into confuſion. The rout then became general, and the carnage dreadful. The conſternation was ſuch, that the French ſoldiers threw themſelves into the Danube, without knowing where they fled. The allies now ſurrounded the village of Blenheim, where thirteen thouſand men ſtill kept their ground; but ſeeing themſelves cut off from all communication with the reſt of the army, they threw down their arms, and ſurrendered priſoners of war. Thus ended the famous battle of Blenheim, one of the moſt complete victories that was ever obtained. Twelve thouſand French and Bavarians were ſlain in the field, or drowned in the Danube, and thirteen thouſand were made priſoners of war. Of the allies, about five thouſand were killed, and eight thouſand wounded. The loſs of the battle was imputed to two capital errors committed by marſhal Tallard; namely, his weakening the centre by placing ſo large a body of troops in the village of Blenheim, and his ſuffering the Engliſh to croſs the rivulet, and form on the other ſide, without once attempting to obſtruct them.

The next day, when the duke of Marlborough viſited his priſoner the marſhal Tallard, he condeſcendingly took him by the hand, when Tallard remarked, truly characteriſtic of a Frenchman, "Sir, you have overcome an army of the beſt ſoldiers in the world."—"I hope, ſir," (replied the duke of Marlborough,) you will except thoſe by whom they have been beaten." A country of a hundred leagues in extent fell by this defeat into the hands of the victors; and the duke, ſoon after the finiſhing of the campaign, repaired to Berlin, where he procured a reinforcement of eight thouſand Pruſſians, to ſerve under prince Eugene in Italy. Thence he proceeded to negociate for further ſupplies at the court of Hanover, and ſoon after returned to England, where he was received with open arms, as his ſervices juſtly merited.

In the mean time, the arms of England were not leſs fortunate by ſea. The French having been employed in equipping a ſtrong ſquadron at Breſt, ſir Cloudeſley Shovel and ſir George Rooke were ſent to watch their motions. Sir George, however, had further orders to convoy a body of forces to Barcelona, where a fruitleſs attack was made by the prince of Heſſe. Finding no hopes from this expedition,

pedition, the troops were reimbarked; and ſir George Rooke, joined by ſir Cloudeſley, called a council of war, and reſolved to make an attempt upon Gibraltar, then belonging to Spain. The prince of Heſſe landed his troops, to the number of eighteen hundred, on the neck of land adjoining, and ſummoned the garriſon to ſurrender, but without effect. Next day the admiral gave orders for cannonading the town; and perceiving that the enemy were driven from the fortifications at the South Mole, captain Whitaker was ordered to arm all the boats, and aſſault that quarter. Thoſe officers who happened to be neareſt the Mole, immediately manned their boats without orders, and entered the fortifications ſword in hand. But the Spaniards ſprung a mine, by which two lieutenants, and about a hundred men, were killed and wounded. Nevertheleſs, the two captains, Hicks and Jumper, took poſſeſſion of a platform, and kept their ground, until they were ſuſtained by captain Whitaker and the reſt of the ſeamen, who took a redoubt between the Mole and the town by ſtorm. Then the governor capitulated, and the prince of Heſſe entered the garriſon, amazed at the ſucceſs of the attempt, conſidering the ſtrength of the fortifications. Gibraltar has ever ſince remained in the poſſeſſion of the Engliſh, and continues of the utmoſt uſe for ſheltering our fleets, or refitting any part of the navy deſtined to annoy an enemy, or protect our trade, in the Mediterranean.

Soon after the taking this important garriſon, the Engliſh fleet, conſiſting of fifty-three ſhips of the line, came up with a French fleet, to the number of fifty-two, commanded by the count de Thouloufe, off the coaſt of Malaga. A little after ten in the morning the engagement began with equal fury on both ſides, and continued with doubtful ſucceſs till two in the afternoon, when the van of the French gave way. For two ſucceſſive days the Engliſh admiral endeavoured to renew the engagement, which the French fleet as cautiouſly declined, and at laſt diſappeared totally. Both nations claimed the honour of the victory upon this occaſion; but the Engliſh rode triumphantly on the ocean. In the mean time, Philip king of Spain, alarmed at the reduction of Gibraltar, diſpatched the marquis of Villadurias with a large army to retake it. France alſo ſent a fleet of thirteen ſhips of the line; but a part of this was diſperſed by a tempeſt, and part was taken by the Engliſh. Nor was the land army more ſucceſsful. The ſiege continued for four months, during which the prince of Heſſe, who commanded the garriſon for the Engliſh, exhibited many proofs of valour. At length the Spaniards, having attempted to ſcale the rock in vain, and finding no hopes of re-taking the place, abandoned the enterpriſe.

While the Engliſh were thus victorious by land and ſea, a new ſcene of contention was opened on the ſide of Spain, where the ambition of the European princes exerted itſelf with the ſame fury that had filled the reſt of the continent. Philip, the fourth grandſon of Louis XIV. had been placed upon the throne of Spain, and had been received with the joyful concurrence of the people. He had alſo been nominated ſucceſſor to the crown by the late king of Spain's will. But in a former treaty among the powers of Europe, Charles, ſon of the emperor of Germany, was appointed heir to that crown; and this treaty had been guaranteed by France herſelf, though ſhe now reſolved to reverſe that conſent in favour of a deſcendant of the houſe of Bourbon. Charles was further led to put in his claim for the crown of Spain by the invitation of the Catalonians, who declared in his favour, and by the aſſiſtance of the Engliſh and the Portugueſe, who promiſed to arm in his cauſe. Upon his way to Spain, he landed in England, where he was received by the dukes of Somerſet and Marlborough, who conducted him to Windſor. The queen's deportment to him was equally noble and obliging, while, on his ſide, he gave general ſatisfaction, by the politeneſs and affability of his conduct. He was furniſhed with two hundred tranſports, thirty ſhips of war, and nine thouſand men, for the conqueſt of that extenſive empire. The earl of Peterborough, a man of romantic bravery, offered to conduct them; and his ſingle ſervice was thought equivalent to armies.

The earl of Peterborough was one of the moſt ſingular and extraordinary men of the age in which he lived. At the early age of fifteen he fought againſt the Moors in Africa; at twenty he aſſiſted in compaſſing the revolution; and he now carried on the war in Spain almoſt at his own expence; his friendſhip for Charles being one of his chief inducements to this great undertaking. He was deformed in his perſon; but poſſeſſed a mind the moſt generous, honourable, and active. His firſt object upon landing in Spain, was to reduce Barcelona, a ſtrong city, with a garriſon of five thouſand men, while his own army amounted to little more than nine thouſand. The operations were begun upon Fort Monjuic, ſtrongly ſituated on a hill that commanded the city. The out-works were taken by ſtorm; and a ſhell chancing to fall into the body of the fort, the powder magazine blew up. This ſtruck the garriſon with ſuch conſternation, that they ſurrendered without further reſiſtance. During the interval which was taken up in ſigning the negociations, a body of Germans and Catalonians belonging to the Engliſh army entered the town, and were plundering all before them. The governor, who was treating with the Engliſh general, thought himſelf betrayed; upon which, lord Peterborough, ſtruck with the ſuddenneſs of the tranſaction, left the writings unfiniſhed, and, flying among the plunderers, drove them from their prey, and returned calmly back, and ſigned the capitulation. The Spaniards were equally amazed at the generoſity of the Engliſh, and the baſeneſs of their own countrymen, the Catalonians, who had led on to the ſpoil. The conqueſt of all Valencia ſucceeded to the taking of this important place.

The Engliſh, however, thought very little of theſe victories; for their whole attention was taken up by the ſplendour of their conqueſts in Flanders; and the duke of Marlborough took care ſtill to engroſs their admiration and regard. He had early in the ſpring opened the campaign, and brought an army of eighty thouſand men into the field. But ſtill he expected further reinforcements from Denmark and Pruſſia; and the court of France very prudently reſolved to attack him before this junction. Villeroy, who ſtill commanded the French army, conſiſting of eighty thouſand men, had orders to act upon the defenſive; but, whenever he ſaw an advantage, to hazard an engagement. The duke, in the mean time, had received a ſlight repulſe by the defection of prince Louis of Baden; and he reſolved to retrieve his credit by ſome ſignal action. Villeroy had drawn up his forces in a ſtrong camp; his right was flanked by the river Mehaigne, his left defended by a deep marſh, and the village of Ramillies lay in the centre. Marlborough, who contemplated this diſpoſition, drew up his army accordingly. He knew that the left wing of the enemy could not paſs the marſh to attack him but at a great diſadvantage; he therefore weakened his force in that quarter, and attacked the centre with ſuperior numbers. The enemy's line was ſoon put into diſorder by this judicious movement, and gave way on all ſides. The horſe, abandoning their foot, were ſo cloſely purſued, or unexpectedly oppoſed in their retreat, that almoſt all of them were cut to pieces. Six thouſand were taken priſoners, and about eight thouſand were killed and wounded. This victory was almoſt as ſignal as that of Blenheim; Bavaria and Cologne were the fruits of the one, and all Brabant was gained by the other. The French troops were diſpirited; the city of Paris was in confuſion. Louis, who had long been flattered with conqueſt, was now humbled, and almoſt excited the compaſſion of his enemies. He entreated for peace, but as yet in vain; the allies carried all before them, and his very capital trembled to the center at the expected approach of the conquerors.

querors. What neither his power, his armies, nor his politics, could effect, was brought about by diſſenſions in England.

The councils of queen Anne had hitherto been governed by a whig miniſtry; for though the duke of Marlborough had ſtarted in the tory intereſt, he ſoon joined the oppoſite faction, becauſe he found them moſt ſincere in their deſires to curb the inſolence of France. The whigs ſtill purſued the policy of the late king; and, impreſſed with a ſpirit of liberty, ſtrove to annihilate deſpotiſm in every part of Europe. In a government where the reaſoning faculty of a few individuals can operate upon the minds of thoſe in command, the politics of the miniſtry muſt alter as the people happen to change. The people in fact were beginning to change. The queen's perſonal virtues, her ſucceſſes, her deference for the clergy, and, in turn, their great veneration for her, began to have a prevailing influence over the whole nation. The people of every rank, in conſequence of her victories, would ſtoop to defend the moſt ſervile tenets, when they tended to flatter or increaſe the power of the ſovereign. They argued in favour of ſtrict hereditary ſucceſſion, divine right, and non-reſiſtance to the regal power. The ſpirit of toryiſm began again to prevail; and the whigs, who had raiſed the queen to the deſerved admiration and dread of all Europe, were the firſt that were likely to fall by the ſervices they had performed. The tories, though affecting to join in vigorous meaſures againſt France, were never ſeriouſly their enemies; they rather hated the Dutch, as of principles very oppoſite to their own; and therefore longed for an opportunity of withdrawing from the compact. They began to meditate ſchemes of oppoſition to the duke of Marlborough. They were taught to regard him as a ſelf-intereſted man, who ſacrificed the real advantages of the nation, in protracting a ruinous war, for his own private emolument and glory. They ſaw their country oppreſſed by an increaſing load of taxes, which, by a continuance of the war, muſt inevitably become an intolerable burthen. Their ſecret diſcontents began to ſpread; and they wanted only a few determined leaders to aſſiſt them in removing the whig miniſtry.

In the mean time, a ſucceſſion of loſſes began to diſſipate the conquering phrenſy which had ſeized the nation, and induced them to wiſh for peace. The army under Charles in Spain was then commanded by lord Galway. This nobleman having received intelligence that the enemy, under the command of the duke of Berwick, was poſted near the town of Almanza, advanced thither to give him battle. The conflict began about two in the afternoon, and the whole front of each army was equally engaged. The centre, conſiſting chiefly of battalions from Great Britain and Holland, ſeemed at firſt victorious; but the Portugueſe horſe, by whom they were ſupported, betaking themſelves to flight, the Engliſh troops were flanked and ſurrounded on every ſide. In this emergency they formed the ſolid ſquare, and retired to an eminence; where, being ignorant of the country, and deſtitute of all ſupplies, they were at laſt obliged to ſurrender priſoners of war, to the number of ten thouſand men. This victory was complete and deciſive; and all Spain, except the province of Catalonia, returned to their allegiance under Philip, their native ſovereign.

An attempt was made upon Toulon, by the duke of Savoy and prince Eugene, ſupported by an Engliſh fleet. The prince, with a body of thirty thouſand men, took poſſeſſion of the eminences that commanded the city, while the fleet attacked and reduced two forts at the entrance of the mole. But the French king ſending an army to the relief of the place, and the duke of Savoy perceiving no hopes of compelling the city to a ſpeedy ſurrender, reſolved to abandon his enterpriſe; and, having embarked his artillery, he retreated by night without any moleſtation. The fleet under ſir Cloudeſley Shovel was alſo unfortunate. Having ſet ſail for England, and being in ſoundings, on the 22d of October, about eight at night, a violent ſtorm ariſing, his ſhip was caſt away upon the rocks of Scilly, and every ſoul on-board periſhed. The like fate befel three ſhips more, while three or four others were ſaved with the utmoſt difficulty. The admiral's body being caſt aſhore, was buried in the ſand; but it was dug up again, and very properly interred in Weſtminſter-abbey.

Nor were the allies more proſperous on the Upper Rhine in Germany. Marſhal Villars, the French general, carried all before him, and was upon the point of reſtoring the elector of Bavaria. The only hopes of the people lay in the activity and conduct of the duke of Marlborough, who opened the campaign at Underluch, near Bruſſels, about the middle of May. But even here they were diſappointed, as in all the reſt. That general, either really willing to protract the war, or receiving intelligence that the French army was ſuperior in numbers, declined an engagement, and rather endeavoured to ſecure himſelf than annoy the enemy. Thus, after ſeveral marchings and counter-marchings, which it would be tedious to relate, both armies retired into winter quarters, at the latter end of October. The French made preparations for the next campaign with recruited vigour. The duke of Marlborough returned to England, to meet with a reception which he did not at all expect.

Previous to the diſgrace of the whig miniſtry, whoſe fall was now at hand, a meaſure of the greateſt importance took place in parliament; a meaſure that had been wiſhed by many, but thought too difficult for execution. This was the union between the two kingdoms of England and Scotland. This great political taſk was reſerved for queen Anne to accompliſh, at a time when both nations were on the moſt friendly footing, and the queen's title and adminiſtration approved by all. Accordingly, the queen having appointed commiſſioners on both ſides, they met at Whitehall, where the lord-keeper Cowper propoſed, "that the two kingdoms of England and Scotland ſhould be for ever united into one, and thence forward called by the name of GREAT BRITAIN; that it ſhould be repreſented by one and the ſame parliament, and governed by the ſame hereditary monarch." The Scottiſh commiſſioners, on their ſide, propoſed, "that the ſubjects of Scotland ſhould for ever enjoy the ſame rights and privileges with thoſe of England; and that all ſtatutes, contrary to the tenor of theſe privileges in either kingdom, ſhould be repealed." Theſe articles were unanimouſly agreed upon by the commiſſioners, and laid before the parliament.

In this treaty it was ſtipulated, that the ſucceſſion to the united kingdoms ſhould be veſted in the houſe of Hanover, being proteſtants; that the united kingdoms ſhould be repreſented by one and the ſame parliament; that all the ſubjects of Great Britain ſhould enjoy a communication of privileges and advantages; that they ſhould have the ſame allowances and privileges with reſpect to commerce and cuſtoms; that the laws concerning public right, civil government and policy, ſhould be the ſame throughout the two united kingdoms; but that no alteration ſhould be made in laws which concerned private right, except for the evident benefit of the ſubjects of Scotland; that the courts of ſeſſion, and all other courts of judicature in Scotland, ſhould remain, as then conſtituted by the laws of that kingdom, with the ſame authority and privileges as before the union; that Scotland ſhould be repreſented in the parliament of Great Britain, by ſixteen peers, and forty-five commoners; that all peers of Scotland ſhould be conſidered as peers of Great Britain, and rank immediately after the Engliſh peers of the like degree at the time of the union, and before ſuch as ſhould be created after it; that all laws and ſtatutes in either kingdom, ſo far as they might be inconſiſtent with the terms of theſe articles, ſhould ceaſe, and be declared for ever void.

In the mean time Mr. Harley, ſecretary of ſtate, who had

had contrived to infinuate himſelf into the queen's good opinion, determined to ſap the credit of the duke of Marlborough, and of lord Godolphin, his ſon-in-law, who was at the head of the treaſury. His aim was to unite the tory intereſt, and expel the whigs. Harley, better known afterwards as lord Oxford, was a man of uncommon erudition, great knowledge, and equal perſeverance. He choſe for his coadjutor Henry St. John, afterwards the famous lord Bolingbroke, a man of great eloquence, and of ſome wit, but little principle. This ſtateſman was at firſt extremely ſubſervient to Oxford's deſigns: but when he came to underſtand the full extent of his own influence, he had the ambition to aim at being premier, and aſpired to depreſs his original patron. To this junto was added ſir Simon Harcourt, a lawyer of conſiderable abilities. Theſe uniting, exerted their endeavours to reconcile the ſcattered body of the tories; and diffuſed aſſurances among their partizans, that the queen would no longer bear the tyranny of a whig miniſtry. She had ever been, they ſaid, a friend in her heart to the high-church party, by which appellation the tory faction now came to be diſtinguiſhed; and to convince the world of the truth of their aſſertions, the queen ſhortly after beſtowed two biſhoprics on clergymen who had openly condemned the revolution.

At length the whig party in the miniſtry opened their eyes to the intrigues of their adverſaries; and the duke of Marlborough had no other means of ſupporting his credit but by openly oppoſing lord Oxford, whom he was determined to diſplace. The ſecretary had lately incurred ſome ſuſpicions, from the ſecret correſpondence which one Gregg, an under-clerk in his office, kept up with the court of France. Gregg was executed, and the duke of Marlborough was willing to take advantage of this opportunity to remove lord Oxford. He accordingly wrote to the queen, that he and lord Godolphin could ſerve her majeſty no longer, ſhould the preſent ſecretary be continued in his place. The queen diſregarding the ſecret intrigues of her miniſters, was willing to keep them all in friendſhip, and endeavoured to appeaſe the duke's reſentment by every art of diſſimulation. But he was too confident of his own power, and continued obſtinate in his refuſal. The earl of Godolphin and the duke went ſo far as to retire from court, and the queen ſaw herſelf in danger of being deſerted by her miniſtry. A ſullen ſilence prevailed through the cabinet, and ſome were even heard to ſay, "that no deliberations could be purſued in the abſence of the duke and the lord-treaſurer." The queen, therefore, ſent for the duke of Marlborough, and told him that Harley ſhould immediately reſign his office; and it was accordingly conferred on Mr. Henry Boyle, chancellor of the exchequer.

The firſt efforts of the tory party being thus fruſtrated, Bolingbroke was reſolved to ſhare in his friend Harley's diſgrace; as were alſo ſir Simon Harcourt, attorney-general, and ſir Thomas Manſell, comptroller of the houſehold, who relinquiſhed their employments. Bolingbroke, as ſecretary at war, was ſucceeded by Robert Walpole, who made ſo conſiderable a figure in the two ſucceeding reigns. The duke thus ſeemed to triumph in his reſentment; after which he returned to proſecute his victories on the continent, where a new harveſt of glory attended him. By his abſence, however, Harley was enabled to throw off the maſk, and to take more vigorous meaſures for proſecuting his deſigns. In him the queen repoſed all her truſt, notwithſtanding he had no viſible concern in the adminiſtration. The firſt triumph of the tories, in which the queen diſcovered an open partiality in their favour, was ſeen in the following tranſaction;—of no great importance in itſelf, indeed, but remarkable only from the conſequences it produced.

Henry Sacheverel, a clergyman bred at Oxford, had for ſome time diſtinguiſhed himſelf by his adherence to the tories or high-church men, and by conſtantly inveighing againſt the diſſenters. At the ſummer aſſizes at Derby, he held forth in that ſame ſtrain before the judges. On the fifth of November following, he declaimed violently in St. Paul's church, defended the doctrine of non-reſiſtance, inveighed againſt the toleration of diſſenters, declared the church in danger from its enemies, and neglected by its friends. Sir Samuel Gerrard, lord-mayor of London, countenanced this harangue, which, though very weak both in the matter and ſtyle, was publiſhed under his protection, and extolled by the tories. Theſe ſermons owed all their celebrity to the complexion of the times, and are now deſervedly neglected. Mr. Dolben, ſon to the archbiſhop of York, laid a complaint before the houſe of commons againſt theſe inſidious rhapſodies, and thus gave force to what would have ſoon been forgotten. The moſt obnoxious paragraphs were read; upon which the ſermons were voted ſeditious libels. Sacheverel was brought to the bar of the houſe; where he openly avowed himſelf as the author, and gloried in what he had done. Being ordered to withdraw, it was reſolved to impeach him of high crimes and miſdemeanors at the bar of the houſe of lords; and Mr. Dolben was directed to conduct the proſecution, in the name of the commons of all England. A committee was appointed to draw up articles of impeachment; Sacheverel was taken into cuſtody, and a day appointed for his trial in Weſtminſter-hall.

The eyes of the whole kingdom were turned upon this very extraordinary trial, which laſted three weeks; and the queen was every day preſent as a private ſpectator. The managers for the commons were ſir Joſeph Jekyl, Mr. Eyre, ſolicitor-general, ſir Peter King, recorder, general Stanhope, ſir Thomas Parker, and Mr. Walpole. The doctor was defended by ſir Simon Harcourt, Mr. Phipps, Dr. Atterbury, Dr. Smallridge, and Dr. Freind. While the trial continued, nothing could exceed the outrage of the populace. They ſurrounded the queen's ſedan, exclaiming, "God bleſs your majeſty and the church! we hope your majeſty is for doctor Sacheverel." They deſtroyed ſeveral meeting-houſes, plundered the dwellings of many eminent diſſenters, and even propoſed to attack the Bank. The queen, in compliance with the requeſt of the commons, publiſhed a proclamation for ſuppreſſing the tumults; and ſeveral perſons being apprehended, were tried for high treaſon. Two were convicted, and ſentenced to die; but were pardoned.

Thoſe who are removed from the intereſts of that period, will wonder at ſo great a conteſt from ſo ſlight a cauſe; but, in fact, the ſpirit of contention had been previouſly laid in the nation, and this declaimer only happened to ſet fire to the train. The lords, when they retired to conſult upon his ſentence, were divided, and continued undetermined for ſome time. At length, after much obſtinate diſpute and altercation, Sacheverel was found guilty by a majority of ſeventeen voices; but no leſs than thirty-four peers entered a proteſt againſt the verdict. He was prohibited from preaching for three years; and his two ſermons were ordered to be burnt by the hands of the common hangman. Yet Sacheverel was ſoon after preſented to a benefice in North Wales, where he was received with every mark of public approbation.

The duke of Marlborough, in the mean time, was leading forward the armies of England and her allies in Flanders, to many new and important victories. The French were now diſpirited, and kept upon the defenſive; but ſtill, when forced to engage, they fought with great obſtinacy, and diſputed every inch of ground. Peace had more than once been ſolicited, and treaties entered upon, and fruſtrated. The duke was therefore reſolved to puſh his good fortune. At the head of a numerous army he approached the village of Oudenarde, where the French, in equal numbers, were poſted. A furious engagement enſued, in which the French were as uſual obliged to retire, and took the advantage of the night to ſecure their retreat. Three thouſand were left dead on the field of battle, and ſeven thouſand taken priſoners. In conſequence of this victory,

victory, Liſle, the ſtrongeſt garriſon in Flanders, was taken, after an obſtinate ſiege. Ghent followed; while Bruges, and the other leſſer towns in French Flanders, were abandoned by their defenders. Thus the campaign ended with ſecuring a barrier to the Dutch, the principal cauſe of the war; and the next object of the invincible Marlborough was to invade the enemy's country.

Tournay, one of the ſtrongeſt cities in French Flanders, was the firſt object of the operations of the allied army, which now amounted to one hundred and ten thouſand fighting men. Though the garriſon did not exceed twelve thouſand, yet the place was thought to be impregnable. The beſieging army proceeded by ſapping; and their troops that were conducting the mines frequently met with thoſe of the enemy under ground, purſuing the ſame plan of deſtruction, and furiouſly engaged in ſubterranean conflicts. At length, after an obſtinate reſiſtance, the city ſurrendered by capitulation.

The bloody battle of Malplaquet next followed. The French army, under the conduct of the celebrated marſhal Villars, amounting to a hundred and twenty thouſand men, were poſted behind the woods of La Merte and Taniers, in the vicinity of Malplaquet. They had fortified their poſition in ſuch a manner with lines, ravines, and trees laid acroſs, that it ſeemed to be quite impregnable. What were the duke's motives for attacking the enemy under ſuch a diſadvantage, have never been explained; but certainly this was the moſt daring of all his exploits. On the eleventh of September, 1709, early in the morning, the allied army, favoured by a thick fog, began the attack. The chief fury of their impreſſion was made upon the left of the enemy, and with ſuch ſucceſs, that, notwithſtanding their impregnable barricadoes, the French were in leſs than an hour driven from their entrenchments. On the enemy's right, the combat was ſuſtained with much greater obſtinacy. The Dutch, who made the attack, drove them from their firſt line, but were repulſed from the ſecond, with great ſlaughter. The prince of Orange, who led the Dutch, rallied his men, and perſiſted in his efforts with incredible perſeverance, though two horſes had been killed under him, and the greater part of his officers ſlain or diſabled. At laſt, the French were obliged to yield to ſuperior proweſs. Villars being dangerouſly wounded, his army made an excellent retreat under the conduct of marſhal Boufflers, and took poſt near Queſnoy and Valenciennes. The victors took poſſeſſion of the field of battle, on which above twenty thouſand veteran troops of each army lay in promiſcuous ſlaughter. The city of Mons fell in conſequence of this ſignal victory, which concluded the campaign.

In the mean time the queen, who was now wholly directed by the counſels of Harley, made an entire change in the adminiſtration. She began by transferring the poſt of lord-chamberlain from the duke of Kent to the duke of Shrewſbury. Soon after the earl of Sunderland, ſecretary of ſtate, and ſon-in-law to the duke of Marlborough, was diſplaced, and the earl of Dartmouth put in his room. The earl of Godolphin was diveſted of his office, and the treaſury put in commiſſion, ſubjected to the direction of Harley, who was appointed chancellor of the exchequer, and under-treaſurer. The earl of Rocheſter was declared preſident of the council, in the room of lord Somers. The ſtaff of lord-ſteward being taken from the duke of Devonſhire, was given to the duke of Buckingham; and Mr. Boyle was removed from the ſecretary's office, to make way for Mr. Henry St. John. The lord-chancellor having reſigned the great ſeal, it was firſt put in commiſſion, and then given to ſir Simon Harcourt. The earl of Wharton ſurrendered his commiſſion of lord-lieutenant of Ireland, and that employment was conferred upon the duke of Ormond. Mr. George Grenville was appointed ſecretary of war, in the room of Mr. Robert Walpole; and, in a word, there was not one of the whig party left in the office of the ſtate, except the duke of Marlborough.

It now only remained to remove and diſgrace the man who had ſo long and ſo nobly ſtood forth as the champion of his country and its allies. But here a new difficulty ſtarted, and the ungrateful ſtep could not be taken without giving offence to the Dutch, who placed every confidence in the victorious and illuſtrious Marlborough. His enemies at home were therefore obliged to wait a more favourable opportunity for his diſgrace. In the mean time, the duke led on his forces againſt marſhal Villars, who ſeemed reſolved to open the new campaign with the total overthrow of the allied armies. But the duke of Marlborough is ſaid to have riſen higher in military tactics and martial renown, during this campaign, than he had ever done before; and in the field to have excelled every former exploit. The capture of Bouchain was the final reſult, which capitulated after a ſiege of twenty days; and this was the laſt ſervice the duke of Marlborough ever performed. At the time this heroic and unparalleled general was invidiouſly called off from his career of glory, he left the allies in poſſeſſion of a vaſt tract of country, which might be truly ſaid to have been of his own conquering. He had ſubjected to their command Spaniſh Guelderland, Limbourg, Brabant, Flanders, and Hainault; he had made them maſters of the Scarpe; and the capture of Bouchain had opened to them a way into the very heart of France. Upon his return from this campaign, his ungrateful country requited him with various unfounded and ridiculous charges of avarice and peculation; and the ungenerous queen of England thought proper to diſmiſs him from all his employments!

For ſome time before the diſmiſſion of Marlborough, a negociation for peace had been ſecretly carried on between the court of France, and the new miniſtry. They had a double aim in bringing this deſirable end about. It would ſerve to mortify the whigs, and it would free the country from an expenſive war. In order, therefore, to accompliſh the end in view, the earl of Jerſey, who acted in concert with lord Oxford, ſent a private meſſage to the court of France, meanly importing the queen's earneſt deſire for peace, and her wiſh for a conference, and ceſſation of hoſtilities. This intimation was delivered by Gualtier, a-time-ſerving prieſt, who was chaplain to the imperial ambaſſador, and a ſpy for the French court. The meſſage was received with uncommon joy at the French court, and an anſwer was returned, ardently and cordially profeſſing the ſame inclinations. This led the way to a reply, and ſoon after to a more definitive memorial from the court of France, which was immediately tranſmitted to the Dutch by the queen, for their approbation.

The miniſtry having got thus far, the great difficulty ſtill exiſted of making the terms of peace palatable to all the confederates. The earl of Stafford, who had been recalled from the Hague, was now ſent back to Holland, with orders to communicate to the penſionary Heinſius theſe preliminary propoſals, to ſignify the queen's approbation of them, and to propoſe a place where the plenipotentiaries ſhould form a congreſs. The Dutch, upon the inſpection of the preliminaries, were extremely averſe to the conference. They ſent over an envoy purpoſely to turn the queen from ſo degrading a ſubmiſſion; but finding their efforts vain, they fixed upon Utrecht as the place of general conference, and they granted paſſports to the French miniſters accordingly.

Before we mention the reſult of this celebrated congreſs, it may be neceſſary to appriſe the reader, that many of the motives which firſt incited each party to take up arms, were now no more. Charles of Auſtria, in whoſe cauſe England had ſpent ſo much blood and treaſure, was, by the death of his elder brother, the emperor Joſeph, placed on the Imperial throne. There was, therefore, every reaſon for not ſupporting his pretenſions to the Spaniſh monarchy; and the ſame political jealouſy which formerly made it deſirable to place him on the throne of that kingdom, was now neceſſary to be exerted

exerted in keeping him out of it. The elector of Bavaria, who had been intimately connected with the French, was now detached from them; and the Dutch, who had trembled for their barrier, were by this time encroaching upon that of the enemy. Thus accident, and a fortuitous concatenation of events, gave almoſt to every power, except to England and France, all that war could ever give. Yet it was the intereſt of England that her allies ſhould be reinſtated in their rights, but not rendered too powerful.

The conferences began at Utrecht, under the conduct of Robinſon biſhop of Briſtol, lord privy-ſeal, and the earl of Stafford, on the ſide of the Engliſh; of Buys and Vanderduſſen, on the part of the Dutch; and of the marſhal d'Uxelles, the cardinal Polignac, and M. Menager, in behalf of France. The miniſters of the emperor and of Savoy aſſiſted, and the other allies ſent alſo plenipotentiaries, though with great reluctance. As England and France were the only powers ſeriouſly inclined to peace, it may be ſuppoſed that all the other deputies ſerved rather to retard than advance its progreſs. The emperor inſiſted obſtinately upon his claim to the Spaniſh monarchy, refuſing to give up the leaſt tittle of his pretenſions; and the Dutch adhered to their old preliminaries, which Louis had conſtantly rejected. The Engliſh miniſters, finding ſo many obſtructions from their allies, ſet on foot a private negociation with France. They ſtipulated certain advantages for the ſubjects of Great-Britain, in a concerted plan of peace. They reſolved to enter into ſuch mutual confidence with the French, as would anticipate all clandeſtine tranſactions to the prejudice of the coalition. Theſe articles were privately regulated between the two courts; but being the reſult of pique and neceſſity, they were not ſo favourable to the Engliſh intereſts, as the nation, after ſo many ſignal victories, had a right to expect. The Engliſh, willing to include their allies, if poſſible, in the treaty, departed from ſome of their juſt claims, in order to gratify the Dutch with the poſſeſſion of ſome towns in Flanders. But even this was not found ſatisfactory. The queen, therefore, finding the confederates averſe to the propoſitions ſhe had made for a general peace, gave them to underſtand, that ſhe looked upon herſelf as releaſed from all her former engagements.

Upon the diſmiſſion of the duke of Marlborough, the duke of Ormond had been inveſted with the ſupreme command of the Britiſh forces; but with particular directions that he ſhould not hazard an engagement. However, he joined prince Eugene at Tournay, who, not being let into the ſecret, adviſed the attacking of the French under Villars; but he ſoon found how affairs ſtood with his coadjutor. Ormond ſeemed extremely uneaſy at his ſituation; and, in a letter to the ſecretary in England, deſired permiſſion to return. But the confederates were loud in their complaints; they expoſtulated with the miniſters at Utrecht upon ſo perfidious a conduct with great ſeverity. The Dutch, indeed, did not reſt here. They had a powerful party in the houſe of lords, and there they reſolved to arraign the conduct of the new miniſtry. Lord Halifax deſcanted on the ill conſequences of the duke of Ormond's refuſing to cooperate with prince Eugene, and moved for an addreſs to her majeſty to looſen the hands of the Engliſh general. It was urged that nothing could be more diſgraceful to the duke himſelf than being thus ſet at the head of an army without a power of acting. But earl Pawlet replied, that though none could doubt of the duke of Ormond's courage, yet he was not like a certain general who led troops to the ſlaughter, in hopes that a great number of officers might be knocked on the head, that he might increaſe his treaſures by diſpoſing of their commiſſions. The duke of Marlborough, who was preſent, was ſo deeply incenſed at this malicious inſinuation, that he ſent the earl a challenge the next day; but the queen interfered, and prevented bloodſhed.

In the mean time the allies, ſupported by the queen of England, ſtill continued the war againſt the French. They had the utmoſt confidence in prince Eugene, their juſtly celebrated general; but after the recal and diſmiſſion of the duke of Marlborough, as if Providence had ſo ordained it to puniſh the ſin of ingratitude, there was a total end of their victories. Villars, the French general, attacked a large body of the allied troops encamped at Denain, under the command of the earl of Albemarle. Their intrenchments were forced, and ſeventeen battalions were either deſtroyed or taken. The earl himſelf, and all the ſurviving officers, were made priſoners of war. Theſe ſucceſſes of Villars gave a favourable turn to the affairs of France, and ſerved to haſten the treaty of Utrecht. The only obſtacle which ſeemed now to retard the buſineſs, was the ſettling the ſucceſſion to the kingdoms of France and Spain. The danger that threatened the intereſts of Europe was, leſt both kingdoms ſhould be united under one ſovereign; and Philip, who was now king of Spain, ſtood next in ſucceſſion to the crown of France, except with the interpoſition of one ſickly child, afterwards Louis XV. Philip, however, at laſt waved his pretenſions to the French monarchy, and the treaty went forward with rapidity and ſucceſs.

In the beginning of Auguſt 1712, ſecretary St. John, then created lord viſcount Bolingbroke, was ſent to the court of Verſailles to remove all obſtructions to the ſeparate treaty. He was accompanied by Prior the poet, and the abbé Gualtier, who were treated with the moſt diſtinguiſhed marks of reſpect. The duke of Marlborough, now neglected by the queen, and contemptuouſly treated by her tory adminiſtration, retired with his family to the continent; and his retreat was compared to that of Scipio from Rome, after he had ſaved his country.

The treaty of peace and commerce between England and France being at length agreed on, and ratified by the queen, ſhe informed her parliament of the ſteps ſhe had taken. She left it to the commons to determine what forces, and what ſupplies, might be neceſſary for the ſafety of the kingdom. "Make yourſelves ſafe, ſaid ſhe, and I ſhall be ſatisfied. The affection of my people, and the providence of Heaven, are the only guards I aſk for my protection." Both houſes returned warm addreſſes; and the ratifications of the treaty being exchanged, which had been ſigned on the 31ſt of March, 1713, peace was proclaimed in England on the fifth of May, to the inexpreſſible joy of the majority of the nation.

The articles of this famous peace were longer canvaſſed, and more warmly debated, than thoſe of any other treaty we read of in hiſtory. The firſt ſtipulation was, that Philip king of Spain, renounced for ever his claim to the crown of France; the union of two ſuch powerful kingdoms being thought dangerous to the liberties of Europe. It was agreed that the duke of Berry, Philip's brother, ſhould alſo renounce his claim to the crown of Spain, in caſe he ever became king of France. It was ſtipulated that the duke of Savoy ſhould poſſeſs the iſland of Sicily, with the title of king, together with Feneſtrelles, and other places on the continent; which increaſe of dominion was, in ſome meaſure, made out of the ſpoils of the French monarchy. The Dutch had that barrier granted them which they ſo long fought after; and if the crown of France was deprived of ſome dominions to enrich the duke of Savoy, on the other hand the houſe of Auſtria was taxed to ſupply the neceſſities of the Hollanders, who were put in poſſeſſion of the ſtrongeſt towns in Flanders. With regard to England, its glory and its intereſts were ſecured. The fortifications of Dunkirk, which were thought dangerous to their trade in time of war, were ordered to be demoliſhed, and its port deſtroyed. Spain gave up Gibraltar and the iſland of Minorca. France reſigned her pretenſions to Hudſon's Bay, Nova Scotia, and Newfoundland; but they were left in poſſeſſion of Cape Breton, with the liberty of drying their fiſh upon

upon the ſhore. In behalf of the emperor it was ſtipulated, that he ſhould poſſeſs the kingdom of Naples, the duchy of Milan, and the Spaniſh Netherlands. The king of Pruſſia was to have Upper Guelder; and a time was fixed for the emperor's acceding to theſe articles, which he had for ſome time obſtinately refuſed. Thus Europe ſeemed to be formed into one great republic, the different members of which were cantoned out to different governors, and the ambition of any one ſtate amenable to the tribunal of all.

The Engliſh having thus given peace to Europe, had full leiſure to indulge their domeſtic diſſenſions. The whig and tory parties never contended with greater animoſity towards each other. Whether it was at this time the wiſh of the miniſters to alter the ſucceſſion of the crown from the houſe of Hanover to the pretender, has never been clearly aſcertained; but true it is that the whigs believed it as certain, and the tories but faintly denied the charge. The ſuſpicions which fell upon that party became every day ſtronger, particularly when the whigs came to be removed from all places of truſt and confidence throughout the kingdom. The whigs were now every where in commotion, either apprehending, or affecting to apprehend, a deſign in favour of the pretender; nay, their reports went ſo far as to aſſert that he was actually concealed in London, and that he had held ſeveral conferences with the miniſters of ſtate. The houſe of lords ſeemed to ſhare in the general apprehenſion. The queen was addreſſed to know what ſteps had been taken for removing the pretender from the dominions of the duke of Lorrain. Mr. Steele, afterwards known as the celebrated ſir Richard Steele, in a pamphlet written by him, bitterly exclaimed againſt the miniſtry, and the immediate danger of their bringing in the pretender. The houſe of commons conſidered this performance as a ſcandalous and ſeditious libel; and Steele was in conſequence expelled from the houſe.

The two principal leaders of the adminiſtration, Bolingbroke and lord Oxford, becoming jealous of each others views, now quarelled, and began to divide the tory intereſt. Oxford, it is thought, was entirely for the Hanoverian ſucceſſion; Bolingbroke had ſome hopes of bringing in the pretender. It was a mortifying proſpect to the queen, to perceive her favourite miniſtry ſplitting into oppoſite factions, while her own ill health kept pace with their contentions. Her conſtitution was broken; and what completed the ruin of her health, was the anxiety of her mind. The council-chamber exhibited for ſome time a ſcene of obſtinate diſpute and bitter altercation. Even in the queen's preſence, the treaſurer and ſecretary did not abſtain from mutual obloquy and reproach. At length, their animoſities coming to a height, Oxford wrote a letter to the queen, calculated to expoſe the turbulent and ambitious ſpirit of his colleague. On the other hand, Bolingbroke charged the treaſurer with having invited the duke of Marlborough to return from his voluntary exile, and of maintaining a private correſpondence with the houſe of Hanover. In conſequence of this charge, Oxford was removed from his employments, and Bolingbroke remained triumphant in his place. But the queen's declining health ſoon gave him a proſpect of what was ſhortly to follow. As no plan had been adopted for ſupplying the vacancy of treaſurer, the queen was perplexed on whom to fix her choice; and it really had ſo violent an effect upon her ſpirits, that ſhe ſunk into a ſtate of lethargic deſpondency. Notwithſtanding the beſt aid of her phyſicians, they deſpaired of her life, and the privy-council was aſſembled on the occaſion. The dukes of Somerſet and Argyle, being informed of the deſperate ſtate in which ſhe lay, entered the council-chamber without being ſummoned not a little to the ſurpriſe of the tory members, who expected not the interference of the body of the peers. The duke of Shrewſbury thanked them for their aſſiſtance at ſo critical a juncture. The phyſicians having declared that the queen was ſtill in her ſenſes, the council unanimouſly agreed that the duke of Shrewſbury was the fitteſt perſon to be appointed to the vacant office of treaſurer. Thus Bolingbroke's ambition was defeated juſt at the moment of his higheſt elevation.

All the peers and members of the privy-council, without diſtinction, being now ſummoned from the different parts of the kingdom, began to provide for the ſafety of the conſtitution. They ſent to the elector of Hanover, informing him of the queen's approaching diſſolution, deſiring him to repair to Holland, where he would be attended by a Britiſh ſquadron to convey him to England. At the ſame time they diſpatched inſtructions to the earl of Stafford at the Hague, to deſire the ſtates-general to be ready to perform the guarantee of the proteſtant ſucceſſion. Precautions were taken to ſecure the ſea-ports; and the command of the fleet was beſtowed upon the earl of Berkeley, a profeſſed whig. Theſe meaſures, which were all dictated by that party, anſwered a double purpoſe. They ſerved to manifeſt their own alacrity in the cauſe of the proteſtant ſucceſſion, and ſeemed to imply a danger to the ſtate from the diſaffection of the oppoſite intereſt.

On the thirtieth of July, the queen ſeemed ſomewhat relieved by medicines, roſe from her bed about eight o'clock, and walked a little; but ſhe was ſoon after ſeized with a fit of apoplexy, from which, however, ſhe was ſomewhat recovered by the aſſiſtance of Dr. Mead; yet ſhe continued all night in a ſtate of inſenſibility. She gave ſome languid ſigns of life between twelve and one; and expired about ſeven o'clock in the morning, Auguſt 1, 1714, in the forty-ninth year of her age, after a proſperous reign of more than twelve years.

This princeſs was rather amiable than great, rather pleaſing than beautiful. In her ended the line of the Stuarts; a family, perhaps, whoſe misfortunes and miſconducts are not to be paralleled in hiſtory.—For the character and iſſue of this illuſtrious ſovereign by her huſband George prince of Denmark, ſee vol. i. p. 732.

From the ACCESSION of the HOUSE of GUELPHS, to the PEACE of AMIENS, in 1801.

Purſuant to the act of ſucceſſion eſtabliſhed in the reign of William and Mary, George, ſon of Erneſt-Auguſtus Guelphs, firſt elector of Brunſwick, and the princeſs Sophia, grand-daughter to James I. aſcended the throne of Great Britain, by the title of George I. He was deſcended from Henry the Lion, duke of Saxony and Bavaria, who married Maude, eldeſt daughter of Henry II. of England; hence he was the legitimate iſſue of one of our early monarchs, in whom had been united the royal Anglo-Saxon and Norman blood, and who was alſo the founder of the noble family of Brunſwick. His mature age, being fifty-four years old, his ſagacity and experience, his numerous alliances, and the general tranquillity of Europe, all contributed to promiſe him a peaceable and happy reign. His virtues, though not ſhining, were ſolid; he was of a very different diſpoſition from the Stuart family, whom he ſucceeded. Theſe were proverbially diſtinguiſhed for leaving their friends in extremity; George, on the contrary, ſoon after his coronation, was heard to ſay, "My maxim is, never to abandon my friends; to do juſtice to all the world, and to fear no man." To theſe excellent qualifications he joined great application to buſineſs. However, one fault, with reſpect to England, muſt be admitted as the natural bias of humanity; he ſtudied more the intereſts of thoſe ſubjects he had left, than of thoſe he came to govern.

The king firſt landed at Greenwich; and two days after, he made his public entry into London, and was crowned on the 11th of October, 1714. The hopes and fears of the tories, who were now called *Jacobites*, and of the whigs, who were called *Hanoverians*, ran very high on the acceſſion of George I. but his majeſty ſoon relieved them from their ſtate of anxiety, by an inſtantaneous and total

change in all the important offices under government. The duke of Marlborough, who had juſt returned from a voluntary exile, was reſtored to his former poſts, with ſeveral new appointments; the earl of Nottingham was declared preſident of the council, the great ſeal was given to lord Cowper, the privy ſeal to the earl of Wharton, and the viceroyalty of Ireland to the earl of Sunderland. At the ſame time, lord Townſhend and Mr. Stanhope were appointed ſecretaries of ſtate, Mr. Pulteney ſecretary at war, and Mr. Walpole was made paymaſter to the army. The poſt of ſecretary for Scotland was beſtowed on the duke of Montroſe, and the duke of Argyle was made commander in chief of the forces in that country.

Thus the whig intereſt obtained an aſcendancy, both in and out of parliament; and they now proceeded to impeach the tory adminiſtration, on account of the peace they had made with France. The earl of Oxford, the duke of Ormond, the earl of Strafford, and viſcount St. John lord Bolingbroke, were the firſt called to account for the parts they had acted in this affair. Ormond and St. John fled; but though Oxford, Prior, and ſome others, were excepted out of the act of grace, they all eſcaped puniſhment. The changes in the adminiſtration had been effected without any direct oppoſition; but when the firſt emotions of fear or of duty had ſubſided, the malcontents of the jacobite faction broke out into various acts of ſedition and riot in the metropolis. From London the infection gradually ſpread to the more diſtant parts of the kingdom, where inſurrections became general, though fortunately without much devaſtation. But the commons, dreading the riſing ſpirit of revolt, addreſſed his majeſty to take vigorous meaſures for ſuppreſſing the rioters; the habeas corpus act was ſuſpended, and a new act was paſſed, by which it was now firſt decreed, that if any perſons, to the number of twelve, unlawfully aſſembled, ſhould continue together one hour after having been required to diſperſe by a juſtice of the peace, and had heard the proclamation againſt riots read in public, they ſhould be deemed guilty of felony without benefit of clergy.

From England the prevailing diſcontents ſpeedily paſſed into Scotland, where the union had hitherto remained unpopular, and was not yet reliſhed by the diſaffected. The Engliſh jacobites fomented their averſion; and a correſpondence being eſtabliſhed between the jacobites of both kingdoms, prince James, called the *pretender*, and who had aſſumed the title of chevalier de St. George, was flattered with the hopes of ſeeing a majority in both nations declare in favour of his right to the crown. But the ſudden death of Louis XIV. was no ſmall diſappointment to the pretender. He had privately ſupplied the chevalier with the means of fitting out an armament in the port of Havre; but the duke of Orleans, on whom the regency of the kingdom now devolved, adopted a new ſyſtem of politics, and entered into the ſtricteſt alliance with the king of Great Britain.

The partizans of the pretender, however, had gone too far to recede; and an open rebellion firſt began in Scotland. The earl of Mar aſſembled three hundred of his own vaſſals on the Highlands, proclaimed the pretender at Caſtletown, on September 6, 1715, and ſet up his ſtandard at Brae Mar, aſſuming the title of lieutenant-general of the pretender's forces. To ſecond their attempts, two veſſels arrived in Scotland from the pretender, with arms, ammunition, and a number of officers, together with aſſurances to the earl, that he himſelf would ſhortly come over to lead his forces. The earl, in conſequence of this declaration, ſoon found himſelf at the head of ten thouſand men, well armed and provided. He ſecured the paſs of the Tay at Perth, where his head-quarters were eſtabliſhed, and made himſelf maſter of the fruitful province of Fife, and all the ſea-coaſt on that ſide of the Frith of Edinburgh. He marched from thence to Dumblaine, as if he had intended to croſs the Forth at Stirling-bridge; but there he was informed of the preparations the duke of Argyle was making, who was raiſing forces to give him battle. This nobleman, whoſe family had ſuffered ſo much under the Stuarts, ſtill poſſeſſed his hereditary hatred; and upon this occaſion he was appointed commander in chief of the forces in North Britain. The earl of Sutherland alſo went into Scotland to raiſe forces for the ſervice of government; and many other Scottiſh peers followed the example. The earl of Mar being informed that the duke was advancing againſt him from Stirling, he at firſt thought it wiſeſt to retreat. But being joined by ſome of the clans under the earl of Seaforth, and others under general Gordon, an experienced officer, he reſolved to riſk a battle.

The duke of Argyle, appriſed of his intentions, and willing to prove his attachment to the proteſtant ſucceſſion, would not ſhrink from the conteſt, though his forces did not amount to half the number of the rebels. In the morning, he drew up his army, conſiſting only of three thouſand five hundred men, in the vicinity of Dumblaine; but he ſoon found himſelf greatly outflanked by the enemy. The duke perceiving the earl's intention to ſurround him, was obliged to alter his poſition; but on account of the deficiency of general officers, this was not done ſo expeditiouſly as to be completed before the rebels began the attack. The left wing, therefore, of the duke's army, received the whole centre of the enemy, and ſupported the firſt charge without ſhrinking. It ſeemed even for a while victorious, as the earl of Clanronald, who commanded, was killed on the ſpot. But Glengary, who was ſecond in command, undertook to inſpire his intimidated forces; and, waving his bonnet, cried out ſeveral times, "Revenge!" This animated the rebel troops to ſuch bravery, that they followed cloſe to the points of the enemy's bayonets, and got within their guard. A total rout began to enſue of that wing of the royal army; and general Wetham, their commander, riding full ſpeed to Stirling, gave out that all was loſt, and that the rebels were completely victorious. In the mean time, the duke of Argyle, who commanded on the right, attacked the left of the enemy, and drove them before him two miles, though they often faced about, and attempted to rally. Having thus entirely broken that wing, and driven them over the river Allan, he returned to the field of battle, where, to his great mortification, he found the enemy victorious, and patiently waiting his return. However, inſtead of renewing the engagement, both armies continued inactive, neither of them caring to renew the attack. In the evening, both ſides drew off, and both claimed the victory. Though the poſſeſſion of the field was kept by the rebels, yet certainly all the honour, and all the advantages of the day, belonged only to the duke of Argyle. It was ſufficient for him to have interrupted the progreſs of the enemy; for, in their circumſtances, delay was defeat. In fact, the earl of Mar ſoon found his diſappointments and his loſſes increaſe. The caſtle of Inverneſs, of which he had been in poſſeſſion, was delivered up to the king by lord Lovat, who had till now profeſſed to act in the intereſt of the pretender. The marquis of Tullibardine forſook the earl, in order to defend his own part of the country; and many of the Scottiſh clans, ſeeing no likelihood of ſucceſs, returned quietly home.

From the time the pretender had undertaken this wild ſcheme at Paris, in which the duke of Ormond and lord Bolingbroke were engaged, lord Stair, the Engliſh ambaſſador at the French court, had penetrated all his deſigns, and ſent faithful accounts of all his meaſures, and adherents, to the miniſtry at home. Upon the firſt rumour, therefore, of an inſurrection, the Britiſh miniſtry impriſoned ſeveral lords and gentlemen, of whom they had a ſuſpicion. The earls of Hume, Wigtown, Kinnoul, and other ſuſpected perſons, were committed to the caſtle of Edinburgh. Sir William Wyndham, ſir John Packington, Harvey, Combe, and others, with the lords Lanſdown and Duplin, were taken into cuſtody in England; but all theſe precautions were

were not able to ſtop the inſurrection in the weſtern counties, where it was already begun. However, their preparations were weak and ill conducted; every meaſure was betrayed to government as ſoon as projected, and many revolts repreſſed in the very outſet. The univerſity of Oxford was treated with great ſeverity on this occaſion. Major-general Pepper, with a ſtrong detachment of dragoons, took poſſeſſion of the city at day-break, declaring he would inſtantly ſhoot any of the ſtudents who ſhould preſume to appear without the limits of their reſpective colleges. The inſurrection of the northern counties came to greater maturity. In October, 1715, the earl of Derwentwater, and Mr. Foſter, took the field with a body of horſe, and, being joined by ſome gentlemen from the borders of Scotland, proclaimed the pretender. Their firſt attempt was to ſeize upon Newcaſtle, in which they had many friends; but they found the gates ſhut againſt them, and were obliged to retire to Hexham. To oppoſe theſe, general Carpenter was detached by government with a body of nine hundred men, and an engagement was hourly expected. But the rebels took the rout to Jedburgh, where they hoped to leave Carpenter behind them, and penetrate into England by the weſtern border. This was an effectual means to cut themſelves off both from retreat or aſſiſtance. A party of Highlanders, who had joined the rebels, refuſed to accompany them in this deſperate irruption, and one-half of them actually returned to their own country. At Brampton, Foſter opened his commiſſion, which had been ſent him from the earl of Mar, and there he proclaimed the pretender king. They continued their march to Penrith, where the militia that was aſſembled to oppoſe them, fled at their appearance. From Penrith they proceeded, by the way of Kendal and Lancaſter, to Preſton, of which place they took poſſeſſion without any reſiſtance. But this was the laſt ſtage of their ill-adviſed incurſion; for general Wills, at the head of ſeven thouſand men, came up to the town to attack them, and his activity allowed them no time to eſcape. They now, therefore, began to put the place in a poſture of defence, and repulſed the firſt attack of the royal army. Next day, however, Wills was reinforced by Carpenter, and the town was inveſted on all ſides. In this helpleſs ſituation, Foſter hoped to capitulate with the general, and ſent colonel Oxburgh, who had been taken priſoner, to propoſe terms. But Wills refuſed to treat with rebels; and ſaid that the only favour they had to expect, was to be ſpared from immediate ſlaughter. Theſe were hard terms; but no better could be obtained. They accordingly laid down their arms, and were put under a ſtrong guard; all the noblemen and leaders were ſecured, and a few of their officers tried for deſerting from the royal army, and ſhot by ſentence of a court-martial. The common ſoldiers were impriſoned at Cheſter and Liverpool; the noblemen and officers were eſcorted to London, and led through the ſtreets, pinioned and bound together, to intimidate their party.

Thus ended the two firſt expeditions ſet on foot in favour of the pretender; in neither of which appear the ſmalleſt traces of conduct, ſagacity, or deſign. But the direction of affairs on the continent, and at the court of Paris, was infinitely worſe. Bolingbroke had there been made his ſecretary, and Ormond his prime-miniſter. But theſe ſtateſmen quickly found that nothing could be done in favour of his cauſe. Louis XIV. who had ever during his life eſpouſed the intereſt of the abdicated family, commended prince James to the care of his brother the duke of Orleans, who ſucceeded in the government of the kingdom; but he denied the pretender any aſſiſtance. His party was compoſed of the loweſt and the moſt ignorant exiles from the Britiſh dominions; the ſecrets of his cabinet, and all his intended meaſures, were bandied about in coffee-houſes by perſons of the loweſt rank; ſubaltern officers were elevated to the rank of generals; and even proſtitutes were intruſted to manage his negociations. The pride of the regent duke of Orleans, therefore, independent of his ſuperior policy, could never have ſuffered him to foul his integrity by connecting himſelf with ſuch a motley tribe. The pretender, thus deſerted in France, reſolved to hazard his perſon among his friends in Scotland. Paſſing through France in diſguiſe, and embarking in a ſmall veſſel at Dunkirk, he arrived, after a voyage of a few days, on the coaſt of Scotland, with only ſix gentlemen in his train. He paſſed unknown through Aberdeen to Feteroſſe, where he was met by the earl of Mar, and about thirty noblemen and gentlemen in his intereſt. There he was ſolemnly proclaimed. His declaration, dated at Commercy, was printed and diſperſed. He went from thence to Dundee, where he made a public entry, and in two days more he arrived at Scone, where he intended to have the ceremony of his coronation performed. He ordered thankſgivings to be made for his ſafe arrival; he enjoined the clergy to pray for him in their churches; and, without the ſmalleſt ſhare of power, went through the ceremonies of royalty, which threw an air of ridicule on all his conduct. Having ſpent ſome time in unimportant parade, he reſolved to abandon the enterpriſe with the ſame levity with which it was undertaken. Having made a ſpeech to his council, he informed them of his want of money, arms, and ammunition, for undertaking a campaign, and therefore deplored that he was compelled to leave them. He embarked in the harbour of Montroſe, accompanied with ſeveral lords, his adherents, and in five days arrived at Gravelines. General Gordon, with the aſſiſtance of the earl mareſchal, proceeded at their head to Aberdeen, where he ſecured three veſſels, which took on-board ſuch perſons as wiſhed to make their eſcape to the continent. He then continued his march through the Highlands, and diſmiſſed his forces as he went forward. His retreat was made with ſuch expedition, that the duke of Argyle, with all his activity, could never overtake his rear, which conſiſted of a thouſand horſe.

In this manner terminated a rebellion founded in imbecility, and conducted in raſhneſs and folly. The law was now put in force with all its terrors; and the priſons were crowded with the deluded inſurgents. The earls of Derwentwater, Nithiſdale, Carnwath, and Wigtown, the lords Widrington, Kenmuir, and Nairne, were impeached, and, upon pleading guilty, all but lord Wigtown, received ſentence of death. No entreaties could ſoften the miniſtry to ſpare theſe unhappy men. The houſe of lords even preſented an addreſs to the throne for mercy, but without effect; the king anſwered, that on this, as well as on all other occaſions, he would act as he thought moſt conſiſtent with the dignity of the crown, and the ſafety of his people. Several others of the principals in the pretender's intereſt, were alſo puniſhed with death, ſome of whom were drawn and quartered. Upwards of a thouſand of the lower orders experienced the king's mercy, and were ſent to people the Britiſh colonies in North America, which thus gained ſtrength and importance from the diſaffections in England.

The rebellion thus extinguiſhed, ſerved to confirm the authority of thoſe in power. The parliament had ſhewn itſelf eager to ſecond the views of the miniſtry; and the pretended danger of the ſtate was made a pretext for continuing the parliament beyond the legal term of its exiſtence. An act, therefore, was made by themſelves, repealing that by which they were to be diſſolved every third year, and the term of the duration was extended to ſeven years, A. D. 1716. This was the origin of ſeptennial parliaments. If it could be right to extend their ſelf-elected duration to ſeven years, they might by the ſame parity of reaſoning perpetuate their authority, and thus deſtroy the balance of the conſtitution. On the introduction of the ſeptennial bill, Mr. Shippen, in his memorable ſpeech againſt it, remarked as follows: "I humbly conceive we have it not in our power to conſent to this bill; for I cannot diſcover by what rule of reaſon or law, we, who are only repreſentatives, can

enlarge,

enlarge, to our own advantage, the authority delegated to us—or that by virtue of ſuch delegated authority, we can deſtroy the fundamental rights of our conſtitution. This houſe has certainly no legiſlative authority but what it derives from the people. The members of this aſſembly were choſen under the triennial act. Our truſt is therefore a triennial truſt; and if we extend it beyond the ſtrict legal duration, we ceaſe from that inſtant to be the truſtees of the people, and are our own electors. From that inſtant, we act by an unwarrantable aſſumption of power, and take upon us to create a new conſtitution. For though it is a received maxim in civil ſcience, that the ſupreme legiſlature cannot be bound, yet an exception is neceſſarily implied, that it is reſtrained from ſubverting the foundation on which it ſtands." This famous bill, however, paſſed both houſes, and all objections to it were conſidered as the reſult of diſaffection.

Theſe important concerns being adjuſted, the king began to turn his thoughts to his Hanoverian dominions, and reſolved upon a voyage to the continent. He foreſaw a ſtorm gathering on the ſide of Sweden. As Charles XII. the heroic monarch of that country, was highly provoked againſt him for having entered into a confederacy with the Ruſſians and Danes, and for having purchaſed the towns of Bremen and Verden from the king of Denmark, which had conſtituted a part of his dominions; George, therefore, in order to ſecure his German dominions, entered into a new treaty with the Dutch and the regent of France, by which they agreed mutually to aſſiſt each other in caſe of an invaſion. Nor were his fears unfounded; Charles maintained a correſpondence with the diſaffected ſubjects of Great Britain: and a ſcheme was formed for landing a conſiderable body of Swediſh forces, with the king at their head; when it was expected they would be joined by all the malcontents of the kingdom. Count Gyllenburgh, the Swediſh miniſter in London, was principally active in the conſpiracy; but being ſeized, with all his papers, by order of the king, the confederacy was detected, and the parties puniſhed. A bill was immediately paſſed by the commons, prohibiting all commerce or connection with Sweden; and a ſupply of two hundred and fifty thouſand pounds was granted the king, to enable him to ſecure his dominions againſt the threatened invaſion. However, the premature death of Charles ſoon put an end to all diſquietudes from that quarter.

But this ſeems to have been the age of treaties, ſubſidies, and political combinations. At that time, the politicians of the age ſuppoſed that ſuch paper-chains would be ſufficient to ſecure the permanence of dominion; but experience has taught the contrary. Among other treaties concluded with ſuch hopes, was that called the *quadruple alliance*. It was agreed upon between the emperor of Germany, France, England, and Holland, that the emperor ſhould renounce all pretenſions to the crown of Spain, and exchange Sardinia for Sicily with the duke of Savoy; that the ſucceſſions to the duchies of Tuſcany, Parma, and Placentia, ſhould be ſettled on the queen of Spain's eldeſt ſon, in caſe the preſent poſſeſſors ſhould die without male iſſue. However, this treaty was by no means agreeable to the king of Spain, and conſequently it became prejudicial to the Engliſh, as it interrupted the commerce to Great Britain. But the intereſt of England was not the object which this treaty had in view. The diſpleaſure of the king of Spain ſoon broke out into an open rupture with the emperor, whom he conſidered as the chief contriver of this alliance; and a numerous body of Spaniſh troops were ſent into Italy to ſupport Philip's pretenſions in that quarter. It was in vain that the regent of France attempted to diſſuade him; or that the king of England offered his mediation: their interpoſition was rejected as intereſted and unjuſt. War, in the exhauſted ſtate of the Engliſh finances, was a real evil; yet a rupture with Spain was reſolved on. A ſquadron of twenty-two ſhips of the line was equipped with all expedition, the command given to ſir George Byng, and ordered to ſail for Naples, which was then threatened by the Spaniſh army. Sir George was received with great joy by the inhabitants of that city, and was informed that the Spaniards, to the amount of thirty thouſand men, were then actually landed in Sicily. In this exigence, as no aſſiſtance could be given by land, he reſolved to ſail thither, fully determined to purſue the Spaniſh fleet on which they had embarked. Upon coming round cape Faro, he perceived two ſmall Spaniſh veſſels, and following them cloſely, they led him to their main fleet, which, before noon, he diſcovered in line of battle, amounting to twenty-ſeven ſail. However, the Spaniſh fleet, upon perceiving the force of the Engliſh, attempted to bear away, though ſuperior in number. The Engliſh made a running fight, in which the Spaniſh commanders behaved with courage and activity; yet they were all taken except three, which were preſerved by the bravery of Cammoc, their vice-admiral, a native of Ireland. Sir George Byng behaved on this occaſion with ſingular prudence and reſolution; and the king wrote him a letter with his own hand, approving his conduct. This victory produced the reſentment and complaints of the Spaniſh miniſters in all the courts of Europe, and haſtened the declaration of war upon the part of the Engliſh, A. D. 1718, which, from motives of delicacy, had hitherto been delayed.

The war with Spain ſerved once more to raiſe the declining hopes of the pretender and his adherents. It was ſuggeſted, that by the aſſiſtance of Alberoni, the Spaniſh miniſter, a new inſurrection might be excited in England. The duke of Ormond was fixed upon to conduct this affair; and he obtained from the Spaniſh court a fleet of ten ſhips of war and tranſports, having on board ſix thouſand regular troops, with arms for twelve thouſand more. But fortune was ſtill unpropitious. Having proceeded as far as cape Finiſterre, he was overtaken by a violent ſtorm, which diſabled his fleet, and fruſtrated the expedition. This misfortune, added to the bad ſucceſs of the Spaniſh arms in Sicily, and other parts of Europe, induced Philip to wiſh for peace; as a prelude to which he conſented to ſign the quadruple alliance.

King George now returned from the continent, to receive the addreſſes and congratulations of his parliament. From addreſſing they proceeded to an object of much greater importance; which was no leſs than fixing the dependency of the Iriſh parliament upon that of Great Britain. Maurice Anneſly had appealed to the houſe of peers in England, from a decree made by the houſe of peers in Ireland, and this decree they reverſed. The Britiſh peers ordered the barons of the exchequer in Ireland, to put Mr. Anneſly in poſſeſſion of the lands he had loſt by the decree of the lords in that kingdom. The barons of the exchequer obeyed this order; and the Iriſh houſe of peers paſſed a vote againſt them, as having attempted to diminiſh the juſt privileges of the parliament of Ireland; and at the ſame time ordered the barons to be taken under the cuſtody of the black rod. On the other hand, the houſe of lords in England reſolved, that the barons of the exchequer in Ireland had acted with courage and fidelity; and addreſſed the king to ſignify his approbation of their conduct. In conſequence of this addreſs, a bill was prepared, by which the Iriſh houſe of lords was deprived of all right to final juriſdiction. It was oppoſed with great vehemence; but was finally carried, and received the royal aſſent. At this time, A. D. 1720, aroſe that ſingular event, known in our hiſtory by the name of the *South Sea Bubble*; a ſource of impoſition and fraud unparalleled in the tranſactions of man, and which had its riſe from a ſpirit of ſcheming avarice, which then ſeems to have pervaded all ranks of people.—For the particulars of this tranſaction, ſee the article BUBBLE, vol. iii. p. 476—470.

The clamours excited in the nation by the burſting of this monſtrous bubble, appear to have ſuggeſted to the diſaffected jacobins, that it was a proper ſeaſon to introduce

duce once more the claims of the pretender. Early in May, 1721, the king received intelligence from the duke of Orleans, regent of France, of a plot againſt his perſon and government. In conſequence, a camp was immediately formed in Hyde park; the military officers were ordered to repair to their poſts; the ſtates of Holland were deſired to have their auxillary troops in readineſs to be embarked, and many ſuſpected perſons were apprehended in Scotland and England. Among thoſe who were ſuppoſed to be principally implicated in this treaſonable conſpiracy, were Atterbury biſhop of Rocheſter, the earl of Orrery, lords Grey and North, Cochrane and Smith from Scotland, Chriſtopher Layer, a young templar, George Kelly, an Iriſh clergyman, Cotton, Bingley, and Fleetwood, Engliſhmen, and one Naynoe, an Iriſh prieſt.

On the meeting of the new parliament, A. D. 1722, his majeſty, in his ſpeech, developed the nature and extent of the plot, which had only been fruſtrated by the above timely diſcovery. To this formidable repreſentation, Mr. Robert Walpole, the prime miniſter, added ſeveral particulars, which ſhewed the dangerous aims and objects of the jacobites. To corroborate the whole, an original and printed copy of a declaration, ſigned by the pretender at Lucca, was laid before the houſe. In this curious paper, the chevalier de St. George expatiated on the grievances of the nation, and calling upon the people to aſſert their rights, gravely propoſed, "that if king George would relinquiſh the throne, the rightful heir, in return, would beſtow on the ſaid George the title of king in his native dominions, and ſecure his ſucceſſion to the Britiſh ſceptre, whenever, in due courſe, his natural right ſhould take place." By way of puniſhing the friends of the pretender, a bill was prepared by the commons to raiſe one hundred thouſand pounds on the real and perſonal eſtates of papiſts, towards defraying the expences incurred by the late rebellion and diſorders; and all perſons of that faith in Scotland were called upon to regiſter their names and eſtates. Theſe pecuniary mulcts were followed by the trial, conviction, and execution, of Layer. No evidence appeared, or at leaſt was produced, for grounding any proceſs againſt the nobles who had been arreſted; but Atterbury biſhop of Rocheſter, was for ever baniſhed the realm, and all other his majeſty's dominions, and ordered to depart out of the ſame before the 25th of June, 1723.

The trial of Rocheſter was followed by another of a different nature, but in which the intereſts of the nation were more deeply concerned. It had been uſual for the lord-chancellors, upon being appointed to their high office, to nominate the maſters in chancery—places of value and of truſt, though then purchaſed as commiſſions in the army. Some men of bad character having been appointed to this office, and having embezzled the money of orphans and ſuitors lodged in their hands, a complaint was made to government, and this drew down the reſentment of the miniſtry on the lord chancellor. He was made to reſign the ſeals; and the king ordered the whole affair to be laid before parliament. The commons, taking the facts into conſideration, and finding many abuſes had crept into that court, which either impeded juſtice or rendered it venal, they reſolved to impeach Thomas earl of Macclesfield, the late chancellor, at the bar of the houſe of lords, for high crimes and miſdemeanors. This is one of the moſt celebrated trials in the annals of England. A bill was previouſly brought in to indemnify the maſters in chancery from the penalties of the law, upon diſcovering what conſiderations they had paid for their admiſſion to their reſpective offices. The trial laſted twenty days. The earl proved that ſuch ſums had been uſually received by former lords-chancellors; but reaſon ſhewed that ſuch receipts were contrary to law and juſtice. Equity, therefore, prevailed above precedent; the earl was convicted of fraudulent practices, and condemned in a fine of thirty thouſand pounds.

The remainder of the reign of George I. preſents little more than a tedious repetition of intricate and contradictory treaties, moſt of which were inimical to the intereſts of this country. To enable the king to fulfil ſome new engagements with the kings of Pruſſia and Denmark, an additional number of ſeamen and land forces were voted by the commons. Yet on a new alliance taking place between the courts of Spain and Vienna, the king felt again alarmed for the ſafety of his German dominions; and a negociation between Pruſſia, France, and England, took place at Hanover, which ended in a defenſive treaty for fifteen years. The hoſtile deſigns of Spain, in conjunction with the emperor, A. D. 1727, becoming daily more apparent, the naval and military force of the kingdom were put on a reſpectable footing; and, in order to cut off the ſupplies which furniſhed Spain with the means of annoyance, admiral Hoſier was directed to ſail to the Weſt Indies, with the intent of making prize of the galleons, which annually import the treaſures of South America into the mother country. This deſign, however, being divulged before it could be executed, the treaſure, amounting to ſix millions ſterling, was unloaded, and carried back to Panama.

It was now confidently aſſerted in parliament, that the objects of Spain were to place the pretender on the throne of Great Britain, and to recover Gibraltar and Port Mahon. Mutual affronts and recriminations followed between the powers at variance; and the ſeaſon for action was at hand. George, therefore, entered into a more ſtrict alliance with the kings of France and Denmark, ſubſidizing Sweden, formed a convention with Heſſe Caſſel, and determined to ſend a ſtrong fleet into the Baltic to check the Ruſſians, who were ſuſpected of being in the intereſts of Spain and the emperor. Parliament gave its entire ſanction to theſe meaſures, and voted an adequate ſupply. Meanwhile, hoſtilities were commenced againſt the dominions of Great Britain, by the Spaniards inveſting Gibraltar. This place was defended by colonel Clayton; and after the enemy had lain before it ſome months, and loſt ten thouſand men, they found it expedient to raiſe the ſiege. The garriſon did not loſe more than three hundred during the whole time of its inveſtment.

Early in the ſpring ſir Charles Wager had been diſpatched with a reinforcement to the garriſon of Gibraltar, and ſir John Norris ſet ſail for the Baltic, where he was joined by a Daniſh ſquadron. Every where preparations were making for a war, which threatened to embroil all Europe. A ſtop, however, was put to the further effuſion of human blood, by the mediation of the king of France; and at length twelve preliminary articles were ſigned by the reſpective plenipotentiaries, by which it was ſtipulated, "that hoſtilities ſhould immediately ceaſe; that the charter of the Oſtend company ſhould be ſuſpended for ſeven years; and, that a congreſs ſhould, in four months, aſſemble at Aix-la-Chapelle, for adjuſting all differences, and conſolidating the peace of Europe." The king of England did not live to enjoy the agreeable proſpect which his ſucceſsful negociations now opened. Being ſuddenly ſeized with a paralytic diſorder, on the road from Holland to Hanover, he was conveyed in a ſtate of inſenſibility to Oſnaburgh, where he expired on Sunday, the 11th of June, 1727, in the ſixty-eighth year of his age, and the thirteenth of his reign. His body was conveyed to Hanover, and interred among his anceſtors.

George I. was of a moderate ſtature; his features regular and manly, and his countenance grave and majeſtic. He was an able and experienced general, and a conſummate politician. Though the rage of party was never ſtronger than during his reign, he was allowed by all to have an honeſt heart; and he was beloved by thoſe who had the beſt opportunity of appreciating his worth. He governed England with great mildneſs; was an enemy to perſecution; and never wiſhed to encroach on the

civil or religious liberties of his people. That he felt a very ſtrong predilection for his native country, Hanover, was no more than natural; but that he ſhewed it too evidently at the expence of Great Britain, is a fact which will not be denied. He had been long ſeparated from the princeſs Sophia, his queen, who never came into England: of courſe the court at St. James's was never brilliant, nor did his majeſty ſeem fond of etiquette. He was married to the princeſs Sophia, daughter and heireſs of the duke of Zell, by whom he had George prince of Wales who ſucceeded him; and a daughter, married to Frederic king of Pruſſia, and mother of Frederic the Great.

George II. did not aſcend the throne until upwards of a month after the demiſe of his father, in conſequence of that event not being known in England. Immediately on the news being communicated to ſir Robert Walpole, that miniſter carried it to the prince and princeſs of Wales at Richmond, who, removing to Leiceſter houſe, a privy council was inſtantly aſſembled, and next day the new king was proclaimed with the uſual ſolemnities. His majeſty took the oath, and ſubſcribed the articles for the ſecurity of the church of Scotland, as required by the act of the union, and declared his firm purpoſe to preſerve entire the conſtitution in church and ſtate. At the ſame time he avowed his intention to adhere to all the treaties which his father had entered into; and he continued all the great officers of ſtate in their places. This prince, in 1704, had married the princeſs Wilhelmina Carolina Dorothea of Brandenburgh Anſpach, and with her was crowned at Weſtminſter, on the 11th of October, 1727, with great magnificence.

In his firſt ſpeech to parliament, the king profeſſed a fixed reſolution to merit the love and affection of his people, by maintaining them in the full enjoyment of their civil and religious rights, and by ſtudying to leſſen the expences of the government in all its departments. Sir Robert Walpole followed up theſe gracious aſſurances, by moving, that eight hundred thouſand pounds a-year ſhould be ſettled on his majeſty during life; and a liberal ſettlement was alſo made for the queen, in caſe ſhe ſhould ſurvive his majeſty. In ſhort, numbers who had been diſſatisfied under the former reign, now expreſſed their confidence in the new king; and, for a time, all parties ſeemed to be united in affection to his perſon, and in attachment to his government.

It had long been maintained by political writers, that exciſes are the moſt proper ways and means of ſupporting government in a long war, becauſe they equalize the burdens, and render them proportionable to the great wants of the public. Agreeably to this idea, though covertly under pretence of preventing frauds, the miniſter, A. D. 1733, propoſed, that a partial exciſe on tobacco ſhould be levied. This meaſure met with a violent oppoſition, not from the conſideration of that train of dependents it would produce, but from the dread of its extenſion to other articles; and the cry of a general exciſe was ſet up by the country-party in parliament, and echoed through the nation. The ferment, in ſhort, became ſo great, that though the miniſter had a triumphant majority of ſixty-one in the houſe of commons, he was obliged to wave the queſtion, and abandon his ſcheme.

In a future ſeſſion of parliament, A. D. 1737, the houſe having reſolved itſelf into a committee to conſider of the national debt, ſir John Barnard moved, "That the king ſhould be enabled to raiſe money, by the ſale of annuities, or by borrowing, at an intereſt not exceeding three per cent.; which ſum, ſo raiſed, ſhould be applied towards redeeming the South-ſea annuities; and, that ſuch of the ſaid annuitants as ſhould be inclined to ſubſcribe their reſpective annuities, ſhould be preferred to all others." The adoption of this meaſure he enforced with unanſwerable arguments; but the miniſtry, unwilling that the merit of the plan ſhould originate with oppoſition, ſet it aſide, without being able to impeach its juſtice and policy. In the courſe of the ſame ſeſſion, an act was paſſed, ſubjecting the ſtage and dramatic writers to certain reſtraints. The number of play-houſes was limited, and all pieces intended for repreſentation were to be ſubmitted to the lord chamberlain, without whoſe licence they could not be acted.

In the following year, A. D. 1738, the jealouſy of the commercial part of the nation had nearly involved the country in war. Loud complaints were made of the encroachments of the French on the Miſſiſſippi, and of the depredations of the Spaniards on the Britiſh merchants trading to the Spaniſh territory. A remonſtrance was in conſequence preſented to the court of Madrid, and a convention was appointed to ſettle the diſpute; and, though the treaty of Seville in 1729 ſeemed to have adjuſted all claims, and provided againſt all differences, this nation, however, eager for war, wiſhed to find occaſion for a rupture.

Walpole was fond of peace, and endeavoured to preſerve it by every means that did not ſtigmatize the honour of the nation. He therefore became unpopular for the very quality that ought to have rendered him reſpected. The Spaniards, probably, availing themſelves of his known diſpoſition for peace, began to inſult and diſtreſs the commerce of Great Britain: they diſputed the right of the Engliſh to cut logwood in the bay of Campeachy, or to collect ſalt in the iſland of Tortugas. The captains of their guarda coſtas made a practice of boarding and plundering Engliſh veſſels, on pretence of ſearching them for contraband commodities; and various other acts of cruelty and injuſtice were committed. In particular, a Spaniſh commiſſioned captain, having cut off the ear of an Engliſh maſter and commander, named Jenkins, bade him carry the morſel to the Engliſh king, and tell him, that the Spaniards would ſerve him in the ſame manner, ſhould an opportunity preſent itſelf. Theſe outrages were loudly and juſtly complained of by the nation at large; yet every endeavour to prevent a rupture with Spain was ſedulouſly adopted by the miniſtry; and a convention was at laſt, A. D. 1738, concluded and ratified, by which the king of Spain bound himſelf to make reparation to the ſubjects of Great Britain for their loſſes, by certain ſtipulated payments within a limited time. Sir Robert Walpole beſtowed the higheſt eulogium on this convention; but, with all his influence, he could only obtain a majority of twenty-eight, in an addreſs of approbation. In the upper houſe the miniſter was likewiſe very hard puſhed, and it was with difficulty he ſtood his ground. At the head of thoſe who voted againſt an addreſs was the prince of Wales, who, on account of a family miſunderſtanding, had joined the oppoſition with all the intereſt he could command.

In the mean while, the Spaniards, who took advantage of the forbearance of the Engliſh, having violated the terms of the convention, there was no alternative but a vigorous oppoſition. Letters of marque and repriſal were conſequently iſſued againſt Spain; a large fleet was aſſembled at Spithead; the land forces were augmented; and, A. D. 1739, an embargo was laid on all merchant veſſels. Walpole, however, ſtill held out the olive-branch; but his overtures for accommodation being rejected, war was formally declared. Yet, notwithſtanding the arrogance of the Spaniards, they appeared but ill prepared for hoſtilities. Admiral Vernon having aſſerted in the houſe of commons, that he could take Porto Bello with only ſix ſhips, he was diſpatched thither, and actually performed this hazardous ſervice. As the war began thus ſucceſsfully, it inſpired the commons to proſecute it with vigour. The miniſter was granted ſuch ſupplies as enabled him to equip a very powerful navy; and a ſquadron of ſhips was equipped for diſtreſſing the enemy in the South ſeas, the command of which was given to commodore Anſon. This fleet was deſtined to ſail through the ſtraits of Magellan, and ſteering northwards, along the coaſts of Chili and Peru, to co-operate occaſionally with admiral Vernon acroſs the iſthmus of Darien. The

delays

delays and miſtakes of the miniſtry, however, fruſtrated that part of the ſcheme, which was originally well laid. The commodore ſet ſail from Portſmouth in September, 1740, with five ſhips of the line, a frigate, and two ſtore-ſhips, with about fourteen hundred men. Having reached the coaſt of Brazil, he refreſhed his people on the iſland of St. Catharine, a ſpot that enjoys all the fruitfulneſs and verdure of the luxurious tropical climate. From thence he ſteered downward into the tempeſtuous regions of the ſouth; and in about five months after, meeting a terrible tempeſt, he doubled Cape Horn. By this time his fleet was diſperſed, and his crew deplorably diſabled with the ſcurvy; ſo that with much difficulty he gained the iſland of Juan Fernandez. There he was joined by one ſhip, and a veſſel of ſeven guns. From thence, advancing northward, he landed on the coaſt of Chili, and attacked the town of Payta by night. The garriſon and the inhabitants fled on all ſides; and the treaſures of the place were ſeized by the conquerors. This ſmall ſquadron then advanced to Panama, ſituated on the iſthmus of Darien, on the weſtern ſide of the great American continent. The commodore now placed all his hopes in taking one of thoſe valuable Spaniſh ſhips which trade from the Philippine iſlands to Mexico. In hopes of meeting with one of theſe, the commodore traverſed the great Pacific Ocean; but the ſcurvy once more viſiting his crew, ſeveral of his men died, and almoſt all were diſabled. In this exigence, having brought all his men into one veſſel, and ſet fire to the other, he ſteered for the iſland of Tinian till his men had ſomewhat recovered their health, and his ſhip was refitted for ſailing. At length, after various toils and dangers, he diſcovered the Spaniſh galleon he had ſo long been in queſt of. This veſſel was built as well for the purpoſes of war as of merchandize. It mounted ſixty guns, with five hundred men; while the crew of the commodore did not amount to half that number. However, the victory was on the ſide of the Engliſh; and they returned home with their prize, which was eſtimated at three hundred and thirteen thouſand pounds ſterling, while the different captures that had been previouſly made, amounted to as much more. Thus, after a voyage of three years, conducted with uncommon perſeverance and intrepidity, the public ſuſtained the loſs of a ſmall fleet, but gained immortal glory; while a few individuals were rewarded with immenſe riches.

When Anſon ſet out, it was with a deſign of acting a ſubordinate part to a more formidable armament deſigned for the coaſt of New Spain, conſiſting of twenty-nine ſhips of the line, and almoſt an equal number of frigates, furniſhed with all kinds of warlike ſtores, near fifteen thouſand ſeamen, and as many land forces. Never was a fleet more completely equipped, nor never had the nation more ſanguine hopes of ſucceſs. Lord Cathcart was appointed to command the army; but dying on the paſſage, the command devolved upon general Wentworth. The miniſtry, without any viſible reaſon, detained the fleet in England, until the ſeaſon for action in America was nearly loſt. In the country where they were to carry on their operations, periodical rains begin about the end of April, and this change in the climate as ſurely brings on epidemical and contagious diſeaſes. Having at length arrived before the wealthy city of Carthagena, they landed their forces, in order to form the ſiege. This city, which lies within ſixty miles of Panama, ſerves as a magazine for the merchandizes of Spain, which are conveyed from Europe thither, and from thence carried over land to Panama, to be exchanged for the native commodities of the New World. The taking of Carthagena, therefore, would have obſtructed the whole trade between Old and New Spain.

To carry on the ſiege with ſafety, the troops were landed on the iſland Tierra Bomba, near the mouth of the harbour, which had been ſtrongly fortified. The land forces erected a battery on-ſhore, with which they made a breach in the principal fort, while admiral Vernon, who commanded the fleet, ſent a number of ſhips into the harbour, to divide the fire of the enemy, and to co-operate with the land army. The breach being deemed practicable, a body of troops were commanded to ſtorm; but the Spaniards deſerted the works, and retired into the city. Encouraged by this advantage, general Wentworth marched up to the walls, and attempted to ſcale fort St. Lazare, in order to take the place by ſtorm. Nothing could be more unfortunate than this undertaking; the ſcaling ladders were found too ſhort; the enemy made a very brave defence; and the Engliſh were obliged to retreat in confuſion, leaving ſix hundred men dead on the ſpot; among whom was colonel Grant, who commanded the grenadiers. The terrors of the climate ſoon began to be more dreadful than thoſe of war; the rainy ſeaſon ſet in with ſuch violence, that it was impoſſible for the troops to continue in camp; and the mortality of a contagious air began to attack them in all its frightful varieties. Theſe misfortunes led to diſſenſions and mutual recriminations between the commanders; till at laſt they agreed to re-imbark the troops, and to withdraw as quick as poſſible from this ſcene of ſlaughter and contagion. This fatal miſcarriage, which tarniſhed the Britiſh glory, was no ſooner known in England, than the kingdom was filled with murmurs and diſcontent.

To this cauſe of complaint, ſeveral others were added. The inactivity of the Engliſh fleet at home was among the moſt principal. Sir John Norris had twice ſailed to the coaſt of Spain, at the head of a very powerful ſquadron, without taking any effectual ſtep to annoy the enemy. The Spaniſh privateers, which were numerous and enterpriſing, annoyed our commerce with great ſucceſs, having taken four hundred and ſeven ſhips belonging to the ſubjects of Great Britain. The Engliſh, though at an immenſe expence in equipping fleets, ſeemed to lie wholly inactive, and ſuffered one loſs after another without repriſal. Theſe untoward events had a manifeſt influence upon the general election which followed; and the complaints againſt the miniſtry became ſo general, that ſir Robert Walpole began to tremble for his ſafety. The prince of Wales, who continued to live retired from court, concurred in the oppoſition. Obſtinate ſtruggles were maintained in all parts of the kingdom; and ſuch a national ſpirit prevailed, that the country intereſt ſeemed ready to preponderate. In this ſituation, the miniſter finding the ſtrength of the houſe of commons turned againſt him, tried every art to divide that confederacy which he knew he had not ſtrength to oppoſe. His firſt attempt was by endeavouring to diſengage the prince from his party, by promiſes of royal favour, and other emoluments. The biſhop of Oxford was ſent to him, with an offer, that if he would make ſubmiſſion to the king, he ſhould be taken into favour; fifty thouſand pounds ſhould be added to his revenue; two hundred thouſand ſhould be granted him to pay his debts; and ſuitable proviſion made for his followers. This, to a perſon involved in debt, from the ſcantineſs of his penſion, and the neceſſity of keeping up his dignity, was a tempting offer. However, the prince nobly diſdained it, declaring he would accept of no conditions dictated under the influence of a miniſter whoſe meaſures he could not approve.

Walpole now ſaw that his power was at an end; but he ſtill feared more for his perſon. The reſentment of the people had been raiſed againſt him to an extravagant height; and their leaders taught them to expect very ſignal juſtice to the ſuppoſed oppreſſor. But in this they were deceived. The king adjourned both houſes of parliament for a few days; and, in the interim, ſir Robert Walpole was created earl of Orford, and reſigned all his employments. At no time of life did Walpole acquit himſelf with more art than on the preſent occaſion. The country-party conſiſted of tories and diſcontented whigs; the former, implacable in their reſentments, were loud for

for impeachment; the latter, either foured by diſappointment, or incited by ambition, only wiſhed his removal. To the whigs, therefore, Walpole applied, and was willing to grant them that power they aimed at; in return for which he only demanded impunity. The offer was accepted; their tory friends were abandoned; and a breach thus enſuing, nearly the ſame oppoſition continued againſt the new miniſtry that had obtained againſt the old. The place of chancellor of the exchequer was beſtowed on Mr. Sandys; lord Harrington was declared preſident of the council; and lord Carteret became ſecretary of ſtate. Mr. Pulteney was ſworn of the privy council, and afterwards created earl of Bath. A reconciliation between the king and the prince of Wales alſo took place; and the change in the adminiſtration was celebrated all over Great Britain.

The war with Spain had now continued for ſeveral years, but was attended with no great glory nor advantage to England. Some unſucceſsful expeditions had been carried on in the Weſt Indies, under admiral Vernon, commodore Knowles, and others. Theſe had for ſome time diſguſted the nation by their unſkilful operations at ſea, and taught them to wiſh for better fortune on land. The people were ripe for renewing their victories in Flanders, and the king deſired nothing with ſo much ardour. It was reſolved, therefore, to ſend a powerful army into the Netherlands, to decide the quarrels that were beginning on the continent; and immenſe triumphs were expected from ſuch an undertaking, which the king reſolved to conduct in perſon. An army of ſixteen thouſand men was in conſequence tranſported to Flanders; and the war with Spain became but an object of ſecondary conſideration.

The origin of thoſe diſſenſions on the continent had ariſen from the ſelfiſh views or ambition of the belligerent powers. After the duke of Orleans, who had been regent of France, died, cardinal Fleury undertook to ſettle the great confuſion in which that luxurious prince had left the kingdom. His moderation and prudence were equally conſpicuous; and under him France repaired her loſſes, and enriched herſelf by commerce. During the long interval of peace which this miniſter's counſels had procured for Europe, two powers, till now of little importance, began to attract the notice and jealouſy of the neighbouring nations. Peter the Great had already civiliſed Ruſſia; and this newly-created extenſive empire began to influence the councils of other nations, and to give laws to the north. The other power that came into notice was that of the king of Pruſſia, whoſe dominions were populous, and whoſe forces were highly diſciplined and ready for action. The other ſtates were but little prepared for renewing the war. The empire remained under the government of Charles VI. who had been placed upon the throne by the treaty of Utrecht. Sweden continued to languiſh, not being recovered from the deſtructive projects of her hero Charles XII. Denmark was powerful, but inclined to peace; and part of Italy ſtill remained ſubject to thoſe princes who had been impoſed upon it by foreign treaties.

All theſe ſeveral ſtates continued to enjoy a profound peace, until the death of Auguſtus, king of Poland, which kindled a freſh flame in Europe. The emperor, aſſiſted by Ruſſia, declared for the elector of Saxony, ſon of the deceaſed king. On the other hand, France declared for Staniſlaus, who had been nominated king of the Poles by Charles of Sweden, and whoſe daughter the the French king had married. In order to forward his pretenſions, Staniſlaus repaired to Dantzic, where the people gladly received him. But his triumph was ſhort; ten thouſand Ruſſians appearing before the place, the Poliſh nobility diſperſed, and Staniſlaus was cloſely beſieged. But though the city was taken, the king eſcaped by night; and fifteen hundred men which had been ſent to his aſſiſtance, were made priſoners of war. France, however, reſolved to ſupport his cauſe; and this, it was thought would be moſt effectually done by diſtreſſing the Auſtrians. The views of France were ſeconded by Spain and Sardinia, both having hopes to grow more powerful by a diviſion of the ſpoils of Auſtria. A French army, therefore, ſoon over-ran the empire, under the conduct of old marſhal Villars; while the duke of Montemar, the general of Spain, was equally victorious in the kingdom of Naples. Thus the emperor had the mortification to ſee his own dominions ravaged, and a great part of Italy torn from him, only for having attempted to give a king to Poland. Theſe rapid ſucceſſes of France and her allies, ſoon compelled the emperor to ſue for peace. It was accordingly granted him; but Staniſlaus, upon whoſe account the war begun, was neglected in the treaty. It was ſtipulated that he ſhould renounce all claim to the crown of Poland; for which the emperor gratified France with the duchy of Lorraine, and ſome other valuable territories.

The emperor dying in 1740, the French began to think this a favourable opportunity for extending their ambition. Regardleſs of treaties, particularly that called the Pragmatic Sanction, by which the reverſion of all the late emperor's dominions was ſettled upon his daughter, they procured the elector of Bavaria to be crowned emperor. Thus the queen of Hungary, daughter of the emperor Charles VI. ſaw herſelf ſtripped of her inheritance, deſerted by all Europe, and without any hopes of ſuccour. She had ſcarcely cloſed her father's eyes, when ſhe loſt Sileſia, by an irruption of the young king of Pruſſia, who ſeized the opportunity of her defenceleſs ſtate to renew his ancient pretenſions to that province, of which it muſt be owned his anceſtors had been unjuſtly deprived. France, Saxony, and Bavaria, attacked the reſt of her dominions; while England was the only ally that ſeemed likely to eſpouſe her cauſe. Sardinia and Holland ſoon after came to her aſſiſtance, and, laſt of all, Ruſſia acceded to the union in her behalf.

It may be aſked, what reaſon Britain had to intermeddle in theſe continental ſchemes? It can only be anſwered, that the intereſts of Hanover, and the ſecurity of that electorate, depended upon nicely balancing the different powers of the empire; and the Engliſh miniſtry were willing to gratify the king. Lord Carteret, who now held that place in the royal confidence which Walpole had formerly poſſeſſed, by theſe meaſures ſoothed the wiſhes of his maſter, and opened a more extenſive field for his own ambition. He expected to receive honour from victories which he ſeemed certain of obtaining; and was eager to adopt meaſures which would engage the martial ſpirit of the nation. When the parliament met, his majeſty began by informing them of his ſtrict adherence to engagements; and that he had ſent a body of Engliſh forces into the Netherlands, which he had augmented by ſixteen thouſand Hanoverians, to make a diverſion upon the dominions of France, in favour of the queen of Hungary. When the ſupplies came to be conſidered, by which this additional number of Hanoverian troops was to be paid, it produced moſt violent debates in both houſes of parliament. It was conſidered as an impoſition upon the nation, as an attempt to pay foreign troops for fighting their own battles; and the miniſtry were preſſed by their own arguments againſt ſuch meaſures before they came into power. They were not aſhamed, however, boldly to defend the meaſure; and at length, by the ſtrength of numbers, carried their point. But however theſe continental meaſures might have been ſuppoſed to injure the real intereſts of the nation, they ſerved effectually to retrieve the queen of Hungary's affairs. She ſoon began to turn the ſcale of victory on her ſide. The French were driven out of Bohemia. Her general, prince Charles of Lorraine, at the head of a large army, invaded the dominions of Bavaria. Her rival, the nominal emperor, was obliged to fly before her; and, abandoned by his allies, and ſtripped even of his hereditary dominions, retired to Frankfort, where he lived in obſcurity.

The

The French, who had begun only as allies, were now obliged to ſuſtain the whole burthen of the war, and accordingly invaded their enemies on every ſide. The troops ſent to the queen's aſſiſtance by England, were commanded by the earl of Stair, an experienced general, who had learnt the art of war under the famous Eugene. The chief object which he had in view was to effect a junction with the queen's army, commanded by prince Charles of Lorraine, and thus to out-number the enemy in the field. The French, to prevent this junction, aſſembled an army of ſixty thouſand men upon the river Maine, A. D. 1743, under the command of marſhal Noailles, who poſted his troops upon the eaſt ſide of that river. The Britiſh forces, to the number of forty thouſand, puſhed forward on the other ſide into a country where they found themſelves entirely deſtitute of proviſions. The king of England arrived at the camp while his army was in this critical ſituation; wherefore he reſolved to penetrate forward, to join twelve thouſand Hanoverians and Heſſians who had reached Hanau. With this view he put his army in motion; but before he had marched three leagues, he found the enemy had ſurrounded him on every ſide, near the village of Dettingen. Nothing now preſented but the moſt mortifying proſpects; if he fought the enemy, it muſt be at the greateſt diſadvantage; if he continued inactive, there was a certainty of being ſtarved; and as for a retreat, that was impoſſible. The impetuoſity of the French troops ſaved his whole army. They paſſed a defile, which they ſhould have been content to defend; and, under the conduct of the duke of Grammont, their horſe charged the Engliſh foot with great fury. They were received, however, with intrepidity and reſolution; ſo that they were obliged to give way, and repaſs the Maine with precipitation, with the loſs of about five thouſand men. The king of England, with great perſonal courage, expoſed himſelf to a ſevere fire of the enemy's cannon, and in the midſt of the engagement encouraged his troops by his preſence and his example. The Engliſh had the honour of the day, but were ſoon obliged to leave the field of battle, which was taken poſſeſſion of by the French, who treated the wounded Engliſh with clemency and care. Though the Engliſh were victorious, yet the earl of Stair, who was commander in chief, did not aſſume any honour from ſuch a victory. He was unwilling to ſhare any glory which was ſo precariouſly obtained, and ſnatched rather from the enemy's miſtake, than gained by his conduct. He therefore ſolicited for leave to reſign; which being granted, the troops were led into quarters, and deſiſted from further operations that campaign.

Meanwhile the French went on with vigour on every ſide. They oppoſed prince Charles of Lorraine, and fruſtrated his attempts to paſs the Rhine. They gained ſome ſucceſſes in Italy; but their chief hopes were placed upon an invaſion of England. Louis XV. from the violence of the parliamentary diſputes, had been perſuaded that England was ripe for a revolution, and only wanted the preſence of the pretender to bring about the change. An invaſion, therefore, was actually projected; and prince Charles-Edward, the ſon of James, the old pretender, haſtily departed from Rome for Paris, where he had a flattering audience of the French king, who undertook to ſupport his exertions to recover the crown of England for his father. The troops deſtined for the expedition amounted to fifteen thouſand men; and preparations were made for embarking them at Dunkirk to ſome of the neareſt ports in England, under the eye of the young pretender. The duke de Roquefeuille, with twenty ſhips of the line, was to ſee them ſafe landed in England; and the famous count Saxe was to command them, when put on-ſhore. But the whole project was diſconcerted by the appearance of ſir John Norris, who, with a ſuperior fleet, made up to attack them. The invading armament was thus obliged to put back; a very hard gale damaged their tranſports; and the French, fruſtrated in their ſcheme of a ſecret invaſion, thought fit openly to declare war.

But though fortune favoured England on this occaſion, yet in other reſpects ſhe was not ſo propitious. A powerful ſquadron had been ſent into the Mediterranean, to overawe thoſe ſtates who might be inclined to lend aſſiſtance to France or Spain; which was conducted by Leſtock; but admiral Matthews, though a younger officer, was ſent out to take the ſuperior command; which produced a miſunderſtanding between the two admirals. An opportunity ſoon offered for theſe officers to diſcover their mutual animoſity, to the manifeſt injury of their country. The combined fleets of France and Spain, to the number of thirty four ſail, were ſeen off Toulon, and a ſignal was made by Matthews to prepare for engaging. It happened that his ſignals were not perfectly exact. This was a ſufficient excuſe to Leſtock for not bringing up into his ſtation; ſo that after ſome vain efforts to attack the enemy in conjunction, Matthews reſolved to engage by himſelf. One ſhip of the line belonging to the Spaniſh ſquadron ſtruck to captain Hawke. The purſuit was continued for three days, at the end of which Leſtock ſeemed to come up with more vigour; but juſt then Matthews gave orders for diſcontinuing the chace; and ſailed away for Port Mahon to repair the damage he had ſuſtained. The Engliſh fleet claimed the victory; and the French and Spaniards were pleaſed with their eſcape. In England, however, this rencounter was conſidered as the moſt mortifying defeat, and the complaints of the people knew no bounds. Both admirals, upon their return, were tried by a court-martial. Matthews, who had fought with intrepidity, was declared for the future incapable of ſerving in his majeſty's navy; while Leſtock, who had kept at a diſtance, was acquitted with honour, for having entrenched himſelf within the punctilios of diſcipline. He barely did his duty; but a man of honour, when his country is at ſtake, *will do more*.

The proceedings in the Netherlands were alſo unfavourable to the Engliſh. The French had aſſembled a formidable army of one hundred and twenty thouſand men, the chief command of which was given to the famous count Saxe, natural ſon to the king of Poland. He had been bred from his youth in camps, and had ſhewn very early inſtances of cool intrepidity. To oppoſe this experienced general, the Engliſh were headed by the duke of Cumberland, who neither poſſeſſed equal talents for war, nor was able to bring ſuch a formidable army into the field. The French, therefore, bore down all before them. They beſieged Fribourg, and in the beginning of the ſucceeding campaign, inveſted the ſtrong city of Tournay. Although the allies were inferior in number, they reſolved, if poſſible, to ſave this city by hazarding a battle. They accordingly marched againſt the enemy, and took poſt in ſight of the French, who were encamped on an eminence, having the village of St. Antoine on the right, a wood on the left, and the town of Fontenoy before them. This advantageous ſituation did not repreſs the ardour of the Engliſh, who began the attack at two o'clock in the morning, and, preſſing forward, bore down all oppoſition. They were for near an hour victorious, and appeared confident of ſucceſs; while marſhal Saxe, who was extremely ill, was carried about to all the poſts in a litter, and aſſured his army that, notwithſtanding all unfavourable appearances, the day was his own. A colemn of the Engliſh, without any command, but by mere mechanical courage, had advanced upon the enemy's lines, which opening, formed an avenue on each ſide to receive them. It was then that the French artillery, on three ſides, began to play upon this forlorn body, which, though they continued for a long time unſhaken, were obliged at laſt to retreat, about three in the afternoon. This was one of the moſt bloody battles fought in the ſeventeenth century; the allies left on the field of battle near twelve thouſand men, and the French bought their victory with an equal number of ſlain. This blow, by which Tournay was taken by the French, gave them ſuch a manifeſt ſuperiority all the reſt of the campaign, that they kept the

fruits of their victory during the whole continuance of the war. The duke of Bavaria, whom they made emperor under the title of Charles VII. was lately dead; but though his pretenſions were the original cauſe of the war, it was by no means diſcontinued at his deceaſe. The grand duke of Tuſcany, huſband to the queen of Hungary, was declared emperor in his room; and though the original cauſe of the quarrel was no more, the diſſenſions ſtill continued as violent as ever.

Notwithſtanding the ill ſucceſs which attended the Britiſh arms by land and ſea, yet theſe being diſtant evils, the Engliſh ſeemed only to complain from honourable motives, and murmured at diſtreſſes of which they had but a very remote idea. The projected invaſion by the pretender was now again at hand, but while it increaſed their perplexities, it only cemented their union. The miniſtry was now changed; the lords Harrington, Cheſterfield, and Mr. Pelham, were at the head of affairs; theſe enjoyed ſome ſhare of popularity, and the operations of war were no longer thwarted by a turbulent oppoſition. The admirals Rowley and Warren had retrieved the honour of the Britiſh flag, and made ſeveral important captures at ſea. The fortreſs of Louiſburg, in the iſland of Cape Breton, had ſurrendered to general Pepperell; while two French Eaſt-Indiamen, and a Spaniſh galleon from Peru, laden with immenſe treaſure were taken. At this period of returning ſucceſs, prince Charles-Edward, made his attempt for gaining the Britiſh crown. He was enterpriſing and ambitious; but, either from inexperience or natural inability, utterly unequal to the bold undertaking in which he had embarked. He was long flattered by the raſh, the ſuperſtitious, and the needy; he was taught to believe that the kingdom was ripe for a revolt, and that it could no longer bear the immenſe load of taxes with which it was burthened.

Being furniſhed with money, and large promiſes from France, he embarked for Scotland on-board a ſmall frigate, accompanied by the marquis of Tullibardine, ſir Thomas Sheridan, and a few other deſperate adventurers. Fortune, which ever perſecuted his family, ſeemed no way more favourable to him; his convoy, a ſhip of ſixty guns, was ſo diſabled in an engagement with an Engliſh man of war, the Lion, that it was obliged to return to Breſt, while he continued his courſe to the weſtern parts of Scotland, and landing on the coaſt of Lochaber, July 27, 1745, was in a little time joined by ſome chiefs of the Highland clans, and their vaſſals. By means of theſe chiefs he ſoon ſaw himſelf at the head of fifteen hundred men, and invited others to join him by his manifeſtoes, which were diſperſed all over Great Britain. The boldneſs of the enterpriſe aſtoniſhed Europe: it awakened the fears of the puſillanimous, the ardour of the brave, and excited the pity of the wiſe. The miniſtry was no ſooner confirmed in the account of his arrival, which at firſt they could be ſcarcely induced to credit, than ſir John Cope was ſent to oppoſe his progreſs. By this time the young pretender was arrived at Perth, where the ceremony was performed of proclaiming his father king of Great Britain. From thence, deſcending with his forces from the Highlands, they ſeemed to gather ſtrength as they went forward; and, advancing to Edinburgh, entered that city without oppoſition. There again the pageantry of proclamation was performed; and there he promiſed to diſſolve the union, which was conſidered as one of the grievances of the country. However, the caſtle of that city ſtill held out, and prince Charles was unprovided with cannon to beſiege it. In the mean time, ſir John Cope, who had purſued the rebels through the Highlands, reſolved to march towards Edinburgh, and give them battle. The young pretender, whoſe forces were ſuperior, though undiſciplined, attacked ſir John near Preſtonpans, a few miles from the capital, and put him and his troops to flight. This victory, by which the king loſt five hundred men, gave the rebels great influence; and had Charles Stuart taken advantage of the general conſternation, and marched directly for England, the conſequences might have been fatal to freedom. But he was amuſed by the promiſe of ſuccours which never came; and was induced to remain in Edinburgh, to enjoy the triumphs of a partial victory, and to be treated as a monarch. By this time his train was compoſed of the earl of Kilmarnock, lord Balmerino, the lords Cromartie, Elcho, Ogilvy, Pittligo, and the eldeſt ſon of lord Lovat, who came in with their clans, and increaſed his army. Lord Lovat himſelf was an enthuſiaſt in the cauſe; but, being without principles, he was unwilling to act openly, afraid of incurring the reſentment of the miniſtry, and the forfeiture of his life. Never was there a man of ſuch unaccountable ambition, or who ever more actively rendered himſelf hateful and ſuſpected by all. He was at firſt outlawed for raviſhing the duke of Argyle's niece; he then offered his ſervice to the old pretender in France, and it was accepted; he next betrayed the forces which were ſent to his aſſiſtance to queen Anne. He a ſecond time invited the pretender over in the reign of George I. and being put in poſſeſſion, by the chevalier, of the caſtle of Stirling, he once more betrayed it into the hands of the enemy. This man, true to neither party, had now, in ſecret, ſent aid to the young pretender, while, in his converſation, he affected to declaim againſt his conduct.

While the thoughtleſs Charles-Edward was trifling away his time at Edinburgh, the miniſtry of Great Britain took every precaution to oppoſe him with ſucceſs. Six thouſand Dutch troops, that had come over to the aſſiſtance of the crown, were diſpatched northward, under the command of general Wade; but it was objected that they could lend no aſſiſtance, being priſoners of France upon parole, and under engagements not to oppoſe that power for the ſpace of one year. However this be, the duke of Cumberland arrived from Flanders, accompanied with a large detachment of dragoons and infantry, well diſciplined, and inured to action, at the head of which he took the field. In the mean while the young pretender, after holding ſeveral councils and conſultations with his followers, came to the reſolution of making an irruption into England. He entered by the weſtern border, and inveſted Carliſle, which ſurrendered in leſs than three days. He there found a conſiderable quantity of arms; and there too he procured his father, the old chevalier de St. George, to be proclaimed king, by the title of James III.

General Wade, being appriſed of his progreſs, haſtily advanced acroſs the country from the oppoſite ſhore; but receiving intelligence that the enemy was full two days' march before him, he retired to his former ſtation. The young pretender, therefore, finding himſelf unoppoſed, reſolved to penetrate farther into the kingdom, after having received aſſurances from France, that a conſiderable body of troops would be landed on the ſouthern coaſt, to make a diverſion in his favour. He was flattered alſo with the hopes of being joined by a conſiderable number of malcontents as he paſſed forward, and that his army would increaſe on the march. Accordingly, leaving a ſmall garriſon in Carliſle, which he ſhould rather have taken with him, he advanced to Penrith, marching on foot in a Highland dreſs, and continuing his irruption till he came to Mancheſter, where he eſtabliſhed his head-quarters. He was there joined by about two hundred Engliſh, who were formed into a regiment under the command of colonel Townly. From thence he purſued his march to Derby, intending to go by the way of Cheſter into Wales, where he hoped to be joined by a great number of followers; but the factions which began to exiſt among his own jealous chiefs, prevented his proceeding to that part of the kingdom. He was now advanced within a hundred miles of London, which was filled with perplexity and conſternation. Had he proceeded with expedition, it is thought he might have made himſelf maſter of the metropolis, where numbers of the diſaffected were ready to join him. In this criſis, the king reſolved immediately to take the field

field in perſon. The volunteers of the city were incorporated into a regiment; the ſtudents of the law, and numerous other claſſes of the people, united into aſſociations for the ſervice of their country. But they were ſoon relieved from their apprehenſions by the anarchy which prevailed in the pretender's army. In fact, he was but the nominal leader of his forces; as his generals, the chiefs of the Highland clans, were, from their education, ignorant, and averſe to ſubordination. They had from the beginning begun to embrace an oppoſite ſyſtem of operation, and to contend with each other for pre-eminence; but they ſeemed now unanimous in returning to their own country. They accordingly retreated to Carliſle, and from thence croſſed the rivers Eden and Solway into Scotland. In theſe marches, however, they preſerved all the rules of war; they abſtained in a great meaſure from plunder; they levied contributions on the towns as they paſſed along; and with unaccountable precaution left a garriſon in Carliſle, which ſhortly after was obliged to ſurrender to the duke of Cumberland at diſcretion, to the number of four hundred men. The pretender, on entering Scotland, proceeded to Glaſgow, where he exacted large contributions. He advanced from thence to Stirling, where he was joined by lord Lewis Gordon, at the head of ſome forces which had been aſſembled in his abſence. Other clans, to the number of two thouſand, came in likewiſe; and from ſome ſupplies of money which he received from Spain, and from ſome ſkirmiſhes in which he was ſucceſsful againſt the royaliſts, his affairs began to put on a more promiſing aſpect. Being joined by lord Drummond, he inveſted Stirling-caſtle, commanded by general Blakeney; but the rebel forces, being unuſed to ſieges, conſumed much time to no purpoſe. It was during this attempt, that general Hawley, who commanded a conſiderable body of forces near Edinburgh, undertook to raiſe the ſiege, and advanced towards the rebels at Falkirk. After two days, the rebels, being ardent to engage, were led on in full ſpirits to attack the king's army. Prince Charles, who was in the front line, gave the ſignal for the onſet; and the firſt fire put Hawley's forces into confuſion. The horſe retreated with precipitation, and fell upon their own infantry; while the rebels, following up their advantage, the greateſt part of the royal army fled in confuſion to Edinburgh, leaving the conquerors in poſſeſſion of their tents, their artillery, and the field of battle.

Thus far the affairs of the rebel army ſeemed not unproſperous; but here was an end of all their triumphs. The duke of Cumberland had now put himſelf at the head of the troops at Edinburgh, which conſiſted of about fourteen thouſand men. With theſe he advanced to Aberdeen, where he was joined by ſeveral of the Scotch nobility attached to the houſe of Hanover; and, having revived the drooping ſpirits of his army, he reſolved to attack the enemy, who retreated at his approach. After refreſhing his troops at Aberdeen, he renewed his march, and in twelve days reached the banks of the Spey. This was the place where the rebels might have had a chance by diſputing his paſſage; but they loſt every advantage for want of diſcipline; they ſeemed devoid of all counſel and ſubordination; without conduct, and without unanimity. After a variety of diſputes among themſelves, they reſolved to await their purſuers upon the plains of Culloden, about nine miles from Inverneſs, emboſomed in hills, except on that ſide which is open to the ſea. There they drew up in order of battle, to the number of eight thouſand men, in three diviſions, ſupplied with a few pieces of artillery, ill manned, and badly ſerved. The battle began about one o'clock in the afternoon, on the 16th of April, 1746. The cannon of the king's army did prodigious execution among the rebels, while theirs was totally unſerviceable. One great error in the pretender's tactics, was ſubjecting wild and undiſciplined troops to the ſtrict forms of artful war, and thus repreſſing their native ardour, from which alone he could hope for ſucceſs. After they had been kept in their ranks and withſtood the Engliſh fire for ſome time, they became impatient for cloſer action, and about five hundred of them made an irruption upon the left wing of the Engliſh, with their accuſtomed fury. The firſt line being diſordered by this onſet, two battalions advanced to ſupport it, and galled the rebels with a cloſe and terrible diſcharge. At the ſame time the dragoons under Hawley, and the Argyleſhire militia, opening a park-wall that guarded the flank of the enemy, and which they had but feebly defended, fell in among them, ſword in hand, with great ſlaughter. In leſs than thirty minutes from the completion of this movement, the rebels were totally routed, and the field covered with their wounded and ſlain, to the number of above three thouſand. The French troops on the left did not fire a ſhot, but ſtood inactive during the engagement, and afterwards ſurrendered priſoners of war. An entire body of the clans marched off the field in order, while the reſt were routed with great ſlaughter, and their leaders obliged with reluctance to retire. The victory was in every reſpect deciſive; and humanity to the conquered would have rendered it glorious. But little mercy was ſhewn; the conquerors refuſed quarter to the wounded, the unarmed, and the defenceleſs; ſome were wantonly ſlain who were only excited by curioſity to become ſpectators of the battle, and ſoldiers were ſeen baſely to anticipate the employment of the executioner. The duke, immediately after the action, ordered thirty-ſix deſerters to be executed; the conquerors ſpread terror wherever they came; the whole country round was one dreadful ſcene of plunder, ſlaughter, and devaſtation; juſtice was forgotten, and vengeance aſſumed her empire.

Thus were blaſted all the hopes and all the ambition of the young Charles-Edward Stuart; one ſhort hour deprived him of imaginary thrones and ſceptres, and reduced him from the unenviable ſtate of a nominal king to that of a miſerable outcaſt, ſhunned by all mankind, except ſuch as ſought his deſtruction. To the good and the brave, ſubſequent diſtreſs often atones for former guilt; and while reaſon would ſpeak for puniſhment, our hearts plead for mercy. Immediately after the engagement, he fled with a captain of Fitz-james's cavalry; and when their horſes were fatigued, they alighted, and ſeparately ſought for ſafety on foot. The unfortunate fugitive pretender wandered about the wilds of Scotland, a wretched ſpectator of all thoſe horrors which had reſulted from his ill-guided ambition. There is a ſtriking ſimilitude between his diſtreſſes and thoſe of Charles II. upon his eſcape from Worceſter. He ſometimes found refuge in caves and cottages, dependent on the wretched natives, who could pity but not relieve him. Sometimes he hid himſelf in foreſts, with one or two companions of his diſtreſs, continually purſued by the troops of the conqueror, as there was a reward of thirty thouſand pounds offered for taking him, dead or alive. Sheridan, an Iriſh adventurer, was the perſon who kept moſt faithfully by him, and inſpired him with courage to ſupport ſuch incredible hardſhips. He had occaſion, in the courſe of his concealments, to truſt his life to the fidelity of above fifty individuals, whoſe regards prevailed above their avarice. One day, having walked from morning till night, he ventured to enter a houſe, the owner of which he well knew was attached to the oppoſite party. As he entered, he addreſſed the owner in the following manner: "The ſon of your king comes to beg a little bread and a few clothes. I know your attachment to my adverſaries: but I believe you have ſufficient honour not to abuſe my confidence, or to take advantage of my diſtreſſed ſituation. Take theſe rags that have for ſome time been my only covering; you may probably reſtore them to me one day when I ſhall be ſeated on the throne of my anceſtors." The maſter of the houſe was touched with pity at his diſtreſs; he aſſiſted him as far as he was able, and never divulged the ſecret.

In this manner he wandered among the frightful wilds of Glengary, for near ſix months, often hemmed round by

his purſuers, but ſtill preſerved by ſome lucky accident from the impending danger. At length a privateer of St. Malo, hired by his adherents, arrived in Lochnanach, in which he embarked in the moſt wretched attire. He was clad in a ſhort coat of black frize, thread-bare, over which was a common Highland plaid, girt round him by a belt, from which depended a piſtol and a dagger. He had not been ſhifted for many weeks; his eyes were hollow, his viſage wan, and his conſtitution greatly impaired by famine and fatigue. He was accompanied by Sullivan and Sheridan, his two Iriſh adherents, who had ſhared all his calamities, together with Cameron of Lochiel, his brother, and a few other exiles. They ſet ſail for France, and, after having been chaſed by two Engliſh men of war, they arrived in ſafety at Roſeau, near Morlaix in Bretagne. Perhaps he would have found it more difficult to eſcape, had not the vigilance of his purſuers been relaxed by a report that he was already ſlain.

While the pretender thus narrowly eſcaped to France, the ſcaffolds and the gibbets were erected for his adherents. Seventeen officers of the rebel army were hanged, drawn, and quartered, at Kennington-common, in the neighbourhood of London. Their conſtancy in death gained more proſelytes to their cauſe than even perhaps their victories would have obtained. Nine were executed in the ſame manner at Carliſle, and eleven at York. A few obtained pardon, and a conſiderable number of the common ſoldiers were tranſported to the plantations of North America. The earls of Kilmarnock and Cromartie, and lord Balmerino, were tried by their peers, and found guilty. Cromartie was pardoned, but the other two were beheaded on Tower-hill. Kilmarnock, either convinced of his errors, or flattered to the laſt with the hopes of pardon, declared a conſciouſneſs of his crimes, and profeſſed his repentance. But very different was the behaviour of Balmerino, who gloried in the cauſe for which he fell. When his fellow-ſufferer was commanded to bid God bleſs king George, which he did with a faint voice, Balmerino ſtill avowed his principles, and cried out aloud, "God bleſs king James!" The unfortunate Radcliffe, brother to the earl of Derwentwater who had been beheaded in the former reign, being taken onboard a ſhip as he was going to reinforce the pretender's army, and his perſon being recognized, he was ſentenced upon a former conviction, and ſuffered the like fate upon Tower-hill. Lord Lovat was alſo tried and found guilty; but his ſufferings did very little honour to the cauſe.

In the mean time, while England was thus in commotion at home, the flames of war continued to rage upon the continent with increaſing violence. The French arms were crowned with repeated ſucceſs; and almoſt the whole Netherlands were reduced under their dominion. The Dutch in their uſual manner negociated, ſupplicated, and evaded the war; but they found themſelves every day ſtripped of ſome of thoſe ſtrong towns which formed a barrier to their dominions, and which they had been put in poſſeſſion of by the victorious Marlborough. They now lay defenceleſs, and ready to receive the laſt terms of their conquerors; their national bravery ſeemed loſt in the ſpirit of traffic and luxury. Two powerful factions, which had ſubſiſted above a century in their republic, ſtill inflamed the people, and divided their councils. The one declared for the prince of Orange and a ſtadtholder; the other oppoſed this election, and deſired rather ſubmiſſive friendſhip than to be at variance with France. The prevalence of either of theſe factions to its utmoſt extent, would have been equally fatal to freedom; for, if a ſtadtholder was elected, the conſtitution became altered from a republic to a kind of limited monarchy; if, on the contrary, the oppoſite party prevailed, the people muſt ſubmit to the weight of a confirmed ariſtocracy, ſupported by French power, and liable to its arbitrary controul. Of the two evils they choſe the former: the people in ſeveral towns, compelled their magiſtrates to declare the prince of Orange ſtadtholder, captain-general, and admiral, of the United Provinces. The vigorous conſequences of this reſolution immediately appeared. All commerce with the French was prohibited; the Dutch army was augmented, the navy put on a reſpectable eſtabliſhment, and orders were iſſued to commence hoſtilities againſt France by ſea and land. Thus the war, which had begun but in a ſingle country, was now diffuſed over all Europe, and, like an epidemic fever, prevailed in different parts of this great political conſtitution, remitting and raging as effects and cauſes intervened.

The king of Sardinia, who had ſome years before joined France againſt England, now changed ſides, and declared againſt the ambitious power of France. Italy felt all the terrors of inteſtine war, or rather looked on, while foreigners were contending with each other for her uſurped dominions. The French and Spaniards on one ſide, and the imperialiſts and the king of Sardinia on the other, ravaged thoſe beautiful territories by turns, and gave laws to that degraded country, which had once ſpread her dominion over the world.

The Engliſh, in the mean while, made an unſucceſsful attack upon Port l'Orient. The French alſo gained a conſiderable victory at Rocroix in Flanders, although it coſt them as many lives as they deſtroyed of the enemy. Another victory, which they obtained at La Feldt, ſerved to depreſs the allied army ſtill more. But the taking of Bergen-op-zoom, the ſtrongeſt garriſon of Brabant, reduced the Dutch to a ſtate of deſperation. Yet theſe victories gained by the French were counterbalanced with as great diſappointments. In Italy, the marſhal Belleiſle's brother, attempting to penetrate, at the head of thirty-four thouſand men, into Piedmont, his army was routed, and himſelf ſlain. An unſucceſsful fleet attempted the recovery of Cape Breton. Two more were fitted out, the one to make a deſcent upon the Britiſh colonies in America, and the other to attack her poſſeſſions in the Eaſt Indies; but theſe fleets were intercepted by Anſon and Warren, and nine of their ſhips taken. Commodore Fox, alſo, with ſix men of war, took above forty French merchantmen richly laden from St. Domingo; and this loſs was followed by a ſignal defeat which the French fleet ſuſtained from admiral Hawke, A. D. 1747, in which ſeven ſhips of the line, and ſeveral frigates, were taken. In this manner, victory, defeat, negociation, treachery, and rebellion, ſucceeded each other for ſome years, till all ſides began to find themſelves growing more feeble, and gaining no advantage from continual animoſity and bloodſhed.

The Dutch had long endeavoured to ſtop the progreſs of a war, in which they had much to loſe, and nothing to gain. The king of France was ſenſible that a career of victory was the moſt advantageous time in which to offer terms of peace. He therefore expreſſed his deſire of general tranquillity to ſir John Ligonier, when he was taken priſoner at the battle of La Feldt. But now the bad ſucceſs of his admirals at ſea, and of his armies in Italy, the bankruptcies of his merchants, and the election of a ſtadtholder in Holland, who gave ſpirit to the oppoſition, all contributed to make him loath the war, and preſs for an accommodation. This was exactly what the allies wanted. A negociation was therefore reſolved upon; and the belligerent powers agreed to form a congreſs at Aix-la-Chapelle, where the earl of Sandwich, and ſir Thomas Robinſon, aſſiſted as plenipotentiaries from the king of Great Britain.

This treaty, which takes its name from the city wherein it was negociated, opened with the preliminary conditions of reſtoring all conqueſts that were made during the war. Hence great hopes were expected of terms both favourable and honourable to the Engliſh people; but the treaty ſtill remains a laſting mark of their precipitate counſels and voluntary diſgrace. It was agreed that all priſoners ſhould be mutually reſtored, and all conqueſts given up; that the duchies of Parma, Placentia, and Guaſtalla, ſhould be ceded to don Philip, heir-apparent to the Spaniſh

niſh throne, and to his heirs; but in caſe of his ſucceeding to the crown of Spain, that then theſe dominions ſhould revert to the houſe of Auſtria. It was confirmed that the fortifications of Dunkirk to the ſea ſhould be demoliſhed; that the Engliſh ſhips, annually ſent with ſlaves to the coaſt of New Spain, ſhould have this privilege continued for four years; that the king of Pruſſia ſhould be confirmed in the poſſeſſion of Sileſia, which he had lately conquered; and that the queen of Hungary ſhould be ſecured in her patrimonial dominions. But the degrading part at laſt fell upon poor old England: it was ſtipulated, that the king of Great Britain ſhould, immediately after the ratification of this treaty, ſend two perſons of rank and diſtinction to France as hoſtages, until reſtitution ſhould be made of Cape Breton, and all other conqueſts which England had made during the war!. This was a humiliating clauſe: but to add to the general error of the negociation, no prevention was put to the ſearching the veſſels of England in the American ſeas, upon which the war had originally begun. The limits of their reſpective poſſeſſions in North America were left unaſcertained; nor did the Engliſh receive any equivalent for thoſe forts which they reſtored to the enemy. The treaty of Utrecht had long been a ſubject of reproach to thoſe by whom it was made; but, with all its faults, the treaty now concluded was far more degrading. Yet ſuch was the ſpirit of the times, that the treaty of Utrecht was branded with univerſal contempt, while that of Aix-la-Chapelle was extolled to the heavens. This treaty, which ſome aſſerted would ſerve for a bond of permanent amity, was but a temporary truce; a ceſſation from hoſtilities, which neither England nor France were ſedulous to continue; for, though the war was actually huſhed up in Europe, yet in the Eaſt and Weſt Indies it ſtill went forward, under cover of their reſpective alliances in thoſe regions.

In the mean time, Mr. Pelham, who conducted the buſineſs of the ſtate, and was confeſſedly a man of candour and capacity, laid a ſcheme for lightening the public debt, accumulated during the late war. His plan was, to leſſen the intereſt which had been promiſed on granting the ſupplies, or elſe obliging the lenders to receive the ſums originally granted. Thoſe, for inſtance, who were proprietors of ſtock, and received for the uſe of their money four per cent. were, by an act paſſed for that purpoſe, compelled to accept of three pounds ten ſhillings per cent. the following year, and three per cent. every year enſuing; or, in caſe of refuſal, to receive the principal. This ſcheme was attended with the deſired effect, and was evidently beneficial to the nation. It was about this time alſo that the famous marriage-act, and the reſtrictions and qualifications for killing game, firſt took place.

A ſcheme was now projected, A. D. 1749, which the nation was taught to believe would be extremely advantageous. This was the encouragement held out to thoſe who had been diſcharged from the army and navy, to become ſettlers in a new colony in North America, in the province of Nova Scotia. To this retreat it was thought the waſte of an exuberant nation might well be drained off; and thoſe bold ſpirits kept in employment at a diſtance, who might be dangerous, if ſuffered to continue in idleneſs at home. The new colony was for ſome time maintained at the expence of the government; but in order to decide the claim to this diſtrict, the Engliſh and French revived the war, which ſpread in conſequence over every part of the globe. The native Indians bordering upon the deſerts of Nova Scotia, looked with a jealous eye upon theſe new ſettlers; and they conſidered the vicinity of the Engliſh as an encroachment upon their poſſeſſions. The French, who were their neighbours, fomented theſe ſuſpicions, by repreſenting the Engliſh as an enterpriſing and dangerous people. Commiſſaries were therefore appointed to meet at Paris, to compromiſe theſe diſputes; but the negociation proved abortive. The French had been the firſt cultivators of Nova Scotia, and, by great induſtry and long perſeverance, had rendered the ſoil more fertile, and capable of ſuſtaining nature with occaſional aſſiſtance from Europe. This country, however, had frequently changed its maſters, until at length the Engliſh were ſettled in the poſſeſſion, and acknowledged as the rightful owners, by the treaty of Utrecht.

But another national diſpute began about the ſame time, and in the ſame part of the world. The French, pretending to have firſt diſcovered the mouth of the Miſſiſſippi, claimed the whole adjacent country towards New Mexico on the eaſt, to the Apalachian mountains on the weſt. In order to eſtabliſh their claim, as they found ſeveral Engliſh families who had ſettled beyond theſe mountains, they diſpoſſeſſed them of their new ſettlements, and built forts to command the country round about. It was now ſeen that their intention was to ſurround the Engliſh colonies, which lay along the ſhore, by taking poſſeſſion of the internal parts of the country that lay towards the back ſettlements; and thus, being in poſſeſſion already of the northern and ſouthern parts of that great continent, to hem the Engliſh in on every ſide, and ſecure to themſelves all the trade of the internal part of the country. The Engliſh, therefore, juſtly apprehended, that if the French united their northern colonies on the river St. Lawrence, to their ſouthern on the river Miſſiſſippi, that then they muſt in a ſhort time become maſters of all that part of North America.

But it was not in America alone, but in Aſia likewiſe, that the ſeeds of a new war were preparing to be extended. On the coaſts of Malabar, the Engliſh and French had, in fact, never ceaſed from hoſtilities. This immenſe tract of country, which now ſaw the armies of Europe contending for its dominion, comprehends Hindooſtan, or the whole peninſula of India. On the coaſts of this country, the Engliſh, the French, and ſeveral other powers of Europe, had built forts, with the original conſent of the Great Mogul, who was then emperor of the whole tract. The war between the Engliſh and French began in India, by their ſiding reſpectively with two contending princes of the country; in which, from being firſt ſecondaries in the quarrel, they became principals. Thus the war between France and England was kindling up in every part of the world; and the miniſtry reſolved to cut ſhort the knot which they could not unlooſe. Orders were accordingly diſpatched to the American provinces to unite into a confederacy for their mutual ſecurity; and, if poſſible, to bring the Indians over to eſpouſe their quarrel.

To ſupport theſe views, the miniſtry in England began a very vigorous exertion in defence of the colonies. Four operations were undertaken in America at the ſame time, A. D. 1756. Of theſe, one was commanded by colonel Monckton, who had orders to drive the French from their encroachments in the province of Nova Scotia. The ſecond was directed againſt Crown-point, under the command of general Johnſon. The third, under the conduct of general Shirley, was deſtined to Niagara, to ſecure the forts on that river; and the fourth was farther ſouthward, againſt Fort du Queſne, under general Braddock.

In theſe expeditions Monckton was ſucceſsful; Johnſon alſo was victorious, though he failed in taking the fort againſt which he was ſent; Shirley was thought to have loſt the ſeaſon for operation by delay; Braddock was vigorous and active, but was defeated and killed. He went forward with intrepidity, and advanced into the deſerts of Oſwego, where no European had ever trod. But his courage was greater than his caution: regardleſs of the deſigns of the Indians, he took no care previouſly to explore the woods or the thickets. Being at length within ten miles of the fortreſs he was appointed to beſiege, and marching forward through the foreſts with full confidence of ſucceſs, on a ſudden his whole army was ſurpriſed by a general diſcharge of arms, both in front and flank, from an enemy that ſtill remained unſeen. It was now too late to think of retreating; the troops had entered the defile, which the enemy had artfully permitted them to do before they offered to fire. The vanguard of the Engliſh

now fell back in conſternation upon the main body, and the panic ſoon became general. The officers alone diſdained to fly, while Braddock himſelf ſtill continued to command his brave aſſociates, diſcovering at once the greateſt intrepidity and the greateſt imprudence. An enthuſiaſt to the diſcipline of war, he diſdained to quit the field, or to permit his men to leave their ranks, when their only method of treating the Indian army was by a precipitate attack, or by an immediate deſertion of the field of battle. At length Braddock, having received a muſket-ſhot through the lungs, dropped, and a total confuſion enſued. All the artillery, ammunition, and baggage, of the army, were left to the enemy; and the loſs ſuſtained by the Engliſh amounted to ſeven hundred men. The ſhattered remains of the army returned by their former route, and arrived to ſpread the general conſternation among the provincials of Philadelphia.

The general indignation that was raiſed by theſe defeats, drove the Engliſh into a ſpirit of retaliation by ſea, where they were more ſure of ſucceſs. Orders were given to make prize of the French ſhipping wherever found, though no formal declaration of war had yet been made. With this order the naval commanders readily complied; the Engliſh ports were ſoon filled with veſſels taken from the enemy, and kept as an indemnification for thoſe forts of which the French had unjuſtly poſſeſſed themſelves in America. The benefit of this meaſure was much more obvious than its juſtice; it ſtruck ſuch a blow, that the navy of France was unable to recover itſelf during the war, which was now formally declared on both ſides.

The firſt political manœuvre ſet on foot by Louis XV. was that of intimidating England with the threats of a formidable invaſion. Several bodies of their troops occupied the coaſts that lay oppoſite the Britiſh ſhores; and theſe were inſtructed in the diſcipline of embarking and diſembarking from flat-bottomed boats, which were conſtructed in great numbers for that purpoſe. The troops deſtined for this enterpriſe amounted to fifty thouſand: but they diſcovered the utmoſt reluctance to engage in this forlorn hope. Whether theſe preparations were really intended for actual deſcent, or made only to terrify the Engliſh, is uncertain; but it is manifeſt that they anſwered the latter purpoſe entirely. In this exigence the king applied to the Dutch for ſix thouſand men, which they were bound to furniſh by treaty in caſe of invaſion. But the wary Dutch refuſed the ſupply, alleging that their treaty was only to ſend troops in caſe of an *actual*, and not a threatened, invaſion. The king, diſappointed of this aſſiſtance, looked over the continent, to find where ſalvation might be had. A body of Heſſians and Hanoverians, amounting to about ten thouſand men, was to be purchaſed; and theſe were brought over into England, and encamped at Wincheſter, during the ſummer of 1756, to protect about as many millions of Engliſhmen, who were ſuppoſed, like children, incapable of defending themſelves. "But the remedy was worſe than the diſeaſe." The miniſtry was reviled for having reduced the nation to ſuch a diſgraceful condeſcenſion; and the people were loud in demanding a vigorous exertion of their own internal ſtrength, fearing no force that could be led to invade them.

Theſe murmurs and diſſenſions among the Engliſh, gave the French an opportunity of carrying on their deſigns in another quarter; and, while the miniſtry were employed in guarding againſt an invaſion at home, they were attacked in the Mediterranean, where they leaſt expected an enemy. The iſland of Minorca, which had been taken from the Spaniards in the reign of queen Anne, was ſecured to England by repeated treaties. But the miniſtry had neglected its defence; ſo that the garriſon was weak, and no way fitted to ſtand a vigorous ſiege. The French, therefore, landed near the fortification of St. Philip, which was reckoned one of the ſtrongeſt in Europe, and commanded by general Blakeney, who was brave indeed, but ſuperannuated. The miniſtry were no ſooner appriſed of this unexpected attack, than they reſolved to raiſe the ſiege, and ſent out admiral Byng with ten ſhips of war expreſsly for that purpoſe. Upon his approaching the iſland, he ſaw the French banners diſplayed upon the ſhore, and the Engliſh colours ſtill flying on the caſtle of St. Philip. He had been ordered to throw a body of troops into the garriſon; but this he thought too hazardous an undertaking; nor did he even make the attempt. While he was thus deliberating between his fears and his duty, his attention was called off by the appearance of a French fleet, that ſeemed of nearly equal force to his own. Confounded by a variety of meaſures, he ſeemed reſolved to purſue none; and therefore gave orders to form the line of battle, and act upon the defenſive. Byng had been long praiſed for his ſkill in naval tactics; and perhaps, valuing moſt thoſe talents for which he was moſt praiſed, he ſacrificed all claims to courage to an applauſe for naval diſcipline. The French fleet advanced; a part of the Engliſh fleet engaged; the admiral kept aloof, and gave very plauſible reaſons for not coming into action. The French fleet, therefore, ſlowly ſailed away; and no other opportunity ever offered of coming to a cloſer engagement. This caution was carried ſtill further; a council of war was called on-board the admiral's ſhip, which deprived the Engliſh garriſon of all hopes of ſuccour. It was determined to ſail away to Gibraltar, to refit the fleet, it having been previouſly decided that the relief of Minorca was impracticable!

Nothing could exceed the reſentment of the nation upon Byng's conduct; and the news which ſoon arrived of the ſurrender of the garriſon to the French, increaſed the general ferment almoſt to phrenſy. In the mean time, Byng continued at Gibraltar, quite ſatisfied with his own conduct, and little expected the ſtorm that was gathering over his head. Orders were ſent out for putting him under an arreſt, and for bringing him to England. He was ſoon after tried by a court-martial at Portſmouth, found guilty on the twelfth article of war, and ſentenced to be ſhot. His judges, however, recommended him to the king as an object of mercy; ſtating that they conſidered his conduct rather as the effects of error than of cowardice. By this ſentence, they hoped to ſatisfy at once the reſentment of the nation, and yet ſcreen themſelves from conſcious ſeverity. The government was reſolved upon ſhewing him no mercy; the parliament was applied to in the admiral's favour; but they found no circumſtances in his conduct that could invalidate the ſentence. Being thus abandoned to his fate, he maintained to the laſt a degree of fortitude and ſerenity, that no way betrayed either timidity or cowardice. On the day fixed for his execution, which was on-board the Monarque man of war in Portſmouth-harbour, he advanced from the cabin, and after delivering a paper, containing the ſtrongeſt aſſertions of his innocence, he came forward to the place where he was to kneel down, and for ſome time perſiſted in not covering his face; but his friends repreſenting that his looks would poſſibly intimidate the ſoldiers who were to ſhoot him, and prevent their taking proper aim, he had his eyes bound with a handkerchief; and then giving the ſoldiers the ſignal to fire, he was ſhot, on March 14, 1757. There appears ſome ſeverity in Byng's puniſhment; but it certainly had a powerful effect upon the ſubſequent operations of the war.

In the mean time the French, who were now maſters of Minorca, made a public declaration that they would retaliate all injuries which they might ſuſtain in their colonies, upon the king of England's territories in Germany. The court of London, dreading the conſequence, and anxious for the ſafety of Hanover, entered into a treaty with the court of Ruſſia, by which it was ſtipulated, that a body of fifty thouſand Ruſſians, ſhould be ready to act in the Engliſh ſervice, in caſe Hanover ſhould be invaded; and for this the czarina was to receive *a hundred thouſand pounds annually*, to be paid in advance!

This treaty, which was conſidered as a maſter-ſtroke of politics

politics by the miniſtry in England, ſoon appeared to be as nugatory as it was expenſive. The king of Pruſſia, who conſidered himſelf as guardian of the intereſts of Germany, declared that he would not ſuffer any foreign troops to enter the empire, either as auxiliaries or as principals. This conſummate politician had been appriſed of a ſecret negociation between the Ruſſians and the Auſtrians, by which the former were to enter the empire, and ſtrip him of his late conqueſt of Sileſia. Thus England was made the dupe of Ruſſian politics; ſhe paid them a large ſubſidy for entering the empire, which they had already determined to perform without her interference. The king of England, whoſe fears for Hanover were thus increaſed, had again recourſe to treaties, and an embaſſy was now ſent to Pruſſia. All the king of England deſired, was to keep a foreign enemy from invading Germany; and this the king of Pruſſia profeſſed to wiſh for with equal ardour. From this ſimilitude of political views, theſe two monarchs coaleſced; they mutually engaged to unite their armies againſt any power whatſoever, that ſhould attempt to make war upon any part of Germany.

This alliance gave birth to one of an oppoſite nature, that aſtoniſhed all Europe. The queen of Hungary had long meditated deſigns for recovering Sileſia, which the king of Pruſſia had taken from her when ſhe was unable to defend her dominions. Her chief hopes of aſſiſtanee were from Ruſſia; but ſhe now found, by the late treaty, that all her hopes from that quarter were fruſtrated. She therefore applied to France for aſſiſtance; and, to procure the friendſhip of that court, gave up her barrier in the Netherlands, which England had been for ages ſecuring to Auſtria againſt that power. By this extraordinary revolution, the whole political ſyſtem of Europe acquired a new aſpect, and the treaties of a century paſt were at one blow deſtroyed. This treaty between France and Auſtria was no ſooner ratified, than thoſe powers invited the empreſs of Ruſſia to join them; and Catharine, regardleſs of her engagements with England, acceded to the propoſal. But not Ruſſia alone, but Sweden alſo, was brought to co-operate in the intrigues of Franee; and a war between that nation and Pruſſia was forthwith declared.

The forces of the belligerent powers were drawn out in the following manner. England oppoſed France in America, Aſia, and on the ocean. France attaeked Hanover on the continent of Europe. That electorate the king of Pruſſia undertook to protect, while England promiſed him troops and money to aſſiſt his operations. Then again Auſtria had her aims on the dominions of Pruſſia, and drew the elector of Saxony into the ſame deſigns. In theſe views ſhe was ſeconded by France and Sweden, and by Ruſſia, who had hopes of acquiring a ſettlement in the weſt of Europe.

This memorable continental war was commenced by the king of Pruſſia, who entered Saxony with a large army, and, with great civility, demanded from the elector a paſſage through his dominions; diſguiſing his knowledge of the elector having entered iuto the treaty with his enemies, and profeſſing himſelf pleaſed with his neutrality. And to carry on the deception further, he entreated, that as the elector's troops were totally unneceſſary in conſequence of his pacific diſpoſition, that he would diſband them for the preſent, as he could not poſſibly have any occaſion for their ſervices. But this propoſal the elector of Saxony did not expect, and therefore rejected it in a menacing tone. Of this the king of Pruſſia was determined to take advantage. Such was the ſituation of the Saxon camp, that, though a ſmall army could defend it againſt numerous forees, yet great difficulty attended the quitting it. Of this his Pruſſian majeſty was well aware; therefore by blocking up every avenue he cut off the proviſions of the Saxon army; and the whole was ſoon reduced to capitulate. He took care to incorporate the common ſoldiers into his own army; and the officers who refuſed to ſerve under him he made priſoners of war. The king of Pruſſia, thus launched into the midſt of his enemies, was threatened eventually to be ſurrounded by their united armies; yet, with wonderful courage and ſueeeſs he perſevered in oppoſing them; he invades Bohemia, defeats the Auſtrian general at Lowoſentch, retreats, begins his ſecond campaign with another victory near Prague, is upon the point of taking that city, but, by a temerity almoſt unexampled; ſuffers a defeat at Kolin. Still, however, uneonquered, "Fortune, (ſaid he,) has turned her back upon me this day. I ought to have expected it. She is a female, and I am no gallant. Succeſs often occaſions a deſtructive confidence. Another time we will do better." We have inſtances of thouſands who gain battles; but no general ever before him acknowledged his errors, except Cæſar.

What the king ſaid of the inſtability of fortune, ſeemed for a time to purſue him. One diſaſter followed upon the heels of another. The Hanoverians were joined with him, and commanded by the duke of Cumberland; who appeared, from the beginning, ſenſible of the inſufficiency of his troops to face the enemy. He was driven beyond the Weſer, the paſſage of which might have been diſputed with ſome ſucceſs; yet the French were permitted to paſs unmoleſted. The Hanoverian army was now driven from one part of the country to another, till at length it made a ſtand near the village of Haſtenback, where it was hoped the numbers of the enemy would have the leaſt opportunity of coming to a general action. But the weaker army was ſtill obliged to retire, and, after a feeble reſiſtance, left the field of battle to the French, who were not remiſs in urging the purſuit. The Hanoverians retired towards Stade; by whieh means they marched into a country from whence they could neither procure proviſions, nor yet attack the enemy with any proſpect of ſucceſs. Unable, therefore, by their ſituation, to eſcape, or by their ſtrength to advance, they were compelled to ſign a capitulation, by which the whole forces laid down their arms, and were diſperſed into different cantonments. By this humiliating capitulation, whieh was called the treaty of Cloſter-ſeven, Hanover was obliged to ſubmit to France, who now determined to purſue the king of Pruſſia with all her ſtrength.

The ſituation of this monarch was become apparently deſperate; nor could human foreſight diſcover how he was to extrieate himſelf from ſurrounding difficulties. The French forces, now united, invaded his dominions on one ſide, commanded by marſhal Broglio. The Ruſſians, under the conduct of general Apraxin, attacked him in another, marking their way with ſlaughter and cruelty. A large body of Auſtrians entered Sileſia; and, penetrating as far as Breſlau, turned to the ſtrong fortreſs of Schweidnitz, which, after an obſtinate defenee, was obliged to ſurrender. Another Auſtrian army entered Luſatia, made themſelves maſters of Zittau, and, ſtill preſſing forward, laid Berlin, the capital, under contribution. In another quarter, a body of twenty thouſand Swedes pierced into Pruſſian Pomerania, took the towns of Anclam and Demmein, and exacted tribute from the whole country. It was in vain that the king of Pruſſia faced about to every enemy, though they then fled beforc him: while he purſued one body, another penetrated from behind; and even while he was victorious, his territories were every day diminiſhing.

The ſuccours of the Engliſh could be of very little advantage to him, after the Hanoverians were reſtrained from acting in his favour. The Britiſh miniſtry, however, conſcious that ſomething ought to be done, planned an enterpriſe againſt France, which, by cauſing a diverſion in that part of the kingdom, would draw off the attention of the enemy from Pruſſia, and give Frederic time to reſpire. Beſide this intention, England alſo hoped to give a ſevere blow to their marine, by deſtroying ſuch ſhips as were building or were laid up in the harbour of Rochefort,

againſt

againſt which city their operations were principally intended. But this expedition totally failed; and the armament returned to England without attempting any one object of their deſtination.

From this expedition, therefore, the king of Pruſſia received no advantage; and the deſpondence among the Engliſh was ſo great, that the miniſtry had thoughts of giving up his cauſe entirely. It was even ſuppoſed that no military efforts could ſave him; and that the only hope remaining was to make the beſt terms poſſible for him with his enemies. The king of England was actually meditating a negociation of this nature, when Frederic the Great expoſtulated with him to the following purpoſe: "Is it poſſible that your majeſty can have ſo little fortitude and conſtancy, as to be diſpirited by a ſmall reverſe of fortune? Are our affairs ſo ruinous that they cannot be retrieved? Conſider the ſtep you have made me undertake; and remember you are the cauſe of all my misfortunes. I ſhould never have abandoned my former alliances but for your flattering aſſurances. I do not now repent of the treaty concluded between us; but I entreat that you will not ingloriouſly leave me at the mercy of my enemies, after having brought upon me all the powers of Europe." In this arduous ſituation, England reſolved, more from motives of generoſity than of intereſt, to ſupport him; and ſucceſs began to return with double ſplendour.

The war in the Eaſt Indies had, in the mean time, been carried on with doubtful ſucceſs; but at length the affairs of the Engliſh ſeemed to gain the aſcendancy, through the heroic conduct of Mr. Clive. The firſt advantage that was obtained from his activity and courage, was the clearing the province of Arcot. Soon after which the French general was taken priſoner, and the nabob, whom the Engliſh ſupported, was reinſtated in the government, of which he had been deprived. The French, diſcouraged by theſe misfortunes, and ſenſible of their own inferiority in Hindooſtan, ſent over a commiſſary to Europe to reſtore peace. A convention between the two companies was accordingly concluded, importing that the territories taken on either ſide ſince the concluſion of the laſt peace ſhould be mutually reſtored; that the nabobs advanced by the influence of either party ſhould be acknowledged by both; and that for the future neither ſhould interfere in the differences that ſhould ariſe between the princes of the country. This ceſſation, which promiſed laſting tranquillity, was, nevertheleſs, but of ſhort duration. In a few months, both ſides renewed their operations, no longer under the name of auxiliaries, but as rivals in arms, in government, and in commerce. What the motives to this infraction were, are not ſufficiently aſcertained; but wherever there is trade there is avarice; and that is a paſſion which too frequently overleaps the bounds of equity. Certain it is that the prince of the greateſt power in that country declared war againſt the Engliſh from motives of perſonal reſentment, and, levying a numerous army, laid ſiege to Calcutta, one of the principal Britiſh forts in that part of the world. The fort was taken, having been deſerted by the commander; and the garriſon, to the number of an hundred and forty-ſix perſons, were made priſoners; and afterwards ſhut up to expire miſerably in a dungeon, for want of air and reſpiration, on June 18, 1756. See an account of this ſhocking event, under CALCUTTA, vol. iii. p. 610.

The deſtruction of this important fortreſs ſerved to interrupt the ſucceſſes of the Engliſh company. But the fortune of Mr. Clive, backed by the activity of an Engliſh fleet under admiral Watſon, ſtill turned the ſcale in their favour. After depoſing the nabob of Arcot, colonel Clive turned to the humbling of the French, who had long diſputed with us the empire in that part of the world. Chandenagore, a French ſettlement higher up the Ganges than Calcutta, was compelled to ſubmit to the Engliſh arms. The goods and money found in this place were conſiderable; but the chief damage the French ſuſtained was from the ruin of this their ſettlement on the Ganges, by which they engroſſed the commerce of this part of the continent. Thus in one campaign, which was carried on by the activity of Clive, ſeconded by the operations of admirals Watſon and Pococke, the Engliſh became poſſeſſed of a territory ſuperior in wealth, fertility, extent, and the number of its inhabitants, to any empire in Europe. Above two millions ſterling were paid to the company and the ſurvivors of thoſe who were impriſoned at Calcutta; the ſoldiers and ſeamen ſhared ſix hundred thouſand pounds, and the Engliſh ſovereignty became irreſiſtible in that part of the world. See particulars of the Indian wars, and their conſequent events, under HINDOOSTAN; and EAST-INDIA COMPANY, vol. iv. p. 875—883.

In the mean time, while conqueſt ſhined upon England from the eaſt, it was ſtill more ſplendid in the weſtern world. Some alterations in the miniſtry led to thoſe ſucceſſes which had been long wiſhed for by the nation, and were at length obtained. At the head of the newly found miniſtry was the celebrated Mr. Pitt, afterwards lord Chatham, who was made principal ſecretary of ſtate, and his coadjutor, the hon. Mr. Legge, chancellor of the exchequer; from whoſe united vigour the nation formed great expectations; and they were not deceived. The firſt important operations took place in America; to which part of the world three ſeveral commanders were appointed at the head of ſeparate expeditions. General Amherſt commanded that deſigned againſt the iſland of Cape Breton; the other was conſigned to the brave general Abercrombie, againſt Crown Point and Ticonderoga; and the third againſt Fort du Queſne, commanded by brigadier-general Forbes.

Cape Breton, which had been taken from the French during the preceding war, had been reſtored at the treaty of Aix-la-Chapelle. It was not till the Engliſh had been put in poſſeſſion of that iſland that they began to perceive its advantageous ſituation, and the convenience of its harbour for annoying the Britiſh trade. It was alſo a convenient port for carrying on their fiſhery, a branch of commerce of the utmoſt benefit to that nation. The wreſting it, therefore, from the hands of the French, was a meaſure ardently deſired by the whole nation. The fortreſs of Louiſbourg, by which it was defended, had been ſtrengthened by the aſſiſtance of art, and was ſtill better defended from the nature of its ſituation. The garriſon alſo was numerous, the commander vigilant, and every precaution taken to oppoſe a landing. But the Engliſh ſurmounted every obſtacle with great intrepidity, and the garriſon ſurrendered to general Amherſt by capitulation. The expedition to Fort du Queſne was equally ſucceſsful; but that againſt Crown Point was once more defeated. This was the ſecond time that the Engliſh had attempted to penetrate the French poſſeſſions in that part of the world. Braddock fell in the firſt attempt, a martyr to his impetuoſity; while too much caution was injurious to his ſucceſſor. Abercrombie ſpent much time in marching to the place of action; and the enemy was thus prepared to give him a ſevere reception. As he approached Ticonderoga, he found the enemy deeply intrenched at the foot of the fort, and ſtill further ſecured by fallen trees, with their branches pointing againſt him. Theſe difficulties the Engliſh veteran attempted to ſurmount; but as the enemy, being ſecure themſelves, took aim at leiſure, a terrible carnage of the aſſailants enſued; and the general, after repeated efforts, was obliged to retreat.

But though in this reſpect the Engliſh arms were unſucceſsful, yet upon the whole the campaign was greatly in their favour. The taking of Fort du Queſne ſerved to remove from their colonies the terror of the incurſions of the Indians, while it interrupted that correſpondence which ran along a chain of forts with which the French had environed the Engliſh ſettlements in America. This, therefore, promiſed a fortunate campaign the next year, and vigorous meaſures were taken to enſure ſucceſs. Accordingly,

cordingly, on the opening of the following year, 1759, the miniſtry again determined to attack three different parts of North America at the ſame time. General Amherſt, the commander in chief, with a body of twelve thouſand men, was to attack Crown-Point, that had hitherto braved the Engliſh army. General Wolfe, at the oppoſite quarter was to enter the river St. Lawrence, and undertake the ſiege of Quebec, the capital of the French dominions in America; while general Prideaux and ſir William Johnſon were to attempt a French fort, near the cataracts of Niagara. This laſt-named expedition was the firſt that ſucceeded. The fort of Niagara was a place of great importance, and ſerved to command all the communication between the northern and weſtern French ſettlements. The ſiege was begun with vigour, and promiſed an eaſy conqueſt; but general Prideaux was killed in the trenches, by the burſting of a mortar; ſo that the whole command devolved upon general Johnſon, who omitted nothing to puſh forward the vigorous operations of his predeceſſor, to which alſo he added his own popularity with the ſoldiers under him. A body of French troops, who were ſenſible of the importance of this fort, attempted to relieve it, but Johnſon attacked them with intrepidity, and in leſs than an hour their whole army was put to the rout, and the garriſon ſurrendered priſoners of war. The ſucceſs of general Amherſt was leſs ſplendid, though not leſs ſerviceable; for upon arriving at the deſtined place, he found the forts both of Crown-Point and Ticonderoga deſerted and deſtroyed.

There now remained but one grand and deciſive blow, to put all North-America into the poſſeſſion of the Engliſh; and this was the taking of Quebec, the capital of Canada. Admiral Saunders was appointed to command the naval part of the expedition; the ſiege by land was committed to the conduct of general Wolfe. This young ſoldier, who was not yet thirty-five, had diſtinguiſhed himſelf on many former occaſions, particularly at the ſiege of Louiſbourg; a part of the ſucceſs of which was juſtly aſcribed to him, who, without being indebted to family or connections, had raiſed himſelf by merit to the preſent command. When we conſider the ſituation of the town on the ſide of a great river, the fortifications with which it was ſecured, the natural ſtrength of the country, the great number of veſſels and floating batteries the enemy had provided for the defence of the place, the numerous bodies of ſavages continually hovering round the Engliſh army, we muſt own there was ſuch a combination of difficulties as might diſcourage and perplex the moſt reſolute commander. The general himſelf ſeemed perfectly ſenſible of the difficulty of the undertaking. After ſtating in a letter to the miniſtry, the dangers that preſented, "I know, (ſaid he,) that the affairs of Great Britain require the moſt vigorous meaſures. But then the courage of a handful of brave men ſhould be exerted only where there is ſome hope of a favourable event. At preſent the difficulties are ſo various, that I am at a loſs how to determine." The only proſpect of attempting the town with ſucceſs was by landing a body of troops in the night below the town, who were to climb up the banks of the river, and take poſſeſſion of the ground on the back of the city. This attempt, however, appeared peculiarly diſcouraging. The ſtream was rapid, the ſhore ſhelving, the bank above lined with centinels, the landing-place ſo narrow as to be eaſily miſſed in the dark, and the ſteepneſs of the ground ſuch as hardly to be ſurmounted in the day-time. All theſe difficulties were removed by the conduct of the general, and the bravery of the troops. Colonel Howe, with the light infantry and the Highlanders, aſcended the woody precipices with admirable courage and activity, and diſlodged a body of troops that defended a narrow path-way up the bank; thus a few mounting, the general drew the reſt up as they arrived. General de Montcalm, the French commander, was no ſooner appriſed that the Engliſh had gained theſe heights, which he had confidently deemed inacceſſible, than he reſolved to hazard a battle; and a furious encounter quickly began. This was one of the moſt deſperate engagements fought during the war. The French general was ſlain; the ſecond in command ſhared the ſame fate. General Wolfe was ſtationed on the right, where the attack was moſt warm: as he ſtood conſpicuous in the front line, he had been aimed at by the enemy's marksmen, and received a ſhot in the wriſt, which, however, did not oblige him to quit the field. Having wrapped a handkerchief round his hand, he continued giving orders without the leaſt emotion, and advanced at the head of the grenadiers with their bayonets fixed; but a ſecond ball pierced his breaſt; ſo that, unable to proceed, he leaned on a ſoldier that was next him. Now ſtruggling in the agonies of death, and juſt expiring, he heard a voice cry, "They run!" upon which he ſeemed for a moment to revive, and aſking who ran, was informed the French. Expreſſing his wonder that they ran ſo ſoon, and unable to gaze any longer, he ſunk on the ſoldier's breaſt, and his laſt words were, "I die happy."

The ſurrender of Quebec was the conſequence of this victory; and with it ſoon after the total ſubjection of all Canada. The French, the following ſeaſon, made a vigorous effort to retake the city; but by the reſolution of governor Murray, and the appearance of an Engliſh fleet under the command of lord Colville, they were forced to abandon the enterpriſe. To theſe conqueſts about the ſame time was added the reduction of the iſland of Guadaloupe, under commodore More and general Hopſon, an acquiſition alſo of great importance.

The ſucceſſes in India and America were deciſive, and achieved at no great expence; while the efforts of the Engliſh in Europe, and the operations of their great ally the king of Pruſſia, were alſo aſtoniſhing, yet produced no ſignal advantage. A defenſive war in Germany was all that could be expected; and the king of Pruſſia maintained himſelf againſt the united powers of the continent with unexampled bravery. The French and Imperialiſts, amidſt the depth of winter, formed the ſiege of Leipſic. The capture of that city would have been fatal to the intereſts of Frederic; therefore, by one of thoſe rapid marches for which he was famous, he ſeemed with his army unexpectedly to riſe up before the town. Such was the terror of his arms, that even vanquiſhed as he ſeemed, the French, though ſuperior in numbers, raiſed the ſiege, and retreated. He was reſolved to purſue, and overtook them at the village of Roſbach, where he gained ſo complete a victory, that night alone ſaved the French army from deſtruction. In the mean time, the Auſtrians in another part of the empire were victorious, and had taken the prince of Bevern, the king of Pruſſia's favourite general, priſoner. The king, therefore, immediately after having gained the battle of Roſbach, again undertook a forced march of two hundred miles, in the depth of winter, and came up with the Auſtrian army near Breſlau. He there diſpoſed his forces with his uſual celerity and judgment, and obtained another ſignal victory, in which he took not leſs than fifteen thouſand priſoners. Breſlau, with a garriſon of ten thouſand men, ſurrendered. Theſe ſucceſſes diſpirited the enemy, and began to give his Hanoverian allies freſh hopes of being able to expel the French from their territories.

Soon after the capitulation of Cloſter Seven, both ſides began to complain that the treaty was not ſtrictly obſerved. The Hanoverians exclaimed againſt the rapacity of the French general, and the brutality of his ſoldiers. The French retorted the charge, accuſed them of inſolence and inſurrection, and reſolved to bind them more ſtrictly to the terms of their agreement. Treaties between nations are ſeldom obſerved any longer than intereſt or fear upholds the union; and among nations that take every advantage, political faith is a term without meaning. The Hanoverians only wanted a pretext to take arms, and a general to head them. Neither were long wanting. The oppreſſions of the French were ſo

ſevere, that the army once more roſe to vindicate their freedom, and Ferdinand, prince of Brunſwick, put himſelf at their head. Nothing could be more fortunate for the intereſts of the king of Pruſſia than this event. He was now enabled to oppoſe the enemy upon more equal terms; he faced them on every ſide, often victorious, ſometimes repulſed, but ever formidable. Never was the ſcience of military tactics carried to ſuch perfection as by Frederic the Great. In this war, Europe ſaw, with aſtoniſhment, campaigns carried on in the midſt of winter, great and bloody battles fought, yet producing no viſible advantage to the victors. At no one time ſince the days of heroiſm were ſuch numbers deſtroyed, ſo many towns taken, ſuch ſtratagems practiſed, or ſuch intrepidity diſcovered. Armies were by the German diſcipline conſidered as compoſing one great machine, organiſed by one commander, and animated by a ſingle will. From the commentary of theſe campaigns, ſucceeding generals will take their leſſons of devaſtation, and improve upon the arts of increaſing human calamity.

England was all this time happily retired from the theatre of war; yet from her natural military ardour ſhe ſeemed deſirous of ſharing thoſe dangers of which ſhe was only a ſpectator. This paſſion for ſharing in a continental war was not leſs pleaſing to the king of England, from his native attachments, than from a deſire of revenge upon the plunderers of his country. As ſoon, therefore, as it was known that prince Ferdinand had put himſelf at the head of the Hanoverians, his Britannic majeſty, in a ſpeech to his parliament, obſerved that the late ſucceſſes of his ally in Germany had given a happy turn to his affairs, which it would be neceſſary to improve. The commons concurred in ſentiments, and liberally granted ſupplies both for the ſervice of the king of Pruſſia, and for enabling the army formed in Hanover to act vigorouſly in conjunction with him. From ſending money into Germany, the nation began to extend their benefits by ſending men. Mr. Pitt, who had at firſt come into popularity by oppoſing ſuch meaſures, was now prevailed on to enter into them with even greater ardour than any of his predeceſſors. The hopes of putting a ſpeedy end to the war by vigorous meaſures, the connections with which he was obliged to co-operate, and perhaps the pleaſure he found in pleaſing the king, all incited him eagerly to puſh forward a continental war. However, he only conſpired with the general inclinations of the people at this time, who, allured by the efforts of their noble ally, were unwilling to ſee him fall a ſacrifice to the united ambition of the continental powers.

In order to indulge this general inclination of aſſiſting the king of Pruſſia, the duke of Marlborough was ſent into Germany with a body of Britiſh forces, to join prince Ferdinand. After ſome ſucceſſes gained by the allied army at Crevelt, the duke of Marlborough dying, his command devolved upon lord George Sackville, who was a great favourite with the Engliſh army. However, a miſunderſtanding aroſe between him and the commander in chief, which too ſoon manifeſted itſelf at the battle of Minden. The cauſe of this ſecret diſguſt on both ſides was never known; it is thought that the extenſive genius and enterpriſing ſpirit of the Engliſh general, were by no means agreeable to prince Ferdinand, who hoped to reap ſome advantages which the other was unwilling to permit. Be that as it may, both armies advancing near the town of Minden, on the firſt of Auguſt, 1758, the French began the attack with great vigour, and a general engagement of the infantry enſued. Lord George, at the head of the Britiſh and Hanoverian horſe, was ſtationed at ſome diſtance on the right of the infantry, from which they were divided by a ſcanty wood that bordered on a heath. The French infantry giving ground, the prince thought that this would be a favourable opportunity to pour down the horſe among them, and accordingly ſent lord George orders to advance. Theſe orders were but ill obeyed; and whether they were unintelligible, or contradictory, ſtill remains a point for poſterity to decide. It is certain that lord George was immediately recalled, tried by a court-martial, found guilty, and declared incapable of ſerving in any military command for the future. The enemy, however, were repulſed with conſiderable loſs, and, at length giving way, were purſued to the very ramparts of Minden. Lord George Sackville being recalled, was now ſucceeded in his command over the Britiſh troops in Germany, by the brave and beloved marquis of Granby, alike the ſoldier's friend, and the enemy's ſcourge in battle, yet the moſt feeling and generous of men to the conquered. His brilliant ſucceſſes during the reſidue of the war gave the higheſt luſtre to the Britiſh arms.

The Britiſh army in Germany now amounted to above thirty thouſand men, and the whole nation was flu ſhed with freſh hopes of conqueſt. But theſe hopes were deluſive. The allies were worſted at Corbach, but retrieved their honour at Exdorf. A victory at Warbourg followed, and another at Zierenberg; but then they ſuffered a defeat at Compen, after which both armies went into winter-quarters. The ſucceſſes on either ſide might be conſidered as a compact by which both engaged to loſe much and gain little; for no advantage whatever followed from victory. The Engliſh at length began to open their eyes to their own intereſt, and found that they were waging unequal war, and loading themſelves with taxes for conqueſts that they could neither preſerve nor enjoy.

Yet the ſucceſsful efforts of the armies of England at this time in every part of the globe were amazing, and the expence of her operations greater than had ever been diſburſed by any nation before. The king of Pruſſia received a ſubſidy; a large body of Engliſh forces commanded the extenſive peninſula of India; another army of twenty thouſand men confirmed their conqueſts in North America; independent of thoſe employed in Germany, and in the different garriſons in various parts of the world; but all theſe were nothing to the force maintained at ſea, which carried victory wherever the Britiſh flag was diſplayed, and almoſt annihilated the French power on the ocean. The courage and the conduct of the Engliſh admirals had ſurpaſſed whatever had been heard of before; neither ſuperior force, nor number, nor even the terrors of ſtorms and tempeſts, could intimidate them. Admiral Hawke gained a complete victory over an equal number of French ſhips, on the coaſt of Bretagne, in Quiberon-bay, in the midſt of a ſtorm, during the darkneſs of the night, and, what a ſeaman fears ſtill more, upon a rocky lee-ſhore.

Such was the luſtre of the Britiſh arms, both by ſea and land, in the memorable year 1759, in every part of the world. But in the midſt of theſe glories, an event happened which conſigned every generous heart in Britain to a ſtate of mourning. On the twenty-fifth of October, 1760, the king, without having complained of any previous diſorder, was found, by his attendants, expiring in his chamber. He had riſen at his uſual hour, and obſerved, that as the weather was fine, he would walk in the gardens of Kenſington, where he then reſided. In a few minutes after his return, being left alone, he was heard to fall on the floor. The noiſe inſtantly brought his attendants into the room, who lifted him into bed; when he deſired, with a faint voice, that the princeſs Amelia might be ſent for; but before ſhe could reach the apartment, he expired. An attempt was made to bleed him, but without effect; and upon opening him, it was diſcovered that the right ventricle of the heart was ruptured, and a great quantity of extravaſated blood was found in the aperture.

George II. died encompaſſed with the unfading laurels of many ſplendid victories, in the ſeventy-ſeventh year of his age, and the thirty-third of his reign, juſtly lamented by his ſubjects, and by all his allies. He was in his perſon nearly of the middle ſize, well-ſhaped, erect, with eyes remarkably prominent, a high noſe, and fair complexion.

In

In his diſpoſition he is ſaid to have been haſty, prone to anger, eſpecially in his youth, yet ſoon appeaſed; but the general caſt of his diſpoſition was complacent, mild, moderate, and humane; in his way of living temperate, regular, and ſo methodical in every branch of private economy, that his attention ſometimes deſcended to objects beneath a king. He was fond of the German taſte for military parade, and was perſonally brave. He loved war as a ſoldier, he ſtudied it as a ſcience, and correſponded on this ſubject with ſome of the greateſt officers whom Germany has produced. The extent of his underſtanding, and the ſplendour of his virtues, we ſhall not preſume to ſettle, or attempt to diſplay; we rather wiſh for opportunities to expatiate on his munificence and liberality; his generous regard to genius and learning; and his encouragement and protection of thoſe arts by which a nation is inſtructed and adorned. With reſpect to his government, it very ſeldom deviated from the inſtitutions of law; or encroached upon private right; or interfered with the common adminiſtration of juſtice. The circumſtances that chiefly marked his public character, were a predilection for his native country, and a cloſe attention to the political intereſts of the Germanic body: points and principles to which he adhered with the moſt invincible fortitude; and if ever the blood and treaſure of Great Britain were ſacrificed to theſe conſiderations, we ought not ſo much to blame the prince, who acted from the dictates of natural affection, as we ſhould the uncontroulable ſpirit of the people for military fame and conqueſts, and the profuſion with which the miniſtry exhauſted the treaſury for the accompliſhment of theſe objects.

George II. had iſſue, 1. Frederic prince of Wales, born 1707, died 1751, during the life-time of his father. 2. Anne, born 1709, married William prince of Orange, 1734, died 1759. 3. Amelia, born 1711, died unmarried 1786. 4. Elizabeth-Caroline, born 1713, died unmarried 1757. 5. George, born 1717, died at three months old. 6. William duke of Cumberland, born 1721, died unmarried 1765. 7. Mary, born 1723, married the prince of Heſſe-Caſſel 1740, died 1771. 8. Louiſa, born 1724, married Frederic V. king of Denmark 1743, died 1751.

Frederic-Lewis, late prince of Wales, was married in 1736 to Auguſta the daughter of Frederic II. duke of Saxe-Gotha; by whom he had iſſue, 1. Auguſta, born 1737, married to the duke of Brunſwick Wolfenbuttel 1746, now living. 2. George-William-Frederic III. his preſent majeſty, born 1738. 3. Edward-Auguſtus duke of York, born 1739, died unmarried at Monacho in Italy 1767. 4. Elizabeth-Caroline, born 1740, died unmarried 1759. 5. William-Henry duke of Glouceſter, born 1743, married the counteſs-dowager Waldegrave in 1766, and now living. 6. Henry-Frederic duke of Cumberland, born 1745, married Mrs. Horton 1771, died 1790. 7. Louiſa-Anne, born 1749, died unmarried 1768. 8. Frederic-William, born 1750, died 1765. 9. Caroline-Matilda, born (after the death of her father) July 11, 1751, married Chriſtian VII. preſent king of Denmark 1766, and died at Zell in 1775.

George III. aſcended the throne of Great Britain under the rich canopy of his grandfather's victorious laurels, and with the advantage of being an Engliſh-born prince. His manners were in the higheſt degree decorous, his morals unblemiſhed, and his perſonal accompliſhments correſponded with the elevation of his rank and ſtation; ſo that the regret which the nation felt at the ſudden demiſe of the good old king, was abſorbed in the tranſports of joy excited by the auſpicious commencement of the reign of the young monarch, who had but juſt attained the age of complete majority; being born June 4, 1738. From his youth upwards, the young prince ſeemed ever to have been diſtinguiſhed by the rectitude of his intentions, and the generoſity and ingenuouſneſs of his conduct. He was deſirous to govern the Engliſh nation upon maxims truly Engliſh, and was fired with the noble ambition of realizing in his own perſon that grand and perfect model of a patriot king, delineated by the happieſt effort of a tranſcendent genius.

The parliament, which, agreeably to the ſalutary proviſions of an act paſſed for that purpoſe, continued to exerciſe its functions for the period of ſix months after the death of the ſovereign, met on the 18th of November, when George III. ſeated on the throne, delivered a ſpeech calculated in the higheſt degree to confirm all the fond and flattering prepoſſeſſions of the public in his favour. After a decent expreſſion of concern for the loſs of the late king, and imploring the bleſſing of heaven on his own endeavours to ſuſtain the weight of government which now devolved upon him, the young monarch, with great propriety and dignity of elocution, proceeded in theſe remarkable words: "Born and educated in this country, I glory in the name of Briton, and the peculiar happineſs of my life will ever conſiſt in promoting the happineſs of a people whoſe loyalty and warm affection to me I conſider as the greateſt and moſt permanent ſecurity of my throne. The civil and religious rights of my loving ſubjects are equally dear to me with the moſt valuable prerogatives of my crown." After an ample delineation of the flouriſhing circumſtances of the kingdom, he concluded his ſpeech as follows: "In this ſtate I have found things at my acceſſion to the throne of my anceſtors—happy in viewing the proſperous part of it; happier ſtill ſhould I have been had I found my kingdoms, whoſe true intereſt I have entirely at heart, in full peace; but ſince the ambition, injurious encroachments, and dangerous deſigns, of my enemies, rendered the war both juſt and neceſſary, and the generous overture made laſt winter towards a congreſs for a pacification has not yet produced any ſuitable return, I am determined, with your cheerful and powerful aſſiſtance, to proſecute this war with vigour, in order to that deſirable object—a ſafe and honourable peace. The eyes of all Europe are upon you. From you the proteſtant intereſt hopes for protection, as well as all our friends for the preſervation of their independency, and our enemies fear the final diſappointment of their ambitious and deſtructive views. Let theſe hopes and fears be confirmed and augmented by the vigour, unanimity, and diſpatch, of our proceedings. In this expectation I am the more encouraged by a pleaſing circumſtance, which I look upon as one of the moſt auſpicious omens of my reign. That happy extinction of diviſions, and that union and good harmony which continue to prevail amongſt my ſubjects, afford me the moſt agreeable proſpect. The natural diſpoſition and wiſh of my heart are to cement and promote them; and I promiſe myſelf that nothing will ariſe on your part to interrupt or diſturb a ſituation ſo eſſential to the true and laſting felicity of this great people."

In the courſe of the ſummer of 1761, the king declared in council his reſolution to demand in marriage the princeſs Charlotte-Sophia of Mecklenburg Strelitz; and the earl of Harcourt being appointed ambaſſador plenipotentiary to the court of Strelitz, the contract of marriage was ſigned, and the princeſs conducted to Stade, whence ſhe embarked on-board one of the royal yachts, and arrived at the palace of St. James's, September 8, the nuptial ceremony being the ſame evening performed in the Chapel-royal. And on the 22d of September the coronation of their majeſties was celebrated with much pomp and magnificence. The new queen ſoon acquired great popularity by the affability of her manners; and which, by the prudence and propriety of her conduct, ſhe has invariably retained.

The operations of the war were ſtill carried on with vigour and ſucceſs. In the month of June, 1761, the iſland of Dominique, important from its ſituation between the iſlands of Martinico and Guadaloupe, was reduced with little difficulty by an armament commanded by ſir James Douglas, and a body of troops under lord Rollo. A far more hazardous enterpriſe was undertaken about

the ſame time againſt the iſland of Belleiſle, ſituated oppoſite the harbour of Vannes on the coaſt of Bretagne. The iſland was defended by a ſtrong fortreſs, conſtructed by the famous Vauban, near the town of Palais. On the firſt diſembarkment of the troops, they met with a very ſevere repulſe, being compelled precipitately to retreat, with the loſs of near five hundred men. But the Engliſh commanders, ſecure of the zeal and ardour of their troops, determined to make another effort, which was attended with happier ſucceſs; and a body of marines and grenadiers, making good their landing on the craggy point of Lomeria, ſuſtained their poſition with wonderful intrepidity againſt a very ſuperior force, till joined by the remaining troops, amounting to eight or ten thouſand men. M. de St. Croix, the French commander, then recalled his detachments, and prepared for a vigorous defence of the citadel, the avenues to which he had fortified with ſix additional redoubts, which, with much effuſion of blood, were ſucceſſively attacked and carried by the Engliſh, who now urged, with the moſt perſevering ardour, the ſiege of the citadel. On the 7th of June, a practicable breach being made, and a general aſſault apprehended on the part of M. de St. Croix, that officer demanded a capitulation, which was granted on the moſt honourable conditions. Thus, at the expence of two thouſand lives, and an enormous ſum expended in naval and military preparations, the Engliſh achieved the conqueſt of a barren rock, affording no produce excepting the laurels of victory.

At the termination of the ſucceſsful campaign of 1759, overtures had been made, as mentioned in the ſpeech from the throne, by the kings of Great Britain and Pruſſia to the courts of Vienna and Verſailles, for a general accommodation of differences, which did not appear wholly unacceptable; and it was agreed to open a general congreſs at Augſburg. Various cauſes of delay, however, concurred to prevent the execution of this project, and the court of Vienna was not yet prepared to relinquiſh its claim to Sileſia. But the enſuing campaign of 1760 proving very diſaſtrous to France, whoſe finances were reduced to a ſtate of the moſt diſtreſſing derangement, the French ambaſſador reſident at Stockholm delivered a declaration to the Swediſh monarch in February 1761, importing his ſovereign's earneſt deſire to adopt effectual meaſures for reſtoring the peace of Europe; and that in concerting with his allies a general plan of pacification, he was diſpoſed abundantly to diſplay his moderation whenever Great Britain ſhould be inclined to acquieſce in reaſonable terms. In the month of March, a memorial was tranſmitted from the duc de Choiſeul, prime miniſter of France, to Mr. Secretary Pitt, ſignifying the firm determination of his moſt Chriſtian majeſty ſo to act in concert with his allies at the future congreſs, as to demonſtrate his ſincere diſpoſition to promote the intereſts of humanity, and reſtore the peace of Europe. His moſt Chriſtian majeſty expreſſed his deſire "that the particular accommodation between France and England ſhould be united with the general pacification of Europe; but as the objects of the war between theſe two powers were totally foreign to the diſputes in Germany, he thought it would be previouſly neceſſary to agree with his Britannic majeſty upon certain principal points which ſhould form the baſis of their particular negociation." Theſe advances were favourably received, and Mr. Pitt wrote an immediate anſwer to the duc de Choiſeul, expreſſing his Britannic majeſty's ſincere deſire to correſpond with the pacific ſentiments of the moſt Chriſtian king; and propoſing that miniſters duly authoriſed ſhould be immediately appointed at the reſpective courts of Verſailles and London, to enter upon this negociation; and, in the month of May, Mr. Stanley repaired to Paris on the part of the king of England, and M. Buſſy was received in the ſame manner from the court of France, at St. James's. The inſtructions of M. Buſſy were to adhere to the *uti poſſidetis*, as the baſis of the negociation; to demand an explanation of his Britannic majeſty's ſentiments touching the dates or eras at which the propoſal ſhould take place: and in the conferences which enſued, the French miniſter continued to preſs the ſpecification of thoſe dates. But the Engliſh miniſter evaded the diſcuſſion of this point until the ſurrender of the citadel of Belleiſle: and then a declaration was made in explicit terms, that the firſt of July, the firſt of September, and the firſt of November, ſhould be the eſtabliſhed eras in Europe, the Weſt Indies, and the Eaſt Indies; after which all the conqueſts made on either ſide ſhould be mutually reſtored; that the preliminaries agreed upon between the two crowns ſhould be concluſive and obligatory, independent of the negociations of Augſburg for ſettling the peace of Germany. After the interchange of many memorials chiefly reſpecting the compenſations to be made for the deviations propoſed from the original principle or baſis of the *uti poſſidetis*, France profeſſed her willingneſs to cede and guaranty Canada to the crown of England, on condition of her being admitted to a participation, as formerly, of the cod-fiſhery on the banks of Newfoundland; and inſiſting alſo upon the reſtitution of the iſland of Cape Breton, as an equivalent for which France conſented to a renewal of the article in the treaties of Utrecht and Aix-la-Chapelle, for the demolition of the harbour and works of Dunkirk; that in lieu of the iſland of Minorca, England ſhould reſtore Guadaloupe and Marigalante; and that in conſideration of the reſtitution of Belleiſle and Senegal, or Goree, France would evacuate her conqueſts in Germany. Touching the captures made by England at ſea previous to the declaration of war, his moſt Chriſtian majeſty declared that "he would gladly ſubmit to the juſtice of the king of England, and the determination of the Engliſh courts of judicature; that ſubjects trading under the faith of treaties, and the protection of the law of nations, ought not to ſuffer from the miſunderſtandings which may ariſe in the cabinets of princes, before thoſe miſunderſtandings are publicly known; that the practice of declaring war was eſtabliſhed by the law of nations as eſſential to the general ſafety; that no ſeizure made or prize taken anterior to ſuch declaration could be deemed legal, without violating the moſt ſacred of human inſtitutions; that no ſort of affinity ſubſiſted between hoſtilities committed on the Ohio and ſhips taken in the Weſt Indies; that ſuch hoſtilities might indeed be alleged as juſt motives for declaring war, but the effects of that declaration ought not to precede the declaration itſelf; and that it would be the height of injuſtice thus to involve innocent individuals, ignorant of the diſputes of monarchs, or the affairs of nations, in the depth of diſtreſs and ruin, by the indiſcriminate confiſcation of their property." Together with this memorial, M. de Buſſy delivered to the Engliſh miniſter another of a very extraordinary nature, importing that the diſputes ſubſiſting between England and Spain gave his moſt Chriſtian majeſty cauſe to apprehend a new war in Europe and America, unleſs they could be now adjuſted; that his Catholic majeſty had communicated to the court of Verſailles the chief points of diſcuſſion, namely, the reſtitution of ſome ſhips taken in the courſe of the war under Spaniſh colours, the liberty claimed by the Spaniſh nation to fiſh on the banks of Newfoundland, and the ſettlements made by the Engliſh on the Spaniſh territories in the bay of Honduras. His moſt Chriſtian majeſty therefore deſired that theſe differences might be amicably terminated, and that the king of Spain ſhould be invited to guaranty the treaty between the two crowns; becauſe, if theſe differences were the means of kindling a new war, the moſt Chriſtian king would be obliged to perform his engagements to his allies.

Theſe memorials were accompanied with a third declaration, ſignifying that the empreſs queen of Auſtria had conſented to a ſeparate peace between England and France, on theſe terms only; that France ſhould for her benefit keep poſſeſſion of the countries conquered in her name, and as her ally, from the king of Pruſſia; and that the

the king of Great Britain ſhould no longer afford aſſiſtance either in money or troops to the king of Pruſſia, in like manner as France ſhould be reſtricted with reſpect to the empreſs queen. The indiſcretion of theſe memorials, containing demands both novel and offenſive, was ſo flagrant, that many perſons ſcrupled not to brand the entire proceedings of the court of Verſailles with the moſt inſidious duplicity, though it appeared ſufficiently evident to the intelligent and impartial, that the impolicy of her conduct aroſe from her extreme anxiety for peace, and a too ſanguine hope that the proſpect of an eventual rupture with Spain would induce Great Britain to relax the rigour of her terms.

The reſentment and indignation of the court of London at this invidious and unexpected interpoſition, ſeemed to know no bounds. Mr. Secretary Pitt declared both verbally, and in writing to M. de Buſſy, that the king of Great Britain would not ſuffer the diſputes with Spain to be mixed, in any ſhape whatſoever, with the negociations for peace now depending with France, and that all further mention of ſuch an idea would be conſidered as offenſive to his dignity: and the right of France at any time to intermeddle in like diſcuſſions between England and Spain, was denied with the moſt poſitive diſdain. Upon theſe grounds M. de Buſſy was informed, that the king of England had ordered the memorial concerning Spain to be returned as totally inadmiſſible; and alſo the memorial relating to the king of Pruſſia, as affecting the honour of Great Britain, and the unſhaken fidelity with which his majeſty will fulfil his engagements with his allies.

The court of Verſailles now became ſenſible of the ill conſequences that might reſult from this falſe ſtep. In a ſubſequent memorial, therefore, ſhe condeſcended to apologiſe for propoſing a diſcuſſion of the points in diſpute with Spain, and declared her readineſs to make new conceſſions for the purpoſe of accompliſhing the deſirable end of a general pacification. In reply, a paper was tranſmitted to Mr. Stanley, containing the *ultimatum* of the Engliſh court; inſiſting upon the entire ceſſion of Canada and its dependencies; of Cape Breton and the other iſlands in the Gulf of St. Laurence; of the ſettlements of Goree and Senegal, in Africa; the reſtoration of Minorca; the demolition of Dunkirk; ſatisfaction to the Eaſt-India company; the evacuation of Oſtend and Nieuport; the reſtitution of Cleves, Weſel, Gueldres; and in general of all the territories belonging to the king of Pruſſia, and the other allies of Great Britain. The king of England alſo left himſelf at full liberty to aſſiſt his Pruſſian majeſty according to the terms of the ſubſiſting treaties. With reſpect to the prizes taken after the commencement of hoſtilities, though before the formality of declaring war, his Britannic majeſty perſiſted in his opinion, that ſuch a demand on the part of France was neither juſt nor defenſible. Should France comply with theſe propoſitions, the court of London declared its readineſs to reſtore to France her conqueſts of Belleiſle and Guadaloupe, and to admit the ſubjects of his moſt Chriſtian majeſty to a participation of the Newfoundland fiſhery, agreeably to the thirteenth article of the treaty of Utrecht, and to cede the ſmall iſland of St. Pierre, on certain conditions, as a harbour for the fiſhermen. Theſe ſevere terms France, in the *ultimatum* on her part, dated September 13, 1761, accepted with little variation, excepting that ſhe refuſed to recede from her claim of reſtitution reſpecting the merchant-ſhips captured previous to the declaration of war; and that his moſt Chriſtian majeſty aſſerted it to be not in his power, agreeably to the ſtipulations by which he is already engaged, to evacuate the countries belonging to the empreſs queen.

To this memorial the court of London deigned not to reply; and the miniſters Stanley and Buſſy returned to their reſpective homes. Notwithſtanding the immediate withdrawment of the memorial reſpecting Spain, and the the declaration of France that the offence given to the Engliſh court was perfectly unintentional, much anger and reſentment remained, which now indeed appeared chiefly directed againſt the court of Madrid; and the Engliſh miniſter tranſmitted inſtructions to the earl of Briſtol, the ambaſſador of England at the court of Spain, to require from his Catholic majeſty an explicit declaration as to the authority by which the French miniſter acted, in preſenting a memorial in the name of the king of Spain; and in caſe it ſhall be avowed by the court of Madrid, to remonſtrate with firmneſs the unexampled irregularity of ſuch proceedings. In relation to the three points of requiſition, Mr. Pitt declared it ſufficient to ſay, reſpecting the firſt, "that the courts inſtituted for the cognizance of ſuch matters, are open to the parties who think fit to ſeek redreſs in due courſe of law. As to the obſolete pretenſions of Spain to fiſh on the banks of Newfoundland, no conceſſion in a matter ſo ſacred would be even thought of. With regard to the diſputes relating to the logwood coaſts, his Britannic majeſty was willing to receive any juſt overtures on the part of his Catholic majeſty, provided they be not conveyed through the channel of France. And he concluded with profeſſing his expectation that the court of Madrid would come to ſome explicit eclairciſſement as to the deſtination of her fleets, and with reſpect to her diſpoſition to maintain and cultivate friendſhip and good correſpondence with Great Britain."

The earl of Briſtol, who appears to have conducted himſelf throughout this difficult negociation with diſtinguiſhed ability and addreſs, informed Mr. Pitt in his reply, dated Auguſt 31, 1761, that immediately on the receipt of the diſpatches from England, he had waited on the Spaniſh miniſter, don Ricardo Wall, at St. Ildefonſo, and in the moſt explicit, and at the ſame time in the leaſt offenſive mode, executed the orders contained in them. In reply, general Wall affirmed that the king of Spain, with a view merely to render the peace more permanent, and without the leaſt intention to give offence to his Britannic majeſty, had aſſented to the propoſal made by the moſt Chriſtian king, for the joint accommodation of their differences with Great Britain. The Spaniſh miniſter aſked, whether it was poſſible to imagine that his Catholic majeſty was ſeeking occaſions of provocation at a time when England was in the moſt flouriſhing and exalted ſituation it had ever known, in conſequence of the moſt extraordinary ſeries of proſperities that any nation had ever met with; that Spain was ſurpriſed Great Britain ſhould take umbrage at any naval preparations made ſince the acceſſion of his preſent majeſty, ſince the ſhips of war in commiſſion were fewer than thoſe which had been equipped during the reign of the late king Ferdinand; that they ſerved in part to maintain the correſpondence between the kingdoms of Spain and the Sicilies, of which his Catholic majeſty, during the minority of his ſon, was the guardian and protector. Others were intended to convoy the homeward or outward bound flotas, aſſogues, or regiſter ſhips; and the remaining ones were to defend their coaſts againſt the inſults of the Barbary corſairs: and that it was the invariable wiſh of his Catholic majeſty to cement and cultivate the friendſhip ſo happily ſubſiſting between the two courts. The Spaniſh miniſter acknowledged that the greateſt harmony exiſted between the kings of France and Spain, at which, who in this age could affect to wonder? But if his Catholic majeſty had conceived that the memorial in queſtion could have been conſtrued into a menace, he would never have conſented to the delivery of it. On the contrary, what proceeding, ſaid the Spaniſh miniſter, more noble can an enemy hold, than to ſay as France does to Great Britain—I am reſolved for the ſake of peace to make theſe ſacrifices; but at the ſame time, in order to ſecure the permanency of it, I am deſirous that England ſhould ſettle with Spain their ſubjects of diſagreement, leſt from the nature of our ſubſiſting engagements I may be entangled in a freſh war. As to the differences which had ariſen between England and Spain reſpecting the capture of the Spaniſh ſhips during the

war, the general allowed they would admit of an eaſy accommodation. But the court of Spain thought the other two articles of much more importance; and that the refuſal of the Engliſh court to enter into any negociation reſpecting the claim of Spain to fiſh on the banks of Newfoundland was violent and harſh, eſpecially as coupled with the abſolute determination of England not to relinquiſh her acknowledged uſurpations on the coaſt of Honduras, except his Catholic majeſty would previouſly aſſure to them the right to which they pretended of cutting logwood within that territory. In other words, he affirmed this was ſaying, "I will give up the dwelling of which I have taken forcible poſſeſſion, but firſt you ſhall engage to give me what I want to take."

When the forbearance of Spain reſpecting the logwood was compared with the excluſive claim of England to the Newfoundland fiſhery, which was of ſo much importance to Spain, as an article not of luxury but ſubſiſtence, the Spaniſh miniſter ſaid, he thought the Engliſh themſelves would heſitate to boaſt of the ſuperior juſtice and equity of their conduct. In his ſubſequent diſpatches of September and October, the earl of Briſtol informed the court of London, "that umbrage had been taken by the court of Madrid at the additional fortifications reported to be going forward at Gibraltar, and that general Wall had aſked, if it were poſſible that England could be ſeriouſly apprehenſive of a rupture with Spain; affirming, that at no time had the Catholic king been more intent upon cultivating a good underſtanding with his Britannic majeſty than at the preſent; that the flota had arrived at Cadiz, but that the treaſure belonging to the crown was much leſs than had been expected; that great abuſes and malverſations had been charged againſt the Spaniſh viceroys and governors in the Weſt Indies; and that his Catholic majeſty's miniſters had ſtrongly ſuggeſted to him the impracticability of reforming effectually the old defective ſyſtem of government, ſhould the court of Madrid embroil itſelf in the preſent troubles of Europe; that the Spaniſh miniſter, don Ricardo, urged the evacuation of the more recent ſettlements on the Honduras coaſt, which he ſaid would ſerve as a ſalvo for the honour of Spain, and greatly facilitate the final adjuſtment of her differences with England. General Wall, ſaid the ambaſſador, has ever acted in too ingenuous a manner for me to ſuſpect the leaſt duplicity in his conduct: the ambaſſador added, that on the notification of the king's marriage to the court of Madrid, he was particularly enjoined to aſſure the king of England of the ſhare his Catholic majeſty would ever take in all events that contributed to his happineſs; that the Spaniſh miniſter expreſſed a thorough concern at the breaking off the conferences between the courts of Verſailles and London; and ſaid it was the opinion in Spain, that the French miniſters had gone as great lengths in conceſſions as could be expected, conſidering the engagements of France with her allies." Previous, however, to the arrival of the laſt diſpatches, Mr. Pitt was no longer miniſter. Having received certain intelligence that a treaty of alliance was recently concluded between the two courts of France and Spain, and being firmly perſuaded that the articles of this treaty were in the higheſt degree inimical to Great Britain, and that Spain waited only the favourable moment to act openly againſt her, he ſtrongly urged in council the policy and neceſſity of an immediate declaration of war againſt that power; and recommended that a ſtrong ſquadron ſhould be immediately ſent to the Mediterranean, to intercept the flota actually on its paſſage from Carthagena to Cadiz. In this opinion he was ſupported only by his brother-in-law earl Temple, lord privy ſeal; and finding his influence in the cabinet at an end, he reſigned the ſeals, October 9, 1761, in order, to uſe his own words, "not to remain reſponſible for meaſures which he was no longer allowed to guide."

Mr. Pitt was ſucceeded in the office of ſecretary of ſtate by the earl of Egremont; and the king, in order doubtleſs to mollify the reſentment of the retiring miniſter, granted him a penſion of three thouſand pounds per annum, a reward which his praiſe-worthy neglect to accumulate riches rendered it neceſſary, though with ſome riſk to his popularity, to accept; and his lady was created baroneſs of Chatham, with remainder to her heirs male, Mr. Pitt in his own perſon declining the honours of the peerage. In this meaſure, the determination of the cabinet could not but be approved by the reflecting and intelligent part of the nation, who ſaw no clear proofs of any intention in the court of Madrid hoſtile to Great Britain; and who were of opinion, that to precipitate the nation, already loaded with a debt of one hundred and thirty millions, into a new and dangerous war, becauſe a treaty had been concluded by Spain with France, which might, when the articles were divulged, poſſibly be found contrary to good faith and amity, was a mode of proceeding not to be juſtified by an appeal to the voice of reaſon, or the law of nations. It could not but be remarked, that the reſignation of Mr. Pitt under theſe circumſtances, favoured more of pride and paſſion than of wiſdom or patriotiſm; and that an oppoſition of ſentiment in the cabinet on ſuch a point, did not juſtify him in withholding his ſervices at a criſis which peculiarly demanded the exertion of his great and acknowledged talents. Nevertheleſs, an unanimous vote of thanks paſſed the court of common-council of London to the right honourable William Pitt, in the moſt flattering terms of reſpect and applauſe, for his great and eminent ſervices.

Had the new miniſters determined to avoid that rupture with Spain, for which no political neceſſity ſeemed to exiſt, they would have been entitled to indiſputable praiſe. But heſitating between their own conviction of the inexpediency, and their anxious deſire to ſupport their character with the nation for reſolution and vigour, they adopted that equivocal line of conduct which aimed at no determined object, and which was really calculated to accelerate the cataſtrophe they earneſtly wiſhed to avert. On the 28th of October, the earl of Egremont wrote to the ambaſſador lord Briſtol, that it was highly expedient the court of Spain ſhould in the preſent moment be appriſed of the ſentiments of that of Great Britain, and that the king of England had nothing more at heart than to cultivate the moſt cordial friendſhip of his Catholic majeſty; but that his Britannic majeſty cannot imagine that the king of Spain ſhould think it unreaſonable to deſire a communication of the treaty acknowledged to have been lately concluded between the courts of Madrid and Verſailles, or of ſuch articles thereof as can by particular and explicit engagements immediately relate to the intereſts of Great Britain, before he enters into further negociation on the points depending between the two crowns; and the ambaſſador is inſtructed to uſe the moſt preſſing inſtances to M. Wall to obtain ſuch communication as is above mentioned. The ambaſſador is further aſſured, that the reſignation of Mr. Pitt will only animate the preſent miniſtry to a more vigorous exertion of their powers; and that the moſt perfect harmony, unanimity, and confidence, now reign in his majeſty's councils. This diſpatch being written with a view to a confidential communication of its contents to the Spaniſh miniſter, the ambaſſador is informed in a ſeparate and "moſt ſecret" letter, that if the court of Spain ſhould propoſe to give his majeſty ſolemn aſſurances of the innocence of the treaty in queſtion in relation to the intereſts of England, he is not totally to reject the alternative, but to take it *in referendum*; provided always, that the ſaid aſſurances be given upon his Catholic majeſty's royal word, ſignified in writing either by the Spaniſh ſecretary of ſtate, M. Wall, or by the count de Fuentes, the Spaniſh miniſter in London, to his Britannic majeſty's ſecretary of ſtate, and not otherwiſe. The earl of Briſtol, in a letter written to the earl of Egremont, dated November the 2d, remarks the ſudden alteration of behaviour in the Spaniſh miniſter, and the haughty language now held by the court

of

of Madrid; general Wall declaring with uncommon warmth, that we were intoxicated with our ſucceſſes, and that it was evident, by our refuſal of the duc de Choiſeul's propoſals, that we aimed firſt to ruin the French power, in order more eaſily afterwards to cruſh Spain, and, by ſeizing the Spaniſh dominions in America, to ſatisfy to the utmoſt our ambition and unbounded thirſt of conqueſt. He himſelf, he ſaid with paſſionate emphaſis, would be the man to adviſe the king of Spain, ſince his dominions were to be overwhelmed, at leaſt to have them ſeized with arms in his ſubjects' hands, and not to continue the paſſive victim he had hitherto appeared to be in the eyes of the world. It was time, he affirmed, for Spain to open her eyes, and not to ſuffer an ally, a neighbour, and a friend, to receive the rigid laws impoſed by an inſulting victor. For this purpoſe he acknowledged, in reply to the requiſitions of the Engliſh ambaſſador reſpecting the purport of the late treaty, that his Catholic majeſty had judged it expedient to renew his "family compacts" with the moſt Chriſtian king.

This ſudden alteration of language and of conduct the ambaſſador aſcribed to the intelligence juſt received by the court of Madrid, of the propoſition made by Mr. Pitt, and recently diſcuſſed in the Britiſh cabinet, of an immediate declaration of war againſt Spain; a meaſure totally unexpected, and by which Spain, who conceived herſelf to be the injured party, was filled with indignation and aſtoniſhment. But the offence now given was not thought entitled to any political indulgence; and lord Briſtol, in the ſubſequent diſpatch of lord Egremont, was expreſsly commanded, in the name of his Britannic majeſty, to demand of the Spaniſh miniſter, an immediate, clear, and categorical, anſwer to the queſtion before ſtated; and to accompany this demand with an aſſurance, that any procraſtination, ambiguity, or evaſion, will be conſidered as ample and ſufficient ground for authorizing his majeſty to take ſuch ſteps as his royal wiſdom ſhall dictate for the honour of his crown, and the ſecurity of his people. At the ſame time the ambaſſador is, with ludicrous inconſiſtency, charged not to uſe any harſhneſs of language which can have the leaſt tendency to indiſpoſe or irritate the Spaniſh court, or the miniſter, M. Wall; as if the language preſcribed to the ambaſſador could poſſibly fail to produce that effect on the Caſtilian pride: but, in caſe the ſatisfaction required was delayed or refuſed, his excellency the ambaſſador was ordered forthwith to quit Madrid, without taking leave, and repair with all convenient ſpeed to Liſbon. About the ſame time that the above diſpatch was tranſmitted by lord Egremont to the earl of Briſtol, a letter was written to his lordſhip by the ambaſſador, in which he ſtates, that general Wall had recovered his uſual temper; and that after an amicable diſcuſſion of the points in diſpute, enforced by long and diſpaſſionate reaſonings, they had parted with reciprocal proteſtations of their earneſt deſire to continue in peace; and a copy of the king's ſpeech to the new parliament arriving about this period, the Spaniſh miniſter highly applauded the candour and moderation diſplayed throughout the whole; aſſuring at the ſame time the Engliſh ambaſſador, that he expected ſhortly to receive the Catholic king's commands to acquaint him with the reſolutions of Spain relative to his applications. But theſe flattering appearances entirely vaniſhed, when, in compliance with the expreſs inſtructions of the Engliſh court, the ambaſſador in peremptory terms demanded the categorical anſwer required in the laſt latter of the earl of Egremont, declaring, in conformity to the orders he had received, that a refuſal, and even a delay of ſatisfaction, would be deemed an aggreſſion on the part of the court of Madrid, and regarded in no other light than as an abſolute declaration of war. "I cannot (ſays the earl of Briſtol, in his official diſpatch) deſcribe the ſurpriſe M. Wall expreſſed at hearing this—he only brought out theſe words: What is to follow? You have then orders to withdraw from hence?" Upon the ambaſſador's acknowledgment that ſuch were his inſtructions, general Wall deſired him for greater preciſion to put in writing what he was ordered to demand; and, repairing to the palace of the Buen Retiro, he returned, after a ſhort interval, an anſwer from his Catholic majeſty, in which the ambaſſador is told, "that the ſpirit of haughtineſs and diſcord which dictated this inconſiderate ſtep, and which for the misfortune of mankind ſtill reigns ſo much in the Britiſh government, is what made in the ſame inſtant the declaration of war and attacked the king's dignity: your excellency may think of retiring when and in the manner convenient to you; which is the only anſwer his majeſty has directed me to give." Orders were ſent from Madrid to the count de Fuentes, inſtantly to leave the court and kingdom of England, delivering firſt a memorial to the miniſters of the king of England, in which the war that the Spaniſh and Engliſh nations were about to plunge into, is attributed to the pride and immeaſurable ambition of him who lately held the reins of government in Great Britain. "If (ſaid the memorial) his Catholic majeſty excuſed himſelf from making the explanations required, it was to manifeſt his juſt reſentment of the inſulting manner in which the affairs of Spain have been treated during Mr. Pitt's adminiſtration; who, when the juſtice of his Catholic majeſty's claims had been incontrovertibly proved, gave as his final anſwer, *That he would not relax in any thing till the Tower of London was taken ſword in hand.* If the reſpect due to royal majeſty had been regarded, explanations it was affirmed might have been had without difficulty. The miniſters of Spain might have ſaid frankly to thoſe of England, what the count de Fuentes, by the king's expreſs orders, declares publicly, That the ſaid treaty is only a convention between the family of Bourbon, wherein is nothing which has the leaſt relation to the preſent war; that there is in it an article for the mutual guarantee of the dominions of the two ſovereigns, but it is ſpecified therein that this guarantee is not to be underſtood but of the dominions which ſhall remain to France after the preſent war ſhall be ended; that although his Catholic majeſty might have had reaſon to think himſelf offended, by the irregular manner in which the memorial for terminating the differences between Spain and England, at the ſame time with the war betwixt this laſt and France, was returned to M. Buſſy, the king of Spain diſſembled, and from his love of peace cauſed a memorial to be delivered to lord Briſtol, wherein it is evidently demonſtrated, that the ſtep of France which put the miniſter Pitt into ſo bad humour, did not at all offend either the laws of neutrality or the ſincerity of the two ſovereigns; that as a freſh proof of his pacific ſpirit, the king of Spain wrote to the king of France his couſin, that if the union of intereſt in any manner retarded the peace with England, he conſented to ſeparate himſelf from it, not to put any obſtacle to ſo great a happineſs: but it was ſoon ſeen this was only a pretence on the part of the Engliſh miniſter; for that of France continuing his negociations without making any mention of Spain, and propoſing conditions very advantageous and honourable for England, the miniſter Pitt, to the great aſtoniſhment of the univerſe, rejected them with diſdain, and ſhewed at the ſame time his ill-will againſt Spain, to the ſcandal of the ſame Britiſh council; and unfortunately he has ſucceeded but too far in his pernicious deſign." This memorial ſerved to demonſtrate the ſuperior ſagacity of lord Briſtol, who declared, in the courſe of this negociation, his firm belief that the treaty in queſtion contained no article injurious to the intereſts of England, although the preposterous pride of the Spaniſh court prevented any poſitive or ſatisfactory aſſurance being given on this head; and the two nations, from an obſtinate adherence to a falſe and fooliſh punctilio of honour, found themſelves at length involved in a war, which they equally and anxiouſly wiſhed to avoid.

The preparations made for conducting the war againſt the united force of the houſe of Bourbon with vigour

and effect, ſhewed that the ſpirit of Mr. Pitt, againſt whom rather than the king of Great Britain the declaration of the king of Spain ſeemed to be directed, ſtill influenced and animated the public counſels. The grand machine of government, once put into motion, continued for a time its progreſs with the ſame force and velocity as if ſtill guided by the powerful hand which firſt urged it into action. Letters of marque were iſſued, and commiſſions granted for privateers to act againſt the ſubjects of his Catholic majeſty; and at length, on the 4th of January, 1762, war was declared againſt Spain with the accuſtomed formalities.

The new parliament was opened by a well-timed ſpeech from the throne, in which his majeſty expreſſed "his regret at the unſucceſsful termination of the late negociation for peace, and his reſolution to proſecute the war in the moſt effectual manner, till the enemies of Great Britain, moved by their own loſſes, and touched with the miſeries of ſo many nations, ſhall yield to the equitable conditions of an honourable peace." Very loyal addreſſes were returned. About two hundred and forty thouſand ſeamen, landmen, and marines, including the German mercenaries, were voted for the ſervice of the year; and twelve millions borrowed to make up the deficiency of the regular means of ſupply. His majeſty had already been voted the clear income of eight hundred thouſand pounds per annum, for the maintenance of the houſehold and the ſupport of the royal dignity, in lieu of the civil liſt revenues, which had been formerly appropriated for the ſovereigns of this country; and a jointure of one hundred thouſand pounds per annum was now ſettled on the queen, with the palaces of Richmond Old-park and Somerſet-houſe.

Towards the concluſion of the preceding year, a plan had been formed for the conqueſt of Martinico, the principal of the French Caribbee iſlands, and the reſidence of the governor-general and council, whoſe juriſdiction extends over all the French Antilles. The armament deſtined for this expedition conſiſted of eighteen ſhips of the line, and as many battalions of troops, under general Monckton and admiral ſir George Rodney, who, rendezvouſing at Barbadoes, proceeded early in the month of January, 1762, to Martinique; and on the 16th landed, after ſilencing the batteries erected on the coaſt in the vicinity of the town of Fort Royal, defended by a ſtrong citadel, and various military works erected on the Morne Tortueſon and the Morne Garnier, neighbouring heights which commanded the town. Theſe were ſoon forced by the intrepidity of the Engliſh troops, which on no occaſion diſplayed itſelf more conſpicuouſly than in the attack of this iſland. On the 4th of February, the commandant of the citadel ordered the chamade to be beat, and the garriſon was permitted to march out with the honours of war. But the governor-general, M. de la Touche, retreated to the ſtrong fortreſs of St. Pierre, ſituated to the leeward of Fort Royal, which he at firſt ſeemed diſpoſed to defend with vigour; but on the 14th, deputies arrived with propoſals of capitulation for the whole iſland, and this important conqueſt was achieved with inconſiderable loſs. In the mean time, commodore Swanton was detached from the fleet, with a force ſufficient for the reduction of the iſland of Grenada and the Grenadines; which ſubmitted without reſiſtance, and proved in the hands of the Engliſh a very valuable acquiſition. At the ſame time, the Engliſh took poſſeſſion of the iſlands of St. Lucia, Tobago, and St. Vincent, which, though declared neutral by former treaties, had been for ſome time occupied by the French.

Spain, who meant certainly nothing further than by the weight of her influence and too partial mediation, to procure for France more favourable terms of accommodation than were otherwiſe obtainable, found herſelf unexpectedly engaged as a principal in the war, for which ſhe was extremely unprepared. The marine of France, by repeated defeats, was broken and ruined; whilſt the numerous fleets of Britain ſeemed to cover the ocean, and rode triumphant from the Ganges to the Miſſiſſippi, from the riſing to the ſetting ſun. The naval power of Spain was utterly unable to cope with this prodigious force. In one quarter only could England be conſidered as vulnerable. By an attack on Portugal, a kingdom in cloſe alliance with Great Britain, very open to invaſion, feeble, opulent, defenceleſs, Spain might reaſonably hope fully to indemnify herſelf for any loſſes ſhe might elſewhere ſuſtain. The military and heroic ſpirit by which the Portugueſe nation had been formerly characterized, was now no more: her privileged orders were ſunk in luxury; her people in ſloth, ignorance, and bigotry; her troops were deſtitute of diſcipline, and her fortreſſes of artillery and ammunition. The recent deſtruction of her capital, by the memorable earthquake, the myſterious conſpiracy againſt the life of the monarch, the conſequent execution of her moſt diſtinguiſhed and popular nobles, the forcible expulſion of the jeſuits, and the entire alienation of the court of Liſbon from the ſee of Rome; all theſe cauſes, conjoined, had filled the kingdom with confuſion and diſcontent. In this ſituation, it was doubtleſs imagined that Portugal would fall an eaſy prey to the arms of Spain, and great military preparations were made, and a large body of forces aſſembled on the frontiers of that kingdom.

On the 16th of March, 1762, a joint memorial was preſented by the ambaſſadors of France and Spain at the court of Liſbon, "inviting the king of Portugal to renounce his connection with Great Britain, and engage in the offenſive and defenſive alliance which they had formed againſt that inſolent and dangerous power." The Catholic king profeſſing "the moſt cordial attachment to the intereſts of his moſt Faithful majeſty, to whom he was ſo nearly allied, inſiſted that the Engliſh ſubjects reſident in Portugal ſhould be compelled to depart the kingdom, and the Engliſh ſhipping no longer be allowed ſhelter in her ports; declaring, that he ſhould immediately occupy with his troops the fortreſſes and maritime places belonging to his moſt Faithful majeſty, to protect them from the reſentment of England." To this extraordinary requiſition, the ambaſſadors of the two courts demanded a categorical anſwer in four days. The king of Portugal replied, in very moderate and conciliatory language, "That he was ſincerely diſpoſed to act as mediator in compromiſing the preſent differences, but that the unfortunate ſtate of his kingdom would not allow him, were he ſo inclined, to engage as a principal in the war; that the honour of his crown, and the faith of ſolemn treaties, would not permit him to abandon the alliance of England; and that he was determined to obſerve a ſtrict neutrality, making thoſe preparations only which were neceſſary for his own defence."

In a ſecond memorial, dated April 1, the confederate powers declared, in a tone ſtill more imperious, "that his moſt Faithful majeſty's alliance with England became in effect an offenſive alliance, from the ſituation of the Portugueſe dominions, and the nature of the Engliſh power; that the Britiſh ſquadrons could not keep the ſea without the uſe of the ports of his moſt Faithful majeſty; that the riches of Portugal paſſed into the hands of the Engliſh; and they again invited him, ſince the differences between the crowns of Spain and Portugal, which had laid the foundation of the alliance with England, had been long ſince happily accommodated, to abandon that alliance, and enter into a ſtrict league of friendſhip with their Chriſtian and Catholic majeſties." The king of Portugal perſiſting in his refuſal of theſe overtures, the ambaſſadors of the two courts, after the delivery of a third memorial ſtill more inſolent and inſulting than the former, were ordered to leave the kingdom.

On the 23d of May, 1762, war was declared by Portugal againſt Spain, the Spaniſh army having already paſſed the frontier. His moſt Faithful majeſty having made previous and urgent ſolicitation to the court of London for aſſiſtance, it was determined to grant him the

moſt

moſt ſpeedy and efficacious ſuccour, by the embarkation of a large body of troops under lord Tyrawley, a veteran officer, who had formerly reſided with high reputation as ambaſſador at the court of Liſbon, and who now united the different characters of plenipotentiary and general. The king of Portugal had conferred, at the recommendation of the king of England, the ſupreme command of his armies on the famous count de la Lippe-Buckebourg, maſter-general of the artillery under prince Ferdinand of Brunſwick, a man whoſe military talents were of the higheſt claſs, and who poſſeſſed all the heroic and romantic qualities which diſtinguiſhed and adorned the ages of chivalry. Lord Tyrawley returning ſoon to England, perhaps in diſguſt at this ſuperior appointment, the command of the Engliſh auxiliaries devolved on the earl of Loudon, under whom ſerved the generals Burgoyne, Crawford, Townſhend, and other officers of diſtinguiſhed merit and reputation.

In the beginning of May, 1762, the Spaniſh army, under the marquis de Sarria, paſſed the Douro, and inveſted the city of Miranda. Unfortunately, at the very commencement of the ſiege, before the parallels were formed, or the batteries planted, the grand magazine of the fortreſs, taking fire by accident, blew up with a tremendous exploſion, occaſioning the loſs of near five hundred lives, and making moreover two large and practicable breaches in the walls. In conſequence of this misfortune, the city was immediately given up, and the garriſon made priſoners of war. Braganza was next attacked; but ſuch was the conſternation of the Portugueſe, that the keys of the town were preſented, without any attempt at reſiſtance, to the Spaniſh commander. The city of Chaves, though provided with all the means of defence, was ſurpriſed at the ſame time by a ſeparate detachment under count O'Reilly. The ſouthern army, commanded by the count d'Aranda, being joined by eight thouſand French auxiliaries, entered the province of Eſtremadura, and opened the trenches before Almeida, in July; after a much better defence than had hitherto been made, that city was compelled to capitulate on the 25th of Auguſt. On the arrival of the count de la Lippe, Liſbon, the metropolis, and Oporto, the ſecond city of the kingdom, were expoſed to imminent danger. But that general, knowing the moſt effectual mode of waging a defenſive war to be the converting it as far as poſſible into an offenſive one, determined to carry the arms of Portugal into the kingdom of Spain. An enterprize againſt the city of Alcantara, where conſiderable magazines were forming, was reſolved upon, and brigadier-general Burgoyne was appointed to the command of the entire force collected for this purpoſe. This officer, paſſing the Tagus at midnight, reached Alcantara at the dawn of day, and, attacking with great reſolution the enemy poſted in the vicinity, and unſuſpicious of danger, totally routed them with very inconſiderable loſs. A great quantity of arms and ammunition fell into the hands of the victors. Amongſt the priſoners was the Spaniſh major-general don Miguel d'Iruniberri, who was preparing for an expedition into the Portugueſe province of Alentejo. The count d'Aranda, having reduced, after the ſurrender of Almeida, the fortreſſes of Caſtel Rodrigo and Caſtel Branco, attempted to force a paſſage through the mountains, intending to croſs the Tagus at Villa Velha, a poſt defended by general Burgoyne, who lay encamped on the ſouthern bank of the river. The old Mooriſh caſtle of Villa Velha, on the northern bank, though gallantly defended, was at length compelled to ſurrender, and the paſſes of the mountains gained. But the enemy having weakened their force at Villa Velha, in order to purſue their advantage in the oppoſite quarter, general Burgoyne ordered a detachment under lieutenant-colonel Lee to ford the Tagus in the night, and attack the Spaniards in their camp. This enterprize was executed with equal ſpirit and ſucceſs. A great number of the Spaniſh officers were ſlain in attempting to rally their troops; their cannon were ſpiked, their magazines deſtroyed, and much valuable plunder became the property of the aſſailants. The Spaniards being repeatedly foiled in their deſign of paſſing the Tagus, by the ſkill and vigilance of the commander, count de la Lippe, and embarraſſed alſo in their operations by the heavy rains which fell at this period, at length repaſſed the mountains, and entirely evacuated the province of Eſtremadura, firſt diſmantling the fortifications of Almeida and Caſtel Rodrigo.

No ſooner was war declared by England againſt Spain, than preparations began to be made for a grand enterprize; and in the beginning of March, 1762, a very powerful armament ſailed from Portſmouth, under the conduct of admiral ſir George Pococke, the earl of Albemarle commanding the land forces on-board. At the beginning of June, they arrived off the iſland of Cuba, and the troops were landed ſix miles to the eaſtward of the Havannah, a city of the utmoſt importance to the ſecurity and almoſt the exiſtence of the Spaniſh empire in America, as being the port where the galleons and flota, loaded with the riches of Mexico and Peru, conſtantly rendezvouſed on their return to Spain. This city was protected, excluſive of other works, by a very ſtrong caſtle called the Moro, againſt which the principal attack of the earl of Albemarle was directed. It was, however, bravely defended by the Spaniſh governor, don Louis de Velaſco; and the ſiege being protracted beyond expectation, ſickneſs began to make its ravages amongſt the beſiegers. On the 30th of July, therefore, although the breaches made were deemed ſcarcely practicable, an aſſault was determined upon, and the troops mounting with the utmoſt intrepidity, drove the enemy from the ramparts; and, after a ſhort but fierce and bloody conflict, the Spaniards were compelled to lay down their arms, and petition for quarter. Don Velaſco, animated with all the genuine Caſtilian heroiſm, fell by a promiſcuous ſhot, whilſt inciting his troops, both by his exhortation and example, to ſupport the glory of the Spaniſh arms. Notwithſtanding the conqueſt of the Moro, the city held out till the 13th of Auguſt, when the governor capitulated, on condition of being allowed to march out with the honours of war, and to have, with his whole garriſon, a free and unmoleſted conveyance to Spain. In this conqueſt was included twelve line-of-battle ſhips then lying in the harbour of the Havannah; great quantities of ammunition and warlike ſtores; prodigious quantities of merchandize of various kinds, and an immenſe treaſure in ſpecie. This therefore was a blow, which, at the very commencement of the war, ſtruck deep into the vitals of the Spaniſh power.

No ſooner was the intelligence of the Spaniſh war conveyed to the Eaſt Indies, than an armament ſpeedily equipped, under the conduct of admiral Corniſh and ſir William Draper, ſailed from Madras, deſtined againſt Luconia, the principal of the Philippine iſlands, of which the chief city is Manilla, whence two large ſhips are ſent annually acroſs the Pacific Ocean to Acapulco, on the coaſt of Mexico, laden with the ſpices, ſilks, and other precious products of India. On the 23d of September, 1762, the whole armament, having on-board a land force, including laſcars, ſepoys, and other troops, amounting to about two thouſand five hundred men, anchored in the bay of Manilla, where they excited great and general alarm. After effecting a landing, the city was ſummoned to ſurrender; but the marquis de Villa Medina, the governor, returned a reſolute refuſal. The Engliſh were far from being in a condition to form a complete inveſtment of the city, which was of great extent and ſtrongly fortified. The quarter which the general determined to attack, was defended by the baſtions of St. Diego and St. Andrew, a ravelin, a wet foſſe thirty yards in breadth, a covered way, and a glacis. At the beginning of October, the weather grew very ſtormy and tempeſtuous; notwithſtanding which the beſiegers carried on their works with unintermitted ardour. A furious ſally was on the 4th

made from the town before day-break, in which the regular troops of the forts were reinforced by a ſtrong body of the native Indians, armed only with bows and lances, who fought with aſtoniſhing perſeverance; advancing to the very muzzles of the Engliſh muſkets, and with wild and ſavage ferocity biting the bayonets even in the agonies of death. They were finally repulſed with great loſs; and a breach being made, a reſolution was taken to ſtorm the town.

Though no offer of capitulation had been made, the garriſon ſeemed ill prepared to ſuſtain an aſſault, and the Engliſh penetrated into the very centre of the city with little oppoſition. The governor retiring into the citadel, the town was expoſed for ſome hours to all the horrors of a general pillage. At length, the citadel being in no condition of defence, the marquis de Villa Medina, the archbiſhop of Manilla, and the officers of the garriſon, ſurrendered themſelves priſoners of war; at the ſame time propoſing a capitulation to ſave the city from total deſtruction. After ſome diſcuſſion, a ranſom of four millions of dollars was offered, and accepted. The port and citadel of Cavite, with the iſlands and fortreſſes depending on the government of Manilla, being included in the capitulation, the whole force of the Engliſh ſcarcely ſufficed to garriſon their conqueſts.

Intelligence being received of the expected arrival of an Acapulco ſhip, the admiral ſent the Panther and Argo ſhips of war in queſt of her, who fell in with the Santa Trinidada, bound for Mexico, pierced for ſixty guns, with merchandize on-board to the amount of three millions of dollars. This was not the only regiſter-ſhip taken in the courſe of this war from the Spaniards; the St. Hermione, from Lima to Cadiz, being captured by two Britiſh frigates cruiſing off Cape St. Vincent. Her cargo was eſtimated at one million ſterling, being ſuppoſed the richeſt prize ever brought into the harbours of Great Britain.

Amongſt the military and naval achievements of the year 1762, it may be proper tranſiently to notice the recovery of the town and fort of St. John, in the iſland of Newfoundland, (ſome months before ſurpriſed and ſurrendered to the French,) by lord Colville and colonel Amherſt, who, ſailing from the harbour of Halifax, by their ſpirited exertions anticipated the effect of an armament fitted out expreſsly for this purpoſe at Portſmouth. All theſe plans of ſucceſsful conqueſt had been projected by the whig adminiſtration, who now went out. On the reſignation of Mr. Pitt, the entire direction of affairs was veſted in the earl of Bute. The duke of Newcaſtle, as firſt lord of the treaſury, and the duke of Devonſhire, as lord chamberlain, were diſmiſſed. The earl of Hardwicke retired in diſguſt; and the duke of Grafton, lord Ravenſworth, and lord Aſhburnham, with ſeveral other noblemen of high diſtinction, now ranged themſelves with Mr. Pitt, on the ſide of the oppoſition. Lord Anſon was ſucceeded at this period in the admiralty by the earl of Halifax, recently returned from the government of Ireland, in which he was ſucceeded by the duke of Northumberland; and Mr. George Grenville was advanced to the ſecretaryſhip. But in a ſhort time this order of things was reverſed: lord Halifax took the ſeals, and Mr. Grenville was placed at the head of the admiralty. No political conflict, however, could take place before the enſuing winter, and the ſummer months paſſed over in angry and ineffectual diſcontent.

On the 12th of Auguſt, 1762, a day auſpicious to the houſe of Brunſwick, as the era of its acceſſion to the throne of Great Britain; auſpicious alſo to the kingdom at large, whilſt the principles of liberty civil and religious, on which that acceſſion was founded, continue to be the rule of their government, the nation was gladdened by the birth of a prince of Wales, whoſe aim, whoſe ſtudy, and whoſe pride, may it ſtill be to eſtabliſh, extend, and improve, that free and happy conſtitution of which he is the hereditary guardian and defender!

The firſt and great object of the new miniſter was the reſtoration of peace; a laudable and noble deſign, but attended with very conſiderable difficulty. The majority of the nation, elated or rather intoxicated with ſucceſs, were eager for the continuance of the war, in the ſanguine hope of new victories; not reflecting that every rational purpoſe of the war had been long ſince obtained, and that additional conqueſts were in fact only additional incumbrances. A powerful party, compoſed of men the moſt diſtinguiſhed for rank, influence, and ability, was now formed in oppoſition to the miniſter; and this oppoſition was openly countenanced by the duke of Cumberland, uncle to the king, who had never connected himſelf with the tory party in oppoſition to the court in the late reign, and who had imbibed the whig principles and prejudices in their full extent. Upon whatever terms the peace might be concluded, it was not to be imagined that ſatisfaction could be given to the political antagoniſts of the miniſter, who would not fail to repreſent it as inadequate to the ſucceſſes of the war, if not inconſiſtent with the intereſt, and diſgraceful to the reputation, of England.

Theſe conſiderations did not, however, deter the miniſter from cauſing ſecret intimations to be given, that the revival of the ineffectual negociation of the laſt year would be not unacceptable; and the king of Sardinia was ſolicited to offer his mediation for this purpoſe. The court of Verſailles readily embracing the overtures now made by England, the duc de Nivernois arrived in London, in the month of September, inveſted with the character of ambaſſador extraordinary and plenipotentiary to the king of Great Britain; and the duke of Bedford, a nobleman diſtinguiſhed for honour and probity, and who had ſucceſſively occupied the high offices of ſecretary of ſtate, firſt lord of the admiralty, lord privy ſeal, and lord lieutenant of Ireland, was delegated in the ſame capacity, inveſted with the ſame diplomatic diſtinctions, to the court of France. And the negociators being actuated by a mutual anxiety for the re-eſtabliſhment of peace, preliminaries were ſigned and interchanged at Fontainebleau, in the beginning of November, 1762, between the miniſters of Great Britain, France, Spain, and Portugal.

On the 25th of November the parliament was convened; and the king, in his ſpeech from the throne, informed the two houſes, "that the preliminary articles were actually ſigned, on terms which he repreſented as very advantageous to England; and he recommended that union at home, which was ſo neceſſary to the adoption of thoſe meaſures which could alone relieve the nation from the heavy burdens entailed upon it by the proſecution of a long and expenſive war." When the addreſs in reply came under the conſideration of the houſe of commons, Mr. Pitt, in a long and elaborate ſpeech, expreſſed his entire diſapprobation of the tenor of the treaty, which he ſtigmatiſed as impolitic, and derogatory to the honour and intereſts of the kingdom. He was determined, afflicted as he was with illneſs, at the hazard of his life, he ſaid, to attend the houſe that day; to raiſe up his voice, his hand, and his arm, againſt the preliminary articles of a treaty, which obſcured all the glories of the war, ſurrendered the deareſt intereſts of the nation, and ſacrificed the public faith by an abandonment of our allies. He was anſwered at large by Mr. Fox, who, although he continued to occupy only the ſubordinate poſt of paymaſter of the army, was, at this time, the ableſt advocate of adminiſtration in the houſe of commons; and, after a warm and ample diſcuſſion, the addreſs, as propoſed by the partiſans of the court, paſſed the houſe by a great majority of voices.

In the houſe of lords, the miniſter, lord Bute, vindicated the treaty, with a ſpirit and energy which was not expected; and he concluded his ſpeech with declaring, "that he wiſhed no other epitaph to be inſcribed on his tomb, than that he was the adviſer of the peace, on the merits of which their lordſhips were then called upon to decide." Notwithſtanding the arguments and objections of the peers in oppoſition, the addreſs paſſed in this houſe

alſo by a ſimilar majority. And in juſtice to the earl of Bute, the impartiality of hiſtory will acknowledge, that this famous peace, ſo much and ſo long the ſubject of declamation and invective, was in fact liable to no ſolid or ſerious exception. The moſt plauſible objection to the treaty was the ceſſion of the iſland of St. Lucie to France; the importance of which, from its ſituation and excellent harbour, ſeems indeed to have been better underſtood by the French than the Engliſh negociators. Mr. Pitt had poſitively refuſed, in his negociation with M. Buſſy, to cede St. Lucie to France.

By this treaty the entire province of Canada was ceded and guaranteed to the Engliſh, with all that part of Louiſiana which is ſituated to the eaſt of the great river Miſſiſſippi, together with Cape Breton, and the other iſlands in the gulf and river of St. Laurence. In the Weſt Indies, the iſland of Grenada, and the Grenadines, were ceded to England, in full right; alſo, of the neutral iſlands, Dominique, St. Vincent's, and Tobago. In Africa, Senegal with its dependencies is guaranteed to England. In the Eaſt Indies, his moſt Chriſtian majeſty acknowledges Mahomed Aly Khan, as nabob of the Carnatic; and Salabat Zing, as ſubah of the Decan; renouncing all acquiſitions made on the coaſt of Coromandel ſince the year 1749, and engaging not to erect fortifications in any part of the kingdom of Bengal. See the article HINDOOSTAN. In Europe, he agrees to reſtore Minorca in the ſame condition as when conquered by the arms of the moſt Chriſtian king. He conſents that the harbour and fortifications of Dunkirk ſhall be demoliſhed. Finally, he ſtipulates that the territories belonging to the elector of Hanover, the landgrave of Heſſe, &c. now occupied by the armies of France, ſhall be evacuated, together with the fortreſſes of Cleves, Weſel, Gueldres, &c. belonging to the king of Pruſſia; and the two monarchs of France and England engage not to furniſh ſuccours of any kind to their reſpective allies in Germany. The difficult queſtion relative to the validity of the prizes captured before the declaration of war, is paſſed over in profound and diſcreet ſilence.

The king of Spain, on his part, cedes and guarantees in full right to England, the Eaſtern and Weſtern Floridas, and in general all that Spain poſſeſſes on the continent of America, to the eaſt or to the ſouth-eaſt of the Miſſiſſippi; in conſequence of which important ceſſion, in conjunction with that of the eaſtern part of Louiſiana, and the entire province of Canada, an immenſe country, capable of unlimited improvement, and bounded by a line of demarcation the moſt clear and definite, was gained to the empire of Britain. His Catholic majeſty alſo relinquiſhes, for himſelf and his ſucceſſors, all pretenſions which he may have formed to the right of fiſhing on the banks of Newfoundland. He confirms and eſtabliſhes for ever the privilege or indulgence enjoyed by the Engliſh of cutting logwood on the coaſt of Honduras, ſtipulating only, that no fortifications ſhall be erected upon the territorial dominions of Spain. Finally, his Catholic majeſty engages entirely to evacuate, on the exchange of the ratifications of the treaty, all the lands, cities, and caſtles, belonging to his moſt Faithful majeſty the king of Portugal, in the ſame condition they were in when conquered by the arms of Spain.

In return for theſe great and important ceſſions, Great Britain engages to reſtore to France, in Europe, the iſland of Belleiſle; in Africa, the iſland of Goree; in the Weſt Indies, the iſlands of Guadaloupe, Martinique, and St. Lucie; in the Eaſt Indies, Pondicherry, and Chandernagore. The right of France to fiſh on the banks of Newfoundland is recogniſed; and the ſmall iſlands of St. Pierre and Miquelon are ceded as a ſhelter for the fiſhermen. The fortreſs of the Havannah, and the other acquiſitions of England, without reſerve, including the recent and as yet unaſcertained conqueſt of the Manillas, are reſtored to Spain.

A great obſtacle to the concluſion of the treaty had been removed by the alteration which had taken place in the politics of England reſpecting the king of Pruſſia, and in the beneficial change in the ſituation of that monarch, who had now concluded a peace with Ruſſia and Sweden, and to whom notice had been already given, that the annual ſubſidy treaty would be no more renewed. The territories of Pruſſia occupied by the French being evacuated, that monarch had, however, upon the face of the treaty of Fontainebleau, no juſt ground of complaint, his native force being equal to his own defence againſt the houſe of Auſtria; or, if it were not, England was under no obligation further to exhauſt her treaſures in order to defend him. Both parties being, however, weary of a war which had been ſo long continued with alternate loſs and advantage, they ſoon came to terms of accommodation.

Although the peace of Fontainebleau was almoſt univerſally unpopular in the nation at large, the decided approbation of the parliament ſeemed to enſure the permanency of the miniſter's power; and the real intrinſic merits of the treaty, with the beneficial conſequences neceſſarily reſulting from the reſtoration of peace, might reaſonably be ſuppoſed gradually to conciliate the minds of the public. But other cauſes of diſſatisfaction aroſe, which heightened almoſt to phrenſy the popular odium againſt the miniſter, and converted the national ebullitions of diſcontent into a tempeſt of faction.

In the courſe of the ſeſſion it was found neceſſary, the increaſing expence of the war having left an immenſe arrear of debt, to negociate a new loan to a very large amount; for diſcharging the intereſt of which, amongſt other taxes, a duty was moved by the chancellor of the exchequer of four ſhillings upon every hogſhead of cider, to be paid by the maker, and with certain qualifications ſubjected to all the laws of exciſe. No ſooner was this unpopular propoſition brought forward, than the oppoſition, eager to embrace ſo inviting an opportunity of attack, opened all their batteries againſt it. The arguments by which the nation had been ſo much inflamed thirty years before, at the period when ſir Robert Walpole attempted to carry into effect his famous project, were now revived. The bill, however, paſſed into a law; and from this time may be dated the ſolid foundation of the revenue by exciſe, which has ſince been made ſo productive.

But ſcarcely was this unpopular meaſure carried into execution, when the kingdom was aſtoniſhed with the reſignation of lord Bute; who having, as he boaſted, reſtored peace to the world, forfeited no engagement, abandoned no friend, and formed a miniſterial connection ſo powerful as no longer to need his aſſiſtance, was now determined, by retiring "to the bleſſings of the life he loved," to demonſtrate that miniſterial greatneſs had for him no charms. To the earl of Bute ſucceeded as firſt lord of the treaſury, Mr. George Grenville, brother to earl Temple, a man accurately verſed in the routine of buſineſs, practiſed in all the minutiæ of office, open and affable in his manners, not deficient in probity, although ambitious of diſtinction. But though his abilities were of a claſs to entitle him in a ſubordinate ſtation to reſpect, he was utterly deſtitute of thoſe commanding talents, that intuitive ſagacity, and intellectual comprehenſion, which mark the man whom nature ſeems to have deſtined to the government of empires.

On the death of lord Egremont, which took place nearly at this period, the ſeals were given to the earl of Sandwich; the earl of Egremont was advanced to the head of the admiralty; and the duke of Bedford, now returned from his embaſſy to Paris, was appointed preſident of the council in the room of the famous earl Granville, who had for many years paſt, and to the cloſe of life, under all the changing viciſſitudes of power, occupied with the higheſt reputation that honourable and exalted office. In conſequence of the retreat of the earl of Bute, a general coalition of parties ſeemed now to be again practicable, and overtures to that purpoſe were made to Mr. Pitt, and the other leaders in oppoſition; but after repeated

repeated conferences, the negociations for that purpoſe terminated ineffectually.

In conſequence of the ill ſucceſs of the recent attempt at reconciliation, the rage of party ſeemed more inflamed than ever, and the preſs teemed with political pamphlets on each ſide, couched in terms of the extremeſt virulence and abuſe. Theſe the miniſtry ſeemed totally and wiſely to diſregard, till on the appearance of the 45th number of a periodical publication ſtyled "The North Briton," containing a perſonal and very indecent attack upon the king, charging him with affirming a direct falſehood in his ſpeech from the throne; it was in an evil hour judged expedient, for the vindication of his majeſty's honour, to exert every effort of government to reſcue the ſovereign from an imputation, the impreſſion made by which, had it been regarded with the dignity of ſilent contempt, would probably have laſted only till the 46th number had promulgated ſome new abuſe, as impudent, as malignant, and as futile, as the former. No miniſter had been more virulently attacked than Mr. Pitt, nor did the political publications of the times ſpare the perſon of the late king; but Mr. Pitt, on being urged to proſecute the libellers, replied only with a ſmile, that the preſs was like the air, "a chartered libertine." The well-known author of the publication in queſtion was Mr. Wilkes, member of parliament for Ayleſbury, in Buckinghamſhire. A warrant was iſſued under the hand and ſeal of lord Halifax, directed to certain of his majeſty's meſſengers in the uſual official form, commanding them to apprehend the authors, printers, and publiſhers, of that ſeditious and treaſonable paper. On the 29th of April, 1763, late at night, the meſſengers entered the houſe of Mr. Wilkes, and produced their warrant, with which, on account of the general terms in which it was drawn, he abſolutely refuſed compliance; but on their return the next morning, he was compelled to accompany them to the office of the ſecretary of ſtate, whence he was committed cloſe priſoner to the Tower, his papers being previouſly ſeized and ſealed, and all acceſs to his perſon ſtrictly prohibited. Application being made to the court of common pleas for an habeas corpus, a writ was accordingly iſſued, directed to the conſtable of the Tower, in conſequence of which, Mr. Wilkes was brought up the next day to Weſtminſter-hall; and the caſe being new and important, he was, after the pleadings were finiſhed, remanded till Friday, May 6, that the judges might have leiſure to form their opinion. On that day, being again brought before them, lord-chief-juſtice Pratt, afterwards lord Camden, proceeded to give the opinion of the court. He declared, as to the leading points involved in this complex queſtion, the commitment of Mr. Wilkes to be not in itſelf illegal, being juſtified by numerous precedents; and though in ſtrict contemplation of law the warrant of the ſecretary of ſtate was not of ſuperior force to that of a juſtice of peace; where a combination of circumſtances gave a ſtrong ſuſpicion of facts incompatible with the public ſafety, he was ſupported in the commitment even without receiving any particular information for the foundation of the charge. As to the ſecond objection, the court was of opinion, that there was no neceſſity for the ſpecification of thoſe particular paſſages in the 45th number of The North Briton, which had been deemed a libel. The paper did not, at that time, come under the cognizance of the court, nor could it without the aſſiſtance of a jury. As to the third head, the chief-juſtice admitted, that the privilege of parliament was violated in the perſon of Mr. Wilkes; for the privilege of parliament could be forfeited only by treaſon, felony, or breach of the peace; but Mr. Wilkes ſtood accuſed only of writing a libel, which did not come within that deſcription. The court then diſcharged Mr. Wilkes, againſt whom nevertheleſs a proſecution was immediately commenced by the attorney-general; and he was at the ſame time, by an official notice from the ſecretary of ſtate to lord Temple, lord-lieutenant of the county of Bucks, diſmiſſed from his military command as colonel of the Buckinghamſhire militia; and lord Temple was himſelf in a ſhort time diſmiſſed from his lieutenancy, to make room for lord Le Deſpencer, late ſir Francis Daſhwood.

Upon the meeting of parliament, November 15, 1763, before the king's ſpeech could be reported to the houſe, the miniſter, Mr. Grenville, knowing the intention of Mr. Wilkes to prefer a formal complaint of the breach of privilege committed in his perſon, declared, that he had a meſſage to deliver from the king. The meſſage being read, imported, "that his majeſty having received information that John Wilkes, eſq. a member of that houſe, was the author of a moſt ſeditious and dangerous libel, he had cauſed the ſaid John Wilkes, eſq. to be apprehended and ſecured, in order to take his trial in due courſe of law. And Mr. Wilkes having been diſcharged out of cuſtody by the court of common pleas, on account of his privilege as a member of that houſe, and having ſince refuſed to anſwer to an information filed againſt him by his majeſty's attorney-general; his majeſty, deſirous to ſhow all poſſible attention to the privileges of the houſe of commons, and at the ſame time ſolicitous not to ſuffer the public juſtice of the kingdom to be eluded, had choſen to direct the ſaid libel, and alſo copies of the examinations upon which Mr. Wilkes was apprehended and ſecured, to be laid before them:" and the miniſter then delivered the papers in at the table. On this a violent debate aroſe, and the houſe, moſt unwiſely making itſelf a principal in the quarrel, and entering with violence into this vexatious and perplexing buſineſs, voted by a great majority, "that The North Briton, Number 45, is a falſe, ſcandalous, and ſeditious, libel, manifeſtly tending to alienate the affections of the people from his majeſty, and to excite them to traitorous inſurrections;" and ordered it to be burnt by the common hangman. Thus was this queſtion, ſo inſignificant in its origin, ſwelled to vaſt and national importance. No legal conviction having as yet taken place, Mr. Wilkes now made his complaint to the houſe, of breach of privilege by the impriſonment of his perſon, the plunder of his houſe, the ſeizure of his papers, and the ſerving him with a ſubpœna upon an information in the court of king's bench. The complaint being perfectly regular, it was reſolved to take it into conſideration; and on the 23d of November, the houſe reſolved, by a majority of 125, in direct contradiction of the late deciſion of the court of common pleas, *and the precedents upon record in their own Journals*, "that privilege of parliament does not extend to the caſe of libel;" and an addreſs was preſented to his majeſty, in which the peers concurred, ſignifying their deteſtation of theſe ſeditious practices, and their warm affection for his majeſty's perſon and government. Mr. Pitt, who attended the houſe on this occaſion, though obliged by illneſs to be ſupported to his ſeat, declared himſelf with warmth againſt the reſolution now paſſed. No man, he ſaid, could condemn the paper or libel more than he did; but he would come at the author fairly, not by a ſacrifice of their conſtitutional privileges, and by ſubjecting every member who did not vote with the miniſter, to the dread and danger of impriſonment. The dignity of parliament called upon them doubtleſs to ſupport and protect the purity of his majeſty's character: this they had done by a ſtrong and deciſive condemnation of the libel in queſtion; the reſt belonged to the courts below.

In purſuance of the former vote, the ſheriffs of London attempting to execute the order of the houſe of commons for burning the 45th number of The North Briton at the Royal Exchange, a violent riot enſued; the paper was reſcued from the hands of the executioner, the peace-officers were attacked, and the ſheriffs themſelves put in danger of their lives. Upon this the two houſes reſolved, that the rioters were perturbators of the public peace, dangerous to the liberties of this country, and obſtructors of the national juſtice. The thanks of the commons were voted to the ſheriffs, and an addreſs preſented to his majeſty,

majeſty, that he would give directions for the puniſhment of the rioters. Parliament now began ſenſibly to feel the ill effects of its indiſcretion, in thus committing themſelves by an eager interference with a buſineſs to which their juriſdiction did not extend, and of which the eſtabliſhed courts of judicature alone could properly take cognizance. Notwithſtanding the votes, addreſſes, and reſolutions, of the two houſes, Mr. Wilkes brought his action againſt the earl of Halifax for ſeizing his papers; and, on the 6th of December, 1763, after an hearing of fifteen hours before lord-chief-juſtice Pratt, and a ſpecial jury, he obtained a verdict for one thouſand pounds damages and full coſts of ſuit. In the charge given by the chief-juſtice on this occaſion to the jury, his lordſhip, varying in ſome degree from his former opinion, ventured to declare the *general warrant* under which Mr. Wilkes was apprehended, *illegal*; with ſubmiſſion, however, to the opinions of the other judges, and of the higheſt judicial authority in this kingdom, the houſe of peers. "If, (ſaid his lordſhip,) theſe ſuperior juriſdictions ſhould declare my opinion erroneous, I ſubmit, as will become me, and kiſs the rod: but I muſt ſay, I ſhall always conſider it as a rod of iron for the chaſtiſement of the people of Great Britain."

Scarcely was this affair diſpoſed of, than the miniſter, Mr. Grenville, determined upon a meaſure in its tendency and ultimate conſequences the moſt intereſting and important which ever perhaps came under the cognizance of the Britiſh parliament. This was the project of taxing America. The plan had been formerly propoſed to ſir Robert Walpole; but that ſagacious ſtateſman replied, "that it was a meaſure too hazardous for him to venture upon; he ſhould therefore leave it to ſome more daring ſucceſſor in office to make the experiment." Mr. Grenville declared his intention to be, "to raiſe a revenue in America in aid to the mother country, the entire produce of which was to be paid into the exchequer of Great Britain." On the 10th of March, 1764, the houſe of commons, therefore, at the motion of the miniſter, paſſed a variety of reſolutions, reſpecting certain new duties on foreign goods imported into the Britiſh colonies in America, which being primarily of the nature of commercial regulations, paſſed without any diſtinct or particular notice in the Britiſh parliament, though their equivocal complexion rendered them very diſtaſteful to the Americans. But in the ſeries of parliamentary reſolutions was one of ſuch peculiar importance, that Mr. Grenville himſelf declared his intention to reſerve the execution of it till the next year. This reſolution imported, that it would be proper to impoſe certain ſtamp duties in the ſaid colonies and plantations, for the purpoſe of raiſing an American revenue payable into the Britiſh exchequer. This new proſpect of being relieved by the taxation of America from a portion of the national burdens was ſo flattering, that the reſolution paſſed the houſe with no ſerious oppoſition.

On the 30th of December in this ſame year, (1764,) died at Rome, in a far advanced age, the pretender, James Stuart, called the chevalier de St. George, only ſon of James II. Born with the proſpect of inheriting three powerful kingdoms, he experienced during the courſe of a long life only a ſucceſſion of misfortunes. So entirely had he ſurvived his political conſequence, that the intelligence of his death was received in Great Britain with the utmoſt indifference; though his pretenſions to the Britiſh crown had, within the memory of the majority of perſons then living, excited the higheſt apprehenſion and alarm. The chevalier left two ſons, upon the eldeſt of whom devolved that ſhadow of a ſhade, the divine and indefeaſible right of ſucceſſion to the throne of Great Britain. The younger, educated an eccleſiaſtic, had been advanced to the purple under the appellation of cardinal of York; and he remains the laſt claimant of the fallen honours of the ancient and royal houſe of Stuart.

Early in the year 1765, the queſtion reſpecting American taxation was revived with redoubled warmth and vigour. The indulgence of the miniſter in deferring the impoſition of the ſtamp duties till the preſent year, had not produced any advances towards an accommodation. The difference of principle occaſioned by the agitation of this queſtion, was in fact far too great to admit of any amicable compromiſe. Numerous petitions were therefore tranſmitted from the different colonies againſt this new principle of taxation. But the miniſter was inflexible; and anarchy followed.

On the 14th of January, 1766, the parliament being convened for the diſpatch of buſineſs, their attention was arreſted by the diſturbances and tumults which had taken place in almoſt all parts of the continent of America, in conſequence of the ſtamp act. As the queſtion relative to this famous act was chiefly a conteſt of principle, founded on the juſtice of taxing the colonies for the protection afforded them, it is ſcarcely worth while to remark the abſurdity ariſing from the paſſing, and immediate repeal, of the act itſelf. For the repeal, Mr. Pitt's arguments were deciſive. He inſiſted that their protection was abundantly compenſated by the profits of their commerce. "I ſpeak from accurate knowledge when I ſay, that the profits to Great Britain from the trade of the colonies, through all its branches, is two millions per annum. This is the fund which carried you triumphantly through the laſt war; this is the price America pays you for her protection; and ſhall a miſerable financier come with a boaſt that he can fetch a pepper-corn into the exchequer at the loſs of millions to the nation? I know the valour of your troops; I know the ſkill of your officers; I know the force of this country; but in ſuch a cauſe your ſucceſs would be hazardous. America, if ſhe fell, would fall like the ſtrong man; ſhe would embrace the pillars of the ſtate, and pull down the conſtitution with her. Is this your boaſted peace? Not to ſheath the ſword in the ſcabbard, but to ſheath it in the bowels of your countrymen? The Americans have been wronged; they have been driven to madneſs by injuſtice. Will you puniſh them for the madneſs you have occaſioned? No: let this country be the firſt to reſume its prudence and temper: I will pledge myſelf for the colonies, that, on their part, animoſity and reſentment will ceaſe. Let affection be the only bond of coercion. The ſyſtem of policy I would earneſtly exhort Great Britain to adopt, is, That the ſtamp act be repealed abſolutely, totally, and immediately." In a ſhort time a bill was brought in for this purpoſe, which paſſed both houſes by conſiderable majorities, and received the royal aſſent; accompanied at the ſame time with a declaratory act, aſſerting the power and right of Great Britain, nevertheleſs, to bind the colonies in all caſes whatſoever. The joy in America was extreme at the intelligence of this repeal; and the mere declaration of an abſtract right, which they imagined to be with reſpect to the claim of taxation in fact relinquiſhed, and which ſeemed chiefly intended as a ſalvo for the honour of parliament, gave them little apprehenſion or uneaſineſs; and it was not till after an interval of ſeveral years, when the colonies had been haraſſed and wearied out by a long ſeries of vexations, that the aſſembly of Maſſachuſetts at length, by a formal reſolution, voted the declaratory act to be a grievance.

Though in actual circumſtances nothing could be more wiſe and ſeaſonable than the repeal of the ſtamp act, it is not to be imagined that this was a meaſure attended with no political inconvenience; far from it: but in the dilemma to which miniſtry were reduced, they adopted that line of conduct which juſtice and policy marked out, and which appeared incomparably the leaſt of the two difficulties. By an egregious want of penetration, the government of Great Britain had attempted to carry into effect a meaſure, which upon trial it was found impoſſible, without bloodſhed and confuſion, to enforce. But as political power exiſts only by opinion, this project, however abſurd, could not be relinquiſhed without ex-

poſing the legiſlative authority of Great Britain to the riſk of at leaſt a temporary degradation. By their ſucceſs in this firſt inſtance of oppoſition and reſiſtance, the Americans would be encouraged and incited (ſuch is the nature of man) to diſpute the authority of the mother country when it happened to be in other inſtances exerted in a mode not agreeable to them, however neceſſary to maintain the juſt and conſtitutional ſubordination of the colonies. This was remarkably exemplified in the conduct of the aſſembly of the province of New York, who came to a reſolution, that they would not regard the proviſions of an act paſſed in the laſt ſeſſion, by which they were required to ſupply the troops ſtationed in the province with neceſſaries in their quarters.

When this inſtance of diſobedience and contumacy was laid before parliament, very rigorous meaſures of vengeance were urged by thoſe whoſe violent counſels had already been productive of ſo much miſchief. But the miniſters, purpoſely avoiding all harſh and poſitive penalties, adopted a meaſure at once forcible and dignified, by enacting a law prohibiting the governor, council, and aſſembly, of New York, to paſs any act till they had in every reſpect complied with the requiſition of parliament. This in a ſhort time produced the deſired effect, and it afforded a demonſtrative evidence, that the real and practical authority of Great Britain, wiſely and temperately exerted, was fully equal to the purpoſe of maintaining that relation of ſuperiority and dependence which indiſputably ought to ſubſiſt between the head and the members of a great and widely-extended empire.

Happy would it have been, had the miniſtry diſcovered in all other parts of their conduct the ſame prudence and policy. But through ſome unaccountable fatality, the project was revived of drawing a revenue from America, in a mode not indeed in all reſpects analogous to that which had been ſo recently abandoned, but which in her irritable ſtate of mind equally ſerved to rekindle thoſe alarms and jealouſies which might reaſonably be ſuppoſed rather allayed than extinguiſhed. In this ſtate of affairs a bill was brought into parliament, and paſſed, for the impoſition of certain duties on glaſs, tea, paper, and painters' colours, imported from Great Britain into the colonies; for, though by the repeal of the ſtamp act the exerciſe of the right of internal taxation was allowed to be virtually relinquiſhed, the claim of external taxation was affirmed ſtill to remain in full force. The Americans by this act were reduced to a moſt grievous embarraſſment. It had been ever uniformly acknowledged that Great Britain poſſeſſed the right of commercial regulation and controul; it could not be denied that port duties had been at former periods impoſed for the purpoſe of commercial regulation, particularly by the act paſſed in the ſixth year of the reign of the late king, on the importation of foreign rums, ſugars, and melaſſes, from the Weſt Indies. It could not be pretended with conſiſtency and plauſibility that the ſame power did not now inhere in the Britiſh parliament; but it was at the ſame time impoſſible not to diſcern that this power was in the preſent inſtance exerciſed with a very different intention, and for the accompliſhment of a very different object; and that by a ſpecies of artifice unworthy of a great nation, an attempt was now made to inveigle them into the payment of that revenue which could not be extorted by means more direct and unequivocal. When the intelligence of this new plan reached America, a ſudden and angry gloom univerſally took place of the hilarity and good humour which had predominated ſince the ſuppoſed relinquiſhment of the plan of American taxation. Mercantile combinations immediately became general, not to import thoſe articles on which the new duties were laid, the trivial amount of which did not diminiſh the odium attending them; the Americans comparing theſe duties to an entering wedge, deſigned to make way for others which would be greater and heavier.

The laſt buſineſs which occupied the attention of parliament before its receſs in 1767, related to the affairs of the Eaſt-India company. The prodigious acquiſitions recently made in the eaſt, and the princely fortunes accumulated by thoſe who occupied the higher departments in the company's ſervice, ſtrongly attracted the attention of the public. At a general court held at the India-houſe, it was affirmed by many of the proprietors to be highly reaſonable, that a larger dividend ſhould be declared by the directors, and that the whole body ſhould participate in the advantages of their late ſucceſſes; inſiſting, that ſo low a dividend as ſix per cent. agreed but ill with the preſent flouriſhing ſtate of the company's affairs. It was plauſibly urged, that the Dutch Eaſt-India company divided twenty per cent. upon its capital, though their poſſeſſions and revenues were in no degree equal to thoſe of the Engliſh. The directors, who, by the ſuperior ſagacity of their conduct, have frequently expoſed the dangerous fallacy of a confident reliance on the collective wiſdom of a popular aſſembly, replied with much good ſenſe and prudence, "that although great advantages had certainly been gained, it was not leſs true, that vaſt expences had been incurred by the unexampled extent and duration of their military operations. The profits of the company, they ſaid, were comparatively remote and precarious; their debts urgent and certain. Juſtice and good policy, therefore, concurred in recommending the previous diſcharge of incumbrances, ere they thought of appropriating the profits. Recal, ſaid they, the tranſactions of the South-Sea year, and conſider the pernicious effects of the fraudulent arts then uſed for raiſing the value of that ſtock. A conſiderable augmentation of dividend will raiſe the price of our fund to an extraordinary height, at which it cannot poſſibly be ſupported. Thus freſh fuel will be added to the ardour for gaming, a wider field will be opened for ſtock-jobbing, and all the myſterious iniquities of 'Change-alley. By your precipitance you will create a new South-Sea bubble, which will ultimately burſt on your own heads."

The proprietary, far from being ſatisfied with theſe reaſonings, reproached the directors with an intention to monopoliſe the riches of the company, and, by their futile and abſurd cavils, prevent all increaſe of dividend to ſwell their own enormous heaps. A dividend of twelve and a half per cent. was accordingly declared; when the parliament, in conſequence of an application from the company for the renewal of their charter, entered into a ſerious inveſtigation of the ſtate of the company's finances. It was without heſitation aſſerted, that a commercial company could not legally acquire territorial rights; and that the revenues annexed to thoſe rights appertained ſolely to the crown. The company, dreading the conſequences of a competition ſo formidable, voluntarily offered an annual ſum of four hundred thouſand pounds to the government, in lieu of all its claims; and a temporary agreement for two years only was concluded upon theſe terms, the queſtion of right remaining undecided. A bill, which the urgency of the caſe only could warrant, was at the ſame time brought into the houſe, reſcinding, by an high exertion of legiſlative authority, the late reſolution of the general court, and confining the dividends of the company to ten per cent. during the continuance of the agreement made with the government, which paſſed with much oppoſition; the ſecretary of ſtate, and the chancellor of the exchequer, on this occaſion, to the aſtoniſhment of the public, voting in the minority. This important bill originated with, and was ſupported by the powerful patronage of, the duke of Grafton, then at the head of the treaſury, who clearly diſcerned the neceſſity of adopting timely and deciſive meaſures of prevention, in oppoſition to the daring and nefarious deſigns of thoſe perſons, who hoped, by declaring an enormous dividend, and advancing the transfer price of the ſtock to a proportionate height, to take the ſame advantage of the public deluſion, as their predeceſſors in the ever-memorable year 1720. General Conway, ſecretary of ſtate, from motives free from any

taint of ſuſpicion, oppoſed the bill in queſtion, under the too ſcrupulous apprehenſion of its eſtabliſhing an arbitrary precedent. The oppoſition to this bill in the houſe of lords was truly formidable. The Rockingham and Grenville parties united in the reprobation of it. The diviſions in the different ſtages were uncommonly cloſe; and the miniſter, who defended the meaſure with great ability, was able on two ſucceſſive trials to command a majority of three voices only; more than 120 peers being preſent. At length it paſſed on a diviſion of 59 to 44 voices. The ideas of lord Chatham, who ſtill maintained an intimate and confidential intercourſe with the duke of Grafton, went to an abſolute and unqualified denial of the legal and conſtitutional right of the company to the territorial revenue, and the political juriſdiction annexed to it, as utterly incompatible with their commercial capacity, and totally foreign to the nature of the privileges veſted in them by charter.

This intereſting ſeſſion did not terminate till July 2, 1767, when the want of cordiality amongſt the miniſters became apparent. Soon after the prorogation, the king wrote with his own hand to the earl of Chatham, acquainting him with his intention to make certain alterations in the adminiſtration, and deſiring his lordſhip's aſſiſtance and advice. But lord Chatham ſignified to his majeſty, that ſuch was his ſtate of health as to render him incapable of affording the leaſt aid in ſettling any future arrangement; but acknowledging the neceſſity of ſtrengthening the hands of government, by a coalition either with the Rockingham or Grenville party. A change of miniſtry being now confidently expected, the duke of Newcaſtle exerted his utmoſt efforts to unite the houſes of Ruſſel and Wentworth, conſcious that a firm and cordial coaleſcence could alone render their oppoſition formidable, or their adminiſtration permanent. This, however, was extremely difficult to effect, from the difference of opinion that ſubſiſted relative to the affairs of America. At length various mutual ſacrifices being made to facilitate the formation of a new adminiſtration on a comprehenſive baſis, at a meeting held July 20, lord Rockingham was, by univerſal conſent, fixed upon as the moſt proper perſon to preſide at the board of treaſury. The marquis then propoſed general Conway for ſecretary of ſtate and miniſter of the houſe of commons, to which the duke of Bedford poſitively objecting, the conference was diſſolved; and at a ſubſequent meeting, the marquis perſiſting in this nomination, all ideas of an union vaniſhed, it being fully underſtood that the two parties would not recede in any degree from their oppoſite ſyſtems reſpecting America; and the miniſters actually in office determined to maintain their ground in defiance of all oppoſition. But on the ſudden death of Mr. Charles Townſend, chancellor of the exchequer, in September, 1767, he was ſucceeded in that office by the celebrated lord North, eldeſt ſon of the earl of Guildford. His abilities, though by no means of the firſt claſs, were far removed from contempt; his knowledge of buſineſs was extenſive, his integrity unimpeached; and, though indolent and unenterpriſing by conſtitution, he was occaſionally capable of reſolute and perſevering exertion. It muſt, however, be remarked, that a certain indiſtinctneſs and confuſion of ideas unfortunately pervaded his general ſyſtem of thinking; and, though he ſeemed habitually to aim at the thing which was right, and often made a conſiderable approach towards it, he almoſt invariably ſtopped ſhort of the true and genuine ſtandard of political propriety. With the reputation of meaning well, therefore, he acquired the imputation of indeciſion and inſtability; and the general tenor of his adminiſtration muſt certainly be allowed to exhibit very few indications of energy, wiſdom, or force of penetration. But the character of this nobleman will be beſt appreciated by poſterity, in contemplating that faithful portraiture of his actions and conduct, which it is the province of hiſtory to delineate. Mr. Thomas Townſhend ſucceeded lord North as paymaſter of the forces; Mr. Jenkinſon Mr. Townſhend as a lord of the treaſury. Lord Chatham, though he held the privy ſeal, and had retired, oppreſſed with illneſs and diſcontent, to his ſeat in Somerſetſhire, was no longer conſulted, from cauſes which require no additional explanation, either as to the arrangements actually made, or with reſpect to thoſe which were ſtill in view.

The earl of Northington, who had occupied, amid the ſucceſſive changes of five different adminiſtrations, the high offices of lord keeper, lord chancellor, and lord preſident, now broken in health, and weary of politics, at this juncture declaring his reſolution to reſign; new advances were made to the Bedford party, who, convinced that an accommodation with lord Rockingham was impracticable, determined at length to cloſe with theſe offers. About the end of the year, earl Gower was nominated preſident of the council, in the room of the earl of Northington; lord Weymouth, ſecretary of ſtate, in the room of general Conway, promoted in the military line; and lord Hillſborough was appointed to the new office of ſecretary of ſtate for the colonies, the creation of which place was ſuppoſed with reaſon to indicate ſome new and extraordinary meaſures. The earl of Chatham, at preſent only the ſhadow of a mighty name, and ſequeſtered in the groves of Burton Pynſent, ceaſed to be mentioned by the public. After the lapſe of ſome months, perceiving, or believing that he perceived, a malignant influence gaining ground, calculated to oppoſe and counteract the eſſential intereſts of the people, he determined upon a reſignation; and in October, 1768, not being able, or not deigning himſelf to appear at court, he ſent the privy ſeal to the king, by the hands of lord Camden; it was immediately delivered to the earl of Briſtol. Nearly at the ſame time, the earl of Shelburne, zealouſly attached to the earl of Chatham, reſigned the ſeals of the ſouthern department to the earl of Weymouth, who was ſucceeded by the earl of Rochford, late ambaſſador at Paris.

Parliament was convened early in 1768; but nothing peculiarly intereſting or important occurred in the courſe of the ſeſſion, with the ſingle exception of a bill introduced and patroniſed by the oppoſition, under the denomination of the *nullum tempus bill*, for quieting the poſſeſſions of the ſubject, and ſecuring them from all obſolete and vexatious claims of the crown, againſt which it was held to be a maxim of law that no preſcription could be pleaded. This bill originated in an incident of an extraordinary nature. The Portland family had, in conſequence of a grant from king William, poſſeſſed for ſeventy years the honour of Penrith and its appurtenances, ſituated in the county of Cumberland. The foreſt of Inglewood, and the manor and caſtle of Carliſle, being conſidered as parts of this grant, were quietly enjoyed by the family for ſeveral deſcents, under the ſame tenure, though not particularly ſpecified. Sir James Lowther, being apprized of this omiſſion, made an application to the crown for a leaſe of the premiſes in queſtion; and the ſurveyor-general of the crown lands, though no lawyer, nor acting on the opinion of any lawyer, took upon him to decide, that theſe eſtates were ſtill veſted in the crown. Orders were therefore iſſued for a new grant to ſir James Lowther, in which the foccage of Carliſle was rated at fifty pounds per annum, and the foreſt of Inglewood at fourteen ſhillings and fourpence; though in reality of immenſe value, and commanding an extenſive election influence. When the board of treaſury met, after a long adjournment, the duke of Portland preſented to the lords a memorial, in which he prayed to be heard by their lordſhips in defence of his title. He was informed that no ſtep would be adopted to his prejudice, till an impartial inveſtigation had taken place. But whilſt the duke's agents and ſolicitors were employed in a laborious ſearch into ancient and mouldered monuments, ſurveys, and court-rolls, his grace was informed, that the grant was actually completed; and, notwithſtanding the caveat entered in the court

court of exchequer, the chancellor, lord North, affixed the ſeal, in purſuance of a poſitive order from the lords of the treaſury.

When this buſineſs came under parliamentary diſcuſſion, the miniſter maintained, "that the premiſes in queſtion were no part of the honour of Penrith, and that the reſumption was therefore juſtifiable; that the family of Portland was ſufficiently paid for any ſervices which it might have rendered the nation; and, after enjoying for ſeventy years an eſtate to which it had no right, it was ſaid they might now be contented to reſign it into the hands of the true owner." The oppoſition replied, "that the revival of the obſolete and dormant prerogative of reſumption, in the face of a long and uninterrupted preſcription, was in the higheſt degree alarming; that reſumptions had been practiſed even in the worſt of times with great caution, from the general abhorrence which every act of that kind muſt excite. The maxim on which they were founded, was aſſerted to be the diſgrace of the government, and the ſcandal of the law; and it could ſcarcely have been imagined, that the moſt enlightened ages would revive a practice which the darkeſt times had held in deteſtation. All the lands of the kingdom have been at different times in the hands of the ſovereigns, and a large proportion of them, from the loſs of authentic deeds, may be liable to ſimilar claims; and thus the ſubject may be haraſſed and ruined by frivolous and vexatious ſuits, without the means of redreſs. To ground a proceeding of this nature upon the mere report of the ſurveyor-general of the crown, unſupported by any authority of law, was reprobated as a mockery and inſult, amounting to an evident abandonment of every principle of equity and juſtice. When the royal revenue aroſe only from demeſne lands, reſumptions might be more eaſily pardonable; but when a vaſt permanent revenue was ſettled by parliament on the crown, the plea of neceſſity is wholly precluded; not to mention that the reſerved rent was too contemptible a conſideration to be ſuppoſed in the remoteſt degree to have influenced the reſumption." The miniſtry contended, that further time was neceſſary for the full inveſtigation of the ſubject; however, the *nullum tempus bill* paſſed into a law; and thus the oppreſſion of an individual, agreeably to the happy genius of the Engliſh conſtitution, became the means of extending and ſecuring the rights and liberties of the community at large. When this great cauſe was argued before the barons of the exchequer, the late grant was judged invalid, as contrary to the ſtatute of queen Anne, which enacts, that, upon every grant, leaſe, or aſſurance, from the crown, the reſerved rent be not leſs than one-third of the clear yearly value of ſuch lands, manors, or meſſuages, as ſhall be contained in ſuch leaſe or grant; and, to the infinite ſatisfaction of every impartial perſon, ſir James Lowther was finally nonſuited, after having thrown the whole county of Cumberland into the utmoſt confuſion: above four hundred ejectments being, as it is affirmed, ſerved by the agents of ſir James Lowther upon the ſub-tenants and actual occupants of thoſe extenſive demeſnes, in one day.

The Britiſh parliament, having nearly completed the legal term of its exiſtence, was diſſolved; and the enſuing general election was ſignalized above all others, by the immenſe ſums expended in electioneering conteſts. The current price of boroughs was enormouſly raiſed by the rival plunderers of the eaſt and of the weſt, who, by a new ſpecies of alchemy, had tranſmuted into Engliſh gold the blood of Africa and the tears of Hindooſtan. Many private fortunes were ruined, or materially impaired, by conteſts carried on with the utmoſt political depravity. The circumſtances attending the election for Middleſex alone, however, demand, from their ſuperior connection with general politics, the ſpecific notice of hiſtory.

It is neceſſary to call to mind that Mr. Wilkes, by his contumacious contempt of the proceedings inſtituted againſt him in the courts at Weſtminſter, ſuffered a ſentence of outlawry to be paſſed upon him; and for ſeveral years preceding this period he had reſided in different parts of the continent. But at the eve of the preſent election he had the temerity to appear publicly at Guildhall, and offer himſelf as a candidate for the city of London. On the firſt advancement of the duke of Grafton to the premierſhip, Mr. Wilkes had written to that nobleman in a ſtrain ſufficiently reſpectful, and even flattering, "congratulating his country on that event, and entreating his grace to mediate his pardon from the king; declaring, that he had never in any moment of his life ſwerved from the duty and allegiance he owed his ſovereign, and profeſſing in every thing to ſubmit to his majeſty's clemency. Your grace's noble manner of thinking, (ſays he,) and the obligations I have formerly received, which are ſtill freſh in my mind, will, I hope, give a full propriety to this addreſs; and I am ſure, a heart glowing with the ſacred zeal of liberty muſt have a favourable reception from the duke of Grafton." This application was treated with neglect and diſdain; and Mr. Wilkes's hopes of pardon being extinguiſhed, he reſolved to make his enemies feel, if poſſible, the effects of his reſentment.

It is remarkable, that although he was received by the populace with loud acclamations, and a great majority of hands appeared in his favour at Guildhall, he was on the poll contemptuouſly rejected. Far from being diſpirited by this defeat, he immediately declared himſelf a candidate for Middleſex; and the electors for this county conſiſting chiefly of freeholders of the loweſt claſs, he was returned by a deciſive majority. Such was the exultation of the populace at this event, that they paraded the ſtreets of the metropolis, and compelled the inhabitants to illuminate their houſes, as if ſome ſignal victory had been gained; and the chief magiſtrate, Harley, was openly and groſsly inſulted by a violent aſſault upon the manſion-houſe. The miniſtry, who had remained unaccountably paſſive at his firſt appearance, now ſeemed to awaken from their lethargy. Mr. Wilkes, having with much diſcretion ſurrendered himſelf to the juriſdiction of the king's bench, obtained a reverſal of his outlawry: but the verdicts given againſt him on both trials were now affirmed by lord Mansfield, and he was in conſequence condemned to ſuffer two years impriſonment; to pay a fine of one thouſand pounds; and to find ſecurity for his good behaviour during the ſpace of ſeven years.

On the 10th of May, 1768, the new parliament was convened, and vaſt multitudes were collected about the king's bench, and the fields adjacent, under the idea of ſeeing Mr. Wilkes go the houſe of commons; when the unfortunate riot took place, in which young Allen was killed. After a very ſhort ſeſſion, and merely paſſing one or two bills *pro forma*, the parliament was prorogued till November. During the receſs, a letter from lord Weymouth, ſecretary of ſtate, addreſſed to the chairman of the bench of juſtices for the county of Surry, and expreſſive of the higheſt approbation of the late proceedings of the magiſtrates, fell into the hands of Mr. Wilkes, who immediately publiſhed it, with a preface ſufficiently daring and indignant. When the parliament met, lord Weymouth made a formal complaint of breach of privilege, and the houſe of commons with little heſitation reſolved this prefatory introduction to be "an inſolent, ſcandalous, and ſeditious, libel." And it being alſo urged that Mr. Wilkes was ſentenced to a long impriſonment for former offences of a ſimilar nature, and incapable of attending his duty in parliament, it was moved by lord Barrington, ſecretary at war, that he be expelled the houſe. His lordſhip's motion was ſeconded by Mr. Rigby, paymaſter of the forces, and carried by a great majority. It was however affirmed, "that the libel with which Mr. Wilkes now ſtood charged, did not come properly under the cognizance of the houſe. If the privileges of the peers were violated, or their proceedings arraigned, they were competent to the vindication of their own honour. For the other libels he has been already expelled. Shall the

the houſe puniſh twice for the ſame offence? Shall we act in direct oppoſition, not to the forms only, but to the very eſſence of the conſtitution? Shall we blend the executive and judicial powers with the legiſlative, and take upon ourſelves the odium of trying and puniſhing in a ſummary manner an offence cognizable by the laws in the ordinary courts of judicature?"

It is ſingular, that the apparently obvious and probable conſequence of this expulſion, does not ſeem to have occurred either to the miniſters of the crown, or to the members in oppoſition. But whatever might have been previouſly expected, the fact is, that, a new writ being iſſued, Mr. Wilkes was a ſecond time returned with the greateſt unanimity. The houſe now began to perceive the dilemma in which it had with ſuch haſte involved itſelf. By proceeding in this buſineſs, they muſt incur the reſentment of the electors; by receding, it were impoſſible to eſcape cenſure. Preferring what appeared to them the leaſt of two evils, they reſolved, "that Mr. Wilkes, having been once expelled, was incapable of ſitting in the ſame parliament, and that the election was therefore void." The freeholders of Middleſex, equally determined with the houſe of commons, choſe him a third time their repreſentative, with the ſame unanimity. The election was again declared void by the commons; and in order to terminate a conteſt in which the houſe appeared to ſo little advantage, colonel Luttrell voluntarily vacated his ſeat in parliament, with a view to offer himſelf as a candidate for Middleſex; being previouſly aſſured that he ſhould at all events, and whatever might be the diſparity of numbers upon the poll, be the ſitting member. At the fourth election Mr. Wilkes was again returned by the ſheriffs; the votes in his favour being 1243 to 296: but, on a petition from colonel Luttrell, he was, after a vehement debate continued to a very late hour, (March 3, 1769,) declared duly elected!

By this deciſion the nation was thrown into a great conſternation, which only ſerved to ſhew how a comparatively trivial queſtion may be magnified into artificial importance, by making it the object of political and perſonal contention. It could not be denied that the houſe of commons had ever exerciſed a judicial authority, which could in no other hands be ſo properly placed, in determining upon the validity of returns, and the qualifications of their own members. This authority might undoubtedly be abuſed or indiſcreetly exerciſed, but all power is in its own nature liable to abuſe; and if ſo vague an objection be admitted, the powers veſted in all political bodies, however conſtituted, muſt be annihilated, and the bands of civil ſociety are at once diſſolved. The power of expulſion for ſuch offences as appear to the houſe to render any of its members unworthy of the truſt repoſed in them, had been exerciſed in numerous inſtances from time immemorial; and though no caſe preciſely ſimilar to the preſent in all its circumſtances could be adduced, the houſe of commons now exiſting had certainly as valid a right to make a precedent in a new caſe within the limits of their own peculiar juriſdiction as any former houſe of commons, or as the courts ſitting in Weſtminſter-hall; and, had the expulſion of Mr. Wilkes been itſelf a popular meaſure, the ſubſequent ſteps taken by the houſe would no doubt have been deemed perfectly regular, as analogous to the ſpirit of former deciſions, conformable to the general powers of adjudication veſted in the houſe, and neceſſarily flowing from the original and eſtabliſhed parliamentary right of expulſion. It muſt nevertheleſs be acknowledged, that a diſcretionary power of expulſion is liable to be perverted to very bad purpoſes; and therefore it was judged proper by an act paſſed in the courſe of the enſuing ſeſſion, to ſpecify the offences which ſhall in future render incapacitation the neceſſary reſult of expulſion; and thus, inſtead of encroaching on the rights of the people in matters of election, this houſe of commons did in reality fix legal and definite boundaries to their own power.

The houſe of commons proceeded, after the queſtion of the Middleſex election was thus determined, to the uſual buſineſs of the ſeſſion, and thirty-three thouſand men were voted for the ſea and land ſervice of the year 1769. The charter of the Eaſt-India company was prolonged for the further term of five years, on conditions ſimilar to the laſt agreement; but the company were now allowed to increaſe their dividend to twelve and a half per cent. during this term, provided they did not in any one year raiſe it above one per cent. On the other hand, ſhould the dividend be reduced below the preſent ſtandard of ten per cent. the ſtipulated payment of four hundred thouſand pounds per annum to the public ſhould be proportionally diminiſhed; and if the dividend ſhould ſink to ſix per cent. the payment to the public ſhould wholly ceaſe.

In May, 1769, a circular letter was written by the earl of Hillſborough, ſecretary of ſtate for America, to all the different colonies, acquainting them, "that it was the intention of his majeſty's miniſters to propoſe, in the next ſeſſion of parliament, taking off the duties upon glaſs, paper, and colours, on conſideration of ſuch duties having been laid contrary to the true principles of commerce; and aſſuring them, that at no time had they entertained any deſign to propoſe to parliament to lay any further taxes on America for the purpoſe of raiſing a revenue." Notwithſtanding the ſalvo of commercial principles, it was ſufficiently evident that this conceſſion was ſolely and wiſely made with a view to conciliate America in this criſis of diſaffection. But as the wiſdom of man is generally blended with a portion of folly, the duty on tea was purpoſely left as a mark of the legiſlative ſupremacy of Britain, very contrary to the inclinations and earneſt endeavours of the miniſter, who, by cogent arguments, demonſtrated in council the impolicy of leaving that fatal germ of contention to expand into incurable animoſity. But though the duke of Grafton was on this occaſion powerfully ſupported by lord Camden, and various other names of the higheſt reſpectability, his grace's ſyſtem of moderation was moſt unfortunately over-ruled in the cabinet; and from this period the duke of Grafton entertained fixed and ſerious ideas of relinquiſhing his ſtation ſo ſoon as a ſucceſſor could be provided by his majeſty.

The ferment raiſed in the nation by the late deciſion of the houſe of commons, ſeemed in the mean time daily to increaſe in violence; the freeholders of the county of Middleſex were highly incenſed, declaring, that the right of election had been wreſted from them, by the unprecedented ſeating of a candidate who was never choſen by the county. The public diſſatisfaction became apparent throughout the kingdom; and their grievances were magnified by an innumerable multitude of political publications, in which the conduct of the adminiſtration was arraigned in the bittereſt terms. Among theſe, the national attention was particularly attracted by a ſeries of letters appearing under the ſignature of *Junius*, and written in a ſtyle ſo maſterly as to be deemed, in point of compoſition, equal to any literary productions in the Engliſh language. They conſiſted, however, of little elſe than ſplendid declamation and poignant invective, and diſcovered a powerful malignity of diſpoſition, which, now the paſſions and follies of the day have vaniſhed, and given place to other paſſions and other follies, muſt excite diſregard; particularly as the author was not, nor probably ever will be, known. Of theſe celebrated letters, by far the moſt memorable is that addreſſed to the king, in which the writer, with equal elegance and energy of diction, affected to exhibit to the view of his ſovereign a moſt ſtriking picture of his adminiſtration. On the appearance of this letter, the attorney-general had orders immediately to file a bill in the court of king's bench, againſt the publiſher, Woodfall, for uttering a falſe and ſeditious libel; but the jury returned their verdict, "Guilty of printing and publiſhing only;" which verdict amounting to an acquittal, the defendant was diſcharged.

By an almoſt total ceceſſion from buſineſs for two years,

the health of lord Chatham was in an unexpected degree reſtored. The parliament met in January, 1770, and, on the motion for an addreſs to the throne, lord Chatham aroſe, and declared, "that, at his advanced period of life, bowing under the weight of his infirmities, he might perhaps have ſtood excuſed if he had continued in his retirement, and never taken part again in public affairs; but the alarming ſtate of the nation called upon him—forced him to come forward once more, and to execute that duty which he owed to God, to his ſovereign, and his country. The ſituation of foreign affairs was, he ſaid, critical; but what more immediately demanded their lordſhips attention, was the diviſions and diſtractions which prevailed in every part of the empire. He lamented thoſe unhappy meaſures which had alienated the colonies from the mother country, and which had driven them into exceſſes he could not juſtify. Such, however, was his partiality to America, that he was inclined to make allowance even for thoſe exceſſes. The diſcontents of three millions of people deſerved conſideration; the foundation of thoſe diſcontents ought to be removed. The diſcontents of the Americans, however, at the preſent criſis were unimportant, in compariſon of thoſe which prevailed in this kingdom. It was an obligation incumbent upon that houſe to enquire into the cauſes of the notorious diſſatisfaction expreſſed by the whole Engliſh nation, to ſtate thoſe cauſes to their ſovereign, and then to give him their beſt advice in order to their being removed;" the motion, however, for this purpoſe, was loſt in a diviſion.

Lord Camden, having in the courſe of the debate condemned in deciſive terms the proceedings of the houſe of commons, and actually dividing with lord Chatham, was immediately compelled to relinquiſh the great ſeal. The removal of that great magiſtrate was followed by the reſignations of the dukes of Beaufort and Mancheſter; the earls of Coventry and Huntingdon, and lord Granby, commander in chief of the forces of Great Britain. The earl of Briſtol chooſing the tranquil and irreſponſible poſt of firſt lord of the bedchamber, vacated by the earl of Huntingdon, the privy ſeal was delivered to the earl of Halifax. On the 22d of January, 1770, the marquis of Rockingham moved for fixing a day to take into conſideration the ſtate of the nation. The 2d of February was fixed upon by the houſe for reſolving itſelf into a committee on this enquiry; but on the 28th of January, the duke of Grafton unexpectedly reſigned his office as firſt lord of the treaſury; and lord North, who had now been two years chancellor of the exchequer, was nominated his ſucceſſor. Thus was at length formed that famous adminiſtration, which exerciſed the powers of government for twelve ſucceſſive years; during which the colonies were diſmembered from the mother country.

On the day ſucceeding the reſignation of the miniſter, the houſe of commons reſolving itſelf into a committee on the ſtate of the nation, Mr. Dowdeſwell moved, "That the houſe, in the exerciſe of its juriſdiction, ought to judge of elections by the law of the land, and by the cuſtom and practice of parliament, which is part of that law." The motion, if adopted, was intended to be followed by other reſolutions, purporting the unequivocal condemnation and conſequent reſcindment of the vote of the laſt ſeſſion. This leading propoſition was ſo ſkilfully worded, that it was impoſſible to put a direct negative upon it; and to evade it by the previous queſtion would only lead to a revival of the ſame motion in a new and varied form. It was therefore with equal parliamentary adroitneſs at once laid at reſt by lord North, who moved as an amendment the additional words: "And that the judgment of this houſe in the caſe of John Wilkes, eſq. was agreeable to the law of the land, and fully authorized by the practice of parliament." Though the amendment was oppoſed with vehemence, as a moſt unfair and diſingenuous perverſion of the true meaning of the reſolution, it was carried upon a diviſion by 224 to 180 voices: thus precluding all hope of redreſs by any future effort in that houſe of parliament.

On the 2d of February, 1770, being the day previouſly fixed upon by the peers for reſolving themſelves into a ſimilar committee, lord Rockingham, after an introductory ſpeech of ſome length, moved, "That the houſe of commons, in the exerciſe of its judicial authority in matters of election, is bound to judge according to the law of the land, and the known and eſtabliſhed law and cuſtom of parliament, which is part thereof." The motion was ſupported with all his accuſtomed warmth and energy by the earl of Chatham, who condemned the conduct of the houſe of commons in terms of great aſperity. He denominated the vote of that houſe, which had made colonel Luttrell repreſentative for Middleſex, "a groſs invaſion of the rights of election, a dangerous violation of the Engliſh conſtitution, and a corrupt ſacrifice of their own honour. To gratify individual reſentment (he ſaid) the laws had been deſpiſed, trampled upon, deſtroyed; thoſe laws which had been made by the ſtern virtue of their anceſtors, the iron barons of old, to whoſe virtue and to whoſe blood, to whoſe ſpirit in the hour of conteſt, and to whoſe fortitude in the triumph of victory, the ſilken barons of this day owe their honours and their ſecurity." The queſtion being now put, it was by a great majority reſolved, that the ſpeaker ſhould reſume the chair; and the original motion being thus evaded, lord Marchmont moved, "That any reſolution of this houſe, directly or indirectly impeaching a judgment of the houſe of commons, in a matter where their juriſdiction is competent, final, and concluſive, would be a violation of the conſtitutional right of the commons, tends to make a breach between the two houſes of parliament, and leads to a general confuſion."

This motion being zealouſly ſupported by lord Mansfield, lord Chatham again roſe, and endeavoured to ſhew the neceſſity of the interference of that houſe, in caſe of an invaſion of the people's liberties, or an unconſtitutional determination of the houſe of commons; and he affirmed, that the caſe of the county of Middleſex fell under both thoſe denominations. Then ſuddenly apoſtrophizing the houſe, he conjured the peerage of England, by the noble blood which had flowed for ſo many ages in their veins, by the glorious ſtruggles of their anceſtors in behalf of liberty, not to behold with indifference a tranſaction ſo alarming. "If, (ſaid he,) my lords, the conſtitution muſt be wounded, let it not receive its mortal ſtab at this dark and midnight hour, (being paſt twelve o'clock,) when almoſt every eye is cloſed in ſleep, and when robbers and aſſaſſins only are awake and prowling for their prey." At half paſt one in the morning the queſtion was put, and decided in the affirmative, though accompanied by an animated proteſt.

On the 1ſt of May, 1770, lord Chatham preſented to the houſe, a bill "for reverſing the adjudications of the houſe of commons, whereby John Wilkes, eſq. has been adjudged incapable of being elected a member to ſerve in this preſent parliament, and the freeholders of the county of Middleſex have been deprived of one of their legal repreſentatives." In deſcanting on the ſubject of this bill, he declared, that a violent outrage had been committed, which ſtruck at every thing ſacred to the liberties of Engliſhmen. The motion for the ſecond reading being negatived, lord Gower moved for its rejection; and, on a diviſion, 89 voted for the motion, 43 againſt it.

Not to be diverted from his purpoſe, lord Chatham made, after a ſhort interval, a motion for an addreſs to the king to diſſolve the parliament. He ſtated "the public diſcontents in England, Ireland, and America; affirmed, that the people had no confidence in the preſent houſe of commons; and ſhewed, from the ſituation of public affairs, the great neceſſity of having a parliament in whom the people can place a proper confidence. Inſtead (he ſaid) of depriving a county of its repreſentative,

one or more members ought to be added to the repreſentation of the counties, in order to operate as a balance againſt the weight of the ſeveral corrupt and venal boroughs. Inſtead of oppreſſing the colonies with a heavy taxation, it is our intereſt to repeal all ſuch laws, and be content with the abundance which accumulates to the treaſury from this commerce."—To this lord North replied—No—the propereſt time to exert our right of taxation is when the right is refuſed. To temporize is to yield; and the authority of the mother country, if it is now unſupported, will in reality be relinquiſhed for ever. A total repeal cannot be thought of till America is proſtrate at our feet.

For more than two years the affairs of America, and the Middleſex election, had ſo engroſſed the attention of the miniſtry, the parliament, and the nation, as almoſt to exclude the conſideration of other ſubjects in themſelves far more important and intereſting. At this period, however, an event forced itſelf upon the public notice, of conſiderable importance to the ſtate. A ſhort time previous to the cloſe of the ſeſſion, lord Chatham had declared, "that a great blow either was, or would ſoon be, ſtruck in ſome part of the world." The high idea univerſally entertained of this nobleman's political information, neceſſarily kept the public mind in a ſtate of ſuſpenſe; but the myſtery was quickly developed, and it was in a few weeks publicly aſcertained, that a ſquadron of Spaniſh ſhips from Buenos Ayres had ſeized upon the Malouine or Falkland iſlands, ſituated in the Magellanic ocean, and of which the Engliſh had been for ſome years the actual occupants or poſſeſſors. Towards the cloſe of the year 1769, captain Hunt, of the Tamer frigate, cruizing off theſe iſlands, fell in with a Spaniſh ſchooner belonging to Port Solidad, and, agreeably to what he conceived to be his duty, charged the commander of the ſchooner to depart from that coaſt, as it was the property of his Britannic majeſty. The ſchooner obeyed; but ſoon returned with an officer on-board, bringing with him a letter from the governor of Buenos Ayres, addreſſed to captain Hunt, in which the governor, in his turn, warned the captain to depart from a coaſt belonging to the king of Spain; but, on the ſuppoſition that captain Hunt's touching at theſe iſlands was merely accidental, the governor expreſſed his earneſt deſire to ſhew him all poſſible civilities. Captain Hunt replied with warmth, that theſe iſlands were the property of the crown of Great Britain, both by diſcovery and ſettlement; and the governor maintaining with equal warmth the rights of the crown of Spain, an altercation of conſiderable length enſued. But in the reſult, captain Hunt was charged with a direct violation of treaties by the governor, who declared it to be his duty to tranſmit the particulars of this tranſaction to the court of Spain. Captain Hunt, perceiving that this buſineſs was of greater importance than he had at firſt apprehended, and not chooſing to take any further ſteps without proper authority, ſet ſail for England, where he arrived in June, 1770, two ſmall ſloops only remaining at the Britiſh Port Egmont. Soon after his departure, a very conſiderable armament, conſiſting of five ſhips of war, with their attendant veſſels, furniſhed with all the apparatus for a regular ſiege, appeared before Port Egmont. Captain Farmer, the commandant, knowing the place to be utterly untenable, ſubmitted, after a few ſhots were fired, to a capitulation; by which he and his whole garriſon were allowed to evacuate the place, carrying with them ſuch of their ſtores as they were able. The commander of the Spaniſh ſquadron, not caring, however, that very early intelligence of this outrage ſhould be carried to England, enjoined captain Farmer not to ſail without his permiſſion; and in order to enſure compliance, he cauſed the rudder of captain Farmer's ſhip, the Favourite, to be taken off and kept on-ſhore, and it was not reſtored for the ſpace of twenty days; an inſult to the Britiſh flag not eaſily paralleled. The Favourite was at length permitted to depart, and, after a voyage of ſeventy days, arrived ſafe at Portſmouth.

No ſooner were the particulars of theſe extraordinary proceedings known in England, than the whole nation appeared inflamed with reſentment, and eager to avenge the national honour, thus groſsly and daringly violated. But a negociation between the two courts immediately commencing, the miniſters of Great Britain inſiſted upon the reſtitution of the iſland on the part of Spain, as a previous ſtep to the determination of the queſtion of right, and as abſolutely neceſſary before an amicable accommodation could take place.

At the enſuing meeting of parliament, in November, 1770, the king acquainted the two houſes, in his ſpeech from the throne, of this inſult which had been offered to the honour of the nation, "by the governor of Buenos Ayres, in ſeizing one of his majeſty's poſſeſſions; and that, ſhould ſatisfaction be refuſed by the court of Spain for this injury, preparations had been and were ſtill making to do ourſelves juſtice." Addreſſes were preſented from both houſes on this occaſion, in a ſtrain calculated to convince the court of Spain, that Engliſhmen, however at variance amongſt themſelves, are ever united, as in a common cauſe, in oppoſition to a common and foreign enemy. The miniſters exerted themſelves to the utmoſt in the equipment of a formidable fleet; and the court of Madrid was ſoon convinced, that, unleſs ſome conceſſions were made, an open rupture muſt enſue. In reply to the demand made by England, the marquis de Grimaldi, the Spaniſh miniſter, alleged, that as England well knew in what light the court of Madrid had ever viewed the ſettlement at Port Egmont, it could not be imagined that the court of Spain could really diſapprove the conduct of the governor of Buenos Ayres, don Buccarelli. But as it was neither the intereſt nor inclination of Spain to involve herſelf in a war with England, his Catholic majeſty was willing to make ſuch conceſſions as ſhould be conſiſtent with his honour and the welfare of his ſubjects; and that inſtructions had been tranſmitted to prince Maſerano, his ambaſſador in London, for this purpoſe. Prince Maſerano accordingly acquainted the Engliſh ſecretary of ſtate, lord Weymouth, that the king of Spain had empowered him to diſavow any particular orders given to M. de Buccarelli, and at the ſame time to ſay that he had acted agreeably to his general inſtructions and oath as governor; that the iſlands ſhould be reſtored; and that it was expected his Britannic majeſty would on his part diſavow captain Hunt's menace, which had prompted the governor to act as he had done.

At this period, lord Weymouth reſigned the ſeals of the ſouthern department to lord Rochford, and a convention was ſoon after concluded on the terms propoſed, but with a ſecret article or engagement annexed, that the iſlands ſhould be evacuated by England within a certain ſpecified term. To this mode of accommodation, lord Weymouth refuſed to accede, as injurious to the honour of Great Britain: but the condition not being known or ſuſpected, it afforded at the time no public ground of objection; and when the evacuation of the iſlands actually took place three years afterwards, the quarrel being almoſt forgotten, and the attention of the public otherwiſe engaged, it paſſed off with ſlight and tranſient animadverſions.

The earl of Halifax now took the ſeals of the northern department in the room of lord Rochford; lord Suffolk ſucceeding lord Halifax as lord privy ſeal; and ſir Edward Hawke relinquiſhed his ſeat at the head of the admiralty to the earl of Sandwich. Mr. George Grenville had departed this life November 13; and many of his friends joining the adminiſtration, the majorities in both houſes, notwithſtanding the general unpopularity of the miniſters, became very formidable.

About the ſame time an incident occurred, which revived in an alarming degree the reſentment of the people againſt

againſt their repreſentatives. Though nothing can appear more reaſonable than that the public at large ſhould be furniſhed with all ſuch means of information, reſpecting the conduct of their repreſentatives in parliament, as may conſiſt with the order and dignity of the houſe, it had been long a ſubject of complaint, that the ſpeeches of the members were, in contempt of the reſolutions of the houſe, regularly printed in the public papers; and ſeveral members having formally ſtated that their ſpeeches had been thus miſrepreſented, a motion was made and carried, that the printers, Wheble and Thompſon, ſhould appear to anſwer this complaint at the bar of the houſe. The printers taking no notice of this general ſummons, a ſecond order was iſſued, and declared to be final. No more regard being paid to the ſecond order than to the firſt, a motion was made, that Wheble and Thompſon ſhould be taken into the cuſtody of the ſerjeant at arms. In conſequence of information from the ſerjeant at arms that the parties had abſconded, a proclamation was iſſued, offering a reward of fifty pounds for apprehending the two printers. Another printer, Miller, was ordered to be taken into cuſtody for contempt of the houſe. Wheble being apprehended in conſequence of the proclamation, and carried before Mr. Wilkes, recently choſen an alderman of London, he was diſcharged by that magiſtrate, and bound over to proſecute the perſon who apprehended him; and in a letter addreſſed to the earl of Halifax, ſecretary of ſtate, Mr. Wilkes declared, "that Wheble had been apprehended in violation of the rights of an Engliſhman, as well as of the chartered privileges of a citizen of London." Thompſon alſo was apprehended, and diſcharged in the ſame manner. Miller being taken into cuſtody by the meſſenger of the houſe of commons, at his own dwelling, was carried before Croſby, lord-mayor, and the aldermen Wilkes and Oliver, at the manſion-houſe. The ſerjeant at arms attending to demand the priſoner, the legality of the warrant was denied, and the printer not only diſcharged, but the meſſenger of the houſe, on pretext of a falſe arreſt, ordered to be committed to priſon in default of bail, which was at the firſt refuſed, but at length given; and for theſe proceedings the thanks of the corporation of London were immediately voted.

The houſe of commons now found themſelves once more reduced to a moſt vexatious perplexity; and the oppoſition, who, as members of the houſe, felt for its honour, and participated in the general indignation excited by this unparalleled affront, reminded the miniſters that to them muſt be imputed the odium under which the houſe had fallen with the people, who embraced with eagerneſs every occaſion to baffle their meaſures. Theſe reflections admitted of little reply, and the lord-mayor and Mr. alderman Oliver, as members of the houſe, were ordered to attend in their places the next day. The lord-mayor pleaded, in his juſtification, that he was bound by oath to preſerve the franchiſes of the city, that his conduct had been ſtrictly agreeable to law, and he demanded to be heard by counſel. This was refuſed, on the ground that no counſel could be heard in oppoſition to the privileges of the houſe; and the lord-mayor's book of minutes being called for, the recognizance of Whittam, the meſſenger, was expunged from the record by order of the houſe; and a reſolution paſſed, that to inſtitute any proceeding at law in this caſe was contrary to the privileges of the houſe; and alſo that it was a breach of privilege to apprehend the meſſenger of this houſe executing his warrant, under the pretence of an aſſault, and that it was a breach of privilege to hold the meſſenger to bail for ſuch pretended aſſault. Mr. Oliver was proceeded againſt in a ſimilar manner; and the two magiſtrates reſolutely refuſing to make any conceſſion or apology, it was at length voted that they be committed priſoners to the Tower.

On the laſt day of the attendance of the lord-mayor, vaſt multitudes of people aſſembling in the vicinity of Weſtminſter-hall, a violent riot took place, and ſeveral of the miniſterial miniſters were groſsly inſulted: lord North himſelf being perſonally attacked, and with difficulty reſcued from the fury of the populace. Mr. Wilkes, having received a ſummons to attend at the bar of the houſe, addreſſed a letter to the ſpeaker, in which he declared that he could attend only in his place as member for the county of Middleſex. After ſome fruitleſs repetitions of the order, the houſe, now deſirous to diſmiſs the buſineſs, ordered a new ſummons for the 8th of April, and appointed the 9th as the firſt day of meeting after the Eaſter receſs. The lord-mayor, and Mr. Oliver, ſoon after their commitment, applied for a writ of *habeas corpus*, which was accordingly iſſued by the court of common pleas; but after very long and learned pleadings, theſe magiſtrates were remanded by the court, and continued in cuſtody till the end of the ſeſſion, when their liberation was celebrated by great rejoicings; and from this time forward the proceedings of parliament, and the ſpeeches of the members, have been publiſhed without interruption or moleſtation.

During the receſs of parliament died the earl of Halifax, a nobleman generous, liberal, and accompliſhed, but as a miniſter unpopular and unfortunate. The earl of Suffolk ſucceeded the earl of Halifax as ſecretary of ſtate for the northern department, and the duke of Grafton accepted the vacant poſt of lord privy ſeal. The miniſter, lord North, notwithſtanding ſome falſe ſteps, evidently gained upon the nation, by the ſuavity of his manners, and his apparent candour and ingenuouſneſs of diſpoſition. The late rupture with Spain, in the view of the public, who were not apprized of the ſecret article of reſtitution, had terminated honourably for England; and his lordſhip ſeemed to ſhew ſome inclination to accommodate the diſputes ſo long ſubſiſting with America. This was further confirmed by the reſignation of the earl of Hillſborough, ſecretary of ſtate for America, who was on various accounts obnoxious to the colonies; and the ſubſequent appointment of the earl of Dartmouth, a nobleman of acknowledged probity, of a mild and lenient temper, and who had uniformly oppoſed in parliament American taxation in every form. Various other changes and promotions alſo took place during the receſs of parliament. The earl of Harcourt ſucceeded lord Townſhend as lord-lieutenant of Ireland, and lord Stormont was appointed ambaſſador at the court of Verſailles in the room of lord Harcourt. Mr. Charles Jenkinſon being nominated vice-treaſurer of Ireland, his ſeat at the board of treaſury was filled by the Hon. Charles James Fox, ſecond ſon of lord Holland, a young man who had already arreſted the attention of the public by the extent of his political knowledge, and the ſplendour of his parliamentary talents.

On the 22d of November, 1772, the ſeſſion was opened by an intereſting ſpeech from the throne, in which "the attention of parliament was particularly called to the preſent ſtate of the Eaſt-India company, and the difficulties in which they appeared to be involved; and his majeſty recommended making ſuch proviſions for the common benefit and ſecurity of all the various intereſts concerned, as they ſhould find beſt adapted to the exigencies of the caſe." Little certainly could it have been imagined, that in the ſhort interval which had elapſed ſince the acquiſition of the Dewannee, of the provinces of Bengal, Bahar, and Oriſſa, by which the company appeared to be elevated to the height of proſperity, they ſhould be reduced to a ſtate of embarraſſment and diſtreſs verging upon ruin. No ſooner had the preſidency of Calcutta obtained the government of thoſe vaſt and opulent territories, than a grand project was formed by the preſident, lord Clive, and unanimouſly approved by the board; agreeably to which, the members of the council, and other civil and military ſervants of the company, might be enabled to derive

derive vaſt emoluments, not only without prejudice to their principals, but with great advantage to the company's revenue. This was no other than the eſtabliſhment of a commercial aſſociation, for the purpoſe of carrying on an inland traffic in the important articles of ſalt, betel-nut, and tobacco. Theſe are articles of general conſumption in India, and conſidered as amongſt the abſolute neceſſaries of life; and they had under the ancient government been ſubject to the trifling duty of the fortieth penny. But in order to obtain the ſanction of the company to the commercial ſyſtem now eſtabliſhed, a duty of thirty-five per cent. was impoſed on ſalt, which, with fifteen per cent. on betel-nut, and twenty-five per cent. on tobacco, produced an annual additional revenue of 160,000l. to the company. This, however, was regarded by the natives as a trivial grievance, in compariſon of the mode in which the traffic was conducted: for the ſervants of the company, acting at once in the two-fold capacity of merchants and ſovereigns, "in order (as they expreſſed themſelves) to aſſiſt this infant branch of commerce," the council decreed to the aſſociation, i. e. to themſelves and their copartners, "the free and excluſive purchaſe and ſale;" or, in other words, the complete monopoly, of the above articles; and their governing rule of trade appears invariably to have been to reduce to the loweſt extreme of depreſſion the price in the purchaſe, and to enhance it in the ſame extravagant proportion in the ſale. When this plan was communicated to the directors, they expreſſed much diſpleaſure that ſuch extortion ſhould be practiſed under their authority. "We leave (ſay they to the council) the adjuſtment of the duties on theſe commodities, to your judgment and conſideration: but we think the vaſt fortunes acquired by the inland trade, have been obtained by a ſcene of the moſt oppreſſive and tyrannic conduct ever known in any age or country. Were we to allow it, we ſhould conſider ourſelves as aſſenting and ſubſcribing to all the miſchiefs which Bengal has preſented to us for four years paſt." They approved, therefore, the oppreſſion of the natives ſo far as they themſelves were benefited by it, and no further. But theſe feeble and inconſiſtent remonſtrances were little regarded.

Another device or project of legal plunder was, to declare void at once, to the inexpreſſible conſternation of the zemindars and polygars, who conſtitute the great landed intereſt of the country, all the leaſes held by them under the government, on very low and beneficial terms, by a kind of feudal tenure. The pretext for this was, that many of theſe leaſes had been colluſively obtained; and it was ſaid, that impartiality required that they ſhould be now relet, without diſtinction, to the higheſt bidder. By this enormous act of deſpotiſm, many individuals of very elevated ſituations in life were entirely ruined, immenſe fortunes were made by the favoured few, and the landed revenue of the company, after all, was acknowledged to be very little improved. Notwithſtanding, indeed, every expedient that could be put in practice for the accumulation of wealth, the aggregate receipts of the company's treaſury alarmingly decreaſed; the natives, reduced to poverty, and almoſt deſpair, by perpetual exactions, could no longer purchaſe their favourite articles at the extravagant prices demanded by the monopoliſts. Thoſe that cultivated the ſoil, planted in doubt, and reaped in uncertainty. A large proportion of land was left untilled, and a general ſcarcity of proviſions, particularly of rice, the great ſtaple of Indian ſuſtenance, unavoidably enſued. It was poſſible to exiſt without betel-nut and tobacco, but not without their daily food. The commercial monopoliſts ſeized with avidity the opportunity of collecting the rice into ſtores. As the Gentoos would in no extremity violate the precepts of their religion by eating fleſh, they had no other alternative than to part with the remains of their property, or die with hunger. The people being thus reduced to a wretched ſubſiſtence on unwholeſome and unaccuſtomed roots, a dreadful ſickneſs and mortality enſued. In ſome diſtricts, the living ſcarcely ſufficed to bury the dead; and peſtilence and famine in horrid combination deſolated the land. The waters of the Ganges were infected by the multitude of carcaſſes caſt into the river; whilſt flights of vultures and other birds of prey, attracted in aſtoniſhing numbers by the putreſcent effluvia, completed the ſhocking picture. See the article HINDOOSTAN.

In the courſe of the ſeſſion, a report was preſented to the houſe by general Burgoyne, containing heavy charges againſt individuals in very exalted ſtations, and in which the character and conduct of lord Clive in particular, underwent a moſt ſevere inveſtigation. The depoſition and conſequent death of ſu-rajah Dowla, the direful reſult of a conſpiracy between the ſervants of the company and the ſubjects of the ſubah, was repreſented as an act replete with treachery and cruelty. The inextinguiſhable thirſt of lucre was affirmed to be the real and primary cauſe of this revolution, which proved the ſource of infinite miſchief, and the means correſponded in baſeneſs and turpitude with the end. It appeared in evidence, that Omichund, one of the chief of the conſpirators at the court of Moorſhedabad, inſiſted upon five per cent. on all the nabob's treaſures, and thirty lacks in money, for his nefarious ſervices; and that this condition was expreſsly inſerted in a formal treaty, concluded and ſigned by the parties previous to the attempt: that another treaty was framed and ſigned by the ſeveral parties, Omichund excepted, in order to defraud him of the reward he had ſtipulated for his villainy: that admiral Watſon, a man of ſtrict probity and honour, had abſolutely refuſed to ſign the fictitious treaty; but that lord Clive had cauſed the admiral's name to be affixed without his knowledge to this inſtrument: that, on the ſubſequent accompliſhment of the revolution, a conference was held at Moorſhedabad, in preſence of the new ſubah Meer Jaffier, and the real treaty, ſigned by the ſubah and the Engliſh council, publicly read; on which occaſion lord Clive himſelf declared to the committee, that the reſentment and indignation expreſſed in the countenance of Omichund baffled all deſcription. He ſaid, "This cannot be the treaty; it was a red treaty that I ſaw." On which his lordſhip replied, "Yes, Omichund, but this is a white treaty." It was affirmed, that lord Clive acquired, in conſequence of the depoſition of ſu-rajah Dowla, vaſt ſums under various pretexts, amounting in Engliſh money to no leſs than 234,000l. excluſive of a jaghire or life-annuity of 30,000l. charged on the revenue of the diſtricts ceded by Meer Jaffier to the company. That lord Clive declared, "he had never made the leaſt ſecret of theſe tranſactions; that his lordſhip held preſents ſo received to be not diſhonourable; that the ſubah, agreeably to the cuſtoms of the Eaſt, had, in a manner ſuitable to his rank and dignity, rewarded thoſe who had been, happily, inſtrumental to the ſucceſs of ſo hazardous an enterprize; adding, that it was well known to every gentleman in Bengal, that the honour of his country, and the intereſt of the proprietary, were the principles that governed all his actions."

Colonel Barré, on the debate which aroſe on reading the report, obſerved, "that the fortunes amaſſed by the company's ſervants, were, no doubt, all honourably acquired. If the property of the natives was taken without their conſent, it was military plunder; if otherwiſe, it was compenſation for ſervices: if by a commercial monopoly, it was inland trade. The nice and ingenious diſtinctions made by the noble lord between bribes and preſents, exactions and gratuities, reminded him of a certain Spaniſh governor of Gibraltar, who, amongſt other perquiſites of office, had been accuſtomed to receive an annual donation from the Jews. This people bringing him, on one of their anniverſaries, only a thouſand ſequins, the governor indignantly declared, "that the Jews ſhould not have audience, as they were ſprung from anceſtors who crucified our Lord Jeſus Chriſt." The Jews went back diſconſolate; but, on further conſideration,

returned with two thouſand ſequins, on which they were again admitted: "for (ſaid the governor), poor men! they had no hand in the crucifixion."

General Burgoyne concluded the report by moving, "1. That all acquiſitions made under the influence of a military force, or by treaty with foreign princes, do of right belong to the ſtate. 2. That to appropriate acquiſitions ſo made to the private emolument of perſons entruſted with any civil or military powers of the ſtate, is illegal. 3. That very great ſums of money, and other valuable property, have been acquired in Bengal by perſons of this deſcription, and appropriated to their private uſe." Theſe reſolutions, amidſt the general indignation excited by the report, paſſed with great unanimity; and the chairman of the committee moved, "That lord Clive, about the time of the depoſition of ſu-rajah Dowla, did obtain and poſſeſs himſelf of ſeveral ſums amounting to two hundred and thirty-four thouſand pounds, under the denomination of private donation, to the diſhonour and detriment of the ſtate."

Lord Clive now entered with great ability into his own vindication, and ſhewed the urgent political neceſſity which had induced him to embrace the meaſures for which he was at this diſtance of time ſo unexpectedly and injuriouſly arraigned. He affirmed, that the power and fortune of the Engliſh nation in India had been entirely owing to the boldneſs and promptitude with which thoſe meaſures had been conducted; that what he had acquired for himſelf, was inconſiderable in compariſon with what he had acquired for the company, whoſe welfare had ever been his great object; that he had been placed in great and eminent ſtations, ſurrounded with temptations; the civil and military powers were united in him, a circumſtance which had never happened to any other individual; that, being circumſcribed by no reſtraint but that of his own conſcience, he might have accumulated a fortune too great for a ſubject; but that he had then determined to reject all future opportunities of gain, and from the day on which he entered the city of Moorſhedabad in triumph, after the victory of Plaſſey, which was a ſpace of fifteen years, he had not benefited himſelf a ſingle ſhilling, directly or indirectly, the jaghire only excepted.

Many of the moſt reſpectable and impartial members of the houſe, could not on reflection but think it a harſh and invidious thing, that the vengeance of parliament ſhould be directed againſt a man who had raiſed ſo high the reputation of the Britiſh arms in India; who had fought the battles of his country with ſuch unparalleled glory and ſucceſs; and who would to the lateſt generations be accounted amongſt the moſt illuſtrious of her heroes. That the ſyſtem of policy adopted by the company's ſervants in India was totally indefenſible, muſt be admitted; but it did not appear from the nature of the regulations, which had received the ſanction of parliament, that any radical alteration of that ſyſtem was in contemplation. A great empire had been founded in the eaſt, chiefly through the exertions of the noble lord againſt whom this charge of delinquency was brought. Is it ſeriouſly meant to relinquiſh this empire? to reſtore thoſe immenſe ſums to the native princes and inhabitants, of which they have been plundered? Far from it. The queſtion is merely, whether the ſtate or the company ſhall enjoy the advantages ariſing from theſe vaſt poſſeſſions? Of this conteſt the reſult is known. The company, loaded with reproach and obloquy, are cenſured, condemned, and puniſhed, without ſo much as being heard in their own defence; but reſtitution is made, not to the princes of India, but to the people of Great Britain; and almoſt at the ſame inſtant that we are paſſing bills for the purpoſe of transferring the riches of Hindooſtan from the treaſury of the company to the royal exchequer, we are called upon to vote impeachments againſt the man by whoſe heroic efforts of valour and plans of policy thoſe riches were acquired. Is there any trace of dignity, of conſiſtency, or virtue, in this conduct? If we are deliberately determined to keep poſſeſſion of thoſe dominions, which are univerſally allowed to have been unjuſtly acquired, we are parties in the injuſtice, and thoſe who were the original actors of it are entitled from the juſtice of the nation (for there is a juſtice even in injuſtice) to indemnity at leaſt, if not to gratitude and applauſe; and all that can with propriety be done, ſhort of reſtitution and emancipation, is to ſecure, by wiſe and equitable regulations, the future happineſs and welfare of thoſe diſtant nations, who are become by an aſtoniſhing viciſſitude of fortune ſubject to our dominion.

On putting the queſtion, the laſt clauſe of the reſolution was rejected, although the miniſter declared in favour of the words of cenſure, and divided in the minority. An amendment was then moved, "That lord Clive did at the ſame time render great and meritorious ſervices to this country;" which was carried by a conſiderable majority, and an end put to the enquiry. A deep impreſſion was nevertheleſs made upon the mind of lord Clive by this public accuſation, and by the odium and obloquy which from this time attached itſelf to his character. His faculties, no longer rouſed to action by the neceſſity of great and vigorous exertion, languiſhed in retirement and ſolitude, and gradually preyed upon themſelves till exiſtence became inſupportable. Originally educated in ſtrict principles of religion, it is probable that his early aſſociations now recurred with redoubled force; and though acquitted by the higheſt human juriſdiction, he could not acquit himſelf, or hope for acquittal at that far more awful tribunal at which he dreaded to appear. After a few years paſſed in a ſtate of wretchedneſs and deſpondency, he at length put a voluntary period to his life; by this melancholy cataſtrophe demonſtrating to mankind the vanity of human purſuits and wiſhes, and the infinite ſuperiority of conſcious virtue to all the gifts of fame and fortune.

When at a very early period of lord North's adminiſtration the duties on paper, glaſs, and colours, were repealed, it has been already remarked, that the duty on tea was purpoſely left as a mark of legiſlative ſupremacy. The Eaſt-India company finding their ſtock of tea to accumulate in their warehouſes, in conſequence of the loſs of the American market, were very urgent with the miniſter to repeal the American import duty of three-pence per pound, offering in lieu of it to pay double the ſum on exportation. A fairer opportunity could not occur to terminate the diſpute. Accordingly, in the ſeſſion of 1773, the act paſſed for allowing the exportation of teas duty free; and the company, eager to make a grand effort to relieve themſelves from their difficulties, were buoyed up with the flattering expectation, by becoming their own factors, of regaining poſſeſſion of the American market: for, when the teas were actually tranſported acroſs the Atlantic, and lodged in warehouſes, the mere circumſtance of their having previouſly paid the import duty would not, it was imagined, impede the company's ſales. In this idea, however, they were moſt fatally deceived. The Americans conſidered this new attempt as an artifice, calculated to inveigle them into the payment of this tax, in order to eſtabliſh the precedent; and they were determined that no ſuch experiment ſhould take effect. Six hundred cheſts were by the company, in purſuance of the act, conſigned to their agent at Boſton, the like quantity to New York and Philadelphia, and in proportion to the other principal ports of the continent. Pennſylvania diſtinguiſhed herſelf by ſetting the firſt example of oppoſition. A general meeting was convened at Philadelphia, in which a ſeries of vigorous reſolutions were paſſed, "declaring this new plan of importation to be a violent attack upon the liberties of America, and pronouncing it to be the duty of every American to oppoſe this attempt; and that whoever ſhould directly or indirectly countenance it was an enemy to his country." A committee was then appointed to wait upon the conſignees of the company, and to requeſt their reſignation, which

was immediately complied with. At New York, on the arrival of the tea-ships, they were with difficulty permitted to approach the wharf; and, as at Philadelphia, the consignees were compelled to relinquish their appointments, and the ships returned back to England without breaking bulk. At Charlestown, after much opposition and tumult, the tea was permitted to be unloaded, but was immediately lodged in damp unventilated cellars, where it long remained, and finally perished. In no place was the delivery of it to the consignees suffered, and in most the captains of the India ships, on being apprized of the temper and disposition of the people, without any attempt to land, wisely set their sails for England. At Boston the spirit of resistance rose to a height which made the excesses committed elsewhere appear trivial; and here, in consequence, the first blood was shed, which brought on the long, obstinate, and unnatural, American war.—For the arduous and interesting events of this war, to the establishment of its independence, and peace with England, A. D. 1782, see the article AMERICA, vol. i. p. 439—465.

The watchfulness of France to take every advantage of the misfortunes of this country, was never more strikingly manifested than during the war of the mother country with her colonies. Without a shadow of cause, and without the least suspicion, she privately entered into the war in support of the refractory colonies, and left it to the best informed in England to discover her intrigues. This extraordinary information was first developed by the hon. Charles James Fox, in the meeting of the house of commons in the session of 1778. He did not, he said, speak from surmise, but he had it from authority he could not question, "that a treaty of amity and alliance had been signed in Paris between France and America, ten days ago; he therefore wished that the noble lord (North) would give the house satisfaction on that interesting point." The minister, closely pressed, at length acknowledged, "that it was but too probable such a treaty was in agitation, though he had no authority to pronounce absolutely that it was concluded:" and it was animadverted upon as a very extraordinary circumstance, that the intelligence of a private member of that house should be sooner received, and more authentically ascertained, than that of the first minister of the government.

In the house of peers, on the same day, the duke of Grafton informed their lordships, that he had indubitable intelligence, that a treaty had been actually signed between France and America; and his grace demanded from the ministers a public avowal or disavowal of this important fact. To which lord Weymouth, secretary of state, replied, "that he knew nothing of any such treaty, nor had received any authentic information of its being either in existence or contemplation." Nevertheless, within a very few days after this extraordinary declaration, lord North delivered a message to the house of commons, and lord Weymouth to the house of peers, in which the king informed the two houses, "That a rescript had been delivered by the ambassador of his most Christian majesty, containing a direct avowal of a treaty of amity, commerce, and alliance, recently concluded with America; in consequence of which offensive communication on the part of the king of France, his majesty had sent orders to his ambassador to withdraw from that court; and, relying on the zealous support of his people, he is prepared to exert all the force and resources of his kingdoms, to repel so unprovoked and unjust an aggression." Addresses were voted by both houses, containing the strongest assurances of assistance and support. An amendment moved by Mr. Baker, containing a severe reflection on the conduct of the minister, was previously rejected in the house of commons, by 263 voices against 113.

A similar amendment was moved in the upper house by the duke of Manchester, which gave rise to a debate, chiefly interesting as it brought into view a very important difference of opinion subsisting between the lords in opposition, and which had on various occasions more covertly appeared, respecting the recognition of American independence. The marquis of Rockingham, and the whole Rockingham connection, maintained without reserve the necessity of admitting the independence of America. "To attempt impossibilities, (said they,) can only render our ruin inevitable; it is not now in our power to recover what we have wantonly thrown away." On the other hand, the earls of Chatham, Temple, and Shelburne, and several other minority lords, who had established a distinct connection, and were, throughout the long course of opposition to this ministry, considered as a separate party, disclaimed every idea of relinquishing America, and deprecated its independence as the greatest of all political and national evils; and as including the utter degradation and final ruin of this country. The numbers on the division were, 100 lords who voted against the amendment, to 36 who supported it.

On the 7th of April, 1778, the duke of Richmond moved an address to the king on the state of the nation. In his speech in support of this address, his grace declared in strong terms his conviction of the necessity of an immediate recognition of American independence. "The mischief, (he said,) whatever might be the magnitude of it, was already done; America was for ever lost; and her independence as firmly established as that of other states. We had indeed sufficient cause for regret; but our lamentation was of no more avail than it would be for the loss of Normandy or France." The earl of Chatham, in full expectation that this point would come under discussion, resolved, however enfeebled and afflicted by his corporeal infirmities, to make his personal appearance in the house, in order to bear his decided testimony against it. The mind feels interested in the minutest circumstances relating to the last day of the public life of this renowned statesman. He was led into the house by his son and son-in-law, Mr. William Pitt and lord viscount Mahon, all the lords standing up out of respect, and making a lane for him to pass to the earls' bench, he bowing very gracefully to them as he proceeded. He looked pale and much emaciated, but his eye retained all its native fire; which, joined to his general deportment, and the attention of the house, formed a spectacle very striking and impressive.

When the duke of Richmond had sat down, lord Chatham rose, and began by lamenting, "that his bodily infirmities had so long, and at so important a crisis, prevented his attendance on the duties of parliament. He declared, that he had made an effort almost beyond the powers of his constitution, to come down to the house on this day, perhaps the last time he should ever be able to enter its walls, to express the indignation he felt at the idea which he understood was gone forth, of yielding up the sovereignty of America. My lords, (continued he,) I rejoice that the grave has not closed upon me; that I am still alive to lift up my voice against the dismemberment of this ancient and noble monarchy. Pressed down as I am by the load of infirmity, I am little able to assist my country in this most perilous conjuncture; but, my lords, while I have sense and memory, I never will consent to tarnish the lustre of this nation by an ignominious surrender of its rights and fairest possessions. Shall a people so lately the terror of the world, now fall prostrate before the house of Bourbon? It is impossible. I am not, I confess, well informed of the resources of this kingdom, but I trust it has still sufficient to maintain its just rights, though I know them not. Any state, my lords, is better than despair. Let us at least make one effort; and, if we must fall, let us fall like men."

The duke of Richmond, in reply, urged the noble lord to point out any possible mode, if he were able to do it, of making the Americans renounce that independence of which they were in possession. His grace added, that if HE could not, no man could; and that it was not in his power to change his opinion on the noble lord's authority,

rity, unſupported by any reaſons, but a mere recital of the calamities ariſing from the ſtate of things not in the power of this country now to alter. Lord Chatham, who appeared greatly agitated during the reply, made an eager effort to riſe at the concluſion of it, as if labouring with ſome great idea, and impatient to give full ſcope to his ſentiments; but, before he could utter a word, preſſing his hand on his breaſt, he fell down ſuddenly in a convulſive fit. The duke of Cumberland, lord Temple, and other lords near him, caught him in their arms. The houſe was immediately cleared; and his lordſhip being carried into an adjoining apartment, the debate was adjourned. Medical aſſiſtance being obtained, his lordſhip in ſome degree recovered, and was conveyed to his favourite villa of Hayes, in Kent, where, after lingering ſome few weeks, he expired, May the 11th, 1778, in the ſeventieth year of his age.

On the firſt intelligence of his death, colonel Barré repaired to the houſe of commons, then ſitting, and communicated the melancholy information. Although it was an event which had been for ſome time expected, the houſe ſeemed affected with the deepeſt ſenſibility. The recollection of his former pre-eminence in power, of his unrivalled eloquence, of his unwearied exertions in the public ſervice, and of the unexampled proſperity to which Great Britain had attained under his adminiſtration, ruſhed upon the mind with irreſiſtible force, and produced an emotion which the ſympathy ſo powerful in popular aſſemblies heightened to enthuſiaſm. The motion made by colonel Barré, "That the remains of the earl of Chatham be interred at the public expence," was unanimouſly adopted; with the further addition, "That a monument be erected to his memory in the collegiate church of St. Peter, Weſtminſter." This was followed by a motion from lord John Cavendiſh, for an addreſs to the king, "That his majeſty would be graciouſly pleaſed to make a permanent proviſion for the family of the late William Pitt, earl of Chatham, in conſideration of the ſervices performed by that able ſtateſman;" and a bill was brought into parliament, and unanimouſly paſſed, by which a clear annuity of four thouſand pounds per annum, payable out of the civil liſt, is for ever to be annexed to the earldom of Chatham, and the ſum of twenty thouſand pounds voted for the diſcharge of debts and incumbrances. Thus nobly and gratefully did the nation reward the ſervices of the man, whoſe counſels, to the amazement of the world, ſhe had for ſo many years neglected and contemned. The ready concurrence of the court in the honours laviſhed on the memory of this great ſtateſman, may be aſcribed entirely to the decided manner in which he delivered, almoſt in his laſt breath, his ſentiments againſt the recognition of American independence, and which may be regarded as the ſole political error, with which, in reſpect to America, he is chargeable. What his preciſe ideas were, with regard to the plan of conciliation proper to be adopted in the then actual circumſtances of the nation, cannot be aſcertained; but of this we may reſt aſſured, from the uniform and ſyſtematic tenor of his policy, that he never would have employed coercive means in accompliſhing it. It is exceedingly to be lamented, that perſonal and party conſiderations prevented that firm and cordial coaleſcence amongſt the whig intereſt, which was ſo neceſſary to give efficacy to their exertions. The diſlike of lord Chatham to the Newcaſtle or Rockingham party was invincible; and the diviſions and animoſities which originated in that diſlike, and which his death was far from extinguiſhing, will ever be lamented by this nation, inaſmuch as ſuch a coalition of great abilities might have finally prevented the miſchiefs that followed.
